# GENERA PLANTARUM

AD EXEMPLARIA IMPRIMIS IN HERBARIIS KEWENSIBUS SERVATA

DEFINITA;

AUCTORIBUS

G. BENTHAM ET J. D. HOOKER.

VOLUMINIS TERTII

PARS II.

SISTENS MONOCOTYLEDONUM ORDINES XXXIV.

*HYDROCHARIDEAS—GRAMINEAS.*

**Pars 2**, pp. vii-xi (incl. Gymnospermae, Monocotyled, vii-xi), text 447-1215, Addenda 1217-1228, Index 1229-1258 . . . 14 April 1883 fide Bentham diary; *J. Bot. (London)* **21** : 155 (May 1883); *Gard. Chron.* n.s. **19** : 733 (9 June 1883).

CLXVII. Hydrocharideae—CLXXXVI. Juncaceae (pp. 448-860); auct. Bentham.

CLXXXVII. Palmae—CXC. Naiadaceae (pp. 870-1019); auct. Hooker.

CXCVI. Eriocaulaceae—CC. Gramineae (pp. 1019-1215); auct. Bentham.

WILLIAMS & NORWICH, 14 HENRIETTA STREET, COVENT GARDEN.

MDCCCLXXXIII.

## GYMNOSPERMEÆ.

---

*Flores* stricte unisexuales. Perianthium 0 v. in *Gnetaceis* anomalum. Ovarium et stylus 0, ovulis nudis, nucleo ipso vertice pollen recipiente. Cotyledones 2, v. interdum 3-∞.

*Gymnospermeæ*, olim in *Monochlamydeis* incluse, hodie ab omnibus botanicis pro subclasse *Dicotyledonum* v. pro classe distincta recipiuntur. Quoad florum homologiam difficillime cum cæteris *Dicotyledonibus* comparantur, nec ullo genere intermedio connectuntur. A *Monocotyledonibus* adhuc remotiores videntur, affinitates potius cum formis nonnullis antiquis *Cryptogamarum* quærendæ.

---

## CONSPECTUS ORDINUM.

---

CLXIV. GNETACEÆ. Fruticium rami v. pedunculi e trunco lignoso interdum arboreo articulati v. nodosi, squamis foliisve oppositis indivisis. Florum spicæ amentiformes v. interruptæ. Perianthium ♂ membranaceum 2-lobum, ♀ utriculosum. Staminum columna 1-8-antherifera.

CLXV. CONIFERÆ. Arborea fruticesve. Folia indivisa, ad squamas reducta v. acicularia, rarius explanata. Flores ♂ amentiformes, antheris 2-∞-locellatis (amenti squamæ 2-∞-antheriferae auct. plur.). Flores ♀ in amentum v. strobilum conferti, rarius solitarii, ovulis ad quamque squamam 1-∞.

CLXVI. CYCADACEÆ. Folia ad apicem caudicis lignosi conferta, ampla, pinnatisecta. Flores utriusque sexus strobilacei, ♂ antherarum loculis ad quamque squamam numerosis, ♀ ovulis ad quamque squamam 2-∞.

## MONOCOTYLEDONES.

---

Caulis herbacei, rarius lignosi v. rhizoma in caudicem fruticosum v. arborescentem productum; fasciculi vasculares intra textum celluloseum sparsi. Folia parallelivenia, venis interdum venulis transversis connexis, rarius reticulato-pennivenia. Perianthium 2-seriatum rarius 1-seriatum v. in ordinibus nonnullis 0. Androecium 1-2-seriatum. Florum partes in quaque serie sæpiissime 3, interdum 2, rarissime 4- $\infty$ , v. in ordinibus nonnullis varie reductæ. Embryonis extremitas cotyledonaris indivisa.

---

### CONSPECTUS ORDINUM.

(*Exceptis neglectis, de quibus confer Formas abnormes sub quoque ordine.*)

---

**Series I. Microspermæ.** Perianthium saltem interius corollinum. Ovarium inferum, 1-loculare placentis 3 parietalibus, v. rarius 3-loculare placentis axilibus. Semina minima, numerosa, exalbuminosa; embryo semini sæpius conformis.

CLXVII. HYDROCHARIDÆ. Herbe aquaticæ. Flores regulares, sæpius unisexuales. Perianthium exterius calycinum, interius dum adsit corollinum. Stamina 3, 6, 9, rarius  $\infty$ , v. abortu pauciora.

CLXVIII. BURMANNIACÆ. Herbe terrestres, haud raro aphyllæ. Flores regulares, rarius segmento extimo maximo parum irregulares. Perianthium corollinum. Stamina 3 v. 6.

CLXIX. ORCHIDÆ. Herbe terrestres v. epiphytice, rarius altissime scandentes. Flores sæpius valde irregulares. Perianthium corollinum. Androecium cum gynæcio in columnam connatum; anthera unica, rarius 2, in columna sessilis v. subsessilis.

**Series II. Spigynæ.** Perianthium saltem interius corollinum. Ovarium (exceptis generibus paucis *Bromeliacearum* et *Hamodoracearum*) inferum. Albumen copiosum.

CLXX. SCITAMINÆ. Flores irregulares. Perianthium exterius sæpius calycinum, interius corollinum. Stamina 1 v. 5 perfecta, 5 v. 1 in staminodia ananthera varie mutata. Ovarium inferum, loculis v. placentis 1- $\infty$ -ovulatis. Semina sæpius arillata. Embryo in canale centrali albuminis rectus incurvus v. hippocrepicus. (Foliorum venæ parallelæ a costa centrali divergentes.)

CLXXI. BROMELIACÆ. Flores regulares. Perianthium exterius calycinum. Stamina 6. Ovarium inferum semi-inferum v. in fundo perianthii liberum, 3-loculare, loculis  $\infty$ -ovulatis. Embryo in cavo parvo marginali albuminis farinosi collocatus, rarius longius intrusus nec inclusus.

**CLXXII. HAMODORACEÆ.** Flores regulares v. parum irregulares. Perianthium corollinum v. extus lanatum. Stamina nunc 6 aequalia v. 1-3 parum dissimilia, nunc 3 lobis interioribus opposita. Ovarium inferum semi-inferum v. in fundo perianthii liberum, 3-loculare, loculis 1- $\infty$ -ovulatis. Embryo in foveola marginali albuminis carnosae collocatus v. longius intrusus, nec omnino inclusus.

**CLXXIII. IMBICÆ.** Flores regulares v. oblique irregulares. Perianthium corollinum. Stamina 3, lobis exterioribus opposita. Ovarium inferum, sæpissime 3-loculare, loculis  $\infty$ -ovulatis. Embryo parvus, in albumine corneo inclusus.

**CLXXIV. AMARYLLIDÆ.** Flores regulares v. parum irregulares. Perianthium corollinum. Stamina 6, rarissime 3 lobis interioribus opposita v.  $\infty$ . Ovarium inferum, sæpissime 3-loculare, loculis  $\infty$ -rarius 1-2-ovulatis. Embryo parvus, in albumine carneo inclusus.

**CLXXV. TACCACEÆ.** Flores regulares. Perianthium corollinum v. subherbaceum. Stamina 6, inclusa, cucullata, antheris intra cucullam sessilibus. Ovarium inferum, 1-loculare, placentis parietalibus  $\infty$ -ovulatis. Embryo minimus, in albumine solido inclusus.

**CLXXVI. DIOSCOREACEÆ** (quoad genera normalia). Flores regulares, unisexuales. Perianthium parvum, corollinum. Stamina 6 perfecta v. quæ lobis interioribus opposita imperfecta v. deficientia. Ovarium inferum, 3-loculare, loculis 2-ovulatis. Embryo parvus, in albumine carneo inclusus. (Caulis sæpius volubiles alte scandentes).

(Accedunt genera nonnulla valde anomala, floribus majoribus hermaphroditis.)

**Series III. Coronariæ.** Perianthium saltem interius corollinum. Ovarium liberum rarissime basi breviter adnatum. Albumen copiosum.

**CLXXVII. ROXBURGHACEÆ.** Flores regulares, in quaque serie 2-meri. Ovarium liberum rarius semi-inferum, 1-loculare, ovulis 2- $\infty$  in fundo loculi erectis v. ab apice pendulis. Embryo in albumine carneo-corneo inclusus.

**CLXXVIII. LILIACEÆ.** Flores sæpius regulares, in quaque serie 3-meri. Stamina 6, rarius 3 lobis interioribus opposita. Ovarium sæpissime 3-loculare, loculis 2- $\infty$ -ovulatis. Embryo minutus v. plus minus elongatus, in albumine carneo v. corneo inclusus.

(Excepta plurima sub Formis abnormibus querenda.)

**CLXXIX. PONTEDERIACEÆ.** Herbæ aquaticæ. Flores regulares v. sæpe parum irregulares. Perianthium corollinum, in quaque serie 3-merum. Stamina 6 v. 3. Ovarium 3-loculare, v. 1-loculare placentis 3 loculis placentisve  $\infty$ -ovulatis, v. abortu 1-loculare 1-ovulatum. Embryo rectus, in canale centrali albumini farinaceo æquilongus.

**CLXXX. PHILYDRACEÆ.** Flores irregulares. Perianthium corollinum, in quaque serie 2-merum, exterioris segmentum posticum anticum includens, interioris segmenta multo minora. Stamen 1. Ovarii loculi v. placentæ 3,  $\infty$ -ovulati. Embryo in albumine subfarinaceo inclusus.

**CLXXXI. XYRIDÆ.** Flores parum irregulares, in capitulo terminali sub bracteis imbricatis solitarii, sessiles, rigide 2-bracteolati. Perianthium corollinum, exterius e segmento unico lato interius involvente v. 0; interius 3-merum. Stamina 3. Ovarii loculi v. placentæ 3, ovulis  $\infty$  orthotropis. Embryo parvus, ad apicem albuminis farinacei v. subcarnosi ab hilo remotus.

**CLXXXII. MAYACEÆ.** Flores regulares, in capitulis terminalibus sub bracteis tenuibus imbricatis solitarii, pedicellati, bracteolis hyalinis. Perianthium exterius calycinum, interius corollinam, in quaque serie 3-merum. Stamina 3. Ovarium 1-loculare, placentis 3 parietalibus, ovulis  $\infty$  orthotropis. Embryo parvus, ad apicem albuminis farinacei v. subcarnosi ab hilo remotus. Caulis prostrati v. fuitantes foliosi.

**CLXXXIII. COMMELINACEÆ.** Flores regulares v. parum irregulares. Perianthium exterius calycinum, interius corollinum, in quaque serie sæpissime 3-merum. Stamina 6 v. abortu pauciora. Ovarium 3-loculare v. 2-loculare, ovulis in quoque loculo solitariis v. paucis orthotropis. Semina in loculis solitaria v. pauca, arcte contigua, latere inferiore affixa, latere exteriori embryostega parva intra foveolam adnata instructo. Embryo sub embryostega in albumine farinaceo marginalis v. parum intrusus.

**CLXXXIV. RAPATACEÆ.** Flores regulares. Perianthium exterius calycinum (interdum vix ullum), interius corollinum in quaque serie 3-merum. Stamina 6, antheris longis apice poro dehiscentibus. Ovarium 3-loculare, ovulis in loculis solitariis v. paucis erectis anatropis. Embryo lenticularis, prope hilum albumini farinaceo applicitum.

**Series IV. Calycinae.** Perianthium calycinum parvum rigidulum v. herbaceum (interius rarius subcorollinum sed parvum). Ovarium liberum. Albumen copiosum.

**CLXXXV. FLAGELLARIÆ.** Flores regulares. Perianthium utriusque seriei 3-merum, Stamina 6. Ovarium 3-loculare, ovulis in loculis solitariis anatropis. Fructus succulentus v. drupaceus. Embryo prope hilum lenticularis, albumini farinaceo applicitus.

**CLXXXVI. JUNCACEÆ.** Flores regulares. Perianthium utriusque seriei 3-merum. Stamina 6, rarius 3. Ovarium 1-3-loculare, ovulis solitariis v.  $\infty$ . Capsula 3-valvis. Embryo albumine plus minus carnosq. inclusus.

**CLXXXVII. PALMÆ.** Flores regulares. Perianthium utriusque seriei 3-merum. Stamina 6, ramis plura v. 3. Ovarium 1-3-loculare, ovulis solitariis. Fructus baccatus v. drupaceus, 1- rarius 2-3-spermus. Embryo parvus, in foveola parva juxta albuminis peripheriam immersus. Arborea v. frutices, foliis pinnatisectis v. fiabellatim plicatis.

**Series V. Nudifloræ.** Perianthium 0 v. ad squamas setasve reductum. Ovarii superi carpella solitaria, v. si plura syncarpica, 1- $\infty$ -ovulata. Semina sæpissime albuminosa.

\* *Flores in spadices dispositi. Arborea frutices herbæ terrestres.*

**CLXXXVIII. PANDANÆ.** Flores dioici. Perianthium 0. Fructus carpella sæpissime in phalanges confluentia. Frutices v. arborea erecti v. scandentes, foliis sessilibus elongato ensiformibus basi vaginantibus marginibus et costa subtus sæpissime spinulosis, spadicebus fasciculatis v. paniculatis spathaceo-bracteatis.

**CLXXXIX. CYCLANTHACEÆ.** Flores dioici v. in diversis spadicebus monoici. Perianthium 0, v. segmenta brevia distincta v. connata. Herbæ v. frutices acaules v. caudicibus scandentibus, foliis petiolatis fiabellatis vernatione plicatis, spadicebus solitariis spathis 2-6 deciduis stipatis.

**CXC. TYPHACEÆ.** Flores in diversis spadicebus monoici, rarissime dioici. Perianthium e squamis membranaceis v. paleis filiformibus. Herbæ aquaticæ v. paludosæ, rhizomate repente caulibus annuis, foliis lineari-elongatis integerrimis basi vaginantibus, spadicebus nudis v. basi foliaceo-1-bracteatis.

**CXCI. ABOTIDÆ.** Flores hermaphroditi v. in eodem spadice monoici, rarissime dioici. Perianthium 0 v. e squamis 4 membranaceis imbricatis. Herbæ v. frutices habitu varii, foliis variis, spadicebus solitariis sæpius spatha basi convoluta v. aperta inclusis.

\*\* *Flores solitarii v. 2-ni e rimis marginalibus. Herbula natantes lenticulares v. globosæ emergentes.*

**CXCII. LEMNACEÆ.** Flores minutissimi, monoici v. dioici. Perianthium 0. Spatha 0 v. membranacea.

**Series VI. Apocarpæ.** Perianthium 1-2-seriatum v. 0. Ovarii carpella supera, solitaria v. si plura distincta. Semina exalbuminosa.

**CXCIII. TRIURIDÆ.** Flores monoici v. dioici. Perianthium regulare, segmentis 3-8 uniseriatis valvatis. Herbula annuæ, aphyllæ, caulibus simplicibus filiformibus v. capillaribus, floribus racemosis. Seminis nucleus homogeneus.

**CXCIV. ALISMACEÆ.** Flores hermaphroditi monoici v. dioici. Perianthium regulare, segmentis 6 2-seriatis, exterioribus herbaceis interioribus membranaceis. Herbæ aquaticæ v. paludosæ, foliis sæpissime radicalibus. Embryo complicato-hippocrepicus.

**CXCV. NAIADACEÆ.** Flores monoici dioici v. hermaphroditi. Perianthium regulare, segmentis 2, 3, 4, v. 6 herbaceis v. 0. Herbæ aquaticæ v. rarius paludosæ, foliis variis. Embryo macropodus.

**Series VII. Glumaceae.** Flores in capitula v. spiculas dispositi sub bracteis (v. glumis) saepissime imbricatis solitarii, sessiles. Perianthii segmenta parva squamiformia glumacea v. 0. Ovarium 1-ovulatum v. in loculos 1-ovulatos divisum. Semina albuminosa.

CXCVI. **ERIOCAULEAE.** Flores unisexuales, in capitula depressa v. subglobosa saepissime androgyna dispositi. Perianthii segmenta 6 v. pauciora, parva scariosa v. hyalina. Ovarium 3- v. 2-loculare, ovulis pendulis orthotropis. Embryo parvus, ab hilo remotus, albumini farinaceo v. laxo carnoso applicitus.

CXCVII. **CENTROLEPIDAE.** Flores hermaphroditi v. polygami, in capitula parva v. spiculas dispositi, rarius solitarii. Perianthium 0. Ovarium 1- $\infty$ -loculare ovulis pendulis orthotropis. Embryo parvus, ab hilo remotus, in albumine subfarinaceo marginalis.

CXCVIII. **RESTIACEAE.** Flores saepissime dioici, in spiculas dispositi, glumis saepius siccis rigidisve. Perianthii regularis segmenta 6 rarius pauciora, glumacea rigida scariosa v. hyalina. Ovarium 1-3-loculare, ovulis pendulis orthotropis. Embryo parvus, ab hilo remotus, albumini farinaceo v. carnoso applicitus.

CXCIX. **CYPERACEAE.** Flores in spiculas dispositi, glumis imbricatis. Perianthium (excepto *Oreobolo*) 0 v. ad setas squamellasve hypogynas reductum. Paleae et lodiculæ 0. Ovarium 1-loculare, ovulo erecto anatropo. Nux indehiscens. Semen a pericarpio liberum. Embryo intra basin albuminis farinacei v. carnosii parvus.

CC. **GRAMINEAE.** Flores in spiculas dispositi, glumis imbricatis saepius distichis. Perianthium 0. Flores saepius palea 2-nervi et lodiculis 2-3 stipati. Ovarium 1-loculare, ovulo ascendente anatropo. Caryopsis indehiscens, pericarpio saepius semini adhærente. Embryo ad basin albuminis farinacei rarius carnosii parvus saepius minutus.

masculo multo major et crassior, squamæ multiseriatim superpositæ, peltatæ, stipite crasso; pelta magna, complanata, subquadrata, marginibus rotundatis, vertice transverse hexagono medio in carinam transversam 2-cornutam contracto, cornubus lateralibus pungentibus. Ovula ad basin peltæ utrinque stipitis solitaria, sessilia, intus spectantia. Semina majuscula, ovoidea.—Truncus erectus, cylindraceus, simplex v. basi furcatus v. proliferus, basibus petiolorum et prophyllorum persistentibus obtectus. Folia simul provenientia, subverticillata, longe petiolata, pinnata, petiolo basi subvaginante, rhachi elongata, foliolis elongatis basi lata sessilibus lineari-lanceolatis integerrimis v. apices versus denticulatis, parallele multinerviis, vernatione imbricativa stricta. Strobili glabri.

Species enumeratæ 6, Mexicanæ. *A. DC. Prod.* xvi. ii. 546. *Regel in Act. Hort. Petrop.* iv. 297.

8. *Microcycas*, *Miq. in Fl. des Serres*, vii. 141. (*Zamiæ*, sect.).—F. ♂. Strobilus cylindraceus; squamæ multiseriatim laxè superpositæ, cuneiformes, dimidio inferiore subtus loculis magnis polliniferis aperto, superiore sterili latiore semicirculari crasso obtuso densè velutino-tomentoso. Fl. ♀: Strobilus masculo longior et crassior; squamæ subvalvatim juxtapositæ, peltatæ, stipite brevi crasso; pelta magna, elongata, globoso-ovoidea, obtusa v. apice truncata, velutino-tomentosa. Ovula utrinque stipitis ad basin peltæ solitaria, sessilia, axin strobili spectantia. Semina . . .—Truncus humilis, gracilis, cylindraceus, basibus prophyllorum et petiolorum persistentibus obtectus. Folia simul subverticillatim provenientia, patentia, petiolata, pinnata, petiolo inermi, foliolis anguste lineari-ensiformibus curvis basi lata articulata sessilibus obtusè acuminatis striato-nervosis, marginibus integerrimis tenuiter recurvis, vernatione recta. Strobili pedunculati, pedunculo basi prophyllis elongatis subulato-lanceolatis molliter lanuginosis cincto.

Species 1, Cubensis. *A. DC. Prod.* xvi. ii. 538. *Regel in Act. Hort. Petrop.* iv. 303.

9. *Zamia*, *Linn. Gen.* n. 1227.—Fl. ♂: Strobilus oblongo-cylindraceus; squamæ multiseriatim superpositæ, valvatim juxtapositæ, peltatæ, stipite crasso; pelta valde incrassata, transverse hexagona v. oblique heptagona, vertice truncata, subtus in latere inferiore et secus stipitem loculos polliniferos sessiles gerentes. Fl. ♀: Strobilus masculo consimilis, sed major et crassior, pelta basi utrinque 1-ovulata. Ovula sessilia, ovoidea.—Caudex, interdum truncus humilis, simplex lobatus v. ramosus, levis v. cicatricatus, nudus epigæus v. fere hypogæus. Folia pauca, unum post alterum provenientia, pinnata, petiolo lævi v. spinuloso, pinnis latis v. angustis basi lata articulata insertis integerrimis v. serratis parallele nervosis, vernatione stricta; prophylla sæpius dentata. Strobili pro ordine inter minores, glabri v. rarius furfuracei, solitarii v. 2-∞-ni.

Species enumeratæ ad 30, Americæ tropicæ et subtropicæ borealis incolæ. *A. DC. Prod.* xvi. ii. 538. *L. C. Rich. Mem. Conf. et Cycad.* t. 27, 28. *Eichl. in Mart. Fl. Bras.* iv. i. t. 109. *Wedd. in Ann. Sc. Nat.* ser. 3, v. t. 4; *ic. in Mart. Fl. Bras.* t. 108, *iterata*. *Miq. Monogr. Cycad.* t. 7, 8; *Cycad. Amer.* t. 1, 2. *Seem. Bot. Her.* t. 43. *Jacq. Hort. Schænbr.* t. 397, 398. *IC. Rar.* t. 686, 686. *Bot. Mag.* t. 1741, 1838, 1851, 1969, 2006, 5242. *Lemaire, Ill. Hortie.* t. 133, 134, 195.

Genus a *Regelio* in *Act. Hort. Petrop.* iv. in 2 divisum: 1. *ZAMIA*, *Regel*, l. c. 304, et *AULACOPHYLLUM*, *Regel, Gartensf.* 1876, 141, et in *Act. Hort. Petrop.* iv. 300, nullo modo diversum nisi 'foliis nervis immersis,' character diagnosticus nobis effugit.

## MONOCOTYLEDONES.

### ORDO CLXVII. **HYDROCHARIDEE.**

Endl. Gen. 160. Lindl. Veg. Kingd. 141.

*Flores* regulares, unisexuales v. rarius hermaphroditi, intra spatham tubulosam 2-fidam v. 2-partitam v. bracteas 2 complicatas (spatham dyphyllam dictas) solitarii v. masculi plures. *Perianthium* ad apicem pedicelli in flore ♂, supra ovarii rostrum in flore ♀ v. ♀, patens, a basi partitum, segmentis 1- v. 2-seriatis in quaque serie 3 rarius 2; exteriora calycina, sæpius tenuiter membranacea, virentia v. subcolorata, valvata v. induplicata; interiora dum adsint plus minus petaloidea, exterioribus majora minora v. rarius æqualia. *Stamina* in flore ♂ v. ♀ 3, 6, 9, v. 12, rarius ∞ v. abortu pauciora, filamentis sæpius brevibus distinctis. *Antheræ* erectæ v. adnatæ, lineares oblongæ ovatæ v. rarius subglobosæ, 2-loculares, loculis distinctis parallelis, a latere longitudinaliter dehiscentibus; staminodia nonnulla in flore ♀ sæpe adsunt. *Ovarii* rudimentum in flore ♂ interdum in centro floris breve carnosulum pulvinatum v. lobatum v. stylis 3 capillaribus nudis coronatum. *Ovarium* floris ♀ v. ♂ inferum, 1-loculare, placentis 3-6 rarius paucioribus v. pluribus nunc vix prominulis nunc 2-lamellatis in medio cavitatis conniventibus ovarium in loculos 3-6 subperfectos dividitibus, supra loculum plus minus in rostrum farctum (rarius cavum?) productum. *Stylus* a basi integra rarius breviter evoluta in ramos stigmatosos v. stigmata tot quot placentæ oblonga v. linearia integra emarginata 2-fida v. 2-partita divisus. *Ovula* in quaque placenta plurima, sæpius numerosa, nunc supra faciem interiori lamellarum placentæ sparsa, nunc in placenta tenui sub-2-seriatim superposita, pendula v. præsertim inferiora ascendentia anatropa, v. (ex Caspary) interdum orthotropa. *Fructus* globosus ovoideus oblongus v. linearis, siccus v. plus minus pulposus, maturitate irregulariter ruptus v. hinc fissus, 1-locularis v. placentis medio coalescentibus 6-∞-locularis; pericarpium membranaceum v. rarius crassiusculum. *Semina* ∞, sæpe numerosa, oblonga, testa (an semper?) duplici, sæpius membranacea extus plus minus pulpa siccitate spongiosa v. filamentosa involuta, v. rarius crustacea demum indurata echinataque. *Albumen* 0. *Embryo* semini conformis, extus lævis v. in longitudinem tenuiter lineatus, ante maturitatem in generibus normalibus specie homogeneus et siccitate interdum farinosus, bene maturus ubi notus a latere fissura parva parum conspicua notatus, intra quam plumula minima omnino recondita; in *Thalassieis* (omnibus?) cotyledon extra radiculam crassam prominens.

*Herbæ* submersæ. *Caules* nunc ad basin aquæ brevissimi v. reptantes v. in aqua natantes stoloniformes, nunc in aqua elongati undique foliati. *Folia* nunc in caule brevi conferta, omnia sessilia linearia v. lanceolata v. interiora cujusve fasciculi rarius omnia petiolata lamina expansa supra aquam natante, nunc secus caulem elongatum submersum brevia, verticillata v. sparsa. *Spathæ* nunc ♀ v. omnes in scapo elongato per anthesin emersæ, nunc ♂ v. omnes ad axillas foliorum sessiles, solitariae v. rarius geminae; unisexuales variant monoicæ v. dioicæ.

*Species* notæ vix 40; *Glycydre* per regiones calidiores temperatasque utriusque orbis late dispersæ, quarum genera 2 Americana, cætera gerontogea, ex his species 2 solæ etiam in America

obviæ; *Marine maris Indici* incolæ exceptis *Thalassia testudinum*, Koen. ex India occidentali et speciebus Americanis 2 valde dubiis *Halophila*.

Ordo distinctissimus, a nonnullis *Naiadeis* adjunctus ob habitum fluitantem v. natantem et semina exalbuminosa, longe tamen differt ovario infero syncarpico, placentis parietalibus  $\infty$ -ovulatis. Habitus idem observatur in aliis pluribus ordinibus, e.g. in *Pontederiaceis*, in *Cyperaceis* paucis, ut etiam in dicotyledonibus nonnullis. Semina *Glycydrarum* iis *Burmanniacearum* similiora quam *Naiadearum*; embryo *Marinarum* ei *Zosterearum* paullo propius accedit.

CONSPECTUS GENERUM.

**Series I. Glycydræ.** Herbæ in aqua dulci submersæ v. natantes. Plumula ubi nota minima, intra embryonis substantiam omnino recondita.

**Tribus I. Hydrillæ.** Caulis elongatus, submersus, undique foliatus, foliis parum elongatis, Spathæ parvæ, ad axillas sessiles. Placentæ in ovario parum prominentes.

1. HYDRILLA. Folia verticillata. Spathæ ♂ subglobosæ, 1-floræ. Perianthium duplex. Stamina 3. Styli 3, indivisi. Ovula anatropa.—*Asia trop., Australia.*

2. ELODEA. Folia verticillata rarius opposita. Spathæ ♂ 1-3-floræ. Perianthium duplex. Stamina 3, 6 v. 9. Styli 3, emarginati v. 2-fidi. Ovula orthotropa.—*Amer. bor. et austr., in Eur. inquilina.*

3. LAGAROSIPHON. Folia sparsa. Spathæ ♂ multifloræ. Perianthium duplex. Stamina perfecta 3. Styli 3, emarginati v. 2-fidi. Ovula orthotropa.—*Asia trop., Madag., Africa.*

**Tribus II. Vallisneriæ.** Caulis brevissimus, interdum stolones reptantes v. natantes emittens. Folia conferta, immersa, sessilia, elongata. Spathæ pedunculatæ. Placentæ in ovario parum prominentes.

4. VALLISNERIA. Spathæ ♂ ovoideæ, floribus numerosis fere in globum confertis; ♀ cylindraceæ 1-floræ. Perianthium simplex. Stamina 1-3. Fructus linearis, erostris.—*Utriusque orbis reg. calid. et temp.*

5. BLYXA. Spathæ utriusque sexus cylindraceæ, ♂  $\infty$ -floræ, ♀ 1-floræ. Perianthium duplex. Stamina 3-9. Ovarium longe rostratum. Fructus linearis.—*Asia trop., ins. Mascar., Australia.*

6. HYDROTROPHUS. Flos ♀ in spatha cylindracea solitarius. Perianthium duplex (interius interdum 2-merum). Stamina 3. Ovarium longe rostratum. Fructus linearis. Semina echinata, rostrata.—*Bengalia.*

**Tribus III. Stratiotæ.** Caulis brevissimus. Folia conferta, alia sessilia submersa, alia (excepta *Stratiote*) longe petiolata, lamina natante. Spathæ pedunculatæ. Placentæ 2-lamellatæ, valde intrusæ, ovarium in loculos 6 subperfecte dividentes.

7. LIMNOBIUM. Spathæ 2-phyllæ, ♂ 2-3-floræ, ♀ 1-floræ. Perianthium duplex. Stamina 3-9. Styli 3. Fructus ovoideus v. oblongus.—*Amer. bor. et trop.*

8. HYDROCHARIS. Spathæ ♂ 2-phyllæ paucifloræ, ♀ 1-phyllæ complicatæ 1-floræ. Perianthium duplex. Staminum filamenta 6, 2-fida, quorum 3 2-antherifera, 3 1-antherifera. Styli 6, 2-fidi. Fructus ovoideus v. oblongus.—*Eur. As. med., in Australia et ins. Mascar. inquilina.*

9. OTTELIA. Flos ♀ in spatha tubulosa solitarius. Perianthium duplex. Stamina 6- $\infty$ . Ovarium rostratum. Styli 6, 2-fidi. Fructus oblongus, sæpe 3-6-alatus.—*Orb. vet. reg. trop. et subtrop., Brasilia.*

10. BOOTTIA. Spathæ tubulosæ, ♂ 3- $\infty$ -floræ, ♀ 1-floræ. Perianthium duplex. Stamina 6-10. Ovarium crasse rostratum. Styli 6-16, 2-fidi. Fructus  $\infty$ -costatus, exalatus.—*Burma, Afr. trop.*

11. STRATIOTES.—Spathæ 2-phyllæ, ♂ 2- $\infty$ -floræ, ♀ 1-floræ. Perianthium duplex. Stamina 11-16. Ovarium rostratum. Styli 6, 2-fidi. Fructus pedicello recurvo e spatha exsertus. Folia submersa spinuloso-serrulata, nec natantia.—*Europa.*

**Series II. Marinæ, seu Tribus IV. Thalassieæ.** Herbæ marinæ submersæ. Cotyledon ubi nota extra radiculam crassam prominens.

12. ENHALUS. Spathæ 2-phyllæ, ♂ subsessiles multifloræ, ♀ longe pedunculatæ 1-floræ. Perianthium duplex. Stamina 3. Ovarium longe rostratum. Styli 6-12, filiformes. Folia submersa longissima, basi per 2-3 vagina tenui stipata.—*Mare Indicum.*

13. *THALASSIA*.—Spathæ 2-phyllæ, basi breviter tubulosæ, utriusque sexus 1-floræ. Perianthium simplex. Stamina 6. Ovarium longe rostratum. Fructus demum in lobos  $\infty$  dehiscens. Folia longa, basi per 2-3 vagina membranaceo-scariosa stipata.—*Ind. Occid., Mare Rubrum et Indicum*.

14. *HALOPHILA*. Spathæ 2-phyllæ, utriusque sexus 1-floræ. Perianthium simplex. Stamina 3. Ovarium longe rostratum. Styli 3. Fructus globosus. Folia ad nodos e squama membranaceo-scariosa geminæ, petiolata, pennivenia.—*Mare Indicum ab Africa usque ad Austral. et Mare Pacif.*

#### TRIBUS I. HYDRILLÆ.

1. *Hydrilla*, L. C. Rich. in *Mem. Inst. Par.* 1811, 9, 61, t. 2. (Epigynanthus, Blume in *Flora* 1825, 679, et in *Hassk. Cat. Hort. Bog.* 53, nomen tantum. *Hydrospondylus*, Hassk. in *Flora*, 1842, ii. Beibl. 33).—Spathæ unisexuales, 1-floræ, ad axillas foliorum sessiles,  $\delta$  subglobosæ membranaceæ, muricatæ, sub anthesi irregulariter ruptæ. Flos breviter pedicellatus. Perianthium duplex, 3-merum; segmenta exteriora ovata v. obovata, interiora angustiora nec longiora. Stamina 3, filamentis crassiusculis; antheræ ovatæ. Pistilli rudimentum 0. Spathæ  $\varphi$  tubulosæ, ore 2-dentato. Flos sessilis. Perianthium supra ovarii rostrum mari similis nisi segmentis angustioribus. Staminodia 0. Ovarium spatha inclusum, ultra spatham in rostrum longissimum filiforme productum, 1-loculare, placentis 3, rarius 2, parum prominulis; styli stigmatosi 3, rarius 2, lineares, crassiusculi, indivisi; ovula haud numerosa, (ex Caspary) anatropa. Fructus angustus, e spatha fissa subexsertus. Semina (ex L. C. Richard) oblonga, testa adnata utrinque minute producta.—Caules submersi, elongati, ramosi, undique foliosi. Folia 3-4-natim verticillata v. inferiora opposita, brevia. Spathæ  $\delta$  parvæ,  $\varphi$  tenues.

Species 1, per aquas dulces Asiæ tropicæ et Australiæ latissime dispersa. *Casp. in Prings. Jahrb.* i. 493. *Roxb. Corom. Pl.* t. 164 (*Serpicula*).

Stylus ex Hasskarl intra tubum perianthii (ovarii rostrum) liberum, quod in speciminibus ipsis Javanicis confirmare nequimus. Ovarii rostrum filiforme intus fartum vidimus quale  $\pi$  L. C. Rich. l. c. t. 2 F. G. delineatur.

2. *Utricularia*, Mich. *Fl. Bor. Amer.* i. 20 (*Udora*, Nutt. *Gen. N. Amer. Pl.* ii. 242. *Apalanthe* et *Egeria*, Planch. in *Ann. Sc. Nat. ser.* 3, xi. 75, 79. *Anacharis* et *Apalanthe*, Bab. et Planch. in *Trans. Bot. Soc. Edinb.* iii. 27, t. 2, et in *Ann. Nat. Hist. ser.* 2, i. 81, t. 8).—Spathæ unisexuales v. polygamæ, ovatæ v. tubulosæ, apice 2-lobæ, demum sæpe varie rumpentes, foemineæ 1-floræ, polygamæ 1-3-floræ. Perianthium  $\delta$  ad apicem pedunculi longi,  $\varphi$  v.  $\varphi$  in ovarii rostro, duplex, 3-merum; segmenta utriusque seriei petaloidea, interiora sæpius exterioribus latiora. Stamina 3, 6 v. 9, in flore  $\varphi$  ad staminodia 3 reducta v. 0; antheræ oblongæ, erectæ. Ovarium in floribus  $\varphi$  et  $\varphi$  intra spatham inclusum, oblongo-lineare, 1-loculare, placentis 3 parietalibus parum prominulis, in rostrum longissimum filiforme fartum productum; stylus brevissimus, ramis stigmatosis 3 linearibus apice 2-lobis v. profunde 2-lobis; ovula in placentis numerosa, (ex Caspary) orthotropa. Fructus oblongus, spatha inclusus v. a latere exsertus. Semina  $\infty$ , oblonga, filamentis pulposis induta; embryo conformis, plumula parva inclusa.—Caules submersi, elongati, ramosi, undique foliosi. Folia brevia, 3-4-natim verticillata v. inferiora opposita. Spathæ ad axillas foliorum sessiles, parvæ v. tenues.

Species ad 8 in aquis dulcibus Americæ temperatæ v. tropicæ late dispersæ, una etiam in variis locis Europæ obvia, ut videtur inquilina, etsi hodie copiosa. L. C. Rich. in *Mem. Inst. Par.* 1811, 4, 60, t. 1. *Caspary in Prings. Jahrb.* i. 497. *Reichb. Ic. Fl. Germ.* t. 59 (*Udora*).

ANACHARIS, L. C. Rich. in *Mem. Inst. Par.* 1811, 7, 61, t. 2, est *E. callitrichoides*, Casp. (*Egeria chilensis* et *Egeria Mattheusii*, Planch.) species Americæ australis extratropicæ, antheris ratione filamentis maxime post pollinis emissionem petaloideo-expansis insignis.

3. *Zagareosiphon*, Harv. in *Hook. Journ. Bot.* iv. 230, t. 22.—Spathæ unisexuales, compressæ, ad axillas foliorum sessiles;  $\delta$  ovatæ, apice 2-fidæ, floribus  $\infty$  sæpe numerosis

pedicellatis minimis. Perianthium duplex, 3-merum; segmenta utriusque seriei petaloidea, ovata, interiora exterioribus parum minora. Stamina perfecta 3, sepalis opposita, filamentis brevibus; antheræ ovatae; staminodia sæpius adsunt 2 v. 3. Pistilli rudimentum 0. Spathæ ♀ oblongæ v. angustæ, mox hinc fissæ, 1-floræ. Perianthium supra ovarii rostrum mari subsimile. Staminodia 0. Ovarium oblongum, 1-loculare, placentis 3 parietalibus parum prominulis, in rostrum longissimum filiforme farctum productum: styli 3, crassi, erecti, stigmatosi, apice emarginati v. 2-fidi; ovula sat numerosa, (ex Caspary) orthotropa. Fructus ovatus oblongus v. fere linearis, pericarpio membranaceo. Semina oblonga, pulpa tenui involuta; embryo conformis, plumula verisimiliter inclusa, a nobis tamen nondum detecta.—Caules submersi, elongati, ramosi, undique foliosi. Folia linearia v. setacea, brevia, sæpe serrulata, sparsa, inferiora sæpissime alterna, floralia haud raro irregulariter verticillata v. conferta. Spathæ interdum ad axillas geruntur, sæpius tamen more affinium solitariae.

Species ad 5, in aquis dulcibus submersæ, una Indica, altera Madagascariensis, 3 Africanæ. Caspary in *Bot. Zeit.* 1870, 88, in *Pringsh. Jahrb.* i. 503, in *Schweinf. Beitr. Fl. Æthiop.* 200, t. 4, et in *Abhandl. Naturw. Ver. Bremen*, vii. 252, t. 18.

NÉCHALANDRA, *Planch. in Ann. Sc. Nat. ser. 3, xi.* 78, est *L. Roxburghii*, Benth. (*Vallisneria alternifolia*, Roxb.; Wight in *Hook. Bot. Misc.* ii. 344, t. 11) species Africanis paullo validior, foliis sæpius nec semper longioribus, characteribus tamen omnino iisdem. Planchon l. c. lapsu calami huc citat iconem *Roxburghii* Pl. Corom. t. 165, quæ *Vallisneria octandra*, Roxb. (*Blyxa*, Thou).

## TRIBUS II. VALLISNERIEÆ.

4. *Vallisneria*, Linn. *Gen. n.* 1097.—Spathæ dioicæ, breviter 2-3-fidæ, ♂ in scapo brevi ovoideæ, ♀ in scapo longissimo filiformi spirali cylindraceæ, angustæ. Flores ♂ intra spatham numerosi, minimi, longiuscule pedicellati sed in capitulum densum conferti. Perianthium simplex, 3-merum. Stamina 1-3, filamentis crassiusculis; antheræ biglobosæ. Pistilli rudimentum 0. Flos ♀ intra spatham solitarius. Perianthii segmenta quam in mare paullo majora. Staminodia 3, segmentis alterna, parva, 2-fida. Ovarium spatha inclusum, 1-loculare, placentis 3 parietalibus parum prominulis; stigmata 3, brevia, lata, 2-dentata v. 2-fida; ovula numerosa. Fructus spatha parum aucta inclusus, linearis, erostris, pericarpio membranaceo. Semina oblonga, basi parum attenuata, testa membranacea; embryo semini conformis, plumula minima intra fissuram vix conspicuam recondita.—Herba submersa, caule brevissimo interdum stolonifero. Folia conferta, longissime angustæque linearia, basi breviter vaginata. Scapi ♂ sub spatha per anthesin rupti, spathis apertis ad aquæ superficiem natantibus, ♀ florentes apice emersi, fructiferi spiraliter retracti sub aqua maturescentes.

Species 1, in aquis dulcibus per regiones calidiores temperatasque utriusque orbis late dispersa. *L. C. Rich. in Mem. Inst. Par.* 1811, 12, 62, t. 3. *Hook. Bot. Misc.* iii. 87, t. suppl. 23, 24. *Benth. Fl. Austral.* vi. 258. *Reich. Ic. Fl. Germ.* t. 60. *Nees, Gen. Fl. Germ. Monocot.* iii. n. 50; in his ultimis plumula perperam extra nec intra embryonem delineatur, analysi optimi Richardii male intellecta.

PHYSIUM, *Lour. Fl. Coch.* 662, est *Vallisneria spiralis*, spatha mascula pro pericarpio, florum alabastris pro seminibus descriptis.

5. *Blyxa*, Thou. *Gen. Nov. Madag.* 4 (Diplosiphon, *Dene. in Jacquem. Voy. Bot.* 166, t. 167).—Spathæ unisexuales, utriusque sexus cylindraceæ, apice breviter 2-fidæ. Flores ♂ intra spatham plures, longe pedunculati. Perianthium duplex, 3-merum; segmenta exteriora oblonga, interiora multo longiora, fere filiformia. Stamina 3-9, uno alterove sæpe ad staminodium reducto, filamentis brevibus; antheræ oblongo-lineares, erectæ. Pistilli rudimentum centrale e stylis 3 capillaribus nudis basi breviter carnosoincrassatis. Flos ♀ intra spatham solitarius, sessilis. Perianthium supra ovarii rostrum mari simile. Staminodia 0 v. minuta. Ovarium longissime lineare, apice rostratum, 1-loculare,

placentis 3 parietalibus parum prominulis; stylus basi brevissimus, ramis stigmatosis 3 filiformibus indivisis. Fructus linearis, spatha inclusus, paricarpio membranaceo. Semina  $\infty$ , oblonga, pulpo parco induta; embryo conformis, plumula minima intra fissuram vix conspicuam recondita.—Herba submersa, caule brevissimo. Folia conferta, longe linearia. Scapi intra folia nunc breves omnino immersi, nunc longe filiformes, spatham florentem ex aqua exserentes.

Species 1, aqua dulci Asiæ tropicæ Australiæ et ins. Mascarensium immersa, *L. C. Rich. in Mem. Inst. Par.* 1811, 63, t. 4, 5. *Roxb. Corom. Pl.* t. 165 (*Vallisneria*). *Benth. Fl. Austral.* vi. 258. Stamina numerus valde variabilis evadit, in speciminibus Indicis sæpius 3-4, interdum 8, rarissime 9.

6. *Hydrotrophus*, *C. B. Clarke in Journ. Linn. Soc.* xiv. 8, t. 1.—Flos hermaphroditus, in spatha lineari solitarius, sessilis. Perianthium supra ovarii rostrum duplex, 3-merum; segmenta exteriora lineari-oblonga, tenuiter herbacea; interiora (sæpius ad 2 reducta? angustissima, tenuiter petaloidea, apice crispa. Stamina 3, filamentis linearibus; antheræ angustæ, erectæ, lateraliter dehiscentes. Ovarium intra spatham inclusum, lineare, ultra spatham in rostrum longum filiforme productum, 1-loculare, placentis parietalibus parum prominulis; styli 3, simplices, basi subconnati. Capsula linearis, spatha inclusa, paricarpio membranaceo. Semina  $\infty$ ; testa crustacea, duriuscula, medio subgloboso echinata, apice basique in rostrum longum rigidum nudum producta; embryo subglobosus, plumula minima intra fissuram lateralem parum conspicuam recondita.—Herba submersa, caule brevissimo. Folia conferta, longissime angustissimeque linearia. Scapi inter folia filiformes, primum breves, demum valde elongati, florem supra aquam exserentes.

Species 1, in aquis dulcibus Bengaliz a Clarkeo detecta.

### TRIBUS III. STRATIOTÆ.

7. *Limnobium*, *L. C. Rich. in Mem. Inst. Par.* 1811, 32, 66, t. 8. (*Hydromystria*, *G. F. Mey. Prim. Fl. Esseq.* 152. *Jalambicea*, *Llave et Lex. Nov. Veg. Descr.* ii. 12. *Trianea*, *Karst. in Linnæa*, xxviii. 424).—Spathæ unisexuales, utriusque sexus 2-phyllæ, bracteis complicatis, exteriori interiorem amplectente. Flores  $\sigma$  in spatha 2-3, longe pedunculati. Perianthium duplex, 3-merum; segmenta exteriora membranacea, oblonga, interiora petaloidea longiora angusta. Stamina 3-9, filamentis brevibus; antheræ oblongæ v. lineares, erectæ, lateraliter dehiscentes. Ovarii rudimentum centrale, breve, styli 2-3 brevibus nudis coronatum. Flos  $\rho$  in spatha solitarius, sessilis v. breviter pedicellatus. Perianthium supra ovarium mari simile v. interdum 2-merum. Staminodia 3 v. 2, brevia. Ovarium ovoideum, erostre, placentis valde intrusus centro contiguus fere in loculis 2-6 divisum; styli 3, rarius 2, 2-fidi. Fructus ovoideo-oblongus, apice perianthii reliquiis dentatus. Semina subglobosa, apice basique breviter mucronata, testa membranacea pulpa involuta, siccitate filamentis brevibus patentibus hispida v. fere echinata.—Herbæ in aqua dulci fluitantes, caule stolonifero. Folia ad nodos fasciculata, petiolata, lamina supra aquam natante ovata v. rotundato-cordata, subtus interdum (nec semper) substantia spongiosa incrassata. Scapi inter folia oriundi, breves nunc brevissimi.

Species 3 v. 4, Americæ borealis Mexici et Americæ australis tropicæ incolæ. *Bosc in Ann. Mus. Par.* ix. t. 30 (*Hydrocharis*). *Benth. Bot. Sulph.* 175. *Griseb. Fl. Brit. W. Ind.* 506.

Planta a Spruceo distributa e fl. Amazonum n. 1693 sub nomine *Hydrocharella echinospora* valde affinis est *Limnobio Sinclairi*, *Benth.*, nisi conspecifica. Planta Mexicana Schaffneriana, n. 484, videtur *L. stolonifera*, *Griseb.*

8. *Hydrocharis*, *Linn. Gen.* n. 1126.—Spathæ unisexuales,  $\sigma$  2-phyllæ, bractea exteriore interiorem amplectente,  $\rho$  1-phyllæ complicatæ. Flores  $\sigma$  in spatha pauci, sæpius 3, longe pedunculati. Perianthium 2-seriatum, 3-merum; segmenta exteriora

ovata, herbacea; interiora petaloidea, multo majora, suborbiculata, undulato-plicata. Stamina filamenta 6, 2-fida, crassiuscula, scabra, 3 sepalis opposita ramo utroque antherifero, 3 petalis opposita ramo interiore nudo exteriori antherifero; antheræ in toto 9, loculis brevibus adnatis longitudinaliter dehiscentibus. Ovarii rudimentum in centro floris breve, pulvinatum, carnosum. Flos ♀ in spatha unicus, longe pedunculatus. Perianthium supra ovarium mari simile nisi petalis basi intus tuberculo carnosio instructis. Ovarium oblongo-turbinatum, erostre, placentis valde intrusis medio contiguis subperfecte 6-loculare; stigmata (v. styli rami stigmatosi) 6, crassiuscula, linearia, 2-fida. Fructus ovoideus v. oblongus, pericarpio carnosio, 6-locularis. Semina numerosa, ovoidea, pulpa laxa induta. Embryo conformis, plumula intra fissuram lateralem parum conspicuam recondita.—Herba in aqua dulci fluitans, stolonifera. Folia ad nodos fasciculata, longe petiolata, lamina cordato-orbiculata supra aquam natante. Scapi inter folia oriundi, per anthesin supra aquam exserti. Petala alba.

Species 1, Europæ et Asiæ mediæ incola, in Australia et Madagascar verisimiliter inquilina. *L. C. Rich. in Mem. Inst. Par.* 1811, 36, 67, t. 9. *Reichb. Ic. Fl. Germ. t.* 62. *Nees, Gen. Fl. Germ. Monocot.* iii. n. 52.

9. *Ottelia*, Pers. *Syn. Pl.* i. 400 (*Damasonium*, Schreb. *Gen. Pl.* 242, non Juss.).—Flos hermaphroditus, in spatha tubulosa breviter 2-fida solitarius, sessilis. Perianthium supra ovarii rostrum 2-seriatum, 3-merum; segmenta exteriora oblonga v. linearia, rigidule membranacea, interiora petaloidea, multo majora, late obovata v. orbiculata, basi appendicibus brevibus obovoideis carnosius instructa. Stamina 6-∞ (usque ad 15), filamentis sæpe complanatis, antheræ erectæ, oblongæ v. lineares, lateraliter dehiscentes. Ovarium oblongum, plus minus rostratum, placentis valde intrusis in centro loculi conniventibus in loculos 6 fere perfecte divisum; styli 6, lineares, semi-2-fidi; ovula numerosa, placentas seu loculorum parietes undique obtegentia. Fructus spatha ventricosa sæpe 3-6-alata inclusus, oblongus, apice attenuatus, pericarpio crassiusculo. Semina numerosa, parva, oblonga, testa crassiuscula pulpa viscosa induta; embryo conformis, plumula parva, intra fissuram lateralem brevem recondita.—Herbæ aqua dulci submersæ, caule brevissimo. Folia conferta, alia submersa petiolo brevi, alia longe petiolata lamina supra aquam natante ovata oblonga v. latissime cordata. Scapus elongatus; spatha herbacea, sub anthesi emersa, ∞-nervis, costis 2-6 prominulis interdum in alas foliaceas valde inæquales haud raro undulatas dilatatis.

Species notæ 6 v. 7, Asiæ tropicæ, Japoniæ, Australiæ, ins. Mascarensium, Africæ tropicæ et subtropicæ et Brasilæ incolæ. *L. C. Rich. in Mem. Inst. Par.* 1811, 27, 65, t. 7. *Planch. in Ann. Sc. Nat. ser.* 3, xi. 81 (*Damasonium*, excl. sp. n. 2). *Miq. in Ann. Mus. Bot. Lugd. Bat.* ii. 271. *Benth. Fl. Austral.* vi. 256. *Sm. Exot. Fl.* t. 15 (*Stratiotes*). *Roxb. Corom. Pl.* t. 185 (*Damasonium*). *Bot. Mag.* t. 1201 (*Damasonium*).

10. *Boottia*, Wall. *Pl. As. Rar.* i. 51, t. 65.—Spathæ unisexuales, tubulosæ demum subfusiformes, breviter 2-fidæ. Flores ♂ intra spatham plures, pedunculati, per anthesin exserti. Perianthium 2-seriatum, 3-merum; segmenta exteriora latiuscule linearia v. oblonga, interiora petaloidea, multo majora, obovato-oblonga. Stamina 6-12, filamentis sæpius complanatis; antheræ erectæ, oblongæ, lateraliter dehiscentes. Pistilli rudimentum in centro floris pulvinatum, carnosum, stylis 3 longis petaloideis 2-fidis coronatum. Flos ♀ intra spatham solitarius, sessilis. Perianthium supra ovarii rostrum mari subsimile nisi paullo minus. Staminodia pauca, parva. Ovarium in rostrum crassiusculum fartum attenuatum, placentis valde intrusis in centro loculi conniventibus in loculos tot quot styli subperfecte divisum; styli 6-15, lineari-filiformes, 2-fidi; ovula numerosa, placentarum facies seu loculorum parietes undique obtegentia. Fructus spatha ventricosa exalata inclusus. Semina numerosa, testa crassiuscula pulpa induta; embryo conformis, plumulam haud deteximus.—Herbæ aqua dulci submersæ, habitu folisque omnino *Otteliæ*. Spathæ ∞-costatæ, costis 2 lateralibus sæpe magis prominulis, non tamen alatis.

Species 3 v. 4, Burmæ et Africæ tropicæ incolæ, inclusis, præter speciem Wallichianam Burmanicam, 2 v. 3 Africanis. His verisimiliter includendæ *Damasonium aloëfolium*, Planch. in Ann. Nat. Hist. ser. 3, xi. 81, *Ottelia lancifolia*, A. Rich. Fl. Abyss. ii. 280, t. 95, et *Ottelia scabra*, Baker in Trans. Linn. Soc. xxix. 151, spathis fœmineis jam defloratis pro hermaphroditis descriptis. Specimina ♂ Africana spathis ∞-floris adsunt plura in Herb. Kew.

11. *Stratiotes*, Linn. Gen. n. 687.—Spathæ unisexuales, diphyllæ, bracteis complicatis exteriore interiorem amplectente. Flores ♂ intra spatham 2-∞, singuli bracteola spathacea complicata stipati, pedicello longo e spatha exserti. Perianthium 2-seriatum, 3-merum; segmenta exteriora ovata v. oblonga, membranacea; interiora petaloidea, multo majora, lata, undulato-crispa. Stamina ∞ (11-15), processibus numerosis brevioribus (staminodiis?) cincta, filamentis basi complanatis; antheræ erectæ, lineares, lateraliter dehiscentes. Pistilli rudimenta 0. Flos ♀ in spatha solitarius, breviter pedicellatus. Perianthium supra ovarii rostrum mari simile nisi paullo minus. Staminodia ∞, linearia, stylis breviora. Ovarium oblongum, sæpius e spatha recurvum in rostrum longe attenuatum; placentis valde intrusis in centro loculi contiguis sub-6-loculare; styli 6, lineares, semi-2-fidi. Fructus pedicello recurvo e spatha lateraliter exsertus, ovoideus, acuminatus, pericarpio carnosus. Semina abortu sæpius pauca, testa crassiuscula pulpa induta; embryo conformis, plumula intra fissuram lateralem recondita.—Herba perennis, submersa, caule brevissimo stolonifero. Folia conferta, omnia sessilia, submersa, lineari-lanceolata, carnosula, acuta, margine dentibus brevibus pungentibus serrata. Scapi breves v. elongati, spatham supra aquam exserentes.

Species 1, Europea. L. C. Rich. in Mem. Inst. Par. 1811, 24, 64, t. 6. Nolte, "*Stratiotes et Sagittaria*," Kopenhagen, 4to. t. 1. Nees, Gen. Fl. Germ. Monocot. in. n. 51. Reichb. Ic. Fl. Germ. t. 61.

#### TRIBUS IV. THALASSIÆ.

12. *Enhalus*, L. C. Rich. in Mem. Inst. Par. 1811, 64.—Spathæ unisexuales, diphyllæ, bractea exteriore interiorem amplectente. Flores ♂ intra spatham numerosi, minimi, in receptaculo oblongo pedicellati. Perianthium 2-seriatum, 3-merum; segmenta utriusque seriei subæqualia, interioribus magis petaloideis. Stamina 3, ex Zollinger segmentis exterioribus, ex Griffith interioribus opposita, filamentis brevissimis; antheræ oblongæ, erectæ, lateraliter dehiscentes. Pistilli rudimentum 0. Flos fœmineus intra spatham mari longiorem solitarius, sessilis. Perianthium ad apicem rostri ovarii 2-seriatum, 3-merum; segmenta exteriora oblonga, imbricata; interiora multo longiora, linearia, spatham excedentia, subvalvata, extus pulcherrime undulato-plicata, introrsum plicis transversis notata. Staminodia 0. Ovarium longe rostratum, 1-loculare, placentis valde intrusis in centro fere contiguis sub-6-loculare; stylorum rami stigmatosi 6 12, lineari-filiformes; ovula in quaque placenta pauca, 1-seriata, anatropa. Fructus spatha patente v. marcescente suffultus, ovoideus, placentis farinoso-carnosis fere in loculos 6 divisus. Semina pauca, magna, testa cellulosa; embryo conformis; cotyledon exserta, subconica, lateralis, bilabiata; plumula recondita magna polyphylla, foliolo exteriore a basi lineari apice serrulato.—Planta marina, submersa, rhizomate crasso fibris foliorum detritorum crinito. Folia longissima, angusta, plana, per 2-3 vagina tenuiter membranacea stipata, marginibus incrassatis, apice rotundata denticulataque. Spathæ ♂ breves, compressæ, vix ex arena exserta; flores sub anthesi a pedicello soluti, in aquæ superficie natantes. Scapus ♀ primum erectus elongatus, per anthesin spiraliter contractus submersus, post fecundationem iterum emersum fructum maturans.

Species 1, ad oras maris Indici a Zeylantia usque ad Australiam extensa. Linn. f. Suppl. 268 (*Stratiotes*). Griff. Notul. iii. 175; Ic. Pl. Asiat. t. 249, 250. Zoll. Verz. Ind. Archip. Pfl. ii. 69.

Richard plantam non vidit et genus condidit ad descriptionem Linnæi qui stylorum ramos seu stigmata pro antheris habuit. Specimina nostra plura, in variis locis lecta, flores fœmineos præbent, sed ob pressionem male examinare potuimus. Characterem supra datum præcipue ex descriptione fusiore Griffithii et notis Zollingerianis sumpsimus.

13. *Thalassia*, Soland. in Koen. et Sims, Ann. Bot. ii. 96 (Schizotheca, Ehrenb. ex Schaeinf. Beitr. Fl. Æthiop. 293, nomen).—Spathæ unisexuales, lato-lineares, diphyllæ, bracteis basi in tubum breviter connatis, utriusque sexus 1-floræ. Flos ♂ longe pedicellatus. Perianthium 1-seriatum, 3-merum; segmenta ovata, petaloidea. Stamina 6, filamentis brevissimis; antheræ longæ, erectæ, lateraliter dehiscentes. Pistilli rudimentum 0. Flos ♀ primum intra spatham caducissimam subsessilis, mox plus minus stipitatus. Ovarium longe rostratum. Perianthium . . . Styli . . . Fructus supra spathæ cicatricem stipitatus, globosus, laevis rugosus v. fere echinatus, ab apice in lobos plures breves v. demum alte fissos stellatimque patentes dehiscens. Semina ∞, parva, pulpa induta, placentis parietalibus affixa.—Plantæ marinæ submersæ. Rhizoma longe repens, annulatum; caules breves. Folia longe loriformia, basi per 2-3 vaginis longis membranaceo-scariosis stipata. Scapi utriusque sexus e vaginis similibus parum prominentes.

Species 2, altera ad oras insularum Indiæ occidentalis, altera in Mare Rubro et Indico crescens. Aschers. in Neumayer, Anleit. Wissensch. Beob. 361.

14. *Halophila*, Thou. Gen. Nov. Madag. 2 (Barkania, Ehrenb. et Hempr. in Abhandl. Acad. Berl. 1832, 429).—Spathæ unisexuales, diphyllæ, bracteis a basi liberis, utriusque sexus 1-floræ. Flos ♂ pedicellatus. Perianthium 1-seriatum, 3-merum; segmenta subherbacea. Antheræ 3, subsessiles, oblongo-lineares, segmentis alternæ, extrorsum dehiscentes. Pistilli rudimentum 0. Flos ♀ intra spatham sessilis. Perianthii segmenta 3, minuta. Ovarium longe rostratum, 1-loculare; styli 3, simplices, longe filiformes, undique minute papilloso; ovula placentis 3 parietalibus vix prominulis 2-seriatim affixa. Fructus spatha inclusus, subglobosus, rostro ovarii exserto coronatus. Semina ∞, subglobosa, testa membranacea. Embryo crassus, apice excavatus; cotyledon intra depressionem prominens, spiraliter torta, plumulam vaginans.—Herbæ marinæ, submersæ, caulibus repentibus stoloniformibus ad nodos radicanibus foliatisque. Folia ad quemque nodum caulis v. ramuli intra squamam membranaceam v. hyalino-scariosam sessilem caulem amplectentem gemina, petiolata, ovalia v. oblonga, pennivenia. Spathæ intra folia solitaria, sessiles, parvæ.

Species 2 v. 3 ad costas marium Indicarum ab Africa tropica et Mare Rubro usque ad Australiam et Mare Pacificum australe submersæ. Bailey Balf. in Trans. Bot. Soc. Edinb. xiii. 290, t. 8 ad 11 et 16. Aschers. in Nuov. Giorn. Bot. Ital. iii. 300, et in Neumayer, Anleit. Wissensch. Beob. 367. Benth. Pl. Austral. vii. 182. Griff. Ic. Pl. Asiat. t. 161 C, f. 2 (*Diplanthera*).

Characteres tam vegetationis singulares quam florales ample illustravit B. Balf. in dissertatione egregia supra citata. Auctor *H. spinulosam*, Benth. (*Cauliniam spinulosam*, Br.) rite e genere excludit, species est forte ad Naiadeas referenda sed floribus adhuc ignotis quoad affinitates dubiæ remanet. *H. Beccarii*, Aschers., pariter a Balfourio e genere excluditur ob squamarum sub foliis deficientia; folia tamen frondosa omnino *Halophilæ* et squamæ minutæ adesse videntur. *H. Baillonii*, Aschers., et *H. Engelmanni*, Aschers., species Americanæ, quoad genera omnino dubiæ remanent.

## ORDO CLXVIII. BURMANNIACEÆ.

Endl. Gen. 163. Lindl. Veg. Kingd. 171.

*Flores regulares* v. in *Corsieis* parum irregulares, hermaphroditi v. rarissime polygami. *Perianthium* superum, corollinum, tubo supra ovarium vario rarius obsoleto; limbi segmenta 6 v. 3, inter se libera; 3 exteriora viridiora, inter se æqualia, æstivatione valvata v. induplicata, v. in *Corsieis* posticum maximum; 3 interiora sæpius minora, nunc

minima v. obsoleta, rarius exterioribus similia, inter se semper æqualia. *Stamina* 3 v. 6, tubo perianthii inserta inclusaque, v. ad faucem affixa et intra tubum deflexa, v. tubo deficiente exserta, filamentis brevibus nunc brevissimis. *Antheræ* 2-loculares, connectivo varie dilatato v. appendiculato rarius vix evoluta; loculi distincti, transversim v. in longitudinem dehiscentes. *Ovarium* inferum, nunc 3-loculare placentis axilibus, nunc 1-loculare placentis 3 parietalibus. *Stylus* tubo perianthii inclusus v. tubo deficiente brevissimus, apice in ramos 3 breves sæpius brevissimos crassos vertice stigmatosos divisus. *Ovula* in quaque placenta numerosissima, minuta. *Fructus* capsularis, perianthio emarcido v. ejus basi circumscissa coronatus, nunc lateraliter inter costas, nunc vertice irregulariter v. rarius valvatis dehiscentis. *Semina* numerosa, parva, testa tenui nunc adnata, nunc laxa hyalina ultra nucleum utrinque longe producta, exalbuminosa. *Embryo* semini v. nucleo conformis, specie homogeneus.

Herbæ annuæ v. e rhizomate perenni, erectæ, simplices v. rarissime in ramos paucos divisæ. Folia nunc evoluta, ad basin caulis conferta v. rarius secus caulem sparsa, linearia v. lanceolata, nunc sæpius omnia ad squamas parvas sparsas cauli concolores reducta. Flos unicus terminalis, v. plures in cyma terminali 2-fida v. rarius dichotoma, secus ramos unilateraliter sessiles v. breviter pedicellati, cærulescentes, flavi v. rarius albi.

Species ad 54, per regiones calidiores utriusque orbis late dispersæ, usque ad Americam borealem et Chinam extensæ.

Ordo nulli arcte affinis, ovarii et seminum structura hinc *Hydrocharideis* quibus Martius approximavit, hinc *Orchideis* uti bene indicavit Miessner, accedit. Ab his tamen perianthio sæpiissime et androcio semper regularibus longe differt. In tribu *Corsiearum* perianthii segmentum unum maximum primo aspectu labellum *Orchidearum* in mentem revocat, sed ad seriem exteriorem pertinet nec ut in *Orchideis* e segmento interiore cum staminodio verisimiliter confluyente sistens.

#### CONSPECTUS GENERUM.

**Tribus I. Suburmanniæ.** Perianthii tubus cylindraceus 3-gonus v. infundibularis. Stamina 3, intra tubum fere sessilia.

\* *Ovarium* 3-loculare. *Caulis* foliatus v. aphyllus.

1. **BURMANNIA.** Perianthii tubus 3-angulatus v. sæpius 3-alatus; limbi segmenta interiora exterioribus minora v. 0. Capsula plus minus 3-alata.—*Utriusque orbis reg. trop., Amer. bor., China.*

2. **CAMPYLOSIPHON.** Perianthii tubus angustus, incurvus, exalatus; limbi segmenta omnia subæqualia, linearia. Capsula angusta, exalata.—*Brasilis bor.*

\*\* *Ovarium* 1-loculare, rarius ima basi divisum. *Caules* aphylli.

3. **GYMNOSIPHON.** Perianthii tubus exalatus, post anthesin medio circumscissus. Antherarum connectivum inappendiculatum.—*Amer. et Afr. trop., Archip. Malay.*

4. **DICTYOSTEGIA.** Perianthii tubus exalatus, continuus. Antherarum connectivum parum dilatatum.—*Amer. et Afr. trop.*

5. **APTERIA.** Perianthii tubus exalatus, 3-sacculatus. Filamenta sub anthera late petaloideo-alata.—*Amer. bor. et austr.*

**Tribus II. Thismiæ.** Perianthii tubus obovoideus v. oblongus, ore sæpius constrictus. Stamina 6, antheris inversis intra tubum deflexis, connectivis dilatatis interdum connatis. Caules carnosissimi, aphylli.

6. **THISMIA.** Perianthii lobi 3 v. omnes subulati, patentes v. recurvi. Antheræ e tubo haud prominentes.—*Amer. et Asia trop.*

7. **BAGNISIA.** Perianthii lobi 3, unguiculati, apice dilatati, conniventes, calyptram 3-stipitatam formantes. Antheræ e tubo haud prominentes.—*Nov. Guinea.*

8. **GEOMITRA.** Perianthium ad os vix constrictum, cæterum *Bagnisiæ*. Antheræ basi e tubo parum prominentes.—*Borneo, Java.*

**Tribus III. Corsiæ.** Perianthium 6-partitum, segmento postico maximo lato, cæteris 5 subæqualibus lineari-subulatis. Stamina 6. Caules aphylli.

9. *CORSIA*. Flores hermaphroditi. Stamina recurvo-patentia. Ovarii placentæ valde intrusæ.—*Nov. Guinea*.

10. *ARACHNITES*. Flores unisexuales. Filamenta erecto-inflexa. Ovarii placentæ parum prominentes.—*Chile*.

## GENUS EXCLUSUM.

*STENOMERIS*, Planch., inter *Dioscoreaceas* anomalas querendum.

## TRIBUS I. EUBURMANNIÆ.

1. *Burmattia*, Linn. Gen. n. 397 (Maburnia, Thou. Gen. Nov. *Madag.* 4) — Perianthii tubus prominenter 3-angulatus v. sæpius 3-alatus; lobi 3 exteriores induplicato-valvati, 3 interiores minores nunc minimi v. 0. Antheræ 3, intra tubum infra lobos interiores subsessiles, connectivo lato supra loculos in cristam integram 2-fidam v. 2-partitam producto; loculi ad latera connectivi prominentes, globosi v. clavati, transversim dehiscentes. Ovarium 3-loculare, placentis axilibus; stylus perianthio inclusus, lobis 3 brevibus crassis interdum vix prominentibus vertice stigmatosis; ovula in quaque placenta numerosissima. Capsula perianthio persistente coronata, plus minus 3-alata, inter alas v. costas maturitate varie rupta. Semina minima, oblonga v. fere globosa, testa tenuissima reticulata v. striata, sæpius appressa, rarius laxa et ultra nucleum utrinque longe producta. — Herbæ erectæ, simplices, nunc tenerrimæ, coloratæ, foliis minimis dissitis infimis vix majoribus v. omnibus squamiformibus, nunc rigidiores, foliis inferioribus majoribus, imis ad basin caulis confertis, rarius secus caulem magis evolutis. Flores cærulei albi v. rarius flavi, ad apicem caulis solitarii, v. plures secus ramos cymæ 2-fidæ 1-seriatim erecti.

Species ad 20, per regiones tropicas utriusque orbis late dispersæ, usque ad Americam borealem et Chinam extensæ. Walp. Ann. i. 181, vi. 42. Miq. Fl. Ind. Bat. Suppl. 616. Griff. Ic. Pl. Asiat. t. 272. Roxb. Corom. Pl. t. 242. Benth. Fl. Austral. vi. 397. Becc. Malaisia i. 242, t. 14, 15. Mart. Nov. Gen. et Sp. i. 9, t. 5. Seub. in Mart. Fl. Bras. iii. i. 55, t. 7.

*TRIPTERELLA*, Mich. Fl. Bor. Amer. i. 19, t. 3 (VOGELIA, Gmel. Syst. ii. 107 ad Anonymos, Walt. Carol. 68 descr.) est species boreali-Americana, tenuis, floribus parvis subcapitatis, perianthii alis fere ad angulos acute prominentes reductis.

*TETRAPTERA*, Miers in Lindl. Veg. Kingd. 172, nomine tantum signata est, cum synonymo *Tripterella*, Mart. Quantum scimus Martius nullam *Tripterellam* edidit præter boreali-Americanam, et alæ 4 nunquam in *Burmanniaceis* observatæ sunt. Nomen igitur Miersianum delendum est.

*GONYANTHES*, Blume Cat. Gen. Plantent. Buitenz. ex Flora 1825, 123, prius dubie ad *Cytineas* relata, postea in Enum. Pl. Jav. 28, *Burmanniaceis* adjuncta, a *Burmattia* distincta fuit perianthii loborum minorum deficientia, et capsula 1-loculari. Miers in Trans. Linn. Soc. xx. 379, *Gonyanthem* distinxit capsula transversim fenestrata nec in longitudinem dehiscente. Perianthii vero lobi in pluribus speciebus *Burmannie* minuti sunt v. omnino evanidi, et in nonnullis a Miersio *Gonyanthi* relatis certe adsunt. Capsula autem nunquam revera 1-locularis est, etsi dissepimenta inter placentam centralem et parietes maturitate haud raro deliquescunt. Capsulæ fissuræ inter costas seu alas sæpe irregulares sunt, et in caractere ipso Blumei capsula rimis 3 lateralibus dehiscere dicitur. Plantæ habitu nequaquam distinguendæ et *Gonyanthes* jam a Beccario ad *Burmanniaceam* relata, ne pro sectione quidem habenda est.

*CRYPTONEMA*, Turcz. in Bull. Soc. Imp. Nat. Mosq. 1848, i. 530 nomen ab auctore ibid. 1853, i. 287, in *NEPHROCELIUM* mutatum, et a Walpersio aliisque lapsu calami *Nephrocodium* scriptum, est *Burmattia celestis*, Don, Royle, Ill. Pl. Himal. t. 91, a speciebus typicis nequaquam distinguenda.

*CYANOTIS* et *CYANANTHUS*, Miers in Wall. Cat. Herb. Ind. n. 9006, 9007, 9008 (*TRIPTERANTHUS*, Wall. ms. a Lindley et a Miersio citatus), sunt *Burmannie* species Indicæ, a Miersio sub *Gonyanthi* descriptæ in Trans. Linn. Soc. xviii. 537, t. 38.

*B. longifolia*, Becc. Malaisia, i. 244, t. 13, e montibus Archipelagi Malayani, insignis est caule perenni alte foliato, basi indurato foliis marcescentibus vestito, et seminum testa reticulata laxa ultra nucleum utrinque longe producta. *B. Kalbreyeri*, Oliv. in Hook. Ic. Pl. t. 1357, est species Colombiana caule ut in *B. longifolia* perenni alte foliato, sed cyma dichotoma et seminum testa tenui appressa vix apice minute appendiculata.

2. *Campylosiphon*, *Benth. in Hook. Ic. Pl. t. 1384*.—Perianthii tubus tenuis, incurvus, exalatus; lobi 6, 2-seriati, omnes tamen angusti longiusculi parum inæquales. Antheræ 3, intra tubum infra lobos interiores subsessiles, connectivo latiusculo supra loculos non producto; loculi ad latera connectivi prominentes, transversim in valvas 2 superpositas dehiscences. Ovarium elongatum, sub-3-quetrum, 6-costatum, 3-loculare, placentis axilibus crassiusculis, septis tenuissimis; stylus perianthio inclusus, apice clavatus, in lobos 3 latos brevissimos vertice stigmatosos subdivisus; ovula in placentis numerosissima. Capsula angusta, incurva, perianthio marcescente coronata, (dum inter costas lateraliter dehiscens?). Semina numerosissima, angulato-globosa, testa appressa.—Herba tenuis, aphylla, succulenta, caule simplici v. apice 2-fido, squamis nunc numerosis linearibus subimbricatis nunc minimis sparsis instructo. Flores ratione plantæ longiusculi, insigniter incurvi, in racemo simplici v. 2-fido ad axillas bractearum membranaceo-scariosarum breviter pedicellati.

Species 1, in sylvis humidis Brasilæ borealis a Spruceo et a Traillio lecta.

3. *Gymnosiphon*, *Blume, Enum. Pl. Jav. 29*. (*Ptychomeria*, *Benth. in Hook. Kew Journ. vii. 14*. *Benitzia*, *Karst. in Linnæa xxviii. 420*).—Perianthii tubus elongatus, exalatus, infra apicem dum circumscissus; lobi 3 exteriores lati, induplicato-valvati, lateraliter interdum fere in lobulos expansi; 3 interiores parvi v. 0. Antheræ 3, intra partem deciduam tubi infra lobos interiores subsessiles v. filamentum brevissimo fultæ; loculi ad latera connectivi inappendiculati crassi, transversim dehiscences. Ovarium 1-loculare, placentis 3 parietalibus; stylus perianthio inclusus, apice in lobos 3 breves incrassato-dilatatos vertice stigmatosos interdumque 2-cornutos v. 2-aristatos divisus, ovula placentas dense obtegantia. Capsula subglobosa, turbinata v. oblonga, perianthii tubi parte persistente coronata, apice dum irregulariter rupta v. simul rimis lateralibus dehiscens. Semina minima, angulato-globosa, varie rugosa, testa appressa exappendiculata.—Herbæ annuæ (v. rhizomate perenni?) teneræ, coloratæ v. hyaline, caule erecto simplici, foliis omnibus ad squamulas parvas concolores reductis. Flores parvuli, in cyma bitida sessiles v. breviter pedicellati, sæpiissime erecti, interdum tamen patentes v. subnutantes; cyma nunc laxa, ramis elongatis floribus dissitis, nunc fere in capitulum contracta.

Species ad 12, quarum 2 v. 3 Archipelagi Malayani, 1 Africæ tropicæ, incolæ, cæteræ omnes Americæ tropicæ. *Walp. Ann. vi. 38* (*Ptychomeria*) et 41 (*Benitzia*). *Beccari, Malaisia, i. 240, t. 14*.

*CYMOCARPA*, *Miers in Trans. Linn. Soc. xviii. 543, t. 38, f. 4*, est *G. refractus*, species Brasiliensis, quæ a genere nequaquam differt nisi capsula plus minus refracta, interdumque nec semper inæqualiter maturescens. Styli rami 2-cornuti v. 2-aristati observantur etiam in *G. cymoso*, *G. divaricato* et *G. cornuto*.

4. *Dictyostegia*, *Miers in Trans. Linn. Soc. xviii. 538, t. 37*.—Perianthii tubus exalatus, continuus; lobi 3 exteriores valvati, 3 interiores minores. Antheræ 3, intra tubum infra lobos interiores ad cavitates parum conspicuas fere sessiles; loculi ad latera connectivi parum dilatati prominentes, subglobosi, transversim dehiscences. Ovarium 1-loculare, placentis 3 parietalibus v. interdum basi placentis medio connatis breviter 3-loculare; stylus perianthio inclusus, apice in lobos 3 breves crassos vertice stigmatosos divisus; ovula numerosa, in placentis conferta. Capsula globosa, perianthio supra capsulam plus minus constricto sed persistente coronata, dum inter placentas varie rupta, rarius distincte 3-valvis. Semina minima, linearia; testa tenuissima, hyalina, reticulata, laxa, nucleo centrali subgloboso 4-5-plo longior.—Herbæ teneræ, coloratæ, caule simplici v. subramoso, foliis ad squamulas parvas concolores reductis, rhizomate interdum parvo oblongo fere tuberiformi. Flores in cyma 2-fida v. rarius in racemo simplici pedicellati, anthesi peracta sæpiissime nutantes.

Species 4 v. 5, Americæ et Africæ tropicæ incolæ. *Benth. in Hook. Kew Journ. vii. 13*. *Karst. in Linnæa, xxviii. 421*. *Hook. Ic. Pl. t. 254* (*Apteria*).

5. *Apteria*, *Nutt. in Journ. Acad. Nat. Sc. Philad. vii. 64, t. 9* (*Stemoptera*, *Miers in Proc. Linn. Soc. i. 62*).—Perianthii tubus exalatus, continuus, infra lobos interiores in

saccula 3 lata excavatus; lobi 3 exteriores ovati subvalvati, 3 interiores minores erecti. Stamina 3, intra tubum ad basin sacculorum affixa, filamentis utrinque late petaloideo-alatis; antheræ ad apicem filamenti tubo inclusæ; loculi divaricati, plus minus lateraliter stipitati, transversim dehiscentes fere 2-lobi. Ovarium 1-loculare, placentis 3 parietalibus parum prominulis; stylus perianthio inclusus, apice in lobos 3 breves crassos divergentes vertice stigmatosos divisus; ovula in quaque placenta numerosa. Capsula obovoideo-subglobosa, perianthio marcescente v. deciduo denudata, demum ad latera inter costas rupta, (v. fide Miersii apice 3-valvis). Semina minima, obovoideo-oblonga, testa reticulata, laxa, nucleum vix superante.—Herba tenera, colorata, caule erecto simplici v. subramoso, foliis ad squamulas parvas concolores reductis. Flores quam in *Gymnosiphone* et *Dioscorea* sæpius majores, solitarii v. pauci, pedicellati, nutantes.

Species editæ 3, omnes tamen unius varietates videntur, nec nisi magnitudine plantæ v. floris differunt, Americæ borealis et tropicæ incolæ. *Miers in Trans. Linn. Soc. xviii. 3, t. 38. Miq. Stirp. Surin. 216, t. 65. Hook. Ic. Pl. t. 660.*

## TRIBUS II. THISMIEÆ

6. *Thismia*, Griff. in *Trans. Linn. Soc. xix. 341, t. 39.*—Perianthii tubus ovoideo-campanulatus v. turbinatus, ore constrictus; lobi 6, nunc omnes longe subulati crassiusculi demum recurvi, nunc 3 subulati, 3 alterni breves ovati. Stamina 6, fauci affixa, intra tubum deflexa, filamentis brevissimis, connectivis late membranaceo-dilatatis, in tubum deflexum connatis v. conniventibus, antherarum loculos distinctos parallelis occultantibus. Ovarium breve, latum, 1-loculare, placentis 3 parietalibus mox a pariete solutis in cavo ovarii columnaribus; stylus brevissimus conicus v. parum elongatus, stigmatibus 3 crassiusculis erectis; ovula in quaque placenta numerosa. Fructus turbinatus, vertice cum perianthio demum circumscisse deciduo cupulatus remanet, pericarpio crasso. Semina numerosa, ovoidea v. subglobosa, rugosa, testa adnata.—Herbæ breves, carnosæ, coloratæ, simplices v. rarius divisæ, foliis omnibus ad squamellas concolores reductis. Flos terminalis, ratione plantæ magnus, v. rarius flores plures breviter pedicellati racemum brevem formant.

Species, si rite omnes in genere unico conservatæ, 7 v. 8, quarum 2 Americæ tropicæ, cæteræ Zeylanicæ, Burmæ v. Archipelagi Malayani incolæ.

Species typica, *T. Brunoniana*, Griff. l. c., a cæteris differt caule plurifloro. Huic addidit Hook. f. in *Thw. Enum. Pl. Zeyl. 325. T. Gardnerianam* (quæ *T. Brunoniana*, Miers in *Trans. Linn. Soc. xx. t. 15, f. 20, 21*, non Griff.) e Zeylania, et Beccari in *Malaisia* i. 251, t. 11, 12, species 3 Borneenses. Ab his genericè distinguere nequimus plantas 2 Brasilienses, nobis quidem non nisi iconibus et descriptione Miersii notus, viz., *Ophiomeris*, Miers in *Trans. Linn. Soc. xx. 373, t. 15*, perianthio incurvo, et *Myostoma*, Miers, l. c. xxv. 474, t. 57.

7. *Bagnisia*, Beccari, *Malaisia*, i. 249, t. 12.—Perianthii tubus amplus, obovoideo-oblongus, ore constrictus; lobi 3, unguiculati, apice dilatato conniventes, calyptram 3-stipitatum formantes, dentibus 3 parvis cum unguibus alternis. Stamina 6, fauci affixa, intra tubum deflexa; antheræ subsessiles, connectivis maximis membranaceis in tubum deflexum connatis; loculi parvi, distincti, adnati. Ovarium breve, latum, 1-loculare, placentis 3 parietalibus; stylus brevissimus, conicus, stigmatibus 3 brevibus crassiusculis sub-2-fidis patentibus; ovula in quaque placenta numerosissima. Fructus turbinato-cupulatus, perianthio circumscisse deciduo truncatus, v. margine parum elevato cinctus. Semina . . . —Herba carnosa, humilis, colorata, foliis omnibus ad squamas reductis, quarum 1-2 sub flore paullo majores bracteiformes. Flos ratione plantæ magnus Thismieiformis.

Species 1, Novæ Guinææ incola.

*Sarcosiphon*, Blume, *Mus. Bot. Lugd. Bat.* i. 65, t. 18, est verisimiliter, ut jam indicavit Beccari, specimen defloratum *Bagnisæ* vel *Geomitæ*, perianthio jam delapso, ovario solo cum stylo superstante et pro flore femineo descripto.

8. *Geomitæ*, Beccari, *Malaisia*, i. 250, t. 10, 11.—Perianthii tubus amplus, obovoideo-oblongus, ore vix constrictus; lobi 3, unguiculati, superne dilatati conniventesque, supra

dilatationem nudi v. in acumina crasse subulata producti, calyptram 3-stipitatam formantes, dentibus 3 minimis cum unguibus alternis. Stamina 6, fauci affixa breviterque exserta, dein abrupte decurva et intra tribum deflexa, filamentis brevissimis crassis; antheræ intra tubum connectivis maximis membranaceo-dilatatis connatæ; loculi parvi, distincti, adnati. Ovarium brève, latum, 1-loculare, placentis 3 jam sub anthesi liberis columnaribus; stylus brevis, stigmatibus 3 brevibus crassis emarginatis; ovula in quaque placenta numerosa. Fructus carnosus, turbinatus, perianthio circumscisse deciduo truncatus, vertice centro dehiscentis. Semina minuta.—Herbæ carnosæ, aphyllæ, habitu *Bagnisiæ* simillimæ. (Char. ex Beccari.)

Species 2, altera Borneensis, altera Javensis, a nobis non visæ. Genus forte melius *Bagnisiæ* adjungendum.

### TRIBUS III. CORSIÆ.

9. *Corsia*, Beccari, *Malaisia*, i. 238, t. 9.—Perianthium 6-partitum; segmenta sub-2-seriata, postico (seriei exterioris) maximo cordato-subrotundo, cæteris 5 subæqualibus longe lineari-subulatis reflexo-patentibus basi intus callo semilunari instructis. Stamina 6, intra segmenta epigyna, filamentis liberis brevibus crassiusculis recurvo-patentibus; antheræ terminales, loculis parallelis contiguis extrorsum dehiscentibus. Ovarium 1-loculare, placentis tamen 3 parietalibus valde intrusis 2-fidisque fere in loculos 3 divisum; stylus brevis, crassus, stigmatibus 3 brevissimis crassis; ovula in quaque placenta numerosa. Capsula elongata, cylindracea, genitalium exuviis coronata, placentis induratis, in valvas 3 dehiscentis. Semina . . . —Herba e rhizomate perenni tenera, erecta, simplex, colorata, foliis ad squamas concolores reductis. Flos unicus, terminalis.

Species 1, Novæ Guineæ incola.

10. *Arachnites*, Philippi in *Bot. Zeit.* 1864, 217, et in *Verh. Zool. Bot. Gesellsch. Wien.* xv. 517, t. 12.—Flores abortu unisexuales. Perianthium 6-partitum; segmenta sub-2-seriata, postico (seriei exterioris) maximo ovato-lanceolato erecto v. incurvo, costa media basi glanduloso-incrassata, cæteris 5 subæqualibus longis lineari-subulatis patentibus. Stamina in flore ♂ (a nobis non viso) 6, filamentis brevibus liberis crassiusculis erecto-inflexis; antheræ rima unica dehiscentes. Ovarii rudimentum sub perianthio tenue, styli rudimentum ovoideum, fissuris 3 notatum. Staminodia in flore ♀ minima ad basin segmentorum. Ovarium inferum, breve, latum, 1-loculare, placentis 3 parietalibus parum prominulis; styli 3, breves, crassi, vertice stigmatosi; ovula in quaque placenta numerosa. Capsula globosa v. aperta, cupularis, vertice dehiscentis. Semina numerosa, minima; testa laxa, reticulata, ultra nucleum parvum utrinque longe producta; embryo specie homogeneus.—Herba e rhizomate (ex icone fasciculato-tuberoso) tenuis, erecta, simplex, colorata, foliis ad squamas concolores reductis. Flos unicus, terminalis.

Species 1, provinciæ Valdiviæ Chilensis incola. Specimina nostra jam deflorata fructifera, perianthio marcescente.

## ORDO CLXIX. ORCHIDÆ.

Endl. *Gen.* 185. Lindl. *Veg. Kingd.* 173; *Gen. et Sp. Orch.*, 8vo, Londini, 1830–40. Blume, *Orch. Archip. Ind. et Jap.*, folio, Amsterdam, 1858. Reichb. f. *Xen. Orch.*, 4to, Leipzig, 1858–81. Pfitzer, *Grundzüge einer vergleichenden Morphologie der Orchideen*, 4to, 1881. Opera præterea plurima, pulchre illustrata, imprimis hortensia, cum opusculis numerosis auctorum variorum.

*Flores* hermaphroditi v. rarissime subpolygami, irregulares. *Perianthium* superum, e segmentis 6 petaloideis v. præsertim exterioribus herbaceis liberis v. inter se varie connatis

constans; 3 exteriora, *Sepala* dicta, æstivatione leviter imbricata v. rarius subvalvata, quorum extimum seu posticum (flore a latere aperto spectato) ad normam inferum seu a rhachi remotum, torsione tamen ovarii v. pedicelli sæpius superum liberumque; lateralialia inter se æqualia, postico similia v. difformia, libera v. inter se varie connata, v. rarius omnia inter se plus minus connata. Ex interioribus 2 lateralialia, *Petala* dicta (*tepala*, Reichb. f.), cum sepalo postico lateralibusque alterna inter se similia et æqualia, sepalis similia v. sæpius minora tenuiora magisque colorata, interdum tamen majora, v. rarius minuta v. omnino abortientia; tertium sepalis lateralibus alternum, *Labellum* dictum, valde polymorphum, rarissime petalis simile, ab iis sæpissime differt, tam forma exteriori, quam lobis callis lamellisve (staminum abortientium rudimentis adnatis?) quibus appendiculatum. *Stamina* ad normam rationalem 6, 2-seriata, sed abortu ad 3, 2, v. sæpissime 1 reducta; 2 lateralialia exteriora cum antico interiore omnino desunt, nisi pro staminodiis haberes appendices labelli; posticum seriei exterioris sæpissime perfectum, et lateralialia seriei interioris, quæ sæpissime (*Cypripedieis* exceptis) ad staminodia reducta nisi omnino abortiva, cum stylo connatum, *gynostemium* formant centrale v. sepalo postico magis approximatum, quod constat e *columna* tereti v. antice complanata sulcata 2-angulata v. 2-alata, cum *clinandrio* postico et *rostello* antico terminalibus. *Clinandrium* (*androclinium*, auct. nonnull.) interdum vix prominens, sæpe plus minus elevatum, membranaceum et cum alis columnæ continuum verisimiliter marginem liberum indicat filamentorum 3 superiorum stylo adnatorum. *Anthera* perfecta sæpius 1, postica (rarius 2 laterales), margini v. intra marginem clinandrii affixa, articulata v. adnata, erecta incumbens v. rarius prona v. reflexa, introrsum 2-ocularis, loculis distinctis parallelis rarius divergentibus v. divaricatis, rima longitudinali 2-valvatim dehiscentibus v. in *Vandeis* plurimis in unum confluentibus. *Pollen* constat e granulis sæpissime per 4 compositis, nunc filiis elasticis laxè connexis, nunc sæpius omnibus v. pro maxima parte in massas 2, 4, 6 v. 8 (in quoque loculo 1-4) *pollinia* dictas arcte v. laxè conferta; hæc pollinia variant solida (*cereæ* dicta) pulverea, farinacea v. in granulas grossas subregulariter sectilia, globosa oblonga v. sæpe pyriformia v. apice basive in acumen breve v. caudiculam longam producta, ante dehiscentiam in quoque loculo libera v. appendice (a caudicula vera distinguenda) e pollinis parte laxiore constante connexa; per dehiscentiam et sæpe jam in alabastro pollinia plus minus visco tenui extensivo (e rostello emisso?) induuntur quo mediante rostellii dorso v. insectis aliisve corporibus fortuito adherent, v. (in *Vandeis*, *Ophrydeis* generibusque aliis paucis) glandulam viscosam polymorpham sæpe in stipitem (errore caudiculam dictam) productam a rostellii dorso solvendam auferunt, et *pollinarium* efficiunt liberum, facile insectis aliisve corporibus extraneis adherens. *Ovarium* inferum, 1-loculare placentis 3 parietalibus, v. in *Cypripedieis* paucis perfecte 3-loculare placentis axilibus, interdum supra loculum in collum seu tubum vacuum ad perianthii basin clausum productum. *Stylus* columna inclusus, filamentorum tubo adnato velatus, antice tamen inter alas v. costas columnæ verisimiliter nudus, ad apicem columnæ plus minus in *rostellum* productum horizontale v. erectum, antheram a stigmate separans, et supra v. dorso sæpius viscosum v. glandulam v. stipitem viscosum pollen excipientem exserens. *Stigma* in facie columnæ inter alas v. costas sæpius paullo infra rostellum situm, rarius ad basin columnæ v. ad apicem rostellii subterminale leviterque antrorsum inclinatum, variat nunc latum profunde concavum v. crasse pulvinatum, nunc angustum transversum v. longitudinale, interdum didydim v. 2-partitum v. brachiis 2 appendiculatum. *Ovula* in placentis numerosissima, minuta. *Fructus* capsularis, rarius carnosulus subindehiscens, sæpius rimis longitudinalibus 3 v. 6 dehiscens, valvis apice basique diu v. omnino coherentibus v. demum ab apice patentibus v. omnino solvendis. *Semina* numerosissima, minuta, testa laxa reticulata hyalina sæpe apice basique producta rarius in alam latam expansa, nucleo solido specie homogeneo.

Herbæ perennes, nunc *terrestres* rhizomate brevi v. repente fibras sæpe carnosulas emittente et quotannis continuo, v. varie tuberifero tuberibus solis perennantibus, nunc *epiphyticæ* caudice (v. rhizomate aërio) sæpius annulato et plus minus vaginis scariosis oblecto arboribus v. saxis mediantibus radicibus adventitiis sæpe carnosulis adherente.

Caules v. rami foliati v. florentes, v. scapi aphylli e nodis v. ex apice rhizomatis caudicis v. tuberis annotini evoluti, sæpius erecti, simplices v. rarius parce ramosi, annui v. monocarpici v. interdum gemma terminali perennantes in *Epidendreis Vandisque* haud raro basi v. supra basin in *pseudobulbum* carnosum incrassati. Folia nunc in caule v. ramo florifero solitaria v. ad basin caulis plura conferta v. rarius per paria valde approximata specie opposita, nunc secus caulem alterna sæpius disticha, supinum sæpe v. in scapo aphyllis omnia ad vaginas reducta, v. in pseudobulbo v. ramo sterili brevi solitaria gemina v. pauca, fere semper basi vagina clausa caulem amplectentia; lamina in vaginam petiolata v. sessilis, membranacea coriacea v. carnosae, integerrima, interdum venis majoribus valde prominentibus plicata. Flores in pedunculo simplici v. secus ramos paniculae spicati racemosi v. solitarii, singuli bractea subtensi, pedicello ebracteolato. Pedunculus communis nunc in caule foliato v. scapo vaginato terminalis, nunc in caule v. ramo distichophyllo axillaris v. lateralis specie suboppositifolius, sed verisimiliter revera ad basin vaginae axillares infra laminam e vagina erumpens. Inflorescentia cæterum polymorpha, interdum in capitulum sessile conferta v. in paniculam amplam laxissime diffusa.

Species notæ inter 4,500 et 5,000 bene distinguendæ, editæ multo numerosiores, sed plurimæ e speciminibus imperfectis descriptæ v. pro varietatibus hortensibus v. silvestribus formis hybridis habendæ certe delendæ, silvestres per regiones temperatas calidioresque utriusque orbis latissime dispersæ, in albis frigidis raræ, in Arcticis Antarcticisque desunt. *Epidendrea* et *Vandea* pro maxima parte inter tropicos vigent, *Ophrydæ* pleræque regiones extratropicas tam australes quam boreales incolunt, *Neottia* et *Cypripediæ* aliæ inter tropicos aliæ in regiones temperatas inveniuntur.

Generum numerosorum distributio methodica opus est difficillimum et adhuc valde imperfectum. Divisio primaria ex antheræ et pollinariorum indole, a Brownio indicata, et a Lindleyo exsecuta adhuc parum mutata remanet. Si *Malacideæ* Lindleyi cum *Epidendreis* jungimus, *Arethuseas* cum *Neottiis*, et *Apostasias* cum *Cypripediis*, tribus adsunt quatuor characteribus definitis limitatæ et vix generibus perpaucis parvis subintermediis junctæ; subtribus tamen interdum limitibus valde incertis circumscriptæ et genera perplurima male definita v. nimis artificialia sunt, nec facile emendantur. Characteres evidentiores e forma appendicibusque labelli et columnæ sæpe cum affinitate naturali minime conveniunt, et validiores ex anthera pollinario rostello et stigmatibus in speciminibus siccis male observantur. Pfitzer, organa vegetationis Orchidearum adhuc nimis neglecta diligenter scrutatus, in commentatione supra citata ordinis divisiones proposuit ad vegetationis variationes solas limitatas. Hi quidem characteres sæpe magui valoris evadunt, sed rarius ad genera v. tribus definienda sufficiunt, et systema ulterius probandum et cum Lindleyano nostroque imprimis ad florum structuram erectis sedulo comparandum. De capsula et seminum variationibus confer Beer, 'Beitr. zur Morphologie und Biologie der Orchideen,' Wien, 1863, tabb. 12.

Orchideæ hodie, ornamenti gratia copiosissime coluntur, et perplurimæ in diariis hortulanorum descriptæ delineatæque sunt. Species tamen veræ a hortulanis sæpiissime cum varietatibus hortensibus v. formis hybridis confusæ, et quas in Gardener's Chronicle aliisque diariis hortulanorum descriptæ v. in operibus ad formas cultas solas illustrandas delineatæ hic sub silentio præterimus et ad Enumerationem Orchidearum cultarum rejicimus a Hemsley in Gard. Chron. 1881 inceptam et in voluminibus sequentibus hinc inde continuatum. Species etiam plures Australienses novas nuperime descripsit Fitzgerald in eodem diario.

#### FORMÆ ABNORMES.

Labellum (staminodiorum rudimentis orbatum?) petalis simile constanter in *Thelymitra* (et in *Argyrorhisi*?) et in formis abnormibus generum nonnullorum aliorum, e.g. *Dendrobium* (*Aclicia*), *Spachoglottis* (*Pastonia*), *Selenipedium* (*Uropedium*), etc.

Antheræ 2 laterales perfectæ, constanter in *Cypripediis*, rarius in formis abnormibus generum nonnullorum aliorum, e.g. in *Arundina* (*Dilochia*).

Ovarium perfecte 3-loculare in *Selenipodio*, *Apostasia*, et *Newwiedia*.

Fructus carnosus vix v. tardius dehiscens in *Vanillearum* speciebus nonnullis.

#### CONSPECTUS TRIBUUM (exceptis neglectis).

**Tribus I. Epidendreae.** Anthera 1, postica, opercularis, sæpius incumbens, loculis distinctis parallelis. Pollinia ceras, 1-2-seriatim parallela, in quaque serie 2 v. 4 (in quoque loculo 1-4),

libera v. visco parco v. appendicula granulosa in quoque loculo connexa, rariissime v. casu tantum rostello affixa.

Subtribus 1. Pleurothallæ. *Caulis ebulbosus, folio unico et inflorescentia terminatus.*

Subtribus 2. Malaxæ. *Inflorescentia terminalis. Anthera erecta v. prona sæpe persistens nec incumbens.*

Subtribus 3. Lipariæ. *Inflorescentia terminalis. Pollinia 4, rarius 8, subæqualia, conferta, sæpius libera, inappendiculata.*

Subtribus 4. Dendrobicæ. *Inflorescentia lateralis v. pseudoterminalis v. in scapo distincto aphylo. Pollinia 4, rarius 2, 1-seriata, parallela, inappendiculata.*

Subtribus 5. Eriæ. *Inflorescentia lateralis v. pseudoterminalis v. in scapo distincto aphylo. Pollinia 8, subæqualia, conferta, viz v. non appendiculata.*

Subtribus 6. Bleticæ. *Inflorescentia lateralis v. rarius terminalis. Pollinia 2-3-seriata (rarius 1-seriata), in quaque serie 4, parallela, omnia ascendentia, appendicula granulosa connexa.*

Subtribus 7. Cælogyneæ. *Inflorescentia terminalis. Pollinia 8 v. 4, subæqualia, conferta, visco v. appendicula parca connexa.*

Subtribus 8. Stenoglossæ. *Inflorescentia terminalis. Pollinia 4, 6, v. 8, in locellis distinctis 1-2-seriata, libera v. visco tenui connexa.*

Subtribus 9. Lælicæ. *Inflorescentia sæpissime terminalis. Pollinia 1-2-seriata, in quaque serie 4, collateralia, parallela compressa, appendicula granulosa connexa, inferiora ascendentia, superiora dum adsint descendentia.*

**Tribus II. Vandæ.** *Anthera 1, postica, opercularis, rostello incumbens v. applicita, loculis sub anthesi sæpissime confluentibus. Pollinia cerea, sæpissime 2 v. 4, per paria sibimet applicita anticum postico, anthera dehiscente (sæpius jam in alabastro) rostelli processu (glandula v. stipiti) sigillatim v. per paria affixa, quocum pollinarium liberum efficiunt.*

Subtribus 1. Eulophiæ. *Folia pseudobulborum plicato-venosa. Scapi florentes aphylli v. foliati. Labellum calcaratum.*

Subtribus 2. Cymbidiæ. *Folia pseudobulborum plicato-venosa. Scapi florentes aphylli v. foliati. Labellum calcaratum. Columna sæpissime apoda.*

Subtribus 3. Cyrtopodiæ. *Folia pseudobulborum plicato-venosa. Scapi florentes aphylli. Columna sæpissime in pedem producta.*

Subtribus 4. Stanhopiæ. *Folia pseudobulborum plicato-venosa. Scapi florentes aphylli. Columna sæpius apoda. Labellum carnosum.*

Subtribus 5. Maxillariæ. *Folia non plicata. Scapi florentes aphylli v. pedunculi axillares. Columna in pedem producta.*

Subtribus 6. Oncidiæ. *Folia non plicata. Scapi florentes aphylli v. pedunculi axillares. Columna apoda.*

Subtribus 7. Sarcanthæ. *Caules ebulbosi, distichophylli (rarius aphylli), radicales. Folia non plicata. Pedunculi laterales v. axillares.*

Subtribus 8. Podochileæ. *Rostellum terminale, erectum v. antrorsum inclinatum, postice (v. supra) sæpius concavum antheram fovens. Pollinarii stipes simplex v. duplex, angustus v. apice dilatatus, ab apice rostelli pendulus.*

**Tribus III. Neottieæ.** *Anthera 1, postica, opercularis v. erecta persistensque, loculis distinctis parallelis. Pollinia granulosa, pulverea v. sectilia. Caules ebulbosi.*

Subtribus 1. Vanilleæ. *Caules elati, sæpe ramosi, erecti v. alte scandentes. Racemi v. panicule terminales v. simul axillares. Anthera subopercularis, rostello brevi incumbens.*

Subtribus 2. Corymbiæ. *Caules elati, interdum ramosi, foliis amplis. Racemi v. panicule terminales. Anthera erecta, rostello erecto parallela.*

Subtribus 3. Spiranthæ. *Caules simplices, erecti, foliis membranaceis (rarius 0), rhizomate non tuberifero. Anthera erecta v. antrorsum inclinata, rostello longiusculo parallela.*

Subtribus 4. Diuriæ. *Caules simplices, erecti, aphylli, 1-foliati v. rarius paucifoliati, rhizomate varie tuberifero. Anthera erecta v. antrorsum inclinata, rostello brevi v. rarius longiusculo.*

Subtribus 5. Arethuseæ. *Caules simplices, erecti, aphylli, 1-foliati v. rarissime paucifoliati, rhizomate sæpius varie tuberifero. Anthera opercularis, incumbens v. suberecta.*

Subtribus 6. Limodoreæ. *Caules simplices, erecti, foliati v. rarius aphylli, rhizomate non tuberifero. Anthera opercularis, incumbens v. suberecta.*

**7. Ophrydese.** Anthera 1, postica, erecta prona v. reflexa, loculis parallelis v. divergentibus distinctis clinandrio adnatis basique sæpe in rostello continuis. Pollinia granulosa, in quoque loculo basi in caudiculam producta, caudiculis anthera dehiscente extremitate glandulæ a rostello solvendæ affixis, quacum pollinarium deciduum efficiunt.

Subtribus 1. Euophrydese. *Anthera erecta. Pollinarii glandulæ in sacculo a dorso rostello elevato inclusæ.*

Subtribus 2. Habenariæ. *Anthera erecta. Pollinarii glandulæ nudæ v. rarius rostellis lobis canaliculatis v. apice inflexis semi-inclusæ.*

Subtribus 3. Disæ. *Anthera reclinata v. in dorso columnæ reflexa, rarius suberecta. Stigma amplum, nunc pseudoterminale nunc ab anthera distans labello subadnatum.*

Subtribus 4. Coryciæ. *Sepalum posticum cum petalis sæpius latis in gulcam coherens. Label- lum basi columnæ adnatum, ultra antheram varie productum v. appendiculatum.*

**Tribus V. Cypripediæ.** Antheræ 2 ad latera rostellii (styli) sessiles v. stipitatae, pollicis granuloso; anthera postica in antheridium polymorphum mutata, rarius perfecta v. omnino deficiens.

#### CONSPECTUS GENERUM.

**Tribus I. Epidendree.** Anthera unica, terminalis, postica, opercularis, supra rostellum horizontale incumbens, v. rarissime (in *Malaxis*) prona v. a rostello aversa, post dehiscentiam sæpissime decidua; loculi 2, distincti, paralleli, interdum septis longitudinalibus 2-locellati, v. longitudinaliter transverseque in locellos 4 divisi. Pollinia cerea, nunc 2 v. 4 (in quoque loculo 1 v. 2) 1-seriata, nunc 4 v. 8 rarius 6 (in quoque loculo 2, 4 v. rarius 3) 2-seriatim superposita, in quoque serie semper equalia et parallela, seriei superioris sæpe inferioribus minor, omnia utrinque obtusa v. superne acuminata rarius in caudiculas producta, libera v. intra loculos appendicula granulosa connexa, v. per dehiscentiam antheræ visco tenui extensivo (sæpius e rostello exsudente) juncta, post dehiscentiam rarissime v. casu tantum rostello affixa.---Herbæ pro magna parte epiphyticae, rhizomate v. caudice cauliformi repente radicante, haud raro pseudobulbose, interdum vero terrestres; tubera tamen hypogæa perrara.

Excepta: Pollinia stipiti e rostello oriundo affixa in *Tipularia* et *Oreorchis*.

Subtribus 1. Pleurothallæ. *Caulces tenues v. brevissimi, non pseudobulbosi, cæspitiosi v. in rhizomate v. caudice cauliformi repente sparsi, folio unico sessili v. rarius petiolato nunquam vaginante terminati, infra folium vaginis 1-∞ sæpius stipati. Pedunculi 1-∞-flori, ad apicem caulis ad axillam folii solitarii v. fasciculati, interdum basi (supra folium) vagina spathacea stipati. Pollinia 2, 4 v. 8, inappendiculata, sæpius parva, subglobosa ovoidæa v. pyriformia, libera v. denum apicibus visco parco tenui connatis.*

In *Masdevallia* et in paucis speciebus aliorum generum caulis infra folium brevissimus est v. vix evolutus, et pedunculus (seu scapus) et folii petiolus in rhizomate collateraliter affixi apparent, revera tamen ex eadem gemma evolvuntur, vagina communi stipati, et pedunculus ad normam terminalis est.

\* Pollinia 2 v. 4.

1. **PLEUROTHALLIS.** Sepala erecta, conniventia v. subpatentia. Petala breviora v. angustiora. sæpe nana. Labellum in basi columnæ sæpius articulatam. Pollinia 2. Folium sæpius sessile. Pedunculi v. flores sæpius fasciculati.---*Amer. trop.*

2. **STELIS.** Sepala patentia. Petala parva, basi sæpius columnam amplectentia. Labellum cum basi columnæ continuum. Pollinia 2. Folium petiolatum. Racemi sæpius solitarii.---*Amer. trop.*

3. **PHYSOSIPHON.** Sepala basi in tubum connata. Petala parva. Labellum cum basi columnæ articulatam. Pollinia 2. Racemi solitarii.---*Amer. trop.*

4. **LEPANTHER.** Sepala patentia. Petala parva, unguibus columnæ adnatis, luminis transverse oblongis. Labellum sæpe basi columnæ adnatum, lumina divaricento-2-loba. Pollinia 2. Folium sessile, vaginis infra folium plurimis minimis. Pedunculi sæpe fasciculati.---*Amer. trop.*

5. **RESTREPIA.** Sepala erecta v. patentia. Petala sæpius filiformia. Labellum in basi columnæ articulatam. Columna elongata. Pollinia 4. Pedunculi 1-flori, solitarii v. plures.---*Amer. trop.*

6. ? BRACHIONIDIUM. Sepala acuminata v. caudata. Petala subsimilia, paullo minora. Pollinia . . . Folii petiolus cum pedunculo v. scapo vagina unica stipatus, caulibus vix infra vaginam evolutis secus rhizoma seu caudicem elongatum sparsis.—*Andes Amer. austr.*

7. MASDEVALLIA. Sepala basi in tubum conniventia v. a basi patentia, apicibus acuminatis v. caudatis patentibus. Petala sæpius parva. Pollinia 2, sæpe 2-partibilia. Folii petiolus cum scapo vagina unica stipatus, caulibus vix infra vaginam evolutis, confertis.—*Amer. austr. et centr.*

\*\* Pollinia 8.

8. ARPOPHYLLUM. Caulis longiusculus, vaginis amplis. Spica longa cylindracea, dense floribunda. Clinandrium latum, rostello lato brevius.—*Mexico, Amer. centr., Jamaica.*

9. OCTOMERIA. Caulis evolutus. Folium oblongum v. lineare. Flores dense fasciculati v. capitati, fasciculo v. capitulo sessili. Clinandrium rotundatum, rostello brevi.—*Amer. trop. or., Ind. occid.*

10. ? MEIRACYLLIUM. Caules in rhizomate repente brevissimi v. vix evoluti. Folium sessile, latum, cordatum. Flores pauci, breviter pedicellati. Clinandrium sub rostello reclinato suboccultum.—*Mexico, Amer. centr.*

Subtribus 2. *Malaxeæ*. Caules basi sæpe pseudobulbosi, foliis 1-3 in vaginam clausam angustatis. Flores parvi sæpe minimi, in racemo simplici terminali. Anthera erecta v. a rostello avera v. prona, post pollinia delapsa sæpe persistens, loculis sursum dehiscentibus. Pollinia 4, inappendiculata, libera v. apicibus visco parco per paria connexa.

11. MALAXIS. Caules 1-2-foliati, racemo terminali. Innovationes ab apice pseudobulbi annotini oriundæ. Petala parva, latiuscula. Labellum basi cordatum, columnam amplexans.—*Europa.*

12. MICROSTYLIS. Caules 1-3-foliati, racemo terminali. Innovationes a basi pseudobulbi annotini oriundæ. Petala angusta, sepalis subæquilonga. Labellum basi cordatum v. auriculatum, columnam amplexans.—*Europa, Asia, ins. Pacific. Amer. bor. et austr.*

(Confer etiam 25, *SUNIPIAM*, anthera *Malaxearum*, habitu *Bulbophylli*.)

Subtribus 3. *Lipariæ*. Caulis sæpe pseudobulbosus, 1-∞-foliatus v. aphyllus, racemo terminali. Columna in generibus normalibus apoda. Pollinia (excepto *Hexalectri*) 4, 2-seriata, inappendiculata, apicibus haud raro acuminatis v. etiam breviter caudiculatis, post dehiscentiam libera v. subfasciculata, visco perparco tenui juncta.

Subtribus ab *Erieis* differt imprimis inflorescentia terminali, a *Cælogyneis*, polliniis sæpissime liberis inappendiculatis et sæpius habitu tenuiore v. humili, caule sæpius 1-foliato v. aphylo.

\* Genera normalia, polliniis 4 liberis v. visco perparco demum fasciculatis.

13. OEBRONIA. Caulis non pseudobulbosus. Folia plura, disticha, vaginis compressis equitantia. Flores minimi, dense cylindraceo-spicati. Columna brevissima.—*Asia trop., ins. Mascar. et maris Pacif., Australia.*

14. LIPARIS. Caulis interdum pseudobulbosus, 1-foliatus v. folia pauca in petiolum vaginantem contracta. Flores parvi, racemosi. Columna longiuscula, semiteres v. superne 2-alata, non brachiata.—*Utriusque orbis reg. temp. et calid.*

15. PLATYCLINIS. Caulis vix v. anguste pseudobulbosus, 1-foliatus. Flores parvi, racemosi. Columna brevis, brachiis 2 longiusculis instructa.—*Ind. or., Archip. Malay.*

16. CALYPSO. Caulis sæpius pseudobulbosus, 1-foliatus, 1-florus. Labellum sepalis longius, lobis lateralibus superne supra lobum medium saccatum connatis. Columna brevis, late alata.—*Europa, Asia et America reg. boreales.*

17. APLECTRUM. Caulis pseudobulbosus, 1-foliatus; post folium emarcidum scapifer, floribus racemosis. Labellum sepalis æquilongum. Columna longiuscula, exalata, apoda.—*Amer. bor.*

18. CORALLORHIZA. Caulis e rhizomate ramoso coralliiformi aphyllus, floribus racemosis. Columna in pedem producta, basi et apice anguste 2-alata.—*Europa, Asia temp., Amer. bor., Mexico.*

\*\* Genera habitu *Corallorhizæ*, pollinario anomalo.

19. TIPULARIA. Caulis pseudobulbosus, 1-foliatus, floribus racemosis. Labellum longe calcaratum. Columna anguste 2-alata. Pollinia 4, demum stipiti filiformi affixa.—*Amer. bor., Himalaya.*

20. *ORBURCHIS*. Caulis pseudobulbosus, foliis 1-2 angustis. Flores racemosi. Labellum ecalcaratum. Columna elongata, exalata, apoda. Pollinia 4, demum stipiti filiformi affixa.—*Asia montana et or.*

21. *HEXALECTRIS*. Caulis e rhizomate ramoso aphyllus, floribus racemosis. Columna anguste 2-alata, apoda. Pollinia 8, visco granuloso in fasciculum connexa.—*Amer. bor., Mexico.*

Subtribus 4. *Dendrobieæ*. Caulis sæpius pseudobulbosus v. carnosus. Pedunculi laterales v. (ex axilla summa oriundi) pseudoterminales, v. scapi aphylli a caule v. pseudobulbo foliato distincti. Columna basi in pedem plus minus producta. Pollinia 2 v. 4 1-seriata, æqualia, parallela, utrinque obtuse inappendiculata, in quoque loculo nunc solitaria ovoidea v. globosa longitudinaliter sulcata, nunc gemina parallele compressiuscula.

Excepta: Anthera in *Sunipia* prona a rostello aversa.

\* *Pedunculi* (racemiferi v. 1-flori) in caule foliato v. sub anthesi defoliato laterales v. pseudoterminales, v. in caule abbreviato v. pseudobulbo 1-2-foliato specie (nec vere!) terminales.

22. *DENDROBIUM*. Labellum basi in unguem pedi columnæ incumbentem v. adnatum brevissime v. longiuscule contractum.—*Asia calid., Japonia, ins. maris Pacifici, Australia.*

23. *LATOUREA*. Labellum basi horizontaliter dilatatum in auriculas columnam amplectentes et pone columnam connatas.—*Nov. Guinea.*

\*\* *Scapi aphylli et pseudobulbi* 1-2-foliati in rhizomate distincti, contigui v. dissiti.

24. *BULBOPHYLLUM*. Racemi longi v. spiciformes, rarissime 1-flori v. subumbelliformes. Sepala sæpissime subæqualia, libera. Labellum cum pede columnæ articulatam.—*Asia et Africa trop., Australia, Nov. Zel., Amer. austr.*

25. *SUNIPIA*. Anthera a rostello aversa, loculis sursum dehiscentibus. Cætera *Bulbophylli* specierum racemosarum.—*Himalaya, Burma.*

26. *CIRRHOPETALUM*. Racemus in umbellam contractus. Sepala lateralia postico longiora, sub labia parallela patentia v. alte connata.—*Ind. or., China, Archip. Malay., Australia, ins. Mascar.*

27. *MEGACALINIUM*. Racemi rhachis dilatata, plana, bracteis floribusque in utraque facie secus costam centalem 1-seriatis. Cætera *Bulbophylli* specierum racemosarum.—*Africa trop.*

28. *TRIAS*. Sepala æqualiter patentia. Anthera in appendiculam loculis 2-3-plo longiorem producta. Herbæ humiles, pseudobulbis 1-foliatis, scapis tenuibus 1-floris.—*Ind. or.*

29. *OSYRICERA*. Sepala subæquilonga, lateralia alte connata. Labellum juxta basin ventricosum. Anthera antice lamina suborbiculari glandulosa instructa. Pseudobulbi 1-foliati. Flores in scapo spicati.—*Java.*

30. *DRYMODA*. Sepala lateralia a postico intervallo longo separata. Pollinia in massam globosam subcoherentia. Pseudobulbi minimi folio caducissimo. Scapus filiformis, 1-florus.—*Malacca.*

31. *MONOMERIA*. Sepala lateralia lata, a postico intervallo longo separata. Pollinia in massam globosam subcoherentia. Pseudobulbi 1-foliati. Scapus elatus, racemo laxo.—*Ind. or.*

32. *DENDROCHILUM*. Sepala æqualia, patentia. Pollinia 4, ovoidea, distincta. Pseudobulbi secus caudicem cauliformem angusti, 1-foliati. Scapi tennes, floribus parvis racemosis Liparioides.—*Malacca, Archip. Malay.*

33. *PANISEA*. Sepala subæqualia, subpatentia. Labellum basi in unguem longum sigmoideo-inflexum contractum. Pollinia 4, ovoidea, distincta. Pseudobulbi angusti, conferti, 1-2-foliati. Scapi tennes, pauciflori.—*Himalaya.*

(Confer etiam 73, *ALAMANIUM*.)

\*\*\* *Pseudobulbi* 1-foliati. *Scapi* elati, laxi pluriflori. *Pollinia* 2, globosa, sulcata v. integra.

(Genera *Dendrobieas Epidendrearum* cum *Cyrtopodiis Vandearum* arcte connectentia.)

34. *ACROCHENE*. Sepalorum mentum breve v. saecatum. Labellum cum pede columnæ articulatam. Anthera sub-1-locularis; pollinia appendicula granulosa connexa. Folium coriaceum.—*Himalaya.*

35. *CHRYSOGLOSSUM*. Sepalorum mentum breve v. saccatum. Labellum basi cum pede columnæ continuum. Anthera discrete 2-locularis; pollinia inappendiculata. Pseudobulbus sæpe tenuis. Folium plicato-venosum.—*Archip. Malay., ins. maris Pacifici*.

36. *COLLABIUM*. Sepalorum mentum longum, calcariforme. Cætera fere *Chrysoglossi*.—*Java*.

Subtribus 5. *Eriæ*. *Caulis foliatus, pseudobulbosus, v. rarius humilis distichophyllus. Pedunculi v. scapi laterales v. e rhizomate a pseudobulbo foliato distincti, rarius pseudoterminales. Columna basi in pedem producta v. rarissime apoda. Pollinia 8, in quoque loculo 4, fasciculata, sæpe compressiuscula, apicibus acutis acuminatis v. in caudiculas breves productis, visco parco rarius granuloso plus minus connexa.*

37. *CÆLIA*. Folia longa, angusta, subplicato-venosa. Scapus dense racemifer, rarius 2-3 florus, e rhizomate a pseudobulbo foliato distinctus. Columna brevis, in pedem producta. Capsula 3-alata.—*Ind. occid., Amer. centr., Mexico*.

38. *ERIA*. Folia varia. Pedunculi 1-flori v. racemiferi, in pseudobulbo v. caule foliato laterales v. pseudoterminales. Columna brevis, in pedem producta.—*Ind. or., China austr., Archip. Malay.*

39. *PHREATIA*. Caulis humilis, bulbosus, distichophyllus. Pedunculi laterales v. scapi e rhizomate aphylli racemiferi, floribus minimis. Columna brevissima, in pedem producta.—*Ind. or., Archip. Malay., ins. maris Pacifici, Australia*.

40. *PACHYSTOMA*. Scapi sub anthesi aphylli, pseudobulbum 1-foliatum interdum tardius evolvitur. Sepala conniventia. Columna elongata, basi in pedem producta. Capsula arcte reflexa.—*Ind. or., Archip. Malay., Afr. trop.*

41. *SPATHOGLOTTIS*. Scapus laxo racemifer e rhizomate a pseudobulbo 1-2-foliato distinctus. Folia elongata, elevato-venosa v. subplicata. Sepala patentia. Columna elongata, apoda. Capsula erecta v. nutans.—*Ind. or., China austr., Archip. Malay., ins. maris Pacifici, Australia*.

Subtribus 6. *Bletieæ*. *Caules 1-∞-foliati, basi sæpius pseudobulbosi, pseudobulbis nunc depressis tuberiformibus nunc elongatis tenuibus. Folia sæpius ampla, plicato-venosa. Racemi nunc caules foliatos nunc sæpius scapos aphyllis terminantes. Columna in pedem producta v. apoda. Pollinia (excepto Anthogonio) 8, a latere compressa, 2-seriata, appendicula granulosa copiosa connexa, seriei superioris sæpius minora sed omnia sursum appendiculæ adnata.*

42. *ACANTHEPHIPIUM*. Sepala in urceolum latum obliquum carnosum coalita. Petala inclusa, basi columnæ adnata. Columna brevis, in pedem longum producta. Flores majusculi, in racemo pauci.—*Ind. or., Archip. Malay.*

43. *PHAIUS*. Sepala libera. Labelli basi gibbosi v. calcarati lobi laterales lati, circa columnam involuti. Columna longiuscula, apoda. Flores speciosi, racemosi.—*Asia trop., Japonia, Archip. Malay., ins. maris Pacifici, Australia, ins. Mascar., Africa trop.*

44. *BLETIA*. Sepala libera. Labelli scalcarati lobi laterales erecti, paralleli v. apice patentes. Columna longiuscula, apoda. Racemus longe pedunculatus, laxis, simplex v. ramosus.—*Amer. trop., Japonia, China*.

45. *CHYSIS*. Sepala lateralia pedi columnæ adnata. Labelli lobi laterales erecti. Columna crassa, 2-alata, basi in pedem producta. Flores speciosi in racemo plures.—*Mexico, Columbia*.

46. *NEPHELAPHYLLUM*. Sepala libera. Labellum calcaratum. Columna longiuscula, 2 alata, apoda. Pseudobulbi foliati angustissimi, cum petiolo articulati petiolum medio articulatum simulant. Flores mediocres, in scapo aphylo laxo v. dense racemosi.—*Ind. or., China austr., Archip. Malay.*

47. *TAINIA*. Sepala lateralia pedi columnæ affixa. Labellum basi gibbum v. calcaratum. Columna longiuscula, pede brevi. Pseudobulbi crassi, 1-foliati. Flores in scapo aphylo laxo racemosi, sepalis petalisque acutis v. longe caudatis.—*Ind. or., China austr., Archip. Malay.*

48. *ANTHOGENIUM*. Sepala in tubum tenuem coalita. Petala linearia, unguibus intra calycem liberis. Columna elongata, apoda. Pollinia 4 (seriei superioris omnino deficientia). Folia in pseudobulbo pauca, graminea. Flores in scapo aphylo tenuiter racemosi.—*Himalaya, Burma*.

Subtribus 7. *Cœlogyneæ*. *Caulis nunc pseudobulbosus 2-foliatus, nunc plurifoliatus sæpiusque bulbosus, pedunculo 1-floro v. racemifero inter folia terminali (sub anthesi interdum aphyllus apparet foliis tardius evolutis). Columna in pedem producta v. apoda. Pollinia 4 v. 8, fasciculata, sæpius compressiuscula, apicibus acutiusculis acuminatis v. in caudiculas productis, appendicula granulosa v. visco tenui plus minus connexa, et interdum post dehisceniam rostello v. glandulæ (a rostello solutæ?) affixa.*

In *Calanthe* affinisque polliniorum appendiculæ v. caudiculæ interdum stipites *Vandearum* simulant, sed evidenter e polline ipso nec e rostello oriundæ.

\* *Pedunculus elongatus, ramosus v. plurispicatus, caule non pseudobulboso. Flores parvi.*

49. JOSEPHA. Sepala lateralialia vix mentum formantia. Columna apoda, longiuscula, anguste 2-alata. Pollinia 4. Paniculæ rami racemiformes.—*Ind. or. penins. et Zeylan.*

50. EABINA. Sepala lateralialia vix mentum formantia. Columna interdum in pedem brevem producta, brevis, exalata. Pollinia 4. Paniculæ rami sessiles, spiciformes v. fasciculiformes.—*Nov. Zel., ins. maris Pacifici.*

\*\* *Flores parvi, in capitulum sessile conferti. Sepala lateralialia cum pede columnæ mentum formantia.*

51. GLOMERA. Caules foliati, capitulo terminali laxo. Pollinia 4.—*Archip. Malay., ins. maris Pacifici.*

52. AGROSTOPHYLLUM. Caules foliati, capitulo terminali denso. Pollinia 8.—*Ind. or., Archip. Malay.*

53. CERATOSTYLIS. Capitula pauciflora,  $\infty$ -bracteata, ob folium caulem continuans specie lateralialia. Columna longe 2-brachiata. Pollinia 8.—*Ind. or., Archip. Malay., ins. maris Pacifici.*

\*\*\* *Flores spicati v. racemosi. Sepala lateralialia basi in gibbum v. mentum connata.*

54. CALLOSTYLIS. Caulis pseudobulbosus, foliis alternis. Sepala erecto-patentia. Clinandrium amplissimum. Pollinia 8.—*Java.*

55. CRYPTOCHILUS. Pseudobulbi 1-2-foliati. Sepala in tubum apice breviter 3-lobum coalita. Clinandrium breve. Pollinia 8.—*Himalaya.*

56. TRICHOSMA. Caulis non incrassatus, 2-foliatus. Sepala patentia. Clinandrium elevatum, dentatum. Pollinia 8. Flores majusculi, racemosi.—*Khasya.*

\*\*\*\* *Flores spicati racemosi v. solitarii. Sepala libera. Columna apoda.*

† Pollinia 4. *Herbæ epiphyticæ, pseudobulbosæ.*

57. CÆLOGYNE. Pseudobulbi 2-phylli, secus rhizoma distincti. Labellum sessile, basi concavum, columnam elongatam amplectens v. involvens. Pollinia 4. Flores majusculi, in caule foliato laxè racemosi, v. in scapo solitarii, foliis tardius evolutis.—*Ind. or., Archip. Malay., China austr.*

58. OTOCHILUS. Pseudobulbi 2-phylli, innovationibus subterminalibus seriem continuam formantes. Labellum sessile, basi saccatum, lobis lateralibus auriculiformibus. Columna elongata. Pollinia 4. Flores quam in *Cælogyne* minores, racemosi, pedunculo sub anthesi terminali plurivaginato aphylo, foliis tardius evolutis.—*Himalaya, Burma.*

59. PHOLIDOTA. Pseudobulbi 2-phylli, nunc ut in *Cælogyne* distincti, nunc ut in *Otochilo* continui. Labellum basi saccatum. Columna brevis, late 2-alata. Pollinia 4. Flores parvi, racemosi. Bracteæ nunc ovatæ distichæ, nunc angustæ deciduæ.—*Ind. or., Archip. Malay., China austr.*

†† Pollinia 8. *Herbæ sæpius terrestres elatæ.*

60. CALANTHE. Labellum sæpiissime calcaratum, ungue cum columna in tubum connato. Columna rarius ultra tubum producta. Caules sub anthesi sæpe aphylli, demum sæpius pseudobulbosi, foliis 2 v. paucis amplius plicato-venosis tardius evolutis, floribus racemosis.—*Utriusque orbis reg. trop. usque ad Japoniam, in America rar.*

61. ARUNDINA. Sepala patentia. Labellum sessile, ecalcaratum, basi concavum, columnam

longiusculam amplectens. Caulis ebulbosus, foliosus. Flores majusculi, in racemo terminali laxo.—*Ind. or., Archip. Malay., China ar. str.*

62. *ELLEANTHUS*. Sepala erecta, rigidula. Labelhum sessile, ecalcaratum, basi columnam longiusculam involvens. Caulis ebulbosus foliosus. Flores mediocres v. parvuli, in spica nunc densa capituliformi nunc rarius longiore tenui.—*Amer. trop.*

Subtribus 8. *Stenoglosseæ*. *Inflorescentia terminalis Eupidendri. Pollinia 4, 6, v. 8, 1-2-seriata, in quaque serie parallela ovoidea non v. vix compressa, libera v. visco tenui interdum longe extensivo connexa, appendicula nulla v. perparca.*

Genera pleraque *Epidendro* valde affinia at pollinario diversa, omnia Americana.

\* *Labellum basi cum columna in tubum brevem v. cyathum connatum.*

63. *LANIUM*. Pollinia 4, in quoque loculo 2, superposita, septo spurio transverso v. obliquo separata. Herbæ humiles, floribus parvulis in racemo simplici v. rarius 0.—*Brasilia, Guiana.*

64. *AMBLOSTOMA*. Anthera subreniformis; pollinia 4, 1-seriata, parallela, in locellis totidem æqualibus distincta. Caulis foliatus. Flores parvi, paniculati. Labelli lamina 3-partita.—*Brasilia, Peruvia.*

65. *SERAPHYTA*. Anthera subglobosa. Labelli lamina indivisa. Cætera *Amblostomatis*.—*Ind. occid.*

66. *DIOTHONEA*. Anthera subreniformis, discrete 2-locularis; pollinia 4, 1-seriata, in locellis totidem distincta. Caulis foliatus. Racemus simplex, sæpius recurvus. Labelli lamina lata, sepalis longior.—*Columbia, Peruvia.*

67. *STENOGLOSSUM*. Omnia *Diothoneæ*, nisi flores minores, et labelli lamina linearis.—*Andes Amer. trop.*

68. *HORMIDIUM*. Anthera subreniformis; pollinia 4, 1-seriata, in locellis totidem æqualibus distincta. Herbæ nane, pseudobulbis 1-2-foliatis. Flores fasciculati v. solitarii.—*Amer. trop.*

69. *HEXISIA*. Anthera semiglobosa; pollinia 4, 1-seriata, in locellis totidem distincta. Pseudobulbi 1-2-foliati, innovationibus subterminalibus internodia carnosa caulis formantibus. Racemi pauciflori, pedunculo brevi squamis imbricatis paleaceis oblecto.—*Amer. trop.*

\*\* *Labellum a columna longiuscula liberum.*

70. *SCAPHYLOTTIS*. Pollinia 4, 1-seriata. Caules innovationibus subterminalibus in internodia carnosa apice 2-foliata divisi. Flores inter folia linearia ad basin innovationum fasciculati, pauci, parvi, bracteati.—*Amer. trop.*

71. *HEXADESMIA*. Pollinia 6, 2-seriata, inferiora 4, superiora 2, in locellis distinctis separata. Caulis internodia carnosa et inflorescentia *Scaphyglottidis*.—*Amer. trop.*

72. *OCTADESMIA*. Pollinia 8, 2-seriata, in quaque serie 4. Caulis ebulbosus, foliis angustis distichis v. solitariis. Racemus simplex v. ramosus.—*Ind. occid.*

Subtribus 9. *Lælicæ*. *Inflorescentia sæpiissime terminalis. Pollinia 1-2-seriata, in quaque serie 4, ovata, collateralia, parallela compressa, inferiora ascendentia, appendicula in quoque loculo granulosa lineari a basi adscendente margini polliniorum applicita, superiora dum adsint ab apice appendiculæ descendente sæpe inferioribus minora. Genera omnia Americana.*

\* *Genera abnormia, inflorescentia laterali.*

73. ? *ALAMANIA*. Caules nani, 2-foliati. Scapi floridi laterales, aphylli, vaginis scariosis oblecti, racemo brevi denso. Columna ad medium cum labello connata. Pollinia 4.—*Mexico.*

74. *PLEURANTHIUM*. Caules distichophylli. Racemi axillares, fasciculiformes. Columna alte cum labello connata. Pollinia 8.—*Amer. trop.*

\*\* *Genera normalia, inflorescentia (una specie excepta) terminali.*

† *Pollinia 4, 1-seriata.*

75. *DIACRIUM*. Labellum a basi columnæ patens, inter lobos laterales supra 2-cornutum, cornubus subtus excavatis. Pseudobulbi elongati, apice paucifoliati.—*Guiana, Amer. centr., Mexico.*

76. *ISOCHILIUS*. Labellum a columna liberum, basi contractum, leviter sigmoideo-flexuosum. Caulis distichophyllus, racemo spiciformi secundo.—*Amer. trop.*

77. *PONERA*. Labellum in pede columnæ basi incumbens. Racemus in ramo distichophyllo terminalis, brevis, subsessilis, additis demum pluribus in ramo annotino lateralibus.—*Mexico, Amer. centr.*

78. *PRINELIA*. Labellum basi columnæ nanæ adnatum. Herba minima, pseudobulbis apice 1-foliatis, pedunculo filiformi 1-floro.—*Brasilia.*

79. *HARTWEGIA*. Labellum basi saccatum, columnæ pedi adnatum; unguis concavus, cum columna connatus; lamina abrupte deflexa, dein patens, adscendens. Habitus *Epidendri* sect. *Amphiglottidis*.—*Amer. austr., Mexico.*

80. *EPIDENDRUM*. Labelli unguis plus minus cum columna apoda connatus, lamina patens. Caulis distichophyllus v. pseudobulbosus, racemo simplici v. paniculato rarissime ad florem unicum magnum reducto.—*Amer. trop., Amer. bor. civit. austral.*

81. *BROUGHTONIA*. Labellum basi columnam apodam amplectens nec adnatum. Ovarium in collum longum tenuem cavum productum. Pseudobulbi apice 1-2-foliati, racemo simplici v. parce ramoso.—*Ind. occid.*

82. *CATTLEYA*. Labellum basi columnam apodam amplectens v. involvens nec adnatum. Pseudobulbi apice 1-2-foliati, floribus speciosis in racemo laxo paucis.—*Amer. trop.*

†† *Pollinia* 8, 2-seriata, seriei superioris inferioribus sæpius multo minora.

83. *LÆLIOPSIS*. Sepala suberecta. Petala ampliora. Labellum basi columnæ breviter adnatum, lobis lateralibus columnam amplectentibus. Ovarium in collum productum. Pseudobulbi 1-foliati.—*Ind. occid.*

84. *TETRAMICRA*. Sepala et petala consimilia, patentia. Labellum a basi patens. Caules non pseudobulbosi, foliis ad basin scapi v. pedunculi longi 1-3, racemo simplici.—*Amer. trop.*

85. *BRASSAVOLA*. Sepala et petala longa angusta patentia. Labelli unguis angustus, columnam amplectens v. involvens, lamina abrupte dilatata, patens. Caules vix incrassati, 1-2-foliati. Flores pauci, majusculi.—*Amer. trop.*

††† *Pollinia* 8, 2-seriata, seriebus parum inæqualibus.

86. *LÆLIA*. Sepala et petala plana. Labelli lobi laterales lati, columnam laxè involventes. Pseudobulbi 1-2-foliati. Flores speciosi nunc maximi.—*Amer. trop.*

87. *SCHOMBURGKIA*. Sepala et petala plus minus undulata. Labelli lobi laterales demum explanati. Pseudobulbi 1-3-foliati. Flores laxè racemosi.—*Amer. trop.*

88. *SOPHRONITIS*. Sepala et petala plana. Labelli lobi laterales conniventes, columnam occultantes, lamina linguiformis. Herbæ humiles, pseudobulbis confertis 1-2-foliatis 1-floris v. breviter 2-3-floris.—*Brasilia.*

**Tribus II. Vandee.** Anthera unica, terminalis, postica, opercularis, supra rostellum horizontale arcte incumbens, v. (in *Podochileis*) rostello erecto applicita, post dehisceniam decidua, junior 2-locularis, loculis tamen sub anthesi sæpiissime in unum confluentibus (loculis divaricatis apice confluentibus v. interdum parallelis valva interiore mox deliquescente?). Pollinia ceræa, 2, globosa v. oblongo-teretia, obtusa, indivisa v. sulco laterali 2-fida, v. singula transversim in 2 (posticum et anticum) sibi met arcte applicita divisa, per dehisceniam sigillatim v. si 4 per paria glandulæ rostellii v. stipiti affixa; glandula nunc parva crassa v. squamiformis viscidulaque, nunc in stipitem producta, mox a rostello soluta cum polliniis affixis *pollinarium* format, ab insectis v. corpore alieno facillime ablatum.—Herbæ epiphyticæ v. rariis terrestres, erectæ v. caudice cauliformi repente radicante arboribus v. saxis affixa, haud raro pseudobulbosæ, nec tubera hypogæa formantes. Inflorescentia sæpius lateralis, rarius caules foliatis terminans.

Excepta: Pollinia 4, distincta, leviter tantum per paria glandulæ rostellii affixa et forte interdum sigillatim decidua in *Ornithidio* et *Lockhartia*, 8 v. casu 6 in *Appendicula* et *Thelasi*.

(In generibus nonnullis *Epidendrearum*, e.g. *Tipularia*, *Oreorchis*, *Amblostomate*, *Seraphyto*, aliisque, polliniorum appendicula seu viscum in filum extensivum anthera deliscente rostello adhæret, et stipitem pollinari *Vandearum* simulat, sed revera est pollinis pars nec a rostello oriunda).

Subtribus I. *Eulophicæ*. Herbæ terrestres v. rariis epiphyticæ, caulibus foliatis sæpius in pseudobulbos incrassatis. Folia plicato-venosa, sæpius angusta. Racemi simplices v. rariis ramosi, scapos aphyllus æ-vaginato v. rariis caules foliatis terminantes. Labellum basi gibbum saccatum v. calcaratum. Columna apoda.

89. *EULOPHIA*. Petala sepalo postico similia v. vix latiora. Labellum basi gibbosum saccatum

1. *varie calcaratum*. Scapi floridi aphylli v. rarius foliati. Glandula rostellæ sæpius in stipitem producta.—*Africa trop. et austr., Asia trop., Australia, (Brasilia?)*.

90. *Lissochilus*. Petala sepalis latiora v. majora magisque colorata. Labellum basi saccatum v. in calcar conicum productum. Scapi floridi aphylli.—*Africa trop. et austr.*

91. *GALEANDRA*. Petala *Eulophiæ*. Labelli calcar late infundibuliforme. Caules floridi foliati. Glandula rostellæ non v. vix in stipitem producta.—*Amer. trop.*

Subtribus 2. *Cymbidiæ*. *Herbæ epiphyticae v. terrestres, caulibus foliatis sæpe in pseudobulbos incrassatis. Folia plicato-venosa, ampla v. angusta, v. rarius in caule plurifoliato tenuiter multivenia. Racemi simplices v. rarius ramosi, in scapo aphyлло v. pedunculo laterali v. in caule foliato terminales. Columna apoda, v. rarius brevissime lateque producta. Labellum ecalcaratum. Genera omnia gerontogea, speciebus perpaucis Polystachyæ exceptis.*

Post antheræ dehisceniam pollinia sæpissime in glandula squamiformi rostellæ sessilia v. stipiti brevissimi tantum simplici v. duplici imposita, in generibus prioribus sæpissime appendicula granulosa transversa (divaricato-biloba) interposita, hæc vero difficillime nisi in specimine recente observatur et rarissime in iconibus delineatur. In *Cymbidio giganteo* alisque appendicula distinctissima est, etiam in *Ansellia* et *Grammangi* observavimus parvam.

92. *CYMBIDIUM*. Sepala et petala parum inæqualia, patentia. Labelli lobi laterales columnam non v. vix alatum laxè amplectentes. Pollinia appendicula transversa granulosa instructa. Caules foliati abbreviati, pseudobulbosi, scapo florente inter folia v. ad basin aphyлло.—*Africa, Asia, Australia.*

93. *ANSELLIA*. Sepala et petala subæqualia, patentia. Columna basi in pedem brevem latum 2-lobum producta, exalata. Pollinia appendicula parva instructa. Caules distichophylli, pedunculo terminali ramoso.—*Africa.*

94. *GRAMMANGIS*. Sepalum posticum fornicatum, lateralia patentia. Petala multo minora. Labellum sepalis multo brevius. Columna 2-alata. Caules breves, pseudobulbosi, paucifoliati, scapo florente simplici aphyлло.—*Madagasc., (Java?)*.

95. *CREMASTRA*. Sepala petala labellumque conniventia, basi longe angusta. Folia in rhizomate tuberoso solitaria. Scapi florentes aphylli, plurivaginati. Racemus secundus, nutans. *Japonia.*

96. *CYPERORCHIS*. Sepala petalæque conniventia v. subpatentia. Labellum a basi erectum, angustum, lobis lateralibus columnam amplectentibus. Caules breves, plurifoliati, vix pseudobulbosi. Scapi florentes aphylli, plurivaginati. Racemus sæpe nutans.—*Ind. or., Archip. Malay.*

97. *GEODORUM*. Sepala et petala erecto-patentia, subæqualia. Labellum sessile, a basi latum, ventricosum-concavum, erectum, fere complicatum. Caules breves foliati et scapi florentes aphylli e rhizomate crasso subtuberoso. Racemus densus, nutans.—*Ind. or., Archip. Malay., Australia.*

98. *GRAMMATOPHYLLUM*. Sepala petalæque patentia. Pollinia post dehisceniam lobis v. cornubus glandulæ v. stipitis lunati v. hippocrepidiformis affixa. Caules foliati. Scapi florentes longi, aphylli. Flores speciosi, laxè racemosi.—*Malacca, Archip. Malay.*

99. *DIRONIUM*. Sepala petalæque patentia. Pollinia post dehisceniam stipitibus 2 distinctis affixa. Caules basi foliati v. aphylli, non pseudobulbosi. Scapi florentes aphylli v. pedunculi laterales. Racemi sæpius floribundi.—*Malacca, Archip. Malay., ins. maris Pacif., Australia.*

100. *THECOSTELE*. Sepala petalæque patentia. Labellum basi columnæ adnatum, dein patens. Columna ima basi cum labello in tubum brevem connata, dein abrupte deflexa citoque incurvo-ascendens. Pseudobulbi 1-foliati. Scapi florentes aphylli, laterales, recurvi, racemo simplici.—*Malacca, Archip. Malay.*

101. *BROMHADIA*. Sepala petalæque patentia. Labellum erectum, lobis lateralibus columnam amplectentibus. Columna late 2-alata. Caulis florens distichophyllus, non pseudobulbosus, pedunculo terminali interdum ramoso; racemi rhachis sæpe incrassata, bracteis distichis serrata.—*Malacca, Archip. Malay.*

102. *POLYSTACHYA*. Sepala conniventia v. subpatentia, lateralia cum pede brevi columnæ in mentum connata. Columna brevis. Caules florentes breves, paucifoliati, demum pseudobulbosi, pedunculo terminali simplici v. ramoso, floribus parvis.—*Asia et Afr. trop. cum sp. paucis Americanis.*

(Confer etiam, 103, *Plocoglottidem*.)

Subtribus 3. *Cyrtopodieæ*. *Herbæ terrestres, elatæ v. sæpius epiphyticæ, caulibus foliatis sæpius in pseudobulbum v. basi in tuber incrassatis. Folia plicato-venosa v. venis paucis elevatis percursa. Scapi florentes a basi caulis v. e rhizomate aphylli. Columna (excepta Aganisia) plus minus in pedem producta.*

Genera pro maxima parte Americana, a *Maxillariis* differunt imprimis habitu, ultima tamen *Stanhopeis* accedunt, priora gerontogea v. amphigea a *Cymbidieis* columnæ pede distinguenda.

\* *Terrestres, pseudobulbis tuberiformibus vel caule vix incrassato indistinctis.*

103. ? *Plocoglottis*. Sepala lateralìa v. omnia patentia. Labellum basi breviter saccatum, cum columnâ plicis membranaceis connexum. Columnæ pes brevissimus. Pollinia stipitibus distinctis filiformibus affixa. Scapi erecti, racemo simplici.—*Archip. Malay.*

104. *CYRTOPODIUM*. Sepala patentia. Labellum pedi columnæ breviter adnatum. Pollinia glandulæ v. stipiti brevi lato affixa. Scapi erecti, racemo simplici v. ramoso.—*Asia, Afr. et Amer. trop.*

105. *GOVENIA*. Sepala conniventia. Labellum cum pede columnæ articulatam. Columna alata. Pollinia stipiti oblongo v. lato affixa. Racemus in caule paucifoliato terminalis, simplex.—*Amer. trop.*

(Confer etiam 102, *POLYSTACHYUM*.)

\*\* *Epiphyticæ, caulibus foliatis brevibus pseudobulbosis.*

† *Pollinarii stipes v. glandula brevis, lata. Sepalum posticum liberum.*

106. *PTEROGLOSSASPIS*. Sepala patentia mento vix prominente. Columna brevissima, 2-callosa. Scapus simplex, elatus, racemo brevi denso.—*Abyssinia.*

107. *ZYGOPETALUM*. Sepala patentia. Labellum explanatum, facie basi crista transversa instructa. Columna incurva. Scapi 1-flori v. laxo racemiferi, floribus speciosis.—*Amer. trop.*

108. *GROBYA*. Sepalum posticum erectum, lateralìa patentissima. Petala multo latiora. Columna erecta, apice 2-loba v. 2-dentata. Scapi recurvi v. deflexi, racemo simplici denso.—*Brasilia.*

109. *CHIRADENIA*. Herba parvula, folio membranaceo-coriaceo nervoso vix plicato. Flores parvi, in racemo pauci, cæterum fere *Zygopetali*.—*Guiana.*

110. *AGANISIA*. Columna apoda. Flores cæterum *Zygopetali* nisi sæpius minores. Scapi simplices, racemiferi.—*Amer. trop.*

111. *ACACALLIS*. Columna ad latera stigmatis utrinque late alata. Labelli unguis longus, apice sacco reverso v. cucullo lato appendiculatus. Cætera *Zygopetali*. Scapus simpliciter racemosus.—*Brasilia bor.*

112. *ERIOPSIS*. Sepala patentia. Labelli lobi laterales erecti, columnam laxè amplectentes; medius parvus, patens. Columna longiuscula, exalata. Scapus simplex, racemo longo floribundo.—*Amer. austr. trop.*

113. *WARREA*. Sepala concava, subpatentia. Labelli lobi laterales parvi, medius expansus, facie lineis elevatis instructus. Scapus simplex, floribus speciosis laxè racemosus.—*Peruvia, Columbia.*

114. *LYCOMORIUM*. Sepala lateralìa latissima. Labellum late cucullatum, lobo medio brevissimo. Columna brevis, crassa, pede longo, clinandrio maximo. Scapus simplex, floribus speciosis dense racemosus.—*Columbia, Amer. centr.*

115. *BATEMANIA*. Sepala lateralìa ad apicem pedis longi columnæ a postico erecto distantia, patentia. Labelli lobi laterales erecti, columnam longiusculam amplectentes, medius brevis. Scapus simplex, floribus laxè racemosus.—*Guiana.*

†† *Pollinarii stipes simplex elongatusque v. duplex. Sepalum posticum liberum.*

116. *BIPRENARIA*. Sepala erecto-patentia. Columnæ pes elongatus. Pollinia stipitibus 2 brevissimis elongative affixa. Scapus simplex. Flores in racemo plures, mediocres v. pauci, rarius solitarii magni.—*Amer. austr. trop.*

117. *XYLOBIUM*. Sepala erecta, demum subpatentia. Labelli lobi laterales columnam amplectentes, medius brevis. Pollinii stipes simplex. Scapus simplex, floribus racemosus.—*Amer. trop.*

118. *LACÆNA*. Sepala patentia. Labelli lobi laterales ad latera unguis breves v. angusti; medius stipitatus, latus. Columnæ pes brevis. Pollinarii stipes simplex, linearis. Scapus longus, simplex, floribus majusculis laxè racemosis.—*Amer. centr.*

119. *LYCASTE*. Sepala erecto-patentia. Labelli lobi laterales ad basin v. apicem unguis lati v. falcati; medius parvus v. elongatus, sæpius ciliatus. Columna longiuscula. Pollinarii stipes longe linearis. Scapus 1-florus, rarius 2-3-florus, flore magno.—*Amer. trop.*

120. *ANGULOA*. Sepala fere in globum conniventia, latiuscula. Labelli carnosuli lobi laterales ad apicem unguis erecti, medius parvus v. latus ciliatusque. Columna mediocris. Pollinarii stipes longus, planus. Scapus 1-florus, flore magno.—*Columbia, Peruvia.*

(Confer etiam 133, *STENIAM*.)

††† *Sepalum posticum basi columnæ adnatum, erectum, lateralia patentia.*

121. ? *CHONDRORHYNCHA*. Petala sepalis multo latiora. Labellum sessile, latum, concavum. Pollinarii stipes brevis, crassus. Caulis ebulbosus. Scapus 1-florus, flore majusculo.—*Columbia.*

122. *GONGORA*. Petala cum sepalo postico columnæ affixa. Labellum angustum. Pollinarii stipes lineari-cuneatus. Scapus simplex, racemo longo laxo flexuoso, floribus majusculis.—*Amer. trop.*

Subtribus 4. *Stanhopeæ*. *Herbæ epiphytica, caulibus brevibus pseudobulbosis v. carnosio-incrassatis, 1-pauci-foliatis. Folia sæpius ampla, plicato-venosa v. venis elevatis percursa. Scapi florentes ad basin pseudobulborum v. e rhizomate simplices, floribus sæpe magnis laxè racemosis v. rarius solitariis. Labellum sæpius et interdum perianthium totum carnosum. Columna apoda. Genera omnia Americana.*

\* *Columna recta, brevis v. longiuscula, sæpius crassa.*

123. *CORYANTHES*. Sepala patentissima, posticum lateralibus brevius. Labelli lobi laterales in medio ungue longo in appendicem poculiformem connati; medius magnus, galeatus. Pollinarii stipes linearis, glandula parva. Flores magni, in racemo laxo pauci.—*Amer. centr.*

124. *STANHOPEA*. Sepala patentia, subæquilonga. Labellum varie incrassatum, polymorphum, sæpe undulatum v. subtortum. Pollinarii stipes planus, glandula squamiformi. Flores magni, in racemo laxo pauci.—*Amer. trop.*

125. *HOULETIA*. Sepala patentia, subæqualia. Labelli angusti lobi laterales unguem marginantes, postice in processus retrorsum arcuatos producti. Pollinarii stipes angustus, glandula indistincta. Flores majusculi, laxè racemosi.—*Amer. austr. trop.*

126. *PERISTERIA*. Sepala lata, in globum crassum conniventia. Labelli lobi laterales erecti; medius concavus, inflexus. Columna brevis. Pollinarii stipes cuneatus v. latus. Flores speciosi, laxè racemosi.—*Columbia.*

127. *ACINETA*. Sepala lata, crassiuscula, demum patentia. Labelli unguis anguste marginatus; lobus medius inflexus, concavus. Columna longiuscula. Pollinarii stipes oblongus, basi in glandulam incrassatus. Flores speciosi, laxè racemosi.—*Columbia, Amer. centr., Mexico.*

128. *CATASETUM*. Flores polygamo-trimorphi. Sepala crassa, in globum conniventia v. lateralia v. omnia patentia v. deflexa. Labellum sessile, polymorphum. Columna in fl. ♂ longiuscula, cirrhis v. setis 2 reflexis instructa, in fl. ♀ brevis, nuda. Pollinarii stipes loriformis, glandula magna crassa. Flores speciosi, laxè racemosi.—*Amer. trop.*

129. *MORMODES*. Sepala sæpius angusta, patentia v. deflexa. Labellum sæpius lateribus reflexis convexum, incurvo-ascendens, in unguem contractum. Columna crassiuscula. Clinandrium longe acuminatum. Pollinarii stipes loriformis, glandula magna crassa. Flores speciosi, laxè racemosi.—*Columbia, Amer. centr., Mexico.*

\*\* *Columna longa, tenuis, incurva.*

130. *CYCNOCHES*. Sepala patentia. Labellum in unguem contractum. Pollinia ovoidea, stipite rigido, glandula magna. Flores speciosi, racemosi.—*Amer. trop.*

131. ? *CHRYSOCCYNUS*. Sepala patentia. Labelli unguis brevis, laminæ anguli recurvi. Pollinia (ovoidea?) stipite brevi. Scapi 1-flori, flore majusculo.—*N. Grenada.*

132. *POLYCYONIS*. Sepala patentia, angusta. Labelli lobi laterales unguem marginantes, apice arcuato-patentes. Pollinia angusta, stipite lineari, glandula parva. Flores speciosi, laxè racemosi.—*Amer. trop.*

Subtribus 5. *Maxillariæ*. *Herbæ epiphytica, nunc pseudobulbis in rhizomate confertis v. in caule foliato sparsis 1-2-foliatis, foliis coriaceis v. carnosis, nunc rhizomate in caulem distiche foliatum elongato, foliis brevibus vaginis subequitantibus, pseudobulbis raris v. 0. Scapi rhizomatis v. pedunculi axillares 1-flori v. rarissime laxè pauciflori. Columna in pedem producta. Genera omnia Americana.*

133. *STENIA*. Sepala patentia. Labellum sessile, latum, carnosum, concavum fere saccatum, subintegrum v. fimbriatum. Pollinarii stipes latus, pubescens; pollinia angusta. Pseudobulbi 1-2-foliati. Scapus 1-florus, flore majusculo.—*Guiana.*

134. *SCHLIMMIA*. Sepalum posticum angustum, lateralia latissima, mentum ample saccatum formantia. Labellum inclusum, angustum, varie lobatum. Pollinarii stipes angustus, cuneatus. Pseudobulbi 1-foliati. Scapus laxè pauciflorus, floribus majusculis.—*Columbia.*

135. ? *CLOWESIA*. Sepala cum petalis in globum conniventia. Labellum sessile, carnosum, concavum, erectum, fimbriatum. Clinandrium elevatum, fimbriatum. Pollinarii stipes brevis, apice dilatatus, glandula crassa. Scapus laxè pauciflorus.—*Brasilia.*

136. *MORMOLYCE*. Sepala patentia. Labelli lobi laterales erecti, medius brevis. Columna incurva. Pollinarii glandula hippocrepica absque stipite. Pseudobulbi globosi, 1-foliati. Scapus tenuis, 1-florus, flore mediocri.—*Mexico.*

137. *SCUTICARIA*. Sepala erecto-patentia. Labellum latum, lobis lateralibus maximis erectis. Columna crassiuscula. Pollinarii glandula transversa, stipitibus brevissimis v. 0. Foliolum longissimum, carnosum, subteres. Scapus 1-florus.—*Brasilia, Guiana.*

138. *MAXILLARIA*. Sepala patentia v. rarius suberecta. Labellum erectum, concavum, lobis lateralibus erectis. Columna crassa. Pollinarii stipes planus, brevis nunc brevissimus. Pseudobulbi 1-2-foliati, foliis planis; rhizoma interdum in caulem dense distichophyllum foliis brevibus productum. Scapi v. pedunculi ad basin pseudobulborum v. axillas foliorum distichorum 1-flori, solitarii.—*Amer. trop.*

139. *CAMARIDIUM*. Sepala patentia et labellum fere *Maxillariæ*. Pollinarii stipes planus, latiusculus. Pseudobulbi 1-2-foliati, rari. Caules dense distichophylli, sæpe ramosi. Pedunculi axillares, solitarii, 1-flori, bracteis paleaceis stipati.—*Amer. trop.*

140. *DICHÆA*. Sepala patentia. Labellum unguiculatum, lamina lata triangulari v. ovata. Pollinarii stipes plana. Caules dense distichophylli, ebulbosi. Flores in axillis pedunculati solitarii, parvi rarius mediocres.—*Amer. trop.*

141. *ORNITHIDIUM*. Sepala erecta v. demum patentia. Labelli lobi laterales erecti. Pollinarii stipes linearis (v. pollinia libera?). Caules dense distichophylli, hinc inde pseudobulbos 1-foliatos emittentes. Pedunculi 1-flori, ad axillas fasciculati, floribus parvulis v. mediocribus. — *Amer. trop.*

Subtribus 6. *Oncidiæ*. *Herbæ epiphytica, caulibus abbreviatis nunc brevissimis, sæpius pseudobulbo 1-2-foliato terminatis v. rarius ebulbosis, foliis paucis subdistiche fasciculatis. Folia non plicata, sæpius coriacea v. carnosæ. Scapi v. pedunculi sub pseudobulbo axillares v. ad basin fasciculi laterales. Columna apoda. Genera omnia Americana tropica.*

\* *Perianthium calcaratum.*

† *Labelli calcar simplex v. duplex, intra calcar v. gibbum sepalorum inclusum.*

142. ? *CRYPTOCENTRUM*. Calcar sepalorum et labelli longissimum, tenue, ovario arcuè appressum quocum in bractea membranacea inclusum. Folia linearia, disticha, vix pseudobulbosa. Scapi 1-flori, flore parvo.—*Ecuador.*

143. *DIADENIUM*. Labelli calcaria 2, intra calcar sepalorum longum tenue ab ovario divergens inclusa. Pseudobulbi parvi, 1-foliati. Flores secus ramos paniculæ laxè racemosi, parvi.—*Brasilia, Peruvia.*

144. *COMPARETTIA*. Labelli calcaria 2, intra calcar sepalorum tenue ab ovario divergens inclusa. Pseudobulbi 1-foliati. Flores in scapo simplici racemosi speciosi.—*Andes Amer. trop.*

145. *SCELOCHILUS*. Labelli calcar duplex v. didymum, intra calcar v. gibbum sepalorum breve. Pseudobulbi angusti, 1-foliati. Flores in scapo simplici v. subramoso pauci, mediocres, racemosi.—*Andes Amer. trop.*

†† *Labelli calcar simplex, sepalis ecalcaratis.*

146. *TRICHOCENTRUM*. Labellum basi cum columna in urceolum connatum, calcare longiusculo. Columna brevis, crassa. Pseudobulbi parvi, 1-foliati. Flores in scapo brevi solitarii v. gemini, mediocres v. majusculi.—*Amer. trop.*

147. *RODRIGUEZIA*. Labellum basi cum columna brevissime connatum v. liberum, calcare brevi nunc ad gibbum reducto. Columna tenuis. Pseudobulbi 1-2-foliati. Flores in scapo simplici racemosi, sæpius speciosi.—*Amer. trop.*

\*\* *Perianthium ecalcaratum. Labellum basi columnæ adnatum.*

148. *TRICHOPILIA*. Sepala erecto-patentia, libera. Clinandrium amplum, membranaceum, sæpius ciliato-fimbriatum. Pseudobulbi 1-foliati. Scapi e rhizomate breves, floribus speciosis solitariis v. paucis.—*Columbia, Amer. centr., Mexico.*

149. *ASPASIA*. Sepala patentia, posticum cum petalis basi columnæ adnatum. Clinandrium breve, truncatum. Folia sub pseudobulbo 1-foliato pauca. Pedunculi axillares, simplices, floribus speciosis breviter racemosi.—*Amer. trop.*

150. *COCLIODA*. Sepala patentia, libera. Clinandrium truncatum v. 3-lobum. Folia sub pseudobulbo 1-foliato pauca. Pedunculi axillares, floribus (sæpius rubris) laxè racemosi.—*Andes Amer. austr.*

151. *DIGNATHA*. Sepala patentia, libera. Labellum lamellis 2 columnæ brevissime adnatum. Clinandrium truncatum. Pseudobulbi 1-foliati. Scapus brevis, flore solitario parvo.—*Mexico.*

\*\*\* *Perianthii ecalcarati tubus supra ovarium ovoides v. globosus, apice clausus.*

152. *SAUNDERSIA*. Sepala patentia. Labelli unguis basi columnæ brevi adnatus, dein latus, sepalis longior. lamina 2-loba. Caulis brevissimus, 1-foliatus, vix pseudobulbosus. Scapus brevis, recurvus, fasciculato-pluriflorus, bracteis obtectus.—*Brasilia.*

153. *BRACHTIA*. Sepala suberecta. Labellum basi cum columna brevissima continuum, erectum, indivisum. Pseudobulbi 1-foliati. Racemus ad apicem pedunculi simplicis brevis, densus, secundus, bracteis membranaceis subimbricatis.—*Columbia.*

\*\*\*\* *Perianthii ecalcarati tubus supra ovarium tenuis v. sæpius 0. Labellum a columna liberum.*

*Caulis sub pseudobulbo 1-foliato paucifolius v. vaginatus (exceptis perpaucis Oncidiis). Sepala patentia.*

a. *Sepala libera v. lateralia basi brevissime connata.*

154. *ODONTOGLOSSUM*. Labelli unguis (sæpe brevissimus) columnæ parallelus, lamina patens. Columna sæpius longiuscula, exauriculata. Scapi nunc breves floribus paucis v. subsolitariis speciosis, nunc ample paniculato-ramosi, floribus speciosis v. parvis.—*Andes Amer. trop.*

155. *ONCIDIUM*. Labellum a basi contracta patens v. a columna divergens, lamina sæpius ampla patente. Columna brevis, ad latera stigmatis sæpissime 2-auriculata. Scapi sæpius elongati ramosi, rarius simplices pauciflori.—*Amer. trop.*

156. *MILTONIA*. Labellum sæpius ad basin columnæ sessile, amplum, patens, indivisum. Cætera *Oncidiis*, floribus speciosis.—*Brasilia, Peruvia.*

157. *BRASSIA*. Sepala et petala longa, angusta, acuminata v. caudata. Labellum ad basin columnæ sessile, planum, latum, sepalis brevius. Columna brevis. Racemi simplices, laxè pauciflori.—*Amer. trop.*

158. *SOLENIIDUM*. Labellum a basi patens, unguo longo, apice dilatatum, indivisum. Columna erecta, late 2-alata. Racemi simplices, floribus longè pedicellatis.—*Columbia.*

159. *LEIOCHILUS*. Labellum a basi patens. Columna brevis, exalata, v. infra stigma 2-auriculata. Anthera ultra loculos longè producta. Scapi simplices v. rarius subramosi, floribus parvis racemosi.—*Ind. occid., Amer. centr., Mexico.*

160. *SIGMATOSTALIX*. Labellum patens, ungue longo. Columna elongata, angustissima.

Pollinarii stipes longe linearis. Scapi simplices, floribus laxè racemosis mediocribus v. parvis.—*Amer. trop.*

161. *ERYCINA*. Labellum patens, circa basin columnæ adnatum, 3-partitum, facie basi anguste 2-callosum et lobis 2 angustis auctum. Columna brevissima, rostello longo. Pollinarii stipes longe linearis. Capsula echinata. Scapus ramosus.—*Mexico*.

8. *Sepala lateralìa sæpius alte connata.*

162. *GOMEZA*. Labellum a basi columnæ incurvo-erectum v. a basi erectum, callis 2 columnam amplectentibus. Columna longiuscula, sæpe 2-alata. Pollinarii stipes angusta. Scapus simplex, floribus mediocribus racemosis, sæpius secundis.—*Brasilia*.

163. *ABOLA*. Sepala lateralìa sub labello patentissima, alte connata. Labellum a basi patens, columnam fere amplectens. Columna brevis, 2-alata. Pollinarii stipes tenuis, brevis. Scapus simplex, floribus parvis racemosis.—*Columbia*.

†† *Caules sub pseudobulbo 1-foliato paucifoliati v. vaginati. Sepala basi v. alte erecta.*

164. *NEODRYAS*. Sepala lateralìa alte connata. Labellum erectum. Columna ad latera stigmatis utrinque ala brevi appendiculata. Scapus v. pedunculus apice paniculatus, floribus parvis in ramulis brevibus racemosis.—*Bolivia, Peruvia*.

165. *TRIZEUXIS*. Sepala lateralìa alto connata. Labellum erectum. Columna brevis, exalata. Pedunculus tenuis, superne paniculatus; floribus minimis in ramulis ultimis racemosis.—*Columbia*.

166. *ADA*. Sepala omnia libera. Labellum patens, angustum, indivisum. Columna brevis, basi in alas labellum amplectentes dilatata. Scapus simplex, floribus in racemo secundo speciosis nutantibus.—*Columbia*.

167. *SUTRINA*. Sepala lateralìa basi in mentum brevissimum cohærentia. Labellum erectum. Columna superne late 2-alata. Rostellum appendice longa lineari instructum. Scapus simplex, floribus racemosis.—*Peruvia*.

168. *TRIGONIDIUM*. Sepala omnia basi in tubum cohærentia v. conniventia. Labellum erectum, angustum, columnam amplectens. Columna brevis, exalata. Scapi 1-flori.—*Amer. trop.*

††† *Folia in caule brevi v. brevissimo bulboso conferta fasciculata v. disticha. Pollinarii stipes longatus, angustus.*

169. *IONOPSIS*. Sepala erecta. Labelli unguis longus, lamina exserta, late expansa. Columna brevis. Pedunculi longi, tenues, sæpe laxè ramosi, floribus longiuscule pedicellatis.—*Amer. trop.*

170. *CRYPTARRHENA*. Sepala patentia. Labelli unguis longus. Columna brevis. Anthera sub clinandrio amplo fere occulta. Pedunculi simplices, floribus parvulis laxè racemosis.—*Ind. occid., Amer. centr.*

171. *ORNITHOCEPHALUS*. Sepala patentia. Labellum subsessile. Columna brevis, rostello horizontali longissimo. Pedunculi simplices, floribus parvis in racemo dissitis.—*Amer. trop.*

172. *QUEKETTIA*. Sepala erecta, linearia, petaloidea. Labellum erectum, indivisum, sepalis paullo latius. Columna angusta, apice 2-auriculata. Folia lineari-teretia. Scapus filiformis, ramosus, floribus parvis dissitis.—*Brasilia*.

173. *ZYGOSTATES*. Sepala patentia. Labellum basi lamina erecta et auriculis 2 linearibus apice dilatatis carnosus instructum. Columna arcuata, rostello longissimo apice recurvo. Pedunculi simplices, floribus parvis in racemo dissitis.—*Brasilia*.

174. *PHYMATIDIUM*. Sepala patentia, tenuissima. Labellum indivisum. Columna tenuis, apice 2-auriculata, rostello brevi. Herbæ pusillæ, dense cæspitosæ, foliis brevibus gramineis. Scapi simplices, tenues, floribus parvis laxè racemosis.—*Brasilia*.

175. *CHYTROGLOSSA*. Sepala patentia. Labellum sessile, patens. Columna brevis, basi stigmatica, supra stigma a latere compressa, apice truncata, 2-alata. Herbæ nanæ, foliis fasciculatis, floribus mediocribus laxè racemosis.—*Brasilia*.

176. *HOFMEISTERELLA*. Sepala linearia, reflexo-patentia. Labellum subsessile, lanceolatum, indivisum. Columna basi late 2-alata, rostello longiusculo reflexo; clinandrium in dentem longum antheriferum productum. Caulis brevissimus, foliis linearibus brevibus. Scapi ancipites, floribus majusculis longe pedicellatis.—*Ecuador*.

(Confer etiam 161, *ERYCINAM*.)

Subtribus 7. Sarcanthee. Caulis non pseudobulbosus, basi v. undique reptans radicans. Folia disticha, coriacea v. carnosa, non plicata, rarius tenuia v. 0. Pedunculi secus caulem laterales v. axillares.

\* Columna apoda. Labellum ecalcaratum v. rarius calcar breve sub lobo medio a basi remotum.

† Genera Americana. Folia in caule ascendente dense disticha, brevia. Columna brevis, 2-alata.

177. LOCKHARTIA. Labellum a basi patens, sepalis longius. Clinandrium breve. Pollinia sæpe libera. Flores parvi, in pedunculo subsolitarii v. laxè paniculati.—*Amer. trop.*

178. CENTROPETALUM. Labellum basi cum alis columnæ in cupulam brevissimam connatum, dein erectum, lamina patente indivisa. Clinandrium amplum, petaloideum. Pollinarii stipites 2 distincti v. in unum coaliti. Flores in axillis solitarii, pedicello bracteis stipato.—*Columbia.*

179. PACHYPHYLLUM. Labellum basi angustum, erectum, lamina indivisa sepala non superante. Clinandrium amplum, petaloideum. Pollinia fere libera. Racemi axillares, breves, rarius 1-flori.—*Andes Amer. trop.*

†† Genera gerontogea, caule laxius v. parce v. breviter foliato. Columna brevis, exalata.

180. LUISIA. Sepala et petala conniventia v. subpatentia. Labellum continuum, sepalis sæpius longius, concavum v. superne convexum. Pollinarii stipes planus, ovatus. Folia teretia, carnosula. Spicæ breves, subsessiles, floribus parvulis v. mediocribus.—*Ind. or., Archip. Malay., Japonia.*

181. COTTONIA. Sepala patentissima. Petala angustiora. Labellum continuum, sepalis sæpius longius, planum v. concavum. Pollinarii stipes longus, angustus. Racemi nunc simplices breves, nunc in pedunculo longissimo ramoso, floribus mediocribus.—*Ind. or.*

182. STAUROPSIS. Sepala et petala patentissima, subæqualia. Labellum continuum, angustum, sepala non superans. Pollinarii stipes planus. Racemi nunc simplices breves floribus majusculis, nunc in pedunculo longo ramosi floribus mediocribus.—*Archip. Malay.*

183. ARACHNANTHE. Sepala et petala patentissima, interdum undulata. Labellum articulatum, lobis lateralibus erectis v. obsoletis, medio carnoso, dorso sæpe gibbo v. calcare brevi instructo. Pollinarii stipes planus, e basi lata acutus v. angustatus. Racemi laxi, simplices v. ramosi, floribus speciosis.—*Archip. Malay., Himalaya.*

\*\* Sepala lateralialia basi pedi columnæ adnata, mentum formantia. Labelli calcar 0, v. a basi remotum v. recurvo-ascendens. Genera gerontogea. Sepala et petala patentia.

184. PHALLENOPSIS. Labellum a basi patens v. basi breviter erectum, ecalcaratum. Columna erecta, pede brevi. Pollinarii stipes linearis v. spatulatus. Racemi laxi, simplices v. ramosi, floribus speciosis.—*Ind. or., Archip. Malay.*

185. DORITIS. Labellum basi longe unguiculatum, incumbens, ecalcaratum, lamina 3-loba. Columna alato-marginata, pede longo. Pedunculi longi, simplices v. ramosi, floribus parvis v. mediocribus.—*Ind. or., Archip. Malay.*

186. RHYNCHOSTYLIS. Labellum ad apicem pedis columnæ profunde saccatum, supra saccum longe angustatum, lamina linguiformi v. ovata. Columna exalata, pede brevi. Pollinarii stipes subfiliformis. Racemi longi, densiflori, floribus majusculis v. mediocribus.—*Ind. or., Archip. Malay.*

187. *SARCOCHILUS*. Labellum basi breviter incumbens v. adnatum, lamina carnosâ, polymorpha, apice sæpius inflexa, dorso gibbo v. calcar carnosum a basi distante instructa. Pollinarii stipes linearis v. oblongus. Pedunculi sæpius simplices, floribus parvis v. rarius majusculis.—*Ind. or., Archip. Malay., ins. maris Pacifici, Australia.*

188. *TRICHOGLOTTIS*. Labellum basi pedi longo horizontali columnæ adnatum, mentum formans sed ecalcaratum, apice concavum erecto-patens. Pollinarii stipes angustus. Pedunculi brevissimi, floribus solitariis v. paucis sæpius parvis.—*Archip. Malay.*

189. *AERANTHUS*. Labellum basi pedi longo horizontali columnæ adnatum, mentum formans sed ecalcaratum, apice concavum erecto-patens. Pollinia in glandulis sessilia absque stipite. Pedunculi longiusculi, flore sæpius solitario majusculo.—*Ins. Mascar.*

190. *AREIDES*. Labellum pedi longiusculo columnæ affixum (articulatum), subtus in calcar sub lamina recurvum v. ascendens productum. Pollinarii stipes angustus. Racemi nunc simplices dense floribundi speciosi, nunc laxiores ramosi.—*Ind. or., Archip. Malay., China, Japonia.*

\*\*\* *Columna apoda. Labellum basi saccatum v. calcaratum.*

† *Genera gerontogea.*

191. *RENANTHERA*. Sepala et petala patentissima, lateralia postico sæpius majora, sub labello brevi sæpius parallela v. medio coherentia. Pollinarii stipes planus, angustus. Racemi plus minus ramosi.—*Ind. or., Archip. Malay., China.*

192. *VANDA*. Sepala et petala patentissima, basi sæpius contracta, crassiuscula. Pollinarii stipes latus. Racemi simplices, floribus majusculis.—*Ind. or., Archip. Malay., Australia.*

193. *SACCOLABIUM*. Sepala et petala patentissima. Pollinarii stipes sæpius tenuis. Racemi simplices v. ramosi, sæpe floribundi, floribus quam in *Vanda* minoribus.—*Ind. or., Archip. Malay.*

194. *UNCIFERA*. Sepala et petala erecto-patentia. Labelli calcar valde incurvum. Pollinarii stipes apice dilatato-sub-2-lobus. Flores parvi, racemis dense spiciformibus.—*Khasya.*

195. *ACAMPE*. Sepala et petala crassiuscula, concava. Pollinarii stipes tenuis. Racemi breves, rigidi, densiflori, in pedunculo brevi simplici v. in panícula plures, floribus parvulis.—*Ind. or., China, Afr. austr. or.*

196. *SARCANTHUS*. Labelli calcar intus lamina longitudinali antica plus minus divisum, cum v. absque callo postico. Racemi graciles, simplices v. laxè paniculati, floribus parvulis.—*Ind. or., China, Archip. Malay.*

197. *CLEISOSTOMA*. Labelli calcar intus ad os callo v. lamella postica subelatum, lamina longitudinali 0. Racemi simplices v. ramosi, floribus parvis confertis.—*Ind. or., Archip. Malay., Austral. trop.*

198. *SCENORCHIS*. Omnia *Saccolabii* nisi columna basi appendicibus 2 linearibus erectis instructa. Folia teretia. Racemi breves floribundi, floribus parvulis.—*Java.*

199. *ORXITHOCHILUS*. Sepala patentia, lateralia basi cum ungue labelli in mentum breve coalita. Labelli lamina lata, 2-3-loba, sæpius fimbriata. Pollinarii stipes loriformis. Racemi tenues, simplices v. ramosi, floribus parvis.—*Himalaya, Burma (Australia?).*

200. *TAXIOPHYLLUM*. Sepala conniventia v. subpatentia, sæpe basi connata. Pollinia 4, distincta; pollinarii stipes brevis. Herbarum nanæ, paucifloræ v. subaphyllæ, floribus minutis.—*Ind. or., Archip. Malay., ins. maris Pacifici, Australia.*

201. *MICROSACCUS*. Sepala et petala patentia. Pollinia 4, distincta, pollinarii stipite lineari. Herbarum parvæ. Folia numerosa, parva, disticha, rigida v. carnosula. Flores minimi, in pedunculis brevissimis solitarii v. gemini.—*Archip. Malay.*

202. *DIPLOCENTRUM*. Labellum juxta basin breviter 2-calcaratum. Cætera fere *Saccolabii*.—*Ind. or. penins.*

203. *ANGRÆCUM*. Sepala et petala patentia. Labelli calcar longum tenue nunc longissimum, limbus patens v. erecto-patens. Pollinarii stipes planus, simplex v. in 2 bene distinctos divisus. Flores magni v. rarius mediocres.—*Afr. trop. et austr., ins. Mascar., Japonia, China.*

204. *CRYPTOPUS*. Sepala et petala patentia, petalis 2-lobis. Labelli calcar longum, limbus patens lobo medio 3-lobus. Pollinarii stipites 2, cupuliformes, glandulis 2 distinctis planis antice ciliato-fimbriatis. Flores speciosi, laxè racemosi.—*Ins. Mascar.*

205. *CEONTA*. Sepala et petala erecto-patentia. Labelli erecti calcar conicum v. obtusum, lobi laterales circa columnam convoluti, medius integer v. 2-lobus. Pollinarii stipites 2, fli-

formes, glandula sæpius unica. Racemi simplices, floribus mediocribus v. majusculis.—*Ins. Mascar.*

206. MYSTACIDIUM. Sepala et petala patentia. Labelli calcar tenue v. ad extremitatem saccatum v. clavatum, lamina patens. Pollinarii stipites 2, filiformes v. apice parum dilatati. Racemi breves in pedunculo simplici interdum elongato floribundi, v. (in sect. *Pectinaria*) folia parva numerosa, floribus solitariis subsessilibus. Labellum sæpe superum.—*Africa trop. et austr.*

†† *Genera Americana.*

207. DENDROPHYLAX. Sepala et petala patentia. Labelli erecti calcar longum, ad os dilatatum, lobus medius divaricato-2-lobus. Pollinarii stipites 2, planæ. Scapi e fasciculis radicum aphylli, flore nunc unico magno, nunc  $\infty$  mediocribus v. parvis racemosis.—*Ind. occid.*

208. CAMPYLOCENTRON. Sepala et petala erecto-conniventia. Labelli calcar sæpius recurvum, obtusum v. vesicatum, lobus medius integer. Pollinarii stipites 2, filiformes, nunc brevissimi. Flores minuti, spicati.—*Amer. trop.*

Subtribus 8. Notylieæ. *Caules nunc abbreviati, pseudobulbo unifoliato terminati, nunc tenues absque pseudobulbo, foliis parvis distichis. Rostellum terminale, erectum v. antrorsum inclinatum, rarius fere horizontale. Anthera pone rostellum cui parallela, sæpius arcte applicita; pollinia 2, 4 v. 8, stipiti longo lineari v. apice dilatato simplici v. duplici affixa.*

Subtribus ab omnibus *Vandeis* differt rostellum et anthera iis *Neottiearum* plurimarum subsimilibus, a quibus differt pollinii cereis. Genera 2 ultima a *Vandeis* omnibus distant polliniorum numero.

\* *Pollinia 2, in Acriopside rarius 4.*

209. CIERREÆA. Sepala et petala angusta, patentia. Labelli lobi laterales ad apicem unguis longi patentis reflexi v. recurvi. Clinandrium parvum. Pseudobulbi 1-foliati, folio amplo plicatovenoso. Scapus simplex, racemo laxo floribundo.—*Brasilia.*

210. MACRADENTIA. Sepala et petala patentia. Labelli lobi laterales erecti, columnam amplectentes. Clinandrium membranaceum, late cupulatum. Anthera longe acuminata. Caulis brevis, foliis coriaceo-carnosis, vaginis distichis mox pseudobulbosis. Pedunculi axillares, simplices, racemo laxo.—*Ind. occid.*

211. NOTYLIA. Sepala erecta v. demum patentia, lateralialia interdum connata. Labelli unguis erectus, lamina triangularis v. hastata. Clinandrium parvum. Anthera longe acuminata. Caulis brevis, foliis coriaceo-carnosis, vaginis distichis superioribus mox pseudobulbosis. Pedunculi axillares, simplices, racemo laxo v. denso.—*Amer. trop.*

212. ACRIOPSIS. Sepala angusta, patentia, lateralialia connata. Petala latiora. Labelli unguis cum columna in urceolum latum connatus. Clinandrium membranaceum, amplum, incurvo-cucullatum. Pollinarii stipes simplex. Pseudobulbi 1-2-foliati, foliis angustis. Scapi tenues, simplices v. ramosi, floribus parvulis laxo racemosis.—*Burma, Archip. Malay.*

\*\* *Pollinia 4.*

213. TELIPOGON. Sepala angusta, patentia. Petala multo latiora, uti labellum subsimile patentissima. Columna hispida, clinandrio brevi. Pollinarii stipes simplex. Folia in caule brevi disticha. Pedunculi pseudoterminales, simplices, floribus speciosis laxo racemosis.—*Andes Amer. austr.*

214. TRICHOCLEROS. Sepala et petala patentia. Labelli lobi laterales ad basin oblongi v. elongati, medius petalis subsimilis. Clinandrium amplum, 2-3-lobum, setosum. Pollinarii stipes simplex. Pedunculus sub pseudobulbo 1-foliato lateralis v. in caule pseudoterminalis, simplex, floribus laxo racemosis sæpe parvis.—*Peruvia, Columbia.*

215. PODOCHILUS. Sepala erecta. Labellum in pede columnæ articulatum. Pollinarii stipites 2. Caules non pseudobulbosi, foliis parvis distichis. Racemus terminalis, floribus parvis nunc minimis.—*Ind. or., Archip. Malay.*

\*\*\* *Pollinia 8.*

216. APPENDICULA. Sepala erecta. Labellum in pede columnæ continuum. Pollinarii stipites 2. Caules non pseudobulbosi, foliis distichis. Racemi laterales, brevissimi, pauciflori, v. longiores pseudoterminales, multiflori, floribus parvis nunc minimis.—*Malacca, Archip. Malay.*

217. *THELASIS*. Sepala erecta. Labellum erectum, indivisum. Columna apoda. Pollinarii stipes simplex. Herbæ nunc minimæ pseudobulbis 1-foliatis, nunc Oberonioidæ distichophyllæ. Flores minimi in racemo terminali.—*Ind. or., China, Archip. Malay.*

**Tribus III. Neottieæ.** Anthera unica, terminalis, postica, nunc opercularis supra rostellum incumbens, nunc sæpius pone rostellum erecta, decidua v. persistens; loculi 2, distincti, paralleli, interdum septo longitudinali imperfecte 2-locellati. Pollinia granulosa, nunc pulverea fere farinacea et primum interdum subsolida apparent, nunc grosse et subregulariter granulosa (sectilia), in quoque loculo plus minus distincte gemina v. 2-partita, v. granulis mox solutis indistincta, per dehiscenciam ex apice rostellii pendula, v. irregulariter rostellum affixa v. libera, rarius stipiti ex apice rostellii pendulo affixa. Herbæ sæpissime terrestres, non pseudobulbosæ, rhizomate repente v. varie tuberifero, caule erecto simplici basi foliato v. aphyllis; in subtribubus 2 prioribus elatæ foliatæ interdum ramosæ v. supra arbores alte scandentes subepiphyticæ.

Subtribus 1. *Vanilleæ*. *Caules elati, sæpe ramosi, erecti v. supra arbores altissime scandentes, radices adventitias interdum emittentes. Racemi v. paniculae terminales v. simul axillares. Columna elongata, rostellum brevi. Anthera subopercularis, incumbens; pollinia laxè granulosa, demum sæpe rostellum insidentia sed glandulam non auferentia.*

\* *Caules alte scandentes, foliis coriaceis carnosius v. 0. Sepala patentia v. late concava.*

218. *GALEOLA*. Folia 0 v. rarius in ramo sterili. Labellum sessile, latum, concavum, columnam laxè involvens. Flores mediocres v. majusculi.—*Ind. or., Japonia, Archip. Malay., Nov. Caled., Australia.*

219. *VANILLA*. Caules foliati v. rarius aphylli. Labelli unguis columnæ adnatus, limbus latus concavus, basi columnam involvens. Flores magni.—*Utriusque orbis reg. trop.*

\*\* *Caules erecti, elati, foliis subplicato-venosis. Sepala basi erecta.*

220. *SOBRALIA*. Sepala basi connata, calyculo nullo. Flores magni.—*Amer. trop. mont.*

221. *EPISTEPHIUM*. Sepala libera, urceolo dentato (sic dicto calyculo) cincta. Flores magni.—*Amer. trop.*

222. *SERTIFERA*. Sepala libera, erecto-patentia. Labellum sessile, latissime ventricosum, intus lamella oblique transversa divisum. Flores parvi.—*Andes Amer. austr.*

Subtribus 2. *Corymbieæ*. *Herbæ elatæ, interdum ramosæ, foliis amplius subplicato-venosis v. arundinaceis. Racemi v. paniculae terminales. Anthera pone rostellum erectum ei parallelum; pollinia granulosa, demum stipiti filiformi a rostellii glandula dependenti affixa.*

223. *CORYMBIS*. Sepala et petala angusta, diu in tubum subcoherentin. Labellum a basi lineare. Columna elongata. Racemi paniculati, laxè pauciflori.—*Utriusque orbis reg. trop.*

224. *TROPIDIA*. Sepala lateraliter basi in mentum brevè connata. Labellum sessile, concavum v. basi saccatum v. breviter calcaratum. Columna brevis. Spicæ breves, densæ, ad apices ramorum solitariae v. paucæ.—*Ind. or., Archip. Malay., ins. maris Pacifici.*

Subtribus 3. *Spiranthæ*. *Caules e rhizomate repente v. brevi non tuberoso ascendentes v. erecti, simplices, foliati v. rarius aphylli, foliis membranaceis. Spica v. racemus terminalis. Anthera pone rostellum longiusculum erectum v. antrorsum inclinatum ei parallela; pollinia demum a glandula rostellii pendula v. interdum stipiti a glandula dependenti affixa.*

§ 1. *Genera pro maxima parte Americana v. extratropica, polline sæpissime pulvereo-granuloso.*

\* *Labellum cum sepalorum mento dum adsit superum.*

† *Columna brevis. Clinandrium postice brevè v. viz prominens (excepta Prescottia).*

225. *ALTENSTEINIA*. Sepala libera v. basi breviter connata. Labellum basi columnam amplectens eique subadnatum; lamina erecta, lata, plana v. concava, indivisa, sæpe ciliato-fimbriata. Caules basi foliati v. florentes aphylli, spica sæpius densa.—*Andes Amer. trop.*

226. *PTEICHIS*. Sepala libera. Labellum sessile v. basi columnæ subadnatum, erectum, late concavum v. calcatum, lobi laterales columnam occultantes, medius angustus, recurvus. Folia ad basin caulis pauca. Spica densa.—*Amer. austr. trop.*

227. *CRANICHIS*. Sepala libera. Labellum erectum, concavum, fornicatum v. subsaccatum, columnam amplectens, indivisum. Columna anthera et rostello brevior. Folia ad basin caulis subradicalia. Flores parvi, sæpe minimi.—*Andes Amer. trop., Ind. occid.*

228. *PRESCOTTIA*. Sepala basi in cyathum v. tubum connata. Labelli lamina erecta, concava cucullata v. fere clausa. Clinandrium postice in filamentum productum. Folia ad basin caulis conferta v. radicalia. Flores parvi, in spica densa v. tenui numerosi.—*Amer. trop.*

229. *PONTHIEVA*. Sepala libera v. lateralialia connata. Petala ab apice columnæ patentia. Labelli unguis columnæ adnatus, lamina dilatata, patens. Folia ad basin caulis subradicalia, ovata v. lanceolata. Racemus laxus, sæpe glanduloso-pubescent. Flores mediocres.—*Amer. trop. et subtrop.*

230. *WULLSCHLÆGELIA*. Sepala lateralialia basi in mentum breve v. elongatum calcariforme connata. Labellum basi intra sepala saccatum v. calcaratum. Scapus tenuissimus, aphyllus, floribus minimis.—*Ind. occid., Bras. bor.*

231. *PSEUDOCENTRUM*. Sepala lateralialia basi in mentum longissimum calcariforme connata. Labellum longe lineare, ab apice columnæ intra sepalorum calcar descendens. Caules foliati, spica floribunda.—*Andes Amer. austr. et centr., Jamaica.*

†† *Columna elongata. Clinandrium membranaceum, elevatum.*

232. *GOMPHICHIS*. Sepala libera, a basi patentia. Folia secus caulem lanceolata v. elongata. Spica densa v. rarius interrupta.—*Andes Amer. austr.*

233. *STENOPTERA*. Sepala basi in tubum tenuem connata. Folia ad basin caulis subradicalia. Spica densa v. tenuis.—*Amer. trop. mont., Ind. occid.*

\*\* *Labellum inferum, sæpe pendulum.*

234. *NEOTTIA*. Sepala et petala libera, demum patentia. Labellum sepalis longius, apice 2-lobum. Columna longiuscula. Caulis aphyllus, vaginis concoloribus.—*Eur., Asia bor. et mont.*

235. *LISTERA*. Sepala et petala libera, patentia. Labellum sepalis longius, integrum v. 2-lobum. Columna brevissima. Caulis subopposite 2-foliatus.—*Eur., Asia temp. et mont., Amer. bor.*

236. *SPIRANTHES*. Sepalum posticum cum petalis galeatum, lateralialia ovario oblique affixa v. longe decurrentia. Columna basi in ovario sæpius decurrens nec in pedem liberum producta. Caules foliati v. florentes aphylli. Spica densa v. laxa, haud raro secunda v. spiralis.—*Utriusque orbis reg. temp. et trop.*

237. *BASKERVILLA*. Sepala lateralialia alte connata, basi mentum latum formantia. Petala angusta, basi contracta. Labelli unguis 2-auriculatus, lamina basi late saccata. Columna brevissima, rostello magno crasso carnoso, stigmate in vertice excavato. Folia ad basin caulis pauca. Spica densiuscula, floribus parvis.—*Peruvia.*

238. *PELEXIA*. Sepala lateralialia basi in appendicem calcariformem longe linearem connata. Labellum lineare, basi in laminam linearem intra calcar sepalorum productum. Rostellum longe subulato-acuminatum. Folia ad basin caulis conferta, subradicalia.—*Amer. trop.*

§ 2. *Genera pro maxime parte gerontogea tropica, polline (an semper?) sectili. Sepalum posticum sæpius cum petalis in galeam connivens v. cohærens.*

\* *Labellum basi in saccum seu calcar inter sepala lateralialia prominens productum.*

239. *PHYSURUS*. Labellum supra calcar cavum, patens, abrupte contractum, lamina integra v. 2-loba. Clinandrium parum prominens. Folia ovata v. lanceolata, membranacea.—*Asia et Amer. trop.*

240. *ANGECTOCHILUS*. Labelli unguis supra calcar longus, patens, fimbriatus, lamina 2-loba. Clinandrium cyathiforme. Folia ad basin caulis conferta, ovata, sæpe picta.—*Ind. or., Archip. Malay.*

241. *VRYDAGOENIA*. Labellum sessile, lamina supra calcar seu saccum parva v. 2-loba; calli 2, longe stipitati, a basi columnæ intra calcar descendentes. Caules foliati, foliis membranaceis.—*Archip. Malay., ins. maris Pacifici.*

242. *CYSTORCHIS*. Labellum sessile, basi ad latera calcaris obtusi v. sacci sæpius 2-vesiculosum, lamina lanceolata, indivisa. Folia ad basin caulis conferta, ovata, discoloria v. picta.—*Archip. Malay.*

243. *HERPYSMA*. Labellum erectum, concavum, marginibus cum columna connatis, calcare longo; lamina patens, lata, integra v. 3-loba. Clinandrium alte cucullatum. Pollinia in caudiculas rigidas producta. Caulis foliatus.—*Himalaya*.

\*\* *Labellum ecalcaratum v. sacco dum adsit intra sepala incluso.*

† *Pollinia stipiti lineari v. cuneato v. glandula a rostello descendenti affixa.*

244. *ZEUXINE*. Sepala inter se libera. Columna inappendiculata. Caules foliati. Flores parvi.—*Ind. or., Archip. Malay., Afr. trop.*

245. *CHIROSTYLIS*. Sepala ad medium in tubum connata. Columna apice brachiis 2 linearibus erectis rostello æquilongis instructa. Caules debiles, foliati. Flores laxiuscule racemosi.—*Ind. or., Archip. Malay., Afr. trop.*

†† *Pollinia (hæc raro in caudiculas attenuata) in glandula rostelli sessilia. Columna (excepta Platylepide) brevis v. brevissima.*

a. *Labellum supra basin ventricosam unguiculatum.*

246. *ODONTOCHILUS*. Sepala lateralibus basi in mentum breve connata. Labelli unguis (ut in *Anectochilo*) fimbriatus v. dentatus, lamina sæpius 2-loba. Clinandrium breve. Caules foliati. Flores mediocres, laxè spicati.—*Ind. or., Archip. Malay., ins. maris Pacifici.*

247. *MYRMECIS*. Sepala petaloidea, basi breviter connata, suberecta. Petala libera. Labelli basis ventricosa pedi columnæ affixa, unguis integer, lamina 2-loba. Clinandrium breve. Caules foliati. Racemus breviter pedunculatus, pauciflorus.—*Java, Japonia.*

248. *HÆMARIA*. Sepala inter se libera. Labelli unguis concavus integer, lamina 2-loba. Clinandrium cyathiforme, fere cucullatum. Caules foliati. Flores mediocres, laxè spicati, subracemosi.—*China, Archip. Malay.*

249. *DOSSINIA*. Sepala inter se libera. Labelli lobi laterales erecti, unguis integer, lamina 2-loba. Columna antice appendice longa intra ventrem labelli intrusa instructa. Clinandrium breve. Caules foliati. Spica laxa.—*Borneo.*

### 3. *Labellum basi late ventricosum sessile v. columnæ adnatum, lamina sæpius parva non unguiculata.*

250. *MACODES*. Sepala libera. Labellum (superum) erectum, lobis lateralibus parvis, medio lineari v. spatulato. Columna antice lamina 2 verticalibus parallelis appendiculata. Clinandrium cyathiforme. Folia ad basin caulis pauca, ovata, marmorata. Flores parvuli, longe racemosi.—*Java.*

251. *HYLOPHILA*. Sepalum posticum cucullatum, lateralibus cum pede columnæ ovarii apici oblique adnata. Labellum (inferum) basi saccato-cucullatum, lamina parva lineari inflexa. Caulis foliatus, elatus. Flores parvi, longe spicati.—*Malacca, Archip. Malay.*

252. *GOODYERA*. Sepala inter se libera. Labellum (inferum) erectum, lamina parva indivisa. Clinandrium cyathiforme. Caulis laxè ascendens v. erectus, elatus, infra medium foliatus. Flores parvuli, spica laxa secunda v. longa densaque.—*Eur., ins. Maür., Asia trop. et temp., Nov. Cæd., ins. Mascar., Amer. bor. et centr.*

253. *LEPIDOGYNE*. Sepala libera, conniventia. Labellum basi columnæ adnatum, lobis lateralibus eam amplectentibus, lamina angusta, recurva. Columna antice lamina erecta instructa. Clinandrium cyathiforme. Caulis elatus, foliatus, spica longa densa.—*Java.*

254. *HETERIA*. Sepala libera v. basi connata. Labellum (sæpius superum) basi plus minus columnæ adnatum, lamina integra v. divaricato-2-loba. Clinandrium breve. Caulis foliatus. Flores parvi, in spica tenui.—*Ind. or., Archip. Malay., ins. maris Pacifici, Australia., Afr. trop.*

255. *MÆRHENOUTIA*. Sepala libera, erecta. Alæ columnæ latissimæ, subpetaloideæ, cum marginibus labelli (inferi) continuæ. Cætera *Heterie* nisi flores paulo majores.—*Ins. maris Pacifici.*

256. *PLATYLEPIS*. Sepala circa columnam in tubum angustum arete conniventia, apice subpatentia. Labellum (inferum) marginibus columnæ leviter coherentibus, lamina parum dilatata. Columna elongata. Clinandrium postice oblongum, erectum. Caulis foliatus. Flores angusti, dense spicati.—*Afr. trop. et subtrop., ins. Mascar.*

257. *MANIELLA*. Sepalorum petalorum labellique unguis in tubum connati. Columna elongata tubo alte adnata. Folia radicalia, petiolata. Spica longa, floribus parvulis.—*Afr. trop. occid.*

γ. *Labellum a basi angustum, indivisum.*

258. EUCOSIA. Sepala inter se libera. Labellum angustum, concavum. Columna brevis. Clinandrium breve, anthera tamen longe stipitata. Pollinia in caudiculas longas rostello non affixas producta. Habitus *Goodyeræ*.—*Java*.

259. GYMNOCHILUS. Sepala angusta, conniventia. Labellum angustum, concaviusculum. Columna brevis. Clinandrium breve, anthera sessili. Pollinia ecaudata, demum glandulæ rostelli affixa. Habitus *Goodyeræ*.—*Ins. Mascar.*

260. ? ARGYRORCHIS. Sepala inter se libera. Labellum petalis consimile. Columna brevissima, antice 2-cristata. Clinandrium cyathiforme. Folia ad basin caulis pauca, ovata, discoloria, picta. (Habitus et char. *Macodis* excepto labello).—*Java*.

Subtribus 4. Diurideæ. *Caules et rhizomate sæpissime varie tuberifero erecti, simplices, aphylli 1-foliati v. rarius 2-pauci-foliati. Spica v. racemus terminalis. Anthera erecta v. antice inclinata, sæpius persistens. Rostellum erectum, sæpius abbreviatum nunc brevissimum, rarius antheræ æquilongum. Pollinia pulvere-granulosa interdum fere solida. Genera gerontogea pro magna parte Australiana.*

\* *Genera Asiatica. Herbæ tenues aphyllæ. Rostellum brevissimum.*

261. LECANORCHIS. Perianthium urceolo dentato (calyculo) cinctum. Columna elongata. Clinandrium elevatum.—*Java, Japonia.*

262. APHYLLORCHIS. Calyculus 0. Columna longiuscula. Clinandrium elevatum.—*Ind. or., Archip. Malay.*

263. STEREOSANDRA. Calyculus 0. Columna brevis. Clinandrium vix prominens. Pollinia in caudiculas longas producta.—*Java.*

\*\* *Genera Australasica (speciebus perpaucis Asiaticis). Herbæ 1-pauci-foliatæ rarius aphyllæ. Rostellum interdum longiusculum. Pollinia demum a glandula rostelli pendula v. stipiti pendulo affixa.*

† *Labellum inferum.*

264. THELYMITRA. Sepala, petala et labellum subæqualia, patentia. Columna brevis, alis latis cum clinandrio in cyathum integrum v. lobatum continuis. Pollinarii stipes 0. Caulis 1-foliatus.—*Australia, N. Zel., N. Caled., Archip. Malay.*

265. EPIBLEMA. Labelli unguis lobis 2 erectis instructa, lamina indivisa. Cætera *Thelymitræ*.—*Australia austr. occid.*

266. DIURIS. Sepalum posticum basi columnam amplexans, superne patens, cum petalorum apicibus sæpissime coloratum, lateralia sub labello longe linearia. Columna brevissima, rostello longo. Pollinarii stipes 0. Folia ad basin caulis pauca, angusta.—*Australia.*

267. ORTHOCERAS. Sepalum posticum incurvum, fornicatum, lateralia linearia, incurvo-erecta. Columna brevissima, apice brachiis 2 rostello lato longioribus instructa. Pollinarii stipes 0. Folia pauca, angusta.—*Australia, N. Zel.*

†† *Labellum superum.*

268. CRYPTOSTYLIS. Sepala et petala angusta, convoluto-subulata. Labellum basi columnam involvens, lamina lata indivisa. Columna brevissima, rostello lato crasso. Pollinarii stipes 0. Folia pauca.—*Australia, Ind. or., Archip. Malay.*

269. PRASOPHYLLUM. Sepalum posticum concavum v. fornicatum, lateralia erecta. Labellum basi concavum, indivisum. Columna brevissima, apice 2-brachiata. Pollinarii stipes longe linearis v. filiformis. Caulis 1-foliatus.—*Australia, N. Zel., N. Caled.*

\*\*\* *Genera Australasica (speciebus perpaucis Asiaticis). Herbæ 1-foliatæ rarius aphyllæ v. pauci-foliatæ. Rostellum brevissimum. Pollinia libera v. dorso varie rostello affixa.*

270. MICROTIS. Sepalum posticum erectum, latum, concavum, lateralia patentia. Labellum sessile, integrum v. 2-lobum. Columna brevissima. Folium 1, elongatum, teres. Flores parvi, dense spicati.—*Australia, N. Zel. (Java?).*

271. *CORYSANTHES*. Sepalum posticum incurvum galeatum v. stipitatum, lateralia parva, linearia v. filiformia. Labellum sub galea laxè tubulosum, lamina parva v. concava. Columna brevis, 2-alata v. 2-auriculata. Caules nani. Folium 1. Flos 1, majusculus.—*Australia, N. Zel., Archip. Malay.*

272. *PTEROSTYLIS*. Sepalum posticum galeatum, lateralia basi connata in labium 2-lobum v. longe 2-caudatum. Labellum articulatam, unguiculatum, lamina basi in appendiculam producta. Columna elongata, ad latera stigmatis 2-appendiculata. Folia ad basin caulis pauca v. scapus aphyllus. Flores solitarii v. racemosi.—*Australia, N. Zel., N. Caled.*

273. *CALEANA*. Sepala et petala linearia. Labellum articulatam, unguiculatum, lamina lata peltata. Columna elongata, late 2-alata. Folium 1, angustum. Flores solitarii v. pauci.—*Australia extratrop.*

274. *DRACKA*. Sepala et petala linearia. Labellum articulatam, unguiculatum, lamina angusta peltata. Columna elongata, 2-auriculata, exalata. Folium 1, latum, v. scapus florens aphyllus. Flores solitarii v. pauci.—*Australia.*

275. *ACIANTHUS*. Sepalum posticum concavum, lateralia filiformia. Petala brevia. Labellum sessile, indivisum. Columna elongata. Folium 1, latum. Flores solitarii v. racemosi.—*Australia or., N. Zel., N. Caled.*

276. *ERIOCHILUS*. Sepalum posticum concavum, lateralia patentia stipitata. Labellum breve, lobis lateralibus erectis, medius recurvus, villosus, indivisus. Columna longiuscula. Folium 1, ovatum v. lanceolatum. Flores solitarii v. pauci.—*Australia.*

277. *LYPERANTHUS*. Sepalum posticum latum, concavum, lateralia angusta. Labelli unguis latus, lamina ovata v. lanceolata, recurva, indivisa, papillosa. Columna longiuscula, exalata. Folia pauca, rarius 1 radicale. Flores in racemo pauci.—*Australia, N. Zel., N. Caled.*

278. *BURNETTIA*. Sepala erecta v. conniventia. Labellum sessile, concavum, erectum, indivisum, apice recurvum, medio lamellatum. Columna longiuscula 2-alata. Scapus aphyllus, 2-3-florus. Folium e rhizomate serotinum.—*Tasmania.*

279. *CYRTOSTYLIS*. Sepalum posticum lineare v. lanceolatum, erectum, lateralia anguste linearia, patentia. Labellum patens, planum, indivisum. Columna longiuscula, breviter 2-alata. Folium ad basin caulis latum. Flores solitarii v. pauci.—*Australia, N. Zel.*

280. *CALADENIA*. Sepalum posticum sæpius erectum, lateralia plana, patentia, petalis latiora. Labellum erectum, lobis lateralibus erectis v. 0, medius recurvo-patens, fimbriatum dentatum v. varie callosum. Columna longiuscula, 2-alata. Folium angustum. Flores pauci, laxè racemosi.—*Australia, N. Zel.*

281. *GLOSSODIA*. Sepala patentia. Labellum sessile, indivisum, nudum, sed calli e basi 2 longi erecti columnæ appliciti. Columna longiuscula, 2-alata. Folium oblongum v. lanceolatum.—*Australia.*

282. *ADENOCHILUS*. Sepalum posticum subgaleatum, lateralia patentia. Labellum erectum, lobis lateralibus latis, medius recurvo-patens, varie callosum. Columna longiuscula, late 2-alata. Folium in medio caule ovatum. Flos unicus. Bractea appendiculam stipitiformem includens.—*Australia, N. Zel.*

283. *CHILOGLOTTIS*. Sepalum posticum incurvum, concavum, basi contractum, lateralia linearia v. teretia. Petala lanceolata. Labellum ovatum, indivisum, varie callosum. Columna elongata, apice late 2-alata. Folia 2, subradicalia. Scapus tenuis, 1-florus.—*Australia, N. Zel.*

284. *CALOCHILUS*. Sepalum posticum erectum, concavum, lateralia patentia. Petala multo minora. Labellum sepalis longius, patens v. pendulum, indivisum, supra dense ciliato-fimbriatum. Columna brevis, late 2-alata. Folium angustum, elongatum.—*Australia or.*

Subtribus 5. *Arethuseæ*. Caules e rhizomate sæpius varie tuberifero erecti, simplices, aphylli 1-foliati v. rarissime paucifoliati. Spica v. racemus terminalis. Anthera opercularis, incumbens v. rarius suberecta. Pollinia varie granulosa. Rosellum brevissimum.

285. *ARETHUSA*. Sepala incurvo-erecta, basi coherentia. Labellum (inferum) angustum, basi columnæ adnatum et brevissime calcaratum. Columna longiuscula, superne 2-alata. Caulis 1-foliatus v. scapus florens aphyllus, gemmis sterilibus 2-3-foliatis.—*Amer. bor., Japonia.*

286. *CALOPOGON*. Sepala patentia. Labellum (superum) ascendens, ad apicem unguis barbatum. Columna elongata, superne 2-alata. Folium gramineum.—*Amer. bor.*

287. *POGONIA*. Sepala erecta v. rarius patentia. Labellum (inferum) erectum v. declinatum,

indivisum v. 3-lobum. Columna elongata, exalata. Caulis 1-pauci-folius, v. scapus florens aphyllus, folio e gemma distincta serotino.—*Amer. et Asia trop. et temp., Africa trop.*

288. POGONIOPSIS. Sepala erecta. Labellum basi saccatum, lineare, antrorsum dilatatum, in lacinias  $\infty$  lineares solutum. Scapus florens aphyllus, racemo densiusculo.—*Brasilia.*

289. ? CHLOROSA. Sepala erecto-patentia, angusta. Labellum angustum, indivisum, columnam amplectens. Columna brevissima. Scapus aphyllus. Folium in gemma distincta late ovatum, petiolatum.—*Java.*

290. LEUCORCHIS. Sepalum posticum cum petalis in labium superum 3-fidum, lateralia in labium inferum 2-fidum connata. Labellum latissimum, indivisum. Columna longiuscula, pede brevi. Herbæ tenues, aphyllæ, floribus parvis.—*Ind. or., Archip. Malay., ins. maris Pacifici.*

291. GASTRODIA. Sepala cum petalis in tubum late ventricosum 5-lobum antice fissum connata. Labellum indivisum. Columna sæpius elongata, pede brevi nunc brevissimo. Herbæ aphyllæ.—*Ind. or., Asia occid., Archip. Malay., Australia, N. Zel.*

292. YOANIA. Sepala carnosa, libera, patentia. Labellum cum petalis campanulato-connivens, apice subfornicatum. Columna plana, quadrata, 2-alata. Pollinarii stipites 2, filiformes. Herba aphylla.—*Japonia.*

293. EPIPOGON. Sepala libera, angusta. Labellum basi late concavum saccatum v. breviter calcaratum. Columna brevis, stigmatē a rostello distante. Pollinarii stipites 2, filiformes. Herbæ aphyllæ.—*Orbis veteris reg. temp. et trop.*

Subtribus 6. Limodoreæ. *Caules e rhizomate brevi v. repente non tuberifero erecti, simplices, pluri-foliati v. rarius aphylli, sæpius elati. Spica v. racemus terminalis. Anthera opercularis, incumbens v. suberecta. Rostellum breve. Pollinia pulvereo-granulosa, anthera dehiscente dorso v. basi rostello affixa. Genera extratropica.*

294. LIMODORUM. Sepala erecta, incurva. Labellum basi cum columna in cupulam latam connatum, longe calcaratum. Columna elongata. Caulis elatus, aphyllus. Flores majusculi.—*Reg. Mediterr., Eur. centr.*

295. CHLORÆA. Sepala patentia v. posticum erectum. Labellum ecalcaratum, a basi incurvo-ascendens v. brevissime columnæ adnatum. Columna longiuscula v. mediocris. Caulis foliatus.—*Amer. austr. extratrop.*

296. BIPINNULA. Sepala lateralia elongata, apice fimbriato-multifida. Cætera *Chlorææ*.—*Amer. austr. extratrop.*

297. CEPHALANTHERA. Sepala conniventia. Labellum supra basin concavam v. breviter saccato-calcaratam constrictum. Columna longiuscula. Caulis foliatus, floribus capsulisque erectis.—*Eur., Afr. bor., Asia temp., Amer. bor. occid.*

298. EPIPACTIS. Sepala patentia. Labellum supra basin latam concavam constrictum. Caulis foliatus, floribus capsulisque nutantibus v. pendulis.—*Eur., Asia temp., Amer. bor.*

**Tribus IV. Ophrydeæ.** Herbæ terrestres, rhizomate sæpius brevi, fibras fasciculatas emittente, quarum una quotannis in tuber indivisum v. lobatum incrassatur, e quo planta nova evolvitur, tubere annotino demum deliquescente; rarius fibræ e rhizomate perenni plures crasso-carnosæ. Caulis annuus, erectus, simplex, plus minus foliatus, spica v. racemo terminatus. Flores sessiles v. breviter pedicellati, ad axillam bractææ solitarii, spica rarius ad florem unicum reducta. Anthera 1, cum apice columnæ sæpius brevissimæ continua, connectivo a clinandrio non distincto, erecta rostello supra, v. reclinata a rostello aversa; loculi adnati, paralleli v. divergentes, quasi reversi, apicibus nempe inferis nunc brevibus nunc elongatis dorsoque rostelli lobis lateralibus applicitis v. adnatis; pollinia in loculis solitaria v. rarius gemina, grosse v. rarius tenuiter granulosa, in caudiculam læviorem producta, caudiculis anthera dehiscente glandulæ a dorso rostelli solvendæ affixis (an rarius glandula e polline ipso formata?). Capsula semper erecta.

Tribus a cæteris distinctissima antheræ loculis dorso usque ad rostellum adnatis, nec a basi facie rostellum spectantibus.

Subtribus 1. Serapiæ. *Anthera erecta. Polliniorum glandulæ in sacculo a dorso rostelli elevato inclusæ.*

299. ORCHIS. Labellum calcaratum. Polliniorum glandulæ 2 distinctæ v. in unam coalitæ, semper in sacculo unico inclusæ.—*Hemisph. borealis reg. temp. imprimis Europa.*

300. *SERAPIAS*. Labellum ecalcaratum, lobo medio sæpius linguiformi, basi lamina glandulosa instructum. Antheræ connectivum ultra loculos productum. Polliniorum glandulæ in sacculo unico inclusæ sæpius connatæ.—*Regio Mediterr.*

301. *ACERAS*. Labellum ecalcaratum, pendulum, angustum, basi nudum. Antheræ connectivum non productum. Polliniorum glandulæ in unum connatæ, sacculo unico. Flores parvi.—*Europa, Reg. Mediterr.*

302. *OPHRYS*. Labellum ecalcaratum v. rarius brevissime subcalcaratum, lamina convexa. Polliniorum glandulæ discretæ, in sacculis 2 distinctis inclusæ.—*Europa, Asia occid., Africa bor.*

Subtribus 2. *Habenariæ*. *Anthera erecta*. Polliniorum glandulæ nudæ v. rarius rostelli lobis canaliculatis v. apice inflexis semi-inclusæ.

\* *Labellum ecalcaratum.*

303. *HERMINIUM*. Herbæ tenues v. humiles, paucifoliatæ, parvifloræ. Anthera immarginata.—*Europa, Asia temp. et mont.*

304. *STENOGLOTTIS*. Herba foliis subradicalibus, parviflora. Antheræ (v. clinandrii) margines incrassati, apice lobo brevi terminati.—*Africa austr.*

305. *ARNOTIIA*. Herba habitu *Cynorchis*, foliis 1-2 subradicalibus. Flores in spica laxa parvuli, sepalis concavis demum patentibus.—*Ins. Mascar.*

\*\* *Labellum calcaratum*. Rostelli lobus medius dentiformis angustus v. obsoletus, erectus v. rarius lator deflexus.

306. *BARTHOLINA*. Petala et sepala angusta, subæqualia, erecta. Labellum patens, latum, longe fimbriato-multifidum. Anthera longissima, angusta. Rostelli lobus medius deflexus. Herba 1-flora, basi 1-phylla.—*Afr. austr.*

307. *HUTTONÆA*. Petala longe unguiculata, lamina concava v. cucullata, fimbriata. Herbæ plurifoliatæ, spica laxæ ∞-flora.—*Afr. austr.*

308. *HOLOTHRIX*. Sepala subæqualia. Petala et labellum sepalis longiora, erecta. Herbæ basi 1-2-foliatæ, caule patenter v. reverse piloso. Flores in spica tenui parvi, secundi.—*Afr. trop. et austr.*

309. *BICORNELLA*. Labelli lobi laterales marginibus calcaris incumbentes, lobos laterales rostelli ferentes. Cætera *Habenariæ* specierum parviflorarum.—*Madagascaria.*

310. *HABENARIA*. Petala sepalis non longiora, sessilia, polymorpha. Herbæ pauci- v. ∞-foliatæ, rarissime aphyllæ, floribus spicatis v. racemosis.—*Utriusque orbis reg. temp. et trop.*

\*\*\* *Labellum calcaratum*. Rostelli lobus medius amplius, erectus.

311. *DIPLOMERIS*. Petala sepalis majora. Rostelli lobus medius ample membranaceo-dilatatus; stigmatis processus in laminam oblongam connati. Herbæ humiles, 1-3-foliatæ, flore unico magno.—*Himalaya.*

312. *BONATEA*. Rostelli lobus medius ample galeatus. Cætera *Habenariæ* specierum grandiflorarum, caule elato folioso.—*Afr. austr.*

313. *CYNORCHIS*. Rostelli lobus medius amplius, complicatus. Stigmatis processus 2, crassi. Herbæ folio unico v. paucis subradicalibus. Racemi laxiusculi, floribus sæpius parvulis.—*Afr. trop., ins. Mascar.*

314. *HEMIPHILA*. Rostelli lobus medius complicatus. Stigmatis processus 0. Herbæ basi 1-foliatæ, racemo paucifloro.—*Ind. or.*

315. *GLOSSULA*. Labelli calcar vesiciformis, lobi laterales filiformes. Rostelli lobus medius concavus. Stigmatis processus 2, crassiusculi. Herbæ paucifoliatæ, spica tenui, floribus parvulis.—*China, Cochinchina.*

Subtribus 3. *Diseæ*. *Anthera reclinata* v. in dorso columnæ reflexa rarius suberecta. Stigma amplum, nunc pseudoterminalis nunc ab anthera distans labello subadnatum.

316. *SATYRIUM*. Labellum erectum, latum, concavum, 2-calcaratum v. 2-gibbum. Stigma pseudoterminalis, concavum v. 2-labiatum. Herbæ paucifoliatæ, rarius elatæ foliosæ. Spicæ sæpius floribundæ.—*Ind. or., ins. Mascar., Africa trop. et austr.*

317. ? *PACHITES*. Calcar 0. Stigma sub rostello crassissimo carnoso brachiis 2 linearibus

erectis appendiculatum. Herba foliosa, foliis linearibus. Spica longa, teres, crassa, floribus parvis numerosis.—*Afr. austr.*

318. *DISA*. Sepalum posticum calcaratum concavum v. subplanum. Rostelli lobi laterales erecti v. recurvi, medius parvus. Stigma a rostello distans ad basin columnæ v. labelli, pulvinatum v. cupulatum, integerrimum. Pollinarii glandulæ distinctæ. Herbæ elatæ foliosæ, v. tenues paucifoliatæ. Flores magni subsolitarii, v. parvi dense spicati, v. intermedii.—*Afr. trop. et austr., ins. Mascar.*

319. *HERSCHELIA*. Sepalum posticum calcaratum. Rostelli lobi 3, erecti, æquilongi, laterales incurvi. Stigma a rostello distans, ad basin columnæ pulvinatum, didymum. Pollinarii glandulæ in unam integram concretæ. Herbæ elatæ, foliis radicalibus longe lineari-filiformibus. Flores mediocres, laxè spicati.—*Afr. austr.*

320. *MONADENTIA*. Sepalum posticum calcaratum. Stigma sub rostello amplo membranaceo ad basin labelli crasse pulvinatum, integrum. Pollinarii glandulæ in unam concretæ. Herbæ foliosæ, floribus parvulis sæpius dense spicatis.—*Afr. austr.*

321. *SCHIZODIUM*. Sepalum posticum calcaratum. Columna *Dise*, stigmatè tamen a labello discreto. Herbæ tenues, foliis subradicalibus parvis ovatis insigniter petiolatis.—*Afr. austr.*

322. *BROWNLEA*. Calcar 0. Stigma latum, vix pulvinatum, a labello discretum. Cætera *Dise*. Herbæ debiles, medio 1-2-foliatæ. Racemus laxè pauciflorus v. spica densa floribunda.—*Afr. austr.*

323. ? *FORFICARIA*. Calcar 0. Petala *setacea*. Labellum nanum, carnosum. Stigma excavatum. Habitus *Dise* sect. *Trichochili*. Folia subulata, rigida, in rhizomate fasciculata. Scapus aphyllus. Spica laxa, pauciflora.—*Afr. austr.*

324. *BRACHYCORYTHIS*. Calcar 0. Labelli unguis brevis, latus, cavus, subcarnosus. Stigma magnum, concavum, a labello liberum. Herbæ foliosæ, foliis in bracteas foliaceas abeuntibus. Spica floribunda, foliata.—*Afr. austr. et trop.*

325. *SCHIZOCHILUS*. Sepalum posticum ecalcaratum. Labellum calcaratum, ungue cæterum brevi lato cavo. Herbæ glabræ, infra medium foliatæ, foliis angustis. Spicæ densæ, bracteis angustis.—*Afr. austr.*

326. *PLATYCORYNE*. Sepalum posticum ecalcaratum. Labellum longe calcaratum. Stigma pulvinatum, labello subadnatum. Herba foliis paucis parvis angustis. Spica laxa, brevis.—*Madagascaria.*

Subtribus 4. *Coryciæ*. Sepalum posticum cum petalis sæpius latis in galeam coherens. Labellum basi columnæ adnatum, ultra antheram variè productum v. appendiculatum.

327. *PTERYGODIUM*. Sepala lateralia libera, plana. Labellum, præter laminam v. appendiculam terminalem, dorso lamina indivisa v. 2-3-loba instructum. Stigma transversum, sæpius 2-brachiatum. Habitus nunc *Ophrydis* nunc *Habenariæ* specierum majorum.—*Africa austr.*

328. *DISPERIS*. Sepala lateralia libera, dorso calcarata v. saccata. Labellum apice 2-labiatum v. variè dilatatum v. appendiculatum. Stigma transversum. Folia pauca dissita, v. 2 subopposita. Flos unicus v. spica laxa.—*Ind. or., Afr. trop. et austr., ins. Mascar.*

329. *CORYCIUM*. Sepala lateralia usque ad apicem in labium anticum connata. Labellum apice transversum v. variè 2-lobum, dorso sæpe appendiculatum. Stigma parvum v. 2-pulvinatum. Herbæ foliatæ, foliis angustis. Spica densa.—*Afr. austr.*

330. *CERATANDRA*. Sepala lateralia libera, plana. Labellum apice transversum, appendiculatum v. nudum. Rostelli lobi laterales elongati erecti. Stigma transversum. Herbæ foliatæ, foliis angustis. Flores dense spicati, rarius laxè racemosi.—*Afr. austr.*

**Tribus V. *Cypripediæ*.** Herbæ terrestres, rhizomate brevi v. repente non tuberifero. Caulis erectus, simplex, foliatus, non pseudobulbosus. Columna sub rostello (stylo) brevis. Antheræ 2, ad latera rostelli sessiles v. stipitatæ, loculis parallelis contiguis, polline granuloso; anthera postica cæterum tribum sæpius sterilis, variè difformis (antheridium), rarius perfecta lateralibus similis, v. omnino deficiens. Rostellum seu stylus inter antheras perfectas plus minus elongatum, apice in discum obliquum antice stigmatosum dilatatum.

331. *CYPRIPEDIUM*. Sepala patentia, lateralia sæpius connata. Labellum inflato-calceiforme. Antheræ perfectæ 2; antheridium late laminiforme v. carnosum. Ovarium 1-loculare, placentis parietalibus. Flores solitarii rarius pauci.—*Europa, Asia temp. et trop., Amer. bor., Mexico.*

332. *SELENIPEDIUM*. Perianthium et antheræ *Cypripedii* (nisi labellum abnorme). Ovarium 3-loculare, placentis axilibus. Pedunculus simplex v. ramosus,  $\infty$ -florus.—*Amer. austr. montana*.

333. *APOSTASIA*. Sepala petala et labellum libera, consimilia. Antheræ perfectæ 2; antheridium angustum v. 0. Ovarium 3-loculare, placentis axilibus. Spicæ simplices v. ramosæ,  $\infty$ -floræ.—*Ind. or., Archip. Malay., Australia trop.*

334. *NEUWIEDIA*. Sepala et petala libera, consimilia; labellum paullo latius. Antheræ perfectæ 3. Ovarium 3-loculare, placentis axilibus. Spica densa, simplex, floribus parvis.—*Malacca, Archip. Malay.*

#### TRIBUS I. EPIDENDRÆ.

1. *Pleurothallis*, R. Br. in *Ait. Hort. Kew. ed. 2*, v. 211. (*Humboldtia*, Ruiz et Pav. *Fl. Per. et Chil. Prod.* 121, t. 27; *Syst. Veg.* 233.)—Sepala subæquilonga, erecta v. sub-patentia, posticum liberum v. ima basi lateralibus brevissime connatum, lateralia basi v. alte connata in unum integrum 2-fidum v. fere 2-partitum, sub pede columnæ sæpius concavum v. leviter gibbum. Petala sepalis breviora v. angustiora, nunc minima rarius sepalis subæquilonga. Labellum petalis brevius v. rarius paullo longius, basi sæpius contractum et cum columnæ basi plus minus distincte articulatum; lobi laterales erecti columnam amplectentes v. parvi dentiformes v. obsoleti, medius integerrimus v. emarginatus, subpatens. Columna labello æquilonga v. paullo brevior, semiteres, angulis interdum membranaceo-marginatis nec vere alatis, basi sæpius in pedem brevissimum producta; clinandrium parvum v. plus minus membranaceo-productum, obliquum, integrum v. breviter 3-lobum. Anthera terminalis v. intra marginem clinandrii opercularis, incumbens, 1-2-localaris, pollinia 2, cerea, globosa ovoidea v. pyriformia, libera v. apicibus visco parco coherentia. Capsula erecta, obliqua v. fere nutans, subglobosa ovoidea v. oblonga, 3-costata 3-quetra v. 3-dyma.—Caulis cæspitosi v. rami caulis repentis v. rhizomatis simplices, longiusculi breves v. brevissimi, apice 1-foliati, infra folium interdum 1- $\infty$ -vaginati, vaginis in una specie in folia productis, non pseudobulbosi. Racemi ad basin folii intra vaginam seu spatham longiusculam brevem v. minimam 1- $\infty$ , simplices, floribundi v. laxè pauciflori, v. in paucis speciebus abbreviati 1-3-flori denseque aggregati. Flores parvi, nunc minimi v. in paucis speciebus mediocres v. majusculi, in racemis floribundis sæpius secundi. Bractee parvæ, rarius magis evolutæ, breviter ocreiformes, nonnullæ sæpe in pedunculo infra flores vacuæ, nunc omnes minutæ v. obsoletæ.

Species descriptæ fere 350 et verisimiliter numerosæ adhuc ineditæ in montibus Americæ tropicæ latent, ubi genus a Brasilia et Bolivia usque ad Mexicum et Indiam occidentalem extenditur. *Lindl. Fol. Orch.* 1869. *Reichb. f. in Walp. Ann.* vi. 167; *Beitr. Orch. Centr. Amer.* 58, 96; *Xen. Orch. t.* 28, 60, 108, 137, 210 et iii. 24; in *Hamb. Gart. Zeit.* xvi. 15, 180; xxi. 294; *Otia Hamb.* 18, 92; in *Flora*, 1865, 275; in *Linnaea* xli. 13, 47, 93, 117, 132.

Genus vastum, quoad inflorescentiam petalorum formam etc. polymorphum, etsi characteribus essentialibus bene limitatum, aed nondum in sectiones distinctas divisum. Lindley, in *Bot. Reg.* 1842, Misc. 68, series proposuit 4, imprimis ex inflorescentia et habitu sat naturales, quas serius in *Foliis Orchidaceis* usque ad 10 extendit, non semper æque feliciter. *Spathaceæ* e.g. species continet inter se habitu dissimiles, vagina ad basin inflorescentiæ seu spathæ solito majore junctas. Hæc spathæ tamen in toto fere genere adest et in speciebus inter se quam maxime affinis magnitudine valde differt; in speciminibus nonnullis *P. Matthewsii*, Lindl., inter *Macrophyllas fasciculatas espathaceas* collocatæ, spatham vidimus ultrapollicarem. Florum structura interior, quoad formam petalorum labelli et columnæ, si revera characteres præbet cum variationibus habitus et inflorescentiæ convenientes, adhuc in perpluribus speciebus imperfecte descripta v. sæpe in flore unico semel tantum observata ad sectiones naturales definiendas haud sufficit. Interea series sequentes e Lindleyanis selectæ, etsi male definitæ, quoad species plerasque naturales videntur.

1. *Elongate floribunda*. Racemi sæpius plures v. in paucis speciebus solitarii, folio multo longiores, floribus numerosis sæpius parvulis breviter pedicellatis secundis. Huc referimus species plerasque e *Spathaceis* Lindleyi cum nonnullis ex *Elongatis* et *Acuminatis*. *H. B. et K. Nov. Gen. et Sp. t.* 90

(*Stelis*). Pæpp. et Endl. Nov. Gen. et Sp. t. 84 ad 86. Hook. Ic. Pl. t. 50; Exot. Fl. t. 123. Bot. Mag. t. 3030. Bot. Reg. t. 1968. Lodd. Bot. Cab. t. 949, 1571.

CROCODILANTHE, Reichb. f. Xen. Orchid. i. 10, t. 6, est *P. crocodilanthæ*, Lindl., species inter *Elongatas* insignis racemis solitariis, floribus ut in affinis numerosis breviter pedicellatis secundis sed solito multo majoribus (8-9 lin. longis). Genus ab auctore primum distinctum fuit labello basi lata vix distincte cum columna articulato, sed articulatio in pluribus species parum distincta est, et auctor ipse serius (in Walp. Ann. vi. 172) speciem inter *Pleurothalles* admisit, ubi *C. tricarinata*, Pæpp., pluribus notis accedit.

2. *Elongatæ minores*. Racemi solitarii v. pauci, folio longiores, laxi, floribus mediocribus v. parvulis dissite pedicellatis. Species sæpe humiles, caule tamen infra folium evoluti. Huc pertinent *Elongatæ* pleræque in Fol. Orchid. enumeratæ. Pæpp. et Endl. Nov. Gen. et Sp. t. 87. Hook. Ic. Pl. t. 55. Bot. Mag. t. 3897, 4142. Knowles et West. Fl. Cab. t. 19. Saund. Ref. Bot. t. 118, 119. Karst. Ausw. Venez. Gew. t. 7 (*Rhynchopereæ*).

3. *Rhynchopereæ*. Racemi plures rarius solitarii, folio sæpius parum breviores, laxi, floribus majusculis paucis (interdum solitariis?) pedicellatis sæpius bene coloratis, petalis quam sepala parum brevioribus acuminatis v. angustis. Caules bene evoluti et folium sæpe majusculum. RHYNCHOPERA, Klotzsch in Link Kl. et Otto Ic. Pl. Rar. 103, t. 41. Huc pertinent *P. Matthewsii*, Lindl., affinesque, *P. lanceolata*, Lindl., etc. In hac Lindley pollinia observavit 4, in flore tamen a nobis examinato ex specimine Fendleriano n. 1476 2 tantum ad normam generis vidimus.

TALPINARIA, Karst. Fl. Colomb. i. 153, t. 76, est ex ic. et descr. species *Rhynchopereæ* affinis, pedicellis subgeminis e spatha exsertis, labelli lobis lateralibus latis brevibus insigniter fimbriato-laceris.

ACRONIA, Presl, Symb. ii. 9, t. 57, ex icone videtur species e serie *Rhynchoperearum* sepalis petalisque angustissimis caudato-acuminatis, petalis pro labello descriptis, labello vero omisso.

Species paucæ e variis seriebus petalis angustissimis apud Lindleyum seriem formant *Restrepoidearum*.

*P. atropurpurea*, Lindl. Fol. Orchid. Pleuroth. 19 (*Masdevallia fenestrata*, Lindl., in Bot. Mag. t. 4164), species ex India occidentali flore majuscula bene colorato insignis est sepalis apice basique arte confertis coherentibusque medio tantum a latere apertis, sepalis lateralibus ut in pluribus speciebus usque ad apicem connatis. Nobis rite videtur ad *Pleurothallæm* relata, ubi a cæteris *Rhynchopereis* differt statura humili pedunculis 1-floris.

*Fasciculatæ*. Pedunculi sæpius 1-3-flori, plurimi interdum numerosi, folio breviores. Folium sessile, basi sæpius cordatum, sinu interdum clauso v. in caulem decurrente. Flores mediocres v. parvulæ. *Macrophyllæ fasciculatæ*, Lindl. Fol. Orch. cum *Sicariis* paucis. Pæpp. et Endl. Nov. Gen. et Sp. t. 83. Wawra, Pr. Max. Reise, Bot. t. 104, f. 1. Lindl. in Journ. Hort. Soc. ii. 247, cum ic. Reichb. f. Xen. Orch. t. 28, f. 2. Hook. Exot. Fl. t. 197. Bot. Mag. t. 3261. Bot. Reg. t. 1298. Lodd. Bot. Cab. t. 1908.

*Sicariæ*, Lindl., includit species e diversis seriebus imprimis e *Fasciculatis* et *Aggregatis*, caule superne plus minus compresso ancipiti v. bialato.

5. *Aggregatæ*. Pedunculi brevissimi, 1-flori rarius 2-flori, ad basin folii densissime aggregati, inflorescentia sessili fere capituliformi. *Aggregatæ* Lindl. cum *Sicariis* nonnullis. Pæpp. et Endl. Nov. Gen. et Sp. t. 82. Wawra, Pr. Max. Reise, Bot. t. 104, f. 2. Saund. Ref. Bot. t. 95.

MYOXANTHUS, Pæpp. et Endl. Nov. Gen. et Sp. i. 50, t. 88, est *P. Reymondi*, Lindl. Bot. Mag. t. 5385, species *Aggregatarum* petalis sepalisque angustis elongatis. DUBOIS-REYMONDIA, Karst. in Bot. Zeit. 1848, 397 (prius DUBOISIA, Karst. Walp. Ann. i. 773, non R. Br.) a Reichb. f. in Walp. Ann. iii. 520 rite ad *Pleurothallæ Aggregatas* refertur. Lindley speciem in *Restrepoideis* includit ob petala medio angustata. ACIANTHERA, Scheidw. in Allgem. Gartenz. 1842, 292, etiam ad *Aggregatas* a Lindleyo refertur.

6. *Apodæ*, Lindl. (olim *Muscosæ*). Species parvæ nunc pusillæ v. nanæ, inflorescentia fere *Elongatarum minorum*, caule infra folium abbreviato v. brevissimo. Pæpp. et Endl. Nov. Gen. et Sp. t. 89a, 90 (*Specklinia*). Miq. Stirp. Surin. t. 64. Reichb. f. Beitr. Orch. Centr. Amer. t. 10. Wawra, Pr. Max. Reise, Bot. t. 104, f. 4. Bot. Mag. t. 3682. Bot. Reg. t. 1797, 1825. Saund. Ref. Bot. t. 120. CENTRANTHERA, Scheidw. in Allgem. Gartenz. 1842, 293.

7. *Caulescentes*, Lindl. Species gracilis multicaulis Ecuadorensis (*P. caulescens*, Lindl.) vaginis infra folium pluribus in laminam foliaceam productis; folium summum tamen more generis non vaginans. In *P. diptera* tamen caules vidimus ut in *P. macrorhiza* secus rhizoma cauliforme 1-foliatos.

*SPECKLINIA*, Lindl. *Gen. et Sp. Orch.* 8, species includit plures inter minores, a genere olim separatas ob calycis labium inferius (e lobis 2 lateralibus connatis) basi evidentius gibbum, serius tamen ab auctore ipso in seriebus diversis *Pleurothallis* distributas.

*P. peduncularis*, Hook. Journ. Bot. iii. 308, t. 9, e Guatemala, errore quodam a Lindleyo ad *P. aphthosam* relata, est *P. ophioccephala*, Lindl., rite a Reichenbachio cum *P. Miersii*, Lindl., ad *Restrepia* translata. *P. Gardneri*, Lindl., species Brasiliensis *P. Miersii* similis, est pariter *Restrepie* species pollinii 4.

2. *Stelis*, Swartz in *K. Vetensk. Acad. Nya Handl. Stockh.* xxi. 248; *Fl. Ind. Occid.* iii. 1549.—Sepala sæpius subæqualia, lata v. triangularia, patentia, breviter v. alte connata, rarius angustiora et minus patentia v. posticum paullo longius v. altius solum. Petala multo breviora, lata, marginibus incrassatis, columnam et labellum sæpe subincludentia. Labellum ad basin columnæ sessile, petalis æquale et subsimile v. angustius et interdum breviter 3-lobum. Columna labello æquilonga v. brevior, nunc brevissima, lata, superne sæpius crassior truncata, v. antice utrinque angulo v. lobo carnoso instructa, apoda; clinandrium parum prominens, truncatum. Anthera terminalis, opercularis, incumbens, semiglobosa, 2-locularis; pollinia 2, cerea, ovoidea v. pyriformia, apice sæpius visco parco connexa. Capsula parva, ovoidea v. oblonga, erostris, sæpe 3-quetra.—Caules cæspitosi v. caulis repentis rami simplices, apice 1-phylli, infra folium sæpe 1-3-vaginati, non pseudobulbosi. Foliolum coriaceum, basi sæpe in petiolum contractum, petiolo sæpe concavo v. canaliculato et interdum prope basin articulatulo, non tamen in vaginam clauso. Flores parvi nunc minimi, in racemo elongato ad basin folii terminalis breviter pedicellati, secundi, rarius subdistichi. Bracteæ alternæ, sæpe distichæ, nunc minimæ concavæ, nunc ocreiformes v. laxæ pedicellum æquantes, rarius elongatæ acuminatæ.

Species editæ ad 150, Americæ tropicæ incolæ, a Brasilia et Peruvia usque ad Indiam occidentalem et Mexicum extensæ. Lindl. *Fol. Orchid.* 1858. Reichb. f. in Walp. *Ann.* vi. 198; *Orch. Centr. Amer.* 57, 93, t. 8, 9; *Xenia Orch.* t. 60, f. 7, et iii. 25; in Wawra, *Pr. Max Reise, Bot.* t. 104, f. 3; *Otia Hamb.* 19; in *Linnaea* xli. 7, 118. Jacq. *Stirp. Amer.* t. 133, f. 2 (*Epidendrum*). Poepp. et Endl. *Nov. Gen. et Sp.* t. 79 ad 81. Sm. *Exot. Bot.* t. 75. Hook.  *Ic. Pl.* t. 62; *Exot. Fl.* t. 158. Bot. Mag. t. 3975, 6521. Bot. Reg. t. 935. Lodd. *Bot. Cab.* t. 442, 1011.

Genus in sectiones 2 dividitur: 1. *Eustelis*, Lindl. (*Trivalves*, Reichb. f.), sepalis æqualibus æqualiterque patentibus; et 2. *Dialissa*, Lindl. (*Bivalves*, Reichb. f.), sepalis sæpe minus patentibus v. angustioribus, postico nunc longiore nunc altius soluto. *DIALISSA*, Lindl. in *Ann. Nat. Hist. ser.* 1, xv. 107. Lindley insuper in *Fol. Orchid.* species nonnullas a *Dialissis* typicis ab *Eustele* parum distinctis separavit sub sectione tertia *Labiata*, sepalis angustioribus minus patentibus obscure subbilabiatis. Hæ quodammodo *Pleurothalli* accedunt, etsi petalis labelloque bene distinctæ. Species *Stelidis* præterea variant columnæ forma, lobis lateralibus v. brachiis plus minus distinctis. *S. disticha*, Poepp. et Endl. l. c. t. 81, insignis est calyce late campanulato-patente obscure sinuato-3-lobo. In *S. purpurascens*, A. Rich., species Mexicana, Lindley pollinia 8 vidit, quod tamen adhuc ex aliis observationibus non confirmatur, in flore a nobis examinato anthera jam delapsa fuit; characteres ceteri omnino *Stelidis* et specimina illis *S. Liebmanni*, Reichb. f., simillima sunt.

3. *Physesiphon*, Lindl. *Bot. Reg. sub n.* 1797.—Sepala basi in tubum ovoideum v. urceolatum connata, superne æqualiter libera, patentia. Petala in fundo tubi nana, carnosa, obovali-cuneata. Labellum parvum, cum basi columnæ articulatulum, oblongo-cuneatum, concavum, medio utrinque lobo brevi auctum. Columna subteres, exalata, apoda v. in pedem brevem producta; clinandrium breve, sæpius obtuse 3-lobum. Anthera terminalis, opercularis, incumbens, decidua; pollinia 2, cerea, ovoidea, apice visco parco subcoherentia.—Caules in rhizomate repente breves, simplices, apice 1-phylli, infra folium 1-2-vaginati, non pseudobulbosi. Foliolum coriaceum, basi angustatum. Flores parvi, in racemo elongato ad basin folii terminalis pedunculati, plures, breviter pedicellati, secundi. Bracteæ breves, ocreatæ.

Species ad 4, Americæ tropicæ a Brasilia usque ad Mexicum incolæ. Hook.  *Ic. Pl.* t. 508. Bot. Mag. t. 4860. Lodd. *Bot. Cab.* t. 1601 (*Stelis*). Saund. *Ref. Bot.* t. 96. Reichb. f. in *Bot. Zeit.* 1866, 385.

Genus *Stelidi* valde affine, nec differt nisi perianthio exteriori urceolato-tubuloso.

4. *Zepanthes*, Swartz in *K. Vetensk. Acad. Nya Handl. Stockh.* xxi. 249, t. 8; *Fl. Ind. Occid.* iii. 1555.—Sepala tenuia, lata, subæqualia, basi breviter connata v. sæpius lateralialia altius connata, postico sublibero. Petala multo breviora, ungue brevi basi columnæ adnata, lamina irregulariter transverse eblonga, sæpe varie appendiculata. Labellum, ungue brevi columnæ arcte applicita v. adnata, divaricato-2-lobum, lobis polymorphis alas columnæ simulantibus. Columna brevis, angusta, apice dilatata, exalata, apoda; clinandrium breve. Anthera terminalis, opercularis, subcucullata, incumbens, semiglobosa; pollinia 2, cerea, ovoidea v. acuminata, libera v. apice visco parco cohærentia. Capsula parva, globosa v. ovoidea, subtriquetra.—Herbæ sæpius parvæ epiphyticæ, caule v. ramulis caulis repentis apice 1-phyllis, infra folium vaginis sæpius plurimis disitis brevibus laxisque v. longioribus ocreiformibus instructis. Folium sæpius cordatum v. parvum, rarius in petiolum brevissimum contractum interdum eleganter transverse venosum. Racemi terminales, ad basin folii solitarii v. pauci, nunc tenues recti bracteis eleganter distichis floribundi, nunc longiores graciliores, rhachi flexuosa, floribus dissitis. Flores parvi, nunc minuti.

Species ad 40, Andium Americæ australis et centralis, Indiæ occidentalis et Mexici incolæ. *Lindl. Gen. et Sp. Orch.* 10. *Reichb. f. Xen. Orch.* i. 140, t. 49, 50; in *Walp. Ann.* iii. 523; vi. 196; in *Flora* 1865, 275; *Orch. Centr. Amer.* 56, 90, t. 9, 10; in *Linnaea* xli. 46. *Hook. Journ. Bot.* i. t. 114. *Bot. Mag.* t. 4112, 5259. *Bot. Reg.* t. 1762.

Genus quoad species normales a *Pleurothalli* facile dignoscitur habitu petalis &c. *L. nummularia*, Reichb. f., sola differt caule filiformi repente ramulis floriferis numerosis brevissimis 1-foliatis 1-floris sub folio 1-vaginat, ita ut prima facie flores ad axillas foliorum distiche alternorum apparent.

5. *Bastrepia*, H. B. et K. *Nov. Gen. et Sp.* i. 366, t. 94.—Sepalum posticum liberum, lateralialia basi v. alte connata in unum integrum 2-dentatum v. 2-fidum basi æquale v. leviter gibbum. Petala libera, filiformia v. setaceo-acuminata, apice sæpe glanduloso-dentata, v. rarius parva latioraque. Labellum oblongum v. ovatum, basi sæpius contractum et cum columnæ basi articulatam, planum v. basi concavum, utroque latere sæpius dente v. lobo brevi v. arista auctum. Columna elongata, angusta, nuda v. angustissime marginata, cæterum exalata, apoda; clinandrium truncatum v. vix postice productum, rarius alte cucullatum. Anthera terminalis, opercularis, incumbens; pollinia 4, cerea, globosa v. anguste pyriformia, apice per paria visco parco cohærentia. Stigma infra antheram transversum, vix prominulum v. spongioso-incrassatum.—Caulis cæspitosi v. rami caulis repentis simplices, longiusculi v. rarius brevissimi, apice 1-foliati, infra folium sæpius 1-3-vaginati. Pedunculi ad basin folii solitarii v. pauci, vagina spathiformi sæpius brevi stipati, 1-flori, folio breviores, sæpius graciles. Flores quam in *Pleurothalle* sæpius majores, rarius parvi.

Species descriptæ ad 20, nonnullæ tamen reducendæ, Americæ tropicæ a Brasilia usque ad Mexicum incolæ. *Lindl. Fol. Orch.* 1859. *Reichb. f. in Walp. Ann.* vi. 203; *Xen. Orchid.* t. 60, f. 1 ad 3, t. 206, f. 2, 3; *Orch. Centr. Amer.* 57, 92, t. 10; in *Bonpl.* 1855, 70, 225; in *Hamb. Gart. Zeit.* xxi. 300; in *Linnaea* xli. 45, 133; et in *Wawra, Pr. Max. Reise, Bot.* 150, t. 104, f. 5. *Hook. Journ. Bot.* iii. 308, t. 9 (*Pleurothallis*). *Lindl. in Journ. Hort. Soc.* iii. 314, ic. xyl. *Karst. Ausw. Gewächse, Venez.* t. 2. *Bot. Mag.* t. 5257, 5966, 6288. *Lemaire, Illustr. Hortic.* t. 601. *Fl. des Serres* t. 743.

Genus *Pleurothalli* valde affine, distinguitur polliniis 4; habitus fere idem, sed pedunculi constanter 1-flori videntur, et flores sæpius nec semper majores. *R. Miersii*, Reichb. f. (*Pleurothallis*, Lindl.), et *R. Gardneri*, Benth. (*Pleurothallis*, Lindl.), species ab ea paullulum diversa foliis angustioribus et floribus plus duplo majoribus, insignes sunt caule nano filiformi prostrato intricato-ramoso et floribus parvis. Lindley distinctionem generis potius in petalorum forma et columna elongata petivit.

6. ? *Brachionidium*, Lindl. *Fol. Orch.* 1859.—Sepala basi brevissime connata v. a basi patentia, in acumen v. caudam producta, lateralialia sæpius altius connata. Petala sepalis conformia nisi paullo minora. Labellum parvum (cum basi columnæ articulatam?), sessile,

indivisum. Columna brevis, erecta, crassiuscula, apoda; clinandrium 3-lobum, lobis seu brachiis anticis falcatis carnosius. Anthera . . . Capsula . . .—Herbæ epiphyticæ, caudice seu rhizomate prostrato elongato sæpe ramoso vaginis scariosis semitecto. Caules (seu rami) 1-foliati, infra folium brevissimi v. vix ulli, vaginis 1-2 scariosis inclusi. Folium coriaceum, parvulum, basi in petiolum sæpius brevem non vaginantem contractum. Pedunculus cum petiolo in vagina scariosa inclusus, 1-florus. Flos mediocris v. majusculus.

Species 3, Colombianæ v. Bolivianæ. Genus *Masdevallia* affine videtur, differt rhizomate cauliformi elongato et petalis magis evolutis quam in cæteris *Pleurothallis*. Quodammodo incertum tamen remanet pollinis adhuc non observatis.

7. *Masdevallia*, Ruiz et Pav. *Fl. Per. et Chil. Prod.* 122, t. 27; *Syst. Veg.* 238.—Sepala nunc basi v. altius in tubum connata v. conniventia, nunc a basi patentia, lateralia postico altius connata sæpeque eo longiora, omnia in acumen v. caudem patentem producta. Petala multo minora, sæpius angusta. Labellum parvum, polymorphum, cum pede columnæ articulum, incumbens v. superne patens, columnæ æquilongum v. rarius magis evolutum. Columna erecta, superne v. apice solo marginata v. alata, basi sæpius in pedem brevem producta; clinandrium obliquum, nunc breve truncatum, nunc latum concavum v. fere cucullatum, cum alis columnæ continuum, margine varie dentatum. Anthera terminalis v. intra clinandrium affixa, opercularis, incumbens, convexa v. cucullata, 1-locularis; pollinia 2, cerea, ovoidea, sæpe 2-partibilia, inappendiculata, libera v. apice visco parco coherentia. Capsula erostris.—Herbæ epiphyticæ, cæspitosæ v. rhizomate repente, non pseudobulbosæ. Caules 1-foliati, infra folium brevissimi v. vix ulli, vaginis 1-2 scariosis inclusi. Folium coriaceum, basi in petiolum longum basi non vaginantem contractum. Pedunculus scapum simulans, basi cum petiolo in vagina scariosa inclusus, ipse 1-3-vaginatus, 1-florus v. laxe racemoso-pluriflorus. Flores mediocres v. majusculi, sæpe pulchre colorati v. varie picti.

Species editæ ultra 100, plures tamen hortulanis potius quam botanicis distinctæ, Americæ tropicæ a Peruvia usque ad Mexicum incolæ, in Brasilia et Guiana perpaucae, in India occidentali adhuc ignotæ. *Reichb. f. in Walp. Ann.* i. 774, iii. 523, vi. 188; *Xen. Orch.* t. 3, 74, 75, 185, 186, 195, 203; iii. 25; *Otia Hamb.* 13; *Orch. Centr. Amer.* 93; in *Linnea* xli. 8, 118; et in *Bot. Zeit.* 1873, 390. *H. B. et K. Nov. Gen. et Sp.* t. 89. *Pæpp. et Endl. Nov. Gen. et Sp.* t. 108. *Karst. Fl. Colomb.* t. 153. *Bot. Mag.* t. 4921, 5476, 5505, 5739, 5962, 5990, 6152, 6159, 6171, 6190, 6208, 6258, 6262, 6273, 6368, 6372.

*M. triaristella*, Reichb. f. ex ic. et descr. in *Bot. Mag.* t. 6268 ab omnibus differt caudis sepalorum lateralium infra apicem sepali lateralibus nec terminalibus. *M. fenestrata*, Lindl., est *Pleurothallis purpurea*, Lindl., perianthio clauso sepalis muticis et characteribus vegetationis omnino *Pleurothallis*.

8. *Arpophyllum*, Llav. et Lex. *Nov. Veg. Descr.* ii. 19.—Sepala æquilonga, inter se libera, patentia, lateralia postico paullo latiora, basi concava, pedi columnæ adnata. Petala sepalis postico subsimilia. Labellum pedi columnæ affixum, ima basi concavum subsaccatum, supra saccum contractum incumbensque, dein erectum; lobi laterales apice rotundati interdum a terminali rotundato patente parum distincti, margine crenulati. Columna erecta, leviter arcuata, exalata, basi in pedem brevem producta; clinandrium parum dilatatum, breviter 3-dentatum, rostello lato brevius. Anthera opercularis, incumbens, subglobosa, 2-locularis; pollinia 8, in quoque loculo 4, obovoidea, acuta v. breviter acuminata, visco parco in phalanges 2 coherentia. Capsula (oblonga?), 6-costata, erostris.—Herbæ terrestres (v. epiphyticæ?), caulibus e caudice repente erectis apice 1-foliatis, infra folium vaginis amplis obtectis. Folium coriaceum v. carnosum, interdum longissimum, basi complicatum at non in vaginam clausum. Pedunculus terminalis, supra folium 1-2-vaginatum; spica longa, densa, cylindracea, floribus numerosis mediocribus sessilibus pulchre coloratis. Bracteæ minimæ.

Species ad 6, inter se parum distinctæ, Mexici v. Americæ centralis incolæ, quarum una etiam in

Jamaica nuperrime detecta. *Lindl. Gen. et Sp. Orch.* 151. *Reichb. f. in Walp. Ann.* vi. 448; *Orch. Centr. Amer.* 42, 89. *Bot. Mag.* t. 6022. *Baill. Dict. Bot. cum tab.*

Genus bene distinctum *Pleurothalleas* quodammodo cum *Liparieis* connectens.

9. *Ootomeria*, *R. Br. in Ait. Hort. Kew. ed. 2*, v. 211. (*Aspegrenia*, *Poepp. et Endl. Nov. Gen. et Sp.* ii. 12, t. 116.)—Sepala subæqualia, patentia, basi brevissime connata. Petala sepalis subconformia v. paullo breviora, patentia. Labellum multo brevius, columnam tamen superans et cum ejus pede articulatum, infra medium utrinque lobo brevi auctum, apice patens v. reflexum. Columna petalis multo brevior, erecta, leviter incurva, semiteres, basi in pedem producta, superne exalata; clinandrium cavum, erectum, rotundatum. Anthera terminalis, opercularis, incumbens, extus 2-4-sulcata, 2-ocularis; pollinia 8, in quoque loculo 4, cerea, oblongo-clavata, acuminata, visco parco in phalanges 2 coherentia. Capsula parva, breviter oblonga, 6-costata, erostis.—Herbæ epiphyticæ, caulibus cæspitosis apice 1-foliatis infra folium 1-3-vaginatiss. Foliū sessile v. in petiolum brevissimum non vaginantem contractum, coriaceum, oblongum lineare v. subteres. Flores mediocres v. parvi, ad apicem caulis ad basin folii dense fasciculati, subcapitati, pedicellis tenuibus brevibus nunc brevissimis.

Species descriptæ 10, Brasiliæ, Guianæ et Indiæ occidentalis incolæ. *Lindl. Gen. et Sp. Orch.* 10. *Reichb. f. in Walp. Ann.* iii. 523; vi. 195; in *Hamb. Gart. Zeit.* xiv. 215; xv. 59; xvi. 424; *Otia Hamb.* 93. *Bauer, Illustr. Orch. Gen. t. 4. Bot. Mag.* t. 2764. *Lodd. Bot. Cab. t.* 1891.

Genus habitu omnino *Pleurothallis* seriei *Aggregatarum*, nec differt nisi polliniorum numero. Hæc bene a Bauero et a Hookero in phalangibus 2 fasciculata delineata, nec omnia 8 in simplici serie collateralia vidimus ut a Lindleyo descripta.

10. ? *Meiracyllium*, *Reichb. f. Xen. Orch.* i. 12, t. 6; iii. 13, t. 209.—Sepala subæqualia, erecto-patentia, lateralibus basi subcoherentia mentum breve formantia. Petala sepalis subsimilia. Labellum cum basi columnæ continuum, erectum, concavum v. basi saccatum, sepalis subæquilongum, latiusculum, indivisum. Columna brevis, crassiuscula, curvula, clavata, vix basi in pedem brevissimum producta, rostello terminali suberecto v. retrorsum inclinato, stigmate antice ad angulum rostellī subhorizontali; clinandrium pone rostellum latiusculum, a rostello fere obtectum. Anthera dorso rostellī incumbens, imperfecte 2-ocularis, convexa, ultra loculum non producta; pollinia 8, cerea, in fasciculos 2 disposita, ovoidea v. oblonga, acuminata, in quoque fasciculo per paria inæqualia, apice visco parco v. appendicula parva granulosa fere glanduliformi connexa, a rostello libera. Capsula . . . —Herbæ epiphyticæ, humiles, rhizomate repente crassiusculo radicante vaginis brevibus obtecto. Caules e rhizomate brevissimi, 1-foliati, non pseudobulbosi. Foliū breve, latum, sessile, crasse carnosum. Pedunculus ad basin folii brevissimus, 1-2-florus. Flores parvuli, pedicellati. Bracteæ minimæ.

Species 3, Mexici et Americæ centralis incolæ. *Reichb. f. in Walp. Ann.* vi. 859; *Orch. Centr. Amer.* 72; et in *Bonpl.* 1856, 214. Habitus *Pleurothallearum*, pollinia potius *Eriearum*, columnā rostellō elongato retrorsum nec antrorsum rostrato in ordine insignis.

11. *Malaxis*, *Swartz in K. Vetensk. Acad. Nya Handl.* xxi. 233, ex parte.—Sepala libera, subæqualia, patentissima. Petala multo minorā, patentia. Labellum sessile, erecto-patens, petalis longius, basi cordatum, sinu columnam amplectens. Columna brevissima, teres, vertice excavata, utrinque dente aucta. Anthera in apice cavo columnæ pone stigma sessilis, suberecta, persistens, loculis discretis sursum dehiscentibus, per dehiscentiam contractis; pollinia 4, cerea, obovoideo-oblonga, per paria in loculos antheræ segregata, dehiscentia antheræ exserta.—Herba humilis, paludosa, inter muscos quasi epiphytica, caule basi in pseudobulbum incrassato, quotannis ex apice pseudobulbi accreto folia et pseudobulbum nova formante, caule pseudobulboque anni præteritis infra novum diu persistentibus. Folia 2-3, parva, haud disticha, basi breviter vaginantia. Flores

minimi, in racemo terminali pedunculato laxè spiciforme brevissime pedicellati, torsione ovarii resupinati.

Species 1, per Europam præcipue borealem late dispersa. *Lindl. Gen. et Sp. Orch.* 23. *Bauer, Illustr. Gen. Orch. t. 1.* *Reichb. f. Ic. Fl. Germ. t. 494.* *Nees, Gen. Fl. Germ. Monocot. iii. n. 14.* De vegetatione cfr. *Hornsch. in Flora* 1838, 257, t. 2; de fecundatione, *Darw. Fertil. Orch.* 130. Species numerosas huic generi a Reichenbachio associatas ad *Oberoniam* restituimus.

12. *Microstylis*, Nutt. *Gen. N. Amer. Pl. ii.* 196. (*Achroanthes*, Raf. ex Endl. *Gen.* 189. *Pedilea*, *Lindl. Orch. Scel.* 27, cum ic. *Crepidium*, *Blume, Bijdr.* 387. *Pterochilus*, *Hook. et Arn. Bot. Beech. Voy.* 71, t. 17.)—Sepala libera, subæqualia, patentia. Petala sepalis subæqualia, sæpius angustiora, nunc filiformia. Labellum sessile, erectum v. patens, petalis brevius, sæpius latissimum, concavum, basi cordatum v. auriculis elongatis columnam amplexans, integrum 2-3-lobum v. dentato-fimbriatum. Columna brevissima, teres, vertice excavata, antice utrinque dente aucta; clinandrium sæpius prominens, obliquum, membranaceum. Anthera intra clinandrium sessilis, erecta, a rostellato aversa, loculis distinctis sursum dehiscentibus post dehiscentiam persistens; pollinia 4, cerea, ovoidea, in quoque loculo 2, visco parco coherencia v. libera. Capsula parva, ovoidea, erostis.—Herbæ terrestres, caule foliato basi sæpe in pseudobulbum incrassato. Folia 1-3, sæpius lata, membranacea, basi in petiolum vaginantem v. immediate in vaginam contracta. Flores parvi, sæpe minimi, rarius majores, in racemum terminalem nunc elongatum laxumque nunc fere in umbellam contractum dispositi. Bractæ parvæ, angustæ.

Species ad 40, Europæ, Asiæ et Americæ borealis et australis incolæ. *Lindl. Gen. et Sp. Orch.* 18. *Reichb. f. in Walp. Ann.* iii. 525, vi. 206; *Otia Hamb.* 36, 94; *Orch. Centr. Amer.* 99; in *Linnaea* xli. 97; et in *Seem. Fl. Vül.* 302. *Reichb. f. Ic. Fl. Germ. t. 493.* *Wight, Ic. t. 901, 902, 1631, 1632, et t. 1630 (Dienia).* *Pæpp. et Endl. Nov. Gen. et Sp. t. 111.* *Bot. Mag. t. 5403.*

Genus *Malaxi* quam maxime affine, primo aspectu in sectiones 2 dividitur quæ tamen vix limitibus certis definiendæ. 1. *Umbellulata*, racemis abbreviatis fere in umbellam contractis, floribus longe pedicellatis. Huc *M. fastigiata*, Reichb., species Mexicana in *Bot. Reg. t. 1290* pro *M. ophioglossoides*, Nutt., delineata, *Link et Otto, Ic. Pl. Rar. t. 5.* *Bot. Mag. t. 4103.* Species typica Nuttallii, boreali-Americana, nobis distincta videtur floribus evidentius racemosis, etsi racemus brevior et densior quam in plerisque racemifloris.

2. *Laxiflora*, racemo elongato floribus breviter pedicellatis dissitis, v. pedicellis brevissimis floribus fere in spicam longam cylindraceam confertis. Hæc series includit species omnes gerontogæas cum pluribus ex Americanis.

*Dienia*, *Lindl. Gen. et Sp. Orch.* 22, a *Microstyle* separata fuit ob labellum erectum nec patens, character tamen nequaquam constans et genus rite a Reichenbachio ad *Microstylem* revocatur.

*Pterochilus plantaginea*, Hook. et Arn., eadem species videtur ac *M. platycheila*, Reichb. f.

Anthera in diversis speciebus diversa videtur, in speciebus typicis boreali-Americanis, loculi bene discreti per dehiscentiam superne aperti, pollinibus more *Malaxos* exsertis; in speciebus Indiciis anthera pariter erecta sed loculis arcte contiguis longior; nunquam tamen vidimus more *Liparis* calyptriformem v. incumbentem et deciduam.

*M. Josephiana*, Reichb. f.; *Bot. Mag. t. 6325*, insignis est floribus solito majoribus, sepalis petalisque latiusculis, labello maximo valde concavo fere cucullato sepalis vix brevior.

13. *Oberonia*, *Lindl. Gen. et Sp. Orch.* 15; *Fol. Orch.* 1859.—Sepala libera, subæqualia, erecta v. posticum minus et reflexum. Petala sepalis angustiora v. breviora. Labellum sessile, concavum, basi dilatata sæpe pulvinatum v. carinatum columnam plerumque amplexans eamque longiuscule superans, margine interdum fimbriatum v. apice 2-3-lobum. Columna brevissima, teres, basi contracta, apoda, apice utrinque angulato-marginata; clinandrium parum prominens. Anthera terminalia, opercularia, incumbens; pollinia 4, cerea, per paria arcte contigua et interdum inæqualia, omnia apice visco parco coherencia et in massam decidua. Capsula parva, globoso-triquetra v. breviter oblonga.—Herbæ epiphyticæ, caespitosæ, abque pseudobulbis. Folia disticha, vaginis compressis equitantis, in caule brevissimo pauca v. secus caulem elongatum sæpe flexuosum alterna,

coriacea v. membranacea planaue v. rarius carnosa subteretia. Flores minimi, in spica v. racemo denso subcylindraceo numerosi, sessiles v. brevissime pedicellati, secus rhachin conferti v. interrupte fasciculati. Bracteæ minimæ.

Species notæ fere 50, Asiæ tropicæ, Australiæ, ins. Mascarensium et maris Pacifici incolæ. *Reichb. f. in Walp. Ann.* vi. 207; *Otia Hamb.* 56; in *Linnaea* xli. 98; et in *Trans. Linn. Soc.* xxx. 154 (Malacia). *Benth. Fl. Austral.* vi. 274. *Lindl. Sert. Orchid.* t. 8. *Brongn. in Duperrey Voy. Bot.* t. 40 B. *Griff. Ic. Pl. Asiat.* t. 286. *Wight, Ic.* t. 1622 ad 1629. *Bot. Mag.* t. 4517, 5056.

Genus a Reichb. f. l. c. infeliceiter *Malaxi* adjunctum, a quâ nostro sensu valde diversum est tam antheræ indole quam vegetatione foliis et patria, a nonnullis cum *Phreatia* confusum, sed præter polliniorum numerum facile distinguitur inflorescentia terminali.

TITANIA, *Endl. Prod. Fl. Norf.* 31, ex ins. Norfolk, est *Oberonia Titania*, *Lindl. (O. palmicola, F. Muell.)*. *O. myosurus*, *Lindl.*, e Nepalia et Burma, ab omnibus differt foliis carnosis angustis fere terotibus, sed characteres omnino *Ocheroniae*.

14. *Liparis*, *L. C. Rich. in Mem. Mus. Par.* iv. 52, t. 5, f. 10. (*Sturmia*, *Reichb. Consp.* 69; *Iconogr. Bot.* t. 956. *Alipsa*, *Hoffmans. ex Linnaea* xvi., *Littbl.* 228.)—Sepala libera, patentia, latiuscula v. sæpius angusta nunc angustissima, æqualia v. posticum angustius. Petala sepalis similia et subæqualia v. sæpe angustiora v. breviora, patentia v. erecta. Labellum basi columnæ affixum v. ei brevissime adnatum, basi ascendens v. erectum v. rarius a basi patens; lobi laterales parum distincti angusti, v. latiores columnam amplectentes; medius oblongus v. in laminam latam patentem v. reflexam expansus, integer v. emarginatus; facie medium versus v. interdum basi 2-tuberculatus. Columna elongata, incurva, semiteres, apoda, apice utrinque marginata v. ala appendiculata; clinandrium breve. Anthera terminalis, opercularis, incumbens; pollinia 4, cerea, ovoidea, interdum acuminata, per paria in loculis segregata, cujusve paris superposita, libera v. apicibus visco parco coherentia. Capsula sæpius parva, subglobosa ovoidea v. oblonga.—Herbæ terrestres v. epiphyticæ, caulibus foliatis basi interdum in pseudobulbum parvum incrassatis. Folia pauca, interdum solitaria, ad basin v. infra medium caulis in petiolum vaginantem sepe denum articulatum contracta, membranacea v. carnosula, æqualiter multivenia v. subplicato-paucicostata. Flores parvi v. rarius mediocres, albi viridiflavescens v. rubri, in racemum terminalem pedunculatum dispositi. Labellum in aliis speciebus sepalis subsimile parum conspicuum, in aliis latissimum intense coloratum. Bracteæ parvulæ v. angustæ.

Species fore 100, per regiones temperatas calidioresque utriusque orbis late dispersæ. *Lindl. Gen. et Sp. Orch.* 26. *Reichb. f. in Walp. Ann.* i. 775 et iii. 527 (*Sturmia*), vi. 217; *Ic. Fl. Germ.* t. 492 (*Sturmia*); *Otia Hamb.* 37, 56; *Orch. Centr. Amer.* 98; in *Flora* 1865, 184, et 1872, 274, 277; in *Linnaea* xli. 42, 97; *Xen. Orch.* iii. 26; et in *Trans. Linn. Soc.* xxx. 154. *Nees. Gen. Fl. Germ. Monocot.* iii. n. 13. *Benth. Fl. Austral.* vi. 272. *Thunb. Ic. Fl. Jap.* t. 10 (*Epidendrum*). *Wall. Pl. As. Rar.* t. 35. *Griff. Ic. Pl. Asiat.* t. 287. *Wight, Ic.* t. 903 ad 906, 1633, 1735. *Thou. Orch. Iles Afr.* t. 25 ad 27, 89, 90. *Harv. Thes. Cap.* t. 109. *Hook. et Arn. Bot. Beech. Voy.* t. 16. *Hook. Exot. Fl.* t. 116 (*Cymbidium?*). *Bot. Mag.* t. 2004 (*Malaxis*), 2709, 3770, 5529. *Bot. Reg.* t. 882, 1175, 1671. *Andr. Bot. Reg.* t. 65 (*Ophrys*). *Lodd. Bot. Cab.* t. 198, 1097, 1558.

Thouars, *Orch. Isles Afr.* tab. esp. 3, sectiones 2 bene naturales distinxit: *Cestichis*, floribus in racemo sparsis, et *Distichis* floribus bracteisque eleganter distichis. *Lindley* minus feliciter sectiones 2 admisit: *Euliparis*, foliis latoribus plicatis et *Cestichis* (inclusa *Distiche*) foliis subcoriaceis non plicatis. Species prioris ploræque nec omnes terrestres et illius sæpius epiphyticæ, sed distinctio nec constans nec semper facile determinanda, et characteres e florum structura nondum ad genus bene dividendum utuntur.

EMPUSA, *Lindl. Bot. Reg. sub n.* 825, *Gen. et Sp. Orch.* 17 (EMPUSARIA, *Reichb. Consp.* 69), species Indica, pro genere distincta fuit sepalis lateralibus basi columnæ adnatis, quod tamen in speciminibus nostris non magis apparet quam in pluribus aliis speciebus, et genus rite a Reichb. f. in *Walp. Ann.* vi. 218 cum *Liparide* jungitur.

EPHIPPIANTHUS, *Reichb. f. in Schmidt, Reise, Amer. Bot.* 180, t. 5, *Xen. Orch.* t. 180, est species parva ex ins. Sachalin folio unico ovato, quam nullo charactero a *Liparide* distinguere possumus. A *Malaxi* bene separatur labello, columna et anthera.

*Liparis ramosa*, Poepp. et Endl. Nov. Gen. et Sp. ii. 9, t. 112, et *L. neuroglossa*, Reichb. f., Xen. Orch. iii. 26, species insignes sunt caule elongato ramoso decumbente, foliis pluribus petiolatis ovatis v. cordatis, racemo terminali elongato.

*PLATYSTYLIS*, Blume, *Bijdr.* 389 (*Malazeos* sect.); *Lindl. Gen. et Sp. Orch.* 18 (gen. propr.), habitu et characteribus pluribus *Liparidis*, a Lindleyo distinguitur imprimis columna late alata, sed in *P. atropurpurea* (fide specimen a Reichb. f. determinatorum) alæ angustissimæ quales in *Liparidibus* veris interdum observantur et genus nobis potius sectio *Liparidis* nuncupandum. Species continet paucas, Indicas et Malayanas.

*GASTROGLOTTIS*, Blume, *Bijdr.* 397, planta Javensis a nemine postea observata, caule foliato, foliis membranaceis plicato-venosis, inflorescentia terminali, floribus parvis, columna apice attenuata, pollinibus 4 filis glutinosis adhærentibus 'nec pedicello nec laminæ adnexis,' *Liparidi* haud male convenit. Differre dicitur labello basi ventricoso, sed in pluribus *Liparidibus* labellum basi valde concavum. *GastrogloTTis montana*, Kuhl. et V. Hasselt, ex auctorum icone in Reichb. f. Xen. Orch. ii. 96, t. 129 edita, a planta Blumeana certe longe aliena est, pseudobulbo 2-foliato, scapo laterali aphylo, columna brevissima lata etc., sed ex analysi imperfecta genus verum adhuc valde incertum remanet, verisimiliter *Bulbophyllo* affine.

15. *Platyclinis*, Benth. in *Journ. Linn. Soc.* xviii. 295. (*Dendrochili* sp. Blume et auct.)—Sepala libera, patentia, subæqualia, angusta. Petala sepalis subsimilia, v. minora, patentia. Labellum ad basin columnæ sessile v. brevissime unguiculatum, ovatum, concavum, sepalis subæquilongum, basi utrinque lobo parvo auctum v. interdum 2-tuberculatum. Columna erecta, semiteres, subalata, apoda, apice utrinque in acumen seu brachium erectum producta; clinandrium postice elevatum, late membranaceum, concavum v. fere cucullatum, margine erosum v. denticulatum, antice cum brachiis columnæ plus minus continuum. Anthera intra clinandrium opercularis, incumbens, 2-locularis; pollinia 4, cerea, ovoidea, per paria in loculis segregata, cujusve paris superposita, acuminata v. subcaudata apicibus per paria coherencia. Capsula. . . —Herbæ epiphytica, caulibus e basi cespitosa v. subramosa simplicibus prope basin 1-foliatis, basi vix incrassatis v. anguste pseudobulbosis, vaginis nonnullis scariosis obtectis. Folium angustum, in petiolum contractum. Flores parvi, in racemo terminali numerosi, breviter pedicellati. Bractee lineares v. lanceolatae, subscariosae, parvae v. florem subaquantas.

Species ad 8, Indiæ orientalis et Archipelagi Malayani incolæ. *DENDROCHILI* sect. 2, Blume, *Bijdr.* 399. *Lindl. Gen. et Sp. Orch.* 34. Reichb. f. in Walp. Ann. vi. 240, 927; *Otia Hamb.* 54; et in Bonpl. 1856, 329; 1857, 43. *Bot. Mag. t.* 4853. *Regel, Gartenfl. t.* 604.

Genus *Liparidi* valde affine, differt imprimis columnæ brachiis elongatis et clinandrio late membranaceo. *Microstylis commelynifolia*, Zoll. e Java, caule tenui prostrato folioso non pseudobulboso foliis late ovatis petiolatis et anthera operculari incumbente a *Microstyle* longe diversa, habitu quodammodo *Liparidi ramosæ* accedit, sed columna abbreviata brachiis erectis potius *Platy-clinidis*. Pollinia conveniunt. Flores minimi et unicum tantum examinare potuimus.

16. *Calypso*, Salisb. *Parad. Lond.* t. 89. (*Cytherea*, Salisb. in *Trans. Hort. Soc.* i. 301. Norna, *Wahlenb. Fl. Suec.* 561, ed. 2, 582. *Orchidium*, Swartz in *Svensk. Bot. t.* 518.)—Sepala libera, erecto-patentia, angusta, subæqualia. Petala sepalis similia et subæqualia. Labellum sepalis longius, patens, late ovatum, concavum; lobi laterales plani, patentes, superne supra lobum medium depressum saccatum integrum v. 2-fidum connati. Columna erecta, sepalis brevior, utrinque latissimo membranaceo-alata, apoda; clinandrium 3-dentatum. Anthera sub apice dentis postici clinandrii affixa, pendula, discrete 2-locularis; pollinia 4, cerea, in quoque loculo 2, ovata, compressa, sibiin arcu applicita et visco parco connexa. Capsula oblongo-fusiformis, 6-costata.—Herbæ terrestres, caule basi 1-foliato, sæpius in pseudobulbum incrassato, 1-3-vaginato. Folium petiolatum, ovatum. Flos majusculus, in pedunculo terminali solitarius, pendulus, labello pulchre picto medio fimbriato.

Species 1, per regiones boreales Europæ, Asiæ et Americæ late dispersa. *Lindl. Gen. et Sp. Orch.* 179. *Hook. Frot. Fl. t.* 12. *Bot. Mag. t.* 2763.

17. *Aplectrum*, Nutt. *Gen. Pl. N. Am.* ii. 197.—Sepala subæqualia, libera, lateralialia basi non producta. Petala sepalis subconformia. Labellum basi breviter contractum, basi columnæ affixum, erecto-patens, sepalis subæquilongum, lobis 2 lateralibus angustis curvulis, medio lato facie longitudinaliter 2-3-lamellato. Columna longiuscula, erecta, subrecta, exalata, apoda; clinandrium parum prominens, oblique truncatum. Anthera terminalis, opercularis, incumbens, convexa, membranacea, lata, 4-locularis, decidua; pollinia 4, cerea, in loculis segregata, late ovata, inappendiculata, libera. Capsula oblongo-fusiformis, reflexa.—Herba rhizomate tenui quotannis in pseudobulbum globosum viscoso-carnosum incrassato. Folium in pseudobulbo unicum, amplum, coriaceum, striato-plicatum, petiolo longiusculo basi sæpius vagina scariosa incluso. Scapus ex eodem pseudobulbo tardius evolutus, terminalis, simplex, paucivaginatus. Flores in racemo sparsi, mediocres, reflexi, breviter pedicellati. Bracteæ minimæ.

Species 1, boreali-Americana. *Lindl. Gen. et Sp. Orch.* 536. *Torr. Fl. N. York*, t. 127.

Genus quoad characteres florales *Corallorhizæ* affine, sed vegetatio longe diversa.

18. *Corallorhiza*, R. Br. in *Ait. Hort. Kew. ed. 2*, v. 209.—Sepala subæqualia, posticum liberum, lateralialia paullo latiora ima basi cum pede columnæ in calcar breve v. gibbum vix prominentem producta. Petala sepalis subconformia v. paullo minora. Labellum basi contractum, in pedem columnæ breviter incumbens, lamina sepala subæquante ovata v. oblonga integra v. utrinque lobo brevi aucta. Columna erecta, incurva, semiteres, basi apiceque utrinque anguste alata, pede brevi in calcar producto v. brevissimo vix prominente; clinandrium parum prominens, truncatum v. sinuatum. Anthera opercularis, lata, septo longitudinali et transverso 4-locularis; pollinia 4, molliter cerea, late ovata, in loculis segregata, inappendiculata, libera v. visco parco coherentia. Capsula ovoidea, obovoidea v. oblonga, erostris, reflexa.—Herbæ aphyllæ, rhizomate coralloideo nodoso-ramoso articulado minute squamigero. Scapus erectus, prope basin vaginis paucis instructus, simplex. Flores in racemo terminali sparsi, parvuli v. mediocres, breviter pedicellati. Bracteæ minimæ v. rarius pedicellos superantes.

Species editæ ad 12, plures tamen in herbariis valde confusæ, Europæ, Asiæ extratropicæ et præsertim Americæ borealis usque ad Mexicum incolæ. *Lindl. Gen. et Sp. Orch.* 533 (*exol.* § 2). *Reichb. f. in Walp. Ann.* i. 775, iii. 526, vi. 217; *Id. Fl. Germ.* t. 490, 491. *Nees, Gen. Fl. Germ. Monocot.* iii. n. 15. *Hook. Exot. Fl.* t. 174. *Dene. in Jacquem. Voy. Bot.* t. 165. *Torr. Bot. Whipple Exped.* t. 25.

Pollinia a Neesio et a Decaisneo 2 tantum dicuntur; semper 4 vidimus etsi interdum 2 inferiora diu sub lamina antheram transverse dividenda occulta.

19. *Tipularia*, Nutt. *Gen. N. Amer. Pl.* ii. 195. (*Anthericlis*, Raf. in *Journ. Phys.* lxxxix. 261. *Plectrurus*, Raf. *Neogen.* 4).—Sepala subæqualia, libera, patentia, angusta. Petala sepalis similia. Labellum a basi columnæ erectum, sessile, basi in calcar longum tenue productum, sepalis subæquilongum; lobi laterales parvi, medius planus, oblongus, integer v. retusus. Columna sepalis brevior, erecta, angusta, superno anguste 2-alata; clinandrium parum prominens. Anthera terminalis, opercularis, incumbens, convexa, latiuscula, 2-locularis; pollinia 4, cerea, in quoque loculo 2, ovoidea, perfecte distincta, inappendiculata, anthera dehiscente stipiti filiformi brevi basi in glandulam incrassato affixa. Capsula ovoideo-clavata incurva v. oblonga rectaque, erostris, reflexa.—Herbæ terrestres, caulibus 1-foliatis basi demum in pseudobulbum tuberiformem incrassatis. Folium ovatum, petiolo longiusculo basi vagina spathiformi incluso. Scapus ex eodem pseudobulbo elongatus, simplex, prope basin paucivaginatus. Flores parvuli, pedicellati, laxe racemosi. Bracteæ minutæ v. obsoletæ.

Species 2 inter se valde affines sed bene distinctæ, altera boreali-Americana, altera Himalaica. *Lindl. Gen. et Sp. Orch.* 252, et in *Journ. Linn. Soc.* i. 174.

Genus *Oreorchi* valde affine, labello calcarato facile distinctum, utrumque quoad locum in systemate ambiguum, nobis rite juxta *Corallorhizam* collocanda videntur. Pollinia omnino *Lipuriæarum* etsi post antheram delapsam sæpissime stipiti e rostello oriundo more *Vandearum* affixa apparent.

20. *Oreorchis*, *Lindl. in Journ. Linn. Soc.* iii. 26.—Sepala subæqualia, libera, angusta, incurvo-incumbentia, mox patentia. Petala sepalis similia. Labellum sepalis æquilongum, basi columnæ affixum, ecalcaratum, ungue erecto, lobi laterales breves, angusti, erecti, medius lator, patens, indivisus. Columna elongata, subteres, superne leviter clavata, exalata, apoda; clinandrium parum prominens, truncatum. Anthera terminalis, opercularis, incumbens, valde convexa, 1-locularis; pollinia 4, subglobosa, distincta, inappendiculata, anthera dehiscens sæpius stipiti filiformi in rostello persistenti affixa. Capsula oblonga v. subfusiformis, erostris, costata, reflexa.—Herba terrestris, caulibus 1-2-foliatis, basi demum in pseudobulbum tuberiformem incrassatis. Folia longa, angusta. Scapus ex eodem pseudobulbo simplex, elongatus, basi paucivaginatus. Flores racemosi, mediocres v. parvuli, brevissime v. tenuiter pedicellati. Bracteæ lineares v. minimæ.

Species editæ 4, Himalayæ, Asiæ Sibiricæ et Japoniæ incolæ. *A. Gray in Mem. Amer. Acad. ser.* 2, vi. 410. *Regel, Fl. Ussur. Tent.* 160, t. 11.

21. *Hexalectris*, *Rafn. Neogen.* 4.—Sepala subæqualia, erecta v. subpatentia, libera, posticum incurvum, lateralia leviter falcata. Petala sepalis subconformia. Labellum a basi columnæ erectum, basi contractum, sepalis æquilongum, obovatum, lobis lateralibus brevibus suberectis. Columna longiuscula, erecta, incurva, semiteres, superne anguste 2-alata, apoda; clinandrium obliquum, postice elevatum, obtusum, concavum, integrum. Anthera intramarginalis, opercularis, incumbens, convexa, distincte 2-locularis, loculis imperfecte 4-locellatis. Pollinia 8, cerea, in quoque loculo 4, sub-2-seriatim fasciculata, ovoidea, acutiuscula, subæqualia, apicibus visco granuloso coherentibus. Capsula oblongo-fusiformis, reflexa.—Herba aphylla, rhizomate nodoso subarticulato brevissime squamigero. Scapus erectus, simplex, vaginis brevibus dissitis instructus. Flores in racemo terminali sparsi, mediocres, breviter pedicellati. Bracteæ angustæ, pedicellum sæpius superantes.

Species 1, civitatum australium Americæ borealis et Mexici incola. *Blume, Orch. Jav.* 18, t. 6 (*Bletia aphylla*, *Nutt. Gen. Pl. N. Amer.* ii. 194).

Genus potius *Corallorhizæ* quam *Bletie* affine, a priori differt polliniis 8 visco granuloso copiosiore, ab hac habitu, et polliniis more *Liparicarum* fasciculatis nec ut in *Bletieis* discrete 2-seriatis.

22. *Dendrobium*, *Swartz in K. Vet. Acad. Stockh. Nya Handl.* xxi. 244. (*Ceraia*, *Lour. Fl. Cochinch.* 518, ex *Lindl.* *Callista*, *Lour. l.c.* 519, ex *Reichb. caractere utriusque generis imperfecto*. *Desmotrichum*, *Blume, Bijdr.* 329, t. 35. *Pedilonum*, *Blume, l.c.* 320, t. 36. *Onychium*, *Blume, l.c.* 323, t. 10.)—Sepala subæquilongæ, posticum liberum, lateralia basi obliqua pedi columnæ adnata, mentum nunc breviter gibbiforme nunc longe calcariformæ formantia, superne libera v. rarius altius connata. Petala sepalis postico æquilongæ v. rarius paullo longiora v. breviora, sæpe angustiora, interdum latiora. Labellum ad apicem pedis columnæ, basi contracta at rarius articulata, in pedem incumbens v. ei adnata, supra basin in lobos latos columnam amplectentes v. angustiores patentesque utrinque expansum, v. lobis obcuris v. obsoletis integrum, apice in laminam patentem angustam v. latissimam planam convexam concavam v. calceiformem acutam obtusam v. retusam expansum, disco sæpe longitudinaliter 2-3-lamellato. Columna breviuscula v. brevissima, apice plus minus 2-alata v. 2-brachiata, basi in pedem sæpe longiusculum producta; clinandrium antice 2-angulatum v. in dentes 2 breves productum. Anthera terminalis, opercularis, incumbens, convexa obtuse conica v. cucullata, 2-locularis; pollinia 4, cerea, ovoidea v. oblonga, obtusa, a latere compressa, per paria in loculis collateralia v. plus minus coherencia, æqualia v. cujusve paris inæqualia, inappendiculata, libera. Capsula ovoidea v. oblonga, rarius elongata, erostris.—Herbes epiphyticæ. Caules v. ramuli floriferi cæspitosi v. sæpius secus rhizoma v. caulem repentem ad axillas vaginarum, simplices, 1-∞-foliati, nunc brevissimi v. in pseudobulbum brevem incrassati, nunc elongati, tennes v. varie ad basin v. superne carnosocrassati. Folia varia, sæpius coriacea v. carnea, non pilosa. Flores speciosi v. rarius parvi, racemosi, racemis simplicibus elongatis laxisque v. brevibus densis v. ad flores

perpaucos v. florem unicum reductis, specie terminalibus (pseudoterminalibus) v. ad nodos lateralibus; flores singuli ad axillam bracteæ sæpius parvæ nunc minutæ v. fere obsoletæ breviter pedicellati.

Species editæ fere 300, genuinæ, per regionem Indo-Australianam late dispersæ, præsertim in Archipelago Malayano frequentes, a Zeylantia et Peninsula usque ad Japoniam, Australiam, Novam Zelandiam et insulas maris Pacifici australis extensæ; plures tamen in diariis hortulanorum ad specimina culta descriptæ ad varietates v. formas hybridas reducendæ. *Lindl. Gen. et Sp. Orch.* 74, et in *Journ. Linn. Soc.* iii. 1. *Reichb. f. in Walp. Ann.* vi. 279; in *Trans. Linn. Soc.* xxx. 149; *Xen. Orch.* t. 146, 169, 193, 194, 202, 206; *Otia Hamb.* 36; in *Bot. Zeit.* 1862, 214; 1863, 128; 1865, 99; 1867, 230; in *Linnaea* xli. 39, 88. *Benth. Fl. Austral.* vi. 275. *Fitzger. Austral. Orch. cum tabb.* 6.

Genus vastum at bene limitatum, quoad inflorescentiam, florum numerum et magnitudinem, separatim et præsertim labelli formam etc. sat polymorphum, haud facile tamen in sectiones distinctas dividendum. Lindley 10 proposuit inter quas *Aporum* solum characteribus certis limitatur. Quæ sequuntur, a Lindleyanis paullo mutatæ, inter se speciebus intermediis nimis frequenter connexæ sunt, quoad maximam tamen partem sat naturales videntur.

1. *Aporum*. Caules plus minus complanati, foliosi. Folia disticha, verticalia, cum vaginis complanatis linea sæpius obliqua articulata. Flores parvuli v. mediocres, in axillis superioribus solitarii v. pauci fasciculati. Sectio facile pro genere distincto habenda. Species ad 12. *Lindl. in Journ. Linn. Soc.* iii. 3. *Bot. Reg.* t. 1239. *Bot. Mag.* t. 3608. *Loeb. Bot. Cab.* t. 1895. *Reichb. f. in Trans. Linn. Soc.* xxx. t. 31 B. *APORUM* (floribus subsolitariis) *Bl. Bijdr.* 334, t. 39. *Lindl. Gen. et Sp. Orch.* 70. *Griff. in Calc. Journ.* iv. t. 17, v. t. 25. *OXYSTOPHYLLUM* (floribus parvis subcapitatis), *Bl. Bijdr.* 335, t. 38; *Rumphia*, t. 193, f. 4, et 198 C. *Lindl. Gen. et Sp. Orch.* 71. *MACROSTOMUM*, *Bl. Bijdr.* 335, t. 37; *Lindl. Gen. et Sp. Orch.* 60. *SCHISMOCERAS*, *Presl, Rel. Hænk.* i. 96, t. 13, f. 2.

2. *Rhizobium*. Folia parvula, crassa, carnosa, ut in *Cadetia* solitaria, sed ad axillas vaginarum caulibus v. rhizomatis repentis sessilia, nec ramulo, nec pseudobulbo fulta, sæpe carnosa. Racemi v. pedunculi ad basin foliorum pauciflori. Species 3, Australianæ. *Benth. Fl. Austral.* vi. 284. *Sm. Exot. Bot.* t. 11. *Bot. Mag.* t. 5249.

3. *Cadetia*. Ramuli breves, sæpe in pseudobulbum incrassati, apice 1-foliati, secus caulem repentem v. prostratum seu rhizoma ad axillas vaginarum scariorum dispositi. Pedicelli specie terminales, ad basin folii solitarii v. pauci. Flores parvuli. Species ad 12, quarum 3 Australianæ, *Benth. Fl. Austral.* vi. 282 (sect. *Monophyllea*) cæteræ Asiaticæ v. ex ins. maris Pacifici, ab auctoribus in variis sectionibus distributæ. Inter Australianas *D. cucurminum*, *Lindl. Bot. Reg.* 1843, t. 37, *Bot. Mag.* t. 4619, insignis est foliis crassissimis subteretibus costatis pseudobulbos simulantibus. Ad sectionem pertinent: *CADETIA*, *Gaud. in Freyc. Voy. Bot.* 422, t. 33, *Bl. Rumphia*, t. 192 f. 4 et 198 E, *D. hispidum* A. Rich. *Sert. Astrol.* t. 5 et *D. heteroideum* *Bl. Rumphia*, iv. t. 193 f. 6, utrumque forte ad *Cadetiam umbellatam* *Gaud.* referendum, *D. funiforme*, *Bl. l. c.* t. 193 f. 5, omnes ex Archipelago Malayano v. ins. maris Pacifici, *D. Macraei*, *Lindl.*, e Zeylantia, *D. nodosum*, *Dalz.*, e Peninsula, *D. Rabani*, *Lindl.* e Khasia, cum specie *D. Macraei* valde affini e Borneo. Huc etiam referendæ videntur icones *Reichb. f. Xen. Orch.* t. 110, f. 1 et t. 118.

*D. nitidissimum*, *Reichb. f. in Journ. Linn. Soc.* xv. 113, ex ins. Admiralty, est species distinctissima ab auctore pro sectione (*Diplocaulobio*) proposita, sed scapis etsi tenuibus elongatisque apice 1-phyllis 1-floris et pseudobulbis 1-foliatis bene *Cadetia* convenit.

4. *Sarcopodium*. Ramuli breves, sæpe in pseudobulbum incrassati, apice 2-foliati, secus caulem repentem v. prostratum seu rhizoma ad axillas vaginarum dispositi. Pedunculus inter folia basi vaginatus, florem unicum majusculum (v. rarius flores paucos?) ferens. *SARCOPODIUM*, *Lindl. Fol. Orch.* 1853, quoad § 1. Species 5 v. 6, Indiæ orientalis v. Archipelagi Malayani incolæ. *Wall. Pl. As. Rar.* t. 29. *Griff. Ic. Pl. As.* t. 304, 309. *Reichb. f. in Gard. Chron.* 1871, 136, et in *Trans. Linn. Soc.* xxx. 138 (*D. Cologyne*).

*Sarcopodii* § 2, *Lindl.*, est *Bulbophylli* sect. *Sestochilus*.

5. *Stachyobium*. Flores racemosi, racemo in caule foliato v. rarius denudato specie terminali, additis rarius racemis paucis in axillis superioribus. Species numerosæ, intermediis paucis cum *Eudendrobio* connexæ, in series sequentes distribuendæ:—

a. *Humiles*. Caulis brevissimus, in pseudobulbum carnosum depressum globosum v. ovoideum incrassatus. Folia sæpius 2, decidua. Racemus tenuis, floribus parvulis, sepalis petalisque angustis tenuibus. *A. Rich. in Ann. Sc. Nat. ser. 2, xv. t. 8. Wight, Ic.* t. 1643.

b. *Geminata*. Caules breves v. brevissimi, in rhizomate fasciculati v. secus caudicem subramosum vaginis obiectum brevissimi. Folia gemina, diu persistentia. Pedunculi inter folia uni- v. pauciflori. Sepala et petala sæpius angusta. In *D. geminato*, Lindl., et *D. labuano*, Lindl., caules secus caudicem brevissimi, anguste bulbiformes, et folia specie secus caulem vaginatum geminatum subsessiles; in cæteris speciebus, caules 1-2-pollicares, carnosuli sed non bulbiformes, in rhizomate fasciculati.

SARCOSTOMA, *Blume Bijdr.* 339, t. 45, species Javanica, a Lindley *Dendrobium* refertur; a Blumeo tamen et serius a Reichenbachio in Bonplandia 1867, 64, cum *Ceratostyle* comparatur, cui habitu accedere videtur, sed pollinia more *Dendrobii* a latere compressa parallele 1-seriata. A *Dendrobii* plerisque differt pollinibus ex ic. Blumei acutiusculis visco parco connexis, ex Reichenbachio in caudiculis filiformes (visco extensivo?) exeuntibus. An revera species *Dendrobii* ad *Stachyobia Geminata* referenda dubium remanet. Fragmentum tantum vidimus in herb. Lindl. absque floribus, cum analysi rudi Reichenbachii.

*Geminatis* habitu similis videtur ex icone *SCARDEDERIS scandens*, Thou. Orch. Hes Afr. t. 91 (SCANDEDERIS in tabula) sed ob descriptionem mancam genus valde dubium remanet.

c. *Erioflora*. Caules humiles, interdum demum longiusculi, carnosuli at non bulbiformes. Folia alterna, membranacea, sub anthesi interdum decidua. Racemi graciles, præter pseudoterminalem sæpe 1-∞ laterales. Sepala et petala tenuia, angusta, acuta v. acuminata. *Wight, Ic.* t. 909, 1649. *Griff. Ic. Pl. As.* t. 307, f. 2.

THELYCHITON *macropus*, Endl. Prod. Fl. Norf. 33, ex specimine imperfecto videtur *Dendrobii* species *D. Kingiano*, Bidw., affinis nisi eadem. *T. brachypus*, Endl. l. c., forte etiam *Dendrobii* species valde dubia remanet. *T. argyropus* est potius *Bulbophylli* species.

d. *Elatiores*. Caules quam in *Eriofloris* longiores, magis carnosuli, sub anthesi foliis sæpissime denudati. Flores in racemis numerosiores sæpeque majores, racemi laterales rari. *Wight Ic.* t. 910. *Bot. Mag.* t. 5430, 5537.

e. *Speciosæ*. Caules longiores, plurifoliati v. rarius sub anthesi aphylli. Racemus unicus pseudoterminalis, nunc elongatus floribundus, rarius pauciflorus v. ad florem unicum reductus. Flores sæpius majusculi; sepala et petala latiuscula v. angusta, interdum undulata v. petala sepalis longiora. *Sm. Exot. Bot.* t. 10. *A. Rich. Sert. Astrol.* t. 6. *Miq. Choix Pl. Jard. Buitenz.* t. 21. *Bot. Mag.* t. 2906, 3074, 4527, 4755, 4898, 5261, 5285, 5444, 5459, 5540, 5956. *Bot. Reg.* t. 1610; 1839, t. 37; 1841, t. 62.

f. *Ramosissimæ*, caulibus tenuibus ramosis paucifoliatis floribus parvis in racemo brevi pseudoterminali paucis. *Wight Ic.* t. 1648.

6. *Strongyle*. Caules sæpe ramosi, elongati tennesque v. breviores rigidique non pseudobulbosi. Folia teretia v. subteretia, modo distantia tenuia v. filiformia, modo breviter disticha rigida recurvopatentia. Racemi tenues pseudoterminales v. laterales, floribus parvulis. *Endl. Iconogr.* t. 99. *F. Muell. Fragm.* i. t. 6. *Miq. Choix Pl. Jard. Buitenz.* t. 22, f. 3 (*Podochilus*) et t. 23. *Reichb. f. Xen. Orch.* t. 109. *Bot. Mag.* t. 4711. *D. uncatum*, Lindl., speciesque aliæ brevifoliæ quodammodo *Aporis* accedunt.

7. *Eudendrobium*. Caules indivisi, apice v. undique foliati, sub anthesi sæpe denudati, haud raro basi v. superne v. ad nodos v. undique carnosio-incrassati. Racemi axillares v. ad nodos laterales, multiflori v. ad fasciculum 2-pauciflorum v. ad florem unicum reducti. Species numerosissimæ, infeliciter a Lindley ad caulis crassitudinem v. florum colorem aliisque characteribus in sectiones nec naturales nec bene definitas distributæ, nobis melius videntur in series sequentes ordinandæ.

a. *Pycnostachya*. Racemi densi laterales v. subterminales, floribus numerosis parvis v. angustis secus rhachin confertis, mento sæpe calcariformi. Caules sub anthesi sæpius defoliati. *Miq. Choix Pl. Jard. Buitenz.* t. 20, f. 1. *A. Rich. Sert. Astrol.* t. 7. *Seem. Fl. Vit.* t. 91. *Bot. Mag.* t. 4352, 5703. *Bot. Reg.* t. 1291.

b. *Formosæ*. Flores speciosi, laxè fasciculati, fasciculis ad apicem caulis confertis. Folia per anthesin sæpe persistentia. *Wall. Pl. As. Rar.* t. 39. *Griff. Ic. Pl. As.* t. 305. *Bot. Reg.* t. 1315. *D. Loweii*, Hook. *Bot. Mag.* t. 5303, huc potius quam ad *Fasciculatas* pertinere videtur. Sectio *Pedilonum*, Lindl., continet *Pycnostachyas* et *Formosas*.

c. *Calostachya*. Racemi laterales, laxi, plus minus elongati, floribus sæpius speciosis. Caules sub anthesi sæpe defoliati et haud raro incrassati, interdum tamen per anthesin foliati. *Wall. Pl. As. Rar.* t. 40. *Gaudich. in Frey. Voy. Bot.* t. 38. *A. Rich. Sert. Astrol.* t. 9. *Hook. Exot. Fl.* t. 71, 184. *Seem. Fl. Vit.* t. 92. *Bot. Mag.* t. 3418, 3643, 3837, 4160, 4659, 5053, 5451, 5459, 5564, 5649, 5780, 5918, 5968, 6013, 6226, 6383. *Bot. Reg.* t. 1695, 1779; 1847, t. 36.

Huc pertinet *D. pulchellum*, Roxb., Lindl. Gen. et Sp. Orch. 82, non Lodd. Bot. Cab. t. 1935, nec Bot. Mag. t. 5037, quæ species ad *D. Devonianum* inter *Fasciculatas* referendâ.

d. *Fasciculata*. Racemi laterales, ad fasciculos laxè paucifloros interdum ad flores 1-2 reducti. Flores sæpe speciosi. Caules sub anthesi sæpe aphylli v. folia perpauca ferentes, haud raro varie carnosio-incrassati, interdum basi foliati sterilesque, superne aphylli, nodis 1-2-floris, apice attenuati nudi, racemum terminalem elongatum interruptumque simulant. *Wight, Ic. t. 908, 1644 ad 1647. Griff. Ic. Pl. As. t. 303, 306, 308. Miq. Choix Pl. Jard. Buitenz. t. 24. Lindl. Sert. Orch. t. 3, 18, 35. Hook. Exot. Fl. t. 9. Bot. Mag. t. 2584, 4013, 4153, 4429, 4450, 4477, 4640, 4663, 4686, 4708, 4886, 4937, 4944, 4970, 4993, 5003, 5011, 5037, 5058, 5130, 5441, 5446, 5454, 5470, 5482, 5488, 5515, 5520, 5652, 5679, 5766, 5825, 6007, 6050, 6199, 6319, 6438. Bot. Reg. t. 548, 1299, 1314, 1756, 1864; 1839, t. 20, 22; 1843, t. 6, 17, 54, 60; 1844, t. 53. Lodd. Bot. Cab. t. 1935. Part. Fl. Gard. t. 57. Reichb. f. Xen. Orch. t. 110, f. 2, t. 145, 152, 155.*

DICHOPUS, *Blume, Mus. Bot. Lugd. Bat. ii. 176*, planta Novo-Guineensis nobis ignota et quoad characteres florales ad iconem Latourei descripta, est verisimiliter *Dendrobii* species hujus subsectionis, columna sub stigmatè appendicè cuneiformi instructa insignis.

e. *Foliosæ*. Caules floriferi foliati, foliis alternis sæpe angustis. Flores axillares, breviter pedicellati, sæpius parvuli, gemini v. fasciculati. *A. Rich. Fl. Nov. Zel. t. 26. GRASTIDIUM, Blume, Bijdr. 333.*

ACLINIA, *Griff. Notul. iii. 320; Ic. Pl. As. t. 351 A, f. 21*, cum aliis speciebus ad varias sectiones imprimis *Stachyobio* pertinentes, a Lindl. Journ. Linn. Soc. iii. 9, sectionem propriam format floribus abnorme subregularibus.

23. *Latourea, Blume, Rumphia, iv. 41, t. 195 et 199 C.*—Sepala subæqualia, acuminata, undulata, patentia; posticum liberum, lateralia basi obliqua pedi columnæ adnata, mentum breve formantia. Petala sepalis similia nisi angustiora. Labellum basi cum pede columnæ saccatum, elongatum, patens, undulatum, basi in lobos 2 membranaceos undulatos horizontales columnam amplexantes et pone eam connatos productum. Columna brevis, latiuscula, exalata; clinandrium parum dilatatum postice in dentem brevem productum. Anthera denti postico affixa, opercularis, incumbens, plano-convexa, imperfecte 2-locularis; pollinia 2, oblonga, a latere compressa, inappendiculata, libera. Capsula . . . —Caules carnosio-incrassati, apice paucifoliati. Pedunculi laterales, laxè longeque racemiferi. Flores speciosi, sepalis petalisque insigniter undulatis (*Char. ex Blum.*).

Species 1, Novæ Guineæ incola, a nobis non visa, et a Blumeo ipso ex figura et analysi in loco natali a Latoureo delineatis descripta. Genus quadammodo incertum, evidenter *Dendrobio* valde affine, nec nisi labelli lobis basalibus pone columnam connatis et polliniis 2 nec 4 diversum; hic tamen character ulterius probandus. Habitus omnino *Dendrobii*.

24. *Bulbophyllum, Thon. Orch. Iles Afr. tab. esp. 3 et ic. t. 93 ad 97 et 99 ad 110. (Bulbophyllum, Spr. Syst. iii. 681. Gersinia, Neraud in Gand. Bot. Freycin. Voy. 27. Diphyes, Blume, Bijdr. 310, t. 66. Tribraichium, Lindl. Collect. Bot. t. 41. Anisopetalum, Hook. Exot. Fl. t. 149.)*—Sepalum posticum liberum, erectum v. patens, lateralibus subæquilongum v. rarius conspicue brevius; lateralia basi oblique dilatata et pedi columnæ adnata, mentum breve gibbiforme v. parum prominens formantia, superne patentia libera v. rarius altius connata. Petala sepalis breviora rarius subæquilongia, sæpius parva v. angusta. Labellum basi contractum cum pede columnæ articulatam v. mobile, in pedem incumbens; lobi laterales parvi, erecti, sæpius auriculiformes v. dentiformes, medius integer v. plumoso-ciliatus, recurvus, angustus v. latiusculus, sæpe varie incrassatus v. medio 2-lamellatus. Columna erecta, sæpius brevis, basi in pedem longiusculum producta, superne 2-alata; clinandrium breve, postice sæpe in dentem antheriferum productum, antice 2-brachiatum, 2-dentatum v. 2-angulatum, et interdum alæ columnæ infra brachia utrinque dente minore appendiculatæ. Anthera terminalis, opercularis, incumbens, depresso-hemisphærica v. obtuse conica, 2-locularis v. rarius septo evanido 1-locularis; pollinia ceræa, ad normam 4, per paria in loculis segregata, sæpe tamen cujusve paris plus minus connata v. uno minimo ita ut duo tantum in anthera appareant, hæc etiam interdum

dorso connata, inappendiculata nisi rarius visco parco subgranuloso coherentia. Capsula globosa ovoidea v. oblonga, erostris.—Herbæ caule seu rhizomate in saxa arboresque repente radicante, vaginis scariosis plus minus oblecto. Pseudobulbi ad axillas vaginarum sessiles, apice folia 1–2 ferentes, et rarius caulis apex 2–3-folius absque pseudobulbis. Scapi floriferi ad latera pseudobulborum v. rarius in rhizomate sparsi, aphylli, simplices, basi v. sparse  $\infty$ -vaginati. Flores nunc parvi v. minuti in racemo terminali numerosi, nunc majores rarius magni in scapo solitarii v. pauci, in paucis speciebus pedicellis ad apicem scapi approximatis subumbellati. Bracteæ sæpius parvæ, in paucis speciebus flores subæquantes imbricatæque, subdistichæ.

Species ad 80, pro maxima parte per regiones tropicas Africæ et Asiæ dispersæ, perpaucæ Austro-Americanæ v. Australianæ, una sola in Nova Zelandia obvia. *Lindl. Gen. et Sp. Orch.* 47, et in *Journ. Linn. Soc.* vi. 125. *Reichb. f. in Walp. Ann.* vi. 243, pro parte; in *Bonpl.* 1857, 57; in *Bot. Zeit.* 1863, 237, 1865, 99; in *Flora*, 1865, 184; in *Linnaea* xli. 92; *Otia Hamb.* 94, 118; et in *Trans. Linn. Soc.* xxx. 150. *Benth. Fl. Austral.* vi. 286.

Genus florum numero et magnitudine polymorphum, quoad species plerasque naturale, sed non semper a finitimis accurate limitatum, nec facile in sectiones bene definitas dividendum. Sequentes, imprimis ad inflorescentiam conditæ, formis intermediis haud raro junguntur etsi plures a variis auctoribus pro generibus propriis propositæ sint.

1. *Sestochilos*. Flores majusculi v. magni, in pedunculo v. scapo basi paucivaginato v. nudo solitarii. In plerisque speciebus pseudobulbi 1-foliati, columnæ dentes laterales breves, anthera magna valde convexa v. obtuse conica. Species Indicæ v. Archipelagi Malayani. *Griff. Ic. Pl. As.* t. 292, 295. *Bot. Mag.* t. 4532. *Bot. Reg.* 1844, t. 13. *Reichb. f. in Saund. Ref. Bot.* t. 116. *SESTOCHILOS*, *Breda, Orch. Kuhl et Hass. cum ic. SARCOPODIUM* § 2, *Lindl. Fol. Orch.* 1853.

2. *Leopardina*. Pedunculi breves, laxè 2–3-flori, rarius 1-flori, floribus majusculis. Sepala lata, patentia. Petala multo minora. Columnæ angulæ anticæ vix in dentes productæ. Anthera opercularis, convexa v. depresso-hemisphærica. Species Indicæ. *Wall. Tent. Fl. Nap.* t. 28 (*Dendrobium*). *Griff. Ic. Pl. Asiat.* t. 296, f. 2. *Reichb. f. in Trans. Linn. Soc.* xxx. t. 32 B.; *Xen. Orch.* t. 144; et in *Saund. Ref. Bot.* t. 115. *Bot. Mag.* t. 5408 (*Sarcopodium*), 5605, 6119.

3. *Elegantæ*. Pedunculi v. scapi graciles, laxè pluriflori v. interdum 1-flori, floribus mediocribus. Columnæ angulæ in dentes prominentes v. brachia productæ. Pseudobulbi 1-foliati. Species Indicæ v. Archipelagi Malayani. *Miq. Choix Pl. Jard. Buitenz.* t. 20, f. 2, t. 22, f. 2. *Reichb. f. in Trans. Linn. Soc.* xxx. t. 32 A.

His affinis est inter Americanas *B. Napelli*, *Lindl.* (*B. baleniceps*, *Reichb. Xen. Orch.* t. 157, ex ic. et descr.?) e Brasilia.

*EPICRANTHES*, *Blume, Bijdr.* 306, t. 9, ex ic. et descr. est verisimiliter *Iulbophylli* species *Elegantibus* affinis, pseudobulbis 1-phyllis, scapis 2-floris; differt columna 'inferne utroque latere processibus antenniformibus 7 pendulis' cincta. Hi processus sunt forte petalorum nanorum laciniae. In collectione Parishiana flores 2 soli supersunt, in quibus processus lineares breviter stipitati ad utrumque latus columnæ 3 v. 4 omnino locum petalorum tenere videntur. *Reichb. f. in Walp. Ann.* vi. 265 *Monomerium* cum *Epicranthe* junxit, serius tamen in *Trans. Linn. Soc.* xxx. 143 iterum distinxit.

4. *Racemosa*. Scapi  $\infty$ -vaginati, sæpe elongati, floribus in racemo sæpius numerosis breviter pedicellatis parvis v. mediocribus. Columnæ anguli in dentes prominentes v. brachia producti et interdum columna infra brachia utrinque 1-dentata. Pseudobulbi 1-foliati v. præsertim in speciebus nonnullis Africanis 2-foliati. Species ultra 40, Asiaticæ et Africanæ cum paucis Americanis. *Wall. Pl. As. Rar.* t. 69. *Wight, Ic.* t. 1650, 1749. *Griff. Ic. Pl. As.* t. 297. *Bot. Mag.* t. 4166, 5050, 5309, 5316, 5329. *Bot. Reg.* t. 963 (*Tribrachia*), 1964. *Reichb. f. in Saund. Ref. Bot.* t. 117. *Xen. Orch.* t. 207. *TAURONTALIX*, *Reichb. f. in Bot. Zeit.* 1852, 933, ex char.

*Iulbophylla* typica racemosa pluribus notis polymorpha sunt. *B. variegatum*, *Thou. Orch. Iles Afr.* t. 105, e Mauritio, insignis est scapis elatis  $\infty$ -vaginatibus plerisque more generis ad latera pseudobulborum sitis, terminalis tamen supra vaginas 2-folius. *B. clavatum*, *Thou. Orch. Iles Afr.* t. 99, e Mauritio, distinguitur rhachi incrassata carnosa; flores tamen sparsi, nec ut in *Megacelinio* in faciebus rhacheos planæ 1-seriati. In *B. occulto*, *Thou. l.c.* t. 93, 94, e Mauritio, et *B. lupulino*, *Lindl.*, ex Africa tropica, bracteæ solito majores, imbricatæ, membranacæ, flores parvos fere occultantes. *Ptiloglossum*, a *Lindleyo*, in *Journ. Linn. Soc.* vi. 125, pro sectione propositum, species

continet plures Africanas labelli lamina angusta longiuscula margine longe denseque plumoso-ciliata. *Bot. Mag. t. 4088, 5288. Bot. Reg. t. 1942, 1970.* Sectio tamen minime naturalis et labellum etiam in speciebus nonnullis Asiaticis margine plus minus ciliatum est. *B. fusco-purpureum*, Wight, Ic. t. 1651, ab omnibus distinguitur petalis antenniformibus e basi nana in aristam longam apice clavatam productis. In *B. lemniscato*, Par., *Bot. Mag. t. 5961*, e Moulmein, sepala dorso infra apicem arista longiuscula instructa sunt. In *B. Careyana*, Spr., affinisque ex India orientali, racemus sæpius dense spiciformis, crassus, cylindraceus, floribus  $\infty$ -seriatim subimbricatis.

IONE, *Lindl. Fol. Orch. 1853; Reichb. f. in Walp. Ann. vi. 635*, a *Bulbophyllo* separatur et ad *Vandeas* transfertur ob 'pollinia per paria glandulis 2 distinctis cartilagineis ovalibus adnata.' Species 3 priores Lindleyi examinare nequimus, in *I. paleacea*, *Lindl., Bot. Mag. t. 6344*, pollinia vidimus omnino *Bulbophylli*, nisi visco extensivo in uno flore vix conspicuo in altero distinctiore lineari per paria connexa. In speciebus angustifoliis Lindleyi, quæ omnes *Bulbophyllo reptanti*, *Lindl.*, simillimæ sunt, pollinia nunc omnino libera, nunc in quoque loculo visco extensivo tenuissimo connexa vidimus. Characteres ceteri tam vegetationis quam floris omnino *Bulbophylli*. *I. paleacea* distinguitur statura elatiore, bracteis solito majoribus paleaceis. *B. reptans* affinesque humiles sunt floribus minoribus.

DIDACTYLE, *Lindl. Fol. Orch. 1852*, genus propositum fuit ad species 7 austro-Americanas, columnæ utrinque infra brachia terminalia dente brevi instructa, quod tamen observatur in speciebus plurimis Africanis racemosis et character species aliter valde dissimiles jungit.

XIPHIZUSA, *Reichb. f. in Bot. Zeit. 1852, 919, et in Walp. Ann. vi. 242*, species continet paucas austro-Americanas, a *Didactyle* separatas, sepalis lateralibus angustis alte coalitis et labelli lobis lateralibus longiusculis erectis, medio ligulato dependente. Character sumptus est a *B. chloroptero*, *Reichb. f.*, cujus fragmenta cum icone picta adsunt in herb. *Lindl.* cum iconibus specierum 2 a Reichenbachio cum *B. chloroptero* comparatarum: *Didactyle gladiata*, *Lindl.*, sepalis *B. chloropteri* sed labelli lobis lateralibus brevibus latis, et *D. Weddellii*, *Lindl.*, habitu multo majore et sepalis omnibus liberis angustis eubæqualibus.

MALACHADENIA, *Lindl. Bot. Reg. 1839, Misc. 67, Bot. Mag. t. 4334*, ex specimine imperfecto in herb. *Lindl.* et ic. et descr. citatis videtur *Bulbophylli* species Brasiliensis, columnæ brachiis longis reflexis. Pollinarii 'glandula mollis cubica' est verisimiliter visci massa e rostello extrusa, qualis in *Liparicis Dendrobicis*que haud raro observatur.

BOLBOPHYLLARIA, *Reichb. f. in Bot. Zeit. 1852, 934; Orch. Centr. Amer. 60; et in Walp. Ann. vi. 241*, genus conditum fuit ad *Bulbophyllum bracteolatum*, *Lindl. Bot. Reg. 1838, t. 57*, speciem Americanam pseudobulbis 2 foliatis, scapo elato, habitu et floribus in rhachi incrassata carnosa sparsis *B. clavatum*, *Thou.*, e Madagascaria referentem, sed ovarium apice bracteolis 2 parvis inter sepalum posticum et lateralia sitis instructum est. Species primum descripta fuit ad specimen cultum plantæ Guianensis et sylvestre e Venezuela, ad eandem speciem tamen referimus *Pleurothallum pachyrhynchum*, A. Rich. Fl. Cub. iii. 234, t. 74, e Cuba, et *B. sordidum*, *Lindl.*, e Guatemala, nec ex charactero dato distinguimus *Bolbophyllariam Krstedii*, *Reichb. f.*, ex America centrali. *Didactyle meridensis*, *Lindl.*, e Venezuela (*D. exaltata*, *Lindl.*, e Guiana), est species *B. bracteolato* affinis, foliis crassioribus, racemi rhachi non v. vix incrassata et bracteolis minoribus, quæ tamen certe adsunt.

*Bulbophyllum bisctum*, *Lindl., Griff. Ic. Pl. As. t. 296, f. 1 (B. cirrhopetaloides, Griff. Notul. iii. 290)*, ex India orientali, a *Reichb. f. l. c.* *Bolbophyllariæ* refertur ob bracteolas ad apicem ovarii bene evolutas lineari-setaceas vix perianthio breviores sed habitus inflorescentia et flores cæterum ab illis *B. bracteolata* longe recedunt; inflorescentia fere *B. fusco-purpurei*, *Wight*, folia solitaria acuta *B. lemniscati*. In *B. clavato*, *Thou.*, a Reichenbachio l. c. ad *Bolbophyllariam* relato, bracteolas non invenimus.

LYRÆA, *Lindl. Gen. et Sp. Orch. 46*, genus conditum fuit ad descriptionem iconemque A. Rich. *Orch. Iles Fr. et Bourb. 62, t. 8*, *Bulbophylli prismatici*, *Thou. Orch. Iles Afr. t. 109*, cum charactero *Bulbophylli* nequaquam convenientes sed forte falsæ, nam Blume genus ad *Bulbophyllum* restituit. Icon rudis Thouarsii habitum ostendit specierum *Racemosarum* et nemo post Richardium plantam examinavisse videtur. Specimina nobis desunt.

5. *Umbellatæ*. Scapi  $\infty$ -vaginati, sæpe elati, floribus mediocribus v. majusculis longiuscule pedicellatis, racemo ad apicem scapi abbreviato umbelliformi v. capituliformi fere *Cirrhopetali*, sed sepalis omnia patentia parum inæqualia. Species paucæ Indiæ v. Archipelagi Malayani. *Breda Orch. Kuhl et Hass. cum ic. Bot. Mag. t. 4267. Bot. Reg. 1845, t. 44.*

COCHLIA, *Blume, Bijdr. 320, t. 59; Lindl. Gen. et Sp. Orch. 46*, species Javensis a nobis non visa, nec ab auctoribus recentioribus descripta, a *Reichb. f. in Walp. Ann. vi. 265*, ad *Bulbophyllum* reducitur, si revera congener, ad hanc seriem pertinet racemo capituliformi subgloboso.

6. *Brachystachye*. Herbæ tenues, reptantes, pseudobulbis parvulis 1-foliatis. Flores parvuli, pauci, longiuscule pedicellati, ad apicem scapi brevis tenuis subumbellati, brevissime laxæque racemosi v. capitati; sepala tenuiter acuminata. Species ad 20, Asiaticæ. *Griff. Ic. Pl. As. t. 294, f. 2.* ODONTOSTYLES, *Breda, Orch. Kuhl et Hass. cum ic.*

His affinis videtur *B. Regnellii*, Reichb. f. *Xen. Orch. t. 157, e* Brasilia.

7. *Oxysepale*. Caulis v. rhizomata elongata, prostrata, ramosa, multivaginata, pseudobulbis parvis nunc minimis 1-foliatis. Scapi breves nunc brevissimi, tenues, pauciflori, sæpe vix e vaginis prominuli. Flores parvuli, sepalis acuminatissimis. Columnæ brachia longa.—Species ad 6, Asiaticæ v. Australianæ. *Griff. Ic. Pl. As. t. 293.* OXYSEPALUM, *Wight, Ic. v. 17, t. 1736.* Huc pertinet inter alia *B. Shepherdii*, F. Muell.; *Fitzger. Austral. Orch. cum tab.*, ubi pedunculi brevissimi delineantur, in speciminibus nostris interdum semipollicem excedunt.

*Thelychiton argyropus*, Endl. *Prod. Fl. Norf. 32, Iconogr. t. 29, ex ins. Norfolk*, est verisimiliter *Bulbophylli* species nana.

25. *Sunipia*, *Lindl. Gen. et Sp. Orch. 179; Orch. Seel. 25, ic.; Sert. Orch. Frontisp. n. 8; et Fol. Orch. 1853.*—Sepala libera, æqualia, patentia. Petala sepalis multo minora, lato-ovata. Labellum ad basin columnæ sessile, erectum, sepalis parum brevius; lobi laterales prope basin angustam breves, auriculiformes, obtusi, medius crassiusculus, oblongus, concavus, marginibus subrecurvis. Columna brevissima, lata, exalata, apoda; clinandrium breve. Anthera intra clinandrium sessilis, suberecta, mox a rostello aversa, loculis distinctis globosis sursum in valvas 2 persistentes dehiscentibus; pollinia 4, in quoque loculo 2, cerea, ovoideo-compressiuscula, libera v. demum visco parco coherentia.—Herba epiphytica, breviter reptans, caulibus brevissimis novellis plurivaginatiss, mox in pseudobulbum 1-phyllum carnosum incrassatis. Folium coriaceum, tenuiter multivenium. Scapi laterales, elongati, aphylli, ima basi vaginati. Flores parvi, in racemo terminali distichi, intra bractæas distichas scariosas v. subcoriaceas concavas sessiles, iisque fere occulti.

Species 1, Himalaica et Barmanica.

Genus antherarum indole nulli nisi *Microstylis* accedere videtur. Habitus potius *Bulbophylli*, quod olim a Lindleyo cum *Ione* (*Bulbophylli* specie) associatum, nec bene ab hoc genere longe separandum ut proposuit Benth. in *Journ. Linn. Soc. xviii. 294.*

26. *Cirrhopetalum*, *Lindl. Bot. Reg. sub t. 832; Gen. et Sp. Orch. 58.* (Zygoglossum, *Reinv. in Syll. Pl. Soc. Ratisb. ii. 4.* Hippoglossum, *Breda, Orch. Kuhl et Hass. cum ic.* Ehippium, *Blume, Bijdr. 309, t. 65.*)—Sepalum posticum liberum, breve, lateralia multo longiora angusta v. acuminata, interdum longe caudata, basi parum dilatata, columnæ pedi adnata, parallele patentia v. dependentia, interdum alte coherentia. Petala sepalis lateralibus multo breviora, sæpius postico subsimilia, ovata v. lanceolata, integra v. eleganter ciliato-serrata. Labellum basi contractum, cum pede columnæ articulatam v. mobile, in pedem incumbens, superne recurvum, integrum v. ad basin laminæ utrinque auriculatum. Columna erecta, brevis, basi in pedem producta, superne 2-alata, alis utrinque in dentem v. brachium erectum productis; clinandrium postice truncatum v. in dentem brevem productum. Anthera terminalis, opercularis, incumbens, depressohemisphærica, inappendiculata, decidua; pollinia cerea, ad normam 4, per paria in loculos segregata, sæpius tamen cujusve paris plus minus connata ita ut duo tantum in anthera appareant, inappendiculata. Capsula ovata v. oblonga, nunc fere fusiformis.—Herbæ caule seu rhizomate repente radicante, habitu *Bulbophylli*. Pseudobulbi ad axillas vaginarum scariosarum apice 1-foliati. Scapi floriferi ad latera pseudobulborum aphylli, ∞-vaginati. Flores sæpe speciosi, racemo in umbellam contracto, circa apicem scapi penduli, rarius pedicellis abbreviatis subcapitati v. pedicellis dissitis laxius racemosi.

Species ad 30, pro maxima parte Indiæ Orientalis v. Archipelagi Malayani incolæ, cum una Mascarensi altera Chinensi, tertia parum anomala Australiana. *Thou. Orch. Ilees Afr. t. 98* (*Bulbophyllum*). *Wall. Pl. As. Rar. t. 67.* *Griff. Ic. Pl. As. t. 298, 299.* *Wight Ic. t. 1652 ad 1658.* *A. Rich. in Ann. Nat. Hist. ser. 2, xv. t. 7* (*Bulbophyllum*). *Bot. Mag. t. 4391, 4418, 4422, 4753, 4977, 4996.* *Bot. Reg. 1842, t. 12, 1843, t. 4<sup>n</sup>*

Genus certe *Bulbophyllo* valde affine, cui reducitur a Blumeo et a Reichb. f. in Walp. Ann. vi. 259, Otia Hamb. 49, in Trans. Linn. Soc. xxx. 153, in Bot. Zeit. 1863, 237, et in Flora, 1872, 275, 278; passim tamen ab hoc auctore in Gard. Chron. retinetur, et quoad species fere omnes naturalissimum est, et tam inflorescentia quam perianthio facile dignoscitur. *C. Wallichii*, Lindl. (*C. refractum*, Zoll.), tamen *Bulbophyllo* accedit racemo elongato, sed sepala lateralialia elongata parallele dependentia omnino *Cirrhopetali*, sepalo postico petalis subsimili. Species Australiana sola, *Cirrhopetalum* v. *Bulbophyllum Elise*, F. Muell. Fragm. Phyt. Austral. vi. 120, t. 57, racemo adhuc laxiore sepalo postico petalis conspicue longiore in Fl. Austral. sub *Bulbophyllo* recensita, revera intermedia videtur.

BULBOPHYLLOPSIS, Reichb. f. in Bot. Zeit. 1852, 933, est ex auctore in Walp. Ann. vi. 243, *C. maculosum*, Lindl., species vera *Cirrhopetali* et ut videtur eadem ac *C. bootanense*, Griff. Notul. iii. 296; Ic. Pl. Asiat. t. 299.

27. **Megaclinium**, Lindl. Bot. Reg. t. 989; Gen. et Sp. Orch. 47; et in Journ. Linn. Soc. vi. 128.—Sepalum posticum liberum, patens, lateralialia minora, acuminata, basi lata columnæ basi v. pedi adnata. Petala minora, angusta. Labellum cum pede columnæ articulatam, mobile, basi inflexum, superne recurvo-patens, integrum v. supra medium margine denticulatum. Columna brevis, utrinque alato-dilatata, basi in pedem brevem nunc brevissimum producta, vertice in clinandrium antice 2-angulatum expansa. Anthera terminalis, opercularis, incumbens, 2-locularis; pollinia 4, cerea, per paria plus minus connata, paribus interdum dorso breviter connatis, inappendiculata. Capsula . . .—Herbæ epiphytica; rhizomate seu caule repente; pseudobulbi sæpius 4-goni, apice 2-foliati (rarius 1-foliati?). Scapi e rhizomate ad latera pseudobulborum aphylli, plurivaginati. Racemus terminalis, rhachi insigniter dilatato-compressa, flores in utraque facie secus costam centram v. parum excentricam 1-seriati, breviter pedicellati, parvi. Bractee sub floribus parvæ, sæpe latæ, in rhachi transversæ. Sepalum posticum variat nunc lateralibus vix dimidio majus breviter acuminatum marginibus leviter involutis, nunc lateralibus 2-3-plo longius oblongum, obtusum, marginibus apicem versus incrassatis coloratis recurvis labellum simulans.

Species ad 9, Africæ tropicæ et australis subtropicæ incolæ. Reichb. f. in Walp. Ann. vi. 257 (*Bulbophylli* sect.). Bot. Mag. t. 4028, 5936. Bot. Reg. t. 1959.

Genus *Bulbophyllo* proxime affine, sed inflorescentia singulari bene definitum videtur.

28. **Trias**, Lindl. Gen. et Sp. Orch. 60.—Sepala subæqualia, patentia; lateralialia basi pedi columnæ adnata. Petala parva, oblonga v. linearia. Labellum ad apicem pedis columnæ mobile, inflexum, incumbens, apice subpatens, angustum, crassiusculum. Columna brevis, lata, antice concava, alis apice antice angulatis v. in dentem brevem productis; clinandrium breve. Anthera erecta, caducissima, loculis bene distinctis, connectivo in appendicem oblongam truncatamque v. teretem loculis 2-3-plo longiorem producto; pollinia 4, cerea, per paria in loculis segregata, cujusve paris subcoherentia; inappendiculata. Capsula . . .—Herbæ humiles, caespitosæ v. caule seu rhizomate repente radicante. Pseudobulbi parvuli, subglobosi, apice 1-foliati. Scapi laterales, tenues, aphylli, 1-flori, præter vaginas ad basin 1-2 parvas ebracteati.

Species 3, quarum 2 in vicinibus Moulmeyn crescentes: Wall. Pl. As. Rar. t. 70; Reichb. f. in Trans. Linn. Soc. xxx. 150 (*Bulbophyllum*); tertia, adhuc inedita, e Peninsula Indiæ Orientalis primo aspectu Moulmeyniansis simillima sed antherarum appendice tereti subdorsali nec complanata truncataque facile distincta.

Genus *Bulbophyllo* valde affine et habitu *B. gracili*, Lindl., aliisque paucis speciebus e Java quodammodo accedit, vix tamen ad *Bulbophyllum* ipsum reducendum ut proposuit Blume, qui tamen characterem ab anthera sumptum haud memorat.

29. **Osyricera**, Blume, Bijdr. 307, t. 58.—Sepala patentia, subæquilonga, lateralialia usque ad apicem coalita. Petala multo minora. Labellum in pede columnæ articulatam, sepalis brevius, juxta basin ventricosum fere saccatum, indivisum, lamina lateribus reflexis valde convexa, utrinque undique glandulosa. Columna erecta, semiteres, apice alis seu brachiis membranaceis 2-3-fidis instructa, basi in pedem brevem producta; clinandrium

breve. Anthera terminalis, opercularis, incumbens, convexa, 2-locularis, antice lamina suborbiculari glandulosa appendiculata; pollinia 2, cerea, in quoque loculo solitaria, ovoidea, inappendiculata, libera.—Herba epiphytica, pseudobulbis 1-foliatis. Folium lineari-lanceolatum. Scapi e rhizomate erecti, spica terminali simplici, floribus sessilibus purpurascensibus. (*Char. ex Blume ic. et descr.*)

Species 1, Javensis, a nobis non visa, nec ab auctoribus recentioribus descripta. *Lindl. Gen. et Sp. Orch.* 13.

Genus verisimiliter *Bulbophyllo* affine, labelli forma et antheræ appendicula insigne.

30. *Drymoda*, *Lindl. Sert. Orch.* t. 8 C.—Sepala patentia, posticum liberum ovatum, lateralia majora ad apicem pedis columnæ a postico intervallo longo separata. Petala parva, lata. Labellum ad apicem pedis columnæ (articulatum?), ungue longo incurvo demum suberecto, lamina patente ovata 3-loba, disco convexo piloso. Columna brevissima, antice alis seu brachiis 2 longis falcatis parallele horizontalibus instructa, basi in pedem longum producta; clinandrium breve. Anthera terminalis, opercularis, incumbens, valde convexa, 2-locularis; pollinia 4, cerea, in quoque loculo 2, ovoidea, compressiuscula, inæqualia, apice massæ globosæ concolori affixa. Capsula parva, obovoidea, erostris.—Herba epiphytica, pusilla, pseudobulbis confertis depressis orbicularibus medio umbonatis folium parvum caducissimum ferentibus. Scapi sub pseudobulbo oriundi, erecti, filiformes, 1-flori, basi squamellis paucis minimis instructi. Flos parvus. Bractea minuta.

Species 1, Peninsulæ Malayanae incola. *Bot. Mag. t.* 5904. Stirps primo aspectu *Eriam extinctoriam*, Oliv., in mentem revocat, sed scapus sub pseudobulbo apice cicatrice folii delapsi notato affixus, nec in medio pseudobulbo, et characteres plerique *Bulbophylli*, a quo differt sepalis lateralibus ut in *Monomeria* ad apicem pedis longi columnæ affixis, et polliniorum appendice globosa de cujus natura incerti sumus; in flore unico examinato imperfecta erat, ex icone Griffithiana in herb. Lindl. polliniis concolor et cum iis continua est, sed ex anthera exserta.

31. *Monomeria*, *Lindl. Gen. et Sp. Orch.* 61.—Sepalum posticum liberum, erectum, concavo-complicatum, acutum; lateralia multo majora, plana, pedi columnæ adnata, intervallo longo a postico separata. Petala brevissima, lata, fimbriata, secus pedem columnæ sæpius irregulariter decurrentia. Labellum ad apicem pedis columnæ articulatum, carnosulum, complicatum, basi incumbens; lobi laterales breves, medius erecto-patens, indivisus, facie lamellatus. Columna brevis, erecta, lata, anguste 2-alata, basi in pedem longum producta; clinandrium breve, dente postico duobusque anticis brevibus. Anthera terminalis, opercularis, incumbens, convexa, 1-locularis; pollinia 4, cerea, in massam globosam cohærentia v. concreta, inappendiculata. Capsula . . .—Herbæ rhizomate repente duro. Pseudobulbi 1-foliati, carnosi, costati, pyramidati v. oblongi. Folium longum, planum, coriaceum, rigidum, basi complicatum in petiolum contractum. Scapi e rhizomate elati, aphylli, simplices, vaginis paucis dissitis. Racemus laxus, floribus mediocribus longiuscule pedicellatis. Bractæ pedicellis breviores.

Species 2, inter se valde affines, altera Nepalensis, altera Burmanica. *Reichb. f. in Trans. Linn. Soc.* xxx. 143, t. 28.

Genus *Bulbophyllo* quam maxime affine nec ad *Vandas* transferendum. Pollinia in floribus 2 speciminum Wallichianorum invenimus qualia a Lindleyo descripta et in herb. Lindl. delineata. Accuratissimus tamen Parish ex specimine unico Burmanico pollinarii stipitem et glandulam delineavit, sed forte error quidam hic latet, nam polliniorum in stipite insertionem ab omnibus *Vandis* nobis notis discrepat.

32. *Dendrochilum*, *Blume, Bijdr.* 398, t. 52, quoad sect. 1.—Sepala subæqualia, patentia, posticum liberum, lateralia basi vix dilatata, columnæ pedi brevi adnata. Petala sepalis paullo minor, patentia. Labellum cum pede brevi columnæ articulatum, subsessile, breviter incumbens, dein erecto-patens, oblongum. Columna brevis, utroque latere dente seu brachio erecto instructa, basi in pedem brevem producta; clinandrium concavum v.

fere cucullatum. Anthera intra clinandrium opercularis, incumbens, convexa, 2-locularis; pollinia 4, cerea, ovoidea, distincta, inappendiculata, apicibus vix acutiusculis visco parvisimo coherentibus. Capsula . . .—Herbæ epiphytica, caule seu caudice reptante ramoso squamis scariosis vaginato, pseudobulbis ad axillas vaginarum angustis 1-foliatis. Folium angustum, coriaceum, planum. Scapi ad latera pseudobulborum e caudice oriundi, basi imbricato-vaginati, aphylli, tenues, simplices. Flores in racemo gracili, parvi, brevissime pedicellati. Bracteæ parvæ.

Species 2 v. 3, Malaccæ et Archipelagi Malayani incolæ. *Lindl. Gen. et Sp. Orch.* 34. *Reichb. f. in Walp. Ann.* vi. 927. Genus ad sectionem primam auctorum limitatum nobis bene distinctum videtur. Racemi tenues et flores parvi primo aspectu iis *Liparidis* subsimiles, sed columna in pedem producta et pollinia paullo diversa; characteres vegetationis omnino *Bulbophylli* nec *Liparitarum*. Sectio secunda auctorum nobis genus proprium format *Platyclinis*, supra n. 15.

33. *Panisea*, *Lindl. Gen. et Sp. Orch.* 44 (*Cælogynis* sect.); *Fol. Orch.* 1854 pro parte (*Androgyne*, *Griff. Notul.* iii. 279).—Sepala et petala subæqualia, libera, angusta, erecta v. subpatentia. Labellum cum basi columnæ continuum, sepalis subæquilongum, angustum, integrum, basi in unguem longum sigmoideo-flexuosum rugosulum contractum. Columna longiuscula, erecta, superne late 2-alata, basi vix in pedem brevem producta; clinandrium parvulum, integrum v. leviter sinuatum. Anthera subterminalis, opercularis, distincte 2-locularis; pollinia 4, ovoidea, cerea, inappendiculata, libera v. visco parco coherentia. Capsula ovoidea v. anguste oblonga.—Herba epiphytica, dense caespitosa. Pseudobulbi angusti, in rhizomate conferti, apice 1–2-phylli. Racemi tenues, laxi, sub pseudobulbo laterales, floribus paucis mediocribus v. parvulis breviter pedicellatis. Bracteæ persistentes, pedicello sæpe longiores.

Species 1 v. 2, Himalaicæ, habitu *Bulbophyllo reptanti*, *Lindl.*, accedentes.

Genus a *P. parviflora* et *P. reflexa*, *Lindl.*, forte speciei unius varietatibus conditum, tam inflorescentia quam floribus potius *Bulbophyllo* quam *Cælogyni* affine videtur. *P. apiculata* et *P. uniflora* a *Lindley* serius additæ ob cristarum labelli deficientiam, quoad formam et situm labelli omnino *Cælogyni* conveniunt, et prior jam rite a *Reichenbachio* ad hoc genus revocata. Hic auctor tamen infelice *C. bilamellatam*, *Lindl.*, ad *Paniseam* transfert, nam labellum omnino *C. proliferæ* basi breviter saccatum, nec flexuosum, uti ex specimine margine læsione eroso in herb. *Lindl.* delineatur.

34. *Acrochaene*, *Lindl. Fol. Orch.* 1853.—Sepala æquilonga, inter se libera, patentia; lateralalia basi lata obliqua pedi columnæ adnata. Petala sepalis paullo breviora, angustiora. Labellum cum pede columnæ articulatam eique basi incumbens, dein erectum, abrupte supra unguem brevem dilatatum; lobi laterales induplicati, apice faciei labelli adnati, medius lanceolatus. Columna brevissima, crassiuscula, basi in pedem longiusculum producta; clinandrii dentes breves. Anthera terminalis, opercularis, incumbens, transverse oblonga, convexa, 1-locularis; pollinia 2, cerea, globosa, appendicula granuloso-viscosa breviter laminiformi demum 2-partita connexa. Capsula . . .—Herba epiphytica, pseudobulbis 1-foliatis ovoideis v. globosis. Folium longe petiolatum, oblongum, coriaceum, striatum. Scapi laterales, erecti, aphylli, basi 2–3-vaginati. Racemus simplex, longiusculus, latus, floribus mediocribus breviter pedicellatis. Bracteæ lanceolatae, membranacæ, pedicello longiores, persistentes.

Species 1, *Sikkimensis*.

35. *Chrysoglossum*, *Blume, Bijdr.* 337, t. 7; *Orch. Archip. Ind.* 161, t. 46, 47.—Sepala subæquilonga, posticum liberum, lateralalia basi paullo latiora, cum pede columnæ in mentum breve v. saccatum connata. Petala sepalo postico subsimilia. Labellum basi cum pede columnæ continuum et mento sepalorum intus adnatum, dein erectum, lamina explanata lobis lateralibus ovatis, medio majore; discus lamellatus. Columna erecta v. arcuata, semiteres, medio v. altius 2-auriculata v. 2-cornuta, v. præter angulos clinandrii nuda, basi in pedem brevem producta; clinandrium postice prominens, antice 2-angulatum v. breviter 2-dentatum. Anthera terminalis, opercularis, incumbens, convexa, discrete

2-locularis, ultra loculos breviter producta; pollinia 2, cerea, in quoque loculo solitaria, collateralia, globosa v. a latere interiore compressa, inappendiculata, libera. Capsula longiuscula, erostris, basi attenuata.—Herbæ terrestres v. epiphyticæ. Folia in rhizomate repente solitaria, majuscula, plicato-venosa, petiolo longiusculo basi haud raro in pseudobulbum incrassato. Scapi e rhizomate erecti, aphylli, plurivaginati, elati. Flores mediores, in racemo laxo breviter pedicellati. Bracteæ ovario breviores.

Species 3, Archipelagi Malayani et insularum maris Pacifici incolæ, cum quarta nuper a C. B. Clarke in Sikkim detecta. *Lindl. Gen. et Sp. Orch.* 13. *De Vr. Illustr. Orch. Reichb. f. in Seem. Fl. Vit.* 304. Characteres præcipue ex descr. et ic. optimis Blumei sumpsimus, flores in solo *C. vesicato*, Reichb. f. ex ins. Fiji, et in *C. (Diglyphosa) latifolio*, Blume, examinavimus, cui columnæ auriculæ seu anguli parum prominulæ nec corniformes ut in speciebus Blumeanis, quo solo caractere distinguitur *DIGLYPHOSA*, *Bl. Bijdr.* 336, t. 60; *Reichb. f. Xen. Orch.* t. 80 (*DIGLYPHIS*, *Bl. Prof. Fl. Jav.*; *Orch. Archip. Ind.* 163, t. 55) quam ad *Chrysoglossi* speciem reducimus. Genus cæterum a *Cyrtopodio* vix nisi pollinario distinguendum.

36. *Collabium*, Blume, *Bijdr.* 357.—Sepala subæquilonga, posticum liberum, lateralia basi cum pede columnæ in mentum longum calcariforme connata. Petala sepalo postico subsimilia. Labellum basi unguiculatum, in pedem columnæ incumbens, superne erectum, lobis lateralibus parvis, medio lato patente margine lacero-fimbriato. Columna erecta, incurva, vix alata, basi in pedem longum reflexum producta; clinandrium erectum, obliquum, edentulum. Anthera terminalis, opercularis, incumbens, distincte 2-locularis; pollinia 2, cerea, in quoque loculo solitaria, late ovata, compressiuscula, inappendiculata, libera. Capsula . . .—Herbæ terrestres, rhizomate repente annulato. Folia secus rhizoma solitaria, ampla, plicato-venosa, petiolo longo basi vagina longa scariosa incluso et demum in pseudobulbum incrassato. Scapi e rhizomate erecti, elati, simplices, aphylli (an basi vaginati?). Racemus terminalis, elongatus, floribundus; flores quam in *Tainia* minores et longius pedicellati, secus rhachin sparsi. Bracteæ membranaceæ, angustæ, reflexæ.

Species 2, altera Javanica, *Lindl. Gen. et Sp. Orch.* 96, *Miq. Choix*, t. 26; altera Borneensis, *Reichb. f. in Gard. Chron.* 1881, i. 462. Fili elastici polliniorum (caudicula, *Lindl.*) proveniunt verisimiliter e visco in *Dendrobieis* sæpe e rostello in antheram dehiscentem intruso et facile in fila elastica extenso, ab appendicula *Epidendrearum* et stipite *Vandearum* valde diversa. De identitate speciei Javanicæ cum typo Blumeano cfr. *Miq. l. c.*; speciem Borneensem non vidimus. Genus cæterum vix a *Chrysoglossa* differt mento longo calcariformi. Reichenbach in *Gard. Chron.* l. c. *Chrysoglossa* omnia ad *Collabium* refert.

37. *Cœlia*, *Lindl. Gen. et Sp. Orch.* 36, *char. emend. in Bot. Reg.* 1842, t. 36. (*Bothriochilus*, *Lemaire, Illustr. Hort.* iii. *Misc.* 30.)—Sepala subæquilonga, a basi erecta, superne patentia, posticum liberum concavum, lateralia latiora, basi cum pede columnæ in mentum breve v. elongatum connata. Petala sepalo postico subsimilia. Labellum ad apicem pedis columnæ articulatam, angustum, basi incumbens, superne patens, sepala non superans, indivisum, nunc in unguem flexuosum contractum, nunc a basi latiore lanceolatum. Columna brevis, latiuscula, acute marginata at vix alata, basi in pedem brevissimum v. elongatum producta; clinandrium truncatum v. margine breviter dilatato sinuatum. Anthera terminalis, opercularis, incumbens, semiglobosa, perfecte 2-locularis; pollinia 8, cerea, in quoque loculo 4, ovoidea, apicibus visco parco coherentia. Capsula brevis v. oblonga, erostris, costis (in *C. Baueri*) in alas dilatatis, quarum 3 valde prominentes.—Herbæ epiphyticæ, caulibus plurifoliatis basi mox in pseudobulbum carnosum incrassatis. Folia elongata, angusta, plicato-venosa. Scapi ad basin pseudobulborum sæpius breves, simplices, basi vaginis imbricatis subspathaceis stipati. Flores mediores, dense racemosi, breviter pedicellati, rarius pauci majoresque. Bracteæ membranaceæ v. paleaceæ, angustæ, flores sæpe superantes.

Species 4 v. 5, Indiæ occidentalis, Americæ centralis v. Mexici incolæ. *Reichb. f. in Walp. Ann.* vi. 218. *Sm. Ic. Pict.* t. 14 (*Epidendrum*). *Bauer, Illustr. Gen.* t. 3 (quoad antheram et pollinia

erronea). *Lemaire, Jard. Fleur. t. 325 (Bifrenaria). Bot. Mag. t. 4712 (ic. in Fl. des Serres, t. 900 repetita), 6628.*

Genus vix ac ne vix ab *Eria* distinguendum patria, habitu et (saltem quoad speciem typicam) capsula.

38. *Eria*, *Lindl. in Bot. Reg. t. 904. (Dendrolirium, Blume, Bijdr. 343, t. 69. Pinalia, Lindl. Orch. Scel. 21, cum ic. Octomeria, Don, Prod. Fl. Nepal. 31, non Br.)*.—Sepala subæqualia, posticum liberum v. basi breviter rarius alte cum cæteris connatum, lateralia sæpius latiora basi pedi columnæ adnata, mentum breve v. rarius calcariforme formantia, superne libera v. rarius altius connata. Peta'la sepalo postico subconformia. Labellum ad apicem pedis columnæ basi contractum, rarius articulatam, incumbens, superne patens, integrum v. utrinque lobo laterali auctum. Columna brevis, lata, antice cava sæpeque anguste 2-alata, basi in pedem producta; clinandrium margine integrum v. vix antice 2-angulatum et postice 1-dentatum. Anthera terminalis, opercularis, incumbens, interdum valde convexa v. obtuse conica, loculis 2 distinctis imperfecte 4-locellatis; pollinia 8, cerea, in quoque loculo 4, pyriformia v. late ovoidea, parum compressa, acutiuscula v. acuminata, in fasciculos 2 visco parco coherentia. Capsula oblonga v. linearis, erostris.—Herbæ epiphyticæ v. rarius terrestres, caulibus secus rhizoma sæpius confertis pseudobulbosis, v. longiusculis sæpe carnosis 2-∞-foliatis, v. rarius 1-foliatis. Pedunculi v. scapi pseudo-terminales v. laterales, nec directe rhizomati affixi, simplices, racemiferi v. interdum 1-flori. Flores parvi mediocres v. rarius majusculi, secus rhachin racemi sparsi v. rarissime distichi. Bractæ parvæ v. angustæ.

Species ad 80, Indiæ orientalis, Chinæ australis et Archipelagi Malayani incolæ. *Lindl. Gen. et Sp. Orch. 65, et in Journ. Linn. Soc. iii. 45 (excl. Trichosmate). Reichb. f. in Walp. Ann. vi. 266; in Bonpl. 1857, 54; Otia Hamb. 54; in Bot. Zeit. 1864, 415; in Flora, 1872, 275; in Linnæa xli. 86; et in Trans. Linn. Soc. xxx. 147 (excl. spp. paucis).*

Genus habitu polymorphum, in sectiones sequentes a nonnullis pro generibus propriis habitis dividitur:—

1. *Porpax*. Plantæ nanæ, pseudobulbis depresso-globosis v. deplanatis demum rete fibroso cæctis, foliis 2 orbiculatis ovatisve mox deliquescentibus coronatis. Flores inter folia solitarii v. 2-3-ni, subsessiles v. brevissime pedicellati, mediocres. Species 7, Peninsulæ Indiæ v. Burmæ Britannicæ incolæ. *Porpax, Lindl. Bot. Reg. 1845, Misc. 62. Aggeianthus et Lichenora, Wight, Ic. v. 18, t. 1737, 1738. Reichenbach f. in Bot. Zeit. 1862, 214, et in Trans. Linn. Soc. xxx. 148, species 2 typicas, E. reticulatam et E. Jerdonianam, ad Cryptochilum refert ob sepala lateralia fere ad apicem inter se et ad medium cum postico coalita, sed nobis tam habitu quam floribus a Cryptochilum veris longe differre videntur, et in E. lichenora, Lindl., E. ustulata, Reichb. f., et E. Parishii, Lindl., sepala lateralia inter se ultra medium et basi cum postico coalita sunt.*

2. *Conchidium*. Herbæ nanæ, pseudobulbis foliisque *Porpaxis*, sed pedunculi tennes, longiusculi, 1-flori v. rarius 2-flori, floribus quam in *Porpace* sæpius multo minoribus. Pedunculus post folia delapsus in centro pseudobulbi terminalis apparet sed revera ad cicatricem foliorum v. gemmæ terminalis lateralis est. Species 5-6, Peninsulæ Indiæ, Zeylanicæ, Burmæ Britannicæ et Chinæ australis incolæ. *Wight, Ic. t. 1637 et 1734 (Phreatia). Bot. Mag. t. 5910 (quoad pollinarium erronea). Conchidium, Griff. Notul. iii. 321, t. 310.*

*E. pleurothallis*, Par. et Reichb. f. in Trans. Linn. Soc. xxx. 147, t. 30, e Burma, pedunculo tenui, flore unico parvo, *E. (Conchidio) pusilla*, Lindl., subaffinis, differt pedunculo e basi imbricato-vaginato in pseudobulbum non incrassato.

3. *Bryobium*. Herbæ parvæ, pseudobulbis *Conchidii* v. interdum ovoideis. Folia in caule brevi 2-3, v. pedunculus per anthesin aphyllus tenuis. Flores parvi nunc minimi, in racemo plures, breviter pedicellati. Species ad 8, Indiæ Orientalis et Archipelagi Malayani incolæ. *Wight, Ic. t. 1642 (Dendrobium). Bryobium, Lindl. Introd. Nat. Syst. ed. 2, 446; Bot. Reg. 1838, Misc. 79 (e Java). Alvisia, Lindl. Fol. Orch. 1859 (e Zeylanica).*

In speciebus typicis tam *Bryobii* quam *Alvisiæ* pseudobulbi ovoidei arcte conferti rhizoma moniliforme simulant, flores minimi, sepalis latiusculis. In plerisque speciebus flores paullo majores sepalis angustis acuminatis fere *Dendrobiorum Stachyobiorum*, et mediante *E. Dalzellii*, Lindl., *Hymenereis* accedunt.

4. *Mycaranthus*. Caules basi vaginati, parum incrassati v. demum anguste pseudobulbosi, apice 2-foliati. Racemi e nodis summis 1-2, stricti, floribus numerosis parvis secundis breviter v. brevissime pedicellatis albo-tomentosis. Sepala breviter, lata. Species 2 v. 3, Indicæ. *Wight, Ic. t. 1733. Griff. Ic. Pl. As. t. 301. Lindl. Collect. Bot. t. 41 B. MYCARANTHUS, Bl. Bijdr. 352, t. 57.*

5. *Eriura*, Lindl. Caules quam in *Mycarantho* elatiores,  $\infty$ -foliati, racemis e nodis summis sæpe pluribus, ceterum uti flores *Mycaranthi*. Species 4-5, Indicæ. *Wall. Pl. As. Rar. t. 36.*

6. *Hymeneria*, Lindl. Caules seu rami floriferi e rhizomate oriundi, foliati, per anthesin laud incrassati, post anthesin uti caules steriles sæpius in pseudobulbos incrassati. Racemi pseudo-terminales solitarii, v. in axillis superioribus pauci, floribus mediocribus v. parvulis. *Griff. Ic. Pl. As. t. 300. Wight, Ic. t. 1634, 1635. Bot. Mag. t. 5415. Huc potius quam ad Dendrolirion pertinent E. scabrilongus et E. vittata, Lindl.*

7. *Urostachya*, Lindl. Caules floriferi validi, sæpe incrassati, interdum longe pseudobulbiformes, apice foliati. Racemi laterales pauci v. plurimi, floribus sæpius parvulis, rarius majusculis. *A. Rich. in Ann. Sc. Nat. ser. 2, xv. t. 9. Bot. Mag. t. 4163, 5391. Bot. Reg. 1841, t. 62; 1844, t. 29; 1847, t. 63. Reichb. f. Xen. Orch. t. 168.*

8. *Dendrolirion*. Scapi floriferi vaginati, a basi v. prope basin pseudobulbi oriundi, pseudobulbis oblongis v. elongatis 1-v. pauci-foliatis. Racemi laxi, pauci- v. multiflori v. rarius dense floribundi. Flores lanati v. glabri, parvi v. majusculi.—*Hook. Exot. Fl. t. 124 (Dendrobium). Bot. Reg. t. 904; 1841, t. 42.*

Sectio quodammodo polymorpha series plures includit; in speciebus typicis flores majusculi lanati. *Hook. Exot. Fl. t. 124 (Dendrobium). Bot. Mag. t. 5391. Bot. Reg. 1841, t. 42. Reichb. f. Xen. Orch. t. 136. In E. sicaria, Lindl., affinisque folia sæpe subteretia et flores parvi lanati. Griff. Ic. Pl. As. t. 300, f. 2. In E. acridostachya, Reichb. f. ex Lindl. in Journ. Linn. Soc. iii. 48, vaginæ scapi floriferi crasse, distichæ, superiores sæpe in folium breve productæ; flores in racemo denso parvi, breviter pedicellati, mento longo calcariformi. In E. rosea, Lindl. Bot. Reg. t. 978, o China et in affinis Indicis (XIPHOSEUM, *Griff. Itin. Not. 78; Ic. Pl. As. t. 316*) vaginæ superiores pariter interdum in folia productæ, sed flores majusculi glabri in racemo laxo sæpe pauci. In E. stellata, Lindl. Bot. Reg. t. 904, Bot. Mag. t. 3605, speciebusque affinis inclusa OCTOMERIA vaginata, Breda, Orch. Kuhl et Hass. cum ic., racemus elongatus latus floribundus. E. barbata, Reichb. f. in Saund. Ref. Bot. t. 114, Griff. Ic. Pl. As. t. 302 (Eriodea), prius a Lindley ad Tainiam relata, videtur species vera Eriæ, E. stellatæ subaffinis, sed ab omnibus distincta racemo laxe ramoso.*

9. *Trichotosia*, Lindl. Caules robusti, foliati, vix ima basi incrassati nec pseudobulbosi, sæpe pilis patentibus hispidi. Racemi axillares, sæpius folio breviores, nunc brevissimi, pauciflori. Flores breviter pedicellati, angusti, villosi v. rarius glabri. Columna interdum quam in ceteris sectionibus longior. Pollinia sæpe latiuscula. *Griff. Ic. Pl. As. t. 315. Bot. Mag. t. 5807. Bot. Reg. 1839, t. 35; 1845, t. 2. TRICHOTOSIA, Blume, Bijdr. 342, t. 11.*

10. *Cylindrolobus*, Lindl. Caules foliati, glabri, tenues v. superne carnosocrassati. Racemi brevissimi, laterales v. subterminales, floribus 2-3 majusculis longe pedicellatis glabris. Sectio a *Trichotosia* imprimis glabritie, ab *Urostachyde* floribus paucis speciosis differt, et hanc sectionem cum *Hymeneriis* brachystachyis connectit. *Wight, Ic. t. 1636. CERATUM, Blume, Bijdr. 341, t. 46. CYLINDROLOBUS, Blume, Præf. Fl. Jav. 6.*

39. *Phreatia*, Lindl. Gen. et Sp. Orch. 63.—Sepala libera, subaxqualia, conniventia v. patentia, lateraliter postico latiora, basi pedi columnæ adnatæ mentum breve formantia. Petala sepalis minora. Labellum basi contractum, cum pede columnæ articulum, incumbens, superne patens, latiusculum, lobis lateralibus parum prominentibus v. 0. Columna brevissima, basi in pedem sæpius brevem producta; clinandrium latiusculum, membranaceum, integrum v. sinuatum. Anthera terminalis, opercularis, incumbens, membranacea, 2-locularis, loculis imperfecte 4-locellatis; pollinia 8, ceræa, in quoque loculo 4, obovoidea, apicibus visco copioso v. parco connexa. Capsula globosa ovoidea v. oblonga, crostris, sæpius minima.—Herbæ brevicaulis, habitu *Oreaniæ*. Folia cum vaginis compressis distichis articulata, e basi complicata plana v. subteretia et canaliculata. Scapi v. pedunculi e rhizomate aphylli, v. axillares, simplices. Flores minimi, in racemo sæpius numerosi, brevissime pedicellati. Bractee sæpius minime.

Species ad 10, Indiæ orientalis, Archipelagi Malayani, Australiæ et insularum maris Pacifici incolæ. *Lindl. in Journ. Linn. Soc.* iii. 61. *Benth. Fl. Austral.* vi. 289. *Reichb. f. in Bonplandia*, 1857, 54 (*Eriæ* sect. excl. *E. retusa*); *Otia Hamb.* 54; in *Linnaea* xli. 87; et in *Trans. Linn. Soc.* xxx. 148 (*Eria*).

Genus certe *Eriæ* valde affine cui adjunxit Reichenbach f., sed habitu, characteribus vegetationis, floribus minimis, perianthio sæpius minus irregulari satis distinctum videtur. Rostellum 2-dentatum a Lindleyo indicatum non in omnibus speciebus apparet. In sectiones 2 sequentes dividitur:

1. *Euphreatia*, scapis e rhizomate juxta basin caulis foliati oriundis. Species typica, *P. elegans*, Lindl., ex India orientali, cum 2 v. 3 affinibus ex Archipelago Malayano.

2. *Plexaure*, pedunculis in caule foliato axillaribus v. foliis delapsis lateralibus. Species plures, Archipelagi Malayani, Australiæ et ins. maris Pacifici incolæ. *A. Rich. Sert. Astrol.* t. 2, 3 (*Oberonia*). *Reichb. f. Xen. Orch.* t. 130 (*Eria*). *PLEXAURE*, *Endl. Prod. Fl. Norf.* 30.

*Oberonia Lindleyi*, Brongn. in Duperr. Voy. t. 40 A, a Reichenbachio ad *Adenoncum virentem*, Bl., refertur, sed characteres minime conveniunt. Ex icone simillima est *Phreatia limenophylaci*; pollinia depicta 2, stipitibus lateralibus rostello seu clinandrii margini affixa, evidenter erronea.

40. *Pachystoma*, Blume, *Bijdr.* 376. (*Pachychilus*, Blume, *Fl. Jav. Præf.* 7; *Orch. Archip. Ind.* 27).—Sepala æquilonga, conniventia, lateralia nunc postico subsimilia pedi columnæ brevissimo adnata, nunc basi latiora cum pede columnæ magis evoluto mentum prominens formantia. Petala sepalo postico similia nisi paullo minora. Labellum pedi columnæ affixum eique basi adnatum, nunc pede brevissimo subsaccatum, nunc pedi longiori incumbens, dein erectum; lobi laterales oblongi, erecti, medius brevis, latus, retusus v. 2-fidus; discus medio laminis carnosulis instructus. Columna erecta, longiuscula, arcuata, subteres, basi in pedem brevissimum v. magis evolutum producta, superne clavata; clinandrium cavum, membranaceum, integrum v. sinuato-3-lobum. Anthera terminalis, opercularis, incumbens, distincte 2-ocularis, loculis plus minus perfecte 4-locellatis; pollinia 8, cerea, in quoque loculo 4, ovoidea, apice brevissime v. vix acuminata, libera v. visco parco subcoherentia. Capsula (in speciebus typicis) ovoidea v. obovoidea rarius oblonga, parvula, reflexa, costis acutiusculis parum prominentibus.—Herbæ terrestres, e rhizomate nodoso erectæ, sub anthesi (v. omnino?) aphyllæ, caule simplici, basi membranaceo-vaginato, pseudobulbo demum interdum 1-2-foliato. Racemus simplex, floribus mediocribus v. majusculis pendulis. Bractæ angustæ, membranacæ, fere hyalinæ.

Species ad 10, quarum una Africæ tropicæ, ceteræ Indiæ orientalis et Archipelagi Malayani incolæ. *Reichb. f. in Walp. Ann.* vi. 462.

Genus quale a Blumeo intelligitur in sectiones 2 dividitur forte melius pro generibus propriis restituendas:—

1. *Apaturia*. Herbæ (tanquam notæ) omnino aphyllæ. Rhizoma crassum, nodosum, scapo terminatum. Vaginæ et bractæ erectæ, angustæ, scariosæ v. tenuiter membranacæ. Flores sat numerosi, parvuli v. mediocres. Mentum sæpe parum prominens. Pollinia breviter acuminata. Species plures Indiæ et Archipelagi Malayani. *Blume, Orch. Archip. Ind.* t. 10, 11 (*Pachychilus*). *APATURIA*, *Lindl. Gen. et Sp. Orch.* 130. *Wight, Ic.* t. 1662.

2. *Ipsæa*. Scapi aphylli, ad basin pseudobulbi cormiformis apice 1-2-foliati. Folia plicato-venosa non semper floribus cœtantia. Flores in racemo perpauci, sæpe solitarii, majusculi, mento valde prominente. Pollinia sæpius longius acuminata, subcaudata. Species 2, quarum typica, e Zeylantia et Peninsula Indica: *IPSEÆ*, *Lindl. Gen. et Sp. Orch.* 124; *Wight, Ic.* t. 1663; *Bot. Mag.* t. 5701, a Blumeo *Orch. Archip. Ind.* 29, t. 22, 23 ad *Pachychilum* relata. Ei bene adjunctum videtur *Pachystoma Thomsonianum*, *Reichb. f.*; *Bot. Mag.* t. 6471, ex Africa tropica.

41. *Spathoglottis*, Blume, *Bijdr.* 400.—Sepala libera, subæqualia v. lateralia paullo latiora, patentia. Petala sepalis similia nisi latiora interdumque longiora. Labellum ad basin columnæ sessile, erectum, basi interdum saccatum; lobi laterales juxta basin erecti, parvuli v. majusculi, medius unguiculatus, ligulatus v. ovatus, ungue sæpe supra lobos laterales utrinque dente v. auricula aucto; discus ad basin lobi medii tuberculatus v. cristatus. Columna elongata, seumiteres, arcuata, superne subclavata et decurrenti-2-alata;

clinandrium breve, incurvum. Anthera opercularis, incumbens, convexa, perfecte v. imperfecte 2-locularis, ultra loculos sæpius producta, loculis vix locellatis; pollinia 8, in quoque loculo 4, cerea, acuminata v. in caudiculam producta, apice in fasciculos 2 leviter connexa. Capsula oblonga, erostris, erecta v. demum pedicello recurvo nutans, costis acute prominentibus.—Herbæ terrestres. Folia in caudice solitaria v. gemina, elongata, plicata v. prominenter nervosa, petiolis elongatis basi  $\infty$ -vaginatis et demum plus minus in pseudobulbum seu tuber incrassatis. Scapi floridi e caudice v. e basi pseudobulborum oriundi, basi  $\infty$ -vaginati, aphylli, simplices, nunc elongati floribundi, nunc tenuiores pauciflori, racemo laxo. Flores flavi v. violacei. Bracteæ nunc minimæ erectæ, nunc majores lanceolatæ deflexæ.

Species ad 10, Indiæ orientalis, Chinæ australis, Archipelagi Malayani, insularum maris Pacifici et Australiæ incolæ. *Lindl. Gen. et Sp. Orch.* 119. *Reichb. f. in Walp. Ann.* vi. 455; et in *Linnaea* xli. 85. *Griff. Ic. Pl. Asiat.* t. 311. In series 2 distribuendæ:—

1. *Elatiore*, pseudobulbis parum incrassatis, vaginarum reliquiis fibrosis sæpius obtectis, foliis amplis, racemo multifloro, bracteis conspicuis. Huc pertinent *Linodorum unguiculatum*, Labill. Sert. Austr. Calid. t. 25; *Bletia angustifolia*, Gaud. in Freyc. Voy. Bot. t. 32; *Spathoglottis plicata*, Blume; De Vriese, Orch. cum tab. 1; *S. tomentosa*, Lindl.; *S. Petri*, Bot. Mag. t. 6354; *S. Paulineæ*, F. Muell.; Benth. Fl. Austral. vi. 304; Fitzgerald. Austral. Orch. cum tab. 1; *S. Vicillardii* et *S. Deplanchei*, Reichb. f. in *Linnaea* xli. 85, 86. Species omnes inter se valde affines.

PAXTONIA, *Lindl. Bot. Reg.* 1838, t. 60, est species Manillana, *S. plicate*, Bl., valde similis, sed a genere differt labello explanato indiviso petalis simili v. paullo latiore. Lindley nuper suspicatus est *Spathoglottidis* esse peloriam, et Reich. f. in Walp. Ann. vi. 456, speciem sub *Spathoglottide* dubie enumerat.

2. *Tenuiores*, pseudobulbis cormiformibus subnudis, foliis angustis, racemo laxo paucifloro, bracteis parvis. *Wall. Pl. As. Rar.* t. 203. *Wight, Ic. t.* 1739. *De Vriese, Illustr. Orch. cum t. 1. Bot. Reg.* 1845, t. 19. Hæc series a Reichenbachio ad *Pachystoma* refertur, nostro sensu tamen tam habitu quam perianthii forma valde diversa.

42. *Acanthophippium*, Blume, *Bijdr.* 353, t. 47 (*Acanthophippium*); *Orch. Archip. Ind.* 156, t. 49.—Sepala lata, carnosæ, in urceolum latum oblique ventricosum coherentia, posticum fornicatum, lateralia basi pedi columnæ adnata, mentum breve v. conicum in *A. striato* fere calcariforme formantia. Petala sepalis inclusa, ad latera columnæ affixa, sepalis multo angustiora, basi cum marginibus membranaceis pedi columnæ continua. Labellum ad apicem pedi columnæ articulatæ, inflexum, sepalis inclusum; lobi laterales lati, erecti; medius recurvus, indivisus. Columna brevis, crassa, superne anguste 2-alata, basi in pedem longissimum medio incurvo-inflexum producta; clinandrium breve, membranaceum. Anthera intra marginem clinandrii affixa, opercularis, incumbens, convexa, 2-locularis, loculis imperfecte locellatis; pollinia 8, in quoque loculo 4, cerea, superiora obovoidea, inferiora longiora, omnia erecta, sursum appendicula granulosa connexa; glandula nulla a rostello solvenda. Capsula magna, oblongo-clavata, erostris, costis 6 prominentibus.—Herbæ terrestres, pseudobulbis oblongis paucifoliatis. Folia ampla, plicato-venosa, in petiolum contracta. Scapi foliis breviores, aphylli, vaginis paucis latiusculis. Flores majusculi, in racemo pauci, pedicellis brevibus post anthesin accretis. Bracteæ membranaceæ, sæpe coloratæ, majusculæ.

Species 3 v. 4, Indiæ orientalis et Archipelagi Malayani incolæ. *Reichb. f. in Walp. Ann.* vi. 460. *Bot. Reg.* t. 1730 et 1846, t. 47. *Bot. Mag.* t. 4492. *Griff. Ic. Pl. As.* t. 325. *Maund, Botanist.* t. 200. Flores carnosos v. fere spongiosos in speciminibus siccis male servatos examinare nequimus, characteres ex iconibus et descriptionibus auctorum imprimis Blumei sumpsimus. Glandula pollinarii a Lindleyo descripta, est appendicula granulosa antheræ inclusa nec squama a rostello solvenda.

43. *Phaius*, *Lenr. Fl. Coch.* 529. (*Tankervillia*, *Link, Handb.* i. 251. *Pachyne*, *Salisb. in Trans. Hort. Soc.* i. 299.)—Sepala libera, subæqualia, patentia v. suberecta. Petala sepalis similia nisi angustiora. Labellum erectum, concavum v. cucullatum, basi in gibbum cavum v. calcar rectum v. curvulum cum columnæ basi continuum productum;

lobi laterales ampli, erecti, columnam involventes, apice interdum undulati et cum lobo medio confluentes; lobus medius expansus, sæpius brevis latusque, patens v. recurvus, margine sæpe undulatus. Columna longiuscula, subteres, 2-angulata v. 2-alata, apice clavata, apoda; clinandrium breve, obliquum, margine sinuatum. Anthera juxta marginem clinandrii affixa, opercularis, incumbens, convexa, distincte 2-locularis, loculis imperfecte 4-locellatis; pollinia 8, in quoque loculo 4, obovata v. oblonga, a latere parallele compressa, faciebus per paria applicita, parvis inferioris cujusve loculi quam superiora sæpius longiora, apice evidentius attenuata, omnia in anthera perfecta cerea, apice appendicula granulosa in anthera juniore loculos fere implente connexa. Capsula oblonga, crostris, costis valde prominentibus.—Herbæ elatiores, terrestres v. epiphyticæ, caulibus in caudice confertis, basi sæpe in pseudobulbum brevem incrassatis. Folia ampla v. elongata, plicata, basi angustata v. in petiolum longum contracta, vaginis sæpius striatis. Scapi v. pedunculi nunc e caudice oriundi, nunc laterales v. terminales. Flores in racemo plures v. pauci, speciosi, pedicellati, flavi violacei v. albi. Bractæ nunc parvæ lineares, nunc majusculæ membranacæ v. herbacæ. Pollinia ut in *Bletia* sæpe (in anthera adhuc imperfecta !) cum appendicula granulosa, in massam unicam in quoque loculo conferta apparent, bene evoluta in omnibus sectionibus more generum affinium cerea et levia sunt.

Species ad 15, imprimis Asiaticæ tropicæ sed ab Africa tropica et insulis Mascarensibus usque ad Australiam, insulas maris Pacifici et Chinam Japoniamque extensæ. *Lindl. Gen. et Sp. Orch.* 126. *Reichb. f. in Walp. Ann.* vi. 458; *Otia Hamb.* 53; et in *Bonpl.* 1856, 328; 1857, 42.

Genus a Blumeo bene elucidatum in sectiones sequentes dividitur:—

1. *Genuini*, Bl. Scapi racemiferi e caudice oriundi, elati, aphylli, plurivaginati. Labellum basi calcaratum. Columna exalata. Species enumeratæ ad 18, nonnullæ tamen parum distincte potius varietates habendæ. *Blume, Orch. Archip. Ind.* t. 1 ad 3, t. 4, f. 2, t. 5, D, E. *Benth. Fl. Austral.* vi. 304. *Ait. Hort. Kew.* ed. 1, iii. t. 12 (*Limodorum*). *Andr. Bot. Rep.* t. 426 (*Limodorum*). *Bot. Mag.* t. 1924 et 2719 (*Bletia*), t. 3960, 4078, 6032. *Lindl. Sert. Orch.* t. 23. *Wight, Ic.* t. 1659–60. *Reich. f. Xen. Orch.* t. 76, 122.

2. *Gastrorchis*, Bl., species includit 4 Mascarenses a *Genuinis* parum diversas calcare ad saccum v. gibbum brevissimum reducto. *Thou. Orch. Iles Afr.* t. 31, 32 (*Limodorum*). *Blume, Orch. Archip. Ind.* 13, t. 11 B.

*PESOMERIA*, *Lindl. Bot. Reg.* 1838, Misc. 5; *Bot. Mag.* t. 4442, est *P. tetragonus*, *Reichb. f. (Epidendrum, Thou. Orch. Iles Afr.* t. 33, 34) species Madagascariensis calcare ut in *Gastrorchide* ad gibbum reducto, labello ima basi columnæ subadnato.

3. *Thunia*. Racemus in caule foliato terminalis, nutans, bracteis amplis membranaceis, flore omnino *Genuinorum*. Species 3 v. 4, Himalaicæ v. Burmanicæ. *Wall. Pl. As. Rar.* t. 198. *Bot. Reg.* 1838, t. 33. *Bot. Mag.* t. 3991. *Knowl. et West. Fl. Cab.* t. 125. *THUNIA, Reichb. f. in Bot. Zeit.* 1852. 764, et *Bot. Mag.* t. 5694.

4. *Limatodes*, Bl. Racemi in caule foliato infra folia laterales. Labellum calcaratum. Columna 2-alata, rostello longiusculo. *LIMATODES, Blume, Bijdr.* 375; *Linn. Gen. et Sp. Orch.* 252, genus ad sectionem *Phaii* reductum a Blume, *Orch. Archip. Ind.* 11, t. 4, f. 1, et t. 11 A. Species 2, Javenses, quibus addidit *Lindl. Fol. Orch.* 1854, et in *Paxt. Fl. Gard.* iii. 35, species 4 Asiaticas, inter quas tamen *L. gracilis* et *L. rosea*, potius ad *Calanthem* referendæ sunt.

44. *Bletia*, Ruiz et Pav. *Prod.* 119, t. 26; *Syst. Veg. Fl. Per. et Chil.* 229. (Gyas, *Salisb. in Trans. Hort. Soc.* i. 299. *Thiebaudia*, *Colla in Mem. Soc. Linn. Par.* iii. 161, t. 4.) —Sepala libera, conniventia v. subpatentia, æqualia v. lateralia basi paullo latiora. Petala sepalo postico similia v. latiora. Labellum basi columnæ affixum, liberum, erectum, basi contractum v. leviter saccatum; lobis laterales latiusculi, erecti, paralleli v. apice patentem, columnam non amplectentes; medius patens, latus, sæpius emarginatus v. 2-lobus; discus sæpius laminis  $\infty$  integris v. denticulato-crispis instructus. Columna elongata, semiteres, 2-angulata, sæpius incurva, interdum basi 2-auriculata v. superne 2-alata, apoda; clinandrii lobis laterales sæpe latiusculi rotundati, posticus dentiformis interdum elongatus. Anthera denti postico clinandrii affixa, opercularis, incumbens v. subpendula, convexa v. elevato-conica, distincte 2-locularis, loculis imperfecte 2-locellatis; pollinia 8, in quoque loculo 4,

per paria superposita, obovata v. oblonga, a latere parallele compressa, faciebus per paria applicita, pari inferiore cujusve loculi superiore sæpius majore, omnia in anthera perfecta cerea, in quoque loculo appendicula granulosa crassiuscule laminiformi sursum connexa; glandula rostellii 0. Capsula oblonga v. fusiformis, erecta, erostris.—Herbæ erectæ, terrestres v. epiphyticæ, pseudobulbis globosis v. depressis crassis fere tuberiformibus. Folia pauca, ampla v. elongata, plicata, in petiolum contracta, v. rarius omnino desunt. Racemus in caule foliato v. in scapo vaginato aphylo terminalis, laxis, longe pedunculatus, simplex v. laxè ramosus. Flores pedicellati v. fere sessiles, mediocres v. majusculi, sepalis lateralibus cum basi columnæ interdum mentum breve formantibus, labelli sacco tamen ubi adest distincto. Bracteæ parvæ nunc minutæ.

Species ad 20, pleræque Americæ tropicæ incolæ, cum una Chinensi et Japonica. *Reichb. f. in Walp. Ann.* vi. 440 (quoad species *Plicifolias*); in *Bot. Zeit.* 1864, 298; in *Flora* 1865, 278; et in *Linnaea* xli. 7. *Blume, Orch. Archip. Ind.* 15 (excl. *B. aphylla*).

Genus pluribus notis *Phaio* accedit, sed labellum nunquam columnam involvit. In utroque genere pollinia nondum perfecte matura sæpe cum appendicula massam granulosem concolorem formant, perfecta semper cerea et bene distincta vidimus. *Bletia* species in sectiones 2 sequentes facile distribuuntur:—

1. *Eubletia*. Scapi in pseudobulbo laterales, aphylli; racemus interdum ramosus. Species omnes Americane. *Jacq. Ic. Rar.* t. 602 (*Limodorum*). *Red. Lil.* t. 83 (*Limodorum*). *Pæpp. et Endl. Nov. Gen. et Sp.* t. 95. *Bot. Mag.* t. 930 (*Limodorum*), 3217, 3319, 3518, 5646. *Bot. Reg.* t. 1401 (*B. florida* ex icone sola nobis nota), 1760.

2. *Bletilla*. Scapi in pseudobulbo terminales v. simul laterales, 1-2-foliati v. rarius sub anthesi aphylli; racemus semper simplex. Species Americane. *Bot. Mag.* t. 3736. *Bot. Reg.* 1847, t. 60, cum *B. hyacinthina*, R. Br., e China et Japonia, columna superne evidentius 2-alata. *Blume, Orch. Archip. Ind.* 17, t. 6. *Sm. Exot. Bot.* t. 60 (*Cymbidium*). *Bot. Mag.* t. 1492 (*Cymbidium*). *BLETILLA*, *Reichb. f. in Fl. des Serres* viii. 246. In *B. gracili*, Lindl. *Bot. Reg.* t. 1681; *Lodd. Bot. Cab.* t. 1977, pariter ad *Bletillam* referenda, columna basi insigniter 2-auriculata, quod etiam in nonnullis aliis speciebus plus minus observatur. *Tetramicra platyphylla*, Griseb. *Cat. Pl. Cub.* 264, foliis etsi parvis planis latis venosis bene ad *Bletiam* (*Bletillam*) referenda videtur. *B. montanum*, *Reichb. f.*, pro genere proprio (*Octadesmi*) habemus. *B. aphylla*, Nutt., *Corallorhiza* affinis, est genus *Hexaletris*, Rafin.

45. *Chysis*, Lindl. *Bot. Reg.* t. 1937, et 1841, t. 23.—Sepala æquilonga, inter se libera, patentia, lateralia postico latiora, basi obliqua columnæ pedi adnata. Petala sepalo postico similia. Labellum pedi columnæ affixum eique breviter incumbens, dein erectum; lobi laterales ampli, erecti, medius patens v. reflexus, integer v. 2-lobus; laminæ v. venæ disci basi sæpius callosæ. Columna erecta, incurva, crassa, latiuscule 2-alata, basi in pedem producta; clinandri dentes laterales breves, obtusi, posticus longior. Anthera denti postico affixa, opercularis, incumbens, loculis 2 distinctis imperfecte 2-4-locellatis; pollinia 8, in quoque loculo 4, obovoidea v. oblonga, cerea, appendicula granulosa ampla interdum fere in laminam extensa connexa, parvis inferioris cujusve loculi sæpius majora v. inter se valde inæqualia, parvis superioris interdum appendiculæ adnata (v. vix ab ea distincta?). Capsula . . .—Herbæ epiphyticæ; caules carnosuli, basi vaginati, superne confertim foliosi, demum (post folia delapsa?) incrassati fusiformes v. longe pseudobulbosi. Folia longiuscula, venis prominulis. Racemus lateralis, sæpius ad axillam folii inferioris; flores plures, speciosi, albi v. plus minus flavi. Bracteæ nunc parvæ nunc foliaceæ, flore paullo breviores.

Species editæ 6-8, nonnullæ tamen potius varietates, Mexici et Columbici incolæ. *Reichb. f. in Walp. Ann.* vi. 471. *Bot. Mag.* t. 3617, 4576, 5186, 5265. *Lem. Jard. Fleur.* t. 121. *Fl. des Serres*, t. 671, 675.

Lindley l. c. pollinia superiora cum massa materiæ viscidulæ semifusa descripsit, an in flore adhuc imperfecto vel monstruoso? in floribus specierum 2 a nobis examinatis pollinia vidimus omnia 8 perfecte distincta, etsi in uno flore valde inæqualia.

46. *Nepholaphyllum*, *Blume, Bijdr.* 372, t. 22. (*Cytheris*, Lindl. *Gen. et Sp. Orch.* 128.)—Sepala subæqualia, libera, patentia, omnia angusta v. lateralia latiora. Petala sepalo

postico subsimilia. Labellum ad basin columnæ sessile, breviter calcaratum, erectum, ovatum obovatum v. oblongum, lobis lateralibus angustis erectis v. obsoletis, medio patente; discus sæpe 2-3-lamellatus. Columna erecta, longiuscula, 2-alata, apoda, vertice in clinandrium latiusculum producta. Anthera opercularis, apice sæpe breviter 2-loba, loculis 2 bene distinctis; pollinia 8, cerea, in quoque loculo 4, compressa, parallela, 2-seriata, appendiculæ lineari sursum adnata, superiora sæpe minora. Capsula reflexa, oblonga, erostris, costis prominulis.—Herbæ terrestres, repentes. Folia solitaria, ovato-lanceolata v. cordata, membranacea, petiolo longiusculo medio articulo v. potius pseudobulbum petioliformem terminantia. Scapus in vagina scariosa cum petiolo inclusus, specie terminalis revera e rhizomate seu caudice distincto oriundus, simplex, plurivaginatus. Flores mediocres, laxe v. dense racemosi.

Species 4, Indiæ orientalis, Chinæ australis et Archipelagi Malayani incolæ. *Blume, Orch. Archip. Ind.* 170, t. 61 et 54 F. *De Vriese, Illustr. Orch. cum t. 1.* *Reichb. f. Xen. Orch. t. 88.* *Bot. Mag. t. 5332, 5390.*

47. *Tainia*, *Blume, Bijdr.* 354. (*Mitopetalum*, *Blume, Præf. Fl. Jav.* 8, et *Orch. Archip. Ind.* 157, t. 50, 51, 54. *Ania*, *Lindl. Gen. et Sp. Orch.* 129.)—Sepala subæquilonga, erecto-patentia, posticum liberum, lateralia basi cum pede columnæ breviter adnata. Petala sepalo postico similia v. angustiora. Labellum ad apicem pedis columnæ affixum, erectum, basi in gibbum v. calcar breve productum, lobis lateralibus erectis parallelis v. columnam amplexantibus, intermedio patente brevi lato integro. Columna longiuscula, leviter incurva, antice concava, anguste 2-alata; clinandrium valde obliquum, edentatum. Anthera terminalis, opercularis, incumbens, valde convexa, sæpius didyma 2-cornuta v. 2-cucullata, distincte 2-localaris, loculis septo imperfecto cruciatim 4-locellatis; pollinia 8, in quoque loculo 4, distincta, cerea, ovata, parallele compressa, 2-seriata, visco granuloso laminiformi v. lineari connexa. Capsula . . .—Caulis steriles e rhizomate basi plurivaginatus, demum in pseudobulbum incrassatus, folio unico terminali amplo longe petiolato. Scapi floridi pariter rhizomati affixi, elati, aphylli, basi paucivaginati, racemo terminali simplici. Flores pedicellati, sparsi, majusculi v. mediocres, sepalis petalisque angustis acutiusculis v. longe acuminatis.

Species 6-7, Indiæ orientalis, Chinæ australis et Archipelagi Malayani incolæ. *Reichb. f. in Walp. Ann.* vi. 269, et in *Trans. Linn. Soc.* xxx. 148 (*Eria*). *Bot. Mag. t. 4669 (Calanthe).* *Breda, Orch. Kuhl et Hass. cum ic.* 11 (*Octomeria paucifolia*, in icone). *Wight, Ic. t. 914.*

Genus *Erie*, quocum junxit Reichenbach f. certe affine, sed columna elongata et habitu nobis bene distinctum videtur et *Bletieis* affinius. *Ania angustifolia*, Lindl., e Silhet et Hong Kong, a Reichenbachio ad *Pachystoma* (*Apaturiam*) relata, est ex speciminibus nostris certe *Tainia* species. Species 2 Zeylanicas (*Thw. Enum. Pl. Zeyl.* 301; *Lindl. Bot. Reg.* 1844, t. 8) examinare non potuimus; *T. speciosa*, Bl., ab omnibus differt sepalis petalisque longissimis subsetaceo-caudatis.

48. *Anthogonium*, *Lindl. Introd. Nat. Syst. ed. 2,* 341; *Gen. et Sp. Orch.* 425.—Sepala in tubum tenuiter cylindraceum basi supra ovarium breviter productum alte coalita; limbus incurvus, lobo postico concavo fornicato, lateralibus latis falcatis. Petala linearia, sepalis æquilonga, in ungues longos intra calycem liberos contracta. Labellum basi cum columna connatum, superne eam involvens, apice liberum, patens, dilatatum, margine sinuatum, sepalis æquilongum. Columna elongata, tenuis, semiteres, apoda, superne anguste 2-alata; clinandrium breve, dente postico parum prominente, anticis obtusis cum columnæ alis continuis. Anthera terminalis, opercularis, incumbens, parum convexa, 2-localaris; pollinia 4, in quoque loculo 2, cerea, ovata, a latere compressiuscula, omnia parallela, in quoque loculo appendiculæ granulosa connexa. Capsula angusta, erostris.—Herba (epiphytica?), caulibus foliatis brevibus basi in pseudobulbos breves incrassatis. Folia 1-3, angusta, graminea v. paullo latiora et plicato-venosa, basi in petiolum contracta. Scapi ad latera pseudobulbi simplices, erecti, aphylli, paucivaginati. Racemus tenuis, laxis, floribus mediocribus tenuibus dissitis breviter pedicellatis. Bractee parvæ.

Species 1, Himalayæ orientalis et Burmæ incolæ. *Reichb. f. in Walp. Ann.* vi. 471. *Griff. Ic. Pl. As. t. 345.* Genus a cæteris *Bletieis* differt polliniis 4 tantum 1-seriatis, sed habitu et patria his potius quam *Eupidendreis* referendum videtur.

49. *Josepha*, Wight,  *Ic. Pl. v. 19, t. 1742, 1743*.—Sepala subæqualia, ovata, conniventia, libera v. basi breviter connata, posticum valde concavum, lateralibus basi mentum brevissimum seu gibbum formantia. Petala sepalis angustiora sæpiusque breviora. Labellum basi columnæ affixum, continuum, erectum, concavum, sepalis æquilongum, lobis laterales parum dilatati columnam subamplectentes, terminalis integer, basi facie 1-2-callosus. Columna erecta, semiteres, superne anguste 2-alata, apoda; clinandrium margine breviter membranaceo-dilatatum, vix antice 2-lobum. Anthera terminalis, opercularis, incumbens, ovata, breviter acuminata, parum convexa, 2-locularis, loculis sub-2-locellatis; pollinia 4, cerea, oblonga, parallela, longe acuminata, subcaudata, inappendiculata, anthera dehiscente visco parco rostello sæpe adhærentia, glandula nulla solubili. Capsula oblonga, parva, erecta.—Herbæ epiphyticae, subcaules, cæspitosæ; vaginæ gemmas novellas involventes, membranaceæ, distiche imbricatæ, compresso-planæ, post folia evoluta sæpius in rete fibrosum resolutæ. Folia in gemma 1-2, rigide coriacea, striata, basi complicata et in una specie in petiolum contracta. Pedunculi v. scapi in gemma solitarii, elongati, tenues, rigiduli, superne ramosi. Flores parvi, secus ramulos ultimos racemosi, breviter pedicellati. Bractæe parvæ, approximatae subimbricatæ v. dissitæ.

Species 2, Peninsule Indiæ orientalis et Zeylanicæ incolæ.

50. *Marina*, Lindl.  *Bot. Reg. sub t. 1699*.—Sepala subæqualia, libera, patentia. Petala sepalis subsimilia. Labellum a basi columnæ v. a pede brevissimo erectum, basi concavum v. ima basi subacatum, sepalis æquilongum v. longius, lobis lateralibus nunc latiusculis erectis parallelis nunc parum prominentibus, medio explanato patente lato integro emarginato v. divaricato-2-lobis. Columna brevis v. brevissima, crassiuscula, basi interdum in pedem brevissimum producta, antice concava; clinandrium breve, integrum v. antice 2-angulatum v. 2-dentatum, dente postico antherifero minimo v. obsoleto. Anthera opercularis, incumbens, convexa, 2-locularis, loculis plus minus distincte 2-locellatis; pollinia 4, cerea, in loculis per paria segregata, libera v. apice visco parco cohærentia. Capsula . . .—Herbæ epiphyticae, foliatæ, non pseudobulbosæ. Flores parvi, secus ramulos brevissimos v. bene evolutos paniculæ thyrsoidæ v. racemiformis sessiles v. breviter pedicellati. Bractæe parvæ, ovate, rigide, striatæ, secus ramulos subimbricatæ.

Species editæ 6, Novæ Zelandiæ et insularum maris Pacifici incolæ, bene in sectiones 2 inter se habitu distinctas sed inflorescentia et floribus subsimiles distribuendæ:—

1. *Eucarina*. Caules rigiduli, fere usque ad inflorescentiam foliati et foliorum vaginis obtecti, foliis linearibus v. lanceolatis. Panicula oblonga v. longe racemiformis, ramulis bene evolutis. Labelli lobus medius latissimus emarginatus v. divaricato-2-lobus. Species 2, Novo-Zelandicæ. *Hook. Ic. Pl. t. 431. Hook. f. Handb. N. Zæl. Fl. 261. Reichb. f. in Walp. Ann. vi. 220.*

2. *Sceptum*. Folia longa, ad basin caulis conferta, vaginis amplis cartilagineis distiche imbricatis. Pedunculus intra folia elatus, rigidus, apyllus, sæpe compressus. Panicula angusta, dense racemiformis, ramulis abbreviatis confertis paucifloris. Labelli lobus medius in floribus examinatis ovatus v. rotundatus, integer. Species editæ 4, inter se valde affines, Novæ Caledoniæ et insularum maris Pacifici incolæ. *Reichb. f. in Linnaea xli. 96; Ota Hamb. 54.*

51. *Glomera*, Blume,  *Bijdr. 372, t. 68*.—Sepala erecta, conniventia, æquilongia, lateralibus latiora, basi sub labello cum pede columnæ mentum saccatum formantia. Petala sepalis postico subsimilia. Labellum pedi columnæ affixum, basi incumbens, dein erectum, indivisum, sepalis non excedens. Columna brevis, exalata, basi in pedem descendantem producta; clinandrium breve, dentibus 2 anticis et dorsali antherifero prominulis; fovea stigmatica ampla, margine membranaceo undique prominulo superne rostello adnato. Anthera terminalis, opercularis, incumbens, semiglobosa, 2-locularis, loculis imperfecto 2-locellatis; pollinia 4, cerea, in loculis per paria segregata, ovoidæ, compressiuscula, in quoque loculo apicibus appendicula parva interdum fere obsoleta connexa v. libera. Capsula . . .—Herbæ epiphyticae, habitu *Agrostophylli*, caulibus foliatis vaginis obtectis non pseudobul-

bosis. Folia disticha, angusta, membranacea v. tenuiter coriacea. Flores parvuli, in capitulo laxo terminali sessili numerosi, breviter pedicellati, bracteis numerosis intermixti, e quibus tamen semper exserti.

Species 2, Archipelagi Malayani et insularum maris Pacifici incolæ. *Lindl. Gen. et Sp. Orch.* 253. *Reichb. f. Xen. Orch.* ii. t. 128, et in *Linnaea* xli. 77.

Genus *Agrostophyllo* valde affine, cui adjungitur in Herb. Lindl., bene tamen differe videtur capitulis laxioribus et pollinibus 4 nec 8.

52. *Agrostophyllum*, Blume, *Bijdr.* 368, t. 53. (*Diploconchium*, Schau. in *Pl. Meyen.* 423, t. 12 A, ex *Reichb. f., char. vix convenit.*)—Sepala erecta, conniventia, æquilonga, basi connata, lateralialia latiora cum pede columnæ sæpius mentum breve formantia. Petala sepalis tenuiora v. angustiora. Labellum basi columnæ v. pedi brevi affixa, a basi subincumbente erectum, latiusculum, sepalis subæquilongum, integrum v. 3-fidum. Columna semiteres, erecta v. incurva, superne incrassata, exalata, basi sæpius in pedem brevem producta; clinandrium obliquum, dorso in lobum brevem productum. Anthera terminalis, opercularis, incumbens, convexa, non acuminata, 2-localaris; pollinia 8, in quoque loculo 4, cerea, ovoidea, breviter v. vix acuminata, libera, inappendiculata, anthera dehiscente interdum visco parco connexa (et glandulæ parvæ affixæ?). Capsula parva, ovoidea v. oblonga, inter bracteas persistentes sæpius sessilis, erecta.—Herbæ epiphyticae, caulibus foliatis cum vaginis imbricatis plus minus complanatis interdumque carnosio-incrassatis. Folia disticha, lato-linearia v. oblonga, tenuiter coriacea, vaginis caulem omnino obtegentibus. Racemi brevissimi, plerique 2-flori, numerosissimi, in capitulum terminale sessile erectum v. nutans densissime conferti. Bracteæ numerosæ, anguste paleaceæ, imbricatæ, flores parvos sæpe fere occultantes.

Species adsunt 5, Indiæ orientalis et Archipelagi Malayane incolæ. *Lindl. Gen. et Sp. Orch.* 248. *Reichb. f. in Walp. Ann.* vi. 909; et in *Seem. Fl. Vit.* 296 (quoad *A. callosum*). *Griff. in Calcutta Journ. Nat. Hist.* iv. t. 19. *Wight, Ic.* t. 1748 (*Appendicula*).

Genus a nonnullis *Appendicularia* relatum, nostro sensu toto cælo diversum tam columnæ fabrica quam habitu et inflorescentia. *A. megalurum*, Reichb. f. in *Seem. Fl. Vit.* 296, inflorescentia spiciformi elongata, rostello erecto, aliisque notis verisimiliter generis alieni est.

53. *Ceratostylis*, Blume, *Bijdr.* 304, t. 56.—Sepala erecta, conniventia, subæquilonga, lateralialia latiora, basi cum pede columnæ in mentum calcariforme descendens coalita. Petala sepalis postico angustiora, cæterum similia. Labellum pedi columnæ affixum, ungue longo incumbente, lamina erecto-patente, crassa, concava, indivisa, sepalis non excedente. Columna brevis, exalata, apice in lobos clinandrii 2 longos erectos, basi in pedem sæpius longiusculum producta; clinandrii lobus posticus antherifer brevissimus; stigma rostellumque parva. Anthera terminalis, opercularis, incumbens, convexa v. semiglobosa, 2-localaris; pollinia 8, cerea, in quoque loculo 4, ovoidea, parva, apicibus visco parco (v. appendicula parva?) connexa, post anthera dehiscenciam cum anthera decidua, v. liberata rostello adhaerentia, nec glandulæ nec stipiti distincto affixa. Capsula parva, ovoidea v. oblonga, erostris.—Herbæ epiphyticae, humiles. Caules nunc cespitosi, fasciculati, sæpe junciformes, basi vaginis scariosis imbricatis stipati, apice 1-foliati (v. interdum aphylli?), nunc breviter diffusi, ramosi, vaginis membranaceis v. scariosis plus minus obtecti, ramulis ad axillas vaginarum apice (more *Pleurothallacearum*) 1-foliatis. Folia linearia v. anguste oblonga, coriacea v. carnosula, interdum subteretia. Flores parvi, pauci v. interdum solitarii, inter bracteas imbricatas paleaceo-scariosas capitulum parvum ad axillum folii sessile formantes, inflorescentia sic revera terminalis etsi ob folium erectum caulem continuum sæpe axillaris v. oppositifolia apparet.

Species notæ ad 15, Indiæ orientalis, Archipelagi Malayani et insularum maris Pacifici incolæ. *Lindl. Gen. et Sp. Orch.* 230. *Reichb. f. in Bonplandia*, 1857, 53; *Otia Hamb.* 54; *Xen. Orch. t.* 127. *Griff. Ic. Pl. As. t.* 332 (*Vanda*, *Appendicula* in *Notul.*).

Genus *Agrostophyllo* affine, habitu facile distinctum. Specimina sicca sæpe quoad flores valde manca, et structura in perpaucis speciebus rite examinata.

54. **Callostylis**, Blume, *Bijdr.* 340. (Tylostylis, Blume, *Fl. Jav. Praef.* 6.)—Sepala erecto-patentia, lateralibus basi connata. Petala sepalis paullo angustiora. Labellum parvum, integrum, convexum, disco elevato instructum, patens, articulatione irritabili cum basi callosa incurva columnæ junctum. Columna incurva, clavata; clinandrium cavum, amplissimum. Anthera terminalis, 2-locularis, loculis 2-locellatis; pollinia 8, in quoque loculo 4, cerea, ovata, compressiuscula, filis elasticis margini stigmatis insidentia. —Herba epiphytica, caulibus foliatis pseudobulbosis. Folia in pseudobulbis alterna, rigida, lanceolata, oblique retusa. Pedunculi solitarii, terminales, spicato-multiflori. Flores pedicellati, bracteati. (*Char. ex descr. Blumei.*)

Species 1, Javanica, a nobis non visa. *Lindl. Gen. et Sp. Orch.* 129. Genus videtur *Agrostophyllo* affine etsi habitu distinctum.

55. **Cryptochilus**, Wall. *Tent. Fl. Nep.* 36, t. 36.—Sepala in tubum ovoideum basi antice gibbosum apice contractum breviter æqualiterque 3-lobum coalita. Petala angusta, tubo inclusa. Labellum tubo inclusum, basi angustatum, pedi columnæ affixum incumbensque, dein erectum, angustum, lobis lateralibus obsoletis. Columna erecta, semiteres, labello brevior; clinandrium parum dilatatum, varie dentatum, dentibus 2 lateralibus sæpius magis prominentibus erectis. Anthera denti postico affixa, opercularis, incumbens, semiglobosa, loculis 2 distinctis indivisis; pollinia 8, in quoque loculo 4, cerea, obovoidea v. oblonga, inappendiculata, libera, apice acuta v. parum elongata, demum visco parco connexa. Capsula ovoidea v. oblonga, erostis, costis prominulis. —Herbæ epiphyticae, pseudobulbis annorum præcedentium secus rhizoma confertis, hornotinis 2-3-vaginatibus et 1-2-foliatis. Folia membranacea v. subcoriacea, venis tenuibus striata, basi complicata v. in petiolum brevem contracta. Pedunculus terminalis; spica simplex, laxa, subdisticha. Flores in axillis bractearum subsessiles iisque sæpius breviores.

Species 2, Himalicae. *Lindl. Gen. et Sp. Orch.* 193. *Wight, Ic. t.* 1757. *Bot. Reg.* 1838, t. 23. *C. reticulatum* et *C. Wightii*, Reichenb. f., ad *Eriam* (*Porpacem*) referimus.

56. **Trichosma**, Lindl. *Bot. Reg.* 1842, t. 21.—Sepala subæqualia, patentia, posticum liberum, lateralibus latiora, basi pedi columnæ adnata, mentum breve formantia. Petala sepalo postico similia v. angustiora. Labellum cum pede columnæ articulatam, ungue breviter incumbente dein erecto, lamina late 3-loba; discus longitudinaliter lamellatus. Columna brevis, semiteres, exalata, basi in pedem producta; clinandrium elevatum, obliquum, margine irregulariter dentatum. Anthera intra marginem clinandrii affixum, opercularis, incumbens, valde convexa, antice ultra loculos in appendicem rotundatam producta, discrete 2-locularis; pollinia 8, cerea, in quoque loculo 4, late ovata, valde compressa, per paria 2-seriatim collateralia, superioribus (anticis) sæpe minoribus, appendicula granuloso-subviscosa copiosa connexa. Capsula . . . —Herba epiphytica, caulibus ob rhizoma abbreviatum caespitosis non pseudobulbosis, basi paucivaginatibus superne 2-foliatis. Folia carnosula (*Griffith*) subplicato-venosa, basi in petiolum vaginantem contracta. Racemus terminalis, pedunculo basi squamis 2-3 vaginato, laxè pluriflorus. Flores majusculi, albi. Bracteæ pedicello subbreviores.

Species 1, montium Khasyæ incolæ, a Lindleyo primum sub *Calogyne* descripta, serius in Journ. Linn. Soc. iii. 52, post Reichenbachium ad *Eriam* relata. Habitus *Calogyne*.

57. **Calogyne**, Lindl. *Collect. sub t.* 33; *Gen. et Sp. Orch.* 38; *Fol. Orch.* 1854. (Chelonanthera, *sect.* 2 et 3, Blume, *Bijdr.* 384, t. 51. Acanthoglossum, Blume, *Bijdr.* 381, *fide Reichenb. f.*)—Sepala subæqualia, erecta v. patentia, libera v. leviter coherentia. Petala sepalis conformia v. sæpe angustiora nunc angustissima. Labellum ad basin columnæ sessile, erectum, basi concavum et interdum breviter saccatum, lobis lateralibus nunc amplius erectis columnam amplectentibus v. involventibus, nunc brevibus v. fere obsoletis, lobo medio sæpe expanso patenteque indiviso. Columna erecta, longiuscula, superne v. apice sæpe 2-alata, apoda; clinandrium obliquum, sæpe membranaceo-dila-

tatum, integrum dentatum v. antice 2-angulatum. Anthera intra marginem clinandrii affixa, subopercularis, incumbens, 2-locularis, loculis basi v. fere undique confluentibus; pollinia 4, cerea, obovata v. oblonga, compressa, per paria in loculis segregata, apice appendice granulosa polymorpha connexa. Capsula sæpius oblonga, costis acutissimis et plus minus in alas expansis.—Herbæ epiphyticæ, cæspitosæ v. longe repentes. Pseudobulbi secus rhizoma sæpius crassi insigniter angulato-costati v. subteretes, apice sæpissime 2-phylli. Scapi v. pedunculi alii inter folia terminales basi paucivaginati, alii sub anthesi ad basin pseudobulbi longius imbricato-vaginati, foliis sub pedunculo tardius evolutis, rarius ad apicem rhizomatis in caulem paucifoliatum abeuntes. Flores majusculi v. speciosi, in pedunculo v. scapo solitarii, v. plures laxè racemosi. Bracteæ sæpe coriaceæ v. subpetaloideæ, deciduæ v. persistentes. Labelli superficies sæpe laminis v. lineis prominentibus dentatis ciliatisve cristata.

Species ad 50, per Indiam orientalem et Archipelagum Malayanum late dispersæ, una usque ad Chinam australem extensa. *Reichb. f. in Walp. Ann.* vi. 222 (excl. *Otochilo* et *Pholidota*); in *Bot. Zeit.* 1862, 214, et 1864, 415; in *Flora*, 1872, 277; in *Bonpl.* 1857, 43; in *Trans. Linn. Soc.* xxx. 146, t. 30; et in *Linnaea* xli. 116.

Genus naturale, a Lindleyo in sectiones 3 sequentes a nonnullis pro generibus propriis habitus divisum, vix tamen characteribus certis limitandæ videntur:—

1. *Neogyne*. Racemus nutans, floribundus. Sepala conniventia, lateralia basi discrete saccata cum labello breviter saccato florem quasi trisaccatum formantia. Clinandrium latum, petaloideum, margine dentatum et sub-3-lobum. Species 1, Himalaica. *Wall. Pl. As. Rar.* t. 38. *Part. Mag.* vi. 73, cum ic. *NEOGYNE*, *Reichb. f. in Bot. Zeit.* 1852, 931.

2. *Pleione*. Scapi v. pedunculi per anthesin aphylli v. jam 2-foliati foliis deciduis, 1-flori (rarisime 2-flori?), flore magno. Bractea sub flore sæpius ampla, laxè vaginans. Labellum basi sæpius breviter saccatum. Sepala lateralia in gibbum parum prominentem basi connata v. omnino libera. Clinandrium cucullatum, margine dentatum. *Sm. Exot. Fl.* t. 97 (*Epidendrum*). *Wall. Pl. As. Rar.* t. 53, 54. *Lindl. in Part. Fl. Gard.* t. 39, 51 (*Pleione*). *Bot. Mag.* t. 4496, 4691, 5072, 5370, 5674, 5753, 6388. *Bot. Reg.* 1840, t. 24. *Reichb. f. Xen. Orch.* t. 134, f. 1. *PLEIONE*, *Don, Prod. Fl. Nepal.* 36. *BOLBOCHIS*, *Zoll. et Mor. Verz. Java Pfl.* 89; *Reichb. f. in Walp. Ann.* i. 775, fide *Lindl.*

3. *Eucalogyne*. Scapi v. pedunculi per anthesin aphylli v. sæpius jam 2-foliati, laxè  $\infty$ -flori v. rarius 1-2-flori. Bracteæ sub floribus dissitæ sæpiusque deciduæ, rarius persistentes. Labellum basi vix v. non saccatum. Clinandrium obliquum, integrum v. denticulatum. Species numerose, per totam aream generis dispersæ, in series sequentes inter se parum distinctas distribuuntur:—

a. *Normales*. *A. Rich. in Ann. Sc. Nat. ser. 2, xv.* t. 6. *Wight, Ic.* t. 1638 ad 1641. *Bot. Mag.* t. 3767, 4645, 4661, 5323, 5462, 5601, 5958. *Bot. Reg.* 1841, t. 29, 57; 1846, t. 69. *Reichb. f. Xen. Orch.* t. 46, 134, f. 2, 153, 155, f. 2.

b. *Filiferae*. Species paucae petalis angustis nunc angustissimis; variant tamen de specie in speciem. *Miq. Choix Pl. Buitenz.* t. 25, f. 1. *Bot. Mag.* t. 4440, 4889. *Bot. Reg.* t. 868; 1847, t. 23. *Lodd. Bot. Cab.* t. 1425. *Reichb. f. Xen. Orch.* t. 166.

c. *Proliferae*. Species ad 8, Himalaice et Burmannicæ, bracteis vacuis sub racemo pluribus coriaceis arcte imbricatis diu persistentibus, sub floribus caducissimis. *Wall. Pl. As. Rar.* t. 218. *Griff. Ic. Pl. As.* t. 290. *Bot. Mag.* t. 5001.

d. *Flexuosæ*. Racemus laxis, rhachi flexuosi, bracteis caducis nec sub racemo imbricatis, superioribus tamen nonnullis ultra racemum vacuis imbricato-convolutis. Labellum quam in cæteris *Eucalogyne* evidentiùs saccatum. Species 2, Archipelagi Malayani incolæ, adhuc non delineatæ.

e. *Flacidae*. Racemus recurvus v. pendulus, bracteis omnibus caducissimis v. rarius subpersistentibus. Species ad 5, Malayane v. Indicæ. *Bot. Mag.* t. 3318, 4785, 5084, 5494. *De Vries, Illustr. Orch. cum. tab.* 1. *Bot. Reg.* 1841, t. 31. *Reichb. f. Xen. Orch.* t. 85, 121.

58. *Otochilus*, *Lindl. Gen. et Sp. Orch.* 35, et in *Journ. Linn. Soc.* i. 173. (*Tetrapeltis*, *Wall. in Lindl. Gen. et Sp. Orch.* 212).—Sepala et petala subæqualia, libera, angusta, patentia. Labellum ad basin columnæ sessile, basi saccatum, lobis lateralibus erectis auriculiformibus, lobo medio elongato linguiformi patente petalis subsimili. Columna alongata, erecta, semiteretes, exalata, apoda, superne clavata; clinandrium valde obliquum, concavum. fere cucullatum. Anthera subterminalis, opercularis, incumbens, loculis

perfecte distinctis subglobosis; pollinia 4, cerea, ovoidea, acutiuscula, per paria in loculis segregata, apicibus appendicula granuloso-viscosa haud copiosa coherentia. Capsula ovoidea, costis parum prominentibus.—Caules seu rhizomata repentes, ramosi, crassiusculi, quasi e pseudobulborum angustorum serie continua constantes; innovationes racemiferæ fere ex apice pseudobulbi annotini oriundæ; racemus sub anthesi pedunculo brevi vaginis imbricatis oblecto fultus, post anthesin pedunculus elongatus, basis intra vaginas in pseudobulbum incrassatur et folia 2 ad apicem pseudobulbi evolvuntur. Specimina florida racemum terminalem ostendunt in pedunculo aphylo vaginato; racemus fructifer longe pedunculatus inter folia 2 ad apicem pseudobulbi. Flores quam in *Cælogynis* multo minus conspicui, laxè racemosi, bracteis angustis.

Species 3 v. 4, Himalayæ et Burmæ incolæ. *Wall. Pl. As. Rar. t. 68. Griff. Ic. Pl. Asiat. t. 288, 289. Bot. Mag. t. 3921.*

Genus *Cælogyni* affine, ad ejus sectionem reducitur a Reichb. f. in *Walp. Ann. vi. 236*, nobis tamen satis distinctum videtur tam vegetatione quam floribus.

59. *Pholidota*, Lindl. in *Hook. Exot. Fl. t. 138; Gen. et Sp. Orch. 36; et in Journ. Linn. Soc. i. 172.* (*Ptilocnema*, Don, *Prod. Fl. Nep. 33.* *Chelonanthera* sect. i., *Blume, Bijdr. 383, t. 51.* *Crinonia*, *Blume, Bijdr. 338, ex Lindl.; ic. t. 41 male convenit.*)—Sepala latiuscula subæqualia, libera, carinato-concava, erecta v. patentia. Petala sepalis sæpius minora, tenuiora, plana. Labellum ad basin columnæ sessile, basi valde concavum subsaccatum, lobis lateralibus erectis brevibus, lobo medio multo latiore patente sepalis brevioris integro v. 2-fido. Columna brevis nunc brevissima, lata, apoda, alis sæpius latis cum clinandrio lato petaloideo continuis. Anthera sub apice affixa, incumbens, opercularis, loculis distinctis subglobosis distincte 2-locellatis; pollinia 4, cerea, late ovoidea, acutiuscula v. acuminata, per paria in loculis segregata, apicibus appendicula viscoso-granulosa parca connexa v. omnino distincta. Capsula ovoidea, costis parum prominulis.—Caulis seu rhizoma repens, ramosus, pseudobulbis 1–2-foliatis more *Cælogynis* distinctis v. *Otochili* continuis. Racemi terminales, rhachi sæpe post anthesin flexuosa. Flores parvi, breviter pedicellati. Bractææ nunc ovatæ, ante anthesin distiche imbricatæ, persistentes, flores subincludentes, nunc angustiores deciduæ.

Species ad 20, Indiæ orientalis et Archipelagi Malayani incolæ, usque ad Chinam australem extensæ. *Reichb. f. in Walp. Ann. vi. 236; in Bonpl. 1856, 329; 1857, 43; in Flora, 1872, 277; Otia Hamb. 47; et in Linnæa xli. 116 (Cælogyne).*

Genus a *Cælogyne* et *Otochilo* columna abbreviata et floribus parvis facile distinctum, in sectiones 2 dividitur:—

1. *Eupholidota*. Innovationes more *Cælogynis* ad basin pseudobulborum e rhizomate oriundæ. *Wall. Pl. As. Rar. t. 239. Wight, Ic. t. 907. De Vriese, Illustr. Orch. cum t. 1. Bot. Reg. t. 1213, 1777.*

2. *Otochiloides*. Innovationes more *Otochili* fere ex apice pseudobulbi annotini oriundæ, pedunculo tamen jam sub anthesi 1–2-foliato. Hue pertinent *P. articulata* et *P. recurva*, Lindl., adhuc nondelineatæ.

*P. camelostylis*, Reichb. f. *Xen. Orch. i. 217, t. 89*, species Javensis a nobis non visa, ex icone et descriptione ab omnibus differt columna elongata tereti exalata recurva et pedunculo more *Cælogynium* proliferarum infra racemum imbricato-squamoso. Flores parvi videntur *Pholidota*. An ad *Otochilum* referenda?

ACANTHOGLOSSUM, *Blume, Bijdr. 381*, species unica Javensis a nobis non visa, a Reichenbachio ad *Pholidotam* refertur.

60. *Calanthe*, R. Br. in *Bot. Reg. sub t. 573.* (*Centrosia*, *Thou. Orch. Iles Afr. t. 35, 36.* *Amblyglottis*, *Blume, Bijdr. 369, t. 64.* *Styloglossum*, *Breda, Orch. Kuhl et Hass. cum tab. 1.* *Ghiesbreghtia*, A. Rich. in *Ann. Sc. Nat. ser. 3, iii. 28.* *Preptanthe*, *Reichb. f. in Fl. des Serres, viii. 245.*)—Sepala subæqualia, libera, patentia, sæpius patentissima, rarius erecto-patentia. Petala sepalis similia v. angustiora, nunc anguste linearia. Labelli unguis cum columna connatus in tubum cylindraceum v. late turbinatum, ima basi in calcar interdum longum tenuisque productus v. rarius ecalcaratus; lamina patens, 3-loba, lobo medio sæpe 2-lobo; discus varie callosus v. lamellatus. Columna brevis, erecta, apoda, alis sæpius usque ad apicem extensis cum ungue labelli connatis, rarius ultra tubum

producta exalataque; clinandrium membranaceum, parum prominens sed sæpe profunde excavatum. Anthera subterminalis, opercularis, incumbens, obtuse conica v. convexa, antice interdum acuminata, 2-locularis; pollinia 8, in quoque loculo 4, cerea, oblonga v. inferiore breviora, plus minus complanata, apice attenuata v. caudata, acuminibus v. caudiculis granulosis facile extensivis plus minus apice connatis, anthera dehiscente interdum glandulæ rostellii affixis. Capsula oblonga, parva v. majuscula, sæpe nutans.—Herbæ terrestres (v. interdum epiphyticae?), caulibus foliatis brevibus demum sæpe in pseudobulbos incrassatis. Folia pauca, sæpius gemina, ampla, plicato-venosa, in petiolum contracta. Scapi e rhizomate erecti, sæpe elati, sub anthesin sæpe aphylli, basi vaginis plus minus stipati, foliis tardius evolutis. Racemi simplices, laxi v. densiflori. Bractee parvæ v. conspicue ovatæ v. lanceolatæ.

Species ad 40, pleraque Asiaticæ tropicæ, nonnullæ per alias regiones calidas dispersæ nempe in Japonia, insulis maris Pacifici, Nova Caledonia, insulis Mascarensibus, Africa tropica et austro-orientali, America centrali, Mexico et India occidentali obviæ. *Lindl. Gen. et Sp. Orch.* 249; *Fol. Orch.* 1854; *Sert. Orch.* t. 24, 42. *Reichb. f. in Walp. Ann.* vi. 910; *Xen. Orch.* t. 79; *Otia Hamb.* 53; in *Bot. Zeit.* 1878, 74; in *Linnaea* xli. 75; et in *Bonpl.* 1856, 322, 1857, 37. *Labill. Sert. Austr. Caled.* t. 25 (*Limodorum*). *Wight, Ic.* t. 918. 1664, 1751–2 (*hæc sub Cytheride*). *Griff. Ic. Pl. As. t.* 283, 313, 339. *Fitzger. Austral. Orch. cum tab.* 1. *Bot. Mag.* t. 2615, 4541, 4671, 5042, 5375. *Bot. Reg.* t. 720; 1840, t. 55; 1844, t. 37. *Fl. des Serres*, t. 816.

Species a Lindleyo in series 2 distribuuntur *Ghiesbreghtia* calcare nullo v. abbreviato, et *Eucalanthe* calcare elongato, sed distinctio vix definita nec cum habitu nec patria conformis. Species tamen nonnullæ, e.g. *C. densiflora*, *Lindl. Bot. Reg.* t. 1646, *C. curculigoides*, *Lindl. Bot. Reg.* 1847, t. 8, *Bot. Mag.* t. 6104 (*Styloglossum*, Breda), a cæteris differunt racemis densis, sepalis petalisque vix patentibus. Columna supra tubum longiuscule producitur in *C. gracilis*, *Lindl.*; *Bot. Mag.* t. 4714 (analysis erronea) calcare nullo, in *C. brevicornu*. *Lindl. Sert. Orch.* t. 9, calcare brevi, et in *C. densiflora*, *Lindl.*, calcare longiusculo, sed tubus latus ex alis columnæ cum labelli ungue formatus semper adest.

*Limatodes rosea*, *Lindl. in Paxt. Fl. Gard.* iii. 35, t. 81, *Bot. Mag.* t. 5312, est *Calanthis* species vera, *C. vestita* affinis, cum qua facile in hortis formas hybridas producit. *L. gracilis*, *Lindl.*, est *Calanthe gracilis* supra notata. *Limatodes*, Blume, ab auctore ipso ad *Phaium* reducitur.

§1. **Arundina**, Blume, *Bijdr.* 401.—Sepala subæqualia, libera, patentia. Petala sepalis similia v. latiora. Labellum ad basin columnæ erectum, sepalis æquilongum v. brevius, lobis lateralibus columnam amplectentibus, medio latiore patente. Columna longiuscula, erecta, semiteres v. utrinque anguste alata, apoda; clinandrium elevatum, cavum, postice rotundatum, medio dentiferum, antice breviter 2-dentatum. Anthera terminalis v. sub apice lobi postici affixa, opercularis, incumbens, discrete 2-locularis; pollinia 8, in quoque loculo 4, ovoidea, parallele compressa, per paria parum superposita, apicibus appendicula granulosa copiosa v. sæpius parva v. visco parco connexis. Capsula majuscula, oblonga v. fusiformis, erostris.—Herbæ terrestres, erectæ, foliosæ. Caules e rhizomate repente vaginis foliorum obtekti, pseudobulbis 0. Folia plana, angusta v. latiuscula, sessilia, cum vagina articulata. Flores majusculi, in racemum terminalem laxum simplicem v. rarius divisum dispositi. Bractee nunc parvæ nunc pedicello longiores, ante anthesin distiche imbricatæ.

Species ad 5, Indiarum orientalis, Chinæ australis et Archipelagi Malayani incolæ. *Lindl. Gen. et Sp. Orch.* 125. *Reichb. f. in Walp. Ann.* vi. 456. *Wight, Ic.* t. 1661. *Griff. Ic. Pl. As. t.* 314. *Bot. Reg.* 1842, t. 38.

In speciebus typicis flores speciosi, in racemo pauci, bractee parvæ, folia angusta. DILUCHIA, *Lindl. Gen. et Sp. Orch.* 38, *Blume, Orch. Archip. Ind.* t. 8 et t. 5 A, *Reichb. f. Xen. Orch.* ii. 13, t. 105, est species in Archipelago Malayano late dispersa, foliis latis, racemo floribundo, bracteis coriaceis ante anthesin distiche imbricatis, et pro genere a Lindleyo distincta ob clinandrium 3-antheriferum, lobis nempe lateralibus magis evolutis et antheras perfectas sæpe ferentibus, sed ex Blumeo hæc antheræ laterales intermedia minores sunt interdumque imperfectæ v. omnino deficientes, et *Reichb. f. l.c.* genus cum *Arundina* junxit. Florem unicum examinare potuimus qui nec cum analysis Lindleyana nec cum Blumeana exacte convenit, sed evidenter columnæ alæ et antherarum evolutio de flore in florem variant.

62. *Mileanthus*, Presl, *Rel. Hænk.* i. 97. (Evelyna, Pæpp. et Endl. *Nov. Gen. et Sp.* i. 32, t. 56 ad 58.)—Sepala subæqualia, libera, erecta, rigidula. Petala sepalis æquilongia, sæpius angustiora. Labellum basi columnæ affixum, erectum, sepalis æquilongum v. longius, columnam sæpius involvens, ima basi concavum, in cavo callis prominentibus 2 distinctis v. in laminam carnosam connatis instructum, supra cavum sæpius leviter constrictum, nunc lobis lateralibus amplis erectis medio minore patente, nunc lobis parum distinctis late rotundatum, margine integrum v. denticulatum. Columna erecta, semiteres v. medio 2-alata, apoda, interdum antice sub stigmatе callo prominente ex Reichb. f. tardius evoluto instructa; clinandrii dentes interdum longiusculi, erecti, postico minore. Anthera denti postico affixa, opercularis, convexiuscula, leviter incumbens, mox erecta, distincte 2-locularis, loculis indivisis; pollinia 8, in quoque loculo 4, cerea, ovoidea, per paria parum superposita, apicibus visco parco v. appendicula parva granulosa connexa. Capsula breviter oblonga, erecta v. patens.—Herbæ terrestres, nunc humiles multicaules, nunc sæpius elatæ, simplices v. ramosæ, foliosæ. Folia supra vaginam sessilia, plicata, ovato-lanceolata v. linearia. Florum spicæ terminales, nunc densæ capituliformes v. oblongæ bracteis rigidulis imbricatis, nunc laxiores distichæ. Bracteæ rarius floribus distincte breviores.

Species fere 50, Americæ tropicæ a Brasilia usque ad Indiam occidentalem et Americam centralem incolæ. Reichb. f. in Walp. *Ann.* vi. 472; Otia Hamb. 92. Aubl. *Pl. Gui.* t. 320 (*Serapias*). Bot. Mag. t. 5141 (*Evelyna*), 6016.

Reichb. f. l.c. sectiones 2 distinguit: 1. *Cælyna*, callis in basi labelli in laminam depressam coalitis. 2. *Eucelyna*, callis labelli 2 distinctis, characteres differentia nulla quoad habitum comitati. In speciebus plerisque utriusque sectionis spicæ densæ bracteis undique imbricatis. In *Evelyna oligantha*, Pæpp., cum specie affini Spruceana, spica laxa, elongata, floribus plus minus dissitis, bracteis minus conspicuis. In *E. limifolia*, Presl (*Evelyna graminifolia*, Pæpp.), affinisque paucis, flores parvi, pauci, in spica disticha brevi arete conferti.

63. *Lanum*, Lindl. in Hook. *Journ. Bot.* iii. 81 (*Epidendri sect.*).—Sepala æquilonga, subpatentia, posticum liberum incurvum, lateralia latiora, falcata, basi columnæ tubo adnata, mentum breve obliquum formantia. Petala sepalo postico similia nisi angustiora. Labellum basi cum columna in tubum breve connatum, dein erecto-patens, concavum, acuminatum, indivisum. Columna brevis, marginibus membranaceis cum labelli basi in tubum connatis; clinandrium amplum, membranaceum, lobis lateralibus latis, postico parvo. Anthera terminalis, opercularis, incumbens, convexa, 2-locularis; loculis septo transverso v. obliquo 2-locellatis; pollinia 4, cerea, ovoidea, acuta v. acuminata, in locellis superposita, apicibus visco parco granuloso v. polliniorum superiorum in filum extenso connexis. Capsula . . .—Herbæ epiphyticæ, caulibus e rhizomate repente nanis basi vaginatis, in *L. avicula* pseudobulbosis foliis 2 ovatis coronatis, in *L. microphylo* vix v. non incrassatis foliis ∞ distichis recurvo-patentibus. Folia rigida v. carnosula. Pedunculus terminalis, tenuis, in *L. avicula* ramosus, in *L. microphylo* simpliciter racemosus. Flores in utraque specie parvuli, breviter pedicellati, sepalis extus puberulis.

Species 2, altera Brasiliensis, altera Surinamensis, apud Lindl. *Fol. Orch.* sectionem *Epidendri* formantes, Reichenbachio f. in Walp. *Ann.* vi. in sectiones *Aulicum* et *Amphylottium* sejunctæ; perianthii tamen forma et præsertim antheræ structura ab illis *Epidendri* multum discrepant. Benth. in Hook.  *Ic. Pl.* t. 1334, 1335.

64. *Amblostoma*, Scheidw. in Otto et Dietr. *Gartenz.* 1838, 383.—Sepala subæqualia, libera, concava, subpatentia. Petala sepalis angustiora sublongiora, patentissima. Labelli unguis columnæ æquilongus, quacum in urceolum seu cupulam latam connatus; lamina 3-partita, lobis brevibus oblongis; discus ad os urceoli 2-cristatus. Columna brevis, alia cum labelli ungue urceolum formantibus, cæterum apoda; clinandrium breve, lobis lateralibus rotundatis, postico obsoleto. Anthera inter lobos laterales clinandrii terminalis, opercularis, incumbens, parum convexa, transverse oblonga fere reniformis, perfecte et parallele 4-locularis; pollinia 4, cerea, globosa, distincta, inappendiculata, anthera dehiscente per paria visco sat copioso in fila 2 elastice extensa v. connexa

et rostello sæpe affixa. Capsula oblongo-fusiformis, erostris, costis parum prominulis.—Herbæ epiphyticæ, caulibus foliatis basi vaginatis carnosio-incrassatis. Folia angusta, tenuiter coriacea, vaginis appressis. Panicula terminalis, tenuis at rigidula, floribus secus ramos confertim racemosis parvis breviter pedicellatis. Bracteæ minimæ.

Species 3, una Brasiliensis (*Epidendrum tridactyla*, Lindl.), altera Peruviana (*E. micranthum*, Hook.), tertia Boliviana. *Reichb. f. in Walp. Ann.* vi. 485; in *Saund. Ref. Bot.* t. 101; et *Xen. Orch.* iii. 22. Pollinia in *A. micrantho* omnino *Amblostomatis* vidimus, ovoidea, in locellis 4 antheræ reniformis distincta, inappendiculata, visco parco extensivo connexa.

65. *Sceraphyta*, Fisch. et Mey. in *Bull. Scient. Acad. Sc. Petersb.* vii. (1840) 25.—Sepala subæqualia, libera, acuta, subpatentia. Petala anguste linearia, sepalis æquilongâ, patentia. Labelli unguis columnæ æquilongus, quacum in urceolum connatus; lamina late ovata, indivisa, patens; discus ad os urceoli callosus. Columna brevis, alis cum labelli ungue urceolum formantibus, cæterum apoda; clinandrium breve, lobis lateralibus rotundatis, postico obsoleto. Anthera inter lobos laterales terminalis, opercularis, incumbens, subglobosa, dorso crasse carnosâ quasi appendiculata, antice 2-locularis, loculis 2-locellatis; pollinia 4, cerea, ovoideo-globosa, distincta, inappendiculata, anthera dehiscente per paria visco sat copioso in fila 2 elasticæ extensivo connexa, sæpeque rostello affixa. Capsula ovoidea, acuminata, subrostrata, costis parum prominulis.—Herba epiphytica, caulibus foliatis basi vaginatis vix carnosâ. Folia coriacea, oblonga v. latiuscula, vaginis arcte appressis. Panicula terminalis, laxè tenuiterque ramosa, floribus parvulis secus ramos laxè racemosis pedicellatis. Bracteæ parvæ.

Species 1, Indiæ occidentalis. *Lodd. Bot. Cab.* t. 846. *Bot. Mag.* t. 3565 (*Epidendrum diffusum*).

Genus *Amblostomati* valde affine, nec differre videtur nisi labelli et antheræ forma.

66. *Diothonea*, Lindl. in *Hook. Journ. Bot.* i. 12. (Gastropodium, Lindl. in *Ann. Nat. Hist. ser. i.* xv. 107.)—Sepala subæqualia, patentia, lanceolata, posticum liberum, lateralia basi leviter obliqua, cum pede v. basi columnæ mentum breve formantia. Petala sepalis subsimilia. Labellum basi cum columna in cyathum latum apertum v. antice saccatum connatum; lobi laterales ad marginem cyathi breves, erecti, medius basi sigmoideo-inflexus v. subrectus, dein patens, ample obovatus, sepalis longior, integer v. obscure lobatus. Columna brevis, usque ad apicem marginibus membranaceis cum labelli basi in cyathum connata v. supra cyathum brevissime lateque erecta, basi in pedem brevem nunc obscurum cum cyatho continuum producta; clinandrium prominens, membranaceum, obliquum, integrum. Anthera intra marginem clinandrii affixa, opercularis, incumbens, subreniformis, leviter convexa, discrete 2-locularis, loculis septo longitudinali vix perfecto 2-locellatis; pollinia 4, cerea, ovoidea, vix compressa, 1-seriata, inappendiculata, libera v. apicibus visco parco in filum extensivo coherentia. Capsula . . .—Herbæ epiphyticæ, non pseudobulbosæ, sæpe ramosæ, foliosæ, ramis vaginis rigidulis obtectis. Folia coriacea, angusta v. ovata, cum vagina articulata. Flores mediocres v. majusculi, in racemo laxo terminali sæpius recurvo longiuscule pedicellati. Bracteæ parvæ, lineares.

Species 4, Andium Columbiæ et Peruviae incolæ. *Reichb. f. in Walp. Ann.* vi. 446, et in *Linnaea* xli. 39.

*HEMISCLERIA*, Lindl. *Fol. Orch.* 1853, habitu characteribusque omnino *Diothonea*, a *D. lloensi* differt floribus minoribus, et columna supra cyathum brevissime producta. Anthera et pollinia ad amussim conveniunt.

67. *Stenoglossum*, H. B. et K. *Nov. Gen. et Sp.* i. 355, t. 87.—Sepala subæqualia, erecto-patentia, angusta, posticum liberum, lateralia basi leviter obliqua, cum pede columnæ mentum breve formantia. Petala sepalis similia v. angustiora. Labellum basi cum columna in cyathum latum apertum connatum, lobi laterales a marginibus sinuatis cyathi non distincti, medius patens, anguste linearis, integer. Columna brevis, usque ad apicem marginibus membranaceis cum labelli basi in cyathum connata, basi in pedem

brevem cum cyatho continuum producta; clinandrium prominens, membranaceum, cum margine sinuato cyathi continuum. Anthera intra marginem clinandrii affixa, opercularis, incumbens, subreniformis, convexa, discrete 2-locularis, loculis septo longitudinali 2-locellatis; pollinia 4, cerea, ovoidea, vix compressa, 1-seriata, inappendiculata, libera v. apicibus visco parco coherentia. Capsula . . .—Herba epiphytica, non pseudobulbosa, subramosa, foliosa, ramis vaginis rigidulis obtectis. Folia coriacea, angusta. Flores quam in *Diothonea* bene minores, in racemo terminali recurvo breviter pedicellati. Bracteæ parvæ.

Species 1, Andium Americæ tropicæ incola. *Lindl. Gen. et Sp. Orch.* 62.

Reichenbach f. in Walp. Ann. vi. 347, speciem Lindleyanam (*Hook. Ic. Pl.* t. 51) rite ad Humboldtianam refert, sed ad *Epidendrum* transfert a quo nobis distinctissima videtur cyatho columnari anthera et polliniis. His tamen characteribus uti habitu ad amussim *Diothoneæ* convenit, a qua vix differt floribus minoribus minus apertis et labelli forma.

68. *Hormidium*, *Lindl. in Hook. Journ. Bot.* iii. 81 (*Epidendri sect.*).—Sepala æquilongia, suberecta v. demum patentia, posticum liberum, lateralia latiora, basi cyatho columnari adnata mentum breve formantia. Petala sepalo postico similia v. angustissima. Labellum basi cum columna in cyathum seu urceolum latum connatum, lamina erecto-patente 3-loba v. indivisa. Columna brevis, marginibus dilatatis usque ad apicem cum labello in cyathum connatis; clinandrium breve, truncatum. Anthera terminalis, opercularis, incumbens, subreniformis, parallele 4-locularis (2-locularis loculis 2-locellatis); pollinia 4, cerea, ovoidea, vix leviter compressa, distincta, inappendiculata, anthera dehiscente apicibus visco parco connexa. Capsula ovoidea v. subglobosa, erostris, costis prominentibus v. anguste alatis.—Herbæ epiphytica, nanæ, pseudobulbis secus rhizoma parvis confertis vaginis membranaceis 2-3 stipatis apice 1-2-foliatis. Folia parva, coriacea v. carnosula. Flores parvi, nunc minimi v. in *H. Sophronite* majusculi, in fasciculo terminali breviter pedicellati v. in racemulis brevibus laxis subfasciculatis pauci, fasciculo interdum ad florem unicum bracteis stipatum reducto.

Species ad 27, Americæ tropicæ a Brasilia usque ad Cubam et Mexicum incolæ. *Lindl. Fol. Orch. Epidendr.* 27. *Hook. Journ. Bot.* i. t. 118. *Bot. Mag. t.* 3233, 6314. *Pæpp. et Endl. Nov. Gen. et Sp. t.* 101 (*omnes sub Epidendro*). *Brongn. in Duperr. Voy. Bot. t.* 42 A (*Cælogyne*).

Reichb. f. in Walp. Ann. vi. 346 species 4 Lindleyanas enumerat et sectionem ad *Auliseam* refert, sed characteres florales et pollinia iis *Diothoneæ* affiniore, habitus peculiaris. Pollinia in solis *H. serpente* et *H. Sophronite* bene observavimus, perianthium specierum fere omnium. Speciebus l. c. enumeratis addendæ videntur *Epidendrum leiochilum*, Reichb. f. e Cuba, floribus minutissimis in pedunculis pluribus, et *E. pulchellum*, A. Rich., a Mexico, et *E. Sophronitis*, Reichb. f. Xen. Orch. t. 167, floribus majusculis.

69. *Hexisia*, *Lindl. in Hook. Journ. Bot.* i. 7. (*Euothonea*, Reichb. f. in *Bot. Zeit.* 1852, 772).—Sepala subæquilongia, angusta, ima basi erecta, cæterum patentia, posticum liberum, lateralia basi vix latiora in mentum brevissimum deorsum producta. Petala sepalo postico subsimilia. Labellum erectum, basi cum columna in cyathum antice vix gibbosum connatum, supra cyathum flexuoso-inflexum; lobi laterales obscuri; medius lanceolatus, patens, sepala æquans. Columna brevis, ultra medium cum labello in cyathum connata; clinandrium expansum, 3-lobum, lobis lateralibus erectis postico longioribus. Anthera lobo postico affixa, opercularis, incumbens, semiglobosa, 2-locularis, loculis 2-locellatis; pollinia 4, cerea, ovoidea, collateralia, non compressa, libera v. visco perparco connexa. Capsula . . .—Herbæ epiphytica, paucifoliata, caulibus subramosis teretibus v. angulatis internodio summo quotannis sæpius incrassato v. longe pseudobulboso; innovationes ad apicem pseudobulbi solitarii v. gemini, basi squamis imbricatis obtekti apice sub racemo 1-2-foliati. Folia angusta, rigidula. Racemi terminales, pauciflori, pedunculo brevi squamis imbricatis coriaceis obtecto; pedicelli squamis sæpius longiores. Flores mediocres, aurantiaci v. purpurei.

Species 3 v. 4, per Americam tropicam a Brasilia usque ad Mexicum dispersa. Reichb. f. in Walp. Ann. vi. 469; et in *Linnaea* xli. 131. *Lindl. Sert. Orch. t.* 40, f. 1 (*Diothonea*).

70. *Scaphyglottis*, Poepp. et Endl. Nov. Gen. et Sp. i. 58, t. 97 ad 100. (Cladobium, Lindl. Introd. Nat. Syst. ed. 2, 446.)—Sepala subæquilonga, erecta v. subpatentia, lateralia postico latiora, basi sæpe in mentum breve cum pede columnæ connata. Petala sepalo postico similia nisi paullo minora. Labellum cum pede columnæ articulum v. continuum, basi contractum, incumbens, dein erectum, apice patens, indivisum v. obscure lobatum. Columna longiuscula, erecta, semiteres, apice 2-auriculata, basi in pedem brevem sæpe membranaceo-dilatatum producta; clinandrium parum prominens, integrum v. antice 2-dentatum. Anthera terminalis, opercularis, incumbens, 2-locularis; pollinia 4, cerea, in quoque loculo 2, ovoidea v. globosa, haud compressa, inappendiculata, libera v. vix visco parco connexa. Capsula . . .—Herbæ epiphyticæ, ramosæ; rami novelli quotannis ab apice rami annotini solitarii v. gemini basi vaginis paleaceis stipati, apice 2-foliati, demum carnosio-incrassati, pseudobulbos lineares v. anguste fusiformes formantes. Folia angusta nunc linearia, coriacea. Flores inter folia ad basin innovationum gemini v. pauci fasciculati, parvi, pedicellis basi bracteatis.

Species ad 8, Americæ tropicæ a Brasiliâ usque ad Mexicum incolæ. Hook. Ic. Pl. t. 313, 317. Bot. Mag. t. 4071. Bot. Reg. t. 1901. Reichb. f. Xen. Orch. t. 200 (Ponera).

Genus a Reichenbachio in Walp. Ann. vi. 452 ad *Ponera* refertur, nobis *Hexadesmia* affinius videtur. A. Poeppigio cum *Dichæa* comparatur a qua distinguitur columna late alata, quod tamen in iconibus suis in sola *S. parviflora*, t. 97, delineatur, et hæc species cum *S. pendula*, t. 98, ab omnibus a nobis visis differre videntur pseudobulbis secus caulem hinc inde crassis ovoideis 1-2-phyllis.

71. *Hexadesmia*, A. Brongn. in Ann. Sc. Nat. ser. 2, xvii. 44.—Sepala subæquilonga, erecta v. subpatentia, posticum liberum, lateralia paullo latiora, basi cum pede columnæ deorsum in mentum producta. Petala sepalo postico similia v. minora. Labellum cum pede columnæ articulum v. continuum, basi contractum, incumbens, superne patens, indivisum v. breviter 2-lobum. Columna longiuscula, erecta, semiteres, apice clavata, exalata, basi in pedem deflexum sæpe membranaceo-dilatatum producta; clinandrium 3-lobum, lobo postico inflexo, lateralibus erectis. Anthera terminalis, opercularis, incumbens, 2-locularis, pollinia 6, cerea, ovoidea, haud compressa, apicibus acutis v. attenuatis visco parco connexa, quorum 4 (in quoque loculo 2), collateralia, tertium ejuſve loculi iis superpositum, omnia septis imperfectis separata. Capsula parva, ovoidea v. oblonga, erostis.—Herbæ epiphyticæ, ramosæ; rami novelli quotannis ad apicem rami annotini solitarii v. gemini, basi vaginis paleaceis imbricatis stipati, apice 2-foliati, internodio superiore sub foliis sæpius elongato carnosio valde incrassato v. pseudobulboso. Folia carnosâ. Flores inter folia ad basin innovationum fasciculati v. breviter denseque racemosi, parvi, bracteis sæpe paleaceis.

Species 4 v. 5, Mexici, Americæ centralis, Indiæ occidentalis et Brasiliæ incolæ. Reichb. f. in Walp. Ann. vi. 468; Xen. Orch. t. 59; Orch. Centr. Amer. 89; et in Linnæa xli. 84. Saund. Ref. Bot. t. 92, 113.

72. *Octadesmia*, Benth. in Journ. Linn. Soc. xviii. 311.—Sepala subæquilonga, subpatentia, posticum angustum liberum, lateralia latiora subfalcata, basi in mentum parum prominulum sub labello connexa. Petala sepalo postico parum latiora. Labellum a basi columnæ suberectum, liberum, oblongum, lobis lateralibus parum prominulis, margine crenulatum, sepalis subbrevis. Columna longiuscula, leviter incurva, semiteres, exalata; clinandrium parum prominens, obscure 3-lobum. Anthera terminalis, opercularis, incumbens, semi-globosa, 2-locularis, loculis obscure 2-locellatis. Pollinia 8, in quoque loculo 4, sub-2-seriata, anticis paullo longioribus, apicibus visco parco connexa. Capsula oblonga v. elongato-fusiformis, in rostrum breve contracta, erectiuscula v. nutans.—Herbæ epiphyticæ, caulibus simplicibus foliatis. Folia lineari-lanceolata, disticha, rigidula nec carnosâ. Pedunculus terminalis, simplex v. parce ramosus, ramis dissite paucifloris. Flores mediocres, breviter pedicellati. Bractææ breves, basi vaginantes.

Species 3, ins. Jamaicæ et San Domingo incolæ: 1. *O. montana*, Benth. (*Octomeria serratifolia*, Hook. Bot. Mag. t. 2823; *Tetranthera montana*, Griseb. Fl. Brit. W. Ind. 622; *Bletia montana*, Reichb. f. in Walp. Ann. vi. 445), foliis pluribus lineari-lanceolatis, racemo plurifloro. 2. *O. elata*,

Benth., *O. montana* subsimilis sed multo validior (6-pedalis), foliis lato-lanceolatis, racemo plurifloro bracteis latis laxis rigidis; in monte Moses Jamaicae legit Syme. 3 *O. monophylla*, Benth. (*Trigonidium monophyllum*, Griseb. Fl. Brit. W. Ind. 629), caule 1-foliato,  $\infty$ -vaginato, 1-2-floro. Perianthium majus et magis expansum quam in præcedentibus, sed florum structura eadem, nec generice separanda.

73. ? *Alamania*, Llav. et Lex. Nov. Veg. Descr. ii. Orch. Opusc. 31.—Sepala subæqualia, erecto-patentia, angusta. Petala sepalis subsimilia. Labellum basi cum columna connatum, erectum, lamina sepalis subsimili, lobis lateralibus parvis dentiformibus. Columna ad medium cum labelli ungue in tubum connata, superne libera, erecta, semiteres, exalata; clinandri lobus posticus latus, obtusus, oblique truncatus, laterales erecti, falcato-ligulati. Anthera terminalis, opercularis, incumbens, dorso obtuse crasso-conica, loculis parallelis septo longitudinali divisus quasi 4-locularis; pollinia 4, lato-ovata, parallele compressa, utrinque obtusa, inappendiculata v. vix granulis paucis connexa. Ovarium in collum longiusculum superne latius productum. Capsula . . .—Herba epiphytica, caulibus in rhizomate repente nanis leviter incrassatis vix pseudobulbosis apice 2-foliatis. Scapi floridi e rhizomate aphylli, vaginis laxè imbricatis membranaceo-scariosis in bracteas abeuntibus obtecti. Racemus brevis, simplex, terminalis, densiflorus. Flores mediocres, conferti, pedicellis longiusculis tenuibus. Bracteæ angustæ, scariosæ.

Species 1, Mexicana. Lindl. Gen. et Sp. Orch. 153. Characterem ex specimine Hartwegiano in Herb. Lindl. confecimus. Character auctorum tamen vix convenit nisi 'Nectarium verum tubulatum infra labelli insertionem productum' partem columnæ cum labello connatam indicet et ovarii collum pro 'segmentis inferioribus basi connatis calcar referentibus' descriptum. Præterea pseudobulbus apice 2-foliatus et racemifer dicitur dum in specimine Herb. Lindl. scapi omnes aphylli, pseudobulbis 2-foliatis omnino ananthis. An genus potius ad *Dendrobias* juxta *Bulbophyllum* amandandum?

74. *Pleuranthium*, Lindl. in Hook. Journ. Bot. iii. 81 (*Epidendri* sect.).—Sepala libera, subæquilonga, patentia, lateralia basi obliqua, brevissime connata. Petala sepalis subsimilia. Labelli unguis erectus, cum columna connatus, lamina patens indivisa. Columna fere ad apicem cum labello connata. Anthera et pollinia *Epidendri*.—Caules elongati, foliati, nec carnosì, nec pseudobulbosi. Folia disticha, vaginis caulem obtegentibus. Racemi ad axillas subsessiles, breves, fasciculiformes, pauciflori v. ad florem unicum reducti. Flores parvuli, breviter pedicellati.

Species 5 v. 6, quarum 1 Brasiliæ, 2 Columbiæ v. Peruviane, 1 Guatemalensis, 1 Cubensis. (*Ponera adendrobium*, Reichb. f. in Flora, 1865, 278). Genus adhuc dubium, *Epidendro* et *Ponera* affine. Habitus et inflorescentia a priori valde discrepant et sepala lateralia basi mentum breve formare videntur minus tamen prominens quam in *Ponera*. Flores in speciminibus nostris rite examinare nequimus, et genus v. sectio ulterius scrutandum.

75. *Diacrium*, Lindl. in Hook. Journ. Bot. iii. 81 (*Epidendri* sect.).—Sepala subæqualia, libera, patentia, crassiuscule petaloidea. Petala sepalis subsimilia. Labellum a basi columnæ patens, sepalis subæquilongum; lobi laterales patentes v. reflexi, medius longius; discus inter lobos laterales elevatus, supra 2-cornutus, cornubus subtus excavatis. Columna brevis, lata, leviter incurva, in alas angustas crassiusculas expansa; clinandrium obliquum, obtusum. Anthera terminalis, opercularis, incumbens, semiglobosa, 2-locularis, loculis septo longitudinali 2-locellatis; pollinia 4, cerea, lato-ovata, æqualia, a latere parallele compressa, 1-seriata, in quoque loculo appendicula granuloso-viscosa lineari a basi marginibus applicita connexa. Capsula . . .—Herbæ epiphytica, caule carnosio vix in pseudobulbum elongatum incrassato. Folia pauca, ad apicem conferta, rigide coriacea subcarnosa, cum vagina brevi articulata. Podunculus terminalis, simplex, vaginis paleaceis distantibus arcte appressis. Flores speciosi, laxè racemosi, breviter pedicellati. Bracteæ parvæ.

Species descriptæ 4, Guianæ Americæ centralis et Mexici incolæ, inter se evidenter valde affines. Reichb. f. in Walp. Ann. vi. 345. Bot. Mag. t. 3332 (omnes sub *Epidendro*).

76. *Isochilus*, R. Br. in *Ait. Hort. Kew. ed. 2*, v. 209.—Sepala æqualia, erecta, libera, carinato-concava, basi interdum subsaccata. Petala sepalis æquilongia, plana. Labellum petalis æquale, et cum iis ad basin columnæ affixum sed infra medium contractum et leviter sigmoideo-flexuosum, medium versus in lobos laterales brevissimos dilatatum, ceterum integrum. Columna erecta, longiuscula, semiteres, exalata, apice ad latera stigmatis in acumina 2 erecta producta, apoda; clinandrium parum prominens, dente postico antherifero brevi. Anthera terminalis, opercularis, incumbens, convexa, distincte 2-locularis; loculis septo longitudinali imperfecto, 2-locellatis; pollinia 4, cerea, in quoque loculo 2, æqualia, ovoideo-oblonga, parallela compressa, erecta, appendicula granuloso-viscosa laminiformi a basi ascendente pollinii incumbente. Capsula globosa v. ovoidea, costis parum prominulis.—Caulis e rhizomate repente vaginis oblecto erecti, foliorum vaginis oblecti, pseudobulbis 0. Folia disticha, patentia, linearia v. lanceolata, rigidule herbacea, sæpius obtusa v. retusa. Flores mediocres, rosei v. rubidi, in racemum terminalem densum unilateralem dispositi, breviter pedicellati v. subsessiles. Bractee herbaceæ, concavæ, flore nullo breviores.

Species 4 v. 5. Americæ calidioris a Brasilia usque ad Mexicum et Indiam occidentalem incolæ. *Reichb. f. in Walp. Ann.* vi. 447. *Jacq. Stirp. Amer.* t. 131, f. 1 (*Epidendrum*). *Andr. Bot. Rep.* t. 445 (*Epidendrum*). *Bot. Reg.* t. 745. *Lodd. Bot. Cab.* t. 1341.

Species a Lindley Gen. et Sp. Orch. 112, *I. linearis*, Br., adsociatæ tardius ab auctore ipso v. a Reichenbachio rite inter genera varia distributa sunt. Hic auctor pollinia 6 vidit in *Isochilo linearis*, antheræ loculis 3-locellatis, quod tamen nec in speciminibus vivis nec in siccis vidimus.

77. *Ponera*, Lindl. Gen. et Sp. Orch. 113; *Bot. Reg.* 1842, *Misc.* 19. (*Nemaconia*, Knowles et Weste. *Fl. Cab.* ii. 127.)—Sepala subæquilongia, posticum liberum, lateralia multo latiora, basi pedi columnæ adnata, mentum sub labello formantia. Petala sepalis postico latiora. Labellum ad apicem pedis columnæ subarticulatum, ungue incumbente, lamina recurvo-patente obovata integra v. dilatato-2-loba. Columna brevis, semiteres, incurva, exalata, basi in pedem producta; clinandrium obliquum, breve v. postice productum incurvumque, antice interdum 2-dentatum. Anthera terminalis, opercularis, incumbens, convexa, 2-locularis, loculis septo longitudinali sub-2-locellatis; pollinia 4, cerea, late ovata, æqualia, a latere parallela compressa, 1-seriata, in quoque loculo appendicula granuloso-viscosa, a basi marginibus applicita connexa. Capsula subglobosa ovoidea v. oblonga, erostris, costis obtusis carnosulis.—Herbæ epiphyticæ, caulibus foliosis e rhizomate repente elongatis nunc longissimis subramosis. Folia alterna, fere graminea, vaginis arcte appressis persistentibus. Flores parvuli, in racemis brevibus fasciculiformibus pauci, breviter pedicellati. Racemi subsessiles, unus sæpius ad apicem innovationis foliati, cum pluribus ad nodos defoliatos caulis annotini. Bractee breves, paleaceæ, caduæ.

Species 4 v. 5, Mexici et Americæ centralis incolæ. *Reichb. f. in Walp. Ann.* vi. 450 (quoad species bulbosas); *Xen. Orch.* t. 19; in *Saund. Ref. Bot.* t. 93; et in *Linnaea* xli. 39.

Genus *Epidendro* valde affine, differt columna in pedem producta et labelli insertionem. Antheræ et pollinia omnino *Epidendri*. Inflorescentia in ramulo hornotino terminalis ad fasciculum sessilem paleaceo-bracteatum reducta ut in *E. equitante*, sed annis sequentibus varie irregularis evadit, innovationibus nunc caulem continuantibus nunc ramulos laterales formantibus. In specie typica ramulus terminalis v. ramuli plures superiores plurifoliati sunt, et sæpius racemuli plurimi aphylli ad nodos defoliatos rami annotini v. vetustioris nascuntur. In *TETRAGAMSTO*, *Reichb. f. in Bonpl.* 1854, 21, saltem in specie typica *T. modesto*, *Reichb. f. l. c.*, et *Xen. Orch.* t. 19, quam a *Ponera* generice distinguere nequimus, ramulus terminalis apice 2-foliatus est et florum fasciculus inter folia more generis sessilis est sed innovatione inter folia sub fasciculo mox evoluto lateralis evadit, folia pseudo-opposita per plures annos persistentia, et caulis quasi articulatus apparet, foliorum paribus cum inflorescentia sessili ad articulationes sitis. In aliis speciebus quarum paucas tantum vidimus vegetatio plus minus typi uni alterive accedere videtur. *P. adendrobium*, *Reichb. f.*, racemulis omnibus axillaribus potius *Pleuranthio* referenda videtur sed flores in speciminibus nostris jam emareidi. *Scaphyglottis* a Reichenbachio ad *Ponera* relata longius distare videtur antheris pollinibus aliisque notis.

78. *Pinellia*, *Lindl. Fol. Orch.* 1853.—Sepala subæqualia, petaloidea, libera, patula, lateralibus basi inæqualia. Petala sepalis conformia at minora. Labellum petalis majus, indivisum, cum columna continuum eique basi adnatum. Columna nana, rectiuscula, fere horizontalis, margine petaloidea. Anthera columnæ apice adnata, carnosa, 4-locularis; pollinia 4, oblonga, collateralia, 1-seriata, appendicula laminiformi 2-partita colligata.—Herba nana, epiphytica, pseudobulbis apice 1-foliatis. Folium carnosum, ovato-lanceolatum, ex icone acuminatum, ex descriptione 3-dentatum. Pedunculus terminalis, filiformis, 1-florus.

Species 1, Brasiliensis, non nisi ex icone notisque Pinelianis in herb. Lindl. nobis nota; a Reichb. f. in Walp. Ann. vi. 204, ad *Restrepia* refertur, sed pseudobulbi, labellum basi columnæ adnatum, et pollinia mediante lamina connata omnino *Cattleyæ*, abhorrent; planta potius *Sophraniti* affinis videtur, a qua differt pollinibus 4 nec 8.

79. *Hartwegia*, *Lindl. Bot. Reg. sub t.* 1970.—Sepala subæquilonga, erecta, conniventia, posticum liberum, lateralibus multo latiora, basi pedi columnæ adnata, mentum sub labello formantia. Petala sepalis minora. Labellum basi ventricosum pedique columnæ adnatum, ungue lato concavo erecto marginibus columnæ alte adnatis; lamina patens, basi contracta, abrupte recurva, dein ascendens, ovata, integra, facie basi transverse callosa. Columna supra unguem labelli breviter producta, antice concava, anguste 2-alata, alis apice in aurículas rotundatas erectas productis; clinandrium postice breviter productum. Anthera opercularis, incumbens, late semiglobosa, 2-locularis; pollinia 4, cerea, late ovata, æqualia, a latere parallela compressa, 1-seriata, in quoque loculo appendicula lineari granuloso-viscosa a basi marginibus applicita connexa. Capsula . . . —Herba epiphytica, caule e rhizomate repente erecto, 1-foliato, supra folium longe scapiformi, vaginis pluribus arcte appressis. Folium subsessile, coriaceo-carnosum, anguste oblongum v. fere lineare. Flores mediocres, in racemo terminali brevi denso conferti, breviter pedicellati, addito interdum racemo altero sessili a terminali distante. Bractee parvae, arcte approximatae.

Species 1, Mexici et Americæ centralis incola. *Reichb. f. in Saund. Ref. Bot. t.* 94.

Genus *Epidendro* et *Ponera* affine. Habitus *Epidendri* sect. *Amphiglottis*, sed differt labello basi saccato intra sepalorum mentum ei *Ponera* subsimile formante. Habitu a *Ponera* longe recedit ut et labello columnæ alte adnato.

80. *Epidendrum*, *Linn. Gen. n.* 1016, *pro parte*.—Sepala libera, æqualia, patentia v. reflexa v. rarius suberecta. Petala sepalis subsimilia v. rarius multo angustiora. Labelli unguis erectus, columnæ appressus et cum eo plus minus in tubum connatus; lobi laterales obsoleti v. rarius dilatati columnam amplectentes; lamina patens, indivisa v. 3-fida; discus 2-callosus v. varie laminatus v. callosus. Columna sæpius angusta usque ad apicem ungui labelli adnata, interdum apice libera, semiteres v. rarius 2-alata v. 2-auriculata; clinandrium sæpius breve, lobis lateralibus sæpius rotundatis postico obsoleto, interdum magis evolutum membranaceum, lacero-fimbriatum. Anthera terminalis, opercularis, incumbens, convexa v. semiglobosa, distincte 2-locularis, loculis septo longitudinali 2-locellatis; pollinia 4, cerea, ovata v. lata, æqualia a latere parallela compressa, 1-seriata, in quoque loculo appendicula granuloso-viscosa laminiformi v. lineari a basi marginibus applicita connexa. Capsula ovoidea v. oblonga, crostris v. rostrata, costis sæpe valde prominentibus angulata v. interdum alata. —Herbæ epiphyticae, caulibus foliatis nunc carnosis v. demum in pseudobulbum incrassatis, nunc tenuioribus interdumque ramosis. Folia coriacea v. rarius graminea. Pedunculus (excepto sect. *Psilanthemo*) in caule foliato terminalis, simplex v. paniculato-ramosus. Flores mediocres v. speciosi, rarius parvuli, secus rhachin simplicem v. ramos panicula racemosi, breviter pedicellati, bracteis parvis v. angustis, rarius in racemo brevissimo sessili conferti, bracteis palaceis subimbricatis.

Species descriptæ ultra 400, per Americam tropicam late dispersæ usque ad civitates australes Americæ borealis parce extensæ, nonnullæ tamen ad varietates hortenses reducendæ. *Lindl.*

*Gen. et Sp. Orch.* 96; *Fol. Orch.* 1853 (excl. sect. *Pleuranthio*). *Reichb. f. in Walp. Ann.* vi. 309; *Xen. Orch.* ii. 27, iii. 22 (excl. *Cattleyis aliisque*); *Otia Hamb.* 10, 91; *Orch. Centr. Amer.* 81; in *Flora*, 1865, 277; et in *Linnaea* xli. 6, 36, 78, 112.

Genus apud Linnæum species fere omnes Orchidearum epiphyticarum ei notarum inclusit, a Swartzio bene ad species Americanas columna cum labelli ungue connata limitatum fuit, cujus sententiam secuti sunt fere omnes auctores recentiores, speciebus paucis pro generibus distinctis separatis. Reichenbach fl. tamen genera plurima a cæteris auctoribus recepta, inclusa *Cattleya* labello ima basi libero, cum *Epidendro* coadunavit, sed character generis sic compositi adhuc ineditus remanet, et nobis parum distinctus videtur, potius species omnes excludimus labello a basi libero, v. polliniis non compressis distinctis inappendiculatis, v. inflorescentia laterali.

Ad species ordinandas Lindley 12 proposuit sectiones; ex his tamen 4, *Diacrium* labello a basi patente, *Hormidium* et *Lanum* polliniis non compressis distinctis inappendiculatis, et *Pleuranthium* inflorescentia constanter laterali nobis pro generibus propriis admittenda videntur. *Epicladium* ad *E. aurantiacum*, Batem. Orch. Mex. et Guatem. t. 12, Regel Gartenfl. t. 158, characteres potius *Cattleyæ* ostendit, a qua vix nisi floribus minoribus distinguitur. *E. Boothianum*, a Lindley in *Epicladio* inclusum, est potius sectionis *Encyclii* species, *E. pterocarpum* quam maxime affinis. Cætera sectiones sequenti modo ordinandæ videntur:—

1. *Barkeria*. Caulis nunc vix carnoso-incrassatus, nunc pseudobulbum anguste fusiformem formans, superne 2-4-foliatus. Columna basi brevissime v. rarius fere ad medium cum labello connata, cæterum ei appressa distincte sæpeque latiusculo 2-alata. Species paucæ Mexicanæ v. Centro-americanæ. *BARKERIA*, Knowles et Weste. *Fl. Cub.* ii. 7, t. 49. *Bot. Mag.* t. 4094, 4784. Columna in specie typica *B. elegans*, Kn. et Weste., vix brevissime, in *B. spectabili* evidentius cum labello connata; in *E. Skinneri*, Lindl. Bot. Reg. t. 1881, Batem. Orch. Mex. et Guat. t. 33, Bot. Mag. t. 3951, et in *B. Lindleyana*, Batem. Orch. Mex. et Guat. t. 28, Bot. Mag. t. 6098, columnæ pars adnata parte libera 2-alata parum brevior.

2. *Encyclia*. Caulis in pseudobulbum nunc ovoideum v. plano-compressum nunc elongato-fusiformem incrassatus, superne 1-2- rarius 3-foliatus. Columna basi brevissime v. infra medium cum labello connata, superne libera, ei appressa, nec (tanquam nobis nota) in alas distinctas dilatata. Species numerosæ a Lindley in series sequentes distributæ:—

a. *Holochila*. Labellum integerrimum. Lindl. *Sert. Orch.* t. 45. *Bot. Reg.* 1840, t. 35. *Bot. Mag.* t. 4107, 5336. 5664. *Reichb. f. in Saund. Ref. Bot.* t. 87.

DINEMA, Lindl. *Gen. et Sp. Orch.* 111, pro genere propositum fuit ad *E. polybulbum*, Sw.; Hook. *Exot. Fl.* t. 112, Bot. Mag. t. 4067, quæ species Mexicana et Jamaicensis, insignis pseudobulbis in rhizomate repente numerosis 2-foliatis pedunculo vaginis paleaceis stipato 1-floro, clinandrii lobis anticis longe ligulatis. Habitus ei *Hormidii* accedit sed anthera omnino *Epidendri*. *Dinema paleacea*, Lindl., est *Epidendrum auritum*, Lindl., pedunculo pariter vaginis paleaceis stipato sed longiore 2-4-floro, clinandrium postice elongatum incurvum; anthera dorso insigniter conico-cristata.

b. *Sarcocchila*. Labellum crassiusculum, breviter dentatum. Flores parvi, paniculati, primo aspectu iis *Amblostomatibus* accedentes, sed anthera et pollinia omnino *Epidendri*. Huc pertinent *E. glaucum*, Lindl. (*PROSTHECHEA*, Knowles et Weste. *Fl. Cub.* ii. 111, nomen in *ERITHECIUM mutatum* *ibid.* 167, t. 87), et *E. ochraceum*, Lindl. Bot. Reg. 1838, t. 26, *Saund. Ref. Bot.* t. 88.

c. *Hymenochila*. Labellum 3-lobum, petaloideum, lobis lateralibus in paucis speciebus (*Sarcocchila*, Lindl.) rotundatis in cæteris brevibus. *A. Rich. Fl. Cub.* t. 75 ad 80. Batem. Orch. Mex. et Guatem. t. 10, 17, 18. *Red. Lil.* t. 84. *DC. Pl. Rar. Hort. Gen.* Not. viii. t. 3. *Link et Otto, Ic. Pl. Rar.* t. 12. Lindl. *Sert. Orch.* t. 46. *Hook. Journ. Bot.* iii. t. 10. *Ic. Pl.* t. 347. *Bot. Mag.* t. 3534, 3557, 3631, 3638, 3765, 3885, 3898, 4572, 4606, 5491. *Bot. Reg.* t. 1415, 1623, 1765, 1879, 1814, t. 34 et 51, 1847, t. 35, 50, et 53. Lindl. et Paxt. *Fl. Gard.* t. 30. *Lodd. Bot. Cab.* t. 1084, 1556 (*Macradenia*). *Reichb. f. Xen. Orch.* t. 51, 56, 57; et in *Saund. Ref. Bot.* t. 86, 89, 90, 111. *ENCYCLIA*, Hook. Bot. Mag. t. 2831, 3013.

3. *Adiscum* (incluso *Osmophyge*). Caulis in pseudobulbum sæpius elongato-fusiformem plus minus incrassatus, superne 1-2- (rarius 3-)foliatus. Columna usque ad apicem labello adnata, v. vix apice brevissime libera.

a. *Schistochila*. Labellum 3-partitum v. plus minus 3-lobum. *Red. Lil.* t. 82. Batem. Orch. Mex. et Guatem. t. 25, 32. *Bot. Mag.* t. 463, 3778. *Bot. Reg.* t. 783, 784, 1870. Lindl. in Paxt. *Fl. Gard.* ii. f. 215. *ATLANTA*, Salish, in *Trans. Hort. Soc.* i. 294, absque char.

b. *Holochila* (*Osmophyta*, Lindl.). Labellum integerrimum. *Pæpp. et Endl. Nov. Gen. et Sp.* t. 102. *Jacq. Ic. Rar. t.* 605. *Link Kl. et Otto, Ic. Pl. Rar. t.* 36. *Andr. Bot. Rep. t.* 13, 645. *Bot. Mag. t.* 152, 572, 1669, 3151, 3595. *Bot. Reg. t.* 1898; 1839, t. 11; 1840, t. 6; 1842, t. 50; 1844, t. 45. *EPIDENDRUM*, *Salisb. in Trans. Hort. Soc. i.* 293. *ANACHEILUM*, *Hoffmans. ex Linnaea xvi. Litt. Ber.* 229.

4. *Euepidendrum*. Caules foliati non pseudobulbosi. Columna usque ad apicem labelli ungui adnata v. vix apice brevissime libera. Sectio vasta a Lindleyo in tres divisa. *Spathium* pedunculo basi vagina spathacea incluso. *Amphiglottium*, pedunculo sæpius elongato vaginis pluribus appressis instructo et *Euepidendrum*, pedunculo sub inflorescentia brevi nudo v. subnudo. Plures tamen species sub quaque sectione enumeratæ cum charactero sectionali male conveniunt et sepe vinculo nullo naturali connectuntur. Reichenbach f. divisionem meliorem proposuit ad inflorescentiam 1 umbellatam (v. ad florem unicum reductam) 2 racemosam, et 3 paniculatam, sed species adhuc ad hanc normam non ordinavit. Nos series plures sat naturales vidimus sed, speciebus pluribus adhuc imperfecte notis, limitibus certis definire non audemus. Sequentes insigniores sunt.

a. *Spathaceæ*. Racemus simplex, erectus, floribundus, pedunculo basi vagina spathiformi sæpius ampla coriacea incluso. Huc species Lindleyanæ n. 135 ad 153 exclusis tamen *E. cornuto* et *E. Klotzschiano* ad *Nutantes* et *E. tenello* et *E. parvifloro* ad *Tenuifolias* transferendis. *Pæpp. et Endl. Nov. Gen. et Sp. t.* 114 (*Encyclia*). *Bot. Mag. t.* 6094, 6145. *Bot. Reg. t.* 1867. *Reg. Gartenfl. t.* 69. *Reichb. f. Xen. Orch. t.* 149.

b. *Subumbellatæ*. Racemus simplex, abbreviatus, floribus paucis v. ad unicum reductis sæpius majusculis bene pedicellatis, pedunculo communi brevi intra vaginam spathiformem incluso v. nudo. Huc species Lindleyanæ 154 ad 159 et 247 ad 255. *Jacq. Stirp. Amer. t.* 136, 159. *Pæpp. et Endl. Nov. Gen. et Sp. t.* 103. *Link, Kl. et Otto Ic. Pl. Rar. t.* 46. *Bot. Mag. t.* 2030, 3298, 3410, 4165, 5643. *Bot. Reg. t.* 80, 1961. *Lodd. Bot. Cab. t.* 713.

c. *Nutantes*. Racemus simplex, recurvus, floribundus, pedunculo basi intra vaginam spathiformem incluso v. subnudo. Huc *E. cornutum* affinesque, cum *E. patente*, Sw., affinesque. *Bot. Mag. t.* 5800, 5654, 5656. *Lodd. Bot. Cab. t.* 1537.

d. *Recurvæ*. Caules sæpe ramosi, foliosi. Racemi intra folia summa sessiles, simplices, recurvi, sæpius densiflori. Habitus interdum *Diothoneis* accedens sed antheræ et pollinia omnino *Epidendræ* et columna cum labelli ungue angusta. Huc *E. scabrum*, *E. torquatum*, *E. Evelynæ*, Reichb., affinesque pluræ. *Reichb. f. Xen. Orch. t.* 26, 48, f. 2.

e. *Tenuifoliae*. Caules nunc tenues humiles, nunc longiores sæpe ramosi. Folia angusta v. lanceolata, submembranacea. Racemi in pedunculo brevi tenues v. laxi, solitarii erecti v. gemini divaricati. Huc *E. conopseum* ex America boreali, *E. fimbriatum*, *E. parviflorum*, *E. ledifolium*, *E. propinquum* affinesque ex America calidiore. *Hook. Journ. Bot. iii. t.* 11. *Bot. Mag. t.* 3457.

*ERSTEDELIA*, *Reichb. f. in Bot. Zeit.* 1852, 932; *Xen. Orch. i.* 39, t. 17, ab auctore ipso Beitr. Orch. Centr. Amer. 37 ad *Epidendrum* reducta.

f. *Amphiglottidæ*. Racemi breves, densi, spiciformes, nunc ad apicem pedunculi elongati vaginis appressis disitis instructi solitarii v. 2-3-ni, nunc secus pedunculum seu rhachin longum dissiti, solitarii v. subfasciculati. *Jacq. Stirp. Amer. t.* 137, 138; *Ic. Rar. t.* 604. *Brongn. in Duperr. Voy. Bot. t.* 43. *Andr. Bot. Rep. t.* 441. *Hook. Exot. Fl. t.* 207. *Bot. Mag. t.* 611, 2844, 3209, 3543, 3666, 5902. *Bot. Reg. t.* 67, 1838, t. 53, 1842, t. 25. *Lodd. Bot. Cab. t.* 472, 1276, 1867. *Maudsl. Botanist, t.* 165. *Saund. Ref. Bot. t.* 91. *AMPHIGLOTTIS*, *Salisb. in Trans. Hort. Soc. i.* 294, absque char.

*PSEUDEPIDENDRUM*, *Reichb. f. in Bot. Zeit.* 1852, 733, species Americæ centralis postea ab auctore ipso ad *Epidendrum* relata est ex ic. et descr. in *Bot. Mag. t.* 5929 species *Amphiglottidea*. Icon tamen in Reichb. f. *Xen. Orch. t.* 53, quoad inflorescentiam et bractæas haud convenit.

*PHYSSINGA*, *Lindl. Bot. Reg.* 1838, Misc. 32, ex exemplari unico valde manco in herb. Lindl. servato et analysi ibidem delineato, videtur *Amphiglottidearum* species floribus monstruosis sepulis nempe basi in cupulam connatis, et labello basi in vesicam globosam o basi calycis protruso omnino abnormis.

g. *Paniculatæ*. Racemi plures, laxi, paniculati; pedunculus communis plus minus evolutus, vaginis varie stipatus, infima interdum spathiformi, v. subnuda. Huc species Lindleyanæ 160 ad 163, 173 ad 189 et 289 ad 294, exclusis tamen *E. seriato* ad *Encycliam* et *E. porphyrium* potius ad *Amphiglottideas* referendis. *H. B. et K. Nov. Gen. et Sp. i. t.* 86. *Bulm. Orch. Mex. et Guatem. t.* 34. *Hook. Journ. Bot. iii. t.* 7; *Exot. Fl. t.* 50. *Bot. Mag. t.* 2980, 3637, 3791, 5556, 5731.

*Bot. Reg. t. 17, 1845, t. 4. Maund, Botanist, t. 226. Reichb. f. in Saund. Ref. Bot. t. 112; Xen. Orch. t. 37.*

h. *Strobilifera*. Caules sæpius diffuse ramosi v. humiles. Spicæ simplices laxæ paucifloræ v. rarius elongatæ, floribus bracteis latis concavis fere spathiformibus subinclusis. Huc *E. ramosum* et *E. rigidum*, Jacq. *Stirp. Amer. t. 132, 134. Hook. Ic. Pl. t. 314*, affinesque plures.

i. *Sessilifloræ*. Flores pauci v. solitarii intra bractearum paleacearum fasciculum subsessiles, fasciculo ad axillam folii summi erecti caulem quasi continuantem sessili. Species paucae, inflorescentia *Poncæ* v. *Hexisiæ* accedentes inter se habitu diversæ, includunt *E. equitantem*, Lindl., caule simplici plano-compresso foliis equitantibus, et *E. teretem*, Reichb. f., affinesque caule ramoso foliis subteretibus patentibus.

k. *Nanæ*. Caules humiles, diffusi, distichophylli. Flores terminales, sæpius solitarii, intra vaginam latam brevem laxè spathiformem sessiles v. brevissime pedicellati. Columnæ tubus brevis, clinandrium membranaceum. Labellum indivisum, sepalis amplius. Species ad 6, Andum Americæ australis et centralis incolæ. *E. Matthewsii*, Reichb. f. in *Linnea* xli. 81, affinesque.

NANODES, Lindl. *Bot. Reg. t. 1541*, species typica, parviflora, Surinamensis et insulæ Trinitatis cum altera grandiflora *N. Medusæ*, Reichb. f.; *Bot. Mag. t. 5723*, ab *Euepidendris Nanis* distinguitur foliis confertioribus floribus interdum geminis arcte sessilibus et polliniorum appendiculis squamæ a rostello solutæ affixis. Hic character tamen ulterius scrutandus est, in flore unico vix perfecte *N. discoloris* a nobis examinato non vidimus, nec in analysi Foeteli in herb. Lindl. delineatur. Descriptio *N. Medusæ* in *Bot. Mag. l.c.* evidenter ad iconem instructa est.

5. ? *Psilanthemum*. Caules foliati, in pseudobulbum fusiformem incrassati. Scapi floridi aphylli, ample paniculati, e rhizomate oriundi, ramis laxè racemiferis. Columna usque ad apicem cum labelli ungue in tubum tenuem sæpius incurvum connata; clinandrium postice ample membranaceum. Anthera in fundo clinandrii suberecta, mox incumbens, ultra loculos 2 dissitos breviter acuminata; pollinia 4, sub-2-seriata, dura, acuta, subfalcata, a latere compressa fere 3-quarta, appendicula granulosa per paria connexa. Species 1 (v. 2?) Columbiæ et Americæ australis incolæ, *E. Stamfordianum*, Batem. *Orch. Mex. et Guatem. t. 11*; *Bot. Mag. t. 4759 (E. basilare, Link Kl. et Otto, Ic. Pl. Rar. t. 45. E. cyenostolix, Reichb. f. in Bot. Zeit. 1852, 731)*. Flores iis *Epidendrorum* nonnullorum simillimi, sed character vegetationis et pollinia forte genus proprium indicant.

81. *Broughtonia*, R. Br. in *Ait. Hort. Kew. ed. 2, v. 217*.—Sepala aequalia, libera, subpatentia. Petala sepalis ampliora. Labellum ad basin columnæ sessile, ab ea liberum v. vix brevissime adnatum, erectum, latum; lobi laterales lati, basi columnam amplectentes, medius latus, patens, sæpe denticulatus. Columna sepalis pluries brevior, erecta, late 2-alata; clinandrii dentes breves. Anthera terminalis, opercularis, incumbens, convexa, distincte 2-locularis, loculis septo longitudinali perfecte 2-locellatis; pollinia 4, circa, per paria in loculis segregata, ovata, aequalia, a latere pærellele compressa, appendicula granuloso-viscosa a basi marginibus applicita connexa. Ovarium in collum cavum (calcar adnatum, R. Br.; cuniculum, Lindl.) longe productum. Capsula ovoidea, collo ovarii rostrata. —Herbæ epiphyticae, pseudobulbis ovoideis v. globosis vaginis paucis obtectis apice 1-2-foliatis. Folia coriacea v. carnea, oblonga v. elongata. Pedunculi terminales, vaginis appressis dissitis. Racemus latus, simplex v. parce ramosus. Flores mediocres v. majusculi, breviter pedicellati. Bractæ parvæ, squamiformes.

Species 3 v. 4, Indiæ occidentalis incolæ. Lindl. *Gen. et Sp. Orch. 118. Bot. Mag. t. 3076, 3536. Lodd. Bot. Cab. t. 793. Henfr. Gard. Mag. iii. 201, ic. in Lemaire Jard. Fleur. t. 172 repetita.*

Genus a Reichenbachio cum *Epidendro* jungitur.

82. *Cattleya*, Lindl. *Collect. Bot. t. 33 ad 37; Gen. et Sp. Orch. 116*.—Sepala libera, subæqualia, patentia v. rarius conniventia. Petala sepalis latiora v. rarius similia. Labellum basi columnæ affixum (excepta *C. bicolor*), liberum, erectum; lobi laterales lati, columnam amplectentes v. involventes, medius patens polymorphus, a lateralibus bene distinctus v. cum iis continuus. Columna longiuscula, valida, semiteres, exalata, sæpius incurva; clinandrium obliquum, dentibus v. lobis 3 sæpius prominentibus obtusis. Anthera terminalis, opercularis, incumbens, convexus v. semi-globosus, distincte 2-locu-

laris, loculis septo longitudinali 2-locellatis; pollinia 4, cerea, lata, valde compressa, parallela, appendicibus granuloso-viscosis linearibus in laminam subconnatis. Capsula ovoideo-oblonga, erostris v. breviter rostrata, costis sæpius acutis valde prominentibus.—Herbæ epiphytica, caulibus pseudobulbosis v. crasse carnosis plurivaginatibus superne 1-2-foliatis. Folia coriacea v. carnosa, sæpius crassa. Pedunculi terminales, basi sæpius intra vaginam laxè spathiformem inclusi. Racemus simplex, laxis, floribus sæpius paucis speciosis interdum maximis breviter pedicellatis. Bractæ parvæ.

Species ad 20, Americæ calidioris a Brasilia usque ad Mexicum incolæ. *Lindl. Sert. Orch. t. 22. Karst. Fl. Colomb. i. t. 49. Batem. Orch. Mex. et Guat. t. 13. Reichenb. Xen. Orch. t. 13, 31, 83, 95, 111, 135, 171, 172. Hook. Exot. Fl. t. 157, 186. Bot. Mag. t. 3669, 3998, 4083, 4085, 4270. 4902, 4916, 5032, 5039, 5048, 5150, 5504, 5618, 5683. Bot. Reg. t. 953, 1172, 1406, 1859, 1919; 1840, t. 48, 58; 1842, t. 1; 1844, t. 5 (cum synopsi specierum); 1845, t. 59; 1846, t. 1, 35; 1847, t. 42.*

Icones supra citatæ species illustrant normales, sepalis petalisque patentibus, his majoribus; in speciebus nonnullis Brasiliensibus, *Bot. Mag. t. 2851, 3265, 3693*, petala sepalis similia v. vix latiora omnia patentia. In *C. citrina*, Lindl., e Mexico (*Bot. Mag. t. 3742, C. Karwinskii*, Mart. Ausw. Merkw. Gew. t. 10), et *C. luteola*, Lindl.; *Reichenb. f. Xen. Orch. t. 83*, sepalia et petala flava omnia conniventia.

*C. bicolor*, Lindl., *Sert. Orch. t. 5, Bot. Mag. t. 4909*, ab auctore in *Bot. Reg. 1844 sub t. 5* pro sectione separatur, ob labellum ima basi columnæ breviter adnatum dein erectum angustum quasi unguiculatum lobis lateralibus obsoletis. Species est distinctissima columna et labello *Epidendro* accedens, pollinibus fere *Tetramicræ*. Flores cæterum iis *C. Forbesii* haud absimiles. *C. Aclandiae* a Lindleyo l.c. ad eandem sectionem relata est vera *Cattleya* lobis lateralibus bene evolutis, ut apparet ex icone *Bot. Reg. 1840, t. 48*. Reichenbach f., in *Walp. Ann. vi. 311*, et *Xen. Orch. ii. 28*, *Cattleyas* omnes ad *Epidendri* sectionem *Epicladium* refert. Species nonnullæ ob vaginam spathaceam ad basin pedunculi ad *Cattleyam* ab auctoribus relatæ, nunc ad *Læliam* transferentur, ob pollinia 8 nec 4, de quibus confer sub hoc genere.

MELENIA, Dumort. *Not. in Mem. Acad. R. Sc. Bruxelles ix. cum ic.*, est ut monet Reichenb. f. *Xen. Orch. ii. 36*, *Cattleyæ Forbesii* specimen flore precociore in scapo aphylo solitario.

83. **Læliopsis**, Linull. in *Pact. Fl. Gard. iii. 155, t. 105*.—Sepala subæqualia, libera, erecta v. vix patentia. Petala sepalis ampliora. Labellum basi columnæ in cupulam brevem adnatum, dein erectum; lobi laterales lati, columnam amplexantes, medius latus rotundatus margine sæpe denticulatus. Columna longiuscula, semiteres, supra basin 2-auriculatum v. 2-dentatum; clinandrii dentes laterales prominuli. Anthera terminalis, opercularis, incumbens, convexa, distincte 2-locularis, loculis septo longitudinali 2-locellatis, locellis imperfecte divisus; pollinia 8, cerea, in quoque loculo 4, paria superposita, a latere compressiuscula et collateraliter 2-seriata, parium superiorum descendentiâ inferioribus ascendentiâ multo minora. Ovarium apice in collum cavum productum. Capsula ovoidea, collo ovarii rostrata.—Herbæ epiphytica, pseudobulbis oblongis interdum longiusculis paucivaginatibus et apice 1-foliatis. Folium oblongum v. angustum, crasso-coriaceum, subcarnosum. Pedunculus terminalis, sæpius elongatus. Racemus simplex, floribus mediocribus v. majusculis breviter pedicellatis. Bractæ parvæ, squamiformes.

Species notæ 3 v. 4, Indiv occidentalis imprimis Cubæ incolæ. Huc pertinent præter speciem typicam e S. Domingo, *Lælia* (*Læliopsis*, Lindl.), *Lindentii*, A. Rich. *Fl. Cub. iii. 243, t. 82*, et *Læliopsis cubensis*, Lindl.; *Læliis* nonnullis præsertim *L. pedunculari* affinisque accedunt quondam florum formæ, sed habitus et pollinia potius *Tetramicræ*. *Broughtonia chinensis*, Lindl. in *Hook. Lond. Journ. i. 492*, ab eodem in *Pact. Fl. Gard. iii. 156* ad *Læliopsis* translata, a Hindsio errore pro planta Chinensi accepta, est *Epidendri* species ex America centrali (*L. nonchincæ*, Reichenb. f.) quæ vix ab *E. nervosa*, Lindl., distincta videtur.

84. **Tetramicra**, Linull. *Gen. et Sp. Orch. 119*.—Sepala subæqualia, libera, patentia. Petala sepalis similia. Labellum basi columnæ affixum, liberum, patens; lobi laterales in ungue brevi distincti, nunc ampli patentes, nunc parvi auriculiformes; medius latus,

integer, basi contractus. Columna erecta, superne v. a basi late 2-alata; clinandrii lobi v. dentes laterales sepe membranacei, posticus parvus. Anthera terminalis, opercularis, incumbens, convexa, loculis 2 distinctis septo longitudinali interdum vix prominente imperfecte 2-locellatis; pollinia perfecta 4, cerea, per paria in loculis segregata, parallele compressa, appendiculis a basi marginibus applicitis connexa, additis sæpius in quoque loculo pollinii 2 parvis v. imperfectis, ab apice appendicularum descendentibus. Capsula oblonga, erostris.—Herbæ terrestres v. epiphyticæ, rhizomate repente, caulibus foliatis vix incrassatis nec pseudobulbosis. Folia e rhizomate intra vaginas imbricatas ad basin scapi 1-3, linearia, carnosa, semiteretia v. brevissima crassaque, v. fere subulata graminea. Pedunculus terminalis, elongatus, tenuis, rigidus, vaginis membranaceis appressis dissitis. Racemus simplex, laxus, floribus mediocribus pedicellatis. Bracteæ parvæ.

Species ad 6, Americæ tropicæ a Brasiliâ usque ad Indiam occidentalem incolæ. *A. Rich. Fl. Cub. t. 83 (Bletia). Bot. Mag. t. 3098 (Brassavola). Hamilt. Prod. Fl. Ind. Occid. 53, cum ic. (Cyrtopodium).*

Genus a Reichenbachio f. in Walp. Ann. vi. 438 ad *Bletiam* reducitur a qua nobis tam habitu quam characteribus distinctissimum videtur, et *Cutleyæ Lælieque* affinius.

LEPTOTES, *Lindl. Sert. Orch. t. 11. Bot. Reg. t. 1625, Bot. Mag. t. 3734*, est species Brasiliensis pedunculo abbreviato laxè pauciflora v. uniflora, floribus quam in cæteris *Tetramicris* majoribus, labelli lobis lateralibus parvis auriculiformibus. Pollinia ex characterè Lindleyano 2 magna oblonga, 4 superiora parva, in flore examinato ut in icone citata *Bot. Mag.* inferiora vidimus 4 perfecta oblonga, superiora omnino *Tetramicræ* parva v. imperfecta. In *T. tenera*, Griseb. (*Bletia tenera*, *A. Rich.; B. Eulophia*, Reichb. f.), labelli lobi laterales minimi auriculiformes omnino *Leptotis*.

*Bletia pratensis* et *B. Schomburgkii*, Reichb. f. in Walp. Ann. vi. 439, a *Tetramicra rigida* non distinguende videntur. *B. schanina*, Reichb. f. l.c. 439, est *Tetramicra* species distinctissima foliis tenuissimis gramineis. *T. platyphylla*, Griseb. Cat. Pl. Cub. 264, ad *Bletiam* referenda videtur. *T. montana*, Griseb. *Fl. Brit. W. Ind.* 622, ad genus nostrum *Octadesmiam* pertinet.

85. **Brassavola**, *R. Br. in Ait. Hort. Kew. ed. 2, v. 216.—Sepala libera, æqualia, patentia, linearia v. lineari-lanceolata, sæpe longa, interdum longe setaceo-acuminata. Petala sepalis similia. Labellum ad basin columnæ sessile, erectum, basi breviter v. longiuscule angustum, columnam amplexans v. involvens, dein abrupte v. rarius gradatim expansum in laminam acutam v. acuminatam sæpius latam, planam v. rarius basi concavam v. fere cucullatam. Columna erecta, ungue labelli sæpius brevior, plus minus 2-alata; clinandrii lobi 3, erecti, prominentes, subæquilongi, omnes v. posticus solus apice dentati. Anthera lobo postico clinandrii affixa, opercularis, incumbens, loculis 2 discretis septo longitudinali 2-locellatis; pollinia 8, in quoque loculo 4, late ovata et parallele compressa, parvis inferioris ascendentia cum parvis superioribus descendentibus in quoque loculo appendicula granulosa lineari v. laminiformi connexa. Capsula ovoidea v. oblonga, ovarii collo interdum prælongo rostrata.—Herbæ epiphyticæ, caulibus vix incrassatis, e caudice ramoso ascendentibus v. erectis laxè paucivaginatissimis v. 1-2-foliatis. Folia carnosa subteretia v. crasse linearia. Flores speciosi, terminales, nunc in pedunculo brevi solitarii v. gemini, nunc ad apicem pedunculi elongati plures, racemosi, pedicellati. Bracteæ breves. Ovarii collum interdum ovario ipso pluries longius. Pollinia seriei superioris sæpe inferioribus more *Tetramicræ* minores.*

Species ad 20, Americæ tropicæ a Brasiliâ usque ad Indiam occidentalem et Mexicium incolæ. *Lindl. Gen. et Sp. Orch. 114, Reichb. f. in Walp. Ann. vi. 433 (Bletia sp.). Jacq. Stirp. Amer. t. 140 (Epidendrum). Bot. Mag. t. 543 (Epidendrum), 2878, 3229, 3722, 3761, 3782, 4021, 4734. Bot. Reg. t. 1465, 1561, 1914, 1839 t. 5, 1840, t. 39.*

*B. glauca*, Lindl., et *B. Digbyana*, Lindl., tam habitu quam floribus nobis videntur potius *Lælie* species.

86. **Lælia**, *Lindl. Gen. et Sp. Orch. 115, et in Bot. Reg. 1842, sub t. 62. (Amalias, Hoffmanns. Preis Vergl. Orch. ex Linnaea xvi., Litthl. 228.)*—Sepala subæqualia, libera, patentia. Petala sepalis sæpius latiora, interdum longiora. Labellum ad basin columnæ erectum, ab ea liberum; lobi laterales lati, columnam involventes; medius patens, nunc

lanceolatus acutus, nunc latus 2-fidus, lobis rotundatis; discus lævis v. lamellatus. Columna longiuscula, antice concava v. anguste 2-alata; clinandrium margine sinuatum v. irregulariter 3-5-dentatum. Anthera denti postico affixa, opercularis, incumbens, convexa, distincte 2-locularis, loculis septo imperfecte longitudinali 2-locellatis, locellis interdum transverse semiseptatis; pollinia 8, in quoque loculo 4, sæpius ovata et parallela compressa, parvis inferioris ascendentia, cum parvis superioris descendentibus in quoque loculo appendicula granulosa lineari connexa. Capsula interdum in rostrum producta videtur, sed maturam non vidimus et juniorem in perpauca speciebus.—Herbæ epiphyticæ, pseudobulbis carnosissimis sæpius oblongis paucivaginis apice 1-2-foliatis. Folia coriacea v. carnosæ, non plicata. Pedunculi terminales, sæpius dissite plurivaginati, interdum more *Cattleyæ* basi vagina majore spathacea inclusi. Racemus simplex, floribus speciosis interdum maximis breviter pedicellatis. Bracteæ spathacæ v. longiusculæ et membranacæ.

Species ad 20, Americæ calidioris a Brasilia usque ad Mexicum incolæ. *Reichb. f. in Walp. Ann.* vi. 418; *Otia Hamb.* 92; *Xen. Orch. t.* 61, 91, 114, 115, 135. *Batem. Orch. Mex. et Guat. t.* 7, 23, 38. *Bot. Mag. t.* 3304, 3810, 3817, 3957, 4090, 4099, 4302, 4905, 5144, 5449, 5498, 5553, 5667, 6038. *Bot. Reg. t.* 1751; 1839, t. 26, 27, 54; 1840, t. 41; 1841, t. 24; 1844, t. 30; 1845, t. 69.

Genus a Reichb. f. in *Xen. Orch.* ii. 43 ad 62, ad *Bletiam* relatum, a qua nostro sensu bene distinguitur habitu, foliis, florum forma, etc., *Cattleyæ* tamen quam maxime affine est, nec separatur nisi polliniorum paribus inferioribus evolutis. In speciebus typicis vagina spathiformis ad basin pedunculi parva est v. omnino deest; species tamen plures habitum omnino *Cattleyæ* præbent, sub quo genere depictæ sunt in *Bot. Mag. t.* 3656, 3711, 3910, 4700, *Bot. Reg. t.* 1172; 1839, t. 2, sed postea ob pollinia 8 nec 4 ad *Læliam* translatae sunt. Species paucae Brasilienses (*Bot. Reg. 1842, t.* 62) a cæteris distinguuntur petalis vix sepalis latioribus; petala pariter sepalis subsimilia in *Brassavola glauca*, Lindl. *Bot. Reg.* 1840, t. 44, *Bot. Mag. t.* 4033, *Batem. Orch. Mex. et Guat. t.* 16, et in *B. Digbyana*, Lindl. *Bot. Reg.* 1846, t. 53, *Bot. Mag. t.* 4474 quæ nobis melius sub *Lælia* quam sub *Brassavola* militare videntur. *Læliæ* facillime cum *Cattleyis* formas hybridas gignunt quarum pollinia variant 8 v. 4.

87. *Schomburgkia*, Lindl. *Sert. Orch. t.* 10, 13. —Sepala subæqualia, libera, patentia, plus minus undulata. Petala sepalis similia et æqualia v. evidentius undulata. Labellum ima basi cum columna brevissime connatum, erectum; lobi laterales explanati v. primum columnam laxè amplectentes, medius rotundatus v. late 2-lobus planusque, v. angustior et undulatus. Columna recta v. incurva, labello incumbens, lobis suis lateralibus sæpius brevior, anguste v. superne latius 2-alata; clinandrii lobi seu dentes laterales breves, posticus longior, v. rarius omnes æquales. Anthera apici dentis postici affixa, incumbens v. subpendula, valde convexa conica v. dorso 2-cornuta, loculis 2 discretis septo longitudinali perfecte 2-locellatis, locellis septo imperfecto transverso divisis, pollinia 8, cerea, in quoque loculo 4, per paria superposita, late ovata, a latere parallela compressa, inferiora ascendentia cum superioribus sæpius minoribus appendicula granulosa interdum laminiformi connexa. Capsula ut videtur erostris, matura tamen nobis deest.—Herbæ epiphyticæ, pseudobulbis v. caulibus carnosissimis oblongis fusiformibus v. elongatis plurivaginis apicem versus 1-3-foliatis. Folia ovata oblonga v. elongata, crasse coriacea v. rigide carnosæ. Racemus in pedunculo terminali elongato simplex, floribus speciosis pedicellatis. Bracteæ persistentes, rigide membranacæ v. coriacæ.

Species ad 12, Americæ tropicæ incolæ. In speciebus typicis Columbianis v. Guianensibus, bracteæ rigide membranacæ longe lineares v. lanceolatae, patentes v. demum reflexæ, flores interdum superantes. *Lindl. l.c. et Bot. Reg.* 1844, t. 23; 1845, t. 53. *Bot. Mag. t.* 3729. Inter illas includimus etiam *S. Lyonii*, Lindl.; *Bot. Mag. t.* 5172 (*S. carinata*, Griseb. *Fl. Brit. W. Ind.* 621) e Jamaica, quæ insignis est columna valde incurvi, clinandrii lobis lateralibus postico submajoribus acutis et antheris dorso 2-cornutis.

In *S. tilicina*, Lindl. *Bot. Reg.* 1845, t. 30, *Batem. Orch. Mex. et Guat. t.* 30, o Honduras et Guatemala, et in *S. Galeottiana*, A. Rich. in *Ann. Sc. Nat. ser. 3, iii.* 23; *Bot. Mag. t.* 4476, specio Mexicana priori affini sed ut videtur distincta, bracteæ parvæ, rigide, subæquamiformes, et caules ærissimo cavi formicos forentes.

Reichenbach f. in *Walp. Ann.* vi. 418 species omnes ad *Bletiam* refert.

88. *Sephonitis*, Lindl. Bot. Reg. t. 1129.—Sepala libera, æqualia, plana, patentia. Petala sepalis similia v. latiora. Labellum ad basin columnæ sessile eique breviter adnatum, erectum; lobi laterales lati, conniventes, columnam omnino occultantes, medius linguiformis, subrecurvus, integerrimus, acutus, discus nudus v. prope basin transverse cristatus. Columna brevis, crassiuscula, superne ad latera stigmatis subpetaloideo-dilatata; clinandrium minute 2-dentatum. Anthera terminalis, opercularis, incumbens, convexa, 2-locularis, loculis septo longitudinali perfecte 2-locellatis, locellis septo transverso minus perfecte divisus; pollinia 8, in quoque loculo 4, cerea, 2-seriata, parallela compressa, superiora pendula cum inferioribus ascendentibus appendicula fere laminiformi connexa.—Herbæ epiphyticæ, humiles. Pseudobulbi in rhizomate conferti, 1-2-foliati. Folia coriacea v. carnosa, complicata, demum explanata, patentia. Pedunculus terminalis, brevis, in specie typica racemum brevem pauciflorum ferens, bracteis subpedicellis minutis, in cæteris speciebus 1-florus, bracteis 1-2 minutis ad basin pedicelli. Flores speciosi coccinei v. violacei.

Species 4 v. 5, Brasilienses (e montibus Orgaos). Lindl. Serot. Orch. t. 5, f. 2. Reichb. f. in Walp. Ann. vi. 465. Bot. Mag. t. 3677, 3709. Fl. des Serres, t. 1716.

#### TRIBUS II. VANDEÆ.

89. *Eulophia*, R. Br. in Bot. Reg. t. 686. (Orthochilus, Hochst., A. Rich. Fl. Abyss. ii. 284, t. 82.)—Sepala subæqualia, inter se libera, lateralia patentia interdum basi columnæ adnata. Petala sepalis postico similia v. vix latiora, cum eo patentia v. erecto-conniventia. Labellum a basi columnæ erectum, supra basin brevissime contractum, inter sepala lateralia in gibbum saccum v. calcar productum; lobi laterales erecti columnam amplectentes v. rarius obsoleti, medius patens v. recurvus, sæpius latus, integer v. 2-lobus; discus medio varie cristatus v. lamellatus. Columna brevis, crassa, apoda, sæpius 2-alata; clinandrium valde obliquum, erectum, integrum. Anthera terminalis, opercularis, incumbens, semi-globosa, obtuse conica v. acuminata, 2-appendiculata v. interdum 2-cornuta, imperfecte 2-locularis; pollinia 4, ovoidea, cerea, per paria sæpius connexa postico minore, inappendiculata, anthera dehiscente stipiti brevi v. rarius elongato glandulæ disciformis rostellum annexæ. Capsula ovoidea v. oblonga, rarius elongata, erostis, pendula, costis prominulis crassiusculis.—Herbæ terrestres, caulibus foliatis basi demum in pseudobulbos sæpius anguste oblongos v. elongatos incrassatis. Folia disticha, sæpius angusta, elongata, plicato-venosa. Scapi v. pedunculi aphylli  $\infty$ -vaginati, in speciebus genuinis ad basin caulibus foliatis laterales, in descendentibus in caule foliato terminales. Racemus simplex v. laxo paniculato-ramosus. Flores mediocres v. parvuli, pedicellati, conferti v. dissiti. Bractee membranaceæ, longiusculæ v. parvæ.

Species ad 50, pro maxima parte gerontogææ, imprimis Africanæ, tropicæ v. australes, plures tamen ex Asia tropica, 2 Australiæ, et una saltem in Brasilia obvia. Lindl. Gen. et Sp. Orch. 180. Reichb. f. in Walp. Ann. i. 785, vi. 644; Xen. Orch. t. 173, 187; Otia Hamb. 66, 116; in Bonpl. 1857, 38; in Flora, 1865, 186, et 1872, 276; et in Bot. Zeit. 1866, 378. Blume, Orch. Archip. Ind. 180 (quoad sect. 1). Benth. Fl. Austral. vi. 299. Roxb. Corom. Pl. t. 38 (Linodorum). Thout. Orch. Hles Afr. t. 43 ad 47 (Linodorum). Wight Ic. t. 913, 1666, 1667. Kurz in Journ. Asiat. Soc. Beng. xlv. t. 13. A. Rich. Fl. Abyss. ii. 284, t. 81 (Saccolabium in icone). Bot. Mag. t. 2467, 5561, 5579, 6246. Bot. Reg. t. 1147, 1433, 1821, 1972. Lodd. Bot. Cab. t. 818. Maund. Botanist, t. 172 (Lissochilus).

In speciebus plerisque. *Geminis*, Lindl., scapi floriferi aphylli, simplices; in paucis Austro-Africanis, *Desciscentibus*, Lindl., pedunculi in caule foliato terminales; in *E. herbacea* affinisque Asiaticis petala sepalis latiora et magis colorata affinitatem cum *Lissochilo* exhibent; in *E. campestri* affinisque ex India Orientali caules foliati et scapi floriferi non coetanii; in *E. micrantha* ex Africa australi, et *E. lurida*, ex Africa tropica, affinisque paucis, flores parvi, in racemo paniculato-ramoso.

In specie Sumatrensi Beccari n. 389, labellum columnæ brevi adnatum calcare solito multo longiore obtuso fore clavato, vix tamen a genere separanda.

*E. gracilis*, Lindl. Bot. Reg. 742, ex Africa tropica, postea ab auctore ad *Galeandram* relata,

nobis videtur vera *Eulophia* species, etsi labelli lobi solito minores et calcar superne valde ampliatus.

*E. maculata*, Reichb. f., stirps Brasiliensis, prius a Lindley Collect. Bot. t. 15, et Bot. Reg. t. 618, ad *Angraecum* relata, postea in Gen. et Sp. Orch. 237 ad *Esceocladem* translata, et a Link et Otto Ic. Sel. t. 14 sub *Geodoro* picta, nulli generi bene convenit. Specimina nostra manca, sed verisimiliter rite a Reichenbachio in *Eulophia* collocata.

*E. arundinæ*, Reichb. in Walp. Ann. iii. 551, e Brasilia, ex specimine nostro imperfecto videtur *Bletia* species. *E. helleborine*, Hook. f. Bot. Mag. t. 5875, est *Gymnadenia macrantha*, Lindl.

90. *Lissochilus*, R. Br. in Lindl. Coll. Bot. t. 31. (Hypodematium, A. Rich. Fl. Abyss. ii. 286, t. 83.)—Sepala libera, æqualia, patentia, per anthesin sæpe reflexa. Petala sepalis latiora v. majora magisque colorata, erecto-patentia. Labellum basi columnæ affixum, liberum, supra basin in saccum seu calcar conicum productum; lobi laterales subpatentes, interdum parum prominentes, medius latus, patens. Columna erecta, brevis, semiteres, apoda, angulis sæpe acutis exalatis; clinandrium obliquum, sæpius integrum. Anthera terminalis, opercularis, incumbens, convexa dorsoque sæpe conica v. 2-gibba, 2-locularis; pollinia 4, distincta v. per paria plus minus concreta, cerea, ovoidæ, inappendiculata, anthera dehiscente glandulæ rostellii latiusculæ vix in stipitem productæ affixa. Capsula ubi nota ovoidæ v. oblonga, erostris, reflexa, angulis obtuse prominulis.—Herbæ terrestres, caulibus breviter foliatis demum in pseudobulbos ovoideos incrassatis. Folia longa, sæpius angusta, elevato-venosa v. plicata. Scapi ad latera pseudobulborum v. e rhizomate elati, aphylli, plurivaginati. Racemus simplex, floribus sæpius speciosis pedicellatis. Bractee oblongæ lanceolatae v. lineares, persistentes.

Species ad 30; Africæ tropicæ et australis incolæ. Lindl. Gen. et Sp. Orch. 191. Reichb. f. in Walp. Ann. i. 787; iii. 553; Otiæ Hamb. 60, 114; in Flora, 1865, 187; et in Linnaea xli. 74. Bot. Mag. t. 2931 (*Eulophia*), 5486, 5861. Bot. Reg. t. 573, 1002 (*Erlophia*), 1814, t. 12.

91. *Galeandra*, Linull. in Bauer, Ill. Gen. Orch. t. 8. (Corydandra, Reichb. Nomencl. ex Endl. Gen. Suppl. ii. 17.)—Sepala æqualia, libera, patentia. Petala sepalis similia v. paullo latiora. Labellum basi columnæ affixum, in calcar amplum subinfundibuliforme descendens productum, lobi laterales lati, erecti, columnam laxè amplectentes v. involventes, medius patens, rotundatus v. 2-lobus, discus medio varie cristatus v. lamellatus. Columna brevis v. parum elongata, apoda, apice breviter 2-alata; clinandrium valde obliquum, postice acuminatum. Anthera terminalis, opercularis, incumbens, obtuse et interdum longiuscule acuminata, imperfecte 2-locularis; pollinia 4, ovoidæ, cerea, per paria sæpius connexa, inappendiculata, anthera dehiscente glandulæ rostellii membraniiformi v. disciformi vix in stipitem brevissimum productæ affixa. Capsula erostris.—Herbæ terrestres v. epiphyticæ, caulibus foliatis basi in pseudobulbum tuberiformem v. elongatum incrassatis. Folia disticha, basi vaginantia, angusta, plicato-venosa. Racemi terminales, pedunculati, simplices. Flores speciosi v. mediocres, breviter pedicellati. Bractee parvæ v. angustæ.

Species ad 6, Americæ tropicæ a Brasilia ad Mexicum incolæ. Reichb. f. in Walp. Ann. vi. 618; Otiæ Hamb. 88. Lindl. Sert. Orch. t. 37. Batem. Orch. Mex. et Guatem. t. 19 (i.e. tamen ex adnot. in herb. Lindl. e plantis 2 diversis compositis). Bot. Mag. t. 4610, 4701. Bot. Reg. 1840, t. 49. Lem. Ill. Hort. t. 248. Maund, Botanist, t. 231.

*G. Beyrichii*, Reichb. f., videtur potius *Cyrtopodis* species. *G. gracilem*, Lindl., cum specibus aliis Africanis scapis floridis aphyllis, ad *Eulophiam* referimus. Genus, ad species Americanas restrictum, facile pro sectione *Eulophia* habendam, habitu *Eulophii* Africanis descendentibus sæpe accedit et vix nisi labelli calcaro magno infundibuliformi differt.

92. *Gymbidium*, Sw. in K. Vetensk. Acad. N. Hanull. Stockh. xxi. 236, pro parte. (Fridor-chis, Blume, Orch. Juv. 90, t. 26.)—Sepala subæqualia, libera, patentia, lateralia interdum basi sub labello brevissimo connata. Petala sepalis similia v. paullo minora. Labellum ad basin columnæ sessile, erectum, basi concavum, lobi laterales latiusculi, erecti, columnam

laxe amplexantes, medius patens v. recurvus, indivisus, disco varie 2-lamellato. Columna longiuscula, semiteres, curvula, exalata v. anguste 2-alata, apoda; clinandrium parum prominulum, truncatum v. obliquum. Anthera terminalis, opercularis, incumbens, valde convexa v. late semiglobosa, 1-locularis v. imperfecte 2-locularis; pollinia 2, late subglobosa, cerea, profunde sulcata v. e duobus sibimet arcte applicitis uno minore conflata, in anthera collateraliter contigua, appendicula parva transversa v. divaricato-2-lamellata connexa, anthera dehiscente mediante appendicula glandulæ squamiformi transversæ affixa. Capsula oblonga, sæpe majuscula, interdum breviter rostrata.—Herbæ epiphyticæ, caulibus foliatis abbreviatis cum foliorum basibus plus minus in pseudobulbum incrassatis. Folia sæpe longissima, coriacea, venis elevatis percursa, v. breviora magis carnosae lævioraque, vaginæ basi dilatæ in caule imbricatæ, vetustiores sæpe ad fibras diu persistentes reductæ. Pedunculi v. scapi inter folia v. ad basin caulis oriundi, longi, simplices v. rarissime ramosi, basi vaginis laxis interdum fere in folia brevia productis stipati. Flores majusculi, laxe racemosi, breviter pedicellati, racemis haud raro elongatis pendulisque. Bractæe breves.

Species ad 30, pro maxima parte Indiæ orientalis, Archipelagi Malayani et Chinæ incolæ, cum speciebus 2 Africanis, 3 Australianis, 1 Novo-Caledonica et 1 Japonica. *Lindl. Gen. et Sp. Orch.* 161, quoad sect. *Eucymbidium*; *Sert. Orch. t. 4. Reichb. f. in Walp. Ann. vi. 622 (excl. sp. paucis); in Flora* 1865, 188; 1872, 274; et in *Trans. Linn. Soc. xxx. 144. Sm. Spicil. Bot. t. 24 (Epidendrum). Roxb. Corom. Pl. t. 44 (Epidendrum). Andr. Bot. Rep. t. 216 et 344 (Epidendrum). Wight Ic. t. 1687–88, 1753. Miq. Choix Pl. Jard. Buitenz. t. 19. Griff. Ic. Pl. As. t. 321. Hook. Exot. Fl. t. 51. Bot. Mag. t. 387, 888 (Epidendrum), 1751, 4844, 4907, 5126, 5457, 5574, 5710, 5851. Bot. Reg. t. 529, 1976; 1840, t. 25; 1841, t. 38; 1844, t. 24; 1847, t. 67. Lodd. Bot. Cab. t. 37.*

*C. tabulare*, Sw., et *C. aculeatum*, Sw., ex Africa australi, a Harveye rite ad *Eulophiam* referentur. *C. Sandersonii*, Harv., tamen cum specie affini ex Africa tropica vera *Cymbidia* videntur, etsi ab Asiaticis different scapo ramoso. *C. Huttoni*, Hook. Bot. Mag. t. 5676, cujus specimina non vidimus, ex ic. et descr. characteres omnino *Grammangis* nec *Cymbidii* offert, sed e Java nec e Madagascaria introducta dicitur.

93. *Ansellia*, *Lindl. Bot. Reg. 1844, sub t. 12, 1846, t. 30.*—Sepala subaequalia, libera, patentia. Petala sepalis similia. Labellum ad apicem pedis columnæ sessile, erectum; lobi laterales lati, erecti, paralleli; medius patens, ovato-rotundatus; discus 2-lamellatus. Columna erecta, lobis lateralibus labelli æquilonga, leviter incurva, semiteres, marginibus acutis, exalata, basi in pedem brevem latum concavum 2-lobum producta; clinandrium parum prominens, integrum. Anthera terminalis, opercularis, incumbens, convexa, appendice obtuse conica coronata, imperfecte 2-locularis; pollinia 2, cerea, ovato-rotundata, 2-loba v. 2-partibilia, in anthera collateraliter contigua, appendicula parva transversa connexa, anthera dehiscente mediante appendicula glandulæ transversæ squamiformi affixa. Capsula oblonga, erostris.—Herbæ epiphyticæ, caule elato carnosissimo-incrassato folioso. Folia disticha, longa, plicato-venosa. Pedunculi terminales, ramosi. Flores secus ramos paniculæ amplæ laxe racemosi, speciosi, pedicellati. Bractæe parvæ.

Species v. varietates insignes 3–4, quoad labelli lamellas magnitudinem florum etc. valde variabiles, per Africam tropicam late dispersæ, una usque ad regionem Natalensem Africæ australis extensa. *Reichb. f. in Walp. Ann. vi. 627. Bot. Mag. t. 4965. Reg. Gartenfl. t. 95.*

94. *Grammangis*, *Reichb. f. Xen. Orch. ii. 17.*—Sepala subaequalia, posticum subfornicatum, lateralia patentia, libera v. basi brevissime in gibbum didymum connata, omnia carnosula. Petala multo breviora tenuioraque, lata, obliqua. Labellum basi columnæ affixum, erectum, sepalis multo brevius; lobi laterales lati erecti, medius brevis, subpatens; discus lamellatus v. cristatus. Columna erecta, leviter incurva, 2-alata, apoda; clinandrium obliquum, incurvum. Anthera terminalis, opercularis, incumbens, valde convexa, dorso (an semper?) appendiculata, imperfecte 2-locularis; pollinia 2, late subglobosa, sulcata, in anthera collateraliter contigua (appendicula parva connexa?), anthera dehis-

cente (mediante appendicula?) glandulæ latæ squamiformi affixa.—Herbæ epiphyticæ, validæ, caule brevi in pseudobulbum oblongum v. fusiforme carnosum incrassato. Folia pauca, longa, coriacea, parum venosa. Scapi ad basin pseudobulbi longi, simplices. Racemus laxus, floribundus, floribus speciosis longe pedicellatis. Bractearum parvæ.

Species 2, altera Madagascariensis, *Lindl. in Bot. Mag. t. 5179 (Grammatophyllum)*, altera (cujus specimina non vidimus) Javensis?. *Hook. Bot. Mag. t. 5676 (Cymbidium Huttoni)*, utraq̃ue ad specimina hortensia ab auctoribus descripta.

95. *Cremastra*, *Lindl. Gen. et Sp. Orch. 172. (Hyacinthorchis, Blume, Mus. Bot. Lugd. Bat. i. 48, t. 16.)*—Sepala subæqualia, libera, conniventia v. vix patentia, basi longe angustata. Petala sepalis similia nisi paullo latiora. Labellum basi columnæ affixum, ab ea liberum, erectum, lineare, complicatum, basi gibbum subsaccatum; lobi laterales supra medium parvi, medius oblongus, integerrimus, sepala subæquans, basi intus appendice carnosâ instructus. Columna longe linearis, erecta, subteres, apice ad latera stigmatidis utrinque dilatata, apoda; clinandrium breve. Anthera terminalis, breviter stipitata, opercularis, incumbens, valde convexa, 1-locularis; pollinia 4, cerea, late ovata, fere plana, apposita, in quoque pari sibiinet incumbentia, inappendiculata, anthera dehiscente stipiti v. glandulæ planæ squamiformi affixa. Capsula oblonga, erostris.—Herba terrestris, rhizomate repente tuberoso-incrassato. Folia in rhizomate solitaria, rigidule membranacea, venis nonnullis magis elevatis subplicata, in petiolum contracta. Scapi e rhizomate aphylli, vaginis tamen interdum in laminam brevem productis. Racemus simplex, secundus sæpeque apice nutans, floribus majusculis angustis breviter pedicellatis pendulis. Bractearum lineares, breves.

Species 1, Japonica. Genus *Cymbidio* valde affine, differt perianthio cum labello angusto, et polliniorum appendiculam saltem in speciminibus siccis non deteximus.

*Dactylostaliæ*, *Reichb. f. in Bot. Zeit. 1878, 74*, species japonica a nobis non visa, ex caractere dato a *Cremastra* vix differre videtur columna apice lobulis 2 linearibus lobulatis instructo.

96. *Cyperorchis*, *Blume, Mus. Bot. Lugd. Bat. i. 48; Orch. Archip. Ind. 92, t. 48.*—Sepala subæqualia, libera, erecta v. subpatentia. Petala sepalis similia. Labellum ad basin columnæ sessile, erectum, angustum, concavum; lobi laterales columnam amplectentes, medius brevis, latus, patens. Columna longiuscula, erecta, semiteres, exalata, apoda; clinandrium obliquum, integrum, margine sinuatum. Anthera terminalis, opercularis, incumbens, valde convexa, breviter et obtuse acuminata, discrete 2-locularis, demum 1-locularis; pollinia 2, ovoideo-pyriformia, cerea, sulcata, acuminata, inappendiculata, anthera dehiscente glandulæ quadratæ absque stipite affixa. Capsula ovoidea v. breviter oblonga.—Herbæ epiphyticæ, caulibus foliatis brevibus sæpe basi induratis vix tamen distincte pseudobulbosis. Folia longa, angusta, vaginis basi parum dilatatis distiche imbricatis, vetustiorum reliquiis sæpe fibroso-persistentibus. Scapi inter folia longi, erecti, vaginis pluribus sæpe in folia breviter erecta productis alte stipati. Racemus floribundus, simplex, sæpius densus, haud raro nutans. Flores speciosi.

Species 2 v. 3, Indiæ orientalis et Archipelagi Malayani incolæ, a Lindley auctoribusque plerisque *Cymbidio* inclusæ, sed habitus, perianthii forma et præsertim pollinarii indoles a Blumeo bene illustrati, genus distinctum indicant. Ille pertinent præter speciem typicam Blumei, *Cymbidium elegans*, *Lindl. Sert. Orch. t. 14, C. Mastersii*, *Lindl. Bot. Reg. 1845, t. 50*, et verisimiliter *C. cochlearæ*, *Lindl.*, cujus tamen pollinarii ab omnibus floribus in herbariis servatis jam delapsa erant.

97. *Geoderum*, *Jacks. in Andr. Bot. Rep. t. 626. (Cistella, Blume, Bijdr. 293, t. 55. Otandra, Salisb. in Trans. Hort. Soc. i. 298, absque char.)*—Sepala subæqualia, libera, erecta v. subpatentia. Petala sepalis similia. Labellum ad basin columnæ sessile, continuum, erectum, a basi latum ventricosum-concavum fere saccatum, indivisum v. late et obscure 2-lobum. Columna breviuscula, erecta, semiteres, exalata, apoda; clinandrium

postice lato-ovatum, erectum. Anthera terminalis, opercularis, incumbens, valde convexa, 1-locularis v. imperfecte 2-locularis; pollinia 2, cerea, lata, profunde sulcata sub-2-loba, inappendiculata, anthera dehiscente stipiti brevi plano affixa, glandula sæpe majuscula. Capsula ovoidea v. oblonga, erostris, reflexa.—Herbæ terrestres, rhizomate sæpe tuberoso-incrassato. Caules plurifoliati, breves. Folia ovato-lanceolata v. elongata, plicato-venosa, in petiolum contracta. Scapi e rhizomate erecti, vaginati, simplices, racemo ad apicem denso nutante. Flores mediocres, brevissime pedicellati. Bractee membranaceo-scariosæ, lanceolatae v. lineares, flores interdum subæquantes.

Species enumeratæ 9, Indiæ orientalis, Archipelagi Malayani et Australiæ incolæ, plures tamen characteribus fere de flore in florem variabilibus distinctæ. *Lindl. Fol. Orch.* 1854. *Reichb. f. in Walp. Ann.* vi. 631. *Roxb. Corom. Pl.* t. 39, 40 (*Limodorum*). *Wight, Ic.* t. 912. *Bot. Mag.* t. 2195. *Bot. Reg.* t. 675, 1687.

98. **Grammatophyllum**, *Blume, Bijdr.* 377, t. 20; *Rumphia*, iv. 47, t. 191. (*Gabertia*, *Gaudich. in Freye. Voy. Bot.* 425. *Pattonia*, *Wight, Ic.* t. 1750.)—Sepala subæqualia, libera, patentia. Petala sepalis similia. Labellum supra basin columnæ affixum (mobile?), erectum, concavum; lobi laterales latiusculi, erecti, columnam laxè amplexentes, medius brevis, recurvo-patens, angustus v. dilatatus. Columna erecta, labello paullo brevior, semiteres, subclavata, exalata, apoda; clinandrium obliquum, incurvum. Anthera subterminalis, opercularis, incumbens, lata, valde convexa, 2-locularis; pollinia 2, cerea, subglobosa, fere 2-partita, inappendiculata, anthera dehiscente sigillatim lobis v. cornubus glandulæ lunatæ v. fere hippocrepidiiformis affixa. Capsula oblongo-fusiformis, erostris.—Herbæ epiphyticae, validæ, caulibus nunc elongatis multifoliatis plus minus carnosis, nunc brevius pseudobulbosis paucifoliatis. Folia disticha, sæpius longissima, coriacea, venosa. Scapi ad basin caulis laterales, longi, simplices. Racemus laxè floribundus, floribus longe pedicellatis speciosis, nunc magnis carnosisque, nunc minoribus tenuioribus. Bractee pedicellis multo breviores.

Species 3 v. 4, peninsule et Archipelagi Malayani incolæ. *Reichb. f. in Walp. Ann.* vi. 628; *Nen. Orch.* ii. 16; *et in Linnaea* xli. 107. *Miq. in Ann. Mus. Lugd. Bat.* iv. t. 8, 9. *Bot. Mag.* t. 3157 (quoad pollinarium erronea). *Bot. Reg.* 1839, t. 65, 1842, t. 69. *Past. Mag. Bot.* vi. 217, cum ic.

99. **Dipodium**, *R. Br. Prod.* 330. (*Leopardanthus*, *Blume, Mus. Bot. Lugd. Bat.* i. 47, t. 15. *Wailesia*, *Lindl. in Journ. Hort. Soc.* iv. 261.)—Sepala subæqualia, libera, patentia. Petala sepalis subsimilia. Labellum erectum, ima basi columnæ adnatum leviterque gibbum v. brevissime saccatum, medio 3-lobum, lobi laterales angusti v. triangulares, medius longior, angustus v. latus, apicem versus facie sæpius pubescens. Columna erecta, semiteres, non v. angustissime alata, apoda; clinandrium varie sinuatum v. dentatum. Anthera terminalis, opercularis, incumbens, convexa v. semiglobosa, 2-locularis; pollinia 2, cerea, globosa, sulcata v. 2-partibilia, inappendiculata, anthera dehiscendo stipitibus 2 distinctis brevibus affixa; glandula carnosula, ovata v. rotundata. Capsula angusta.—Herbæ terrestres, non pseudobulbosæ, caulibus basi foliatis v. floriferis aphyllis. Folia dum adsint angusta, coriacea, vaginis in caule imbricatis v. regulariter distichis equitantibusque. Scapi aphylli, elati, basi vaginis nonnullis imbricatis stipati, v. pedunculi in caule foliati longi, erecti. Racemi simplices, sæpe floribundi, floribus majusculis sæpissime punctatis.

Species ad 6, peninsule et Archipelagi Malayani, insularum maris Pacifici et Australiæ incolæ. *Lindl. Gen. et Sp. Orch.* 186. *Reichb. f. Nen. Orch.* ii. 15, t. 107. *Sm. Exot. Bot.* t. 12 (*Dendrobium*). *Griff. Ic. Pl. Asiat.* iii. t. 323, 324 (*Grammatophyllum*). *Hook. f. Fl. Tasman.* t. 127. *Bot. Reg.* t. 1980. *Past. Mag. Bot.* xvi. 321, cum ic. (*Wailesia*).

100. **Thecostele**, *Reichb. f. in Bonplandia*, 1857, 37; *Nen. Orch.* ii. 133, t. 147; *et in Trans. Linn. Soc.* xxx. 144, t. 29.—Sepala aequalia, libera, patentia, latiuscula. Petala linearia, sepalis æquilonga. Labellum basi cum columna in tubum latum connatum, dein

patens; lobi laterales ad basin laminæ erecti, falcati, fere circinati; medius patens, elongatus, sinuatus, indivisus, disco velutino. Columna ima basi in tubum brevem cum labello connata, erecta, ad apicem tubi abrupte deflexa citoque incurvo-ascendens elongataque, ad deflexionem in auriculas 2 horizontales supra os tubi producta, apice ad latera stigmatidis alis 2 falcatis appendiculata; clinandrium parum prominens. Anthera terminalis, opercularis, incumbens, galeata, 2-locularis; pollinia 2, cerea, globosa, sulcata, inappendiculata, anthera dehiscente glandulæ squamiformi sigillatim affixa. Capsula ovoidea, erostis.—Herba epiphytica, pseudobulbis 1-foliatis carnosis costatis. Folium oblongum, coriaceum. Scapi ad latera pseudobulborum recurvi, aphylli, basi breviter plurivaginati. Racemus simplex, floribus mediocribus breviter pedicellatis. Bractee parvæ.

Species 1, Malacæ et Archipelagi Malayani incolæ. Specimina enim Parishiana e Moulmeyn et Motleyana e Borneo nobis conspecifica videntur, et vix variant nisi labelli loborum latitudine. Pollinarii stipites filiformes, in iconè Parishiana tenuissimi, in Trans. Linn. Soc. l.e. nimis incrassati, non veri stipites sunt, sed visci fila elasticæ extensivo; in flore a nobis examinato pollinia in rostello omnino sessilia erant, glandula nondum soluta. Generis affinitas cum *Stanhopeis* Americanis, a Reichenbachio indicata, nobis effugit.

101. *Bromheadia*, *Lincl. Bot. Reg.* 1841, *Misc.* 89; 1844, t. 18.—Sepala subæqualia, libera, patentissima. Petala sepalis subsimilia. Labellum ad basin columnæ sessile, erectum, concavum; lobi laterales latiusculi, erecti, columnam laxè amplexentes, medius brevis, patens, indivisus; discus pubescens, subristatus. Columna longiuscula, erecta, curvula, late 2-alata, apoda; clinandrium membranaceum, concavum, obliquum. Anthera terminalis, opercularis, incumbens, semiglobosa v. subconica, 1-locularis (v. imperfecte 2-locularis?); pollinia 2, cerea, late ovoidea, sulcata, inappendiculata, anthera dehiscente glandulæ squamiformi fere triangulari affixa absque stipite. Capsula . . . —Herbæ epiphyticæ (v. terrestres?), non pseudobulbosæ, caulibus foliatis erectis simplicibus. Folia disticha, coriacea, venosa, basi complicata, vaginis persistentibus caulem arcuè obtegentibus. Racemus in caule foliato terminalis, simplex v. ramosus, rhachi sæpe incrassata flexuosa, bracteis triangularibus rigidis distiche erectis quasi serrata. Flores majusculi, breviter pedicellati.

Species 2, Malacæ et Archipelagi Malayani incolæ. *Reichb. f. in Walp. Ann.* vi. 882, et *Olia Bot. Hamb.* 44. *Wight, Ic. t.* 1740. *Bot. Mag.* t. 4001.

102. *Polystachya*, *Hook. Esot. Fl.* t. 103. (*Encyclia*, *Purpp. et Endl. Nov. Gen. et Sp.* ii. 10, *procl.* t. 113 *anal. imperfecto*. Epiphora, *Lincl. in Comp. Bot. Mag.* ii. 201.) —Sepala conniventia v. subpatentia, posticum liberum, lateralia latiora nunc latissima, basi pedi columnæ adnata. Petala sepalò postico similia v. angustiora. Labellum (superum) cum pede columnæ articulatum, basi contractum incumbens, dein erectum; lobi laterales parum prominentes, erecti, medius patens v. recurvus, indivisus. Columna brevis nunc brevissima, lata, exalata, basi in pedem producta; clinandrium breve, truncatum. Anthera terminalis, opercularis, incumbens, valde convexa, 1-locularis v. imperfecte 2-locularis; pollinia 4, cerea, late ovata, per paria sibimet arcuè applicita v. in 2 connata, postico sæpius minore, inappendiculata, anthera dehiscente stipiti brevi v. glandulæ (an constanter?) affixa. Capsula oblonga v. fusiformis, interdum elongata, erecta v. patens. Herbæ epiphyticæ, caulibus foliatis brevibus basi vaginatis demum in pseudobulbos carnosos v. tuberiformes sæpe parvos incrassatis. Folia pauca, disticha, oblonga v. angusta, multinervia at non plicata, basi in vaginas contracta. Pedunculus terminalis supra folium paucivaginatus. Racemus in caule foliato terminalis, simplex, v. racemi plures, breves, secus rhachin communem dissiti, paniculam angustam laxam formantes. Flores parvi, rarius mediocres, v. in *P. granuliflora* flos major solitarius videtur. Bractee parvæ.

Species ad 40, plerumque Africanæ, tropicæ v. australes, nonnullæ Asiaticæ, Indicæ v. Malayanae, paucæque Americæ tropicæ incolæ, inter has *P. latrata*, *Hook.*, parum tantum a *P. zeylanica*, *Lindl.*,

ex orbe vetere distinguitur. *Lindl. Gen. et Sp. Orch.* 72, et in *Journ. Linn. Soc.* vi. 129. *Reichb. f. in Walp. Ann.* vi. 637; *Xen. Orch.* t. 207; *Otia Hamb.* 60, 110; in *Bonpl.* 1857, 39; in *Flora*, 1865, 185; et in *Linnaea* xli. 73. *Lindl. Collect. Bot.* t. 20 (*Dendrobium*). *Wight, Ic.* t. 1678, 1679. *Harv. Thes. Cap.* t. 176 ad 179. *Bot. Mag.* t. 3707, 4161, 5586. *Bot. Reg.* t. 851. *Lodd. Bot. Cub.* t. 458 (*Dendrobium*). *Fl. des Serres*, t. 1521. *Saund. Ref. Bot.* t. 80, 81.

Pollinarii stipes sæpe brevissima in speciminibus siccis difficillime observatur interdumque deesse videtur, sed anthera et pollinia cæterum omnino *Vandearum*.

103. ? *Plocoglottis*, *Blume, Bijdr.* 380; *Orch. Archip. Ind.* 61, t. 14 ad 16.—Sepala æquilonga, libera v. lateralibus basi latiore columnæ pedi adnata, mentum breve sæpe formantia, omnia patentia v. posticum cum petalis sæpius angustioribus connivens. Labellum ima basi columnæ plicis membranaceis connexum breviterque saccatum, supra saccum erectum; lobi laterales parum prominuli, medius interdum demum elastice reflexus. Columna erecta, crassa, semiteres, exalata, basi in pedem brevissimum producta; clinandrium obliquum, dentibus vix prominulis v. obsoletis. Anthera terminalis, opercularis, incumbens, convexa, distincte 2-locularis, loculis valde imperfecte 2-locellatis. Pollinia 4, cerea, ovata, compressiuscula, per paria in loculis segregata et sibimet incumbentia, inappendiculata, anthera dehiscente per paria stipitibus filiformibus v. linearibus distinctis rostello affixa (absque glandula distincta?). Capsula oblonga v. elongata, erostris, costis obtuse prominentibus.—Herbæ terrestres, caulibus e rhizomate repente 1-∞-foliatis, basi leviter incrassatis nec distincte pseudobulbosis. Folia ampla, plicato-venosa. Pedunculi v. scapi aphylli, a basi caulium laterales, longi, erecti, paucivaginati. Racemus simplex, floribus mediocribus breviter pedicellatis. Bractee nunc minimæ, squamiformes, nunc pedicello sublongiores.

Species ad 8, Archipelagi Ma'ayani incolæ. *Lindl. Gen. et Sp. Orch.* 132. *Reichb. f. in Walp. Ann.* vi. 464; *Xen. Orch.* ii. t. 154.

104. *Cyrtopodium*, *R. Br. in Ait. Hort. Kew. ed.* 2, v. 216. (*Tylochilus*, *Nees in Verh. Gartenb. Gesellsch. Berlin*, viii. 191, t. 3. *Cyrtopera*, *Lindl. Gen. et Sp. Orch.* 189.)—Sepala 3, libera, patentia, subæqualia v. lateralibus basi latiora et plus minus in pedem columnæ decurrentia. Petala sepalo postico similia v. paullo latiora brevioraque. Labellum pedi columnæ affixa sæpiusque breviter adnata, quacum mentum format inter sepala lateralibus plus minus prominens; lobi laterales latiusculi, erecti v. demum patentes, medius rotundatus, patens, integer 2-lobus v. crispato-dentatus. Columna erecta, basi in pedem mentum formantem producta, semiteres, angulis acutis vix alatis; clinandrium obliquum, integrum. Anthera terminalis, opercularis, incumbens, interdum stipitata, convexa v. dorso 1-2-gibba, imperfecte 2-locularis. Pollinia 2 v. 4, per paria plus minus connata, late ovoides v. globosæ, cereæ, in anthera inappendiculata, anthera dehiscente glandulæ rostelli latæ fere membranaceæ v. in stipitem brevem crassum productæ affixæ. Capsula oblonga v. elongata, reflexa, erostris, costis sæpius acute prominulis.—Herbæ terrestres, rhizomate in pseudobulbos tuberiformes incrassato, caulibus breviter paucifoliatis. Folia longa, plicato-venosa, in petiolum contracta. Scapi e rhizomate erecti, elati, aphylli, plurivaginati. Racemus simplex v. ramosus, floribus mediocribus v. speciosis breviter pedicellatis. Bractee lineares v. lanceolatae.

Species ultra 20, Asiæ, Afriæ et Americæ tropicæ et Madagascariæ incolæ. *Lindl. Gen. et Sp. Orch.* 188. *Reichb. f. in Walp. Ann.* vi. 666, 667; *Otia Hamb.* 35, 44, 68, 88, 116; in *Bonpl.* 1857, 38; in *Flora*, 1865, 189; 1872, 274, et in *Trans. Linn. Soc.* xxx. 144 (*Cyrtopodium* et *Cyrtopera*).

In specie typica, *C. Andersonii*, Br., in *C. punctata* affinisque pluribus Americanis vix non *C. Andersonii* varietatibus, racemus ramosus et sepala lateralibus basi vix dilatata, brevissime tantum pedi columnæ adnata. Huc pertinent icones *Lindl. Scrt. Orch.* t. 12. *Andr. Bot. Rep.* t. 651 (*Cymbidium*). *Bot. Mag.* t. 1800, 3507. *Bot. Reg.* 1841, t. 8. *Lodd. Bot. Cub.* t. 121. *Kn. et Weste. Fl. Cub.* t. 4. *Reichb. Iconogr. Exot.* t. 214.

Genus *Cyrtopera* (*Eulophia*, sect. *Blume, Orch. Archip. Ind.* 181, t. 62, 63, 66) propositum fuit ad species Asiaticas et Africanas racemo simplici et sepalis lateralibus plus minus interdum fore ad apicem

pedis columnæ adnatis. *Wight, Ic. t. 1690, 1754. Royle, Ill. Bot. Himal. t. 88. Hook. Ic. Pl. t. 104 (Cymbidium). Bot. Mag. t. 6161. Thou. Orch. Iles Afr. t. 41, 42 (Limodorum). C. Woodfordii tamen, ex America tropica (Bot. Mag. t. 1814, Bot. Reg. t. 1808), characteres ostendit *Cyrtoperæ* et in *C. flava*, Lindl., ex India orientali, et in *C. plantaginea*, Lindl., e Madagascaria, sepala lateralialia a pede columnæ fere omnino libera nec basi dilatata. In his omnibus speciebus racemus simplex, sed distinctio inter genera cæterum evanescit.*

*C. foliosa*, Lindl. in Comp. Bot. Mag. ii. 203, ex Africa australi habitu a *Cyrtoperis* distinctissima, ex icone in herb. Lindl., videtur potius *Eulophiæ* species *E. cochleari*, Lindl., subaffinis.

105. *Govenia*, Linull. in *Lindl. Bot. Cab. t. 1709; Gen. et Sp. Orch. 153. (Eucnemis, Lindl. Gen. et Sp. Orch. 161, ex adnot. in Herb. Lindl.)*.—Sepala subæqualia, conniventia, posticum incurvo-erectum, lateralialia falcata v. decurva, basi cum columnæ pede mentum breve formantia. Petala sepalo postico similia. Labellum pedi columnæ affixum, articulatam, basi incumbens, concavum, apice patens, indivisum. Columna incurva, late semiteres, superne v. undique alata, basi in pedem brevem producta; clinandrium truncatum. Anthera terminalis, opercularis, incumbens, valde convexa, dorso interdum cristata, 1-locularis; pollinia 4, cerea, late ovata, compressa, per paria sibiim applicita, paribus in anthera a latere appositis, inappendiculata, anthera dehiscente stipiti oblongo v. lato affixa, glandula parva v. dilatata. Capsula oblonga, erostis.—Herbæ terrestres, rhizomate interdum in pseudobulbos tuberiformes incrassato, caulibus erectis paucifoliatis basi vaginis nonnullis stipatis, quarum una sæpe inflato-utriculiformis. Folia ampla, plicato-venosa, basi contracta. Racemus in caule foliato terminalis, simplex, pedunculo prope basin paucivaginato. Flores mediocres, conferti v. demum dissiti, brevissime pedicellati. Bractæ parvæ ovatæ, v. angustæ ovario paullo breviores.

Species ad 10, Americæ tropicæ a Brasilia usque ad Indiam occidentalem et Mexicum incolæ. *Reichb. f. in Walp. Ann. vi. 556; Orch. Centr. Amer. 75. Bot. Mag. t. 3660, 4151. Bot. Reg. t. 1795, 1838, t. 13.*

*Govenia limbata*, Griseb. Fl. Brit. W. Ind. 628 (*Cymbidium limbatum*, Lindl.), delenda est. Descripta fuit ad specimen in herb. Hook. evidenter ex horto Liverpool, constans e folio *Oncidii* cum inflorescentia *Cymbidii*, ut bene notavit Reichb. f.

106. *Pteroglossaspis*, Reichb. f., *Otia Bot. Hamb. 67.*—Sepala subæqualia, libera, patentia, lateralialia basi mentum parum prominulum formantia. Petala sepalis similia. Labellum ad basin columnæ affixum, sessile, patens, ecalcaratum; lobi laterales ovato-rotundati, patentes, medius major, obtusissimus, integer; discus  $\infty$ -seriatim tuberculosus. Columna brevissima, lata, basi vix in pedem brevissimum producta, lobis 2 calliformibus instructa, ad angulos subalata; clinandrium rotundatum, parum prominens. Anthera terminalis, opercularis, incumbens, 1-locularis; pollinia 2, subglobosa, basi extrorsum perforata, inappendiculata, anthera dehiscente stipiti brevi affixa; glandula squamiformis. Capsula . . .—Herba (epiphytica?) pseudobulbis demum ovoideo-globosis; caulibus foliatis brevissimis. Folia 1-2, longa, angusta, plicato-venosa. Scapi e rhizomate elati, aphylli, plurivaginati. Flores mediocres, in racemum simplicem densum conferti, pedicellis brevissimis. Bractæ membranaceæ, flores æquantes v. paullo breviores.

Species 1, Abyssinica.

107. *Zygopetalum*, Hook. Bot. Mag. t. 2748.—Sepala subæqualia, patentia, libera v. vix brevissime basi connexa, lateralialia pedi brevi columnæ affixa. Petala sepalis similia. Labellum pedi columnæ affixa, cui breviter incumbens mentum breve format; lobi laterales nunc parum prominentes patentes, nunc paullo majores erecti, columnam amplectentes, medius explanatus, patens, sæpius latum interdum ovatum; discus crista transversa sæpius valde prominente carnosa integra v. lobata instructus. Columna incurva, semiteres, exalata v. apice breviter 2-alata, basi in pedem brevem producta; clinandrium obliquum, integrum, v. membranaceum cucullatumque margine fimbriatum. Anthera terminalis v. intra marginem clinandri affixa, opercularis,

incumbens, dorso convexa ovoideo-conica v. acuminata, 2-localaris; pollinia 4, obovoidea, per paria in loculis segregata, inappendiculata, anthera dehiscente in glandula rostellis sessilia v. stipiti latiusculo affixa. Capsula ovoidea v. oblonga, erostris.—Herbæ epiphyticæ, caulibus foliatis brevibus demum in pseudobulbos incrassatis. Folia disticha, membranacea v. rigidula, elevato-venosa v. subplicata. Scapi floriferi aphylli, ∞-vaginati, 1-flori v. racemo laxo terminati. Flores speciosi. Bractæ parvæ v. latiusculæ.

Species ad 40, Americæ calidioris a Brasilia usque ad Americam centralem et Indiam occidentalem incolæ. *Lindl. Gen. et Sp. Orch.* 187. *Bot. Reg.* 1844, *Misc.* 9. *Reichb. f. in Walp. Ann.* vi. 650; *Otia Hamb.* 8; *Orch. Centr. Amer.* 74; in *Bot. Zeit.* 1865, 99; et in *Linnaea* xli. 5, 107.

Genus *Cyrtopodium* affine, a Blumeo *Eulophiæ* adjunctum, nobis tamen bene distinctum videtur, in sectiones sequentes naturales, apud plures auctores pro generibus habendas, sed a Reichenbachio l. c. iterum conjunctas dividitur:—

1. *Euzygopetalum*. Scapi elati, floribus pluribus speciosis. Labellum latum (excepto *Z. stenochilo*, Lodd. *Bot. Cab.* t. 1923), crista crassa varie appressa v. elevata integra v. lobata. Clinandrium obliquum, integrum. Anthera obtusa v. obtuse acuminata; pollinarii stipes brevis.—*Bot. Mag. t.* 2748, 3402, 3674, 3686. *Bot. Reg. t.* 1433 (*Eulophia*). Lodd. *Bot. Cab. t.* 1664, 1687, 1776. *Maudsl. Bot. Anal.* t. 111.

2. *Zygosepalum*. Scapi 1-3-flori, floribus speciosis. Sepala et petala anguste acuminata. Clinandrium rægnum, membranaceum, subcucullatum, fimbriato-lacerum, lobis lateralibus seu alis columnæ rotundatis integris. Anthera dorso longe rostrata. Cætera *Euzygopetali*. Species v. varietates 2, Guianenses. *Bot. Mag. t.* 2819. *ZYGOSEPALUM*, *Reichb. f. in Bot. Zeit.* 1852, 668; in *Walp. Ann.* vi. 665; et in *Saund. Ref. Bot.* t. 106.

3. *Huntleya*. Scapi 1-flori. Labellum unguiculatum, crista longe fimbriata, lamina ovata acuta. Columna latissima, clinandrio amplo subcrenulato fere *Zygosepali*. Anthera erostris. Species 1, Brasiliensis et Guianensis, *HUNTLEYA*, *Batem. ex Lindl. in Bot. Reg. sub n.* 1991 et 1839, t. 14; cum 2 e Mexico et America centrali, *GALEOTTIA*, *A. Rich. in Ann. Sc. Nat. ser.* 3, iii. 25; species omnes a *Reichb. f. in Walp. Ann.* vi. 555, *Xen. Orch. t.* 66, f. 1, 2, et in *Bot. Mag. t.* 5567 et 6003, ad *Batemanniam* relatæ.

4. *Bollea*. Scapi 1-flori. Sepala et petala lata. Labellum late rotundatum, ungue brevi, crista crassa elevata. Columna brevis, latissima, crassa, clinandrio subcucullato integerrimo. Species 1, Guianensis. *Lindl. Sert. Orch. t.* 26 (*Huntleya*). *BOLLEA*, *Reichb. f. Bot. Zeit.* 1852, 667; *Xen. Orch. i.* 187, t. 66, f. 3. *Bot. Mag. t.* 6331, 6458.

5. *Warszewiczella*. Scapi 1-flori. Sepala et petala *Euzygopetali* v. latiora et minus explanata, interdum undulata. Labellum sæpius latissimum. Columna *Euzygopetali*. Pollinarii stipes magis evoluta, apice utrinque sæpius angustata. Species ad 6. *Bot. Mag. t.* 3585, 4766, 4830 (*Warrea*), 5598 (*Huntleya*). *Bot. Reg. t.* 1857. *Reichb. f. Xen. Orch. t.* 73. *WARSEWICZELLA*, *Reichb. f. in Bot. Zeit.* 1852, 635; *Xen. Orch. t.* 23, 93. *Bot. Mag. t.* 5582. *PASCATOREA*, *Reichb. f. in Bot. Zeit.* 1852, 667; *Xen. Orch. t.* 11, 65. *Bot. Mag. t.* 6214, 6240.

6. *Promenæa*. Scapi ut in *Warszewiczella* 1-flori, a qua differt statura humiliore et columna antice sub stigmate sæpius nec semper linea longitudinali elevata seu carina instructa. Species ad 8, pleræque Brasiliannæ. *Link et Otto Ic. Pl. Sc. t.* 52 (*Cymbidium*). *Bot. Mag. t.* 3877 (*Maxillaria*). *ПРОМЪННА*, *Lindl. Bot. Reg.* 1843, *Misc.* 13 (pro maxima parte). *KEFERSTEINIA*, *Reichb. f. in Bot. Zeit.* 1852, 633; *Xen. Orch. t.* 25. *Bot. Mag. t.* 5046. Nec distinguere possumus (ex char. et analysi in herb. Lindl.) *CHAUBARDIAM*, *Reichb. f. in Bot. Zeit.* 1852, 671, et in *Walp. Ann.* vi. 543.

108. *Grobya*, *Lindl. Bot. Reg. t.* 1740.—Sepalum posticum liberum, erectum, lateralia patentissima v. deflexa, ad medium connata, apice flexuosa. Petala erecto-patentia, sepalo postico multo latiora. Labellum in pede columnæ articulatam, ungue brevissimo incumbente, erectum, latum; lobi laterales erecti, medius patens; discus varie callosus v. cristatus. Columna erecta, semiteres, apice utrinque lobo brevi v. dente aucta et interdum prope basin 2-auriculata, basi in pedem brevem crassiusculum producta; clinandrium oblique truncatum. Anthera terminalis, opercularis, incumbens, (2-localaris?); polloblique truncatum. Anthera terminalis, inappendiculata, anthera dehiscente linea 2, cerca, profunde sulcata v. 2-partibilia, inappendiculata, anthera dehiscente stipiti plano longiusculo affixa, glandula ovata. Capsula . . .—Herbæ epiphyticæ, caulibus plurifoliatis brevibus basi demum in pseudobulbos carnosos incrassatis. Folia

longa, angusta, plicato-venosa. Scapi ad basin pseudobulborum simplices, basi plurivaginati, recurvi v. a basi deflexi. Racemus densus, floribus mediocribus v. majusculis breviter pedicellatis. Bracteæ angustæ, breves.

Species 2, Brasilienses. *Reichb. f. in Walp. Ann.* vi. 627.

109. *Cheiradenia*, *Lindl. Fol. Orch.* 1853.—Sepala subæquilonga, inter se libera, patentia, lateralia latiora pedi columnæ adnata. Petala sepalo postico similia. Labellum ad apicem pedis columnæ articulatam, latum, indivisum, planum; discus crista transversa digitata instructus. Columna brevis, semiteres, crassiuscula, subclavata, basi in pedem producta; clinandrium truncatum. Anthera terminalis, opercularis, incumbens (1-locularis?); pollinia 2, cerea, ovoidea, sulcata, inappendiculata, anthera dehiscente stipiti plano lato affixa. Capsula . . .—Herba epiphytica, parvula, caule brevissimo 1-foliato mox in pseudobulbum parvum incrassato. Folium membranaceo-coriaceum, nervosum. Scapi laterales, tenues fere filiformes, aphylli, simplices. Flores parvuli, pauci, in racemo distantes, breviter pedicellati. Bracteæ angustæ, acuminatæ.

Species 1, Guianensis. *Walp. Ann.* vi. 543.

Genus nobis non satis notum. Flores in speciminibus nostris paucos examinare nequimus et characteres supra dati ex analysi Lindleyana. *Zygopetalis* minoribus affine videtur sed partes omnes multo minores tenuioresque. Habitus fere *Leiochili* v. *Cryptarrhenæ Regelii*, Reichb., sed columna certe in pedem producta.

110. *Aganisia*, *Lindl. Bot. Reg.* 1839, *Misc.* 45; 1840, t. 32. (*Koellensteinia*, *Reichb. f. in Bonplandia*, 1854, 17; in *Walp. Ann.* vi. 551; et *Xen. Orch.* t. 24.)—Sepala æqualia, libera, patentia. Petala sepalis subsimilia. Labellum ungue brevissimo columnæ basi affixum, quacum articulatam; lobi laterales breves v. obsoleti, medius patens, latus, rotundatus v. subquadratus, integer v. late 2-3-lobus; discus ad basin laminæ late cristatus. Columna erecta, semiteres, basi non producta, apice utrinque lobo brevi obtuso v. longiore acutiusculo cum clinandrio cæterum integerrimo continuo aucta. Anthera terminalis, opercularis, incumbens, dorso convexa v. breviter appendiculata, 1-locularis; pollinia 4, cerea, obovoidea v. oblonga, acutiuscula, per paria connata, inappendiculata; anthera dehiscente stipiti plano oblongo v. lineari affixa; glandula parva. Capsula . . .—Herbæ terrestres v. epiphyticæ, caulibus foliatis brevibus demum (an semper?) in pseudobulbos incrassatis. Folia pauca, sæpe solitaria, plicato-venosa, linearia v. latiuscula, in petiolum contracta. Scapi ad basin pseudobulborum v. e rhizomate erecti, aphylli, paucivaginati, sæpe tenues. Racemus simplex, latus, floribus mediocribus breviter pedicellatis. Bracteæ parvæ.

Species ad 6, Americæ tropicæ incolæ. Huc includimus, præter speciem typicam Lindleyi, *A. lepidam*, Reichb. f. *Beitr. Orchidk.* 15, t. 5; *Warreum cinereum*, Lindl. *Bot. Reg.* 1845, t. 28 (*Zygopetalum tricolor*, Lindl. *Bot. Reg.* 1846, sub t. 64); et *Promenæam gramineam*, Lindl. *Bot. Reg.* 1843, *Misc.* 13, *Bot. Mag.* t. 6338 (*Koellensteinia*). Genus a *Zygopetalo* affinisque facile distinctum floribus (sæpius minoribus) explanatis, mento nullo prominente. Hic tamen multo melius quam inter *Oncidieas* collocatur.

111. *Acacallis*, *Lindl. Fol. Orch.* 1853.—Sepala inter se libera, subæqualia, patentia, lateralia basi pedi columnæ adnata, mentum breve formantia. Petala sepalo postico similia. Labellum pedi columnæ affixum eique brevissime in mentum connatum, dein erecto-patens, ungue longiusculo superne introrsum in saccum reversum seu cucullum latum cristatum margine dentatum dilatatum; lamina lata, sub-2-loba, undulato-denticulata; discus basi late cristatus. Columna erecta, semiteres, basi in pedem brevem producta, ad latera stigmatis alis latis membranaceis appendiculata; clinandrium breve, dento postico parum prominente. Anthera terminalis, opercularis, incumbens, convexa, 1-locularis; pollinia 4, cerea, late obovoidea, per paria connata (v. 2, 2-loba), inappendiculata, anthera dehiscente stipiti plano oblongo affixa; glandula parva. Capsula . . .—Herba epiphytica, caulibus foliatis brevibus, demum in pseudobulbum incrassatis. Folium

unicum (v. 2?) amplum, plicato-venosum, in petiolum contractum. Scapus florifer e rhizomate v. in pseudobulbo lateralis, elongatus, aphyllus, paucivaginatus. Racemus simplex, floribus paucis speciosis (cyaneis) breviter pedicellatis.

Species 1, Brasiliæ borealis incolæ, a Reichb. f. Beitr. Orchidk. 13, t. 4, ad *Aganisiæ* relata; nobis tamen *Zygopetalum* multo affinium videtur, a quo differt imprimis labelli appendice singulari et auriculis columnæ amplis.

112. *Eriopsis*, Lindl. Bot. Reg. 1847, sub t. 9 et t. 18.—Sepala æqualia, patentia, libera v. lateralibus cum pede columnæ in mentum brevissimum connata. Petala sepalis subsimilia. Labellum pedi columnæ affixum, breviter incumbens, dein erectum; lobi laterales lati, erecti, columnam laxè amplexantes, medius parvus, patens, integer v. 2-lobus; discus varie lamellatus. Columna longiuscula, semiteres, incurva, apice subclavata, exalata, basi in pedem brevem producta; clinandrium valde obliquum, integrum v. antice obtuse 2-angulatum v. breviter 2-dentatum. Anthera intra marginem clinandrii opercularis, incumbens, valde convexa, 1-locularis; pollinia 2, late semiglobosa 2-partibilia, v. 4 per paria sibimet applicita altero minore, paribus in anthera a latere appositis, inappendiculata, anthera dehiscente glandulæ carnosulæ mox squamiformi subquadratæ affixa, stipite 0. Capsula . . .—Herbæ epiphytica, caulibus foliatis brevibus demum in pseudobulbos incrassatis. Folia sæpius 2, longa, ampla, plicato-venosa. Scapi e rhizomate longi, erecti, aphylli, paucivaginati. Racemus longus, simplex, laxè floribundus, floribus speciosis pedicellatis. Bracteæ minutæ.

Species 3 v. 4, Brasiliæ borealis, Guianæ et Colombiæ incolæ. Reichb. f. in Walp. Ann. vi. 662. Bot. Mag. t. 4437.

PSEUDERIOPSIS, Reichb. f. in Linneæ xxii. 852, species Guianensis a nobis non visa, ex caractere dato ab *Eriopsis* typicis paullulum differt, angulis columnæ basi alatis et dentibus anticis clinandrii in brachia productis.

113. *Warrea*, Lindl. Bot. Reg. 1843, Misc. 14.—Sepala subæqualia, lata, concava, subpatentia, lateralibus basi obliqua, columnæ pedi adnata. Petala sepalis subsimilia. Labellum pedi brevi columnæ affixum, sessile, ima basi brevissime contractum incumbensque, dein erectum, latum, concavum; lobi laterales parum prominentes, medius expansus, rotundatus, integer v. 2-fidus; discus medio lineis elevatis carnosus instructus. Columna longiuscula, semiteres, crassa, apice clavata, exalata, basi in pedem brevem producta; clinandrium valde obliquum, concavum, fere cucullatum. Anthera terminalis, opercularis, incumbens, convexa, 2-locularis; pollinia 4, cerea, ovoidea, compressiuscula, per paria in loculis segregata, inappendiculata, anthera dehiscente stipiti brevi lineari affixa. Capsula . . .—Herbæ terrestres, caulibus foliatis brevibus demum in pseudobulbos ovoideos v. elongatos incrassatis. Folia pauca, disticha, elongata, sæpius angusta, plicato-venosa. Scapi aphylli, plurivaginati, elati, simplices. Racemus elongatus, laxis, floribus breviter pedicellatis speciosis. Bracteæ breves.

Species 2?, Peraviæ et Colombiæ incolæ. Reichb. f. Xcn. Orch. t. 24, f. 1 ad 9. Bot. Mag. t. 4235 (*Maxillaria*). Lodd. Bot. Cab. t. 1884 (*Maxillaria*).

*W. cyanea*, Lindl., ad *Aganisiæ* referenda est.

114. *Zycemormium*, Reichb. f. in Bot. Zeit. 1852, 833, et in Walp. Ann. vi. 611.—Sepala æquilonga, carnosæ, posticum liberum v. basi cum cæteris brevissime connatum, lateralibus latissima, basi cum pede columnæ in mentum latum connata. Petala sepalis postico minora et angustiora. Labellum ab apice pedis columnæ incumbens, sepalis inpostico minora et angustiora. Labellum ab apice pedis columnæ incumbens, sepalis inpostico minora et angustiora. Columna clusum, late cucullatum, lobis lateralibus erectis, medio brevissimo patente. Columna brevis, crassa, apice 2-auriculata, basi in pedem longum producta; clinandrium maximum, dilatatum, undulatum, cum auriculis columnæ continuum. Anthera intra marginem clinandrii affixa, opercularis, incumbens, crassa, subsuberosa, 2-locularis; pollinia 2, cerea,

anguste oblonga, sulcata, inappendiculata, anthera dehiscente glandulæ latiusculæ absque stipite affixa. Capsulæ . . . —Herbæ epiphyticæ, caulibus brevibus paucifoliatis mox in pseudobulbos carnosos incrassatis. Folia magna *Peristerie*. Scapi ad latera pseudobulborum recurvi v. penduli, plurivaginati, simplices. Flores majusculi, dense racemosi, breviter pedicellati.

Species 3?, Colombiæ et Americæ centralis incolæ. *Pæpp. et Endl. Nov. Gen. et Sp. t. 74 (Anguloa)*. *Reichb. f. Xen. Orch. t. 64*. Hæc species typica, eique associandæ videntur *Peristeria cerina*, Lindl. Bot. Reg. t. 1953, et forte *P. guttata*, Knowles et Westc. Fl. Cab. t. 70, ex descriptione potius quam ex analysi in icone.

Genus habitu *Peristerie* accedit sed columna et perianthium omnino *Cyrtopodicearum*.

115. *Batemannia*, Lindl. Bot. Reg. t. 1714. —Sepala æquilonga, posticum liberum, erectum, concavum, lateralia pedi longo columnæ adnata, ad apicem pedis patentia, postico angustiora. Petala sepalo postico subsimilia at plana, basi pedi columnæ latiuscule adnata. Labellum ad apicem pedis columnæ articulatam, basi incumbens, concavum; lobi laterales erecti, columnam amplectentes, medius patens, brevis, indivisus; crista ad basin lobi parva. Columna longiuscula, crassa, antice concava, exalata, basi in pedem producta; clinandrium obliquum, margine elevato membranaceo denticulato. Anthera intra marginem clinandrii affixa, opercularis, incumbens, convexa, 2-locularis, membrana lata appendiculata; pollinia 2, cerea, anguste oblonga, sulcata v. 2-loba, inappendiculata, anthera dehiscente glandulæ (v. stipiti) obovatæ v. cuneiformi planæ affixa. Capsula . . . —Herba epiphytica, caulibus abbreviatis 1-3-foliatis, mox in pseudobulbum carnosum incrassatis. Folia ampla, membranaceo-coriacea, plicato-venosa, basi breviter contracta. Scapi ad basin pseudobulborum recurvi v. penduli, basi vaginis subfoliaceis stipati, simplices. Flores majusculi, laxè racemosi, pedicellati. Bracteæ ovatæ, pedicello breviores.

Species 1, Guianensis. Bot. Mag. t. 3818 (petala imperfecte delineata).

*Huntleya Meleagris*, Lindl., speciesque affines a Reichb. f. in Walp. Ann. vi. 555, et in Linnæa xli. 108, ad *Batemanniam* relata, nobis et habitu et characteribus longe differre videntur et ad *Zygotatum* referendæ.

116. *Bifrenaria*, Lindl. Gen. et Sp. Orch. 152. —Sepala subæquilonga, erecto-patentia, lateralia basi lata pedi columnæ adnata, mentum sæpius longum calcariforme formantia. Petala sepalo postico similia v. minora latioraque. Labellum ad apicem pedis columnæ sæpius articulatam, ungue incumbente brevi v. elongato; lobi laterales ad apicem unguis latiusculi, erecti, medius patens, integer v. 2-fidus. Columna erecta, crassiuscula, semiteres, exalata, basi in pedem longum producta; clinandrium truncatum. Anthera terminalis, opercularis, incumbens, valde convexa, interdum dorso cristata, 1-locularis v. imperfecte 2-locularis; pollinia 4, ovoidea v. latiuscula, cerea, per paria sibimet arcte applicita v. in 2-2-fida connata, inappendiculata, anthera dehiscente stipitibus 2 brevissimis elongatisve basi in glandulam transversam sæpius connatis affixa. Capsula . . . —Herbæ epiphyticæ, caulibus brevissimis paucivaginatibus mox in pseudobulbos carnosos apice 1-2-foliosos incrassatis. Folia oblonga, interdum ampla, plicato-venosa. Scapi inter pseudobulbos simplices, erecti, nunc breves floribus paucis rarius ad unum reductis magnisque, nunc tenuiores floribus minoribus in racemo pluribus breviter pedicellatis. Bracteæ parvæ v. in grandifloris spathaceæ.

Species ad 10, Brasiliæ, Guianæ et forte Colombiæ incolæ. *Reichb. f. in Walp. Ann. vi. 546 (excl. B. Hadwenii)*; *Xen. Orch. t. 94*. *Hook. Exot. Fl. t. 120 (Dendrobium)*, 217. *Bot. Mag. t. 2789, 2927, 3597, 3629*. *Bot. Reg. t. 897, 1566, 1875; 1839, t. 12*. *Lodd. Bot. Cab. t. 1318, 1877*. *Knowl. et Westc. Fl. Cab. t. 83*. *Reg. Gartenfl. t. 52 (ic. nonnulla sub Mazillaria)*.

*Stenocoryne*, Lindl. Bot. Reg. 1843, Misc. 53, est *B. longicornis*, Lindl., species e Guiana et Brasilia boreali, mento longo tenuiter calcariformi insignis, et ab auctore generice distincta 'caudiculis 2 glandulisque totidem ovalibus.' Flores typicos Guianenses examinare nequimus, sed in planta Spruceana e Panuræ Brasiliæ borealis n. 2935, Guianensi cæterum simillima et a

Lindleyo pro eadem determinata, pollinarii stipites 2 vidimus basi certe connatos, nec a basi distinctos ut in herb. Lindl. delineati.

117. *Xylobium*, Lindl. Bot. Reg. sub t. 897.—Sepala subæquilonga, erecta, demum subpatentia, lateralia postico latiora basi pedi columnæ adnata, mentum formantia. Petala sepalo postico similia nisi minora. Labellum cum pede columnæ subarticulatum, sessile v. basi contractum incumbensque, dein erectum; lobi laterales erecti, columnam amplectentes, medius brevis, latus, patens, facie lævis lamellatus v. basi callosus. Columna erecta, semiteres, antice concava v. anguste 2-alata, basi in pedem producta; clinandrium oblique truncatum. Anthera terminalis, opercularis, incumbens, valde convexa, 1-locularis; pollinia 4, ovoidea, per paria sibimet arcte applicita v. plus minus connata altero minore, inappendiculata, anthera dehiscente stipiti interdum longiusculo affixa, glandula squamiformi transversa. Capsula oblonga, erecta.—Herbæ epiphyticæ, caulibus brevibus plurivaginatibus mox in pseudobulbos carnosos 1-2-foliatos incrassatis. Folia ampla v. elongata, plicato-venosa, in petiolum contracta. Scapi ad basin pseudobulborum erecti, simplices. Flores racemosi, mediocres v. majusculi, brevissime pedicellati. Bractee lineares, sæpius longiusculæ.

Species enumeratæ 16, Americæ tropicæ incolæ. Lindl. in Part. Fl. Gard. iii. 69, t. 264. Reichb. f. in Walp. Ann. vi. 507 (ab utroque ad sectionem *Maxillariæ* reductæ). Presl Symb. t. 24 (*Dendrobium*). Poepp. et Endl. Nov. Gen. et Sp. t. 67 (*Maxillaria*). Bot. Reg. t. 732 (*Dendrobium*), 1549 (*Maxillaria*). Bot. Mag. t. 2806, 2955, 3981 (*Maxillaria*).

Genus quoad florum characteres *Maxillariæ* affine, sed habitu et inflorescentia (*Bifrenariæ*) et pollinarii stipite longiore satis distinctum videtur.

118. *Zaccena*, Lindl. Bot. Reg. 1843, Misc. 68; 1844, t. 50. (*Navenia*, Klotzsch in Allgem. Gartenz. 1853, 193.)—Sepala subæquilonga, patentia, postico liberum, lateralia paullo latiora, basi cum pede columnæ mentum brevissimum formantia. Petala sepalo postico similia nisi minora. Labellum cum pede columnæ continuum (v. articulatum?), inflexum, apice patens; lobi laterales ad latera unguis lati brevesque, v. longi et angusti, erecti, medius patens, stipitatus, latus, indivisus. Columna incurvo-erecta, longiuscula, semiteres, apice subclavata breviterque 2-alata, basi in pedem brevem producta; clinandrium concavum, oblique membranaceo-marginatum. Anthera subterminalis, opercularis, incumbens, imperfecte 2-locularis; pollinia 2, cerea, anguste v. latiuscule oblonga, sulcata, apice attenuata, inappendiculata, anthera dehiscente stipiti lineari affixa; glandula parva. Capsula . . .—Herbæ epiphyticæ, caulibus brevibus 2-3-foliatis mox in pseudobulbum carnosum incrassatis. Folia ampla, plicato-venosa, in petiolum contracta. Scapi infra pseudobulbos longi, recurvi, plurivaginati, simplices. Flores majusculi, laxè racemosi, breviter pedicellati. Bractee subscariosæ, pedicellos subæquantes v. paullo longiores.

Species 2, Americæ centralis incolæ. Reichb. f. in Walp. Ann. vi. 612. Bot. Mag. t. 6516. Lemaire, Illustr. Hort. i. t. 33.

119. *Lycaste*, Lindl. Bot. Reg. 1843, Misc. 14; et in Part. Fl. Gard. ii. 37, f. 151, 152.—Sepala subæqualia, erecto-patentia, lateralia paullo latiora, basi cum pede columnæ mentum sæpius breve interdum fere saccatum formantia. Petala nunc sepalis similia nisi minora, nunc sæpius distincte breviora latioraque. Labellum columnæ pedi affixum, sessile v. unguiculatum, sepalis brevius; lobi laterales ad basin v. ad apicem unguis erecti, lati v. anguste falcati, medius parvus latus v. elongatus angustusque, patens, integer v. varie ciliatus v. fimbriatus; discus medio appendice transversa v. callo polymorpho instructus. Columna longiuscula, arcuata, semiteres, exalata v. apice angustissime 2-alata, basi in pedem brevem producta; clinandrium breve v. rarius membranaceo-dilatatum. Anthera terminalis, opercularis, incumbens, valde convexa, 1-locularis; pollinia 4, oblonga v. ovoidea, per paria sibimet arcte applicita, inappendiculata, anthera dehiscente stipiti

longo lineari affixa, glandula parvula. Capsula oblonga v. fusiformis, erecta.—Herbæ epiphyticae (v. terrestres?) caulibus brevibus paucifoliatis basi vaginatis mox in pseudobulbos carnosos incrassatis. Folia ampla, plicato-venosa. Scapi ad latera pseudobulborum erecti, 1-flori v. rarius laxè 2–3-flori. Flores magni, sæpius nutantes.

Species ad 25, Americæ tropicæ a Peruvia usque ad Mexicum et Indiam occidentalem incolæ. *Reichb. f. in Walp. Ann.* vi. 600; *Otia Hamb.* 7. *Pæpp. et Endl. Nov. Gen. et Sp. t.* 64. *Batem. Orch. Mer. et Guat. t.* 35. *Exot. Fl. t.* 219. *Bot. Mag. t.* 3146, 3395, 4081, 4193, 4445, 5616, 5706, 6251, 6303. *Bot. Reg. t.* 1206, 1428, 1871, 1845, t. 34. *Saund. Ref. Bot. t.* 102. *Lodd. Bot. Cab. t.* 1824 (ic. nonnullæ sub *Maxillaria*).

Genus bene a *Maxillaria* separatum, *Anguloa* tamen valde affine, paullulum differt perianthio plus minus patente, cæterum pluribus notis variat. In *L. cristata*, *L. fulvescente*, affinisque, labellum basi angustatum, lobo medio insigniter ciliato, in speciebus pluribus labellum basi concavum intus fere saccatum, lobo medio integro. *L. tetragona*, Lindl. (a nobis non visa), ab omnibus differt scapo brevissimo, labello crasse carnosio fere saccato intus lamina carnosia aucto.

*PAPHINIA*, Lindl. *Bot. Reg.* 1843, *Misc.* 14 (*Maxillaria*, *Bot. Reg. t.* 1811), *Bot. Mag. t.* 4836, ad *Lycastem* referenda videtur; a speciebus typicis paullulum differt scapo sæpe 2-floro. Appendicula in medio labello in utraque specie adest. *P. rugosa*, Reichb. f. in *Linnaea* xli. 110, nobis ignota est.

*COLAX*, Lindl. *Bot. Reg.* 1843, *Misc.* 50, species 2 Brasilienses includit, ab auctore distinctas floribus subglobosis vix ringentibus, quod in sola icone *Bot. Reg. t.* 1510 (*Maxillaria viridi*) apparet, et pollinarii stipite superne plus minus membranaceo-dilatata. In iconibus tamen *M. placantheræ*, *Bot. Mag. t.* 3173, a Reichenbachio ad *M. viridem* reducta, et præsertim *C. jugosi*, Lindl., Reichb. f. *Xen. Orch. t.* 41; *Bot. Mag. t.* 5661; *Illustr. Hort. t.* 96, sepala et petala plane patentia delineantur. Pollinarii stipes in utraque specie quam in *Lycastis* plerisque latior videtur, sed in genere variat. Scapi in *C. rugoso* ut in *Paphinia* 2–3-flori, in *C. viridi* ut in *Lycastis* typicis 1-flori.

120. *Anguloa*, Ruiz et Pav. *Prod. Fl. Per.* 118, t. 26; *Syst. Veg.* 228.—Sepala subæqualia, lata, crassiuscula, fere in globum conniventia, lateralia basi rotundata, sub pede columnæ connata. Petala sepalo postico subsimilia v. minora. Labellum in pede columnæ plus minus stipitatum, carnosulum; lobi laterales ad apicem unguis erecti, paralleli, medius patens, parvus v. latior ciliatusque; discus medio lamella auctus. Columna erecta, semiteres, exalata, basi in pedem brevem producta; clinandrium truncatum v. antice 2-appendiculatum. Anthera terminalis, opercularis, incumbens, galeata, 1-ocularis; pollinia 4, cerea, ovata v. oblonga, per paria sibimet arcte applicita postico minore, inappendiculata, anthera dehiscente stipiti longo plano affixa, glandula ovata. Capsula . . .—Herbæ epiphytica v. terrestres, caulibus brevibus paucifoliatis basi vaginatis mox in pseudobulbos carnosos incrassatis. Folia ampla, plicato-venosa. Scapi ad latera pseudobulborum erecti, 1-flori, vaginis pluribus laxis, superioribus interdum in laminam foliaceam brevem productis. Flos magnus, sæpius nutans.

Species 3, Andium Colombiæ et Peruvix incolæ. Lindl. in *Bot. Reg.* 1846, sub t. 41. *Reichb. f. in Walp. Ann.* vi. 599; *Otia Hamb.* 6. *Bot. Mag. t.* 4313, 4807, 5384. *Bot. Reg.* 1844, t. 60, 63; 1846, t. 41.

121. *Chondrorhyncha*, Lindl. *Orch. Linden.* 12.—Sepala subæquilonga, anguste oblonga, posticum basi columnæ adnatum, concavo-carinatum, lateralia basi obliqua, pedi brevissimo columnæ adnata. Petala sepalis multo latiora, obovato-oblonga. Labellum cum pede columnæ articulatam, sessile, latum, erectum, concavum, indivisum, basi intus callo 3-dentato instructum. Columna semiteres, superne utrinque dilatata, basi in pedem brevissimum producta; clinandrium valde obliquum, integrum. Anthera terminalis, opercularis, incumbens, 1-ocularis; pollinia 4, cerea, angusta, acuminata, per paria sibimet incumbentia, postico minore, inappendiculata, anthera dehiscente stipiti crasso affixa, glandula molli. Capsula . . .—Herbæ epiphyticae, caulibus brevissimis plurifoliatis non pseudobulbosis. Folia oblonga, plicato-venosa, in petiolum contracta. Scapus e rhizomate simplex, paucivaginatus, flore unico majusculo.

Species 1 v. 2, Colombianæ. *Reichb. f. in Walp. Ann.* vi. 663, et in *Saund. Ref. Bot. t.* 107. Genus ex herbario et notis Lindleyanis potius *Zygopetalum* quam *Stenia* affine videtur; flores nos ipsi examinare nequimus.

122. *Gongora*, Ruiz et Pav. *Fl. Per. et Chil. Prod.* 117, t. 25; *Syst. Veg.* 227.—Sepalum posticum erecto-patens, basi columnæ plus minus adnatum, lateralia latiora, basi pedi columnæ adnata, patentia v. reflexa. Petala cum sepalo postico, quo sæpius breviora, basi columnæ adnata erecta v. patentia. Labellum cum pede columnæ continuum, patens v. ascendens, angustum, carnosum; lobi laterales crassi, erecti, varie cornigeri v. aristuliferi, medius varie saccatus complicatus v. a latere compressus. Columna erecta v. ascendens, basi in pedem producta, superne semiteres, exalata, apice sæpius clavata, antice 2-cornuta v. nuda; clinandrium breve, truncatum. Anthera terminalis, opercularis, incumbens, convexa, antice interdum acuminata, 1-locularis v. imperfecte 2-locularis; pollinia 2, ovoidea v. anguste oblonga, acutiuscula, inappendiculata, anthera dehiscente stipiti lineari-cuneato affixa, glandula sæpius parvula. Capsula oblonga v. fusiformis, nunc elongata, erostris v. apice brevissime contracta.—Herbæ epiphyticæ, caulibus brevissimis basi vaginatis, mox in pseudobulbum carnosum sæpius 2-foliatum incrassatis. Folia ampla, plicato-venosa, basi contracta. Scapi ad basin pseudobulborum sæpius reflexi, simplices, racemo longo laxo flexuoso. Flores majusculi, longiuscule pedicellati. Bractæ breves, angustæ.

Species enumeratæ ad 20, Americæ tropicæ a Brasilia usque ad Mexicum incolæ. *Reichb. f. in Walp. Ann.* vi. 590; *Xen. Orch.* i. 51, t. 20, 170; *in Bot. Zeit.* 1857, 157; 1864, 298; 1866, 385; *et in Linnaea* xli. 110. *Hook. Exot. Fl.* t. 178. *Bot. Mag.* t. 3220, 3687, 6284. *Bot. Reg.* t. 1616; 1839, t. 51; 1841, t. 2; 1845, t. 56; 1847, t. 17, 69. *Maund, Botanist.* t. 109.

ACROPKRA, *Lindl. Gen. et Sp. Orch.* 172; *Lodd. Bot. Cab.* t. 1645 (*Mazillaria*); *Bot. Mag.* t. 3563, 5501; *DC. Not.* ix. *Pl. Rar. Hort. Gen.* t. 2, a Reichenbachio rite ad *Gongoram* reducitur. Species typica a cæteris *Gongoris* non differt nisi sepalis latioribus et petalis apice sæpius divaricato-2-aristatis. In speciminibus hortensibus stigma ex Darwinio semper imperfectum; in sylvestribus a Bourgeau in Mexico lectis perfectum est, capsulis bene maturescentibus.

123. *Coryanthes*, *Hook. Bot. Mag.* t. 3102.—Sepala libera, patentissima, magna, irregulariter undulato-flexuosa, posticum lateralibus brevius latiusque. Petala sepalis multo minora, erecta, torta. Labellum carnosum, ungue longo patente cum basi columnæ continuo; lobi laterales in medio ungue in appendicem poculiformem connati, medius magnus, galeatus. Columna longiuscula, teres, apice inflexo-clavata v. breviter 2-alata, apoda, basi 2-auriculata v. 2-cornuta; clinandrium parum prominens. Anthera terminalis, opercularis, incumbens, convexa, carnosae, 2-locularis; pollinia 2, cerea, anguste oblonga, sulcata, inappendiculata, anthera dehiscente stipiti lineari affixa, glandula parva. Capsula . . .—Herbæ epiphyticæ, caulibus abbreviatis mox in pseudobulbos carnosos apice 2-foliatos incrassatis. Folia ampla, nervosa, subplicata. Scapi ad latera pseudobulborum reflexi, simplices. Racemi laxè pauciflori, floribus maximis breviter pedicellatis.

Species ad 4, Americæ australis tropicæ incolæ. *Lindl. Fol. Orch.* 1852. *Reichb. f. in Walp. Ann.* vi. 596; *in Bot. Zeit.* 1864, 332; *et in Linnaea* xli. 74. *Karst. Ausw. Gew. Venez.* t. 1. *Batem. Orch. Mex. et Guat.* t. 36. *Hook. Bot. Misc.* ii. t. 80 (*Gongora*). *Bot. Mag.* t. 2755 (*Gongora*), 3747. *Bot. Reg.* t. 1793, 1841.

124. *Stanhopea*, *Frost ex Hook. Bot. Mag.* t. 2948-9. (*Ceratophilus*, *Lindl. in Lodd. Bot. Cab.* t. 1414, 1764, nunc *Blume*.)—Sepala libera, patentia, lata v. oblonga, carnosae, subæqualia v. lateralia latiora. Petala sepalis similia v. angustiora, interdum undulata. Labellum basi columnæ affixum, continuum v. vix brevissime ei connatum, patens, crasse carnosum, sæpe undulatum v. subtortum; lobi laterales unguem marginantes v. erecti, sæpe in massam solidam incrassati, *hypochilium* formantes globosum oblongum v. calceiforme, basi interdum 2-cornutum; lobus medius nunc brevissimus integer ab *hypochilio* vix distinctus, nunc evolutus continuus v. articulatus *epichilium* integrum v. 3-lobum formans, v. basi lobis v. cornubus 2 distinctis *metachilium* formantibus instructus. Columna erecta v. incurva, sæpius longiuscula, apoda, superne v. apice membranaceo-

*marginata* v. 2-alata; clinandrium breve, antice sæpius prominule 2-dentatum v. 2-cornutum. Anthera terminalis, opercularis, incumbens, convexa v. subglobosa, 1-locularis; pollinia 2, cerea, anguste oblonga, apice attenuata, inappendiculata, anthera dehiscente stipiti plano sæpius oblongo affixa, glandula squamiformi. Capsula ubi nota longe fusiformis.—Herbæ epiphyticæ, caulibus brevissimis  $\infty$ -vaginatis 1-foliatis mox in pseudobulbum carnosum incrassatis. Folium amplum, plicato-venosum, in petiolum contractum. Scapi inter pseudobulbos deflexi v. penduli, vaginis spathaceis stipati, simplices. Flores magni, in racemo laxo pauci, pedicellati. Bractææ membranaceæ, spathaceæ, nunc pedicellum nunc ovarium ipsum involventes.

Species ad 20, Americæ tropicæ a Brasiliæ usque ad Mexicum incolæ. *Lindl. Fl. Orch.* 1852; *Sert. Orch. t. 1, 20*; et in *Past. Fl. Gard. i. 31, f. 19 ad 21*. *Reichb. f. Xen. Orch. i. 111, t. 72, 82, 124, 125, 164, 165, 205*; in *Walp. Ann. vi. 582*; in *Saund. Ref. Bot. t. 108*; *Otia Hamb. 9*; et in *Linnaea xli. 109*. *Humb. et Bonpl. Pl. Æquin. t. 27 (Epidendrum)*. *Batem. Orch. Mex. et Guatem. t. 7, 15, 27*. *Bot. Mag. l. c. et t. 3359, 4197, 4885, 5278, 5289, 5300*. *Bot. Reg. t. 1529, 1800, 1837; 1838, t. 5, 1839, t. 1, 1843, t. 44, 1845, t. 24, 65*. *Lem. Fl. des Serres ii. t. 181, 713, 974*. *Lodd. Bot. Cab. t. 1985*.

Genus naturalissimum quoad labellum polymorphum, in sectiones difficillime dividitur. Lindley series 4 proposuit ad bractearum evolutionem, labellum cornutum v. eornutum, lobo medio indiviso v. 3-partito. Reichenbach series 3 distinxit, ad labellum integrum (*STANHOPEASTRUM*, *Reichb. f. in Bot. Zeit.* 1852, 927; *Xen. Orch. t. 43*), v. in membra 2 v. 3 separabile. Limites tamen inter series utriusque auctoris sæpe obscuri sunt; labelli forma de specie in speciem et interdum in varietatibus ejusdem speciei variat.

Pollinarii stipes in speciebus perpaucis adhuc descriptus est. Capsulam in uno solo specimine vidimus immaturam, nec in ulla icone delineatur. Antheram unilocularem vidimus qualem a Hookero aliisque delineatur; Lindley 2-locularem dixit, verisimiliter a verbis Bonplandii seductus, qui in *Pl. Æquin. l. c.* pollinia pro loculis descripsit.

125. *Houlletia*, *A. Brongn. in Ann. Sc. Nat. ser. 2, xv. 37*.—Sepala subæqualia, libera, patentia. Petala sepalis similia v. basi angustiora. Labellum cum basi columnæ continuum, patens, angustum, carnosum, lobi laterales unguem crassum seu hypochilium marginantes, postice in processus corniformes retrorsum arcuatos producti, medius articulatus, indivisus, latiusculus, basi sæpe truncatus v. 2-auriculatus. Columna incurvo-erecta, crassiuscula, semiteres, exalata, apoda (v. basi in pedem brevissimum producta ?); clinandrium truncatum. Anthera terminalis, opercularis, incumbens, valde convexa, 1-locularis; pollinia 2, cerea, anguste oblonga, inappendiculata, anthera dehiscente stipiti angusto v. lineari affixa, glandula indistincta. Capsula . . .—Herbæ epiphyticæ, caulibus brevissimis vaginatis 1-foliatis mox in pseudobulbum carnosum incrassatis. Folium amplum, plicato-venosum, in petiolum longiusculum contractum. Scapi inter pseudobulbos erecti v. recurvi, simplices, paucivaginati. Flores majusculi, laxo racemosi, longiuscule pedicellati. Bractææ pedicello multo breviores.

Species 5, Brasiliæ et Colombiæ incolæ. *Reichb. f. in Walp. Ann. vi. 615, et in Linnaea xli. 111*. *Lindl. Sert. Orch. t. 43*. *Bot. Mag. t. 4072, 6305*.

126. *Peristeria*, *Hook. Bot. Mag. t. 3116, 3479*. (*Eckardia*, *Reichb. ex Endl. Gen. Pl. Suppl. ii. 17*).—Sepala subæquilonga, lata, crassiuscula, in globum conniventia, lateralia postico latiora et basi breviter connata. Petala sepalis minora, cæterum sub-similia. Labellum carnosum, cum basi columnæ continuum, basi patens; lobi laterales lati, erecti, medius continuus (v. articulatus ?), inflexus v. incumbens, concavus, indivisus v. 3-partitus; discus sæpe callosus. Columna erecta, subincurva, brevius, crassa, apoda, exalata, antice 2-auriculata v. nuda; clinandrium obliquum, postico elevatum. Anthera terminalis, opercularis, incumbens, imperfecte 2-locularis; pollinia 2, cerea, anguste oblonga, sæpius sulcata v. subdivisa, inappendiculata, anthera dehiscente stipiti (v. glandula ?) oblongo cuneato v. lato affixa. Capsula . . .—Herbæ epiphyticæ, validæ, caulibus brevissimis vaginatis mox in pseudobulbum carnosum apice 1- v. pauci-foliatum

incrassatis. Folia ampla nunc longissima, plicato-venosa, in petiolum contracta. Scapi ad latera pseudobulborum erecti nutantes v. a basi deflexi, simplices. Flores speciosi, in racemo brevi v. elongato breviter pedicellati. Bracteae parvae v. membranaceae at ovario breviores.

Species 2 v. 3, Andium Colombiæ incolæ. *Reichb. f. in Walp. Ann.* vi. 607.

127. *Acineta*, Lindl. *Bot. Reg* 1843, *Misc.* 67. (*Neippergia*, *Morren in Ann. Soc. Agr. Gand.* v. 375, t. 282, ex Lindl.)—Sepala subæquilonga, lata, crassiuscula, demum subpatentia, lateralia postico latiora et basi breviter connata. Petala sepalis subsimilia nisi minora. Labellum carnosum, cum basi columnæ continuum, ungue angusto marginato, lobus medius continuus v. articulatus, inflexus, concavus, indivisus v. alte 3-lobus; discus sæpius calloso-appendiculatus. Columna erecta, curvula, interdum longiuscula, apoda, exalata v. superne crassior et anguste 2-alata; clinandrium obliquum, postice sæpe elevatum. Anthera terminalis, opercularis, incumbens, valde convexa, antice sæpe producta et 2-dentata, 1-ocularis v. imperfecte 2-ocularis; pollinia 2, cerea, anguste oblonga, inappendiculata, anthera dehiscente stipiti oblongo basi sæpe in glandulam dilatato affixa. Capsula . . .—Herbæ epiphyticae, habitu *Peristeria*, caulibus mox in pseudobulbum carnosum apice 1- v. pauci-foliatum incrassatis. Folia ampla, plicato-venosa, in petiolum contracta. Scapi ad latera pseudobulborum erecti v. penduli, validi, simplices. Flores speciosi, in racemo breviter pedicellati. Bracteae parvae.

Species ad 8, Americæ tropicæ a Colombia usque ad Mexicum incolæ. *Reichb. f. in Walp. Ann.* vi. 608; *Xen. Orch.* t. 70. *H. B. et K. Nov. Gen. et Sp.* t. 93 (*Angola*). *Batem. Orch. Mex. et Guatem.* t. 8. *Bot. Mag.* t. 4156, 4203, et *Bot. Reg.* 1843, t. 18 (*omnes sub Peristeria*).

Genus olim *Peristeria* inclusum, paullulum differt perianthio demum aperto, columna, anthera et pollinario.

128. *Catasetum*, L. C. Rich. in Kunth, *Syn. Pl. Æquin.* i. 330. (*Catachætum*, Hoffm. ex *Linnaea* xvi., *Littbl.* 231.)—Sepala et petala libera, subæqualia, nunc omnia lata, crassa, in globum conniventia, nunc angustiora omnia v. sepalum posticum cum petalis conniventia, v. sepalia lateralia v. interdum omnia patula v. deflexa. Labellum carnosum ad basin columnæ sessile. Flores cæterum polygamo-3-morphi. Fl. ♂ (*Cataseta typica*): Labellum crasse carnosum, latum, valde concavum v. galeatum, margine v. ore sæpe crenulatum dentatum v. fimbriatum. Columna erecta, longiuscula, crassa, margine utrinque infra stigma sicco seta v. cirro reflexo instructa, apoda; clinandrium postice in acumen longum productum. Anthera terminalis, opercularis, incumbens, convexa, dorso longe acuminata, 1-ocularis v. imperfecte 2-ocularis; pollinia 4, per paria sibimet incumbentia v. 2-sulcata v. 2-loba, cerea, oblonga, inappendiculata, anthera dehiscente stipiti longo loriformi affixa, glandula magna crassa. Fl. ♀ (*MONACHANTHUS*, Lindl. *Bot. Reg.* sub t. 1538): Labellum fere ut in mare. Columna multo brevior nunc brevissima, absque cirris, stigmatate perfecto. Anthera quam in mare minor, polliniis (ex Darw.) imperfectis. Capsula oblonga, maxima, erostris. Fl. ♀ (*MYANTHUS*, Lindl. *Bot. Reg.* sub t. 1538): Labellum angustum oblongum v. ovatum, planum v. basi valde concavum, lobo medio interdum elongato, supra undique v. partim v. ad margines solos longe fimbriatum et supra basin interdum cornigerum. Columna fere maris, sed stigma ut videtur perfectum.—Herbæ terrestres v. epiphyticae, caulibus brevibus basi vaginatis plurifoliatis mox in pseudobulbum ovoideum v. fusiformem incrassatis. Folia ampla, plicato-venosa, in vaginas contracta. Scapi ad basin pseudobulborum simplices, erecti v. penduli. Flores speciosi, in racemo numerosi v. pauci, ♂ et ♀ sæpius erecti labello supero, ♀ sæpius reversi.

Species fore 40, Americæ tropicæ a Brasilia usque ad Mexicum incolæ. *Reichb. f. in Walp. Ann.* vi. 564; *Otia Hamb.* 9; *Orch. Centr. Amer.* 73.

Formæ sexuales sæpiissime separatim delineatæ scil.: *CATASETUM* (♂), *H. B. et K. Nov. Gen. et Sp.*

t. 630 et 631 (quoad scapum florentem, scapo fructifero ad formam ♀ pertinente). *Lindl. Collect. Bot. t. 40. Hook. Exot. Fl. t. 90, 91, 151, 213. Nees, Pl. Hort. Bonn. t. 1. Link, Kl. et Otto, Ic. Formas tres in eadem planta quarum una sola fertilis primum detexit Schomburgk et descripsit in Trans. Linn. Soc. xvii. 551, t. 29; de quibus confer Darwin in Journ. Linn. Soc. vi. 151, et Fertil. Orch. 211.

129. *Mormodes*, Lindl. *Introd. Nat. Syst. ed. 2*, 446. (Cyclosia, Klotzsch in *Allgem. Gartenzeit.* 1838, 305.)—Sepala libera, subæqualia, patentia v. reflexa, rarius conniventia, sæpius angusta. Petala sepalis similia v. paullo latiora. Labellum ad basin columnæ subarticulatum, a basi patente incurvo-ascendens, plus minus in unguem sæpissime convexum contractum, superne latius, reduplicatum v. rarius concavum; lobi laterales sæpissime reflexi, rarius plano-patentes, medius sæpius acutus, integer v. raro ciliato-denticulatus. Columna crassiuscula, erecta, sæpe obliqua, antice concava, ecirrosa, exalata, apoda; clinandrium postice longe acuminatum. Anthera terminalis, opercularis, incumbens, convexa, dorso acuminata, 1-ocularis v. imperfecte 2-ocularis; pollinia 4, per paria sibimet incumbencia, v. 2, sulcata, cerea, oblonga, inappendiculata, anthera dehiscens stipiti loriformi affixa, glandula magna. Capsula . . .—Herbæ epiphyticæ, caulibus brevibus plurifoliatis mox in pseudobulbos oblongos v. fusiformes carnosos plurivaginosos incrassatis. Folia elongata, plicato-venosa. Scapi ad basin pseudobulborum simplices, racemis sæpius pendulis floribundis. Flores speciosi.

Species ad 14, Colombiæ et Americæ centralis usque ad Mexicum incolæ. *Reichb. f. in Walp. Ann. vi. 577; Otia Hamb. 90; Orch. Centr. Amer. 74, t. 7; et Xen. Orch. t. 170. Batem. Orch. Mex. et Guatem. t. 14. Lindl. in Paxt. Fl. Gard. iii. t. 93. Bot. Mag. t. 3879, 3900, 4214, 4455, 4577, 5802, 6480, 6496. Bot. Reg. t. 1868; 1842, t. 43.*

*M. Greenii*, Hook. f. Bot. Mag. t. 5802, ab omnibus differt sepalis petalisque late ovatis et labelli lateribus superne conduplicatis, lobis patentibus brevibus ciliato-denticulatis. *Reichb. f. in Gard. Chron. 1869, 1205*, hanc speciem ad *M. unciæ* suam reducit sed character in Gard. Chron. 1869, 892, quoad perianthii formam et colorem minime convenit. *M. luxata*, Lindl., nostro sensu ad *Catachætum* (*Monacanthum*) transferenda est.

130. *Cynoches*, Lindl. *Gen. et Sp. Orch. 154*.—Sepala subæqualia, libera, patentia. Petala sepalis similia v. paullo latiora, basi contracta v. latiuscula. Labellum carnosum, cum basi columnæ continuum, patens, basi in unguem contractum, superne lanceolatum v. orbiculatum, integrum v. varie lobatum cristatum v. fimbriatum. Columna elongata, tenuis, valde arcuata, exalata, apoda, apice incurvo-clavata; clinandrium postice elevatum, acuminatum v. bifidum (rarius oblique truncatum?). Anthera terminalis, opercularis, incumbens, 1-ocularis v. imperfecte 2-ocularis; pollinia 2, cerea, ovoides, sulcata, inappendiculata, anthera dehiscens stipiti lineari rigidulo affixa, glandula magna crassa. Capsula . . .—Herbæ epiphyticæ, caulibus plurifoliatis mox longe carnosio-incrassatis v. pseudobulbos oblongos plurivaginosos formantibus. Folia ampla, plicato-venosa. Scapi ad basin pseudobulborum erecti v. nutantes, simplices. Flores speciosi, in racemo plures v. numerosi. Bractee parvæ.

Species ad 8, Americæ tropicæ a Guiana usque ad Mexicum incolæ. *Reichb. f. in Walp. Ann. vi. 559; Otia Hamb. 10. Lindl. Sert. Orch. t. 16, 33, et in Paxt. Fl. Gard. t. 75. Bot. Mag. t. 3855, 4054, 4215. Bot. Reg. t. 1742; 1843, t. 22; 1846, t. 46. Maund, Botanist, t. 54, 156. Lodd. Bot. Cab. t. 2000.*

*LUXEMANNIA*, *Reichb. f. in Bonplandia 1854, 281, et in Walp. Ann. vi. 563, est Cynoches Purotorii*,

Lindl., in omnibus cum genere conveniens, exceptis polliniis ex Reichb. f. 'sessilibus in caudicula minuta.' Flores 3 tantum vidimus in herb. Lindl. pollinariis jam delapsis. *L. Wallisii*, Reichb. f. in Linnæa xli. 109, nobis ignota est.

131. *Chrysoeyenia*, Reichb. f. in Bonpl., 1854, 280; *Xen. Orch.* i. 162, t. 55; et *Otia Hamb.* 8.—Sepala subæqualia, libera, patentia. Petala sepalis similia, basi lata. Labellum breve, carnosum, cum basi columnæ continuum, patens, ungue brevissimo, lamina crassa, ovato-triangulari, basi angulis recurvis instructa. Columna elongata, tenuis, valde incurva, exalata, apoda; clinandrium breve, obliquum. Anthera terminalis, opercularis, incumbens, 1-locularis v. imperfecte 2-locularis; pollinia (a nobis non visa) 2, cerea, sulcata, inappendiculata, anthera dehiscente stipiti breve affixa, glandula hippocrepica. Capsula . . .—Herba epiphytica, rhizomate v. caudice elongato, vaginis inferioribus cujusve innovationis dissitis, superioribus arcte imbricatis pseudobulbos 1-foliatos foventibus. Folium ovatum v. oblongum, breviter petiolatum, venis majoribus acute elevatis. Scapi v. pedunculi ad axillas vaginarum infra pseudobulbos foliis multo breviores, plurivaginati, 1-flori. Flos majusculus.

Species 1, Novo-Granatensis. Genus ab auctore cum *Trigonidio* comparatur, nobis *Cynochi* affinis videtur.

132. *Polyeyenia*, Reichb. f. in Bonplandia, 1855, 218.—Sepala subæqualia, libera, patentia, angusta. Petala sepalis similia v. basi angustiora substipitata. Labellum basi columnæ affixum, patens, interdum basi 2-auriculatum; lobi laterales unguem anguste marginantes, apice varie arcuato-patentes, medius ovato-lanceolatus acuminatus, integer, basi dilatatus v. fere 3-lobus. Columna elongata, tenuis, curva, apice clavata, exalata, apoda; clinandrium truncatum. Anthera terminalis, opercularis, incumbens, valde convexa, 1-locularis; pollinia 2, cerea, anguste oblonga, apice acutiuscula, inappendiculata, anthera dehiscente stipiti lineari affixa, glandula vix distincta. Capsula . . .—Herbæ epiphyticæ, caulibus brevissimis vaginatis 1-foliatis, mox in pseudobulbum carnosum incrassatis. Folium amplum, plicato-venosum, in petiolum contractum. Scapi e rhizomate erecti, paucivaginati, simplices. Racemus laxè floribundus, sæpius nutans. Flores majusculi, pedicellati. Bracteæ parvæ.

Species 3, Americæ tropicæ a Guiana usque ad Americam centralem incolæ. Reichb. f. in Walp. Ann. vi. 618. Bot. Mag. t. 4479 (*Cynoches*). Bot. Reg. 1841, t. 69 (*Houlletia*). Illustr. Hort. xvii. t. 19.

133. *Stenia*, Lindl. Bot. Reg. sub t. 1991, et 1838, t. 20.—Sepala subæquilonga, inter se libera, patentia, lateralia parum latiora, basi pedi columnæ adnata. Petala sepalis postico similia. Labellum cum pede columnæ continuum, incumbens, carnosum, latum, concavum fere saccatum; lobi laterales minimi, medius indivisus v. omnes latiores fimbriati; discus transversæ cristatus. Columna crassiuscula, erecta, semiteres, basi in pedem brevem producta; clinandrium valde obliquum, integerrimum. Anthera terminalis, opercularis, incumbens (semiglobosa?), 2-locularis (denuo 1-locularis?); pollinia 4, oblongo-linearum, per paria sibimet incumbens, postico minore, inappendiculata, anthera dehiscente stipiti lato ciliato-pubescenti affixa. Capsula . . .—Herbæ epiphyticæ, caulibus abbreviatis, pseudobulbis confertis 1-2-foliatis. Folia oblonga v. angusta, coriacea, costa prominula. Scapi ad axillas vaginarum infra folia v. pseudobulbos breves, recurvi, flore unico majusculo. (Char. ex ic. et descr.)

Species 2, a nobis non visæ, altera Guianensis, altera Colombiana. Reichb. f. in Walp. Ann. vi. 542; in Illustr. Hort. xviii. 194, t. 80; in Saund. Ref. Bot. t. 107 (*Chondrorhyncha*).

Genus nobis non satis notum, species typica ex analysi Lindleyana tam labello quam polliniis ad *Stanhopeas* accedere videtur, sed columnæ pes, habitus et folia potius *Marillariarum*.

134. *Schizumia*, Planch. in Lind. Catal. 1852, ex Lindl. in Paxt. Fl. Gard. iii. 115, f. 267.—Sepalum posticum liberum, angustum, concavo-carinatum, lateralia latissima,

cum pede columnæ in mentum ample saccatum connata. Petala sepalo postico angustiora, apice patentia. Labellum ab apice pedis columnæ incumbens, sepalis inclusum, angustum, varie lobatum. Columna erecta, ad latera stigmatis alis v. auriculis longiusculis instructa, basi in pedem longum producta; clinandrium truncatum. Anthera terminalis, opercularis, incumbens, galeata, 2-locularis; pollinia 2, cerea, oblonga, inappendiculata, anthera dehiscente stipiti elongato apice cuneato affixa, glandula parva lunata. Capsula . . . — Herba epiphytica, pseudobulbis oblongis subfusiformibus 1-foliatis. Folium coriaceum, in petiolum contractum. Scapi inter pseudobulbos erecti v. recurvi, simplices, paucivaginati. Flores majusculi, carnosiusculi, eburnei, in racemo laxo pauci, breviter pedicellati.

Species descriptæ 3, inter se evidenter valde affines, Andium Colombiæ incolæ. *Reichb. f. in Gard. Chron. ser. 2, vi. 708, ic. l. c. vii. 141.*

Genus hinc *Lycomormio* hinc *Maxillariæ* affine, perianthii forma distinctum.

135. ? *Clowesia*, *Lindl. Bot. Reg. 1843, t. 39.*—Sepala subæqualia, inter se libera, cum petalis in globum conniventia, mox patentia, lateralia basi pedi columnæ adnata, mentum breve formantia. Petala sepalo postico similia nisi latiora, ciliolata. Labellum cum pede columnæ continuum, sessile, carnosum, concavum, suberectum; lobi laterales erecti, medius recurvus, omnes dense fimbriati. Columna erecta, antice concava, superne latior, exalata, basi in pedem brevem producta; clinandrium valde elevatum, carnosum, fimbriato-lacerum. Anthera in fundo clinandrii opercularis, incumbens; pollinia 2, oblonga, sulcata, inappendiculata, anthera dehiscente stipiti brevi apice valde dilatato affixa, glandula crassa. — Herba epiphytica, pseudobulbis oblongis carnosiusculis plurivaginatibus. Habitus fide horticoli fere *Cataseti*, foliis lanceolato-ovatis acuminatis. Scapus ad basin pseudobulborum brevis, erectus, laxe pluriflorus, floribus breviter pedicellatis mediocribus albidis roseo-marginatis. Bractæ parvæ.

Species unica, Brasiliensis. *Reichb. in Walp. Ann. vi. 686.* Genus videtur *Eriopsidi* affine, sed adhuc dubium nonnisi ex icone et descriptione Lindleyi notum. Scapus solus adest in herb. Lindl. cum flore unico. Folia non vidit Lindley. Dubium remanet an genus *Stanhopeis* an *Maxillariæ* referendum.

136. *Mormolyce*, *Fenzl, Nov. Gen. et Sp. 1, t. 2; in Denkschr. Akad. Wiss. Wien. i. 253, t. 29.*—Sepala subæqualia, libera, a basi patentia. Petala sepalis paullo minora. Labellum a basi columnæ ascendens, suberectum, sepalis multo brevius; lobi laterales erecti, columnæ paralleli, medius brevis, patens v. recurvus; discus subcallosus. Columna incurvo-erecta, semiteres, exalata, apoda v. vix basi protrusa; clinandrium oblique truncatum. Anthera terminalis, opercularis, incumbens, valde convexa; pollinia 4, cerea, ovoidea, per paria sibimet incumbens v. connata, postico minore, inappendiculata, anthera dehiscente glandulæ squamiformi hippocrepicæ absque stipite affixa. Capsula . . . — Herba epiphytica, rhizomate repente, caulibus brevissimis paucivaginatibus mox in pseudobulbum globosum carnosum 1-foliatum incrassatis. Folium longiusculum, coriaceum, basi breviter contractum. Scapi e rhizomate tenues, plurivaginati, aphylli, simplices, 1-flori. Flos mediocris, longiuscule pedicellatus. Bractea ad basin pedicelli brevis.

Species 1, Mexicana. Habitus fere *Trigonidii* cui adjunxit Lindley sub nomine *T. ringentis*, sed perianthii forma valde diversa fere *Maxillariæ*, a qua vix genericè separanda. *Reichb. f. in Walp. Ann. iii. 541, vi. 504.*

137. *Scuticaria*, *Lindl. Bot. Reg. 1843, Misc. 14.*—Sepala subæquilonga, erecto-patentia, lateralia basi lata pedi columnæ adnata, mentum prominens formantia. Petala sepalo postico similia nisi minora. Labellum ad apicem pedis columnæ sessile, articulatam, latum, concavum; lobi laterales maximi, erecti, medius minor, patens. Columna erecta, crassiuscula, semiteres, exalata, basi in pedem producta; clinandrium truncatum. Anthera terminalis, opercularis, incumbens, valde convexa, 1-locularis v. imperfecte

2-locularis; pollinia 4, cerea, ovata, per paria sibimet arcte applicita, inappendiculata, anthera dehiscente stipitibus brevissimis v. fere obsoletis glandulæ transversæ squamiformi affixa. Capsula . . . —Herbæ epiphyticæ, caulibus e rhizomate brevissimo ramoso squamato brevissimis 1-foliatis basi paucivaginatæ, demum vix carnosæ-incrassatis. Folium longissimum, carnosum, subteres, hinc sulcatum, cum caule continuum. Scapi ad latera caulium breves, 1-flori.

Species 2, altera Brasiliensis, *Bot. Mag. t. 4629 (Bifrenaria)*, altera Guianensis, *Bot. Mag. t. 3573, Bot. Reg. t. 1986 (Maxillaria)*.

Species Brasiliensis, *S. Hadweni (Bifrenaria Hadweni, Lindl.)*, pollinarii stipitibus distinctis etsi brevibus, nequaquam a Guianensi typica generice separanda. Pollinia in hac specie in glandula sessilia a Lindleyo dicuntur, ex icone *Bot. Reg. t. 1986*, stipites adsunt brevissimi annuliformes, in icone *Bot. Mag. t. 3573*, æque longi ac lati delineantur. Habitus in utraque specie eadem, ab illa *Bifrenariæ* longe differt.

138. *Maxillaria*, Ruiz et Pav. *Prod. Fl. Chil. et Per. 116, t. 25; Syst. Veg. 219*. — Sepala subæqualia, inter se libera, lateralia basi pedi columnæ adnata mentum sæpius parum prominens formantia, patentia v. rarius suberecta. Petala sepalis similia v. interdum minora. Labellum ad apicem pedis columnæ ungue brevissimo inflexo erectum, concavum; lobi laterales erecti, medius ovato-oblongus patens, sepalis paullo v. multo brevior; discus subnudus v. tuberculo instructus. Columna erecta, sæpe leviter incurva, crassa, semiteres, exalata, antice concava; clinandrium crassiusculum, concavum, integrum. Anthera terminalis, opercularis, incumbens, conica v. semiglobosa, 1-locularis v. imperfecte 2-locularis, sæpe pubescens; pollinia 4, ovata, compressa, per paria faciebus planis sibimet incumbentia, inappendiculata, anthera dehiscente stipiti plano brevi nunc brevissimo affixa, glandula squamiformi. Capsula ubi nota ovoideo- v. obovoideo-oblonga, erecta, erostis. —Herbæ epiphyticæ, caulibus nunc in rhizomate brevissimis mox in pseudobulbum carnosum 1-2-foliatum incrassatis, nunc ad apicem rhizomatis elongatis densæ distichophyllis. Folia coriacea, tenuia v. subcarnosa, præter costam tenuiter venosa. Scapi v. pedunculi ad basin pseudobulborum v. in axillis foliorum solitarii, 2-co-vaginati, semper 1-flori. Flores magni v. mediocres.

Species enumeratæ ultra 100, Americæ tropicæ a Brasilia usque ad Indiam occidentalem et Mexicum incolæ, nonnullæ tamen verisimiliter ad varietates hortenses reducendæ. *Lindl. Gen. et Sp. Orch. 142, pro parte. Reichb. f. in Walp. Ann. vi. 512 (sect. Colacastrium); Xen. Orch. iii. 22; Oria Hamb. 7, 88; Orch. Centr. Amer. 31, 76, 104; et in Linnaea xli. 6, 28, 34, 73, 127.*

Genus sat naturale, sed characteribus vix certis a pluribus affinibus separatam. Species in series 2 sequentes distribuuntur:—

1. *Acaules*. Rhizoma breve, vaginis aphyllis. Folia ad apices pseudobulborum sola evoluta. Scapi sæpius longiusculi. Series a *Lycaste* et *Xylobio* imprimis foliorum indole ab hoc etiam scapis 1-floris distinguenda. Pœpp. et Endl. *Nov. Gen. et Sp. t. 62, 63, 65, 66. Hook. Exot. Fl. t. 119 (Dendrobium); Ic. Pl. t. 384; Bot. Mag. t. 2729, 3154, 3613, 3945, 3966, 4374, 4434, 6477. Bot. Reg. t. 1530 (Cymbidium), 1799, 1802, 1848. Lodd. Bot. Cab. t. 1612. Maund, Botanist, t. 140. Saund. Ref. Bot. t. 78, 79, 103, 104. Reichb. f. Xen. Orch. t. 10, f. 2, 3, t. 67.*

*PSITTACOGLOSSUM, Llav. et Lex. Nov. Veg. Descr. ii., Orch. Opusc. 29*, ex characteribus dato omnino *Maxillariæ Acaulis* convenit, *Maxillaria* eorundem auct. evidenter ad *Xylobium* referenda. *DICRYPTA, Lindl. Gen. et Sp. Orch. 44 et 152 (HETEROTAXIS, Lindl. Bot. Reg. t. 1028, Lodd. Bot. Cab. t. 1657)* est pariter species *Maxillariæ* e serie *Acaulium*. Icones supra citatæ species illustrant columnæ pede brevi mento parum prominente; in *M. grandiflora, Lindl.; Illustr. Hort. xvii. t. 14 (Dendrobio, H. B. et K. Nov. Gen. et Sp. t. 88), M. eburnea, Lindl. Sert. Orch. t. 40, M. venusta, Lindl.; Bot. Mag. t. 5296*, affinibusque paucis, sepala lateralia latissima, columnæ pedi longo adnata, mentum valde prominens formantia.

2. *Cauliscentes*. Rhizoma ultra pseudobulbos in caulem vaginis laxis obtectum apice 1-2-foliatum productum, pedunculis seu scapis ad axillas vaginarum brevibus. Species nonnullæ *Camaridii* quodammodo accedentes. *Hook. Exot. Fl. t. 142 (Dendrobium); Ic. Pl. t. 316, 348. Bot. Mag. t. 3614. Bot. Reg. 1839, t. 8. Reichb. f. Xen. Orch. t. 10, f. 1. Nothium, Lindl. Gen. et Sp.*

Orch. 151, pro sectione propositum, delendum, est enim compositum e *Cattleya* quadam cum floribus *Bifrenariæ Harrisoniæ*.

139. *Camaridium*, Lindl. in *Bot. Reg. sub t. 844*.—Sepala subæqualia, inter se libera, patentia, lateralia basi pedi columnæ adnata, mentum breve formantia. Petala sepalis similia v. paullo minora. Labellum ad apicem pedis columnæ erectum, concavum, basi breviter contractum; lobi laterales columnam laxè amplexantes, medius patens; discus callosus v. barbatus. Columna erecta, curvula, semiteres, exalata, basi in pedem brevem producta; clinandrium parum prominens, truncatum. Anthera terminalis, opercularis, incumbens, valde convexa v. obtuse conica, imperfecte 2-locularis; pollinia 4, cerea, ovata, compressa, per paria sibimet incumbentia, postico sæpius minore, inappendiculata, anthera dehiscente stipiti plano latiusculo affixa, glandula parva. Capsula . . .—Herbæ epiphyticæ, caulibus foliatis sæpe ramosis, haud raro pseudobulbos hinc inde axillares v. ad apices innovationum 1-2-foliatis ferentibus. Folia ramorum florentium sæpe numerosa, regulariter disticha, coriacea, oblonga v. angusta, vaginis imbricatis distiche compressis, ad apices pseudobulborum majora. Flores ad axillas foliorum distichorum solitarii, mediocres; pedunculi bracteis paleaceis stipati.

Species ad 12, Americæ tropicæ incolæ, quarum typica Guianensis, cæteræ Colombianæ v. Peruvianæ. *Reichb. in Walp. Ann. vi. 538 (Maxillaria) et 541. Bot. Mag. t. 3306 (Ornithidium) et 4141 (Cymbidium). Pepp. et Endl. Nov. Gen. et Sp. t. 68 (Dicrypta). H. B. et K. Nov. Gen. et Sp. t. 78 (Isochilus).*

Genus hinc *Dichæa* v. *Ornithidio* hinc *Maxillariæ* valde affine, cum priore mediante *D. glauca* arcte connexa, sed pseudobulbi sæpe adsunt etsi in nonnullis speciebus omnino deesse videntur. *Ornithidia* differunt sepalis minus patentibus et pedunculis fasciculatis sæpiusque columna apoda. Characteres e pollinario sumpti ulterius scrutandi. In specie typica ut in *C. alato*, Lindl., et *C. inflexo*, Lindl., sepalia et petala quam in cæteris multo obtusiora.

140. *Dichæa*, Lindl. *Gen. et Sp. Orch. 208.* (*Fernandezia*, Ruiz et Pav. *Prod. Fl. Per. et Chil. 123, pro parte*).—Sepala subæqualia, libera, patentia, lateralia basi cum pede columnæ mentum sæpius parum prominens formantia. Petala sepalis similia v. paullo minora. Labellum pedi columnæ affixum, basi brevissime v. longiuscule unguiculatum, lamina nunc late triangulari angulis interdum in dentem productis, nunc late ovata, concava, indivisa. Columna erecta, semiteres, exalata, basi in pedem brevem v. brevissimum producta: clinandrium obliquum breve integrumque, v. latius et denticulatum. Anthera terminalis, opercularis, incumbens, valde convexa, imperfecte 2-locularis; pollinia 4, cerea, ovoidea, per paria sibimet arcte incumbentia, inappendiculata, anthera dehiscente stipiti plano affixa, glandula parva. Capsula ovoidea v. oblonga, hirsuta muricata v. lævis, costis parum prominulis.—Herbæ epiphyticæ non pseudobulbosæ, caulibus foliosis elongatis sæpe pendulis vaginis foliorum obtectis. Folia disticha, patentia v. squarrosa, sæpius breviora. Pedunculi axillares, solitarii, floribus parvis sæpius minimis rarius mediocribus.

Species ad 12, Americæ tropicæ imprimis Mexici, Americæ centralis et Indiæ occidentalis incolæ. *Reichb. f. in Walp. Ann. vi. 823; Otia Hamb. 90; Orch. Centr. Amer. 78, 104; in Flora, 1866, 279; et in Linnæa xli. 75, 112, 129. Pepp. et Endl. Nov. Gen. et Sp. t. 105, 106. Hook. Exot. Fl. t. 196 (Isochilus). Saund. Ref. Bot. t. 84.*

In speciebus typicis folia breviora, labellum sæpius nec semper in ungue longo triangulare, et capsula insigniter hispida v. muricata. *D. glauca*, Lindl., affinesque paucæ, capsula glabra et foliis paullo longioribus, *Camaridio* quodammodo accedunt.

141. *Ornithidium*, Salisb. in *Trans. Hort. Soc. i. 293 (absque char.)*.—Sepala subæqualia, libera, erecta v. patentia, acuta, lateralia basi vix mentum brevissimum formantia. Petala sepalis similia nisi minora. Labellum nunc a basi columnæ erectum quacum continuum v. brevissime connatum, nunc ad apicem pedis brevissimi affixum, ex

ungue brevissime horizontali erectum; lobi laterales erecti, paralleli, columnam sæpe amplectentes, medius patens indivisus. Columna brevis v. parum elongata, crassiuscula, apoda v. in pedem brevissimum producta, exalata; clinandrium oblique truncatum. Anthera terminalis, opercularis, incumbens, galeata, imperfecte 2-locularis; pollinia 4, cerea, ovoidea, per paria sibimet incumbentia, nunc libera videntur, nunc anthera dehiscente stipiti lineari affixa glandula parva. Capsula . . .—Herbæ epiphyticæ, caulibus foliatis vaginis distiche imbricatis obtectis, et hinc inde pseudobulbos 1-foliatos laterales v. subterminales emittentibus. Folia oblonga v. elongata, tenuiter coriacea, sæpe in eodem specimine dimorpha, alia præcipue pseudobulborum longa basi in petiolum contracta, alia disticha abbreviata cum vagina articulata, sæpe tamen irregulariter mixta. Pedunculi 1-flori, ad axillas fasciculati. Flores mediocres v. parvuli.

Species ad 20, Americæ tropicæ a Brasilia usque ad Indiam occidentalem et Mexicum incolæ. *Reichb. f. in Walp. Ann.* vi. 486; *Xen. Orch. t.* 84, 207; *Orch. Centr. Amer.* 75; et in *Linnaea* xli. 34.

Genus quoad locum systematicum subdubium, *Dichææ* et *Camaridio* evidenter affine, sed mentum perianthii parum prominens v. obsoletum et pollinarium (in pluribus speciebus imperfecte observatum) minus distincte characteres *Vandearum* præbet. Facile ab affinibus dignoscitur pedunculis fasciculatis sæpiissimeque perianthii forma, sed limites et diagnoses in speciminibus perfectis ulterius scrutandæ. Interea series 4 sequentes distinguendæ:—

1. In specie typica *O. coccineo*, labellum basi cum columna breviter connatum, erectum, lobis lateralibus columnam amplectentibus. *Hook. Exot. Fl. t.* 38. *Griff. Ic. Pl. As. t.* 317 (ad specimen hortense). *Jacq. Stirp. Amer. t.* 135 (*Epidendrum*). *Bot. Mag. t.* 1437 (*Cymbidium*).

2. In *O. giganteo*, Lindl., affinibusque, columna basi antice incrassata, labello a basi erecto columnæ applicito sed minime adnato. Huc pertinere videtur *O. aureum*, Poepp. et Endl. *Nov. Gen. et Sp. t.* 96.

3. In pluribus speciebus (*O. suavi*, Lindl., affinibusque) labellum basi in unguem brevem horizontalem cum columnæ basi continuum contractum, dein erectum, subincumbens at non articulatam videtur. Huc etiam verisimiliter pertinent *Scaphyglottis parviflora* et *S. pendula*, Poepp. et Endl. *Nov. Gen. et Sp. t.* 97, 98, et, columna quam in cæteris speciebus paullo longiore, *SIAGONANTHEUS*, Poepp. et Endl. *l. c.* i. 40, t. 69.

4. In *O. denso*, Reichb. f. in *Saund. Ref. Bot. t.* 105 (*Maxillaria densa*, Lindl. *Bot. Reg. t.* 1804), labelli unguis medio in callum transversum incrassatur ibidemque subarticulatus.

142. ? *Cryptocentrum*, Benth. in *Journ. Linn. Soc.* xviii. 325.—Sepala tenuia, erecta, basi in tubum connata, posticum paullo brevius, lateralia basi in calcar longum tenue ovario appressum connata. Petala sepalo postico similia nisi breviora. Labellum cum basi columnæ continuum, erectum, basi intra calcar sepalorum in calcar longissimum ei subadnatum productum, lamina obovata, concava. Columna brevis, erecta, subteres, exalata, apoda; clinandrium parum prominens. Anthera terminalis, opercularis, incumbens, semiglobosa, 1-locularis; pollinia 2, cerea, subglobosa (sulcata?), inappendiculata (anthera dehiscente stipiti affixa?). Capsula . . .—Herba epiphytica, caulibus foliatis brevibus demum basi incrassatis et vaginis vetustis fibrosis obtectis vix tamen pseudobulbosis. Folia plura, linearia, vaginis distiche imbricatis. Scapi ad basin caulibus numerosi, tenues, simplices, uniflori, foliis multo breviores, vaginas 1-2 angustas infra bracteam ferentes. Flos tenuis, cum calcare fere pollicaris. Bractea membranaceo-paleacea, angusta, elongata, ovarium et calcar arte involvens, laminis parvis perianthii solis exsertis.

Species 1, Ecuadorensis, *Jameson (C. Jamesoni, Benth.)*. Specimina plurima sed vix perfecta; genus distinctissimum apparet sed in speciminibus melioribus ulterius probandum.

143. *Diadenum*, Poepp. et Endl. *Nov. Gen. et Sp. i.* 41, t. 71. (*Chænanthe, Lindl. Bot. Reg.* 1838, *Misc.* 38).—Sepala subsequilonga, conniventia, angusta, lateralia alte connata basi in calcar longum producta. Petala sepalo postico latiora, libera. Labellum cum basi columnæ continuum, longo unguiculatum, erectum, basi in calcar longum duplex intra

sepalorum calcar productum ; lobi laterales ad apicem unguis auriculiformes, medius brevis, patens v. recurvus. Columna erecta, semiteres, exalata, apoda ; clinandrium parum prominulum, truncatum. Anthera terminalis, opercularis, incumbens, valde convexa, sub-1-locularis ; pollinia 2, oblonga, acutiuscula, inappendiculata, anthera dehiscente stipiti lineari affixa, glandula parva. Capsula . . .—Herbæ epiphyticæ caulibus brevissimis 1-foliatis demum in pseudobulbum parvum incrassatis. Folium coriaceum. Scapi ad basin pseudobulbi erecti, tenues, apice laxè paniculato-ramosissimi. Flores parvi, secus ramulos dissiti, breviter pedicellati. Bractæ parvæ.

Species 2, inter se evidenter valde affines, etsi diversæ descriptæ, altera Peruviana, altera Paraensis, utraque adhuc accuratius investiganda. *Reichb. f. in Walp. Ann.* vi. 687; *Xen. Orch.* i. 13, t. 6.

Character supra datus partim ex descr. citatis sumptus, partim e flore unico examinato *Chananthis Barkeri*, Lindl., in quo calcaria labelli a columna et a calcare sepalorum libera vidimus. Lindley identitatem generis sui cum Poeppigiano jam in herb. suo agnovit.

144. *Comparettia*, Poepp. et Endl. *Nov. Gen. et Sp.* i. 42, t. 73 (excl. *C. saccata*).—Sepala æquilonga, erecto-patentia, posticum liberum, lateralia connata, basi in calcar longum tenue a petalis liberum producta. Petala sepalo postico æquilonga at latiora. Labellum cum basi columnæ continuum, basi in calcaria 2 longa linearia intra calcar sepalorum inclusa producta ; lobi laterales latiuscule auriculiformes erecti, medius patens, sepalis multo longior, latissimus, emarginatus. Columna erecta, crassiuscula, semiteres, antice sulcata, exalata, apoda ; clinandrium breve, obliquum, postice acutiusculum. Anthera terminalis, opercularis, incumbens, valde convexa, 1-locularis ; pollinia 2, cerea, late ovoidea, sulcata, inappendiculata, anthera dehiscente stipiti lineari-cuneato affixa, glandula ovata. Capsula ovoidea v. oblonga, acutangula, rostrata.—Herbæ epiphyticæ, caulibus brevissimis 2-3-vaginatissimis mox in pseudobulbum parvum carnosum 1-foliatum incrassatis. Folium coriaceum. Scapi ad basin pseudobulbi erecti, elongati, simplices. Flores speciosi, laxè racemosi, distincte pedicellati. Bractæ parvæ.

Species 2, Andium Americæ australis a Peruvia usque ad Americam centralem incolæ. *Reichb. f. in Walp. Ann.* vi. 687. *Bot. Mag.* t. 4980. *Bot. Reg.* 1838, t. 68.

PLECTROPHORA, Focke in *Tijdschr. Wiss. en Natuurrk. Wetensk. Amsterdam*, i. 212, a Lindley et a Reichenbachio ad *Trichocentrum* relata, differt habitu, perianthio, et præsertim calcare sepalino nec e labello solo producto et melius cum *Comparettia* convenit.

145. *Scelochilus*, Klotzsch in *Allgem. Gartenz.* 1841, 261.—Sepala subæquilonga, erecta, conniventia, posticum concavum, lateralia alte connata, basi in saccum v. calcar breve sub labello producta. Petala sepalo postico sublatisiora. Labellum cum basi columnæ continuum, longe unguiculatum, erectum, basi in calcar breve duplex v. didymum intra calcar calycis productum, lobi laterales in medio ungue intramarginales, v. ad apicem unguis auriculiformes v. falcati, medius brevis, latus, patens ; discus ad basin lobi sæpe callosus. Columna erecta, semiteres, exalata, apoda, ad latera stigmatis parum dilatata ; clinandrium vix prominulum, truncatum. Anthera terminalis, opercularis, incumbens, convexa, imperfecte 2-locularis ; pollinia 2, cerea, subglobosa, sulcata, inappendiculata, anthera dehiscente stipiti lineari brevi affixa, glandula oblonga. Capsula . . .—Herbæ epiphyticæ, humiles, caulibus brevissimis vaginatissimis 1-foliatis demum in pseudobulbum angustum plus minus incrassatis. Folium coriaceum, non plicatum. Scapi ad basin pseudobulborum erecti, tenues, simplices v. subramosi. Flores mediocres, in racemo pauci, pedicellati. Bractæ angustæ.

Species 3 v. 4, Andium Americæ australis incolæ. *Link, Kl. et Otto, Ic. Pl. Rar.* i. 77, t. 31. *Lindl. in Part. Fl. Gard.* iii. 87, f. 274. *Reichb. f. in Walp. Ann.* vi. 688, et in *Linnaea*, xli. 105. *Poepp. et Endl. Nov. Gen. et Sp.* t. 72 (*Comparettia saccata*). Hæc species bene a Reichb. f. ad *Scelochilum* refertur, atque forte eadem ac *S. Jamesoni*, Lindl. Genus totum cæterum *Comparettie* nimis affine est.

146. *Trichocentrum*, Poepp. et Endl. Nov. Gen. et Sp. ii. 11, t. 115.—Sepala subæqualia, libera, patentia. Petala sepalis similia. Labellum basi cum columna in arceolum connatum, basi in calcar descendens productum, supra urceolum erectum, 2-auriculatum v. nudum; lobi laterales parum dilatati, erectiusculi, medius explanatus, late 2-lobus, sepalis multo longior. Columna brevis, crassa, fere ad apicem labello adnata, apoda; clinandrium antice latiuscule 2-lobum, dorso breve. Anthera terminalis, opercularis, incumbens, semiglobosa, imperfecte 2-locularis; pollinia 2, cerea, ovoidea, compressiuscula, inappendiculata, anthera dehiscens stipiti plano cuneato affixa, glandula ovata. Capsula . . .—Herbæ epiphyticæ, caulibus brevissimis 1-foliatis demum in pseudobulbum parvum carnosum incrassatis. Folium coriaceum. Scapi inter pseudobulbos breves, plurivaginati, 1-flori v. rarius 2-flori. Flores mediocres v. majusculi.

Species ad 8, Americæ tropicæ a Brasilia usque ad Americam centralem incolæ. Reichb. f. in Walp. Ann. vi. 544 (excl. sp. n. 1 et 2). Bot. Mag. t. 3969, 5688. Bot. Reg. t. 1951. Illustr. Hortie. xxiv. t. 282. Reichb. f. in Saund. Ref. Bot. t. 77; Xen. Orch. t. 177.

147. *Rodriguezia*, Ruiz et Pav. Prod. Fl. Per. et Chil. 115, t. 25; Syst. Veg. 218. (Burlingtonia, Lindl. Bot. Reg. t. 1927; 1839, t. 44; Sert. Orch. t. 2, 36.)—Sepala subæquilongia, posticum liberum petaloideum, lateralia angusta alte connata, omnia erecta, conniventia v. lateralia sub labello patentia v. reflexa, rarius incurvo-ascendentia mentum sub labello formantia. Petala sepalo postico similia. Labellum basi columnæ continuum v. brevissime connatum, erectum, basi in calcar breve v. gibbum sæpius solidum productum, ungue columnæ parallelo, lamina patente obovato v. obcordato sepala sæpe excedente, disco sæpius cristato. Columna erecta, tenuis, apoda, apice clavata v. in brachia v. auriculas 2 varie producta; clinandri lobi laterales nunc longe producti nunc abbreviati. Anthera terminalis, opercularis, incumbens, valde convexa v. galeata, 1-locularis; pollinia 2, cerea, ovoidea v. subglobosa, sulcata, inappendiculata, anthera dehiscens stipiti lineari v. basi dilatato affixa, glandula oblonga. Capsula . . .—Herbæ epiphyticæ, caulibus secus rhizoma interdum elongatum brevibus pseudobulbo 1-2-foliato terminatis. Folia oblonga v. elongata, coriacea. Scapi sub pseudobulbo axillares, erecti. Racemi simplices, floribundi, floribus sæpius speciosis.

Species ad 20, Americæ tropicæ a Brasilia usque ad Americam centralem incolæ. Reichb. f. in Walp. Ann. vi. 690; Oria Hamb. 87. H. B. et K. Nov. Gen. et Sp. t. 92. Poepp. et Endl. Nov. Gen. et Sp. t. 70. Hook. Exot. Fl. t. 129 (Pleurorrhallis). Bot. Mag. t. 3524, et sub Burlingtonia, t. 4834, 5419. Bot. Reg. t. 930. Lodd. Bot. Cab. t. 676. Fl. des Serres, t. 716 (Burlingtonia).

Genus cum *Gomeza* arcte connectitur, mediante *Burlingtonia maculata*, Lindl., cui labellum basi gibbum tantum nec distincte calcaratum. Calcar brevissimum etiam in *R. secunda*, H. B. et K.

148. *Trichopilia*, Lindl. Introd. Nat. Syst. ed. 2, 446, et Bot. Reg. t. 1863. (Pilumna, Lindl. Bot. Reg. 1844, Misc. 74; 1846, t. 57. Leucophyle, Klotzsch in App. Sem. Hort. Berol. 1854, ex Reichb. f.)—Sepala subæqualia, libera, angusta, erecto-patentia. Petala sepalis subsimilia. Labelli unguis columnæ adnatus, v. in parte superiore eum arcte involvens, lamina patens, lobis lateralibus parum dilatatis conniventibus v. cum medio undulato continuis; discus nudus v. lamellatus. Columna cum labelli ungue teres, apice ad latera stigmatis 2-auriculata v. 2-dentata; clinandrium ample membranaceum, integrum v. 3-lobum, sæpius varie fimbriatum v. ciliato-dentatum. Anthera intra clinandrium opercularis, incumbens, convexa, obtusa v. acuminata, 1-locularis; pollinia 2, obovoideo-oblonga, exappendiculata, anthera dehiscens stipiti loriformi affixa, glandula parva v. cuneata. Capsula ovoidea v. oblonga, erostris v. brevissime rostrata.—Herbæ epiphyticæ, pseudobulbis 1-foliatis. Folium carnosum, erectum, basi complicatum, angustum v. latiusculum. Scapi e rhizomate breves, aphylli, paucivaginati, 1-2- v. rarius 3-5-flori. Flores speciosi, pedicellati, sepalis sæpe tortilibus. Bractee parvæ.

Species ad 16, Americæ calidioris incolæ, imprimis in Colombia, America centrali et Mexico vigentes. Reichb. f. in Walp. Ann. vi. 678; Xen. Orch. ii. 98, t. 7, 131; in Saund. Ref. Bot. t. 100, et in Linnaea xli. 104. Lindl. in Part. Fl. Gard. t. 11, 54. Bot. Mag. t. 3739, 4654, 4857, 5035 (Pilumna), 5550, 5949. Rev. Gartenfl. t. 78.

*HELICIA*, Lindl. *Bot. Reg.* 1845, *Misc.* 17, et in *Part. Fl. Gard.* ii. 97, fig. 182, ab auctore a *Trichopilia* separata fuit imprimis ob labellum a columna liberum basi 2-auriculatum, cui tamen ex Reichb. f. *Xen. Orch.* ii. 106 revera basi adnatum est, et genus ad *Trichopiliam* restitutum. Flos unicus in herb. Lindl. adest quem examinare nequimus.

*OLIVERIANA*, Reichb. f. in *Linnaea* xli. 111, e Medellin, Wallis, a nobis non visa, ex caractere dato in omnibus cum *Trichopilia* convenire videtur, excepto racemo 6-floro et labello 3-fido lobo medio dentiformi. De foliis et pseudobulbo silet auctor.

149. *Aspasia*, Lindl. *Gen. et Sp. Orch.* 139. (Trophianthus, Scheidw. in *Allgem. Gartenz.* 1844, 218.)—Sepala æquilonga, patentia, posticum cum petalis subsimilibus supra basin columnæ adnatum, lateralia libera. Labellum ungue columnæ adnato, cæterum patens; lobi laterales latiusculi, subdistincti, v. cum medio majore lato confluentes. Columna infra medium cum labello connata, dein erecta, semiteres, antice sulcata v. marginibus fovei stigmatici elevatis obtusis concava, cæterum exalata, apoda; clinandrium parum elevatum, truncatum, dente postico antherifero sæpe prominente. Anthera terminalis, opercularis, incumbens, valde convexa, dorso sæpe cristata, 2-ocularis; pollinia 2, ovoidea v. pyriformia, inappendiculata, anthera dehiscente stipiti plano angusto v. cuneato affixa, glandula parva. Capsula . . .—Herbæ epiphyticæ, caulibus foliatis brevibus pseudobulbo 1-foliato sæpius terminatis. Folia infra pseudobulbum pauca, coriacea, vaginis distiche imbricatis. Pedunculi infra pseudobulbum axillares, breves, simplices. Flores speciosi, breviter racemosi.

Species ad 6, per Americam tropicam a Brasilia usque ad Americam centralem dispersæ. Reichb. f. *Xen. Orch.* i. 82, t. 34, et in *Walp. Ann.* vi. 849 (*Odontoglossi sect.*). *Bot. Mag.* t. 3679, 3962. *Bot. Reg.* t. 1907.

150. *Cochlioda*, Lindl. *Fol. Orch.* 1853.—Sepala æqualia, patentia, libera v. lateralia basi v. ad medium connata, mentum breve nunc obscurum formantia. Petala sepalis subsimilia. Labelli unguis erectus, columnam arcte amplexens eique plus minus adnatus; lamina patens, lobis lateralibus rotundatis sæpe reflexis, medio angusto integro v. emarginato sepalis non excedente; discus basi sæpe membrana v. callo appendiculatus. Columna erecta, sæpe leviter incurva, tenuis v. crassa, semiteres, cum labello plus minus connata, exalata, basi in pedem brevissimum producta v. fere apoda; clinandrium truncatum v. obliquum v. sæpe membranaceo-3-lobum, interdum denticulatum. Anthera terminalis, opercularis, incumbens, imperfecte 2-ocularis; pollinia 2, cerea, ovoidea v. subglobosa, sulcata, inappendiculata, anthera dehiscente stipiti plano brevi latoque v. oblongo affixa, glandula majuscula. Capsula . . .—Herbæ epiphyticæ, caulibus brevissimis pseudobulbo 1-2-foliato terminatis. Folia oblonga v. angusta, coriacea, in petiolum contracta. Scapi sub pseudobulbo 1-2, basi folio v. vaginis foliaceis stipati, simplices v. parce ramosi. Flores sæpius eleganter rubri, laxiuscule racemosi, pedicellati.

Species ad 6, Andium Americæ australis incolæ. Genus naturale, floribus fere *Epidendri* cum pollinario *Vandearum*; præter speciem typicam Lindleyi, includit *Odontoglossum roseum*, Lindl.; Batem. *Monogr. Odontogl.* t. 22, *Bot. Mag.* t. 6084, cum aliis a Reichb. f. in *Gard. Chron.* 1872, 393, ad *Mesospinidium* relatis et sub hoc nomine in *Bot. Mag.* t. 5627 et 6001 depictis, nostro sensu tamen minime congeneres *Mesospinidii* typici auctoris, quæ *Odontoglossi* species. *C. sanguinea* (*Mesospinidium sanguineum*, Reichb. f. in herb. Lindl.) a Warzewiczio et a Spruceo n. 6004 collecta, a *C. rosea* differt imprimis columna brevi crassa.

151. *Dignathe*, Lindl. in *Journ. Hort. Soc.* iv. 268.—Sepala subæqualia, libera, patentia. Petala sepalis similia v. paullo minora. Labellum basi subæccatum et per lamellas 2 carnosas columnæ adnatum, lamina patente lata indivisa sepalis æquilonga. Columna brevissima, crassa, apoda; clinandrium truncatum. Anthera . . .; pollinia 2, cerea, ovoidea, inappendiculata, anthera dehiscente stipiti lineari brevi affixa, glandula parva. Capsula . . .—Herba humilis, caulibus brevissimis vaginis latis obtectis et pseudobulbo 1-foliato terminatis. Folium parvulum, petiolatum, ovatum, coriaceum,

costa prominula. Scapus infra pseudobulbum petiolo vix longior, flore unico parvulo. Bractea scariosa.

Species 1, Mexicana. *Reichb. f. in Walp. Ann.* vi. 682. Genus nobis imperfecte notum ex specimen unico in herb. Lindl.; character noster quoad flores ex analysi et descriptione Lindleyi.

152. *Saundersia*, *Reichb. f. Beitr. Orch.* 17, t. 6, in *Nov. Act. Nat. Cur.* xxxv.—Perianthium supra ovarium productum in cavum oblique ovoideum sub sepalis clausum. Sepala supra cavum libera, subæqualia, patentia, ovata. Petala sepalis similia. Labellum ima basi cum columna breviter connatum, ungue longo latiusculo sepala superante, lamina 2-loba. Columna brevis, crassa, 2-auriculata, basi cum labello connata, apoda; clinandrium truncatum. Anthera terminalis, opercularis, incumbens, 1-locularis; pollinia 2, cerea, ovoideo-oblonga, sulcata, inappendiculata, anthera dehiscente stipiti angusto affixa, glandula parva. Capsula . . . —Herba epiphytica, caulibus brevissimis 1-foliatis paucivaginatibus, non v. vix in pseudobulbum incrassatis. Folium oblongum, coriaceo-carnosum. Scapus brevis, recurvus, subfasciculato-pluriflorus, bracteis ovatis obtectus. Flores mediocres. (*Char. ex ic. et descr. Reichb. et ex ic. Descourtils in herb. Lindl.*)

Species 1, Brasiliensis, a nobis non visa. *Reichb. f. Xen. Orch.* t. 177.

153. *Bractia*, *Reichb. f. in Linnaea*, xxii. 853. (*Oncodia*, *Lindl. Fol. Orch.* 1853.)—Perianthium supra ovarium productum in cavum oblique subglobosum, infra sepala clausum. Sepala supra cavum libera, subæqualia, suberecta. Petala sepalis similia nisi latiora. Labellum cum basi columnæ continuum, breve, erectum; indivisum, basi 2-lamellatum. Columna brevissima, crassa, marginibus basi cum labello continuis; clinandrium oblique truncatum, antice 2-dentatum. Anthera terminalis, opercularis, incumbens, dorso carinata, imperfecte 2-locularis; pollinia 2, cerea, subglobosa, sulcata, inappendiculata, anthera dehiscente stipiti lato lineari affixa, glandula oblonga. Capsula . . . —Herba epiphytica, caulibus brevibus paucifoliatis pseudobulbo 1-foliato terminatis. Folia coriacea. Pedunculi sub pseudobulbo axillares v. laterales, simplices. Racemus ad apicem pedunculi brevis, densus, secundus, bracteis membranaceis imbricatis flores subæquantibus. Flores mediocres v. parvuli, breviter pedicellati.

Species 3, Colombianæ. *Reichb. f. in Walp. Ann.* vi. 854; *Xen. Orch.* i. 74, t. 29.

154. *Odontoglossum*, *H. B. et K. Nov. Gen. et Sp.* i. 350, t. 85.—Sepala subæqualia, patentia, libera v. lateraliter rarius basi brevissime connata, lanceolata v. oblonga, rarius ovalia. Petala sepalis similia v. rarius latiora. Labellum ad basin columnæ ei continuum sæpeque brevissime adnatum, basi erectum v. columnæ parallelum; lobi laterales breves erecti, medius patens v. deflexus, integer v. emarginatus, angustus v. latissimus; discus basi varie cristatus bicallosus v. rarius nudus. Columna quam in *Oncidio* sæpius (nec semper) longior, medium versus angustior, basi interdum in membranam expansa, apice præter dentes v. lobos clinandri exalata, rarissime more *Oncidii* ad latera stigmatibus 2-auriculata; clinandrium nunc truncatum vix prominens, nunc dentibus v. lobis 2 lateralibus angustis v. varie laceris dilatatisque instructum, nunc ample membranaceum lobatum denticulatumque. Anthera intra clinandrium terminalis, opercularis, incumbens, semiglobosa v. fere cucullata, 1-locularis v. imperfecte 2-locularis; pollinia 2, ovoidea, integra v. a latere sulcata, inappendiculata, anthera dehiscente stipiti lineari v. rarius latiori affixa, glandula ovali v. angusta. Capsula ovoidea v. oblonga, apice sæpius breviter rostrata.—Herba epiphytica, caulibus abbreviatis pseudobulbo 1-2-foliato terminatis. Folia sub pseudobulbo pauca, disticha, coriacea v. carnosula. Scapi sub pseudobulbo axillares, quam in *Oncidio* sæpius validiores, nunc breves 1-flori v. laxè pauciflori, nunc elati ample paniculato-ramosi floribundi. Flores speciosi v. in *Myanthis* nonnullis parvuli, pedicellati. Bractee ovatae v. lanceolatae, pedicellis breviores nunc minimæ.

Species editæ ultra 80, nonnullæ tamen potius varietates incertæ, Andium Americæ tropicæ a Bolivia usque ad Mexicum incolæ. *Lindl. Fol. Orch.* 1852. *Reichb. f. in Walp. Ann.* vi. 824 (excl. *sp. paucis*); *Xen. Orch.* t. 22, 63, 68, 71, 81, 143, 158 ad 160, 174, 183, 184, 191, 192; in *Scand. Ref. Bot.* t. 99; *Otia Hamb.* 4; *Orch. Centr. Amer.* 70; in *Bot. Zeit.* 1864, 297, 415; 1875, 843; et in *Linnaea* xli. 2, 25, 68, 102. *Bateman, Monogr. Odontogl. Londini*, 1874, cum tabb. 30 (excl. t. 22, quæ *Cochlioda*, et t. 29 ad *Miltoniam* referenda); *Orch. Mex. et Guatem.* t. 24. *Bot. Mag.* t. 3812 (*Zygopetalum*), 3955, 4272, 4878, 4919, 4923, 5691, 5697, 5736, 5778, 5993, 6029, 6144, 6229, 6237, 6265, 6317, 6455, 6502. *Bot. Reg.* 1839, t. 48, 62 (*Cyrtochilus*); 1840, t. 30, 66; 1844, t. 39; 1845, t. 36; 1846, t. 34. *Lindl. et Paxt. Fl. Gard.* t. 15, 18, 90. *Link, Kl. et Otto, Ic. Pl. Rar.* t. 16.

Genus a Lindleyo in sectiones 6 dividitur, characteres tamen e clinandrii forma sumpti variant sæpe de specie in speciem, alii ex labelli colore valde incerti sunt et sectiones nullæ naturales evadunt, nisi forte *Myanthium*, species continens paniculatas parvifloras, quarum nullæ adhuc delineatæ sunt. *Trymenium* species plures continet inter se sat dissimiles, a normalibus subdistinctas, columna abbreviata fere *Oncidii*, clinandrii lobis membranaceis interdum fimbriato-dentatis. Ab *Oncidio* distinguuntur labio ima basi columnæ parallelo nec a basi distincto. Huc pertinent icones *Batem. Monogr. Odontogl.* t. 6 et 27. *Bot. Mag.* t. 4104. *Bot. Reg.* 1841, t. 48 et 1843, t. 3.

*MESOSPINDIUM*, *Reichb. in Bot. Zeit.* 1852, 929; *Xen. Orch.* i. 36, t. 16, quoad speciem typicam, *M. Warszewiczii*, ex icona et descr. et, ex flore in herb. Lindl. servato, videtur *Odontoglossi* species e sectione *Myanthio*, *O. ramuloso*, Lindl., valde affinis. Species ab auctore serius *Mesospindio* additæ nobis minime congeneres sunt, et sub *Cochlioda*, *Ada*, et *Abola* quærendæ.

155. *Oncidium*, *Swartz in K. Vetensk. Akad. Nya Handl. Stockh.* xxi. 239.—Sepala sæpius subæqualia, patentia v. reflexa, libera v. lateralibus basi breviter connata, posticum rarius lateralibus multo angustius longiusque. Petala sepalo postico similia v. rarius majora. Labellum basi columnæ affixum, continuum, ungue brevi a columna divergente v. patente; lobi laterales ungui adnati, sæpius breves patentes v. reflexi, nunc obsoleti, medius patens, interdum latissimus, emarginatus v. 2-fidus, nunc (in *Microchilis*) angustus v. parvus integerrimusque; discus ad apicem unguis sæpissime insigniter cristatus v. tuberculatus. Columna brevis, crassa, superne ad latera stigmatis utrinque ala petaloidea auriculiformi extra marginem fovei instructa, apoda sed basi haud raro antice breviter gibba v. 2-auriculata; clinandrium nunc brevissimum truncatum nunc ovatum oblique erectum, integrum v. antice breviter 2-dentatum. Anthera terminalis, opercularis, incumbens, valde convexa, semiglobosa v. cucullata, 1-locularis v. imperfecte rarius perfecte 2-locularis; pollinia 2, cerea, obovoidea, inappendiculata, anthera dehiscente stipiti plano angusto elongatoque v. lato brevissimoque affixa, glandula varia. Capsula sæpissime ovoidea oblonga v. fusiformis, plus minus rostrata.—Herbæ epiphyticæ, caulibus foliatis sæpius brevibus v. brevissimis pseudobulbo 1-2-foliato terminatis, rarius ̑-foliatis ebulbosis. Folia sub pseudobulbo pauca v. interdum 0, plana, coriacea v. rarius papyracea, v. in speciebus ebulbosis basi a latere compressa distiche equitantis, vaginis caulem brevem obtegentibus. Pedunculi laterales v. ad basin pseudobulborum sæpius elongati ramosique, interdum flexuosi, rarius abbreviati uni- v. pauci-flori. Racemi laxi, floribus sæpe speciosis sæpissime plus minus flavis. Bracteæ parvæ.

Species editæ ultra 250, plures tamen inter se parum distinctæ, Americæ tropicæ incolæ, a Brasilia et Bolivia usque ad Indiam occidentalem et Mexicum extensæ. *Lindl. Fol. Orch.* 1855. *Reichb. f. in Walp. Ann.* vi. 699; *Otia Hamb.* 5, 86, 95; *Orch. Centr. Amer.* 72; in *Flora*, 1865, 278; in *Bot. Zeit.* 1856, 513; 1857, 158; 1862, 215; et in *Linnaea* xli. 20, 32, 67, 102.

Genus naturale, cum affinis rarius confusum, a Lindleyo l.c. in series 14 divisum, quarum pleræque characteribus artificialibus distinctæ, sequentes tamen insigniores sunt.

1. *Microchila*. Caules pseudobulbosi, foliis planis. Flores sæpius speciosi, ample paniculati. Labelli lamina seu lobus medius parvus v. angustus, integerrimus. Species omnes Colombianæ v. Peruvianæ. *Bot. Mag.* t. 5632. *Bot. Reg.* 1843, t. 23. *Paxt. Fl. Gard.* ii. t. 63. *CYRTOCHILUM*, *H. B. et K. Nov. Gen. et Sp.* i. 349, t. 84 (ic. quoad pollinarium erronea). *Pæpp. et Endl. Nov. Gen. et Sp.* t. 61.

2. *Equitantia*. Caules sæpius humiles, non pseudobulbosi, foliis distichis basi complicatis equitantis. Inflorescentia sæpius simplex v. parum ramosa. Labelli lamina lata sepalis longior. Capsula interdum erostris. Huc pertinent *O. iridifolium*, Lindl., cum speciebus 2 v. 3 ei valde

affinibus ex America australi v. centrali et ad 10 ex India occidentali. *A. Rich. Fl. Cub. t. 84. Bot. Mag. t. 2773, 3393, 4130. Bot. Reg. t. 1787, 1789, 1842, t. 54. Paxt. Fl. Gard. t. 33.*

*O. onustum*, Lindl., e Panama, species pseudobulbosa, in Fol. Orch. 12 errore inter *Equitantia* collocatur. *O. crista-galli*, Reichb. f. (*O. decipiens*, Lindl.), primo aspectu *O. iridifolio* sub simile, sub hoc nomine in Bot. Reg. t. 1911 delineatum fuit, sed rite in Fol. Orch. ad species planifolias pseudobulbosas transfertur.

3. *Teretifolia*. Folia in pseudobulbo parvo solitaria (v. gemina?), longa, carnosa, teretia v. parum compressa. Inflorescentia et flores *Planifoliorum*. Species paucae per aream totam generis late dispersae. *Bot. Mag. t. 3568. Bot. Reg. t. 1994, 1842, t. 4, 1846, t. 27.*

4. *Planifolia*. Caules pseudobulbosi, foliis sub pseudobulbo paucis planis v. basi breviter concavis nec equitantibus. Inflorescentia saepius paniculata, rarius ad racemum pauciflorum v. in una specie ad florem unicum reducta. Labelli lamina lata, sepalis longior. Species numerosae, habitu vario, a Lindleyo in series 11 distributae, imprimis ad sepala lateralialia libera v. basi plus minus connata, v. ad formam labelli ejusque dentes v. cristas distinctas, characteres artificiales ad usum practicum sufficientes, etsi parum naturales. *H. B. et K. Nov. Gen. et Sp. t. 81. Pepp. et Endl. Nov. Gen. et Sp. t. 60. Batem. Orch. Mex. et Guatem. t. 3, 4, et t. 20 (Odontoglossum). Lindl. Collect. t. 27; Sert. Orch. t. 25 (Cyrtorchilus), 27, 39, 48; in Paxt. Fl. Gard. t. 6, 21, 87. Reichb. f. Xen. Orch. t. 18, 33, 36, 63, 69, 98, 99; et in Saund. Ref. Bot. t. 74, 75. Link. Kl. et Otto, Ic. Pl. Rar. t. 6. Bot. Mag. t. 777, 1491, 2203, 2990, 3109, 3486, 3499, 3581, 3705, 3712, 3752, 3806, 3807, 3836, 3854, 3880, 3912, 3926, 4148, 4454, 4824, 5193, 5214, 5293, 5708, 5725, 5743, 5756, 5859, 5878, 5980, 6138, 6254, 6278, 6322, 6494 (paucae sub Cyrtorchilo). Bot. Reg. t. 727, 920, 1007, 1050, 1542, 1569, 1651, 1660, 1699, 1758, 1851, 1887, 1911, 1920, 1929, 2006; 1838, t. 44, 48; 1839, t. 42, 57; 1840, t. 10; 1841, t. 59; 1842, t. 30; 1843, t. 12, 43; 1845, t. 40, 64; 1847, t. 20 (Odontoglossum), 66, 68, 70.*

CUITLAUZINA, Llav. et Lex. Nov. Gen. et Sp. ii. Orchid. Opusc. 32. Lindl. Gen. et Sp. Orch. 196, planta Mexicana nobis ignota, ex caractere dato ab *Oncidio* non separanda videtur.

PALUMBINA, Reichb. f. in Walp. Ann. vi. 699; Bot. Mag. t. 5546, est *Oncidium candidum*, species Guatemalensis v. Mexicana a Lindleyo, Fol. Orch. Oncid. 18, dubie *Oncidio* adscripta ob 'pollinia caudiculis 2 cuneatis glandulae circulari adnata'; ex Reichb. f. l.c. 'pollinia postice fissas, caudicula secundaria utrinque in fissuram ingrediente caudiculae lineari accreta'; analysis in tabula Bot. Mag. cum neutra descriptione convenit et specimina nobis desunt. Sepala lateralialia altius connata quam in ulla specie *Oncidii* a nobis examinata, sed characteres generici adhuc valde dubii remanent. Perianthium candidum immaculatum insigne est, sed etiam in *O. concolore* et *O. citrino* saepius immaculatum est et pallidum, etsi citrinum.

*O. Papilio*, Lindl. Bot. Reg. t. 910; Bot. Mag. t. 2795; et *O. Kramerianum*, Reichb. f. Xen. Orch. t. 33, insignes sunt sepalo postico petalisque erectis longe linearibus.

156. *Miltonia*, Lindl. Bot. Reg. sub t. 1976, et t. 1992; Fol. Orch. 1853. (Macrochilus, Knowles et Westc. Fl. Cub. t. 45).—Sepala subaequalia, patentia, libera v. lateralialia basi brevissime connata. Petala sepalis similia v. paullo latiora. Labellum ad basin columnae affixum, arcte sessile v. ungue brevissimo latoque instructum, a basi patens, amplum, indivisum, disco basi leviter lamellato. Columna brevis, apoda, apice v. antice varie 2-auriculata v. 2-alata; clinandrium breve, truncatum v. antice 2-lobum, v. membranaceo-dilatatum 2-3-lobum. Anthera terminalis, opercularis, incumbens, convexa, 1-locularis v. imperfecte 2-locularis; pollinia 2, cerea, ovoidea, integra v. sulcata, inappendiculata, anthera dehiscente stipiti obovato v. oblongo affixa, glandula squamiformi. Capsula (imatura) erostris.—Herbæ epiphyticae, caulibus brevissimis pseudobulbo 1-2-foliato terminatis. Folia coriacea, oblonga v. elongata, basi parum contracta. Scapi sub pseudobulbis axillares, simplices, validi, 1-2-flori v. laxe pluriflori. Flores speciosi, longiuscule pedicellati. Bractea nunc longae spathacae, nunc abbreviatae v. minimae.

Species admissae ad 10, quarum una Peruviana, ceterae omnes Brasilienses, Reichb. f. Xen. Orch. i. 128, t. 21, 47, 54; et in Walp. Ann. vi. 757. Lindl. Sert. Orch. t. 7 (Cyrtorchilus), 21, 34. Bot. Reg. t. 1627 (Cyrtorchilus), t. 1830 (Oncidium), et 1845, t. 8. Bot. Mag. t. 3793, 4109, 4204, 4425, 5436, 5572, 5843. Illis etiam forte addendae *Odontoglossum vexillare*, Reichb. f., Batem. Odontogl. Monogr. t. 29, Bot. Mag. t. 6037, affinesque paucae labello a basi sessili patento nequaquam columnae parallelo, etsi, fide hortulanorum, facile cum *Odontoglossis* variis nec cum *Miltoniis* genuinis proles hybridas gignunt. Genus ceterum *Oncidio* et *Odontoglossis* nimis affine, cum priore

mediante *M. flavescens*, Lindl., arete connectitur, et mediante *M. cuneata*, Lindl., cum *Odonogloss*. A Lindleyo in series dividitur ad clinandrii margines seu columnæ alas, a Reichenbachio ad bracteas spathaceas v. breves, sectiones tamen bene limitatas haud præbet.

157. *Brassia*, R. Br. in *Ait. Hort. Kew. ed. 2*, v. 215.—Sepala libera, patentia, angusta, acuminata v. caudata, æqualia v. lateralialia longiora. Petala sepalo postico similia v. minora. Labellum ad basin columnæ sessile, patens, planum, indivisum, sepalis brevius, basi 2-lamellatum. Columna brevis, erecta, aptera, apoda; clinandrium parum prominens, truncatum. Anthera terminalis, opercularis, incumbens, valde convexa v. semiglobosa, 1-locularis; pollinia 2, cerea, obovoidea, inappendiculata, anthera dehiscens stipiti plano oblongo v. lineari affixa, glandula varia. Capsula . . .—Herbæ epiphyticæ, caulibus abbreviatis pseudobulbo 1-2-foliato terminatis. Folia sub pseudobulbo pauca v. ad vaginas reducta, coriacea. Pedunculi sub pseudobulbo laterales v. axillares, simplices. Racemi laxi, sæpius pauciflori. Flores mediocres v. majusculi, sepalis interdum longissimis. Bracteæ breves v. spathaceæ.

Species ad 20, Americæ tropicæ a Brasilia usque ad Indiam occidentalem et Mexicum incolæ. *Lindl. Fol. Orch.* 1853; *Sert. Orch. t. 6.* *Reichb. in Walp. Ann. vi.* 764 (*Oncidium*); *Xen. Orch. t. 32*, 45. *Hook. Exot. Fl. t. 179.* *A. DC. Not. X. Pl. Rar. Hort. Gen. t. 1.* *Pepp. et Endl. Nov. Gen. et Sp. t. 117.* *Batem. Orch. Mex. et Guatem. t. 22.* *Bot. Mag. t. 1691*, 3451, 3577, 3794, 4003, 5748. *Bot. Reg. t. 832*, 1754, 1841, *t. 18*, 1847, *t. 29.* *Knowles et Westc. Fl. Cab. t. 53.*

158. *Solenidium*, Lindl. *Orch. Linden. 15*, et in *Paxt. Fl. Gard. iii. t. 102*.—Sepala subæqualia, libera, patentia. Petala sepalis similia. Labellum ad basin columnæ patens, in unguem longum contractum, apice dilatatum, indivisum; discus lamellis villosis instructus. Columna erecta, apoda, late 2-alata, alis superne in auriculas dilatatis et cum clinandrio membranaceo varie dentato v. lobato continuis. Anthera in fundo clinandrii opercularis, incumbens, galeata, 1-locularis; pollinia 2, cerea, ovoidea, inappendiculata, anthera dehiscens stipiti loriformi affixa, glandula ovata. Capsula . . .—Herba epiphytica, caulibus abbreviatis pseudobulbo 1-2-foliato terminatis. Folia longiuscula, tenuiter coriacea. Scapi sub pseudobulbo axillares, simplices. Racemus latus, floribus medio-cribus longe pedicellatis. Bracteæ parvæ.

Species 1, Andium Colombiæ incolæ.

Genus *Oncidio*, quocum junxit Reichb. f. in *Walp. Ann. vi.* 771, valde affine, satis tamen distinctum videtur columna a basi late alata et inflorescentia.

159. *Leiochilus*, Knowles et Westc. *Fl. Cab. ii.* 143 (errore Leochilus). (*Cryptosaccus*, *err. typ.* *Cryptosanus*, *Scheidw. in Allgem. Gart. Zeit. 1843*, 101.)—Sepala subæqualia, patentia, libera v. lateralialia basi breviter connata. Petala sepalis similia v. paullo latiora. Labellum ad basin columnæ affixum, continuum, patens; lobi laterales rotundati, erecti v. patentes, nunc obsoleti, medius oblongus v. obovatus, patens, indivisus, sepalis interdum longior, discus inter lobos laterales varie carnosus v. callosus. Columna brevis, erecta, apoda, exalata sed infra stigma sæpe 2-auriculata; clinandrium truncatum v. postice breviter productum; rostellum elongatum. Anthera terminalis, opercularis, incumbens, 1-locularis, antice ultra loculum in appendicem membranaceam loculo longiorem producta; pollinia 2, ceræ, obovoidea v. globosa, inappendiculata, anthera dehiscens stipiti angusto elongato affixa, glandula ovata. Capsula ovali-oblonga, rostrata.—Herbæ epiphyticæ, humiles, caulibus brevissimis pseudobulbo 1-foliato terminatis, vaginis membranaceo-scariosis v. foliis paucis sub pseudobulbo obtectis. Folia oblonga v. angusta, plana, in petiolum contracta. Scapi sub pseudobulbo tenues, simplices v. rarius subramosi. Racemi laxi, floribus parvis teneris distincte pedicellatis. Bracteæ pedicellos subæquantes v. breviores, angustæ, acutæ.

Species 4 v. 5, Indiæ Occidentalis, Mexici et Americæ centralis incolæ. *Lindl. Bot. Reg. 1842*, *Misc. 22.* *Reichb. f. Xen. Orch. i.* 15, *t. 6.* *Bot. Mag. t. 3845* (*Oncidium*).

Genus a Reichb. f. in Walp. Ann. vi. 740 et 772 iterum ad *Oncidium* revocatur, bene tamen distinctum videtur habitu columna et anthera, eoque includimus *RHYNCHOSTELEM*, Reichb. f. in Bot. Zeit. 1852, 770 (*Odontoglossum pygmaeum*, Lindl.), speciem in omnibus cum cæteris *Leiochilis* convenientem, exceptis columnæ auriculis vix prominulis.

160. *Sigmatostallix*, Reichb. f. in Bot. Zeit. 1852, 769.—Sepala libera, subæqualia, patentia, acuta v. acuminata. Petala sepalis similia nisi angustiora. Labellum ungue longo 2-carinato, lamina transversa basi truncata, angulis acutis v. recurvo-apiculatis. Columna elongata, angustissima, ad latera stigmatis parum dilatata; clinandrium parum prominens, integrum, postice breviter productum. Anthera terminalis, opercularis, incumbens, 1-ocularis, breviter appendiculata; pollinia 2, cerea, ovoidea, inappendiculata, anthera dehiscente stipiti lineari apice dilatato affixa, glandula parva. Capsula ovoidea, triquetra, erostris.—Herbæ humiles, caulibus brevissimis paucifoliatis vaginis distichis obtectis, pseudobulbo 1-foliato terminatis. Pedunculi sub pseudobulbo axillares, simplices, folio multo longiores. Flores in racemo dissiti, breviter pedicellati, penduli, mediocres v. parvuli. Bractæ ocreiformes.

Species 7, Americæ tropicæ incolæ. Reichb. f. in Walp. Ann. vi. 858; Xen. Orch. t. 8. Characterem ad *S. pictum* et *S. radicans* instruximus. His addidit Reichenbach *Speckliniam gramineam*, Pepp. et Endl. Nov. Gen. et Sp. i. 51, t. 89 B, ejus tamen icon et descriptio vix cum characterē Reichenbachiano conveniunt, et species 4 Andinas in Linnæa xli. 16, 68, 103 descriptas, a nobis non visas.

161. *Erycina*, Lindl. Fol. Orch. 1853.—Sepala subæqualia, acuta, patentia, lateralibus basi connata. Petala sepalis similia. Labellum circa basin columnæ adnatum, patens, sepalis multo longius, 3-partitum, lobis omnibus latis petaloideis basi contractis; discus ad basin lobi medii callis 2 linguiformibus appendiculatus, et lobi 2 angusti erecti ad basin columnæ. Columna brevissima, latiuscula, exalata, apoda, rostello longo horizontali apice recurvo; clinandrium parum prominens. Anthera terminalis, opercularis, incumbens, 1-ocularis, in appendicem membranaceam producta; pollinia 4 (v. 2?), cerea, ovoidea, inappendiculata, anthera dehiscente apici parum dilatato stipitis longe linearis affixa, glandula ovata. Capsula oblonga, echinata, erostris.—Herba epiphytica, caulibus foliatis brevissimis pseudobulbo 1-foliato terminatis (*H. B. et K.*). Folia pauca, coriacea, vaginis distiche imbricatis demum incrassatis. Pedunculus axillaris, erectus, tenuis at rigidus, divaricato-ramosus. Flores mediocres v. parvuli, secus ramos parum dissiti, breviter pedicellati. Bractæ divaricatæ, rigide, fere aculeiformes.

Species 1, Mexicana. *H. B. et K. Nov. Gen. et Sp. t. 79 (Oncidium).*

Genus habitu *Ionopsidi*, labelli appendicibus et rostello *Zygostati* affine videtur. Folii terminalis vagina in speciminibus nostris parum tantum incrassatur, sed ex *H. B. et K.* pseudobulbi formantur.

162. *Gomesa*, R. Br. in Bot. Mag. t. 1748.—Sepala subæquilonga, omnia libera et patentia v. lateralibus sub labello patentissima, approximata v. alte connata. Petala sepalis postico similia v. latiora. Labellum basi columnæ affixum, continuum, incurvo-erectum v. a basi erectum, dein reflexum, ealcaratum; lobi laterales erecti, nunc obsoleti v. parum prominuli, columnam sæpe amplexentes, modius patens v. reflexus, indivisus, sepalis non excedens; discus basi callis 2 longitudinalibus columnam amplexentibus instructus. Columna erecta, apoda, semiteros, recta, angusta v. superne clavata v. 2-alata, v. ad latera stigmatis 2-auriculata; clinandrium parum prominulum. Anthera terminalis, opercularis, incumbens, valde convexa v. galeata, 1-ocularis; pollinia 2, cerea, ovoidea v. subglobosa, sulcata, inappendiculata, anthera dehiscente stipiti angusto v. basi dilatato affixa, glandula ovata (v. 2-aurita?). Capsula . . .—Herbæ epiphyticæ, caulibus brevibus pseudobulbo 1-2-foliato terminatis. Folia oblonga v. elongata, in petiolum latiusculum contracta. Scapi sub pseudobulbo axillares, simplices. Racemus sæpius floribundus, floribus mediocribus. Bractæ angustæ, pedicellum sæpe superantes.

Species ad 6 Brasilienses, a *Reichb. f. in Walp. Ann.* vi. 853 ad *Odontoglossum* relatæ, sed habitu sepalis lateralibus aliisque notis satis distinctæ videntur, a *Rodriguezia* labello ecalcarato facile differunt. *Bot. Mag.* t. 2746 (*Pleurothallis*), t. 3497 et 3504 (*Rodriguezia*). *Bot. Reg.* 1840, t. 54 (*Rodriguezia*). *Lodd. Bot. Cab.* t. 680.

163. *Abola*, *Lindl. Fol. Orch.* 1853.—Sepala subæquilonga, posticum erectum, lateralia alte connata in unum sub labello patentissimum. Petala sepalo postico similia nisi latiora. Labellum ad basin columnæ sessile, patens, basi lata columnam fere amplectens; lobi laterales rotundati, cum medio oblongo continui; discus basi callosus. Columna brevis, apoda, 2-alata, alis basi latis labello impositis; clinandrium obliquum, postice elevatum. Anthera terminalis, opercularis, incumbens, semiglobosa, 1-locularis; pollinia 2, cerea, ovoidea, inappendiculata, anthera dehiscente stipiti tenui brevi affixa. Capsula oblonga, erostris.—Herba epiphytica, humilis, caulibus abbreviatis pseudobulbo 1-2-foliato terminatis. Folia angusta, coriacea, in petiolum contracta, sub pseudobulbo pauca v. ad vaginas distiche imbricatas reducta. Scapi sub pseudobulbo axillares, tenues. Racemus simplex, rhachi flexuosa. Flores parvi, bracteis pedicello brevioribus.

Species 1, Andium Colombiæ incolæ.

Genus *Gomezæ* valde affine, differt imprimis columna brevi late alata, a Reichenbachio nescimus quo jure *Mesospinidio* refertur. *Lindley* e specimine manco caulem ebulbosum descripsit.

164. *Neodryas*, *Reichb. f. in Bot. Zeit.* 1852, 834; *Xen. Orch.* i. 38, t. 16, iii. 21.—Sepala æquilonga, erecto-patentia, posticum concavum, lateralia (in *N. Mandoni*) alte connata. Petala sepalis æquilonga, multo latiora. Labellum cum basi columnæ continuum, ungue incurvo, erectum, sepalis æquilongum; lobi laterales in ungue auriculiformes (v. obsoleti?), medius latus, patens; discus ad basin laminæ late cristato-callosus. Columna erecta, crassiuscula, ad latera stigmatis incrassata et utrinque ala brevi appendiculata, apoda; clinandrium parum prominens, truncatum v. antice 2-dentatum. Anthera terminalis, opercularis, incumbens, valde convexa, imperfecte 2-locularis, antice breviter producta; pollinia 2, cerea, ovoidea, demum 2-partibilia, lobo postico minore, inappendiculata, anthera dehiscente stipiti plano ligulato affixa, glandula ovata. Capsula . . .—Herbæ epiphyticæ, caulibus foliatis brevibus pseudobulbo 1-foliato terminatis. Folia sub pseudobulbo pauca, membranaceo-coriacea, basi longe contracta, exteriora ad vaginam reducta. Pedunculus sub pseudobulbo axillaris, foliis longior, apice paniculatus. Flores parvi, in ramulis brevibus paniculæ racemosi. Bracteæ parvæ. (Char. imprimis ex *N. Mandoni*, *Reichb. f.*)

Species ad 3, Bolivianæ v. Peruvianæ. Genus *Oncidio* valde affine, vix differt perianthio minore minus explanato et forte cum *O. Brunlesiano*, *Reichb. f.*, ad sectionem *Oncidii* reducendum.

165. *Trizeuxis*, *Lindl. Collect. Bot.* t. 2; *Gen. et Sp. Orch.* 140.—Sepalum posticum erectum, fornicatum, lateralia vix breviora, alte coalita. Petala sepalis subæquilonga iis latiora. Labellum a basi columnæ erectum; lobi laterales erecti, unguem anguste marginantes, medius parvus, indivisus. Columna brevis, erecta, crassa, exalata, apoda; clinandrium truncatum. Anthera terminalis, opercularis, incumbens, 1-locularis, in appendicem brevem productus; pollinia 2, oblonga, inappendiculata, anthera dehiscente stipiti lineari longiusculo apice parum dilatato affixa, glandula oblonga. Capsula brevis, late triquetra, distincte rostrata.—Herba humilis, caulibus foliatis brevibus pseudobulbo 1-foliato terminatis. Folia coriacea, non plicata, sæpe falcata, vaginis sub pseudobulbo distiche imbricatis. Pedunculi sub pseudobulbo axillares, tenues, superne paniculato-ramosi. Flores minimi, in ramulis ultimis racemosi, pedicellis filiformibus. Bracteæ parvæ, secus rhachin arcte approximatae, quæquaversæ, fere imbricatæ.

Species 1, Andium Colombiæ incolæ, prius ex insula Trinidad accepta, sed forte ibidem in horto botanico culta. *Hook. Fl. Exot.* t. 126.

166. *Ada*, *Lindl. Fol. Orch.* 1853.—Sepala parum inæqualia, libera, erecta v. superne patentia. Petala sepalis similia nisi minora. Labellum ad basin columnæ continuum,

sessile, patens, angustum, indivisum, sepalis brevius. Columna brevis, crassa, apoda, basi dilatata in alas rotundatas labelli basin amplexantes; clinandrium oblique prominens, integrum. Anthera terminalis, opercularis, incumbens, convexa, fere galeata, 1-locularis; pollinia 2, cerea, ovoidea, inappendiculata, anthera dehiscente stipiti plano cuneato affixa, glandula ovata. Capsula . . .—Herba epiphytica, caulibus abbreviatis pseudobulbo 1-2-foliato terminatis. Folia oblonga v. elongata, coriacea. Scapi sub pseudobulbo axillares, simplices, paucivaginati. Flores in racemo subsecundi, nutantes, speciosi, cinnabarini, breviter pedicellati. Bractæ membranaceo-scariosæ.

Species 1, Andium Colombiæ incolæ. *Bot. Mag. t. 5435; Illustr. Hortic. xix. t. 107.*

*Brassia cinnabarina*, Lindl. *Fol. Orch.*, nobis omnino eadem videtur ac *Ada aurantiaca*, Lindl., floribus utriusque sedulo comparatis; a Reichenbachio tamen in Walp. *Ann. vi. 858* pro speciebus distinctis sub *Mesospinidio* enumerantur, caractere diagnostico haud dato. Genus nobis tam a *Mesospinidio* typico (*Odontoglossa*), quam a *Cochlidio* bene distinctum videtur perianthii forma, columnæ basi labellum amplexante aliisque notis. Labellum basi columnæ adnatum a Lindleyo dicitur, quod tamen vix apparet.

167. *Satrina*, Lindl. in *Ann. Nat. Hist. ser. 1, x. 184*.—Sepala subæqualia, erecta, conniventia, lateralia basi coherentia mentum brevissimum simulantia. Petala sepalis similia nisi paulo latiora. Labellum cum basi columnæ continuum, erectum, ungue longo concavo marginato, lamina dilatata crenulata. Columna erecta, apoda, superne late 2-alata alis longe falcato-acuminatis; rostellum basi in appendicem longam linearem erectam striatam productum; clinandrium breve, antice 2-auriculatum. Anthera terminalis, opercularis, incumbens, subglobosa, imperfecte 2-locularis, dorso et antice crista lata membranacea appendiculata; pollinia 2, cerea, late ovata, sulcata (v. 2-partibilia?), inappendiculata, anthera dehiscente stipiti anguste lineari affixa, glandula parva. Capsula . . .—Herba epiphytica, humilis, caulibus brevissimis 1-2-vaginatibus mox in pseudobulbum carnosum 1-2-foliatum incrassatis. Folia coriacea. Scapus ad basin pseudobulbi erectus, simplex. Flores haud numerosi, dissite racemosi, mediocres, brevissime pedicellati. Bractæ parvæ.

Species 1, Peruviana. *Reichb. f. in Walp. Ann. vi. 686.*

Genus bene distinctum, sed adhuc ex specimine unico tantum in Herb. Hook. servato notum, et quoad pollinarii structuram ulterius investigandum. Appendix rostellum longe linearis fere aristiformis a Lindleyo pro glandula describitur, sed post pollinarium delapsam in rostello persistit quocum continuum est. Glandulam veram in flore examinato parvam oblongam vidimus.

168. *Trigonidium*, Lindl. *Bot. Reg. t. 1923*.—Sepala subæqualia, basi in tubum triquetrum turbinatum conniventia v. coherentia, superne libera, patentia. Petala sepalis multo minora. Labellum a basi columnæ erectum, sepalis multo brevius; lobi laterales erecti columnam amplexantes, medius patens, basi carnosulus v. callosus. Columna brevis, crassiuscula, semiteres, exalata, apoda; clinandrium breve, oblique truncatum. Anthera terminalis, opercularis, incumbens, valde convexa, 1-locularis; pollinia 4, cerea, per paria coherentia postico minore, inappendiculata, anthera dehiscente glandulæ (v. stipiti) latæ squamiformi affixa. Capsula . . .—Herbæ epiphyticae, caulibus brevissimis mox in pseudobulbum carnosum 1-2-foliatum incrassatis. Folia coriacea, non plicata, linearia v. oblonga. Scapi infra pseudobulbum v. e rhizomate simplices, plurivaginati, 1-flori. Flos majusculus, intra bracteam spathaceam breviter pedicellatus.

Species editæ 7 v. 8, Americæ tropicæ a Brasilia usque ad Americam centralem incolæ, nonnullæ tamen *T. obtusi*, Lindl., formæ. *Reichb. in Walp. Ann. vi. 502* (excl. *T. ringente* quæ *Mormolyce*, Fenzl).

*T. insigne*, Reichb. f. in Herb. Hook., e N. Grenada, *Purdie*, habitu et floribus maximis a cæteris speciebus valde diversa atque verisimiliter generis alieni, sed e flore unico imperfecto haud tute definiendi. *T. monophyllum*, Griseb., ad *Octadesmium* referimus.

169. *Xonopsis*, II. B. et K. *Nov. Gen. et Sp. i. 348, t. 83*. (*Iantha*, Hook. *Exot. Fl. t. 113*. *Cybelion*, Spreng. *Syst. iii. 679*).—Sepala subæquilonga, erecta v. apice patentia,

posticum liberum, lateralia ima basi sub labello in saccum brevem connata. Petala sepalo postico similia nisi latiora. Labellum basi columnæ affixum, ungue sepalis parum brevior, lobi laterales intra marginem unguis angusti, medius maximus, expansus, sepalis 2-3-plo longior, late 2-lobus, discus basi 2-callosus. Columna brevis, erecta, crassa, antice concava, exalata, apoda; clinandrium breve, truncatum. Anthera terminalis, opercularis, incumbens, semiglobosa, 1-locularis v. imperfecte 2-locularis, antice breviter productus; pollinia 2, cerea, obovoideo-subglobosa, inappendiculata, anthera dehiscente stipiti loriformi affixa, glandula squamiformi. Capsula oblonga v. ovoidea, erostis v. in rostrum breve producta.—Herbæ epiphyticæ, caulibus foliatis brevissimis non pseudobulbosis. Folia pauca, angusta, coriacea, vaginis persistentibus distiche imbricatis. Pedunculi 1-3, laterales v. subterminales, elongati, tenues, rigidi, paucivaginati. Racemi graciles, laxi, simplices v. paniculato-ramosi. Flores mediocres v. elegantes, longiuscule pedicellati. Bracteæ minimæ.

Species enumeratæ ad 10, nonnullæ tamen ad varietates *I. pulchellæ* reducendæ, Americæ tropicæ a Brasilia usque ad Indiam occidentalem et Mexicum incolæ. *Lindl. Gen. et Sp. Orch.* 193; *Fol. Orch.* 1852; *Collect. Bot.* t. 39 A. *Reichb. f. in Walp. Ann.* vi. 683, et in *Linnaea* xli. 68. *Bot. Mag.* t. 5541. *Bot. Reg.* t. 1904.

170. **Cryptarrhena**, *R. Br. in Bot. Reg.* t. 153. (Orchidifunkia, *A. Rich. in Ann. Sc. Nat. ser.* 3, iii. 24, et eo teste Clynhymania, *A. Rich. in Compt. Rend. Acad. Sc. Par.* 1844.)—Sepala subæqualia, libera, patentia, acuta. Petala sepalis subæqualia at latiora. Labellum cum basi columnæ continuum, patens, ungue longo supra carinato-cristato; lobi laterales ad apicem unguis angusti, patentes v. recurvi; medius brevior, latior, 2-4-fidus. Columna brevis, superne incrassata, exalata, apoda; clinandrium valde elevatum, obliquum v. fere cucullatum, margine denticulatum. Anthera intra clinandrium opercularis, incumbens, convexa, breviter acuminata, 1- (v. 2-?) locularis; pollinia (*ex ic. Rich.*) 4, cerea, per paria facie plana sibimet incumbens, inappendiculata; anthera dehiscente apici parum dilatato stipitis linearis affixa, glandula parva. Capsula ovoidea v. oblonga, erostis.—Herbæ epiphyticæ, humiles, caulibus foliatis brevissimis non pseudobulbosis. Folia plura, conferta, membranaceo-coriacea, vaginis coriaceis distiche imbricatis. Pedunculi axillares, erecti, foliis longiores, simplices. Flores parvuli, laxè racemosi. Bracteæ angustæ, pedicellos subæquantes.

Species 2, altera per Indiam occidentalem et Americam centalem et occidentalem usque ad Guay-aquil extensa, altera Surinamensis. *Reichb. f. in Walp. Ann.* vi. 697.

*C. pallidiflora*, *Reichb. f.*, omnino eadem videtur ac species typica, *C. lunata*, *Br.*; pollinarii appendices a *Reichb. f.* descriptæ verisimiliter monstrosæ erant, in icone Richardiana in herb. *Lindl.* serrata non apparent. Pollinaria a speciminibus a nobis examinatis omnia jam delapsa fuerunt.

171. **Ornithocephalus**, *Hook. Exot. Fl.* t. 127.—Sepala subæqualia, libera, patentia, posticum concavum. Petala sepalis subsimilia. Labellum cum basi columnæ continuum, subsessile; lobi laterales crassi, latiusculi, medius parvus v. elongatus, sæpe inflexus, marginibus interdum in dorso lateralium decurrentibus. Columna brevis, crassiuscula, antice concava, exalata, apoda, rostello horizontali longissimo; clinandrium parum prominens. Anthera terminalis, opercularis, incumbens, imperfecte 2-locularis, ultra loculos in appendicem brevem producta; pollinia 4, cerea, inappendiculata, anthera dehiscente per paria apici parum dilatato stipitis longe linearis affixa, glandula ovoidea v. parva. Capsula ovoidea v. subglobosa, erostis.—Herbæ humiles, epiphyticæ. Folia carnosa v. coriacea, oblonga v. linearia, vaginis distiche imbricatis carnosius margine interiore sæpe scariosis, post laminam delapsam sæpe incrassatis vix tamen pseudobulbosis. Pedunculi axillares, simplices. Flores sæpius parvi, in racemo dissiti. Bracteæ distichæ, in rhachii sæpe flexuosa rigidulæ, persistentes, patentes, fere dentiformes.

Species ad 20, Americæ tropicæ a Brasilia usque ad Mexicum incolæ. *Reichb. f. in Walp. Ann.* vi. 492; *Otia Hamb.* 88; et in *Linnaea* xli. 33, 106.

172. *Quekettia*, Lindl. Bot. Reg. 1839, Misc. 3; Fol. Orch. 1852.—Sepala subæqualia, libera, erecta, linearia, petaloidea. Petala sepalis similia. Labellum a basi columnæ erectum, sepalis æquilongum iisque paullo latius, indivisum, basi excavatum, 2-callosum. Columna erecta, angusta, semiteres, apice auriculis 2 recurvis appendiculata; clinandrium truncatum. Anthera terminalis, opercularis, incumbens, 1-ocularis; pollinia 2, cerea, ovoidea, sulcata, inappendiculata, anthera dehiscente stipiti lineari affixa, glandula parva. Capsula . . .—Herba (epiphytica?) pusilla, caule indescrito. Folia linearia, teretia, carnosula. Scapus filiformis, ramosus. Flores parvi, secus ramos dissiti, ad axillam bracteæ parvæ scariosæ sessiles.

Species 1, Brasiliensis. Reichb. f. in Walp. Ann. vi. 689. Flores in specimine unico imperfecto in Herb. Lindl. servato examinare nequimus. Characterem nostrum e descriptione Lindleyana sumpsimus.

173. *Zygostates*, Lindl. Bot. Reg. sub t. 1927; Fol. Orch. 1852. (Dactylostyles, Scheidw. in Allgem. Gartenz. 1839, 405.)—Sepala subæqualia, libera, patentia v. reflexa. Petala sepalis similia v. latiora. Labellum cum basi columnæ continuum, patens, concavum, indivisum; discus basi callo v. lamina carnosula longiuscula instructus, et ad utrumque latus ad basin columnæ adest auricula patens v. lobus longe linearis carnosus apice dilatatus. Columna arcuata, semiteres, superne antice concava, exalata, apoda, rostello longissimo primum horizontali dein recurvo-ascendente; clinandrium postice ad basin rostelli parvum. Anthera opercularis, incumbens, imperfecte 2-ocularis, breviter appendiculata; pollinia 4 (v. ex Lindl. 2) cerea, ovoidea, inappendiculata, anthera dehiscente apici dilatato stipitis longe linearis affixa, glandula parva. Capsula . . .—Herbæ humiles, epiphyticæ, habitu *Ornithocephali*. Folia carnosula v. coriacea, vaginis vix in pseudobulbum incrassatis. Pedunculi axillares, simplices. Flores parvi, in racemo dissiti.

Species 3 v. 4, Brasilienses. Reichb. f. in Walp. Ann. vi. 563 et 928.

Genus ab *Ornithocephalo* parum differt rostello incurvo, et labello ad junctionem cum columna biauriculato. Labelli tamen appendices variabiles videntur, et adhuc in floribus perpaucis rite observatæ.

174. *Phymatidium*, Lindl. Gen. et Sp. Orch. 209.—Sepala subæqualia, tenuissima, libera, patentia. Petala sepalis similia. Labellum cum basi columnæ continuum, patens v. ascendens, indivisus; discus medio callo v. lamina carnosula et ad junctionem cum columna callis 3 v. 1 instructus. Columna tenuis, incurvo-erecta, semiteres, apice breviter v. late 2-auriculata, cæterum exalata, apoda, rostello brevi; clinandrium plus minus dilatatum, membranaceum, cum auriculis columnæ continuum. Anthera terminalis, opercularis, incumbens, imperfecte 2-ocularis, in appendicem membranaceam producta; pollinia 4, cerea, distincta, oblonga, acuminata v. acutiuscula, inappendiculata, anthera dehiscente apici dilatato stipitis longiusculi membranacei affixa. Capsula parva, globosa, erostris.—Herbæ pusillæ, epiphyticæ, dense caespitosæ, multicaules, non pseudobulbosæ. Folia breviter angustequæ linearia, graminea, basi vagina stipata. Scapi inter folia numerosi, tenues, simplices, foliis longiores (2-3-pollicares), fere a basi floridi. Flores parvi, laxè racemosi, rhachi flexuosa. Bracteæ rigidæ, patentes, nunc minimæ, nunc subulatæ pedicello longiores.

Species 2, Brasilienses.

Genus ab *Ornithocephalo* imprimis rostello brevi distinguitur.

175. *Chytroglossa*, Reichb. f. in Hamb. Gartenz. 1863, 545, in Journ. Hort. Soc. ser. 2, i. 97, t. 3, 4; Xen. Orch. t. 148.—Sepala æquilonga, libera, patentia, lateralibus postico sublatiora. Petala sepalis subsimilia. Labellum cum basi columnæ continuum, patens, late v. obscure 3-lobum, prope basin 1-2-callosum. Columna brevis, supra stigma a latere valde compressa, apice truncata et antice longe minuto erecto aucta, alis 2 lateralibus

latis apice productis; clinandrium membranaceum, concavum, denticulatum, alas columna terminans; stigma ad basin columnæ magnum, concavum. Anthera (a nobis non visa) oblongo-spathulata (Reichb. f.), 1-locularis (M. L. Pinel); pollinia 2, sulcata (M. L. Pinel), v. 4 per paria incumbens (Reichb. f.), cerea, inappendiculata, anthera dehiscens stipiti longo lineari apice latiori affixa, glandula parva. Capsula . . .—Herbæ nanæ, epiphyticæ, caule brevissimo non pseudobulboso. Folia subdistiche fasciculata, oblongo-elliptica v. linearia, plana. Racemi ad basin foliorum brevissime pedunculati, recurvi v. penduli, laxè pluriflori, rhachi in una specie insigniter flexuosa. Flores mediocres, breviter pedicellati. Bracteæ minimæ.

Species 2, Brasilienses. Genus *Phymatidio* affine, columnæ structura facile distinctum.

176. *Mofmeisterella*, Reichb. f. in Walp. Ann. iii. 563; Xen. Orch. i. 41, t. 18.—Sepala subæqualia, libera, linearia, cum petalis similibus reflexo-patentia. Labellum ad basin columnæ subsessile, erecto-patens, lanceolatum, indivisum, sepalis sublongius. Columna erecta, basi late 2-alata, apoda, rostello longiusculo reflexo rigido; clinandrium valde obliquum, postice in dentem longum antheriferum productum. Anthera terminalis, opercularis, incumbens, 1-locularis, in appendicem membranaceam brevem producta; pollinia 4 (ex Reichb. 2), ovoideo-oblonga, inappendiculata, anthera dehiscens apici dilatato stipitis longi tenuis per paria affixa, glandula oblonga. Capsula . . .—Herba epiphytica, radicans, caulibus foliatis brevissimis non pseudobulbosis. Folia disticha, linearia (in specimine pollicaria). Scapi e rhizomate erecti, ancipites, rhachi subflexuosa, bracteis dissitis incurvo-erectis. Flores majusculi, ad axillas bractearum longe tenuiterque pedicellati.

Species 1, Andium Ecuadorensium incola. In floribus 2 examinatis pollinia 4 invenimus.

177. *Lockhartia*, Hook. Bot. Mag. t. 2715. (Fernandezia, Lindl. Gen. et Sp. Orch. 207, non Ruiz et Pav.)—Sepala subæqualia, libera, patentia v. lateraliter reflexa. Petala sepalis similia. Labellum a basi columnæ patens, sepalis longius, lobi laterales ad basin divaricati v. incurvo-erecti, longiusculi, medius obvatus v. oblongus, varie 3-4-lobus; discus valde callosus. Columna brevissima, lata, ad latera stigmatis late 2-alata v. 2-auriculata; clinandrium obliquum, breve. Anthera terminalis, opercularis, incumbens, convexa, late et obtuse acuminata, imperfecte 2-locularis; pollinia 2, ovata, apice longiuscule acuminata subcaudata, inappendiculata, anthera dehiscens visco parco glandulæ parvæ affixa v. libera. Capsula brevis, ovoidea v. subglobosa, angulata, erostris.—Herbæ epiphyticæ non pseudobulbosæ, caulibus foliatis fasciculatis erectis simplicibus. Folia brevina, erecta v. subpatentia, distiche imbricata, equitancia, caulem obtegentia. Pedunculi in axillis superioribus nunc 1-2-flori, nunc laxè at tenuiter paniculato-ramosi. Flores longiuscule pedicellati, parvi v. mediocres. Bracteæ membranacæ, amplexicaules.

Species ad 10, Americæ tropicæ a Brasilia usque ad Indiam occidentalem et Mexicū incolæ. Reichb. f. Xen. Orch. i. 99, t. 39, 40; in Walp. Ann. vi. 818; Oria Hamb. 6; in Bot. Zeit. 1857, 159; in Linnæa xli. 106; et in Savand. Ref. Bot. t. 76. Bot. Reg. t. 1806 (Fernandezia). Bot. Mag. t. 5592 (Fernandezia).

Pollinia delapsa semper libera vidimus v. (glandula?) parva connexa, nec unquam pollinarium in ic. Ref. Bot. l. c. depictum deteximus. An hic latet error pictoris, v. pollinarium revera variabile, incertum est.

178. *Centropetalum*, Lindl. Sert. Orch. sub t. 21.—Sepala subæqualia, patentia, libera v. lateraliter plus minus connata. Petala sepalis similia v. latiora. Labellum ima basi cum columna connatum, dein erectum, ungue columnæ parallelo, lobi laterales parum prominuli v. latiores columnam amplectentes, lamina patens, ovata v. late rotundata, indivisa, medio sæpe clinandrii alis agglutinata. Columna sub clinandrio brevis, apoda, basi alata cum labello in cupulam brevissimam connata; clinandrium amplum, late et oblique membranaceo-dilatatum, petaloideum, obscure 3-lobum. Anthera intra marginem

clinandrii opercularis, incumbens v. deflexa, valde convexa, 1-locularis, apice quasi valvatim dehiscens, valva membranacea aperta appendicem antheræ simulans; pollinia 2, cerea, ovoideo-oblonga v. subglobosa, integra v. fere 2-partibilia, inappendiculata, anthera dehiscente stipitibus 2 distinctis v. plus minus in unum coalitis affixa, glandula ovata v. oblonga. Capsula parva, subgloboso-3-quetra, v. anguste oblonga, erostris, costis acutis angulata.—Herbæ humiles, repentes, non pseudobulbosæ, caulibus foliatis ascendentibus. Folia disticha, brevia, carnosæ, patentia v. recurva, vaginis persistentibus caulem obtagentibus. Flores mediocres, in axillis superioribus solitarii, pedicello sæpe folia superante, basi bracteæ 1-2 spathaceis stipato.

Species adsunt 5 v. 6, Andium Colombiæ incolæ. *Reichb. f. Xen. Orch.* i. 96, 97, t. 38; *et in Walp. Ann.* vi. 924, 925 (*Centropetalum et Nasonia*).

Genus naturale, clinandrio magno petaloideo insigne, in sectiones 2 facile dividitur:—

1. *Nasonia*. Sepala lateralialia alte connata. Pollinarii stipes simplex, linearis, hyalinus. Species 1 (v. 2?). *NASONIA*, *Lindl. in Benth. Pl. Hartw.* 150. *Bot. Mag.* t. 5718. *Reichb. f. ll. cc.* (quoad species *disepalas*).

2. *Eucentropetalum*. Sepala lateralialia libera. Pollinarii stipites 2, filiformes, a basi distincti v. fere ad medium coaliti. Huc *Centropetalum*, *Lindl.*, et *Reichb. f.* cum *Nasoniis* nonnullis *Lindleyi* seu *Nasoniæ trisepalæ*, *Reichb. f.* Auctores *Centropetalum* a *Nasonia* distinguunt polliniis in quoque stipite 2 distinctis, quod tamen in speciminibus *Warczewiczianis* a *Lindleyo* communicatis non invenimus; pollinia tamen in aliis speciebus interdum profunde sulcata vidimus ut in iconæ *Xen. Orch.* t. 38 depicta.

*Nasonia sanguinea*, *Lindl.*, vix congener videtur, sed flores examinare nequimus. *FERNANDEZIA*, *Ruiz et Pav. Prod. Fl. Per. et Chil.* 123, t. 27; *Syst. Veg.* 239, genus est, teste *Reichenbachii* in *Walp. Ann.* vi. 818, e speciebus variis *Centropetalis* et *Dichææ* compositum.

179. *Pachyphyllum*, *H. B. et K. Nov. Gen. et Sp.* i. 338, t. 77.—Sepala libera v. vix basi connata, erecta, æqualia v. lateralialia paullo longiora basique cum labello mentum breve formantia. Petala sepalo postico similia nisi latiora. Labellum ad basin columnæ affixum, erectum, basi angustum concavum; lamina apice subpatens, indivisa, sepala non superans; discus medio 2-lamellatus v. 2-callosus. Columna brevis, apoda, 2-alata; clinandrium amplum, membranaceo-petaloideum, obscure 3-lobum, cum alis columnæ continuum. Anthera intra clinandrium opercularis, incumbens, subglobosa, 1-locularis, quasi valvatim aperiens; pollinia 2, cerea, obovoideo-oblonga, parva, apice attenuata, inappendiculata, anthera dehiscente visco parco glandulæ parvæ (v. stipiti brevī?) affixa v. libera. Capsula subgloboso-triquetra, erostris.—Herbæ epiphyticæ, caulibus et rhizomate brevibus ascendentibus dense foliatis simplicibus v. parce ramosis. Folia disticha, brevia, patentia v. recurva, carnosæ, vaginis imbricatis persistentibus caulem obtagentibus. Racemi axillares, breves, pauciflori v. ad florem unicum reducti. Flores parvi, breviter pedicellati. Bracteæ parvæ, distichæ.

Species 6 v. 7, Andium Americæ australis incolæ. *Reichb. f. Xen. Orch.* i. 165, t. 58, iii. 22; *in Walp. Ann.* vi. 822; *et in Linneæ* xli. 31. *Hook. Ic. Pl.* t. 117.

Genus *Lockhartia* valde affino, habitu et clinandrio etiam *Centropetalo* prope accedit.

180. *Luisia*, *Gaudich. in Freyc. Voy. Bot.* 426, t. 37. (*Mesoclastes*, *Lindl. Gen. et Sp. Orch.* 44. *Birchæ*, *A. Rich. in Ann. Sc. Nat. ser. 2*, xv. 66, t. 10.)—Sepala libera, conniventia v. subpatentia, æqualia v. posticum paullo minus. Petala sepalis similia v. longiora angustioraque. Labellum ad basin columnæ sessile, continuum, sepalis sæpe longius, basi concavum callosum v. lobis lateralibus parvis 2-auriculatum nec saccatum; lamina patens, sæpe crassa, convexa v. concava, integra v. apice 2-loba. Columna brevissima, crassa, subincurva; clinandrium truncatum, integerrimum, parum obliquum. Anthera terminalis, opercularis, incumbens, 2-locularis; pollinia 2, cerea, ovoideo-globosa, integra v. sulco exarata, inappendiculata, anthera dehiscente stipiti plano ovato in glandulam replicato affixa. Capsula longiuscule oblonga, erostris, erecta, costis acute prominulis.—Herbæ epiphyticæ, caulibus foliatis simplicibus v. ramosis foliorum vaginis arcte tubulosis obtectis nec pseudobulbosis. Folia alterna, teretia, elongata,

*carnea*. Spicæ laterales, sæpius brevissimæ, floribus subsessilibus parvulis v. mediocribus. Bracteæ breves, crassæ, subimbricatæ.

Species ad 10, Indiæ orientalis et Asiæ orientalis, ab Archipelago Malayano usque ad Japoniam incolæ. *Lindl. Fol. Orch.* 1853. *Blume, Rumphia*, iv. 50, t. 194 et 197 D. *Reichb. f. in Walp. Ann.* vi. 619; *Xen. Orch.* t. 78; et in *Trans. Linn. Soc.* xxx. 144, t. 30. *Thunb. Ic. Pl. Jap.* t. 7 (*Epidendrum*). *Hook. Exot. Fl.* t. 72 (*Vanda*). *Wight, Ic.* t. 911 et 1689 (*Cymbidium*). *Bot. Mag.* t. 3648 (*Cymbidium*) et t. 5558.

181. *Cottonia*, *Wight, Ic.* v. 21, t. 1755.—Sepala subæqualia, libera, patentissima. Petala sepalis conspicue angustiora. Labellum ad basin columnæ sessile, patens, ecalcaratum, sepalis sæpe longius, planum v. concavum; lobi laterales oblongi, obtusi, medius obovatus v. angustus, integer emarginatus v. breviter 2-fidus v. 2-setifer. Columna brevis, lata, apoda, exalata; clinandrium breve, obliquum, dentibus obtusis parum prominentibus. Anthera terminalis, opercularis, incumbens, parum convexa, lata, loculis ad basin connectivi 2 distinctis; pollinia 2, ovoideo-globosa, cerea, fere 2-partita, inappendiculata, anthera dehiscente stipiti longiusculo tenui affixa, glandula parva. Capsula anguste oblonga v. elongata, erostris, patens v. demum pendula, costis parum prominulis.—Herbæ epiphyticæ, caulibus foliatis brevibus non pseudobulbosis. Folia disticha, in una specie longiuscula rigide coriacea, in altera oblonga subfalcata tenuiter coriacea, vaginis persistentibus caulem brevem obtegentibus. Pedunculi laterales, in una specie longissimi ramosique, in altera simplices folia vix superantes. Flores mediocres, laxo racemosi, breviter pedicellati. Bracteæ parvæ.

Species 2 v. 3, Indiæ orientalis incolæ, inter se habitu sat dissimiles, altera typica, *C. peduncularis*, *Lindl.*, quam e Zeylan et vicinibus Bombay accepimus, altera pluribus notis bene distincta, *C. Championi*, *Lindl.*, a provinciis orientalibus usque ad Chinam australem extenditur, et ab hac vix distinguere possumus *Luisiam bicaudatam*, *Thw. Enum. Pl. Zeyl.* 302, e Zeylan.

182. *Stauropsis*, *Reichb. f. in Hamb. Gartenzeit.* 1860, 117; *Xen. Orch.* ii. 7 (errore *Stauritis*, *Reichb. f. in Hamb. Gartenzeit.* 1862, 34. *Fieldia*, *Gaudich. in Freyc. Voy. Bot.* 424, t. 36, non *Cunn.*).—Sepala subæqualia, libera, patentissima. Petala sepalis similia. Labellum basi columnæ affixum, continuum, patens, concavum, ecalcaratum, angustum; lobi laterales breves, medius longiusculus concavus, apice inflexus. Columna brevis, crassa, exalata, apoda; clinandrium truncatum, parum prominens. Anthera terminalis, opercularis, incumbens, semiglobosa, imperfecte 2-locularis; pollinia 2, cerea, ovoideo-globosa, sulcata v. 2-partibilia, inappendiculata, anthera dehiscente stipiti plano affixa, glandula squamiformi. Capsula oblongo-clavata, erostris, crassiuscula, costis prominulis.—Herbæ epiphyticæ, caulibus foliatis non pseudobulbosis. Folia disticha, patentia, coriacea, plana. Pedunculi laterales, racemo nunc brevi simplici floribus paucis majusculis, nunc longo laxo ramoso floribus sat numerosis minoribus.

Species ad 8, Archipelagi Malayani (et Indiæ Orientalis?) incolæ. *Blume, Rumphia*, iv. 49, t. 194. *Lindl. Bot. Reg.* 1846, t. 59. *Bot. Mag.* t. 5189, apud quos auctores sectionem formant *Vanda*. Ab hoc genere tamen differunt sepalis petalisque basi minus angustatis, labello nec succato nec calcarato, et *Fieldia* pro genere bene restituitur a *Reichb. f. in Walp. Ann.* vi. 870. Nomen tamen mutandum fuerit ob genus prius homonymum Cunninghamianum inter *Gesneriaceas*, supra, ii. 1012, si revera a *Stauropside*, *Reichb. f.*, distinguitur. Nos characterem nullum invenimus, et speciosus a *Reichenbachio* ad *Stauropsidem* relatis addenda videtur *Trichoglottis fasciata*, *Reichb. f.* Genus cæterum *Cottonia* valde affine, nuperrime a *Reichenbachio* in *Gard. Chron.* iterum in *Phulænopside* inclusum.

183. *Arachnanthe*, *Blume, Rumphia*, iv. 55, t. 196 et 199 D. (*Arachnis*, *Blume, Bijdr.* 365).—Sepala libera, patentia, subæqualia, crassiuscula, angusta sæpeque undulata v. curvula, v. latiora subplana. Petala sepalis similia. Labellum ad basin columnæ articulatulum, breve, erectum v. patens, basi nec saccatum nec calcaratum; lobi laterales erecti v. rarius obsoleti, medius carnosus, polymorphus, dorso sæpe gibbo v. calcare brevissimo incurvo v. recurvo instructus. Columna brevis, crassa, antice concava, basi

non v. vix producta; clinandrium parum prominens, truncatum. Anthera terminalis, opercularis, incumbens, convexa, antice interdum breviter producta, 2-locularis; pollinia 2, cerea, extrorsum sulcata v. 2-partita, inappendiculata, anthera dehiscente stipiti plano triangulari v. e basi latiore angustato affixâ, glandula ovata v. transversa. Capsula angulata, erostris.—Herbæ epiphyticæ, caulibus foliatis non pseudobulbosis. Folia disticha, coriaceo-carnosa, nunc longissima, nunc breviora v. falcata, apice sæpe oblique 2-loba. Pedunculi laterales, elongati, simplices v. ramosi; flores speciosi, secus ramos dissite pedicellati. Bracteæ parvæ.

Species nobis notæ 6, quarum 5 Archipelagi Malayani una Himalayæ incolæ.

Genus hinc *Renanthera*, cujus sectio a Lindleyo et Reichenbachio habitur, hinc *Vandæ* valde affine, a priore perianthio crassiore, labello basi non saccato et quodammodo habitu differt, a *Vanda* imprimis labello cum columna articulo. In speciebus typicis racemus ramosus, labelli lobi laterales lati; his jam a Reichenbachio f. additur *Vanda Lowei*, Lindl.; Bot. Mag. t. 5475 (*A. Lowei* nobis), racemo longissimo laxo simplici, labelli lobis lateralibus obsoletis, medio lato introrsum appendicula inflexa instructo, species cæterum insignis floribus in eadem planta dimorphis plerisque sepalis petalisque angustis undulatis maculatis, in uno tamen racemo sepala petalaeque latiora sunt planiora et flava.

*ARRHYNCHIUM*, Lindl. in *Part. Fl. Gard.* i. 142, est *Renanthera bilinguis*, Reichb. f. *Xen. Orch.* t. 4, species *Arachnanthis* labelli gibbo dorsali ut in *A. moschifera* recurvo. lobis lateralibus tamen parvis auriculiformibus nec latis erectis.

*ARMODORUM*, Breda, *Orch. Kuhl et Hass. cum t.* 1, est *A. Sulingi* (*Acerides Sulingi*, Bl.), a Lindleyo ad *Renantheram* relata et tardius (Fol. *Orch.*) uti a Blumeo ipso (Mus. Bot. Lugd. Bat. i. 62) ad *Vandam* translata, cæcum a Reichb. f. in Walp. *Ann.* vi. 875 ad *Renantheram* revocata. Floris analysis in icone citata valde obscura est, nec verbis bene explanata, sed, ex icone cum racemi parte in herb. Lindl., quoad formam perianthii et pollinarium *Arachnanthis* convenit, labelli tamen gibbo dorsali sursum recurvo nec deorsum incurvo.

*ESMERALDA*, Reichb. f. *Xen. Orch.* ii. 38, et in *Walp. Ann.* vi. 871, est *A. Cathcartii* (*Vanda Cathcartii*, Lindl.; Hook. f. *Ill. Him. Pl.* t. 23; Bot. Mag. t. 5845), racemo ut in *A. Lowei* et *A. Sulingi* simplici, sepalis petalisque latis subplanis insigniter transverse lineatis, labelli lobis lateralibus ut in *A. moschifera* latis erectis, species a *Vanda* bene separata ob labellum articulatam aliasque notas, sed mediantibus floribus latisepalis *A. Lowei* arcte cum cæteris *Arachnanthis* connexa.

184. *Phalsenopsis*, Blume, *Bijdr.* 294; *Rumphia*, iv. 52, t. 194 et 199 A.—Sepala subæqualia, libera, patentissima. Petala sepalis similia v. multo latiora basiueque contracta, v. rarius angustiora. Labellum ad apicem pedis columnæ continuum, a basi patens v. ima basi brevissime erectum angulum parvum formans, ealcaratum; lobi laterales patentes v. incumbenti-erecti, integri v. angulato-lobati, medius patens, oblongus v. latus, planus v. rarius concavus, apice integer v. anguste 2-lobus; discus ad basin laminæ varie appendiculatus. Columna semiteres, crassiuscula v. medio angustior, erecta v. leviter incurva, basi in pedem brevem producta, interdumque 2-auriculata, angulis exalatis; clinandrium postice ovatum, erectum, concavum. Anthera subterminalis, opercularis, incumbens, parum convexa, antice in acumen obtusum producta, 2-locularis; pollinia 2, subglobosa (v. oblonga?), cerea, sulcata, inappendiculata, anthera dehiscente stipiti lineari v. spathulato affixa, glandula squamiformi. Capsula cylindracea v. clavata, sæpius longiuscula, erostris.—Herbæ epiphyticæ, caulibus foliatis brevibus non pseudobulbosis. Folia disticha, coriacea v. carnosa, oblonga, vaginis persistentibus caulem obtegentibus. Pedunculi laterales, simplices v. ramosi. Flores speciosi, laxè racemosi, breviter pedicellati. Bracteæ parvæ.

Species ad 15, Archipelagi Malayani et Indiæ provinciarum orientalium incolæ. Reichb. f. *Xen. Orch.* ii. 4; in *Flora* 1872, 273; et in *Bot. Zeit.* 1862, 214; 1863, 128; 1864, 298; 1865, 146.

Genus in sectiones 2 sequentes commode dividitur:—

1. *Euphaleopsis*. Petala sepalis multo latiora, basi contracta, labelli lobus medius apice 2-cirrifer v. divaricato-2-lobus, v. obscure emarginatus. Species omnes Archipelagi incolæ. Blume, *ll. cc. Benn. Pl. Jav. Rar.* t. 8. Reichb. f. *Xen. Orch.* t. 101, 151. Bot. Reg. 1838, t. 34. Bot. Mag. t. 4297, 5184, 5351, 5630, 6622. Maund, *Botanist*, t. 133.

2. *Stauroglottis*. Petala sepalis similia v. interdum paullo minora; labelli lobus medius apice semper integer. Species Malayanae et Indicae. Reichb. f. *Xen. Orch.* t. 156, et in *Saund. Ref. Bot.* t. 85. *Bot. Mag.* t. 5212, 5523, 5527, 5815. *STAUROGLOTTIS*, Schau. in *Pl. Meyen.* 432.

*POLYCHILLOS*, Breda, *Orch. Kuhl et Hass. cum t.* 1, *Lindl. Fol. Orch.* 1853, *Bot. Mag.* t. 5570, a sectione *Stauroglottis* parum differt racemi rhachi carnosa ancipiti, bracteis basi adnatis distichis.

*P. Wightii*, Reichb. in *Bot. Zeit.* 1862, 214, e Peninsula Indica, est nobis *Doritis* species, ut videtur eadem ac *Aerides latifolia*, Thw., e Zeylan. Planta Parishiana a Reichb. f. in *Trans. Linn. Soc.* xxx. 135, ad *P. Wightii* relata vix eadem videtur, rhachi leviter incrassata dum in *P. Wightii* tenuis est. Flores tamen examinare nequimus et folia in specimine nostro desunt.

185. *Doritis*, Lindl. *Gen. et Sp. Orch.* 178.—Sepala inter se libera, patentia, subæquilongia, lateralia obliqua basi latissima pedi columnæ adnata, posticum oblongum. Petala sepalo postico subsimilia. Labellum ad apicem pedis columnæ affixum, ungue longo basi incumbente mentumque formante mox ascendente auriculis seu lobulis 2 angustis instructo, lamina patente late 3-loba v. fere 3-partita; discus lamellatus. Columna brevis, lata, alato-marginata; clinandrium breve, integrum. Anthera terminalis, opercularis, incumbens, antice acuminata; pollinia 2, cerea, subglobosa, postice 2-loba, v. 4 a basi distincta per paria sibimet applicita, inappendiculata, anthera dehiscente stipiti longo affixa, glandula parva ovata. Capsula ubi nota longe oblonga v. elongata, erostris, patens, costis acute prominulis.—Herbæ epiphyticae, caulibus brevissimis ramosis vaginis foliorum obtectis non pseudobulbosis. Folia pauca, disticha, oblonga, nunc crassa rigida v. carnosa, nunc tenuiora mox evanida. Scapi aphylli, sæpe longissimi, vaginis paucis parvis remotis. Racemus simplex v. paniculato-ramosus, floribus parvulis.

Species nobis notæ 5, Indiæ Orientalis et Archipelagi Malayani incolæ, in sectiones 2 sequentes distribuendæ:—

1. *Eudoritis*. Folia rigidula. Scapus longus, simplex. Huc species typica Cochinchinensis, cui addidit Reichb. f. *Xen. Orch.* ii. 7, *Dendrobium bifalce*, Lindl. in *Benth. Bot. Sulph.* 181, t. 58, e Nova Guinea, quod ex icone Lindleyana quoad perianthii formam bene convenit, sed acumen longum restelli, in *D. pulcherrima* insigne, omnino deesse videtur. Specimina utriusque speciei in Herb. Kew. servata valde manca sunt.

2. *Carteretia*. Folia tenuiora, in caule inter radices acrias numerosas vix evoluto pauca v. per anthesin omnino deficientia. Scapus laxè paniculato-ramosus v. (interdum in eadem specie) abbreviatus simplexque. Huc pertinent *CARTERETIA paniculata*, A. Rich. *Sert. Astrol.* 10, t. 4, e Nova Guinea; *Aerides latifolia*, Thw. *Enum. Pl. Zeyl.* 429, e Zeylan; *Phalenopsis Wightii*, Reichb. f., e Peninsula Indica, vix ab *Aeride latifolia* distincta; et *Acrides teniale*, Lindl., *Griff. Ic. Pl. As.* t. 338 A, e Napalia et Khasya.

186. *Rhynchostylis*, Blume, *Bijdr.* 285, t. 49.—Sepala subæquilongia, inter se libera, patentia, lateralia postico latiora, pedi columnæ affixa. Labellum ad apicem pedis columnæ affixum, basi profunde saccatum; lobi laterales obsoleti, medius supra saccum longe angustatum, apice inflexum, linguiforme v. obovatum. Columna brevis, crassa, semiteres, exalata, basi in pedem producta; clinandrium brevissimum, integrum; rostellum crassiusculum, antice supra stigma prominens. Anthera terminalis, opercularis, incumbens, semiglobosa, imperfecte 2-locularis; pollinia 2, cerea, subglobosa, sulcata v. fere 2-partita, inappendiculata, anthera dehiscente stipiti longo filiformi affixa, glandula parva submembranacea. Capsula oblonga v. subclavata, erostris, erecta v. patens, costis acute prominulis, interdum subalatis.—Herbæ epiphyticae, caulibus foliatis non pseudobulbosis. Folia disticha, coriacea v. carnosa, plana, vaginis persistentibus caulem obtegentibus. Racemi laterales, longi, densiflori, floribus majusculis v. mediocribus breviter pedicellatis. Bracteæ parvæ.

Species 2 v. 3, Indiæ orientalis et Archipelagi Malayani incolæ. Reichb. f. in *Walp. Ann.* vi. 887. *Lindl. Sert. Orch.* t. 47 (*Saccolabium*). *Bot. Reg.* t. 1443 (*Sarcanthus*). *Wight, Ic.* t. 1745-6 (*Saccolabium*). *Bot. Mag.* t. 4108 (*Saccolabium*).

*Vanda violacea*, Lindl. *Bot. Reg.* 1847, t. 30, a Reichb. f. ad *Rhynchostylem* relata, differt labelli sacco columnæ apodæ contiguo et lobis lateralibus breviter prominulis et nobis *Saccolabio* referenda videtur.

187. *Sarcochilus*, R. Br. Prod. 332. (Dendrocolla, Bl. Bijdr. 286, t. 67. Thrixspermum, Reichb. f. Xen. Orch. ii. 120, t. 140.)—Sepala patentia, libera, subæqualia v. lateralia postico latiora, pedi columnæ plus minus adnata. Petala sepalo postico subsimilia. Labellum pedi columnæ affixum, basi incumbens v. breviter adnatum, mentum sæpius parvum formans, dein recurvo-patens; lobi laterales erecti petaloidei v. parvi dentiformes, medius varie carnosus, dorso sæpius in gibbum parvum v. conicum interdum calcariforme carnosum v. spongiosum rarius intus cavum productus, ad basin laminæ sæpius breviter calloso-appendiculatus. Columna erecta, semiteres, exalata, basi in pedem producta; clinandrium obliquum, integrum v. antice 2-dentatum; rostellum breve v. elongatum. Anthera terminalis, opercularis, incumbens, convexa, antice obtusa v. acuminata, 2-locularis; pollinia 2, globosa, v. 4 plus minus per paria connata, cerea, inappendiculata, anthera dehiscente stipiti lineari v. oblongo affixa, glandula squamiformi. Capsula oblonga v. elongata, erostris v. brevissime rostrata, erecta v. subpatens, costis prominulis interdum alatis.—Herbæ epiphyticæ, caulibus foliatis abbreviatis v. rarius elongatis non pseudobulbosis. Folia coriacea v. carnosia, oblonga v. linearia, disticha v. interdum perpauca v. sub anthesi deficientia. Pedunculi laterales, simplices v. rarius ramosi. Flores mediocres v. parvi, rarius (in *S. Calceolo*) speciosi.

Species ad 30, Indiæ orientalis, Archipelagi Malayani, insularum maris Pacifici et Australiæ incolæ. Reichb. f. in Walp. Ann. i. 781, vi. 497; Xen. Orch. t. 86 (*Dendrocolla*); Otia Hamb. 35; et in Trans. Linn. Soc. xxx. 145. F. Muell. Fragm. Phytogr. Austral. viii. 248. Fitzger. Orch. Austral. tabb. 5.

Genus quoad formam labelli ejusque menti v. gibbi dorsalis fere de specie in speciem variat, in sectiones satis naturales quoad inflorescentiam a Blumeo dividitur:—

1. *Cuculla*. Racemi rhachis carnosula, anceps, bracteis regulariter distichis carinato-adnatis. In specibus typicis sepalum posticum et petala anguste linearia fere setaceo-acuminata et caules foliati sæpius breves vaginis subimbricatis. ORSIDICE, Reichb. f. in Bonplandia, 1854, 93, est *S. amplexicaulis*, caule foliato elongato, foliis subdissitis, et sepalis omnibus ovatis lateralibus latis. In THRIXSPERMO, Lour. Fl. Coch. 519. caulis ut in *Orsidice* elongatus dicitur, sed folia lanceolato-linearia et sepalia omnia uti petala subulato-linearia; speciem non vidimus.

2. *Fornicaria*. Racemi rhachis teres, brevis, bracteis angustis confertis; caules foliati breves, foliis paucis. Hujus species typica est *S. Hystrix*, Reichb. f. (*Dendrocolla Hystrix*, Bl.), quam Reichb. f. in Xenia ii. 123 includit in *Grosourdya*, ejusd. in Bot. Zeit. 1864, 297, et vix specificè differt *CYLINDROCHILUS*, Thw. Enum. Pl. Zeyl. 307, quam auctor ipse in Appendice 430 ad *Dendrocollam* reducit. Species cæteræ *Grosourdya*, Reichb., nobis desunt, et characterem differentialem non bene intelligimus, nisi e mento v. gibbo labelli elongato calcariformi sumitur.

3. *Tubera*. Racemi rhachis teres, floribus alternis sparsive dissitis. ORNITHARIUM, Lindl. in Part. Fl. Gard. i. 186, f. 117. GUNNIA, Lindl. Bot. Reg. sub n. 1699; Hook. f. Fl. Tasm. ii. 32, t. 128. Huc pertinent species Asiaticæ a Reichb. f. Xen. Orch. ii. 121 sub litt. B enumeratæ, Australianæ in Benth. Fl. Austral. vi. 292 enumeratæ vel a Fitzgerald, Austral. Orch. in tabb. 4 depictæ, cum una Novo-Zelandica, Hook. f. Handb. N. Zeal. Fl. 263, et una Vitiensis, Reichb. f. in Seem. Fl. Vit. 297, t. 90 (THRIXSPERMUM). Inter Asiaticas, *S. Calceolus*, Lindl. Bot. Reg. 1846, t. 19, insignis est floribus magnis. *Cleistanoma ionosmum*, Lindl. Bot. Reg. 1847, t. 41, floribus mediocribus, nobis ad *Sarcochilum* pertinere videtur etsi a cæteris speciebus differt racemo longe ramoso. Huic affinis videtur racemo tamen simplici *Acridas Traysmanni*, Miq. Choix Pl. Jard. Buitenz. t. 18, a Reichenbachio ad *Sarcochilum* relata.

Nomen genericum Loureirianum inepte Browniano substitueretur, nam vitiosissimum est, et a Botanicis fore omnibus neglectum, nec hodie corrigendum, ob *Trichospermum* jam a Blumeo generi *Tiliacearum* tributum.

CHILOCHRISTA, Lindl. Bot. Reg. sub t. 1522, Wight, Ic. t. 1741, est *Sarcochilus usneoides*, Reichb. f., quæ saltem sub anthesi omnino aphylla videtur.

PTEROCERAS, Hassk. in Flora 1842, ii. Beibl. 6, a Reichb. f. ad *Sarcochilum teretem* refertur, sed descriptiones Hasskarllii ibid. et in Pl. Jav. Rar. 128 vix conveniunt.

MICROPERA, Dalz. in Hook. Kew Journ. iii. 282, quoad *M. maculatum* a Lindleyo in Journ. Linn. Soc. iii. 38 pro genere proprio servata, nobis ad *Sarcochilum* reducenda videtur. Labellum carnosum in hoc genere valde polymorphum.

CAMAROTIS, *Lindl. Gen. et Sp. Orch.* 219; *Sert. Orch. t.* 19; et MICROPERA, *Lindl. in Bot. Reg. sub t.* 1522, jam ab auctore ipso in *Journ. Linn. Soc.* iii. 37 ad *Camarotem* reducta, nobis videntur *Sarcochili* species, rostello valde elongato, labelli gibbo conico cavo interdum calceiformi. Rostelli apex uti labelli forma variat de specie in speciem.

In *Camarote philippinensi*, *Lindl. ut in STEREOCHILO, Lindl. in Journ. Linn. Soc.* iii. 38, rostellum elongatur ut in *Camarotibus* typicis, sed pes columnæ brevior est; labelli gibbum in priore cavum, in illa solidum. *C. apiculata*, *Reichb. f. in Bonpl. 1857, 39*, nobis ignota est.

ADENONCOS, *Blume, Bijdr.* 381, *Lindl. Gen. et Sp. Orch.* 235, species Javensis, nobis ignota, ex caractere dato a *Sarcochilo* parum differt polliniis 4 distinctis. *Reichenbach* specimen Blumeum plantæ minimæ in *Bonplandia 1857, 40* descripit et cum *Oberonia Lindleyana*, *Brongn.*, comparat, quæ *Phreatia* species, inter *Epidendreas* (*Ericas*), at *Blume* in *Adenonco* pollinarium *Vandearum* descripsit. Genus valde dubium remanet, an *Microsacco* affine?

188. *Trichoglottis*, *Blume, Bijdr.* 359, *pro parte*.—Sepala patentia, inter se libera, lateralia basi latissima pedi columnæ adnata, posticum oblongum. Petala sepalo postico similia. Labellum basi columnæ pedi adnatum, cum quo mentum longum horizontale calcariforme format, superne patens; lobi laterales breves, erecti, medius latiusculus, patens; discus appendicula lanceolata instructus. Columna brevis, exalata, basi in pedem longum producta; clinandrium parum prominens, truncatum, obscure dentatum. Anthera terminalis, opercularis, incumbens, subglobosa fere cucullata, imperfecte 2-locularis; pollinia 2, globosa, cerea, inappendiculata, anthera dehiscente stipiti angusto affixa, glandula parva. Capsula . . .—Herba epiphytica, caulibus foliatis elongatis non pseudobulbosis. Folia disticha, secus caulem dissita, angusta. Pedunculi laterales, brevissimi, 1- v. pauci-flori. Flores parvi v. mediocres.

Species 4 v. 5, quarum nobis adsunt 3, Archipelagi Malayani incolæ, *T. lanceolaria* et *T. rigida*, *Bl.*, cum tertia adhuc indeterminata. *Reichb. f. Xen. Orch. t.* 117, *et in Linnaea* xli. 30.

Genus habitu sat naturale, *Sarcochilo* valde affine, labello tamen non carnoso. Inter species huc relatas, *T. retusa*, *Bl.*, nobis omnino ignota est, *T. pusilla*, *Reichb. f.*, ex ic. in herb. *Lindl. in Reichb. f. Xen. Orch. t.* 116, repetita, videtur *Saccolabii* species, *T. pallens*, *Lindl.*, et *T. philippinensis*, *Lindl.*, ad *Stauropsin* referendæ. *T. quadricornutum*, *Kurz in Journ. Asiat. Soc. Beng.* xlv. 156, t. 13, est, ex specimine manco, verisimiliter *Cleisostomatis* species.

189. *Acranthus*, *Lindl. Bot. Reg. t.* 817.—Sepala subæquilonga, erecto-patentia, libera, basi dilatata, lateralibus latioribus obliquis pedi columnæ adnatis. Petala sepalo postico similia nisi minora. Labellum pedi columnæ affixum basi que adnatum, in mentum breviter calcariforme horizontale obtusum v. didymum productum, dein dilatatum, incumbens, concavum v. complicatum, integrum, apice erecto-patens. Columna brevissima, basi in pedem longum membranaceum cum labello continuum producta, apice 2-alata; clinandrium brevissimum, truncatum. Anthera terminalis, opercularis, incumbens, 2-locularis; pollinia 2, globosa, sulcata v. bipartibilia, inappendiculata, anthera dehiscente in glandulis rostelli 2 sessilia. Capsula . . .—Herbæ epiphytica, caulibus foliatis abbreviatis non pseudobulbosis. Folia disticha, elongata, coriacea, basi complicata, vaginis persistentibus in caule imbricatis. Pedunculi ad basin caulis laterales, longiusculi, co-bracteati. Flos sæpius unicus, majusculus, pedicellatus, plures tamen in specimenibus nonnullis adsunt imperfecti, et verisimiliter interdum 2-3 perfecti in racemo laxo.

Species 2, insularum Mascarensium incolæ. *Thou. Orch. Ile Afr. t.* 88 (*Dendrobium*). *Bot. Mag.* t. 6034 (lapsu *Acranthus*).

Genus ad species typicas limitatum *Acridi* potius quam *Angræco* affine. *A. sesquipedalis*, *Lindl.*, ad *Angræcum* restituenda est. *Mystacidium* et *Eonia*, *Lindl.*, a *Reichenbachio Acrantho* adjuncta, nobis longe distare videntur.

190. *Aerides*, *Lour. Fl. Coch.* 525.—Sepala subæquilonga, patentia, posticum ovatum v. oblongum, lateralia latiora, basi pedi columnæ adnata. Petala sepalo postico subsi-

milia. Labellum pedi columnæ affixum (articulatum?), erectum v. incumbens, basi calcaratum, calcare sursum recurvo v. sub lamina ascendente intus vacuo; lobi laterales ad latera calcaris erecti, latiusculi, sæpius parvi; medius patens, ovatum v. amplum. Columna brevis, crassiuscula, basi in pedem producta, exalata; clinandrium truncatum, parum prominens. Anthera terminalis, opercularis, incumbens, convexa, 2-locularis; pollinia 2, compresso-globosa, extus sulcata, inappendiculata, anthera dehiscente stipiti angusto v. complanato affixa; glandula squamiformis. Capsula oblonga v. clavata, erostris, patens v. reflexa, sæpius crassiuscula, rarius longior et angustior, costis prominentibus v. anguste alatis.—Herbæ epiphyticæ, caulibus foliatis non pseudobulbosis. Folia disticha, coriacea v. subcarnosa, vaginis persistentibus caulem obtagentibus. Racemi laterales, nunc simplices dense floribundi, nunc ramosi laxiores. Flores mediocres v. majusculi, racemis sæpius speciosis. Bracteæ parvæ.

Species ad 10, Indiæ orientalis, Archipelagi Malayani et Asiæ orientalis usque ad Japoniam incolæ. *Lindl. Gen. et Sp. Orch.* 238 (excl. *spp. plur.*). *Reichb. f. in Walp. Ann.* vi. 896; in *Bot. Zeit.* 1864, 415, et in *Trans. Linn. Soc.* xxx. 145.

Genus cum *Saccolabio* sæpe confusum, differt imprimis columna in pedem plus minus producta, in series v. sectiones sat distinctas dividitur:—

1. *Planifoliae*. Folia plana coriacea v. rigida. Columnæ pes valde elongatus. Huc pertinent: species typica *A. odoratum*, Lour.; *Bot. Reg.* t. 1485, *Bot. Mag.* t. 4139; *A. crispum*, Wall.; *Bot. Mag.* t. 4427; Wight,  *Ic.* t. 1674 (*Saccolabium*, et *A. Lindleyanum*, t. 1677); *A. virens*, Lindl. *Bot. Reg.* 1844, t. 41; *A. maculosum* var., Henfr. *Gard. Mag.* ii. 121, cum ic. non Lindl.; *A. quinquivulnerum*, Lindl. *Sert. Orch.* t. 30, aliaque plures *A. odorato* affines, Blume, *Rumphia*, iv. 192, f. 3, 193, f. 1. *Reichb. f. Xen. Orch.* t. 92, 104, 204. Huc etiam referenda species Japonica, *A. japonicum*, Linden et *Reichb. f.*; *Bot. Mag.* t. 5798.

2. *Teretifoliae*. Folia teretia, carnosa. Columnæ pes brevis. Harum specierum nobis notæ sunt: *A. cylindricum*, Lindl.; Wight,  *Ic.* t. 1744, *A. vandarum*, *Reichb. f.* (*A. cylindricum*, *Bot. Mag.* t. 4982, non Lindl.), et *A. mitratum*, *Reichb. f.*, *Bot. Mag.* t. 5728.

*A. appendiculatum*, Wall., foliis teretibus, ex icone in herb. Lindl. ad *Cleisostoma* referendum videtur. *A. Hyatrix* et *A. difforme*, Lindl., sectionem nunc genus *Ornithochilus*, Wall., formant; *A. teniale*, Lindl., ad *Doritidem* referimus. *A. Wightianum*, Lindl., est *Vanda parviflora*, Lindl. *A. multiflorum*, Roxb. (*A. affine*, Lindl. *Sert. Orch.* t. 15, *Bot. Mag.* t. 4049, *Pact. Mag.* ii. t. 60), species in India orientali lato dispersa, habitu *Aeridibus* et *Saccolabiis* dense racemosis subsimilis, ab utroque genere distinguitur labello ut in *Arachnanthe* basi nec sacento nec calcarato, sed sub lobo medio gibbo v. calcare brevi recurvo instructo. Columna quam in utroque genere longior. Species vix sub *Aeride* retinenda, an tamen rite ad *Arachnanthem* (*Armadorum*) referenda, dubium remanet.

191. *Benanthera*, Lour. *Fl. Cochinch.* 521. (*Nephranthera*, Hassk. *Cat. Hort. Bog.* 44.)—Sepala patentissima, libera, petaloidea, lateralia postico paullo latiora sæpeque longiora, diu parallele contigua v. medio subcoherentia. Petala sepalo postico similia. Labellum breve, ad basin columnæ sessile, articulatum, infra juxta basin in saccum v. calcar conicum productum; lobi laterales ad latera calcaris lati erecti, medius parvus, patens, planus v. varie carnosus-incrassatus. Columna brevis, crassa, semiteres, exalata, basi non producta; clinandrium parum prominens, vix obliquum, integrum. Anthera terminalis, opercularis, incumbens, convexa, antice interdum producta, 2-locularis; pollinia 2, cerea, ovoidea v. oblonga, extorsum sulcata v. 2-partita, inappendiculata; anthera dehiscente stipiti plano angusto v. apice parum latiori affixa, glandula rotundata v. transversa. Capsula angulata, erostris.—Herbæ epiphyticæ, caulibus foliatis ramosis non pseudobulbosis. Folia disticha, patentia, carnosa v. rigida, apice sæpe oblique 2-loba. Pedunculi laterales, elongati, ramosi, racemis laxis ample paniculatis. Flores speciosi v. parvuli.

Species ad 5, Asiæ tropicæ et Archipelagi Malayani incolæ. *Lindl. Gen. et Sp. Orch.* 217. *Reichb. in Walp. Ann.* vi. 874 (excl. sect. *Arrhynchio* et *Arachnanthe*); *Xen. Orch.* t. 35, 113. Blume, *Rumphia* iv. t. 193, 197. *Bot. Mag.* t. 2997, 2998. *Bot. Reg.* t. 1131, 1843, t. 41.

In specie typica, *R. coccinea*, Lour., et præsertim in *R. matutina*, Bl., sepala lateralia sæpo diu lateraliter coherunt, sed in omnibus speciminibus a nobis visis denum solvantur. In *R. micrantha*,

Bl. (*R. elongata*, Lindl., ex Reichb., *R. matutina*, Lindl. in Bot. Reg., *Saccolabium reflexum*, Lindl.) speciebusque 1 v. 2 ei valde affinibus, sepala magis aequalia sed lateralialia subparallela apparent.

192. *Vanda*, *R. Br. in Bot. Reg. t. 506*.—Sepala subæqualia, libera, patentissima, basi sæpe angustata v. fere unguiculata. Petala sepalis similia. Labellum basi columnæ affixum, continuum, patens, basi saccatum v. obtuse calcaratum; lobi laterales ad latera sacci erecti, rotundati v. ad aurículas reducti, medius patens, latus v. oblongus; discus lævis v. varie callosus v. lamellatus. Columna brevis, crassa, exalata, apoda; clinandrium truncatum, parum prominens. Anthera terminalis, opercularis, incumbens, convexa v. semiglobosa, 2-locularis; pollinia 4, cerea, late ovata, per paria in loculis contigua v. concreta, inappendiculata, anthera dehiscente stipiti plano latiusculo affixa, glandula crassiuscula v. plana. Capsula oblonga v. longiuscula, erecta v. patens, crassiuscula, erostris, costis prominentibus.—Herbæ epiphyticæ, caulibus foliatis non pseudobulbosis. Folia disticha, patentia, coriacea v. subcarnosa, apice sæpe emarginata v. breviter 2-loba, plana v. in *V. tereti* teretia. Pedunculi laterales, racemo simplici laxo. Flores speciosi v. rarius mediocres, breviter pedicellati. Bractææ breves. Capsulæ sæpe longiuscule pedicellatæ.

Species ad 20, Indiæ orientalis et Archipelagi Malayani incolæ, quarum una etiam in Australia tropica invenitur. Lindl. *Fol. Orch.* 1853. *Blume, Rumphia*, iv. 48, t. 192, 197 C, quoad sect. 1. *Griff. Ic. Pl. As.* t. 330, 331. Reichb. *f. Xen. Orch.* t. 5, 12, 102, 150; in *Flora*, 1872, 277; in *Bot. Zeit.* 1858, 351; et in *Linnaea* xli. 30. Wight, *Ic. t. 916*. *Bot. Mag. t. 2245*, 3416, 4114, 4432, 5174, 5611, 5759, 5811, 5834, 6173, 6328. *Bot. Reg. t. 506*, 1809. *Past. Fl. Gard. t. 36*, 42.

*Vanda parviflora*, Wight, *Ic. t. 1669* (*Aerides Wightianum*, Lindl. *Gen. et Sp. Orch.* 238, *Bot. Mag. t. 5138*) species floribus solito minoribus insignis, cæterum *V. cærulescenti* affinis, nobis characteres omnino *Vandæ* nec *Aeridis* præbere videtur, sepalis omnibus liberis, columna apoda, labello calcarato. *Aerides testaceum*, a Reichb. f. cum *A. Wightiano* junctum, nobis ignotum est.

Sectio *Lamellaria*, Lindl., imprimis ad *V. spathulatam*, Lindl.; Wight, *Ic. t. 915*, stabilita, vix ab *Euvanda* separatur labelli disco distincte lamellato. Sectio *Cristaria*, Lindl., ad *V. cristatam*, Lindl., *Bot. Reg.* 1842, t. 48, *Bot. Mag. t. 4304*, definita, est *Euvandæ* species labelli lobo medio apice truncato 3-dentato v. 3-cornuto. *V. alpina*, Lindl. (a qua *V. Griffithii* vix distincta) a Lindleyo *V. cristariae* associata, characteres præbet potius *Stauropsidis*.

Sectio *Anota*, Lindl. (*V. densiflora* olim *Saccolabium giganteum*, Lindl.), tam habitu quam characteribus, ad *Saccolabium* restituenda videtur.

193. *Saccolabium*, *Blume, Bijdr.* 292. (*Saccochilus*, *Blume, Fl. Jav. Proef.* 8. *Robiquetia*, *Gaud. in Freyc. Voy. Bot.* 426, t. 34.)—Sepala subæqualia, libera, patentia v. erecto-patentia, plana v. concava, lateralialia interdum basi parum latiora, posticum interdum fere cucullatum. Petala sepalis subsimilia, interdum latiora, rarius angustiora. Labellum ad basin columnæ sessile, basi calcaratum v. saccatum, calcare descendente recto v. rarius recurvo intus nudo; lobi laterales ad latera calcaris erecti, sæpius parvi, interdum latiusculi v. vix prominentes, medius patens v. erectus, polymorphus, nunc parvus dentiformis, nunc oblongus linguiformis v. transverse dilatatus, rarius calcare longior; discus ad os calcaris interdum lamina parva appendiculatus. Columna brevis, lata, nunc brevissima, apoda, exalata v. angulis parum prominulis; clinandrium parum prominens, truncatum. Anthera terminalis, opercularis, incumbens, convexa, antice sæpius obtuse acuminata, 1-locularis v. imperfecte 2-locularis; pollinia 2, subglobosa, integra sulcata v. 2-partita, inappendiculata, anthera dehiscente stipiti lineari v. tenui (rarius loriformi?) affixa, glandula sæpius parva. Capsula sæpius oblonga, rarius elongata, interdum globosa v. ovoidea, erostris, costis tenuibus v. prominulis.—Herbæ epiphyticæ, caulibus foliatis non pseudobulbosis. Folia disticha, patentia, coriacea carnosae v. rarius tenuia, plana v. rarius teretia, vaginis persistentibus caulem obtegentibus. Pedunculi laterales, simplices v. ramosi. Flores nunc majusculi, minores tamen quam in *Vanda*, racemum densum speciosum recurvum formantes, nunc diassiti v. parvi, v. in racemo tenui simplici v. paniculato-ramoso minimi, breviter pedicellati. Bractææ parvæ.

Species ad 20, Indiæ orientalis et Archipelagi Malayani incolæ. Lindl. *Gen. et Sp. Orch.* 220. Reichb. *f. in Walp. Ann.* vi. 883; *Otia Hamb.* 41, 52; et in *Trans. Linn. Soc.* xxx. 146.

Genus sat polymorphum, sed haud male definitum si *Rhynchostylem* et *Ornithochilum* excludimus, quibus columnæ pes evolutus mentum perianthii format. In series sequentes dividitur:—

1. *Speciosæ*. Flores speciosi, dense racemosi v. paniculati, calcare longiusculo incurvo, *Aeridem* referentes, sed columna apoda. Huc pertinent inter alia *S. rubrum*, Wight, Ic. t. 1673; *S. speciosum*, Wight, Ic. t. 1674–5 (*Aerides maculosa*, Lindl. Bot. Reg. 1845, t. 58); *S. paniculatum*, Wight, Ic. t. 1676; *S. Wightianum*, Lindl.; Wight, Ic. t. 917.

2. *Genuina*. Flores sæpius mediocres, racemosi, calcare longiusculo recto; labelli lobi omnes dentiformes v. ovati, v. medius angustus calcare tamen semper brevior. Lindl. *Sert. Orch.* t. 17, 32. Wight, Ic. t. 1686 (*Sarcanthus*), ex ic. et descr. Bot. Reg. 1847, t. 58. Bot. Mag. t. 5326, 5595, 5681, 6222. Reichb. f. *Xen. Orch.* t. 139.

3. *Longilabellatæ*. Inflorescentia *Genuinarum* v. *Speciosarum*. Labelli saccus conicus v. ovatus rarius calcar longiusculum, lobi laterales brevissimi v. obsoleti, medius multo longior, obovatus v. latus, basi parum contractus. Bot. Mag. t. 5433, 5635. Bot. Reg. t. 1352; 1847, t. 30 (*Vanda*).

4. *Latilabellatæ*. Inflorescentia *Genuinarum*. Labelli saccus latus, lobi laterales breves, medius transverse dilatatus, margine ciliolato-fimbriatus. Griff.  *Ic. Pl. Asiat.* t. 333, 334. Wight, Ic. t. 1671 (*Vanda*). Bot. Mag. t. 4772, 5767. *GASTROCHILUS*, Don, *Prod. Fl. Nep.* 32.

5. *Micranthæ*. Flores minimi, racemis sæpius paniculato-ramosis. Capsulæ parvæ globosæ v. breviter ovoidæ. Huc pertinent *S. gemmatum*, Lindl., *S. gracile*, Lindl., *S. micranthum*, Lindl.; Reichb. f. in Saund. Ref. Bot. t. 110, *S. Jerdonianum*, Reichb. f.; Wight, Ic. t. 1756 (*Tenio-phyllum*), aliæque paucæ.

6. *Microphyllæ*. Caules tenues, foliis numerosis parvis. Flores laterales sæpius solitarii. *S. distichum*, Lindl., et ex ic. et descr. *CERATOCHILUS*, Blume, *Dijdr.* 358, t. 25; Reichb. f. *Xen. Orch.* i. 203, t. 77.

OMEA, Blume, *Dijdr.* 359, a nobis non visa, ex caractere dato verisimiliter ad *Saccolabium* juxta *Ceratochilum* referenda erit. Specimina Beccariana e Sumatra n. 567, cum caractere Blumeano satis convenientia, a *Saccolabiis Micranthis* paullulum differunt racemo longo flexuoso, floris calcare longiusculo clavato, labelli lobo medio ovato crassiusculo subcarnoso.

CECROCLADES, Lindl. *Gen. et Sp. Orch.* 235, quoad species plerasque rite a Reichb. f. ad *Saccolabium* reducit. *Æ. tenera*, Wight, Ic. t. 1683, est ipsum *S. brevifolium*, Lindl., species caule elongato foliis brevibus dissitis late oblongis insignis; *Æ. maculata*, Lindl., est *Eulophia maculata*, Reichb. f.; *Æ. falcata*, Lindl., characteres exhibet omnino *Angræci*, etsi patria longe distet.

*Saccolabium filiforme*, Lindl., et *S. roseum*, Lindl. (*Sarcanthi* sp., Wight, Ic. t. 1684, 1685), habitu *Schænorhizis juncifoliae*, Bl., et ei errore a Thw. Enum. Pl. Zeyl. 304 relata, characteres tamen *Saccolabiis* exhibent; insignes sunt petalis quam sepala subduplo latioribus dum in *Schænorhizide* multo angustiora sunt.

*Saccolabium acuminatum*, Thw. l.c., est *Sarcanthus peninsularis*, Lindl. *S. Hillii*, F. Muell., ex Australia, ad *Ornithochilum* referendum videtur.

194. *Uncifera*, Lindl. in *Journ. Linn. Soc.* iii. 39.—Sepala subæqualia, libera, erecta v. erecto-patentia. Petala sepalis similia v. paullo minora. Labellum basi columnæ affixum, basi in calcar longiusculum curvum productum; lobi laterales parvi, medius subpatens, integer v. leviter 3-lobus. Columna brevissima, lata, exalata, apoda, rostello longo apice dilatato v. 2-loba; clinandrium vix prominulum truncatum cum dente postico longiusculo. Anthera denti postico affixa, opercularis, incumbens, cucullata, antice longe rostrata, 2-locularis; pollinia 2 globosa, cerea, inappendiculata, anthera dehiscente stipiti longo superne dilatato sub-2-loba et inter lobos appendiculato affixa, glandula squamiformi longiuscula sagittata. Capsula oblonga, erostris, patens v. reflexa, costis parum prominulis.—Herbæ epiphyticæ, caulibus foliatis non pseudobulbosis. Folia disticha, tenuiter coriacea v. crassiora subcarnosa, vaginis persistentibus caulem obtegentibus. Racemi laterales, densi, spiciformes, breviter pedunculati. Flores parvuli v. mediocres, brevissime pedicellati, secus rhachin conferti. Bractæ parvæ.

Species 2, Khasye incolæ. Genus *Saccolabio* affine, differt imprimis pollinariis stipite, et calcare curvo.

195. *Acampe*, Lindl. *Fol. Orch.* 1853.—Sepala libera, subpatentia, subæqualia, carnosa. Petala sepalis similia v. paullo angustiora. Labellum ad basin columnæ sessile,

continuum, patens, basi saccatum v. conico-calcaratum, calcare intus vacuo; lobi laterales auriculiformes ad latera calcaris erecti, medius patens, integer; discus sæpius basi lamellatus v. pilosus. Columna brevissima, crassa, apoda, exalata; clinandrium truncatum, antice breviter 2-lobum v. 2-mucronatum. Anthera terminalis, opercularis, incumbens, imperfecte 2-locularis; pollinia 2, subglobosa, cerea, inappendiculata, anthera dehiscente stipiti tenui affixa, glandula parva. Capsula oblonga v. fere linearis, crassiuscula, eros-tris.—Herbæ (epiphyticæ, caulibus foliatis non pseudobulbosis. Folia disticha, coriacea, vaginis persistentibus caulem obtegentibus. Pedunculi laterales, rigidi, nunc breves simplices, nunc elongati, paniculati, ramis brevibus. Flores quam in *Vanda* multo minores, secus rhachin conferti, breviter pedicellati. Bractæ parvæ.

Species ad 9, quarum 8 (ex Lindleyo) Indiæ Orientalis et Chinæ australis incolæ. *Roxb. Corom. Pl. t. 43 (Epidendrum)*. *Lindl. Collect. Bot. t. 38 (Vanda)*. *Bot. Reg. t. 1552 (Saccolabium)*. *Wight, Ic. t. 1670 (Vanda) et t. 1672 (Saccolabium)*. *Reichb. f. in Flora, 1872, 277; Otia Hamb. 76*. His addenda videtur species in Africa austro-orientali a Melleri lecta, *A. papillosa* et *A. excavata* evidenter valde affinis.

Genus naturale etsi characteribus floralibus parum distinctum. Racemi in plerisque speciebus in pedunculo brevi simplices, in *A. multiflora* tamen sæpius paniculati. *A. dentata*, Lindl., e Sikkim, floribus parvis paniculatis primo aspectu *Sarcantho paniculato* accedit, sed labelli calcar intus nudum indivisum.

196. *Sarcanthus*, Lindl. *Collect. Bot. t. 39 B; Gen. et Sp. Orch. 233*.—Sepala libera, subæqualia, patentia, carnosula. Petala sepalis subsimilia. Labellum basi columnæ affixum, continuum (v. ex Lindl. articulatum), patens, basi calcaratum, calcare cylindraceo v. obtuse conico intus antice lamina longitudinali semidiviso, postice ad os sæpius callosio-appendiculato; lobi laterales ad latera calcaris breves auriculiformes v. obliqui, medius ovatus oblongus v. lanceolatus, patens v. inflexus. Columna oblonga, subterea, antice concava, exalata, apoda; clinandrium truncatum, antice 2-angulatum 2-dentatum v. 2-cornutum. Anthera terminalis, opercularis, incumbens, convexa, breviter acuminata, 2-locularis; pollinia 4, ovoidea, cerea, per paria subconnata, inappendiculata, anthera dehiscente stipiti angusto sæpe filiformi affixa, glandula parva. Capsula erostris, ovoidea v. oblonga, patens v. reflexa, rarius longior et erectiuscula.—Herbæ epiphyticæ, caulibus foliatis non pseudobulbosis. Folia disticha, coriacea v. carnosula, plana v. teretia, vaginis persistentibus caulem obtegentibus. Pedunculi laterales, sæpe tenues, simplices v. paniculato-ramosi. Flores parvi, breviter pedicellati, sæpe flavo-virescentes intus purpurascens. Bractæ parvæ.

Species ad 15, Indiæ orientalis, Chinæ australis et Archipelagi Malayani incolæ. *Bauer, Ill. Orch. Gen. t. 9. Reichb. in Walp. Ann. vi. 891; in Saund. Ref. Bot. t. 109; in Bonpl. 1857, 40; in Bot. Zeit. 1857, 159; 1864, 298. Lindl. Collect. Bot. t. 6 (Vanda). Hook. Exot. Fl. t. 187 (Vanda). Wight, Ic. t. 1747. Bot. Mag. t. 3571, 4639, 5217, 5630. Bot. Reg. t. 220 (Aerides), 676 (Vanda), 1014.*

*Saccolabium densiflorum*, Lindl., a Reichb. f. in Trans. Linn. Soc. xxx. 136, ad *Sarcanthum* relatum, lamina longitudinali intra calcar carente, ad *Cleisostoma* transferendum est.

197. *Cleisostoma*, Blume, *Bijdr. 362. (Pomatocalpa, Breda, Orch. Kuhl et Hass. ex Reichb. f.; ic. in exempl. nostro deest)*.—Sepala subpatentia, subæqualia, libera v. lateraliter basi columnæ pedi brevi affixa. Petala sepalis similia. Labellum basi columnæ v. pedi affixa, basi in calcar v. saccum intus longitudinaliter indivisum sed ore squama v. appendicula postica integra v. bifida subclausum productum; lobi laterales ad latera calcaris falcati v. angusti, medius brevis sæpius latus. Columna brevis, semiteres, exalata, basi interdum in pedem brevem producta; clinandrium breve, truncatum, antice 2-dentatum v. 2-lobum. Anthera terminalis, opercularis, incumbens, 2-locularis; pollinia 4, per paria conferta v. concreta, cerea, inappendiculata, anthera dehiscente stipiti angusto v. spatulato interdum filiformi affixa; glandula squamiformis. Capsula angusta, longiuscula v. rarius breviter oblonga, erostris, erecta v. patens, costis promi-nulis.—Herbæ epiphyticæ, caulibus foliatis non pseudobulbosis. Folia disticha, patentia,

*carnosa* v. *coriacea*, *plana* v. *rarius teretia*, vaginis persistentibus caulem obtegentibus. Pedunculi laterales, simplices v. ramosi. Flores parvi, sæpius numerosi, secus rhachin sessiles v. breviter pedicellati. Bractee parvæ.

Species ad 15, Indiæ orientalis, Archipelagi Malayani et Australiæ tropicæ incolæ. *Lindl. Gen. et Sp. Orch.* 226. *Reichb. in Walp. Ann.* vi. 888; *Xen. Orch. t.* 142; *Otia Hamb.* 52; in *Flora*, 1872, 273; et in *Linnaea* xli. 76. *Benth. Fl. Austral.* vi. 296. *Lindl. in Part. Mag.* iii. t. 99. *Fitzger. Austral. Orch. cum tabb.* 2.

*Saccolabium lineolatum*, Thw. Enum. Pl. Zeyl. 304 (C. P. n. 2741), est *Cleisostoma maculosum*, Lindl. *C. maculosum*, Thw. l. c. non Lindl., cujus specimina nobis desunt, videtur ex icone Thwaitesii species nova *C. Wendlandorum*, Reichb. f., valde affinis. *Saccolabium densiflorum*, Lindl., a Reichb. f. in Trans. Linn. Soc. xxx. 136 ad *Sarcanthum* relatum, nobis videtur tam habitu quam characteribus *Cleisostomatis* species; labelli calcar intus lamina longitudinali caret sed ore subclausum est callo postico bifido.

*C. ionosum*, Lindl., supra ad *Sarcochilum* transtulimus, et *C. tridentatum*, Lindl., ex Australia, jam a Reichenbachio recte ad *Sarcochilum* relatum est.

*EchioGLOSSUM*, Blume, *Bijdr.* 364, t. 28, a nobis non visum, ab auctore distinguitur a *Cleisostoma* imprimis labello apice ligula lineari 2-fida appendiculato. *Echioglossa* herbarii Lindleyani, incluso *E. mutico*, Reichb. f., hujus appendicis carent et nobis omnino ad *Cleisostoma* referenda videntur. Inflorescentia generis sæpius paniculata sed interdum racemi simplices et in speciebus nonnullis, quibus habitus *Trichoglottidis*, racemi brevissimi fere ad fasciculos sessiles reducti. Huc includimus *Trichoglottidem* quadricornutam, Kurz. *E. minor*, Reichb. f., e Java, nobis ignota est.

SYMPTEA, Llanos, *Fragm. Pl. Filip.* 98, species Philippinensis a nobis non visa, ex auctoris descriptione omnino ad *Cleisostoma* referenda videtur.

198. **Schoenorchis**, Blume, *Bijdr.* 361, quoad sect. i.; *Rumphia*, iv. 51, t. 193, 198 B. —Sepala subæqualia, libera, erecto-patentia, posticum concavum. Petala sepalis multo angustiora. Labellum ad basin columnæ sessile, basi calcaratum, calcare longo valde curvato intus nudo; lobi laterales ad margines calcaris longiusculi, patentes, medius brevis, patens. Columna brevis, lata, apoda, antice fere a basi lobis 2 linearibus erectis instructa, cæterum exalata; clinandrium breve, truncatum. Anthera terminalis, opercularis, incumbens, convexa, semi-2-ocularis; pollinia 2, cerea, subglobosa, sulcata (v. 2-partibilia?), inappendiculata, anthera dehiscente stipiti longo angusto affixa, glandula lineari. Capsula oblonga, basi attenuata, costis valde prominentibus. —Herbæ epiphyticæ, caule foliato elongato non pseudobulboso. Folia lineari-teretia, subdisticha, *carnosa*, vaginis persistentibus in caule subdissitis adnatis. Racemi axillares, simplices, floribundi at foliis breviores. Flores parvuli, breviter pedicellati. Bractee minime.

Species 1, Javanica.

Genus valde affine *Saccolabio*, cui sect. 2 Blumei (in *Bijdr.*) a Lindleyo rite refertur. *Schoenorchis juncifolia*, Thw. Enum. Pl. Zeyl. 304, non Bl., est *Saccolabium filiforme*, Lindl., species primo aspectu *Schoenorchidi* typice simillima, statim vero dignoscenda, petalis quam sepala latioribus et appendicem columnæ absentia.

199. **Ornithochilus**, Wall.; *Lindl. Gen. et Sp. Orch.* 242 (*Aeridis* sect.). —Sepala subaquilonga, patentia, lateralia paullo latiora, basi cum ungue labelli in mentum breve a columna liberum connata. Petala sepalo postico paullo angustiora. Labellum a basi columnæ patens, ima lusi mentum parvum formans, ungue lato concavo margine interdum fimbriato, subtus in calcar v. saccum rectum v. incurvum intus vacuum producto; lamina lata, patens v. inflexa, 2-3-loba, margine sæpe ciliato-fimbriata. Columna basi latiuscula, exalata, apoda, rostello longo; clinandrium postice ovatum, erectum. Anthera terminalis, opercularis, incumbens, 2-ocularis; pollinia 2, subglobosa, sulcata, inappendiculata, anthera dehiscente stipiti plano longiuscule loriformi affixa. Capsula anguste oblonga v. elongata, erecta, patens, costis parum prominulis. —Herbæ epiphyticæ, caulibus foliatis brevibus non pseudobulbosis. Folia pauca, disticha, plana, latiuscula, tenuiter coriacea, vaginis persistentibus caulem obtegentibus. Racemi laterales, tenues, simplices v. paniculato-ramosi. Flores parvi, pedicellati. Bractee parvæ.

Species typicæ 2, Himalayæ et Burmæ incolæ, *Aerides difforme*, Lindl. l.c.; et *A. hystrix*, Lindl., in Journ. Linn. Soc. iii. 42. His forte addendum *Saccolabium Hillii*, F. Muell.; Benth. Fl. Austral. vi. 298, Fitzger. Austral. Orch. cum tab. 1, quæ species *Ornithochilo* habitu et plerisque characteribus accedit, nec differt nisi labelli lobo medio dentiformi v. obsoleto.

200. *Tœniophyllum*, Blume, *Bijdr.* 355, t. 70.—Sepala conniventia v. subpatentia, subæqualia, basi sæpius breviter connata. Petala similia v. paullo minora, libera. Labellum ad basin columnæ sessile, continuum, basi in saccum v. calcar descendens intus nudum productum; lobi laterales ad margines calcaris breves v. obsoleti, medius parvus, patens, carnosulus, integer (v. 2-fidus?). Columna brevissima, lata; clinandrium parum prominens, truncatum, antice 2-angulatum v. 2-dentatum. Anthera terminalis, opercularis, incumbens, parum convexa, 2-locularis; pollinia 4, cerea (ovoidea?), inappendiculata, per paria sibimet incumbentia, anthera dehiscente stipiti brevi lineari affixa, glandula parva. Capsula oblongo-linearis, costis 3 prominulis angulata.—Herbæ nanæ, epiphyticæ, radicibus aëreis longis fasciculatis carnosis, caule brevissimo paucifoliato v. aphylo, non pseudobulboso. Folia dum adsint linearia. Pedunculi laterales, brevissimi, tenues, simplices. Flores minuti, brevissime pedicellati, rhachi racemi sæpius flexuosa. Bracteæ minutæ, sparsæ.

Species ad 6, Indiæ orientalis, Archipelagi Malayani, insularum maris Pacifici et Australiæ incolæ. Lindl. *Gen. et Sp. Orch.* 225. *Reichb. f. Xen. Orch.* i. 202, ii. 67, t. 77, 116; *Otia Hamb.* 53. Benth. *Fl. Austral.* vi. 291.

Genus ob flores minutos in herbariis raros quoad characteres staminales quodammodo incertum. *T. Jerdonianum*, Wight, a Reichenbachio bene ad *Saccolabium* refertur.

201. *Microsaccus*, Blume, *Bijdr.* 367.—Sepala subæqualia, libera, patentia. Petala sepalis similia v. angustiora. Labellum basi columnæ affixum, continuum, basi in saccum latum depressum productum; lobi laterales parvi v. obsoleti, medius erectus, concavus, sepalis vix brevior, sæpius latus, indivisus. Columna brevissima, exalata, apoda (v. in pedem brevissimum producta?); clinandrium parum prominens, truncatum. Anthera terminalis, opercularis, incumbens, valde convexa v. fere cucullata, sub-2-locularis; pollinia 4, distincta, globosa, cerea, inappendiculata, anthera dehiscente stipiti anguste lineari affixa, glandula parva. Capsula ovoidea v. breviter oblonga, erostris.—Herbæ epiphyticæ, parvæ, caulibus foliatis cum vaginis distichis ancipitibus non pseudobulbosis. Folia numerosa, parva, disticha, scapelliformia v. fere linearia, rigida v. carnosula. Pedunculi laterales, brevissimi, 1-2-flori. Flores minimi, bracteis sæpe stipati.

Species nobis adsunt 3 v. 4 Archipelagi Malayani et Malacæ incolæ. Lindl. *Gen. et Sp. Orch.* 218.

Genus quoad characteres florales *Saccolabio* accedit, sed pollinia globosa 4 bene distincta et habitus refert potius species minores *Dendrobii* sectionis *Apori* v. *Appendiculam*, quarum tamen pollinarium longe differt.

202. *Diplocentrum*, Lindl. *Bot. Reg. sub t.* 1522; *Gen. et Sp. Orch.* 218.—Sepala libera, subpatentia, subæqualia v. lateralibus paullo majora. Petala sepalis postico sub-similia. Labellum ad basin columnæ sessile, articulatum, patens, oblongum v. ovatum, integrum, medio carnosum, dorso juxta basin breviter 2-calcaratum. Columna brevissima, lata, ad latera stigmatis leviter 2-auriculata; clinandrium vix prominens, truncatum. Anthera terminalis, opercularis, incumbens, convexa, obtuse acuminata, basi 2-locularis; pollinia 2, ovoidea, cerea, sulcata v. 2-partibilia, inappendiculata, anthera dehiscente stipiti lineari v. basi dilatato affixa, glandula latiuscula. Capsula breviter oblonga v. clavata, erostris, patens v. reflexa, costis parum prominulis.—Herbæ epiphyticæ, caulibus foliatis non pseudobulbosis. Folia disticha, carnosæ, angustæ, subteretia v. complicata, sæpissime recurva. Pedunculi laterales, sæpe ramosi, racemis longiusculis recurvis. Flores parvi, brevissime pedicellati. Bracteæ minutæ. Capsulæ fere sessiles.

Species 2 v. 3, peninsulæ Indiæ orientalis incolæ. Wight,  *Ic. t.* 1680 ad 1682.

203. **Angræcum**. Thou. Orch. Iles Afr. tab. syst. 2, pro parte. (Aerobion, Spr. Syst. iii. 679).—Sepala subæqualia, libera, patentia. Petala sepalis subsimilia. Labellum basi columnæ affixum, continuum, ima basi in calcar longum nunc longissimum productum; lobi laterales ad latera calcaris parvi v. obsoleti, lamina patens v. erecto-patens, integra v. 3-loba. Columna brevissima, lata, facie concava, exalata, apoda; clinandrium vix prominulum, truncatum, integrum. Anthera terminalis, opercularis, incumbens, convexa, antice sæpe producta, vix perfecte 2-locularis; pollinia 2, cerea, globosa, sulcata, stipiti plano v. stipitibus 2 distinctis planis affixa, glandula squamiformi simplici v. duplici. Capsula oblonga v. fusiformis, erostris, erecta v. patens.—Herbæ epiphyticæ, caulibus foliatis elongatis v. brevibus non pseudobulbosis. Folia disticha, coriacea v. carnosa, vaginis persistentibus caulem obtegentibus. Pedunculi laterales, simplices. Flores sæpius speciosi nunc maximi, racemosi v. rarius subsolitarii.

Species ad 25, pro maxima parte Africæ tropicæ v. australis et insularum Mascarensium incolæ, una tamen characteribus nullis essentialibus separanda in China et Japonia invenitur. Lindl. Gen. et Sp. Orch. 245. Reichb. f. in Walp. Ann. vi. 904; Otia Hamb. 68, 77, 177; in Flora, 1865, 189; 1872, 278 (excl. sp. paucis). Bolus in Journ. Linn. Soc. xix.

Genus a variis auctoribus varie extensum v. reductum, haud facile characteribus certis a *Vanda* et *Saccolabio* separatur, sæpissime tamen cognoscendum calcare longo tenui. Pollinarium in diversis speciebus diversum, in aliis adhuc non bene observatum et affinitates incertæ remanent. Interea tamen sectiones sequentes distinctæ videntur et duæ priores forte generice separandæ:—

1. *Macroura*. Labelli lamina patens, sæpius dilatata; calcar longum, tenue. Pollinia in stipitibus 2 distinctis planis faciei affixa, glandulis squamiformibus distinctis. Huc pertinent *A. sesquipedal*, Thou. Orch. Iles Afr. t. 66, 67; Bot. Mag. t. 5113; *A. gladiifolium*, Thou. l.c. t. 53; Bot. Reg. 1840, t. 68; *A. funale*, Bot. Mag. t. 4295.

2. *Listrostachys*. Labelli lamina cum calcare continua, basi sæpius concava in acumen integerimum desinens. Pollinia in stipitibus 2 distinctis planis apice affixa, glandulis squamiformibus distinctis v. in unam connatis. Racemi floribundi, bracteis sæpe latis interdum fere foliaceis. Huc pertinent: *A. arcuatum*, Lindl.; Harv. Thes. Cap. t. 107; *A. Chailluanum*, Bot. Mag. t. 5589; *A. pertusum*, Paxt.; Bot. Mag. t. 4782, et genus LISTROSTACHYS, Reichb. f. in Bot. Zeit. 1852, 930; in Walp. Ann. vi. 907; in Flora, 1865, 189; et in Linnaea xli. 75.

3. *Euangræcum*. Labelli lamina patens, sæpius dilatata. Pollinia ad apicem stipitis plani sæpe angusti indivisi v. facile partibiles affixa, glandula unica. Species numerosæ, plures tamen quoad pollinarium adhuc imperfecte observatæ. Thou. Orch. Iles Afr. t. 61 ad 65. Bot. Mag. t. 4159, 4761, 5170, 5624. Bot. Reg. t. 1522, 1841, t. 35. Harv. Thes. Cap. t. 108.

Inter *Euangræca*, *A. infundibulare*, Lindl., insigne est calcare longo ad os late infundibulari; *A. caudatum*, Lindl. Bot. Reg. t. 1844; Bot. Mag. t. 4370, calcare longissimo undique tenui et columna quam in cæteris speciebus multo longiore. *A. armeniacum*, Lindl., floribus parvis. *A. falcatum* (*Limodorum*, Thunb. Ic. Fl. Jap. t. 6; Bot. Reg. t. 283; Bot. Mag. t. 2097; *Aerides*, Miq. Ann. Mus. Lugd. Bat. ii. 205) patria (China et Japonia) a cæteris longe distat, nulla specie adhuc in Asia tropica reperta; characteres omnino specierum typicarum ostendit, calcare longo tenui et floribus non minoribus quam in nonnullis Africanis. Hæc species a Franch. et Savat. Enum. Pl. Jap. ii. 29, inenato confusa est cum *Aeride japonica*, Linden, quæ veræ *Aeridis* species.

Species plures, a Thouarsio delineatæ v. in herbariis servatæ, adhuc minus cognite, dubiæ remanent.

ARRANGIS, Reichb. f. in Flora, 1865, 190, species includit 2 Angolenses ab *Euangræco* separatas ob pollinariū stipitem semi-2-fidum.

204. **Cryptopus**, Lindl. Bot. Reg. sub t. 817. (Beclardia, A. Rich. Orch. Iles Fr. et Bourb. 78, t. 11, f. 3).—Sepala subæqualia, libera, patentia, integerrima. Petala sepalis æquilonga sed apice valde dilatata, divaricato-2-4-loba. Labellum ad basin columnæ sessile, patens, basi in calcar longum tenue productum; lobi laterales ad latera calcaris patentes, falcati, medius unguiculatus, patens, apice 3-lobus, lobis lateralibus divaricatis medio minimo. Columna brevissima, antice sub-2-alata, apoda; clinandrium breve, truncatum. Anthera terminalis, opercularis, incumbens, diu persistens, valde convexa, breviter acuminata, 2-locularis; pollinia 2, globosa, sulcata v. 2-loba, inappendiculata, anthera deliscente stipitibus 2 distinctis brevibus cupulatis affixa, glandulis 2 squami-

formibus postice integris antice ciliato-fimbriatis. Capsula . . .—Herba epiphytica, caulibus foliatis elongatis non pseudobulbosis. Folia disticha, patentia, oblonga, rigide coriacea, vaginis persistentibus caulem fere obtegentibus. Pedunculi laterales, longiusculi, simplices. Flores speciosi, laxe racemosi, pedicellis brevibus. Bracteæ parvæ.

Species 1, insularum Mascarensium incolæ. *Thou. Orch. Iles Afr. t. 79, 80 (Angræcum). Hook. Journ. Bot. i. 45, t. 115.*

Genus *Angræco* affine quocum mediante *A. bicaudato*, Lindl., connectitur.

205. *Æonia*, Lindl. *Bot. Reg. sub t. 817*.—Sepala subæqualia, libera, erecto-patentia. Petala sepalis subsimilia. Labellum ad basin columnæ sessile, basi in calcar conicum v. obtusum productum, erectum; lobi laterales dilatati, circa columnam convoluti, medius erecto-patens, integer v. divaricato-2-lobus, cum mucrone v. lobo lineari intermedio. Columna brevissima, lata, exalata, apoda; clinandrium parum prominens, obliquum v. truncatum, antice 2-angulatum v. 2-cuspidatum. Anthera terminalis, opercularis, incumbens, convexa, antice breviter acuminata v. 2-dentata, 2-locularis; pollinia 2, ovoidea v. globosa, integra v. sulcato-2-loba, inappendiculata, anthera dehiscente stipitibus filiformibus distinctis v. basi breviter connatis affixa, glandula unica. Capsula oblonga, erostris, costis parum prominulis.—Herbæ epiphyticæ, caulibus foliatis brevibus v. elongatis non pseudobulbosis. Folia disticha, coriacea, vaginis persistentibus caulem obtegentibus. Pedunculi laterales, simplices. Flores racemosi, breviter pedicellati, mediocres v. majusculi. Bracteæ ovatæ, persistentes.

Species descriptæ 4 v. 5, insularum Mascarensium incolæ. *Thou. Orch. Iles Afr. t. 81 ad 84 (Epidendrum). A. Rich. Orch. Iles Fr. et Bourb. t. 10, f. 2 (Angræcum), et t. 11, f. 2 (Beclardia). Balf. et S. Moore in Bak. Fl. Maurit. 354, et Balf. Bot. Rodrig. t. 36 (Listrostachys).*

Genus ab *Angræco* affinibusque facile distinguitur perianthii forma, quare a Thouarsio ad *Epidendrum* relatum fuit. Pollinarii stipites in omnibus speciebus a Thouarsio filiformes delineati, quales in *Æ. polystachyæ* var. *longifoliæ*, Reichb. f., invenimus. A. Rich. in *Æ. polystachia* pollinaria iis *Angræci sesquipedalis* similia delineavit, in specimine nostro formæ typicæ jam delapsa sunt, sed labellum prorsus *Æoniæ* lobis lateralibus columnam omnino involventibus.

206. *Mystacidium*, Lindl. in *Comp. Bot. Mag. ii. 205*. (*Aeranthus*, Reichb. f. in Walp. *Ann. vi. 899, excl. sp. Americanis, et in Floru 1865, 190, non Lindl.*)—Sepala subæqualia, libera, patentia. Petala sepalis subsimilia. Labellum basi columnæ affixum, ima basi in calcar longum tenue productum; lobi laterales nunc ovati erecti, nunc sæpius parum prominuli v. obsoleti; medius erectus v. patens, sæpius ovatus, indivisus. Columna brevissima, late semiteres, exalata, apoda; clinandrium brevissimum, truncatum, antice interdum minute 2-dentatum. Anthera terminalis, opercularis, incumbens, convexa, antice plus minus acuminata, basi 2-locularis; pollinia 2, globosa, interdum sulcata, cerea, inappendiculata, anthera dehiscente stipitibus 2 distinctis filiformibus nunc apice clavatis v. brevissimis affixa; glandula unica. Capsula . . .—Herbæ epiphyticæ, non pseudobulbosæ, caulibus foliatis nunc brevibus nunc longiusculis rigidis. Folia disticha, sæpius pauca, coriacea, patentia, interdum parva lateraliter compressa subequitancia, rarius sub anthesi deficientia. Racemi axillares, sæpius breves, interdum in pedunculo elongato simplices floribundi v. ad florem unicum subsessilem reducti. Flores sæpius parvi, in racemo secundi v. quaquaversi, calcare sæpissime ascendente. Bracteæ parvæ.

Species ad 20, Africæ tropicæ et australis incolæ.

In speciebus typicis caulis brevis paucifolius, racemi breviter pedunculati floribundi, flores in *M. filicorni*, Lindl., affinibusque Harv. *Thes. Cap. t. 173 ad 175 secundi, in M. fragrantissimo (Listrostachyde, Reichb. f.)* affinibusque quaquaversi, calcare in omnibus undique tenui.

Gussonia, A. Rich. *Orch. Iles Fr. et Bourb. 76, t. 11, f. 1, et Microxelia, Lindl. Gen. et Sp. Orch. 60, sunt evidenter Mystacidii species, Angræco aphylo, Thou. Orch. Iles Afr. t. 73, valde affines, nisi conspiciantur, a Mystacidiiis typicis vix differunt nisi caule sub anthesi aphylo.*

*Gomphocentrum*, bene sectionem format caule rigido crasso, foliis longis rigidioribus, raceminis

elongatis floribundis, labelli calcare extremitate clavato v. late saccato. Pollinari stipites basi filiformes apice tamen haud raro clavati v. fere cupulati. Huc pertinent *Angræcum caulescens*, Thou. Orch. Iles Afr. t. 75, Hook. Journ. Bot. i. t. 117, speciesque ad 6 imprimis tropicæ.

*Angræcum pellucidum*, Lindl. Bot. Reg. 1844, t. 2, his habitu et pollinari stipitibus affine, differt calcare acuto.

*Pectinaria* sectio facile pro genere distincto habenda, species 2 continet parvas, caule tenero, foliis numerosis insigniter distichis parvulis, floribus lateralibus sæpius solitariis subsessilibus, labelli calcare longo tenui, lobis lateralibus quam in speciebus typicis magis evolutis, pollinari stipitibus brevissimis v. ad filum elasticæ extensivum reductis, polliniis specie in glandula squamiformi subsessilibus. Huc pertinent *Angræcum distichum*, Lindl. Bot. Reg. t. 1781, Bot. Mag. t. 4145, e Sierra Leone, et *A. pectinatum*, Thou. Orch. Iles Afr. t. 51, A. Rich. Orch. Iles Fr. et Bourb. t. 10, f. 5, Hook. Journ. Bot. i. 47, t. 116, e Madagascar.

207. *Dendrophylax*, Reichb. f. in Walp. Ann. vi. 903.—Sepala subæqualia, libera, patentia. Petala sepalis subsimilia. Labellum ad basin columnæ sessile, basi in calcar longum os versus dilatatum productum, cum columnæ continuum, erectum, basi concavum; lobi laterales breves, patentes, medius late 2-lobus, lobis divaricatis dente sæpe interjecto. Columna brevissima, lata, sub-2-alata, apoda; clinandrium parum prominulum, truncatum. Anthera terminalis, opercularis, incumbens, convexa, breviter acuminata v. mutica, 2-locularis; pollinia 2, globosa, cerea, sulcata, inappendiculata, anthera dehiscente stipitibus 2 distinctis planis oblongis v. cuneatis affixa, glandula squamiformi unica v. 2-partibili. Capsula oblonga v. elongata, erostris, angulata.—Herbæ epiphyticæ aphyllæ, radicibus dense fasciculatis, pseudobulbo nullo. Scapi tenses, simplices, vaginis parvis dissitis. Flores in scapo solitarii v. pauci racemosi, maximi mediocres v. parvuli. Bractæe parvæ.

Species 3, Indiæ occidentalis incolæ. Reichb. f. in Walp. Ann. vi. l. c. (*Dendrophylax*), et 902 (*Aceranthi aphylli grandiflori*), Bot. Mag. t. 4295 (*Angræcum*).

208. *Campylocentrum*, Benth. in Journ. Linn. Soc. xviii. 337. (Todaroa, A. Rich. in Ann. Sc. Nat. ser. 3, iii. 28, non Webb.)—Sepala libera, subæqualia, angusta, erecta, c. univentia v. apice parum patentia. Petala sepalis similia. Labellum ad basin columnæ sessile, basi in calcar sæpius recurvum v. apice vesicatum v. obtusatum productum, lamina ovata v. oblonga, sepalis subæquilongâ, lobi laterales parvi v. obsoleti, medius sæpius integer. Columna brevissima, exalata, apoda; clinandrium parum prominens, truncatum. Anthera terminalis, opercularis, incumbens, convexa, erostris v. breviter acuminata, 2-locularis; pollinia 2, globosa, cerea, inappendiculata, anthera dehiscente stipitibus 2 brevibus filiformibus v. ad fila elasticæ extensivæ reductis affixa, glandula squamiformi unica v. 2-partita. Capsula parva, ovoidea v. anguste oblonga, erostris, costis acutis angulata.—Herbæ epiphyticæ, caulibus nunc foliatis nunc rarius aphyllis, non pseudobulbosis, radicibus fasciculatis v. sparsis. Folia disticha, sæpe dissita, oblonga linearia v. teretia. Flores minuti, in spicis lateralibus tenuibus brevibusque dense conferti, rarius in spicis laxioribus longioribusque alterni, sæpe distichi. Bractæe parvæ, persistentes.

Species ad 15, Americæ tropicæ a Brasilia usque ad Indiam occidentalem et Mexicum incolæ, a Lindleyo sub *Angræco* v. a Reichb. f. sub *Acerantho* enumeratæ. Lindl. Bot. Reg. t. 1772 (*habitatione falsa*) et 1840 sub t. 68. Reichb. f. in Walp. Ann. vi. 901; Otia Hamb. 10, 91; in Flora 1865, 279; et in Linnea xli. 31.

209. *Cirrhaea*, Lindl. in Bot. Reg. sub t. 930; Gen. et Sp. Orch. 141. (Scleropteris, Scheidw. in Allgem. Gartenz. 1839, 407.)—Sepala libera, subæqualia, patentissima v. reflexa, angusta. Petala sepalis sæpius minora, magis colorata. Labellum cum basi columnæ continuum, ungue longo patente dein ascendente; lobi laterales ad apicem unguis longi, angusti, reflexi v. recurvi, medius brevior, patens, basi sæpius columnæ contiguus. Columna erecta, semiteres, a basi attenuata, incurvo-incrassata v. clavata,

rostello brevi erecto terminata; clinandrium pone rostellum parvum; stigma anticum horizontale. Anthera oblonga, erecta, rostello applicita, basi breviter 1-locularis, supra loculum in appendicem longam membranaceam rostellum amplectentem producta; pollinia 2, cerea, angusta, inappendiculata, anthera dehiscente apici parum dilatato stipitis linearis affixa, glandula parva. Capsula . . .—Herbæ epiphyticæ, caulibus brevissimis paucivaginatiss, mox in pseudobulbum 1-foliatum carnosum incrassatis. Foliolum amplum, plicato-venosum. Scapus ad basin pseudobulbi simplex, recurvus, laxè floribundus. Flores majusculi, pedicellati, primo aspectu iis *Gongoræ* subsimiles. Bractee minimæ.

Species editæ 5, Brasilienses. *Reichb. f. in Walp. Ann.* vi. 495. *Bot. Mag. t.* 2978 (*Gongora*), 3726. *Bot. Reg. t.* 1538, 1889, 2005. *Lodd. Bot. Cab. t.* 936 (*Cymbidium*), 1967, 1999.

210. *Macradenia*, R. Br. in *Bot. Reg. t.* 612. (*Rhynchadenia*, A. Rich. *Fl. Cub.* iii. 248, t. 85.)—Sepala æqualia, libera, patentia. Petala paullo minora. Labellum cum basi columnæ continuum, erectum; lobi laterales latiusculi, erecti, columnam amplectentes, medius brevis, patens. Columna erecta, subteres, exalata, apoda, antice sulcata v. marginibus elevatis concava, rostello erecto v. leviter inclinato tenui terminata; clinandrium pone rostellum membranaceum, late cupulatum, margine erosum v. denticulatum. Anthera in fundo clinandrii erecta, oblonga, rostello arcuè applicita, basi breviter et imperfecte 2-locellata, locellis mox in unum confluentibus, in appendicem longam membranaceam rostellum amplectentem producta; pollinia 2, cerea, ovoidea, distincta, inappendiculata, anthera dehiscente apici dilatato stipitis longi angustissimi affixa, glandula parva ovata. Capsula . . .—Herbæ humiles, habitu *Notylia*. Folia pauca, plana, carnosæ v. coriacea, vaginis distiche imbricatis demum in pseudobulbos carnosos incrassatis. Pedunculi axillares, paucivaginati, simplices. Racemi nutantes v. reflexi, laxi. Flores quam in *Notylia* paullo majores. Bractee parvæ.

Species typicæ 1 v. 2 Indiæ occidentalis incolæ. *Lindl. Gen. et Sp. Orch.* 195. *Bot. Reg. t.* 1815; quibus addidit *Reichb. f. in Walp. Ann.* vi. 696, duas e Surinam tertiamque e Guatemala a nobis non visas.

211. *Notylia*, Lindl. *Bot. Reg. sub t.* 930; *Gen. et Sp. Orch.* 192.—Sepala æqualia, angusta, erecta v. demum patentia, libera v. lateralialia alte connata. Petala sepalis similia v. minora magisque colorata. Labellum ad basin columnæ continuum, erectum, ungue brevi v. elongato interdum 2-auriculato, lamina triangulari v. hastata acuminata; discus brevis v. 2-callosus. Columna erecta, teres v. antice sulcata, exalata, apoda, apice sæpe leviter recurva, rostello longo erecto acuminata; clinandrium ad basin rostellii dorsale, parvum. Anthera erecta, oblonga, rostello applicita, basi imperfecte 2-locellata, supra loculum longe appendiculata, membranacea, concava, stipitem et sæpe rostellum ipsum amplectens; pollinia 2, cerea, ovoidea, inappendiculata, anthera dehiscente ad apicem dilatatum stipitis longi tenuis affixa, glandula parva. Capsula . . .—Herbæ humiles. Folia plana, carnosæ v. coriacea, vaginis distiche imbricatis introrsum scarioso-marginatis, superioribus demum in pseudobulbos carnosos incrassatis, floralia sæpe ad vaginam spathaceam reductis. Pedunculi axillares, paucivaginati, simplices. Flores parvi v. rarius mediocres, dense v. laxiuscule racemosi, pedicellis sæpe gracilibus. Bractee tenues, rarius latiores membranaceæ et pedicellos æquantes.

Species descriptæ 18, Americæ tropicæ incolæ, plures tamen verisimiliter *N. punctatæ* v. aliarum varietates. *Reichb. f. Xen. Orch.* i. 46, t. 20; in *Walp. Ann.* vi. 670; *Ott. Hamb.* 87. *H. B. et K. Nov. Gen. et Sp.* i. t. 91 (*Pleurothallis*). *Link. Kl. et Otto, Ic. Pl. Rar. t.* 18. *Hook. Lond. Journ.* iii. t. 10. *Bot. Mag. t.* 5609, 6311. *Bot. Reg. t.* 759 (*Pleurothallis*).

In *N. bicolore*, Lindl., folia dicuntur equitantia nec plana quod tamen vix confirmare possumus. Foliorum vaginæ plurimæ vix incrassatæ, nonnullæ tamen superiores pseudobulbos normales etsi parvos formant.

212. *Acriopsis*, Reinw. in *Syll. Pl. Ratiss.* ii. 4, et eod. ann., *Blume, Bijdr.* 376, t. 71.—Sepala æquilonga, angusta, patentia, posticum carinato-concavum, lateralialia usque ad

apicem in unum postico simile connata. Petala sepalis æquilonga at latiora, plana. Labelli unguis cum columnæ in urceolum latum connatus, lamina patens, concava, angusta, basi lobis lateralibus latiusculis 2-auriculata, apice 3-fida. Columna supra urceolum breviter producta, curvula, subclavata, superne ad latera stigmatis auriculis 2 falcatis instructa, apoda; clinandrium amplum, membranaceum, incurvo-cucullatum, late 2-lobum; rostellum terminale, erectum v. antrorsum inclinatum, acutum, latiusculum, dorso concavo antheram fovens. Anthera in fundo clinandrii erecta, semiimmersa, rostellum applicita, acuminata, 2-locularis; pollinia 2 v. 4 per paria sibimet arcte applicita, anguste oblonga, cereo-pulposa, inappendiculata, anthera dehiscens stipiti longo filiformi v. superne dilatato affixa, glandula parva oblonga. Capsula parvula, inflato-globosa, in uno specimine 3-valvata.—Herbæ epiphyticæ, tenues, pseudobulbis carnosissimis globosis v. ovoideis 1-2-foliatis. Folia angusta, tenuiter coriacea. Scapi ad latera pseudobulborum tenues, simplices v. superne ramosi, nudi v. vaginis paucis parvis instructi. Flores parvi, laxe racemosi. Bracteæ parvæ.

Species 3 v. 4, Burmæ et Archipelagi Malayani incolæ. *Reichb. f. in Walp. Ann.* vi. 492. *Griff. Ic. Pl. As. t.* 318. *Wight, Ic. t.* 1748.

213. **Telipogon**, *H. B. et K. Nov. Gen. et Sp.* i. 335, t. 75 (quoad analysin imperfecta). (*Thelypogon*, *Spr. Syst.* iii. 682.)—Sepala subæqualia, libera, patentissima, angusta. Petala pariter patentissima sed multo latiora, venosa. Labellum sessile, patentissimum, indivisum, petalis simillimum v. paulo latius, rarius minus. Columna brevissima, crassa, exalata, apoda, undique v. ad clinandrium longe setosa v. hispida, rostellum terminali erecto; stigma anticum, horizontale, late concavum; clinandrium posticum, breve, integrum. Anthera erecta, rostellum applicata, subdidyma, distincte 2-locularis; pollinia 4, cerea, in quoque loculo 2, distincta, oblonga, acuta, cujusve paris sæpe inæqualia, inappendiculata, anthera dehiscens apici parum dilatato stipitis linearis tenuis affixa, glandula cum apice rostellum uncinata. Capsula ubi nota ovoidea, 3-alata v. acutissime 3-angulata, breviter rostrata.—Herbæ epiphyticæ, caulibus foliatis secus rhizoma v. caudicem radicanter brevissimis v. ad apicem caudicis longioribus, pseudobulbis nullis (in speciminibus visis). Folia disticha, brevia, coriacea v. carnosissima. Pedunculi pseudoterminales, longiusculi, erecti, simplices. Flores ad apicem pedunculi pauci, laxe racemosi, speciosi. Bracteæ pedicellis breviores.

Species descriptæ ultra 40, Andium Colombiæ et Peruviae incolæ, plures tamen inter se vix distinctæ videntur. *Lindl. Gen. Sp. et Orch.* 214. *Reichb. f. in Walp. Ann.* i. 790, iii. 562, vi. 861; *Xen. Orch.* i. t. 97; *Otia Hamb.* 6; et in *Linnaea* xli. 3, 27, 69, 104.

214. **Trichoceros**, *H. B. et K. Nov. Gen. et Sp.* i. 337, t. 76.—Sepala subæqualia, libera, patentia. Petala sepalis similia v. latiora. Labellum ad basin columnæ sessile, patens; lobi laterales ad basin patentes v. erecti, oblongi v. lineares, interdum ciliati antenniformesque, medius ovatus, petalis subsimilis v. sæpius angustior crassiorque. Columna brevissima, crassa, exalata, apoda, rostellum erecto terminata; stigma anticum, horizontale, late cavum; clinandrium posticum, amplum, 2-3-lobum, longe setosum v. hispidum. Anthera dorso rostellum applicita (prope basin affixa?) subdidyma, distincte 2-locularis; pollinia 4, cerea, in quoque loculo 2, distincta, oblonga, acutiuscula, cujusve paris sæpe inæqualia, inappendiculata, anthera dehiscens apici parum dilatato stipitis linearis affixa, glandula parva recta v. cum rostellum apice recurva. Capsula (in *T. murali*, *Lindl.*) oblongo-fusiformis, erostris.—Herbæ epiphyticæ, caulibus e rhizomate radicante brevissimis, sæpius pseudobulbo 1-foliato terminatis. Folia pauca, disticha, coriacea v. carnosissima. Pedunculus sub pseudobulbo axillaris v. pseudobulbo non evoluto pseudoterminialis, erectus, simplex. Flores ad apicem pedunculi laxe racemosi, mediocres v. parvi, longiuscule pedicellati. Bracteæ pedicello breviores.

Species descriptæ 6 v. 7, Peruviae et Colombiæ incolæ, forte ad 3 v. 4 reducendæ. *Lindl. Gen. et Sp. Orch.* 174. *Reichb. f. in Walp. Ann.* vi. 630; *Xen. Orch.* i. t. 9, 97; in *Bonpl.* 1856, 212; et in *Linnaea* xli. 33. *Humb. et Bonpl. Pl. Equin.* t. 28 (*Epidendrum*).

*ASTROGLOSSUS*, Reichb. f. in herb. Lindl., est *Trichoceros astroglossus*, Lindl. herb., seu *Telipogon astroglossus*, Reichb. f. Xen. Orch. i. 16, t. 7, species floribus minimis perianthium et columnam *Trichocerotis* ostendens, etsi rostellii apex cum glandula recurvum sit. Hic character nobis nihili videtur.

215. *Podeochilus*, Blume, *Bijdr.* 295, t. 12; *Rumphia*, iv. 43, t. 192, 200. (*Cryptoglottis*, Blume, *Bijdr.* 296, t. 42. *Platysma*, Blume, *Bijdr.* 295, t. 43, nomen in *Plocostigma mutatum*, Fl. Jav. Præf. 6. *Apista*, Blume, *Bijdr.* 296. *Hexameria*, R. Br. in *Benn. Pl. Jav. Rar.* 26, t. 7.)—Sepala æquilonga, erecta, conniventia, posticum concavum, liberum v. cum cæteris alte connatum, lateralia latiora, ad medium connata, basi in mentum sacciforme v. calcariforme pedem columnæ includens producta. Petala sepalo postico similia v. angustiora. Labellum ad apicem pedis columnæ articulatam, erectum, sepalis inclusum, integrum v. 3-lobum, basi extrorsum sæpe in appendiculam 2-fidam productum. Columna brevissima, exalata, apice ad latera stigmatis sæpe 2-cuspidata, basi in pedem longum intra perianthii mentum producta; rostellum terminale, erectum, longum, sæpe 2-fidum, postice concavum, antice convexum; clinandrium pone rostellum parvum; stigma anticum, subhorizontale. Anthera in clinandrio sessilis, erecta, longe acuminata, rostello applicita, basi 2-locularis; pollinia 4, rarius per paria concreta, ovoidea, cerea, inappendiculata, anthera dehiscente per paria stipitibus 2 distinctis apicem versus membranaceo-dilatatis affixa, glandula unica squamiformi. Capsula parva, oblonga, erostris.—Herbæ epiphyticæ, caulibus foliatis tenuibus. Folia parva, disticha, nunc linearia, plana, basi breviter complicata angustataque, nunc a latere compressa, scapelliformia, vaginis equitantibus more *Apori* arcte approximatis. Flores parvi, sæpius minuti, in racemos terminales dispositi. Bractee parvæ, dissitæ v. in una specie elegantissime distichæ, rhachi deflorata pinnulata.

Species ad 12, Indiæ orientalis et Archipelagi Malayani incolæ. Lindl. *Gen. et Sp. Orch.* 234. *Wight, Ic.* t. 1748. Reichb. f. in *Bonpl.* 1857, 41.

Genus, ab *Appendicula* pollinibus sæpissime 4 nec 8 distinctum, variat de specie in speciem, foliis basi lata equitantibus v. planis basiue pius minus contractis, sepalo postico libero v. cum cæteris arcte connato, lateralium mento breviter gibbiformi v. longiuscule calcariformi, labelli basi dorso 2-cruri v. inappendiculato, columna ad latera stigmatis 2-cuspidata v. nuda, sed characteres diversi non satis inter se conveniunt ad sectiones distinguendas. In *P. serpyllifolio* quæ *Cryptoglottis*, Bl., seu *Hexameria*, R. Br., adest ex Bennetio in quoque loculo antheræ pollinium tertium minus, non vero ut videtur constanter, nam in floribus 2 a nobis examinatis rudimentum minutum tantum pollinii tertii invenimus v. omnino nullum. *P. Zollingeri*, Miq. Choix, t. 25, f. 2, a *P. Zollingeri*, Reichb. f., et ab omnibus nobis notis speciebus differt, ex icone, foliis ovalibus emarginatis et racemo laxo ramoso. *P. bicolor*, Miq. l. c. t. 22, f. 3, est *Dendrobium subulatum*, Lindl.

216. *Appendicula*, Blume, *Bijdr.* 297, t. 40; *Rumphia*, iv. 46, t. 195, 200. (*Meta-chilum*, Lindl. *Gen. et Sp. Orch.* 74. *Conchochilus*, Hassk. in *Hæv. et De Vr. Tijdschr.* ix. 146.)—Sepala æquilonga, erecta, conniventia, posticum fere liberum, lateralia latiora, basi in mentum sacciforme v. calcariforme pedem columnæ includens connata. Petala sepalo postico similia v. angustiora. Labellum ad apicem pedis columnæ affixum, ungue incumbente v. breviter adnato, lamina erecta, concava, integra v. 3-loba, facie basi callis 1 v. 2 appendiculata. Columna brevissima, exalata, apice ad latera stigmatis sæpe 2-cuspidata, basi in pedem intra perianthii mentum producta; rostellum terminale, erectum, longum, acuminatum v. sæpius 2-fidum, postice concavum, antice rectum; clinandrium pone rostellum parvum; stigma anticum subhorizontale. Anthera in clinandrio sessilis, erecta, longe acuminata, rostello applicita, basi 2-locularis; pollinia 8, in quoque loculo 4 v. rarius unum cujusve loculi deficit, cerea, oblonga, basi longe attenuata, stipitibus 2 distinctis superne v. fere a basi membranaceo-dilatatis affixa, glandula (an semper?) unica. Capsula parva, ovoidea v. oblonga.—Herbæ epiphyticæ, caulibus foliatis laxis sæpe compressis v. ancipitibus. Folia numerosa, disticha, patentia, membranacea v. subcoriacea, sæpe parva, vaginis arcte adnatis caulem obtegentibus. Racemi nunc brevissimi, pauciflori, plerique v. omnes laterales, nunc longiores,

tenues, multiflori, pseudoterminalis v. in parte superiore caulis pauci. Flores parvi, sæpius minuti. Bracteæ breves, patentes v. reflexæ.

Species ad 20, pleræque Malaccæ, Archipelagi Malayani v. insularum maris Pacifici incolæ. *Lindl. Gen. et Sp. Orch.* 227. *Reichb. f. in Walp. Ann.* vi. 893; in *Bonpl.* 1857, 41; *Xen. Orch. t.* 138; *Otia Hamb.* 45; et in *Linneæ* xli. 76. *Wight, Ic. t.* 1748. *Griff. in Calc. Journ. Hist. Nat. iv. t.* 19; *Ic. Pl. As. t.* 335, 337. Illis tamen addendæ *A. bifaria*, Lindl., e China australi et e Cachar Indiæ orientalis, cum altera ei simillima e Peninsula Indiæ orientalis jam a Kœnigio in Retz, Obs. vi. 45, edita, sub nomine *Epidendri hexandri* descripta, etsi ab auctoribus recentioribus neglecta. In specimine nostro ex herbario Rottleriano flores haud perfectos examinare nequivimus, sed ex descriptione fusiore Kœnigii omnino *Appendiculæ* convenit, etsi pollinia in quoque loculo ad 3 reducta dicuntur, quod hinc inde in aliis speciebus casu observatur. Hæc species igitur, uti *Hexameria Brownii*, genera *Podochilus* et *Appendiculæ* arcte connectit.

217. **Tholasis**, Blume, *Bijdr.* 385, t. 75; *Orch. Archip. Ind.* 19, t. 5, 7. (Oxyanthera, Brongn. in *Duperr. Voy. Bot.* 197, t. 37 B. Euproboscis, *Griff. in Calc. Journ. Nat. Hist.* v. 371, t. 26.)—Sepala æqualia, erecta, conniventia, basi plus minus connata, lateralia basi in mentum breve producta. Petala sepalo postico similia v. paullo minora. Labellum basi columnæ affixum, erectum, ovatum, sepalis æquilongum, indivisum, concavum v. complicatum. Columna brevis, exalata, apoda (v. in pedem brevissimum producta ?); rostellum terminale, erectum, longum, acuminatum, antice convexum, dorso concavum; clinandrium pone rostellum parvum; stigma anticum subhorizontale. Anthera in clinandrio sessilis, erecta, acuminata, rostellum applicita et primum fere involuta, basi 2-locularis; pollinia 8, in quoque loculo 4, ovoidea v. subglobosa, inappendiculata, anthera dehiscens stipiti longe filiformi affixa, glandula parva squamiformi v. oblonga. Capsula parva, oblonga v. oblique obovoidea, erecta, erostria.—Herbæ epiphyticæ, sæpius parvæ. Caules nunc brevissimi, in pseudobulbum carnosum depressum incrassati, folio unico angusto coriaceo basi vagina stipati, nunc breves foliati non pseudobulbosi, vaginis foliorum more *Oberoniæ* distiche subimbricatis. Scapi simplices, aphylli, paucivaginati, in speciebus pseudobulbosis e rhizomate oriundi, basi folio unico v. vagina longa stipati, in foliatis ad axillam foliorum. Racemi v. spicæ tenues, elongati v. juniores fere in capitulum contracti. Flores minimi, brevissime pedicellati. Bracteæ parvæ.

Species v. varietates insignes adsunt 8, Indiæ orientalis, Chinæ australis et Archipelagi Malayani incolæ. *Lindl. Gen. et Sp. Orch.* 253. *Reichb. f. in Walp. Ann.* vi. 922, et in *Bonpl.* 1857, 37. *Wight, Ic. t.* 1732 (*Euproboscis*, ad specimen floribus monstruosis 3-andris delineata).

### TRIBUS III. NEOTTIÆÆ.

218. **Galeola**, Lour. *Fl. Cochinch.* 520. (Cyrtosia, Blume, *Bijdr.* 396, t. 6; *Rumphia*, i. 199, t. 69. Erythrorchis, Blume, *Rumphia*, i. 200, t. 70. Hæmatorchis, Blume, l.c. iv. t. 200 B. Pogochilus, Falcem. in *Hook. Journ. Bot.* iv. 73. Ledgeria, F. *Muell. Fragm. Phyt. Austral.* i. 238.)—Sepala subæqualia, concava, conniventia v. demum patentia. Petala sepalis æquilongum, nunc latiora nunc angustiora. Labellum ad basin columnæ sessile, latum, concavum, columnam laxè involvens, sepalis vix longius, lobis lateralibus brevibus latis v. obsoletis, medio lato sæpe undulato-crispo, facie villosa v. glabra. Columna longiuscula, exalata v. apice breviter alata, apoda; stigma sub rostellum brevi transversum; clinandrium plus minus membranaceo-dilatatum, obscure lobatum v. denticulatum, cum alis columnæ dum adsint continuum. Anthera intra marginem clinandrii affixa, incumbens, dorso plana convexa v. crasse conica, loculis distinctis; pollinia in loculis plus minus distincte 2-lobis pulvereis-granulosa v. interdum subcerea, libera v. demum in rostellum sessilia. Capsula magna, oblonga v. sæpius elongata, carnosae v. rariis subsiccæ, interdum vix tardius dehiscens sæpius tamen demum in valvas inæquales fissæ. Semina late v. anguste alata v. aptera.—Herbæ aphyllæ, ramosæ, super arbores interdum altissime scandentes, radices hinc inde emittentes, interdum erectæ,

elatæ. Racemi laxè paniculati sæpius penduli. Flores mediocres v. majusculi. Bractææ ad basin ramulorum et pedicellorum parvæ v. in una specie foliaceæ.

Species ad 12, Indiæ orientalis, Japoniæ, Archipelagi Malayani, Novæ Caledoniæ et Australiæ incolæ. *Reichb. f. Xen. Orch.* ii. 76, t. 119 (*Erythrorchis*), t. 120 (*Cyrtosia*), et t. 195; *Otia Hamb.* 40. *Benth. Fl. Austral.* vi. 306. *Hook. f. Ill. Himal. Pl.* t. 22 (*Cyrtosia*). *Fitzger. Austral. Orch. cum tab.* 1.

Capsula in *G. javanica* omnino indehiscens dicitur, in *G. Lindleyana* et *G. septentrionali* vix tardius diu siccata dehiscit, in *G. altissima* et *G. cassyhoide* longior tenuiorque est et maturitate facile dehiscit.

ERIAxis, *Reichb. f. in Linnæa* xli. 63, est species Novo-Caledonica quam auctor distinguit capsula demum in valvas 6 dehiscente, labello basi columnæ adnato et ramis nonnullis sterilibus foliis bene evolutis instructis. Species tamen nobis invita natura a *Galola* (*Erythrorchi*) *altissima*, Bl., generice separatur. Capsulæ valvæ in aliis speciebus numero variant 2, 3 v. 4. Sepala extus tomentoso-villosa æstivatione vix non valvata observantur in *G. altissima* ut in *G. rigida*.

219. *Vanilla*, Sw. in *Nov. Act. Soc. Sc. Upsala*, vi. 66, t. 5. (*Myrobroma*, *Salisb. Parad. Lond.* t. 82).—Sepala subæqualia, libera, patentia. Petala sepalis subsimilia. Labelli unguis columnæ adnatus, limbus latus, concavus, basi columnam involvens. Columna elongata, aptera, apoda; stigma sub rostello brevi transversum; clinandrium breve v. oblique elevatum. Anthera margini clinandrii affixa, incumbens, convexa semiglobosa v. obtuse conica, loculis discretis; pollinia pulvereo-granulosa, libera v. demum in rostello sessilia. Capsula sæpius elongata, carnosa, non v. vix tardius dehiscens.—Herbæ validæ, alte scandentes, ramosæ, foliosæ v. rarius aphyllæ, radices emittentes. Folia coriacea v. carnosa, nervosa, sessilia v. breviter petiolata. Racemi v. spicæ axillares, sæpius breves. Flores magni. Bractææ ovatæ.

Species ad 20, per regiones tropicas utriusque orbis late dispersæ. *Lindl. Gen. et Sp. Orch.* 434. *Bauer, Ill. Orchid. Gen.* t. 10, 11. *Reichb. f. in Bonplandia*, 1854, 88, 97; in *Flora*, 1865, 273; *Otia Hamb.* 39; et in *Linnæa* xi. 65. *Blume, Rumphia*, i. t. 67, 68. *Wight, Ic.* t. 931, 932. *Griff. Ic. Pl. As.* t. 281. *Andr. Bot. Rep.* t. 538. *Lodd. Bot. Cab.* t. 737. *Hayne, Arzneigew.* xiv. t. 22. *Fl. des Serres*, t. 1789, 2218.

220. *Sobralia*, Ruiz et Pav. *Prod. Fl. Per. et Chil.* 120, t. 26; *Syst. Veg.* 231.—Sepala subæqualia, erecta, basi connata. Petala sepalis subsimilia v. latiora magisque colorata. Labelium a basi columnæ erectum; lobi laterales columnam arcte amplectentes v. involventes, eique interdum basi adnati; lamina e sepalis breviter exserta, patens, concava, undulata v. fimbriata, indivisa v. 2-loba; facie lævis v. 2-lamellata v. lamellato-cristata. Columna elongata, subincurva, semiteres, angulis acutiusculis v. anguste alatis, apoda; stigma sub rostello brevi latum; clinandrium breviter v. longiuscule 3-lobum. Anthera lobo postico affixa, incumbens, discrete 2-ocularis; pollinia (in perpaucis floribus observata) sæpius in quoque loculo 4, pulvereo-granulosa, appendicula copiosa laxè granulosa connexa, a rostello libera (v. demum in rostello sessilia?). Capsula oblonga v. elongata, rigida v. carnosa, erostris.—Herbæ terrestres, elatæ, foliosæ, non tuberosæ. Folia dissita, coriacea, plicato-venosa, in vagina sessilia. Flores magni, in racemis terminalibus axillari-busque pauci, interdum ad florem unicum reducti. Bractææ appressæ, sæpe rigide paleaceæ, interdum plures imbricatæ.

Species ad 30, Andium Americæ tropicæ a Peruvia usque ad Mexicum, necnon Guianæ incolæ. *Lindl. Fol. Orch.* 1854; *Sert. Orchid.* t. 29. *Reichb. f. Orch. Centr. Amer.* 5, 68, t. 1; *Xen. Orch.* ii. 175, t. 30, 42, 90, 163, 175, 176. *Papp. et Endl. Nov. Gen. et Sp.* t. 93. *Batcm. Orch. Mex. et Guatem.* t. 26, 37. *Bot. Mag.* t. 4446, 4570, 4682, 4882. *Bot. Reg.* 1841, t. 17.

FREGEA, *Reichb. f. in Bot. Zeit.* 1852, 712; *Orch. Centr. Amer.* 10, t. 2, species unica ex America centrali, e specimine unico siccæ a nobis non viso nota, ex caractere dato et icone vix a *Sobralia* generice distinguenda videtur columnæ abbreviata.

CYATHOLOTTIS, *Papp. et Endl. Nov. Gen. et Sp.* i. 55, t. 94, species unica Peruviana, a nobis non

visa, ex descr. et icone pariter ad *Sobraliam* referenda videtur. Flores solito minores et bractæ numerosiores imbricatæ. Bractæ tamen plures imbricatæ observantur in speciebus pluribus *S. violaceæ*, Lindl., affinibus.

221. *Epistephium*, Kunth, *Syn. Pl. Equin.* i. 340.—Perianthium ad apicem ovarii urceolo calyciformi dentato cinctum. Sepala libera, subæqualia, erecta. Petala sepalis subsimilia nisi latiora magisque colorata. Labelli unguis columnæ adnatus, lamina subpatens, obovata, indivisa, basi columnam amplectens. Columna semiteres, superne breviter dilatata; stigma sub rostello brevi latum; clinandrium membranaceum, late 3-lobum. Anthera lobo postico clinandrii affixa, incumbens v. subpendula, loculis discretis; pollinia laxè pulvereo-granulosa (in quoque loculo 2 v. 4?). Capsula oblonga v. elongata, rigida.—Herbæ terrestres, sæpius elatæ, subramosæ, basi sæpius radicales, glaberrimæ. Folia rigide coriacea, nervosa, ovata v. lanceolata, sessilia v. cordato-amplexicaulia. Flores magni, in racemo terminali v. rarius axillari plures. Bractæ breves, latæ.

Species 6, Americæ australis tropicæ incolæ. Lindl. *Gen. et Sp. Orch.* 432. *H. B. et K. Nov. Gen. et Sp.* vii. t. 632. *Pæpp. et Endl. Nov. Gen. et Sp.* t. 91, 92. *Reichb. f. Xen. Orch.* t. 1; in *Bonpl.* 1854, 97; et in *Linnaea* xli. 65. *Bot. Mag.* t. 5485.

222. *Sertifera*, Lindl. *Herb.*; *Reichb. f. in Linnaea* xli. 63.—Sepala subæqualia, libera, erecto-patentia. Petala sepalis subsimilia nisi paullo angustiora. Labellum a basi columnæ erectum, latissimum, membranaceum, ventricosum, ecalcaratum, marginibus columnam involvens, medio lamella oblique transversa quasi in saccos 2 superpositos divisum. Columna longiuscula, tenuis, exalata, apoda, rostello lato concavo membranaceo; clinandrium breve. Anthera in margine clinandrii erecta v. incumbens, loculis discretis; pollinia pulvereo-granulosa, in quoque loculo (si rite observata) 4, appendice copiosa laxè granulosa connexa. Capsula . . .—Herba terrestris, rhizomate repente, caule elato foliato. Folia in vagina longa, sessilia, plicato-venosa. Racemi breves, fere in umbellam contracti, ad axillas pedunculati. Flores parvuli, longiuscule pedicellati. Bractæ parvæ, angustæ.

Species 1, Ecuadorensis, *S. purpurea*, Lindl., cui addidit Reichb. f. alteram Peruvianam, *S. virgatam*, a nobis non visam, quæ racemo terminali dissitiflora, labello oblongo sub-3-lobo forte non vere congener.

223. *Corymbis* (etiam *Corymborchis*), Thou. *Orch. Hes Afr.* t. 37, 38. (*Hysteria*, Reinw. in *Blume, Cat. Hort. Buitenz.* 99, nomen tantum; et in *Syll. Pl. Soc. Ratiss.* ii. 5. *Rhynchanthera*, *Blume, Bijdr. tabell.* 78, ex ejusd. *Orch. Archip. Ind.* 125. *Macrostylis*, *Breda, Orch. Kuhl et Hass. cum tab.* 1. *Chloidia*, Lindl. *Gen. et Sp. Orch.* 484.)—Sepala et petala linearia, diu in tubum conniventia v. subcoherentia, apice in laminas subpatentes plus minus dilatatum. Labellum a basi columnæ erectum, lineare, canaliculatum, apice in laminam breviter recurvam dilatatum. Columna longa, erecta, teres, apice clavata, lobis v. auriculis 2 erectis terminata; stigma ad basin rostelli erecti acuminati transversæ saccatum, margine inferiore sæpius incrassato; clinandrium breve. Anthera erecta, angusta, rostello subæquilonga, acuminata, loculis contiguis; pollinia granulosa, anthera dehiscente stipiti subuliformi a glandula peltata rostelli dependenti affixa; pollinario delapso rostellum 2-fidum remanet. Capsula linearis, subteres, perianthii reliquiis brevibus et columna persistente coronata.—Herbæ elatæ, terrestres, foliatæ, interdum ramosæ, fibris radicalibus in rhizomate fasciculatis. Folia ampla, venis elevatis subplicata, in vaginis appressis sessilia v. breviter petiolata. Flores mediocres v. majusculi, secus ramos paniculæ brevis axillaris v. terminalis subcorymbosæ dissiti, subsessiles. Bractæ parvæ, ovatæ.

Species 6 v. 7, per regiones tropicas utriusque orbis late dispersæ. *Benth. Fl. Austral.* vi. 311. *Reichb. f. in Flora*, 1865, 183, et in *Bonpl.* 1854, 11, 96 (*Macrostylis*). *Blume, Orch. Archip. Ind.* 125, t. 43, 43.

Species Americane a Lindleyo sub nomine *Chloidia* a gerontogeis distinctæ, nec habitu nec characteribus differunt. Genus in integrum servatum naturalissimum est, nulli nisi *Tropidie* affine.

224. *Tropidia*, Lindl. Bot. Reg. sub t. 1618; Gen. et Sp. Orch. 497. (*Decaisnea*, Lindl. in Wall. Cat. Herb. Ind. n. 7388, nomen. *Cnemidia*, Lindl. Bot. Reg. sub t. 1618; Gen. et Sp. Orch. 462. *Ptychochilus*, Schau. in Pl. Meyen. 431, t. 12 B. Govindovia, Wight, Ic. vi. 34, t. 2090.)—Sepala conniventia, posticum angustum, lateralia latiora, basi sub labello in mentum breve connata. Petala sepalo postico subsimilia. Labellum ad basin columnæ sessile, erectum, canaliculatum concavum v. basi in saccum seu calcar breve obtusum productum, sepalis subæquilongum, indivisum, sæpe acuminatum. Columna brevis nunc brevissima, rostello longo erecto utrinque membranaceo-dilatato antheram amplectente, apice in acumen longum subulatum productum; stigma ad basin acuminis crassum, cavum, fere horizontale; clinandrium pone rostellum vix prominens. Anthera erecta, angusta, acuminata, rostello subbrevior, loculis contiguis; pollinia granulosa, anthera dehiscente stipiti subuliformi a glandula peltata rostellii dependenti affixa, pollinario delapso rostellum 2-fidum remanet. Capsula ovoidea v. oblonga, acutangula, erecta v. subpatens.—Herbæ terrestres, elatæ, foliatæ, sæpe ramosæ, fibris radicalibus in rhizomate fasciculatis. Folia ampla v. arundinacea, venis elevatis subplicata. Flores medio-cres, spicis brevibus densis ad apices ramorum solitariis v. paucis. Bracteæ herbacæ, nunc subulatæ erectæ, nunc latiores disticho-patentes.

Species ad 5, Indiæ orientalis, Archipelagi Malayani et insularum maris Pacifici incolæ. Blume, Orch. Archip. Ind. 121, t. 40, 41. Reichb. f. in Seem. Fl. Vt. 295; in Linnaea xxv. 230; Otia Hamb. 51 (*Cnemidia*).

225. *Altensteinia*, H. B. et K. Nov. Gen. et Sp. i. 332, t. 72, 73.—Sepala subæqualia, nunc libera patentia v. reflexa, nunc erecto-patentia basi breviter connata. Petala sepalis similia nisi tenuiora v. minora. Labellum superum, sessile, erectum, rotundatum, basi columnam amplectens eique interdum breviter adnatum, denum planum v. late concavum, indivisum, sæpe ciliato-fimbriatum. Columna brevis, exalata, apoda; stigma sub rostello amplo erecto membranaceo-dilatato late concavum v. profunde excavatum fere saccatum; clinandrium postice breve, lateribus membranaceo-dilatatis cum rostello continuis laceris v. integris. Anthera sessilis, erecta, ovata, loculis contiguis; pollinia pulvereo-granulosa, oblonga, anthera dehiscente a glandula terminali rostellii pendula. Capsula erecta, ovoidea v. subglobosa.—Herbæ terrestres, fibris radicalibus in rhizomate brevi fasciculatis, caule ima basi foliato v. aphylo plurivaginato erecto simplici. Folia ovata v. angusta, nunc ad basin caulis pauca, nunc in gemma distincta subfasciculata. Flores mediocres v. parvi, dense spicati. Bracteæ membranaceo-scariosæ, in spica juniore imbricatæ.

Species ad 12, Americæ tropicæ andinæ incolæ. Lindl. Gen. et Sp. Orch. 449; et in Ann. Nat. Hist. ser. 1, xv. 385. Reichb. f. Xen. Orch. i. 17; iii. 18.

AA, Reichb. f. Xen. Orch. i. 18, genus ad *Altensteiniam paleaceam*, H. B. et K. propositum, species 2 includit, scapo florenti aphylo, vaginis bracteisque scarioso-hyalinis, floribus parvis, sepalis petalisque basi subconnatis, labello etiam in flore aperto valde concavo. *MYNOSODES*, Reichb. f. Xen. Orch. i. 19, t. 8, ab *Aa* parum differt columna paullo longiore, et ab ipso auctore, Xen. Orch. iii. 18, ad *Altensteiniam* revocatur.

226. *Pterichis*, Lindl. Gen. et Sp. Orch. 444. (*Acræa*, Lindl. in Benth. Pl. Hartw. 155.)—Sepala subæqualia, libera, posticum pendulum, lateralia erecta. Petala sepalo postico angustiora, patentia, libera v. diu sepalo adhærentia. Labellum superum, erectum, ad basin columnæ sessile eique subadnatum, latissimum, concavum, subgaleatum, intus pubescens v. callosum, lobi laterales lati erecti columnam occultantes, medius angustus recurvus. Columna brevissima, lata; stigma concavum sub rostello terminali erecto basi lato postice (antheram versus) concavo medio in acumen angustum productum; clinandrium parum prominens. Anthera erecta, oblonga, loculis contiguis; pollinia pulvereo-granulosa, angusta, anthera dehiscente a glandula terminali rostellii pendula. Capsula erecta, oblonga.—Herbæ terrestres, fibris in rhizomate brevi fasciculatis subcarnosis. Folia ad basin caulis erecti simplicis pauca. Flores mediocres, in scapo vaginato aphylo laxè spicati, ad axillas bractearum lanceolarum sessiles.

Species ad 6, Americæ tropicæ australis incolæ. *Lindl. Orch. Lindon.* 26, et in *Ann. Nat. Hist. ser. 1, xv. 386 (Acræa)*. *Reichb. f. in Bonplandia* 1854, 10; *Xen. Orch.* iii. 18, 83 (*Acræa*).

Genus ab *Allensteinia* parum differt, imprimis labelli forma.

227. **Cranichis**, Sw. in *K. Vetensk. Acad. Nya Handl. Stockh.* xxi. 226.—Sepala libera, subæqualia, posticum (inferum) patens, lateralia sæpius latiora, erecta v. patentia. Petala angusta, patentia, a columna libera v. vix ima basi brevissime adnata. Labellum (superum) ad basin columnæ sessile (v. unguiculatum?), erectum, concavum fornicatum v. postice subsaccatum, columnam amplectens, indivisum. Columna brevis nunc brevissima, rostello amplo erecto v. apice incurvo, columna sæpe longiore, postice (antheram versus) concavo v. 2-alato, antice stigmatoso; clinandrium breve. Anthera in margine clinandrii sessilis v. stipitata, erecta, rostello parallela eoque subbrevior, loculis distinctis; pollinia pulvereogranulosa, acuminata, anthera dehiscente a glandula rostelli pendula. Capsula erecta, ovoidea v. oblonga.—Herbæ terrestres, fibris radicalibus in rhizomate brevi v. repente subfasciculatis. Folia radicalia v. ima basi caulis conferta, lata, patentia, membranacea, sessilia v. longe petiolata. Scapus sæpius tenuis, interdum elatus, simplex, paucivaginatus. Flores parvi, in spica conferti v. dissiti. Bracteæ breves v. angustæ.

Species fere 20, Americæ tropicæ Andinæ Mexici et Indiæ occidentalis incolæ. *Lindl. Gen. et Sp. Orch.* 450; *Orch. Lind.* 27; et in *Ann. Nat. Hist. ser. 1, xv. 385*. *Reichb. f. in Flora* 1865, 274; *Otia Hamb.* 4, 83; *Orch. Centr. Amer.* 62; et in *Linnaea* xli. 19, 52. *Sw. Fl. Ind. Occid.* t. 29. *H. B. et K. Nov. Gen. et Sp. t. 74 (Ophrys)*. *Pæpp. et Endl. Nov. Gen. et Sp. t. 123 (Ponthieva)*.

*C. parvilabris*, Lindl. *Orch. Lind.* 27, ex speciminibus nostris est *Ponthieva* species. Ocampoa, *A. Rich. et Gal. in Ann. Sc. Nat. ser. 3, iii. 31*, in herb. Lindl. ad *Prescottiam* refertur. Specimina nobis desunt, sed analysis in herb. Lindl. characteres omnes *Cranichidis* ostendit, excepto labello unguiculato.

228. **Prescottia** (errore Prescottia), Lindl. in *Hook. Exot. Fl. t. 115*. (Decaisnea, *Brongn. in Duperr. Voy. Coq. Bot.* 192, t. 39. *Galeoglossum*, *A. Rich. et Gal. in Ann. Sc. Nat. ser. 3, iii. 31*).—Sepala membranacea, basi in cyathum brevem v. in tubum longiorem connata, superne patentia v. sæpius revoluta. Petala angusta, tenuia, basi columnæ adnata. Labelli (superi) unguis cyatho sepalino adnatus, lamina erecta, lata, subcarnosa, valde concava fornicata cucullata v. fere clausa, basi 2-auriculata, columnam sæpe includens. Columna brevissima; stigmata 2, subdistincta, ad basin rostelli erecti lati membranacei obtusi v. retusi; clinandrium erectum, acuminatum v. quasi in filamentum productum, marginibus cum rostello connatis. Anthera in margine v. acumine clinandrii erecta, sæpius brevis, loculis divergentibus; pollinia pulvereogranulosa, anthera dehiscente lobis rostelli sæpius sigillatim affixa. Capsula parva, erecta, ovoidea v. oblonga.—Herbæ terrestres, fibris radicalibus in rhizomate fasciculatis interdum carnosius, caule foliato tenui v. elato simplici, supra folia plurivaginato. Folia ad basin caulis conferta v. radicalia, sessilia v. longe petiolata, parva v. ampla, membranacea. Flores parvi nunc minimi, in spica densa v. tenui numerosi, subsessiles. Bractere flore breviores.

Species ad 20, Americæ tropicæ a Brasilia usque ad Indiam occidentalem et Mexicum incolæ. *Lindl. Gen. et Sp. Orch.* 453, et in *Ann. Nat. Hist. ser. 1, xv. 386*. *Blume, Orch. Archip. Ind.* t. 48 B. *Reichb. f. in Walp. Ann.* i. 806, iii. 594; in *Bonplandia* 1855, 66; in *Linnaea* xix. 377; et in *Saund. Ref. Bot.* t. 98. *Bot. Reg. t. 1915*. *Lodd. Bot. Cub.* t. 990.

229. **Ponthieva**, R. Br. in *Ait. Hort. Kew. ed. 2, v. 199*.—Sepala libera, patentia, nunc subæqualia, nunc lateralia postico latiora interdumque inter se connata. Petala alte columnæ adnata, ab apice columnæ patentia, sepalis angustiora. Labelli (superi) unguis basi columnæ adnatus, ab apice columnæ breviter patens, ascendens, lobis laterilibus auriculatis; lamina abrupte dilatata, patens, nunc minima. Columna brevis v. longiuscula, subteres, apice dilatata; stigma sub rostello erecto dilatato postice concavo latum, excavatum; clinandrium breve. Anthera pone rostellum erecta eoque brevior,

oblonga, parum convexa, loculis contiguus; pollinia in loculis sub-2-partita, pulvereo-granulosa, anthera dehiscente a glandula rostellii pendula. Capsula oblonga, erecta, erostris.—Herbæ terrestres, glabræ v. pilosæ, fibris radicalibus in rhizomate brevi fasciculatis. Scapus elongatus, simplex. Folia subradicalia, ovata v. lanceolata, plus minus petiolata, membranacea. Flores mediocres, in racemo laxo sæpius glanduloso-pubescente breviter pedicellati. Bracteæ angustæ, sæpius parvæ.

Species editæ ad 10, per Americam calidiorem a Bolivia usque ad Mexicum et Americæ borealis civitates australes dispersæ. *Lindl. Gen. et Sp. Orch.* 444, et in *Ann. Nat. Hist. ser. 1*, xv. 385. *Reichb. f. Orch. Centr. Amer.* 63; in *Linnaea* xxviii. 382, xli. 18, 52, 101; *Xen. Orch.* iii. 18. *A. Rich. Fl. Cub. t.* 87. *Bot. Mag. t.* 842 (*Neottia*), 6637. *Bot. Reg. t.* 760. *Lodd. Bot. Cab. t.* 1190.

230. *Wallschlagelia*, *Reichb. f. in Griseb. Fl. Brit. W. Ind.* 639, et in *Bot. Zeit.* 1863, 131.—Sepala tenuia, erecta, conniventia, posticum liberum, lateralia paullo latiora, basi in mentum breve v. elongatum calcariforme coalita. Petala sepalo postico similia, nisi minora. Labellum ad basin columnæ sessile, erectum, latum, concavum, intus nudum, basi in saccum seu calcar intra sepalorum mentum productum, indivisum. Columna brevissima; stigma sub rostello brevi lato erecto integrum; clinandrium breve. Anthera erecta, sessilis, ovata, vix acuminata, loculis distinctis; pollinia pulvereo-granulosa, anthera dehiscente glandulæ parvæ rostellii affixa. Capsula parva, ovoidea, erecta.—Herbæ terrestres, aphyllæ, fibris radicalibus in rhizomate brevi fasciculatis leviter incrassatis, caule simplici tenuissimo squamis paucis parvis instructo. Flores minimi, in spica laxa subsessiles. Bracteæ minimæ.

Species 2, altera Indiæ occidentalis incola, perianthii mento brevi gibbiformi, labello basi breviter saccato, *Sw. Fl. Ind. Occid. t.* 29, f. 1 (*Cranichis*); altera (*W. calcarata*, Benth.) ad fluvium Uaupès Brasiliz borealis a Spruceo lecta sub n. 2847, perianthii mento longiuscule et anguste calcariformi calcar labelli includente. Flos in utraque specie minus distincte reversus quam in *Cranichide*, cui cæterum genus valde affine est.

231. *Pseudocentrum*, *Lindl. in Journ. Linn. Soc.* iii. 63.—Sepalum posticum (inferum) liberum, angustum, incurvum, lateralia breviora, latiora, basi connata et in mentum longissime lineare calcariforme ascendens producta. Petala angustata, libera. Labellum (superum) basi columnæ adnatum, ab apice columnæ patens, longissime lineare canaliculatumque intra sepalorum mentum inclusum, juxta columnam lobis 2 erectis auriculatum, apice (in fundo calcaris) breviter clausum, lobo medio parvo lineari inflexo. Columna brevis nunc brevissima; stigma ad basin rostellii erecti late membranacei medio acuminati profunde excavatum; clinandrium breve, membranaceo-dilatatum, marginibus cum rostello continuis. Anthera in margine clinandrii erecta, ovata, loculis contiguus. Pollinia oblonga, pulvereo-granulosa, anthera dehiscente a glandula terminali rostellii pendula. Capsula . . .—Herbæ terrestres, elatæ, fibris radicalibus in rhizomate brevi fasciculatis carnosis, caulibus foliatis simplicibus erectis. Folia radicalia plura, longe petiolata, membranacea, caulina pauca, superiora ad vaginas reducta. Flores mediocres v. majusculi, in spica longa numerosi, subsessiles. Bracteæ membranacæ.

Species 4 v. 5, Andium Americæ australis, Americæ centralis et Jamaicæ incolæ, quarum 3 solæ, altera Jamesoniana, altera Purdieana, cum tertia Jamaicensi, Benth. in *Hook. Ic. Pl. t.* 1382, nobis notæ sunt. *P. Hoffmanni* et *P. bursarium*, Reichb. f. in *Linnaea* xli. 53, non vidimus.

232. *Gomphichis*, *Lindl. Gen. et Sp. Orch.* 446.—Sepala subæqualia, libera, a basi patentia, subincurva. Petala sepalis similia nisi minora. Labellum (superum) a basi columnæ erectum, in unguem brevem contractum, lamina lata concava subgaleata indivisa v. 3-loba columnam obtegente. Columna subteres, antrorsum incurva, sæpius villosa; stigma ad basin rostellii ampli erecti supra carinati latum, concavum; clinandrium membranaceo-dilatatum, marginibus cum rostello continuis. Anthera in margine clinandrii erecta, ovata, loculis contiguus; pollinia pulvereo-granulosa, anthera dehiscente a glandula terminali rostellii pendula. Capsula ovoidea, erecta.—Herbæ terrestres, fibris

radicalibus in rhizomate brevi fasciculatis carnosis, caule foliato erecto simplici. Folia lanceolata v. elongata, inferiora in petiolum contracta, superiora ad vaginas herbaceas reducta. Flores parvuli, in spica densa v. rarius laxa numerosi, sessiles. Perianthium supra ovarium sæpius inflexum. Bractee membranaceae, floribus breviores.

Species 4 v. 5, Andium Americæ australis incolæ. Genus a Reichb. f. in Bonplandia 1856, 211 ad *Stenopteram* reductum fuit, sed satis distinctum videtur imprimis perianthii forma, et ab auctore eodem iterum admittitur in Xen. Orch. iii. 20.

233. *Stenoptera*, Presl, Rel. Hænk. i. 95, t. 14. (Porphyrostachys, Reichb. f. Xen. Orch. i. 18.)—Sepala subæqualia, basi in tubum tenuem connata, superne libera, incurva, suberecta, æqualia v. posticum (inferum) angustum. Petala sepalis angustiora v. minora. Labellum (superum) a basi columnæ erectum, ovatum, basi in unguem contractum, lamina plana v. concava. Columna subteres, recta v. incurva, exalata; stigma ad basin rostellii erecti ampli supra carinati latum concavum; clinandrium elevatum, lateribus membranaceis nunc a rostelllo distinctis nunc cum ejus marginibus in cyathum connatis. Anthera in margine clinandrii erecta, ovata v. oblonga, loculis contiguis, valvis latis; pollinia pulvereo-granulosa, anthera dehiscente a glandula terminali rostellii pendula. Capsula oblonga, erecta.—Herbæ terrestres, fibris radicalibus in rhizomate brevi fasciculatis carnosulis, caule foliato elato simplici supra folia plurivaginato. Folia ad basin caulis conferta, subradicalia, basi contracta v. breviter petiolata. Flores in spica densa speciosi v. in spica tenui mediocres. Bractee nunc membranaceae coloratae, nunc parvulae.

Species 3, Americæ tropicæ montanæ incolæ, a Brasilia et Bolivia usque ad Indiam occidentalem extensæ. Lindl. Gen. et Sp. Orch. 447. H. B. et K. Nov. Gen. et Sp. t. 73 (*Altensteinia*); Reichb. f. in Bot. Zeit. 1863, 131.

234. *Neottia*, Linn. Gen. ed. i. 271. (Neottidium, Schlecht. ex Link, Handb. i. 249.)—Sepala subæqualia, libera, concava, denuum patentia. Petala sepalis similia nisi angustiora. Labellum a basi columnæ patens, sepalis longius, basi cavum v. subplanum, apice 2-lobum. Columna erecta v. incurva, longiuscula, subteres, exalata, apoda; stigma sub rostelllo antrorsum inclinato transversum; clinandrium truncatum v. obliquum posticeque brevissime productum. Anthera in margine clinandrii erectum v. antrorsum inclinatum, loculis contiguis; pollen pulvereo-granulosum in massas laxè coherens, anthera dehiscente a glandula rostellii pendulas v. mox dissolutas. Capsula ovoidea v. breviter oblonga, erecta v. subpatens, erostris.—Herbæ terrestres, aphyllæ, fibris radicalibus brevibus carnosis numerosis dense fasciculatis. Caulis erectus, simplex, vaginis pluribus concoloribus superne laxis sed limbo orbatis. Flores breviter pedicellati, dense v. laxè racemosi. Bractee parvæ.

Species nobis notæ 3, Europæ et Asiæ borealis v. montanæ incolæ. Lindl. Gen. et Sp. Orch. 457, et in Journ. Linn. Soc. i. 176. Reichb. f. Ic. Fl. Germ. t. 473, 478, f. 1, 2. Nees, Gen. Fl. Germ. Monoc. iii. n. 18 (*Neottidium*). Barla, Ic. Orch. Alp. Marit. t. 9. Dene. in Jacquem. Voy. Bot. t. 163 (*N. Lindleyana*, quæ nobis videtur *N. listeroidis*, Lindl. var.).

Labellum in *N. Nidus-avis* basi concavum est, in *N. listeroides*, Lindl., basi angustius planumque v. fere convexum. *N. micrantha*, Lindl., est species valde dubia et verisimiliter non congener, e specimine unico nota, a cl. auctore a Prescottio recepto cum habitatione 'Sibiria,' sed nec a Ledebourio nec ab ullo alio auctore Rossico visa.

235. *Listera*, R. Br. in Ait. Hort. Kew. ed. 2, v. 201. (Diphryllum, Raf. in Desc. Journ. Bot. i. (1808) 220.)—Sepala subæqualia, libera, patentia v. reflexa. Petala sepalis similia. Labellum a basi columnæ patens, dein sæpius pendulum, sepalis longius, angustum, integrum v. 2-fidum. Columna brevissima, crassa, exalata, apoda; stigma sub rostelllo terminali v. antrorsum inclinato transversum; clinandrium membranaceum, postice extensum, erectum, antheram sæpe æquans. Anthera a basi clinandrii antrorsum inclinatum loculis contiguis; pollinia in loculis sæpius bipartita, laxè pulvereo-granulosa, anthera dehiscente a glandula rostellii pendula. Capsula obovoidea v. subglobosa, erecta

v. subpatens, erostris, angulis obtusissimis.—Herbæ terrestres, fibris radicalibus in rhizomate brevi fasciculatis. Caules erecti, simplices, paucivaginati, medio foliis 2 latis suboppositis instructi. Flores parvuli, in racemo sæpius elongato breviter pedicellati. Bracteæ parvæ.

Species ad 10, Europæ, Asiæ temperatæ et montanæ et Americæ borealis incolæ. *Lindl. Gen. et Sp. Orch.* 455, et in *Journ. Linn. Soc.* i. 175. *Reichb. Ic. Fl. Germ.* t. 478, f. 3 ad 5, t. 479, 480. *Nees, Gen. Fl. Germ. Monoc.* iii. n. 19. *Barla, Ic. Orch. Alp. Marit.* t. 9. *Blume, Orch. Archip. Ind.* 135, t. 38 et 48 l. *Hook. Fl. Bor. Amer.* t. 205.

236. *Spiranthes*, L. C. Rich. in *Mem. Mus. Par.* iv. 50. (Aristotelea, *Lour. Fl. Cochinch.* 522, non *Lhér.* Ibidium, *Salisb. in Trans. Hort. Soc.* i. 291, pro parte absque char. *Gyrostachis*, *Pers. Syn. Pl.* ii. 511, sub *Neottia indicata*. *Cyclopogon*, *Presl, Rel. Hænk.* i. 93, t. 13, f. 1 male.)—Sepala libera, subæqualia, posticum erectum, cum petalis in galeam connivens v. cohærens v. apice patens, lateralia ovarii apici plus minus oblique affixa v. decurrentia, erecta v. patentia. Labellum sessile v. distincte unguiculatum, erectum, sæpe angustum, concavum, columnam amplectens eique sæpe adhærens, apice patens, indivisum v. 3-lobum, intus callis v. lamina duplici plus minus appendiculatum. Columna teres, basi sæpius in apice obliquo ovarii plus minus decurrens nec in pedem liberum producta; stigma sub rostello erecto nunc brevi obtuso nunc elongato membranaceo-dilatato latum; clinandrium postice breve, marginibus interdum elevatis cum rostello continuis. Anthera erecta, ovata v. oblonga, sessilis v. stipitata, rostello brevior v. longior, loculis discretis; pollinia pulvere-granulosa, interdum in caudicula brevem producta, anthera dehiscente a glandula rostellii pendula, pollinario delapso rostellum 2-dentatum relinquuntia. Capsula ovoidea v. oblonga, erecta.—Herbæ terrestres, fibris radicalibus in rhizomate brevi sæpius carnosius fasciculatis interdum in tubera incrassatis, caulibus foliatis v. florentibus aphyllis. Folia in diversis sectionibus diversa. Flores parvi v. majusculi, in spica unilateralis v. densa sessiles.

Species ad 80, per regiones temperatas tropicasque utriusque orbis late disperse.

Sectiones sequentes a variis auctoribus pro generibus propriis accipiuntur sed characteribus diversis limitantur:—

1. *Euspiranthes*. Folia caulina angusta v. rarius lata, sessilia v. in petiolum sæpius brevem contracta. Flores parvuli secus lineam spiralem v. rarius rectam secundi. Sepala lateralia ovario oblique affixa v. breviter decurrentia. Species temperatæ v. tropicæ. *Lindl. Gen. et Sp. Orch.* 463. *Reichb. f. Ic. Fl. Germ.* t. 474 ad 477; *Orch. Centr. Amer.* 65; in *Bonpl.* 1854, 11; 1855, 214; 1856, 211; in *Linneæ* xxv. 230; *Xen. Orch.* iii. 20; *Otia Hamb.* 84. *Nees, Gen. Fl. Germ. Monocot.* iii. n. 16. *Barla, Orch. Alp. Marit.* t. 10. *Bab. in Trans. Linn. Soc.* xix. t. 32. *Lindl. Collect. Bot.* t. 30. *Hook. Journ. Bot.* iii. t. 12. *Wight, Ic.* t. 1724. *Blume, Orch. Archip. Ind.* t. 37, 38, 45, 48 (*Gyrostachys*). *Fitzger. Austral. Orch. cum tab.* 1. *Hook. Fl. Bor. Amer.* t. 203. *Torr. Fl. N. York,* t. 128, 129. *Pæpp. et Endl. Nov. Gen. et Sp.* t. 110. *Reichb. f. Xen. Orch.* t. 179, f. 1. *Link, Kl. et Otto, Ic. Pl. Rar.* t. 11. *Bot. Mag.* t. 1568, 5277. *Bot. Reg.* t. 602, 794, 823, 1934. *Sweet, Brit. Fl. Gard.* t. 42 (icones antiquiores pleræque sub *Neottia*).

2. *Sauroglossum*. Folia subradicalia longiuscule petiolata, ovata v. ovato-lanceolata. Spica laxa v. secunda. Flores quam in *Euspiranthe* sæpius majores. Sepala lateralia ovario oblique v. fere recte affixa, vix v. non decurrentia. Species tropicæ Americanæ. *Jacq. Ic. Rar.* t. 601. *Red. Lil.* t. 164. *Andr. Bot. Rep.* t. 376. *Bot. Mag.* t. 2026 (omnes sub *Neottia*). *SAUROGLOSSUM, Lindl. Bot. Reg.* t. 1618; *Gen. et Sp. Orch.* 480. *SYNASSA, Lindl. Bot. Reg.* sub t. 1618; *Gen. et Sp. Orch.* 481. *Spiranthes elatum*, A. Rich., ad hanc sectionem referimus, sed a *Sauroglossum elato*, Lindl., specificè distincta videtur.

3. *Sarcochlottis*. Folia radicalia longiuscule petiolata, ovata v. ovato-lanceolata. Spica laxa v. densa, vix secunda. Flores quam in *Euspiranthe* majores, nunc magni. Sepala lateralia cum columnæ basi in ovario plus minus decurrentia nec montum distinctum formantia. Species tropicæ Americane. *Sm. Exot. Bot.* t. 105. *Bot. Mag.* t. 1562, 2730. *Bot. Reg.* t. 1043 (omnes sub *Neottia*). *Reichb. f. Orch. Centr. Amer.* 66; in *Bonpl.* 1854, 11; 1856, 211; et in *Linneæ* xix. 378, xxviii. 382, et xxii. 815 (*Stenorhynchus*). *SARCOCHLOTTIS, Presl, Rel. Hænk.* i. 95, t. 15. *Lindl. Bot. Reg.* 1843; *Misc.* 60.

4. *Stenorrhynchus*. Caules sæpe elati, interdum foliati. Folia radicalia basi breviter v. longe angustata. Spica sæpius densa. Flores sæpius majusculi v. magni. Sepala lateralibus cum columnæ basi in ovarium longe decurrentia, basi in mentum distinctum prominentia. Species tropicæ Americane. *H. B. et K. Nov. Gen. et Sp. t. 71. Jacq. Ic. Rar. t. 600. Hook. Exot. Fl. t. 3, 4. Bot. Mag. t. 1036, 1374, 2797 (omnes sub Neottia). Reichb. f. Xen. Orch. t. 179, f. 2, 3. STENORHYNCHUS, L. C. Rich. in Mem. Mus. Par. iv. 59 (nomen); Lindl. Gen. et Sp. Orch. 476, et in Ann. Nat. Hist. ser. 1, xv. 386. Pepp. et Endl. Nov. Gen. et Sp. 109. Bot. Reg. t. 701 (Neottia); 1847, t. 65. Reichb. f. in Bonpl. 1855, 177; 1856, 211, et in Linnæa xli. 101. Præter species ad *Stenorrhynchum* relatas huc pertinent etiam *Spiranthes hirta*, Lindl., *S. bonariensis*, Lindl., alique.*

237. *Baskervilla*, Lindl. Gen. et Sp. Orch. 505.—Sepala subæquilonga, erecta, posticum liberum, lateralibus fere ad apicem connata, basi sub labello mentum latum formantia. Petala angusta, basi contracta et columnæ appressa (v. ex Lindleyo adnata). Labellum basi columnæ affixum, ungue brevi patente, lobis 2 erectis juxta columnam auriculato, lamina erecta basi late saccata. Columna brevissima, teres, clavata, rostello magno erecto bialato acuminato, facie supra (antheram versus) leviter concava, infera (labellum versus) carnosio-incrassata apice 2-dentata; stigma inter dentes et acumen rostelli horizontale, cavatum; clinandrium brevissimum. Anthera breviter stipitata, erecta, acuminata, rostello parum brevior, loculis contiguis; pollinia in quoque loculo 2, fere solida læviaque (demum pulverea?), ovoideo-oblonga, in caudiculis longas connatas producta, anthera dehiscente a glandula rostelli pendula. Capsula . . . —Herba terrestris, fibris radicalibus in rhizomate repente fasciculatis, caule erecto simplici basi paucitoliato. Folia membranacea, oblongo-lanceolata, in petiolum contracta. Flores parvuli, in spica densiuscula sessiles. Bractee angustæ, inferiores flores æquantes.

Species 1, Peruviana, e specimine unico adhuc nota. Genus certe inter *Neottias* *Spirantheas* collocandum, sed rostelli et polliniorum indole singulare. Analysis in herb. Lindleyano delineata a floribus a nobis examinatis pluribus notis differt.

238. *Pelezia*, Lindl. Gen. et Sp. Orch. 482, quoad species calcaratas.—Sepalum posticum erectum, cum petalis in galeam angustam setaceo-acuminatam connatum, lateralibus linearibus, basi in appendicem longe linearem calcariformem acutam latere superiore subapertam connata. Labellum ad basin columnæ peltatum affixa, erecta, linearis, canaliculata, basi in laminam longam carinato-complicatam v. calcariformem intra calcar sepalorum productum, a calcare liberum (v. plus minus adnatum?). Columna brevis, apoda; stigma latum, ad basin rostelli erecti longe subulato-acuminatis; clinandrium breve. Anthera pone rostellum erecta, oblongo-linearis, loculis contiguis; pollinia angusta, pulvereogranulosa, anthera dehiscente ab apice rostelli pendula. Capsula erecta, oblonga.—Herbæ terrestres, fibris in rhizomate sæpius repente fasciculatis. Folia radicalia longe petiolata v. ad basin caulibus simplicibus plurivaginati pauca, conferta, petiolis brevibus. Flores mediocres, in spica nunc densa nunc elongata laxioreque subsessiles. Bractee angustæ v. lanceolatae.

Species 7 v. 8, Americæ tropicæ a Brasiliâ usque ad Indiam occidentalem et Americam centralem incolæ. *Reichb. f. Orch. Centr. Amer. 102; in Bonplandia 1854, 11; Otia Hamb. 83; et in Saund. Ref. Bot. t. 97. Pepp. et Endl. Nov. Gen. et Sp. t. 124. Bot. Mag. t. 3403 (Neottia).*

*PELEZIA, Poit. ex L. C. Rich. Mem. Mus. Par. iv. 59, nomen tantum (COLLEA, Lindl. Bot. Reg. sub t. 760, PELEZIA, Lindl. Bot. Reg. t. 985) includit Spiranthem adnatam et Peleziam domingensem. Lindl. PELEZIA, Spreng. Syst. iii. 677, 701, includit Spiranthem adnatam cum Cephalanthere speciebus Japonicis calcaratis.*

239. *Physurus*, L. C. Rich. in Mem. Mus. Par. iv. 55, nomen. (*Erythrodes*, Blume, Bijdr. 410, t. 72. Microchilus, Presl, Rel. Hænk. i. 94; Symb. Bot. t. 15, 16.)—Sepala subæqualia, libera, erecta v. subpatentia. Petala cum sepalo postico in galeam conniventia v. coherentia. Labellum a basi columnæ erectum eique interdum breviter adnatum, subtus in calcar descendens acutum obtusum v. subdidymum productum, superne cavum, abrupte contractum, lamina terminali patente v. recurva integra v. varie 2-fida. Columna

brevis nunc brevissima, exalata; stigma ad basin rostellæ erecti longiusculi cavum; clinandrium parum prominens. Anthera erecta, breviter acuminata, loculis contiguis distinctis; pollinia granulosa (sectilia v. in speciebus nonnullis Americanis pulverea?), anthera dehiscente a glandula rostellæ sæpius majuscula oblonga pendula, pollinario delapso rostellum alte 2-fidum relinquentia. Capsula oblonga v. ovoides, erecta.—Herbæ terrestres, foliatæ, fibris radicalibus in rhizomate repente sæpius fasciculatis. Caules ascendentes v. erecti, simplices. Folia petiolata, ovata v. lanceolata, membranacea, in speciebus Americanis sæpe picta. Flores parvi v. mediocres, in spica laxa v. densa sæpe elongata subsessiles. Bractæe parvæ v. angustæ.

Species ad 20, regionum calidiorum Americæ et Asiæ incolæ. *Lindl. Gen. et Sp. Orch.* 501, et in *Journ. Linn. Soc.* i. 180. *Reichb. f. in Bonplandia* 1855, 214; 1856, 211; in *Flora* 1865, 274; *Orch. Centr. Amer.* 63; *Xen. Orch.* t. 178; *Oria Hamb.* 83. *Blume, Orch. Archip. Ind.* 95, t. 27, 28. *Griff. Ic. Pl. As. t.* 347 (*Goodyera*). *A. Rich. Fl. Cub.* t. 88. *Hook. Ic. Pl.* t. 449. *Bot. Mag. t.* 5305. *Saund. Ref. Bot.* t. 73.

*QUETRIETIA*, *Blume, Orch. Archip. Ind.* 117, t. 37 (*ORCHIPEDUM*, *Breda, Orch. Kuhl et Hass. cum tab. 1*), ab auctore a *Physuro* distinguitur flore toto imprimis rostello cum anthera antrorsum inclinato et nobis potius pro sectione *Physuri* habenda videtur.

*Physurus glandulosus*, *Lindl. in Journ. Linn. Soc.* i. 180, est *Cystorchis* species.

240. *Anectochilus*, *Blume, Fl. Jav. Pref.* 6. (*Anecochilus*, *Blume, Bijdr.* 411, t. 15. *Chrysobaphus*, *Wall. Tent. Fl. Nep.* 37, t. 27).—Sepala libera, posticum erectum v. recurvum, cum petalis in galeam agglutinatum, lateralia patentia, obliqua. Labellum pedi columnæ adnatum, patens, subtus in calcar descendens obtusum v. acutiusculum productum, ungue elongato longe fimbriato, lamina 2-loba in alabastro incumbente, demum patente. Columna brevissima, antice sub stigmatibus interdum nec semper 2-auriculata v. 2-lamellata; stigma sub rostello antrorsum elongato lato bicallosum; clinandrium plus minus dilatatum, cum marginibus rostellæ continuum, cyathiforme. Anthera ad marginem clinandrii in rostello inclinata v. suberecta, brevis v. acuminata, loculis discretis; pollinia granulosa (sectilia) in caudiculas breves v. elongatas connatasque producta, anthera dehiscente a glandula rostellæ pendula, pollinario delapso rostellum 2-fidum relinquentia. Capsula oblonga, erecta, sæpius acutangula, erostris.—Herbæ terrestres, rhizomate repente non tuberoso, caule foliato ascendente v. erecto. Folia prope basin caulis conferta v. subradicalia, petiolata, ovata, rigidule membranacea, sæpe eleganter picta. Flores mediocres, in spica laxa v. racemo pauci, sessiles v. brevissime pedicellati. Bractæe flore breviores.

Species ad 8, Indiæ orientalis et Archipelagi Malayani incolæ. *Lindl. Gen. et Sp. Orch.* 498, et in *Journ. Linn. Soc.* i. 178, pro parte. *Blume, Orch. Archip. Ind.* 41, t. 12, 17. *Wight, Ic.* t. 1731. *Bot. Mag. t.* 4123, 5208. *Bot. Reg. t.* 2010.

*A. lanceolatus*, *Lindl.*, *A. grandiflorus*, *Lindl.*, *A. flavus*, *Lindl.*, *A. Jauberti*, *Gaudich.*, et *A. longiflorus*, *Reichb.*, labello ecalcarato, ad *Odontochilum* pertinent. *A. albolineatus*, *Reichb. f. in Trans. Linn. Soc.* xxx. 141, species eadem videtur ac *A. brevilabris*, *Lindl.*

241. *Vrydagzenia*, *Blume, Orch. Archip. Ind.* 71, t. 17, 19, 20.—Sepala subæqualia, libera, posticum erectum cum petalis in galeam coherens, lateralia patentia. Labellum sessile, basi in calcar obtusum seu saccum inter sepala lateralia protrusum productum, erectum, concavum, lamina minima v. rarius dilatato-2-loba; calcar intus callis 2 longe stipitatis a columnæ basi descendentibus instructum. Columna brevissima, stigmata 2, ad latera rostellæ brevis erecti discreta; clinandrium breve. Anthera erecta, ovata, loculis discretis; pollinia sectilia, in caudiculas breves producta; anthera dehiscente glandulæ ovate rostellæ affixa, pollinario delapso rostellum 2-fidum relinquentia. Capsula . . . Herbæ terrestres, debiles, ascendentes, foliosæ, habitu fere *Heteriac.* Folia ovata v. lanceolata, membranacea, in petiolum brevem contracta. Flores mediocres v. parvuli, in spica sæpius brevi densa supra folia ultima sessili v. rarius elongata longiusque pedunculata sessiles. Bractæe flore breviores.

Species 8, Archipelagi Malayani et insularum maris Pacifici incolæ. *Reichb. f. Otia Hamb.* 51. Hic includitur præter species Blumeanas *Anæctochilus sandwicensis*, Lindl. Gen. et Sp. Orch. 500.

242. *Cystorchis*, Blume, *Orch. Archip. Ind.* 87, t. 24, 36.—Sepala libera, subæqualia, posticum erectum cum petalis in galeam connivens v. cohærens, lateralia subpatentia. Labellum ad basin columnæ sessile v. ei subadnatum, subtus in saccum seu calcar obtusum inter sepala lateralia protrusum productum, intus nudum v. vesiculis 2 intus callosis instructum, superne patens, lanceolatum, indivisum. Columna brevissima; stigma crassum, rostellum magnum erectum latum antice fere omnino obtegens sub acumine longiusculo duplici; clinandrium breve v. elevatum, marginibus cum rostellum in cyathum connatis. Anthera ad marginem clinandrii sessilis semi-immersa, v. in clinandrio brevi substipitata, erecta, ovata, loculis distinctis; pollinia sectilia, plus minus in caudiculas producta, anthera dehiscente glandulæ lineari v. oblongæ rostellum affixa, pollinario delapso rostellum profunde 2-fidum relinquentia. Capsula . . .—Herbæ terrestres, caule foliato e rhizomate repente ascendente v. erecto simplici. Folia ad basin caulis conferta, petiolata, ovata, crassiuscule membranacea, discoloria v. picta. Flores parvuli, in spica densa v. laxiuscula sessiles.

Species typicæ 2, Archipelagi Malayani incolæ, labello basi 2-vesiculoso, clinandrio elevato. In *C. obscura*, Blume, l. c. 89, t. 37, vesiculæ laterales labelli deesse videntur sed species dubie tantum ab auctore huc refertur. In *Ætheria fusca*, Lindl. in Journ. Linn. Soc. i. 184, e Himalaya, labellum vesiculis intus callosis omnino caret et clinandrium breve anthera substipitata, sed calcar latum subinflatum inter sepala protrusum et characteres cæteri uti habitus omnino *Cystorchidis* nec *Heterie*.

243. *Herpysma*, Lindl. *Bot. Reg. sub t.* 1618.—Sepala subæqualia, libera, tenuia, posticum erectum, fornicatum, lateralia patentia. Petala libera, sepalis lateralibus subsimilia. Labellum erectum, concavum, marginibus columnæ adnatum, subtus in calcar longiusculum descendens productum, intus 2-lamellatum, apice in laminam patentem rotundatam integram v. sub-3-lobam dilatatum. Columna brevis; stigma ad basin rostellum elongati erecti latiusculi 2-fidi prominens; clinandrium membranaceo-dilatatum, alte cupulatum. Anthera ad marginem clinandrii dorsifixæ, semi-immersa, erecta, oblonga, loculis discretis; pollinia sectilia, in quoque loculo in caudiculas leves duriusculas quasi 2-valvas producta, anthera dehiscente lobis rostellum applicita. Capsula ovoideo-oblonga, erecta, acutangula.—Herba longe procurrens, foliosa, caulibus ascendentibus. Folia membranacea, ovato-lanceolata, in petiolum contracta, vaginis laxis hyalinis. Flores mediocres, in spica densa intra folia ultima sessili conferti. Bractee tenues, lanceolatae.

Species 1, Himalaica. Lindl. *Gen. et Sp. Orch.* 506. Flores primo aspectu iis *Myrmecii* similes, sed calcare facili distinguendi, et polliniorum caudiculæ (saltem in floribus examinatis) ab omnibus a nobis examinatis differunt.

244. *Zeuxine*, Lindl. *Bot. Reg. sub t.* 1618. (*Adenostyles*, Blume, *Bijdr.* 414, non *Cass.* *Tripleura*, Lindl. *Bot. Reg. sub t.* 1618. *Psychechilus*, Breda, *Orch. Kuhl et Hass. cum tab.* 1.)—Sepala subæqualia, posticum erectum concavum, lateralia patentia, libera. Petala angusta, cum sepalo postico sæpius in galeam cohærentia. Labellum basi columnæ brevissime adnatum, erectum, basi concavum v. subsaccatum, e sepalis lateralibus tamen non protrusum, intus varie 2-callosum v. nudum, supra basin plus minus contractum; lamina nunc parva integra sepalis brevior, nunc elongata apice 2-fida lobis patentibus v. 2-valvatis erectis. Columna brevissima; stigma ad basin rostellum lati membranacei erecti v. antrorsum inclinati depressum, v. in callos 2 viscosos divisum; clinandrium breve, cum marginibus rostellum continuum. Anthera erecta v. antrorsum inclinata, oblonga, breviter apiculata, loculis contiguis valvis exterioribus latis; pollen grosse granulosum (sectile), sæpe vix in massas cohærens, anthera dehiscente stipti lineari v. cuneato a rostellum glandula descendenti affixum. Capsula parva, erecta, ovoidea v. subglobosa.—Herbæ terrestres, teneræ v. humiles, rhizomate breviter repente (interdum e tubere perenni oriundo?), caule ascendente v. erecto foliato simplici. Folia nunc linearia supra

vaginam subsessilia nunc ovata v. lanceolata, petiolata, membranacea. Flores parvi, in apica densa v. tenuiore sessilia. Bracteæ membranacæ, flore breviores, rarius scariosæ flores superantes.

Species ad 16, Indiæ orientalis, Archipelagi Malayani et Africæ tropicæ incolæ. *Lindl. Gen. et Sp. Orch.* 485, et in *Journ. Linn. Soc.* i. 186. *Blume, Orch. Archip. Ind.* 65. *Reichb. f. Otia Hamb.* 34.

Lindley *Tripleuram* a *Zeuxine* distinxit labello supéro nec infero, caractere tamen ab auctore serius emendato. Blume sectiones 3 indicavit, quibus addimus quartam a Blumeo pro genere proprio receptam:—

1. *Euzeuxine*, caule humili, foliis angustis linearibus gramineis in vagina subsessilibus, labelli parte cava intus nuda v. callis 2 parvis instructa. Flores parvi. *Wight, Ic. t.* 1724 bis, 1725, 1726. *Blume, Orch. Archip. Ind.* 67, t. 19, 22, 23.

2. *Lathrodus*, Blume, caule tenero ascendente, foliis petiolatis ovatis v. lanceolatis, labelli parte cava intus prope marginem utrinque callo reflexo instructa, lamina minima integra. Flores parvi. *Blume, Orch. Archip. Ind.* 71, t. 18, 23.

3. *Psychechilus*, Blume, habitu et foliis *Lathrodi* sed labelli lamina 2-fida. Flores parvi. *Blume, Orch. Archip. Ind.* 69, t. 18, 23, 39.

4. *Monochilus*, habitus *Goodyera*, foliis petiolatis ovatis, labelli parte cava intus varie 2- v. 4 callosa. lamina sæpius a sepalis exserta, interdum demum elongato-2-fida. Flores quam in præcedentibus paullo majores. *MONOCHILUS*, *Wall.*; *Lindl. Gen. et Sp. Orch.* 486, et in *Journ. Linn. Soc.* i. 186. *Wight, Ic. t.* 1728. *Reichb. f. Xen. Orch. t.* 87; *Otia Hamb.* 52, 110; in *Bonpl.* 1857, 35, et in *Linnæa* xli. 60. *HAPLOCHILUS*, *Endl. Gen. Suppl.* ii. 20; *Blume, Orch. Archip. Ind.* 109, t. 39, 48.

245. *Cheirostylis*, *Blume, Bijdr.* 413, t. 16.—Sepala membranacea, ad medium in tubum coalita, æqualia v. basi breviter in mentum producta. Petala sepalo postico adnata, interdum vix distinguenda. Labellum a basi columnæ erectum, angustum, canaliculatum, intus basi 2-callosum, apice in laminam 2-lobam sæpe fimbriatam dilatatum. Columna brevis, apice processubus seu brachiis 2 erectis angustis rostellum æquilongis appendiculata; stigma sub rostellum erecto acuminato alte 2-lobo cavum; clinandrium breve, cum brachiis columnæ et marginibus rostellum basi continuum. Anthera erecta, acuminata, loculis ad basin brevibus discretis; pollinia sectilia, anthera dehiscente stipiti plano lineari-cuneato a glandula oblonga rostellum dependenti affixa; pollinario delapso columna apice subæqualiter 4-brachiata apparet (ob rostellum lobos columnæ brachiis subsimiles). Capsula obovoidea v. oblonga, acutangula, erostris.—Herbæ terrestres, debiles, interdum pusillæ, rhizomate repente, caulibus foliatis simplicibus ascendentibus v. erectis. Folia petiolata, ovata v. lanceolata, membranacea. Flores parvuli v. mediores, in racemo laxiusculo plures, breviter pedicellati.

Species ad 8, Indiæ orientalis, Archipelagi Malayani et Africæ tropicæ incolæ. *Lindl. Gen. et Sp. Orch.* 488, et in *Journ. Linn. Soc.* i. 187. *Blume, Orch. Archip. Ind.* 53, t. 13, 17, 39. *A. Rich. in Ann. Sc. Nat. ser. 2, xv. t.* 12 (*Goodyera*). *Griff. Ic. Pl. As. t.* 350 (*Zeuxine*). *Wight, Ic. t.* 1727. *Reichb. f. in Trans. Linn. Soc.* xxx. 141; *Otia Hamb.* 110.

246. *Odontochilus*, *Blume, Orch. Archip. Ind.* 79, t. 29, 36.—Sepalum posticum erectum, cum petalis in galeam connivens v. cohærens, lateralia latiora, basi obliqua, cum pede columnæ in mentum sub labello connata. Labellum pedi columnæ affixum, ecalcaratum, sed basi in gibbum seu saccum obtusum intus 2-callosum intra sepala lateralia dilatatum et interdum didymum, ungue supra saccum patente margine fimbriato-lacero v. dentato; lamina seu lobus medius emarginatus v. 2-fidus, in alabastro inflexus, demum patens. Columna brevissima, antice sub stigmate 2-auriculata v. nuda; stigma sub rostellum antrorsum inclinatum sæpius 2-partitum; clinandrium parum elevatum. Anthera ad marginem clinandrii semiglobosa v. inclinata, supra rostellum inclinata, loculis discretis; pollinia sectilia, in caudiculis breves v. longiusculas producta, anthera dehiscente a glandula rostellum pendula, pollinario delapso rostellum 2-fidum relinquunt. Capsula oblonga, erecta.—Herbæ terrestres, rhizomate et interdum caule basi repente

subramoso, caulibus foliatis ascendentibus v. erectis simplicibus. Folia petiolata, ovata v. lanceolata, membranacea. Flores mediocres, in spica laxa sessiles.

Species ad 10, Indiæ orientalis, Archipelagi Malayani et insularum maris Pacifici incolæ. *Gaudich. Voy. Bonite Bot. t. 100 (Anectochilus)*, quæ planta ad portum Byron ins. Sandwicensium nec Australiæ lecta fuit.

*Cystopus*, *Blume, Orch. Archip. Ind. 82, t. 21, 23, 30, 31*, species paucas continet cæteris *Odontochilis* habitu simillimas nec nostro sensu characteribus florum separandas. *Blume* genus distinxit imprimis flore in ovario magis obliquo et stigmate minus diviso, characteres interdum parum distincti videntur, flores tamen paucos examinare potuimus. Genus cæterum ab affini *Anectochilo* differt præcipue labelli calcare nullo inter sepala lateralialia protruso.

247. *Myrmechis*, *Blume, Orch. Archip. Ind. 76, t. 21*.—Sepala subpetaloidea, basi breviter connata, suberecta, posticum concavum, lateralialia latiora, basi cum pede columnæ mentum brevem formantia. Petala a sepalis libera, erecta, lato-lanceolata. Labellum pedi columnæ affixum, incurvum, dein erectum, basi subgloboso-ventricosum, columnæ subadnatum, intus 2-callosum, dein in unguem canaliculatum integrum productum, lamina terminali brevi dilatata 2-loba. Columna brevissima, basi in pedem brevem producta; stigmata 2, ad latera rostellis brevis erecti discreta; clinandrium breve. Anthera erecta, breviter ovata, loculis discretis, pollinia sectilia, in caudiculas brevissimas producta, anthera dehiscente glandulæ crassæ rostellis affixa, pollinario delapso rostellum breviter 2-fidum relinquentia. Capsula . . .—Herbæ terrestres, teneræ, foliosæ, procumbentes v. ascendentes. Folia ovata v. suborbiculata, breviter petiolata, membranacea. Flores mediocres, in racemo terminali breviter pedunculato pauci.

Species 2, Javæ et Japoniæ incolæ. *Blume, l. c. Lindl. in Journ. Linn. Soc. i. 182 (Rhamphidia alsinæfolia et R. grandiflora)*. *Rhamphidia japonica*, Reichb. f. in Bot. Zeit. 1878, 75, est verisimiliter planta a Franch. et Savat. Enum. Pl. Jap. ii. 39, ad *Myrmechin gracilem*, Bl. (*Rhamphidiam alsinæfoliam*, Lindl.) relata. Genus cæterum potius *Odontochilo* quam *Heterie* (*Rhamphidiæ*) affine.

248. *Hæmaria*, *Lindl. Gen. et Sp. Orch. 489*. (*Ludisia*, *A. Rich. in Diet. Class. Hist. Nat. vii. 437*, genus indicatum nec in ix., sub litt. L. retentum).—Sepala æquilonga, libera, posticum erectum fornicatum cum petalis in galeam connivens v. cohærens, lateralialia patentissima. Labellum basi columnæ affixum eique sæpius breviter adnatum, ungue a basi scrotiformi v. 2-gibba patente concavo ad latera interdum 2-auriculato, lamina divaricato-2-loba. Columna brevis, clavata, antice nuda; stigma ad basin rostellis erecti v. inclinati acuminati indivisum; clinandrium concavum v. fere cucullatum, cum rostellis marginibus in cyathum continuum. Anthera margini clinandrii affixa, semiimmersa, erecta v. inclinata, acuminata, loculis discretis; pollinia sectilia, in caudiculas producta, anthera dehiscente glandulæ oblongæ rostellis affixa, pollinario delapso rostellum 2-fidum relinquentia. Capsula erecta, oblonga.—Herbæ terrestres, caulibus foliatis decumbentibus ascendentibus v. basi cum rhizomate repentibus. Folia breviter v. brevissime petiolata, ovata v. elliptica, crassiuscule membranacea. Flores mediocres, in racemo plures, breviter pedicellati v. subsessiles. Bractæ membranaceæ, ovario breviores.

Species notæ 4, Chinæ, Cochinchinæ et Archipelagi Malayani incolæ. *Blume, Orch. Archip. Ind. 113, t. 34, 42 (Ludisia)*. *Bot. Mag. t. 2055*. *Bot. Reg. t. 271*; *Lodd. Bot. Cab. t. 143 (omnes sub Goodyera)*. *Miq. Choix Pl. Jard. Buitenz. t. 16*.

*Myroda*, *Lindl. Gen. et Sp. Orch. 489*, e Penang, ex specimine unico, a speciebus typicis *Hæmarie* parum differre videtur columna paullo nec multum longiore, labello paullo altius adnato.

249. *Dossinia*, *Morren in Ann. Soc. Gand. iv. 171, cum ic.*—Sepala subæqualia, libera, patentia. Petala angusta, sepalo postico coherentia. Labellum (inferum) basi columnæ brevissime adnatum, a basi patente ventricosum-scrotiformi intus 2-callosa incurvo-ascendens; lobi laterales latiusculi, erecti, medius unguiculatus, dilatato-2-lobus. Columna brevis, sub stigmate appendice longa intra ventrem labelli intrusa instructa:

stigma ad basin rostellī erecti lati antheram versus concavi integrum; clinandrium postice breve. Anthera erecta, breviter acuminata, loculis contiguis discretis; pollinia sectilia, in caudiculas breves producta, anthera dehiscente glandulæ rostellī oblongæ affixa. Capsula . . .—Herba terrestris, habitu *Anæctochili*. Folia ad basin caulis ovata, marmorata, in petiolum brevem latum contracta. Flores in spica laxa pubescente sat numerosi, subsessiles.

Species 1, in hortis e Borneo introducta. *Lindl. in Fl. des Serres*, t. 370 (*Cheirostylis*). *Blume, Orch. Archip. Ind.* 56, t. 18, et in *Belg. Hort.* 1862, t. 1.

Planta Khasyana huc a Lindleyo in Journ. Linn. Soc. i. 185 relata, nobis diversa videtur et forte non congener sed exemplar unicum examinare nequimus.

250. *Macodes*, *Blume, Bijdr.* 407, t. 2.—Sepala subæqualia, libera, patentia, lateralialia obliqua parum latiora. Petala angusta, patentia. Labellum (superum) ad basin columnæ erectum, late ventricosum, intus prope margines 2-callosum, lobi laterales parvi, erecti, medius longior, linearis v. spathulatus. Columna brevis, antice sub stigmate alis 2 latis verticalibus sibimet applicitis appendiculata; stigma sub rostello elongato acuminato erecto v. inclinato prominens; clinandrium membranaceum, basi cum rostello in cyathum connatum. Anthera acuminata, erecta v. rostello parallelo antrorsum inclinata, loculis discretis; pollinia sectilia, in caudiculas longas læves producta, anthera dehiscente glandulæ oblongæ rostellī affixa, pollinario delapso rostellum alte 2-lobum relinquuntia. Capsula oblonga, subfusiformis, erecta.—Herba terrestris, habitu *Anæctochili*. Folia ad basin caulis pauca, petiolata, ovata, marmorata. Flores parvuli, in racemo longo breviter pedicellati. Bracteæ breves.

Species 1, Javensis. *Blume, Orch. Archip. Ind.* 119, t. 31, 36. *Reichb. f. Xen. Orch.* t. 96, f. 1.

251. *Hylephila*, *Lindl. Bot. Reg. sub t.* 1618.—Sepalum posticum cucullatum, acuminatum, incumbens, lateralialia lata, valde inæquilatera, acuminata, ovarii apici valde obliquo adnata, in mentum sibimet applicita labellum includentia. Petala linearia. Labellum pedi columnæ oblique adnatum, saccato-cucullatum, intus nudum; lobus terminalis parvus, linearis, inflexus. Columna brevissima, basi in pedem brevem ovario oblique adnatum producta; stigma sub rostello elongato 2-fido antrorsum inclinato prominens; clinandrium breve. Anthera stipitata, longe acuminata, incumbens, loculis ad basin brevibus contiguis; pollinia sectilia, in acumen seu caudiculam brevem producta, anthera dehiscente a glandula oblonga rostellī pendula; pollinario delapso rostellum longe 2-brachiatum relinquuntia. Capsula oblonga, erecta.—Herba terrestris, foliata, rhizomate repente, caule elato simplici habitu (*Goodyerani procerum* referente). Folia prope basin conferta, supra vaginas laxas breviter petiolata, lanceolata v. oblonga. Flores parvi, in spica longa tenui pubescente sessiles. Bracteæ angustæ, flores subsuperantes.

Species 1, Malacæ et Archipelagi Malayani occidentalis incola. *Lindl. Gen. et Sp. Orch.* 490. *Blume, Orch. Archip. Ind.* 115, t. 35, 36.

252. *Goodyera*, *L. Br. in. Ait. Hort. Kew. ed. 2, v.* 197. (*Peramium*, *Salisb. in Trans. Hort. Soc.* i. 301, *absque char.* *Gonogona*, *Link, Bot. Handb.* i. 248. *Tussaca*, *Rafin. in Journ. Phys.* lxxxix. 261.)—Sepala subæqualia, posticum erectum, concavum, cum petalis angustis in galeam connivens v. coherens, lateralialia libera, erecta v. patentia. Labellum ad basin columnæ sessile, incurvo-ascendens interdumque brevissime adnatum, latum, concavum ventricosum v. subsaccatum, apice interdum recurvo-acuminatum, indivisum, intus sæpe fimbriatum v. villosum nec callosum. Columna subteres, brevis v. brevissima, inappendiculata; stigma sub rostello erecto concavum, latum v. fore divisum; clinandrium dilatatum, marginibus cum rostello in cyathum continuis. Anthera erecta v. incumbens, loculis discretis; pollinia oblonga, tenuiter sectilia, interdum acuminata v. in caudiculam producta, anthera dehiscente a glandula rostellī pendula, pollinario delapso rostellum relinquuntia anguste 2-fidum v. in lobos longissime brachiatos divisum.

Capsula erecta, obovoidea v. oblonga, erostris.—Herbæ terrestres, rhizomate repente non tuberoso, fibris radicalibus subfasciculatis, caule foliato simplici ascendente v. erecto. Folia in parte inferiore caulis plus minus petiolata, ovata v. lanceolata. Flores parvuli, in spica laxa secunda v. longa densaque sessiles. Bractæ flore breviores.

Species ad 25, Europæ, Maderæ, Asiæ tropicæ et temperatæ et Americæ borealis et (ex Reichb.) Novæ Caledoniæ et ins. Mascarensium incolæ. *Lindl. Gen. et Sp. Orch.* 492, et in *Journ. Linn. Soc.* i. 182. *Reichb. f. Ic. Fl. Germ. t.* 482. *Nees, Gen. Fl. Germ. Monoc. iii. n.* 17. *Barla, Orch. Alp. Marit. t.* 10. *Blume, Orch. Archip. Ind.* 31, t. 9, ad 9 d., 11, 22. *Hook. Fl. Bor. Amer. t.* 204. *Bot. Mag. t.* 2540. *Sweet, Brit. Fl. Gard. ser. 2, t.* 47.

*G. viscosa*, Reichb. f. in *Linnæa* xli. 61, ex ins. Bourbon, nobis ignota est.

*CIONISACCUS*, *Brida, Orch. Kuhl et Hass. cum tab.* 1 (CORDYLESTYLIS, *Falcon. in Hook. Journ. Bot.* iv. 74. *LEUCOSTACHYS*, *Hoffmans. Preisverz. Orch.* 1842, ex *Linnæa* xvi., *Littbl.* 234), est *G. procera*, *Hook. Exot. Fl. t.* 39; *Wight, Ic. t.* 1729, species Asiatica, elata, floribus parvis in spica longa densa non secunda numerosis, cui affinis est *G. fumata*, *Thwaites, Enum. Pl. Zeyl.* 314, floribus tamen majoribus.

*G. macrophylla*, *Lowe, Prim. Fl. Mader.* 13, cum ic., est species insignis, elata, habitu fere *G. procera*, sed flores multo majores, rostellum elongatum, anthera intra cyathum amplum clinandrii semi-immersa, margini clinandrii medio dorso affixa.

*Cænorchis*, *Blume (sect.)*, est *G. pusilla*, *Blume, Orch. Archip. Ind.* 36, t. 9 b, habitu specierum typicarum, sed pollinia apice in caudiculam longam attenuata.

*GEORCHIS*, *Lindl. Gen. et Sp. Orch.* 495, et in *Journ. Linn. Soc.* i. 184, *Reichb. f. in Bonpl.* 1857, 35, et in *Linnæa* xli. 61, a Blumeo ad sectionem *Goodyeræ* reducta, species continet 8 Asiaticas; a typicis differunt imprimis anthera longe acuminata, rostello longo post pollinarium delapsum longe 2-brachiato, et pollinibus plus minus in caudiculam attenuatis, characteres tamen de specie in speciem variabiles.

*G. Wrightii*, *Reichb. in Flora* 1865, 274, e Cuba, est *Spiranthis (Sauroglossi)* species, ab affinis imprimis floribus minimis distincta. *G. guianensis*, *Lindl.*, est *Spiranthes Hostmanni*, *Reichb.* species tamen nobis adest ex America centrali quæ revera ad *Goodyeræ* pertinere videtur.

253. *Lepidogyne*, *Blume, Orch. Archip. Ind.* 93, t. 25.—Sepala libera, subæqualia, conniventia. Petala sepalo postico adherentia eique subsimilia nisi obtusiora. Labellum basi columnæ adnatum, late ventricosum, intus tuberculatum, erectum, lobis lateralibus columnam amplectentibus, cæterum indivisum, in laminam angustam recurvam contractum. Columna brevis; stigma sub rostello elongato acuminato erecto basi dilatato intra laminam brevem erectam absconditum; clinandrium elevatum, cum marginibus rostelli in cyathum connatum. Anthera margini clinandrii dorso affixa, semi-immersa, erecta, longe acuminata, loculis contiguis distinctis; pollinia sectilia, in caudiculas longas attenuata; anthera dehiscente glandulæ angustæ rostelli affixa, pollinario delapso rostellum longe 2-fidum relinquuntia. Capsula . . .—Herba terrestris, rhizomate repente, caule elato simplici basi foliato. Folia longa, lineari-lanceolata, basi in vaginam parum contracta. Flores in spica longa densa sessiles. Bractæ lineares, herbaceæ, flores æquant. (*Char. ex ic. et descr. Blumei.*)

Species 1, Javanica, a nobis non visa. Habitu *Spiranthis* speciebus elatioribus accedere videtur, sed characteres ut monet *Blume* iis *Goodyeræ* propinquiores.

254. *Metaxia* (Eteria), *Blume, Bijdr.* 409, t. 14. (*Ætheria*, *Endl. Gen. Pl.* 214. *Rhamphidia*, *Lindl. Gen. et Sp. Orch.* 490, et in *Journ. Linn. Soc.* i. 181, pro parte.)—Sepala libera v. basi breviter connata, conniventia v. demum patentia, æqualia v. lateralibus paulo latiora. Petala angusta v. basi lata, sepalo postico sæpe adherentia. Labellum (sæpius an semper? superum), a basi columnæ erectum, basi late ventricosum, marginibus sæpius columnæ plus minus adnatis, intus varie callosum, lamina terminali brevi inflexa integra v. rarius magis evoluta divaricato-2-loba. Columna brevis, antice sæpe sub stigmatibus appendiculis seu cristulis 2 cum labello connatis instructa; stigma sub rostello erecto transversum, cavum, margine inferiore 2-lobo v. 2-brachiato, lobis brachiisve interdum apice papillosis et forte stigmatosis; clinandrium breve. Anthera pone rostellum

erecta v. leviter antrorsum inclinata, loculis distinctis; pollinia sectilia, in caudiculas interdum longiusculas producta, anthera dehiscente a glandula parva v. oblonga rostellum pendula, pollinario delapso rostellum 2-fidum relinquentia. Capsula erecta, ovoidea v. oblonga.—Herbæ terrestres, rhizomate repente, caule foliato ascendente v. erecto simplici. Folia petiolata, ovata v. lanceolata, membranacea. Flores parvi nunc minimi, in spica sæpius tenui laxiuscula subsessiles. Labellum sæpius superum interdum tamen ex Blumeo in specie affini inferum est.

Species ad 13, Indiæ orientalis, Archipelagi Malayani, insularum maris Pacifici, Australiæ, Novæ Caledoniæ, et Africæ tropicæ incolæ. *Blume, Orch. Archip. Ind.* 101, t. 32 ad 35 et 56. *Reichb. f. in Trans. Linn. Soc.* xxx. 142; *Otia Hamb.* 52, 109; in *Bonpl.* 1855, 214; 1857, 35; et in *Linnæa* xli. 62.

Genus hinc *Goodyera* (*Georchis*) hinc *Marenhoutia* affine, quoad species nonnullas in speciminibus perfectis ulterius scrutandum. Species parvifloræ labello supero brevissime tantum columnæ adhærente ad *Heteris* genuinis Blumei pertinent, etsi typum formant generis *Rhamphidii*, Lindl. Huc referendæ *R. tenuis*, Lindl., *R. ovalifolia*, Lindl. (*Goodyera ovalifolia*, Wight, Ic. t. 1730), *R. Gardneri*, Thw. Enum. Pl. Zeyl. 313, *R. rubicunda*, Reichb. f. in Seem. Fl. Vit. 294.

*CEROCHILUS*, Lindl. in *Gard. Chron.* 1854, 87, est *Rhamphidia rubens*, Lindl., in Journ. Linn. Soc. i. 182, a Khasya, a *Heteris* genuinis differt floribus majoribus, sepalis breviter connatis lateralibus mentum breve formantibus, labelli marginibus usque ad apicem columnæ adnatis, clinandrio alte cupulato anthera semi-immersa.

*RHOMBODA*, Lindl. in Journ. Linn. Soc. i. 181, species unica e Sikhim, nobis characteres omnino *Cerochili* præbere videtur.

*Rhamphidia alsinæfolia*, Lindl., est *Myrmechis gracilis*, Bl.; *R. grandiflora*, Lindl., est *Myrmechis glabra*, Bl. Species utraque tam habitu quam characteribus a *Heteria* facile distinguitur.

*SALACISTIS*, Reichb. f. *Xen. Orch.* i. 214, t. 87, species Javensis a nobis non visa, ex icone habitum omnino *Heteriæ* (*Rhamphidiæ*) ostendit, nec ex characteribus et analysi imperfectis generice distinguere possumus, nisi columna paullo longiore.

*Rhamphidia* 3 Novo-Caledoniæ, a Reichb. f. in *Linnæa* xli. 58 editæ, nobis ignotæ sunt.

255. *Marenhoutia*, *Blume, Orch. Archip. Ind.* 99, t. 28, 42.—Sepala libera, petaloidea, erecta, subæqualia. Petala sepalis similia nisi angustiora. Labellum (inferum) ad basin columnæ sessile, erectum, latum, concavum, indivisum, apice rotundato emarginatum, marginibus basi cum alis columnæ connatis, facie prope basin medio lamellata. Columna erecta, alis 2 latis petaloideis cum labello connatis apice cum rostello continuis et inter rostellum et antheram appendicibus angustis erectis instructis; stigma sub rostello erecto tenui latum, utrinque acuminatum; clinandrium postice parum elevatum, lateribus cum brachiis alisque columnæ breviter continuis. Anthera erecta, majuscula, lanceolata, loculis distinctis rostellum acumen fere amplectentibus; pollinia tenuiter sectilia, apice attenuata. Capsula oblonga, erecta.—Herba terrestria, rhizomate repente, caule foliato ascendente v. erecto simplici. Folia in parte inferiore caulis conferta, ovata v. lanceolata, in petiolum brevem contracta; vaginæ superiores nonnullæ in laminam angustam productæ. Flores mediocres, in spica laxiuscula subsessiles, erecti. Bractæ lanceolatæ, flore breviores.

Species typica unica insularum Societatis incola, nam *Notiophrys Commelyne*, Lindl., eadem videtur ac *Marenhoutia plantaginea*, Blume. Speciem tamen alteram ei forte congenerem legit Milne in insula Niviti-Levu. Huic flores minores et labelli ventricosi lamina terminalis parva 2-loba, et *Marenhoutiam* connectere videtur cum *Heteriæ* speciebus labello infero præditis. Verisimiliter genus totum melius notum *Heteriæ* adjungendum erit.

256. *Platylopis*, *A. Rich. Orch. Iles Fr. et Bourb.* 39, t. 6. (*Notiophrys*, Lindl. in Journ. Linn. Soc. i. 189, vi. 138. *Diplogastra*, Reichb. f. in *Flora*, 1865, 183.)—Sepala subæqualia, angusta, libera sed circa columnam ultra medium in tubum arcte conniventia, lateralibus ima basi sub labello in mentum brevissimum connata. Petala angusta, cum sepalis postico in galeam angustam subcoherentia. Labellum ad basin columnæ sessile, erectum, canaliculato-concavum, basi latiuscule ventricosum, marginibus columnæ leviter cohærentibus, lamina parum dilatata, sepalis brevior. Columna elongata, subteres, superne

lineis 2 a rostello decurrentibus notata; stigma in nonnullis speciminibus nullum deteximus, in aliis sub lobis longis erectis lanceolatis acuminatis rostelli latum, crasse papillosum; clinandrium pone rostellum oblongum, erectum. Anthera ad apicem clinandrii erecta, acuminata, rostello æquilonga, loculis discretis; pollen sectile v. laxè granulosum, anthera dehiscente lobis rostelli copiose adhærens. Capsula oblonga, apice breviter contracta, subrostrata.—Herbæ terrestres, rhizomate repente, caule ascendente foliato, habitu specierum majorum *Heterie*. Folia ovata v. ovato-lanceolata, membranacea, in petiolum contracta. Flores angusti, in spica densa glanduloso-pubescente sessiles. Bracteæ ovatae, ante anthesin imbricatæ.

Species 3 (v. 5?), Africae tropicæ et australis subtropicæ et insularum Mascarensium incolæ. *Thou. Orch. Iles Afr. t. 28 (Goodyera)*. *Blume, Orch. Archip. Ind. 98, t. 42. Moore in Baker, Fl. Mauriti. 339.*

Specimina Mascarensia variant foliorum venatione, bracteis, etc. et forte species 2 v. 3 includunt. *Diplogastru angolensis*, Welw., nobis omnino eadem videtur ac *Notiophrys glandulosa*, Lindl. *N. Commelyna*, Lindl., ex ins. Taiti, est *Marenhoutia plantaginea*, Blume. *Platylepis heteromorpha*, Reichb. f. *Otia Hamb. 52*, ex insula Upola, nobis ignota, est forte species altera *Marenhoutie*.

257. *Manniella*, Reichb. f. *Otia Hamb. 109*.—Sepala et petala quasi unguiculata, unguibus in tubum cylindraceum circa columnam connatis; laminæ tubo breviores, sepali postici galeata, sepalorum lateralium ovatae patentes, petalorum intra galeam ovato-lanceolatae erectæ. Labelli unguis infra apicem tubi breviter liber, supra papillosus, lamina lata, concava, sepala non excedens, marginibus basi utrinque in appendicem lineari-clavatam ungui parallelam productis. Columna elongata, tubo perianthii arcte adnata, apice sub galea breviter libera, lobis seu alis 2 terminalibus erectis latis serrulatis (clinandrii lobis?) instructa; rostellum breve, latum, emarginatum. Anthera inter lobos seu alas columnæ subsessilis, lata, concava, erecta, subincumbens, loculis discretis; pollen laxè granulosum, primum in pollinia 2 (v. 4?) coherens. Capsula oblonga, erecta, perianthio diu persistente coronata.—Herba elatiuscula, terrestris, rhizomate repente?, fibris radicalibus nonnullis crasse carnosis. Caulis simplex, basi vaginis foliorum inclusus, superne vaginis paucis brevibus absque lamina instructus. Folia subradicalia, longe petiolata, ovata, membranacea. Spica longa, tenuis. Flores parvi, demum dissiti. Bracteæ angustæ flore breviores.

Species 1, Africae tropicæ occidentalis incolæ. Genus videtur *Platylepidi* affine, perianthii segmentis in tubum connatis insigne.

258. *Mucosia*, Blume, *Bijdr. 415, t. 18*.—Sepalum posticum erectum, cum petalis in galeam coherens, lateralia libera, demum patentia. Labellum ad basin columnæ sessile, erectum, concavum, angustum, indivisum, ecallosum. Columna brevissima, rostello magno crasso erecto vertice stigmatoso ultra stigma vix acuminato; clinandrium non prominens. Anthera pone rostellum longe stipitata, erecta, longe acuminata, loculis contiguis ad basin æqualiter breviterque 2-valvibus; pollinia sectilia, in caudiculas longas sutaceas producta, anthera dehiscente libera, glandula rostelli nulla. Capsula . . . —Herba terrestris facie *Goodyere (Georchis)*, fibris radicalibus fasciculatis, caule basi foliato erecto simplici pubescente. Flores mediocres, in spica laxa pauci, sessiles. Bracteæ angustæ. (*Char. ex ic. et descr. Blumci.*)

Species 1, Javensis, a nobis non visa, et semel tantum a Blumeo lecta. *Blume, Orch. Archip. Ind. 59, t. 12 b, 42.*

259. *Gymnochilus*, Blume, *Orch. Archip. Ind. 107, t. 32*.—Sepala subæqualia, angusta, conniventia, libera v. lateralia basi brevissime connata. Petala angusta, sepalo postico subadherentia. Labellum ad basin columnæ sessile, erectum, anguste oblongum, concaviusculum, indivisum, nudum, glabrum. Columna brevis, teres, subclavata; stigmata ad basin rostelli longiusculi erecti 2, discreta; clinandrium vix prominens. Anthera sessilis, erecta, oblonga, loculis contiguis distinctis; pollinia sectilia, vix acuminata,

anthera dehiscente glandulæ rostellæ ovatæ affixa, pollinario delapso rostellum 2-fidum relinquentia. Capsula parva, ovoidea v. subglobosa, erecta v. subpatens.—Herbæ terrestres, teneræ, rhizomate repente, caule foliato ascendente simplici. Folia petiolata, ovata v. ovato-lanceolata, membranacea. Flores minimi, in spica laxiuscula sessiles. Bracteæ parvæ.

Species 2, ins. Mascarensium incolæ. *Thou. Orch. Iles Afr. tab. syn. 1, t. 29. Moore in Baker, Fl. Maurit. 340 (Goodyera nuda, Thou.).*

Genus *Goodyera* affine quidem, sed labello sepalis lateralibus subsimili facile distinctum.

260. ? *Argyrorchis*, Blume, *Orch. Archip. Ind. 120, t. 31, 36 E.*—Sepala subæqualia, libera, erecta v. lateraliter demum patentia. Petala angusta, sepalo postico coherentia. Labellum a basi columnæ erectum, angustum, indivisum, petalis omnino simile. Columna brevissima, clavata, antice 2-cristata; stigma sub rostello erecto acuminato 2-pulvinatum; clinandrium elevatum, cum rostellis marginibus in cyathum connatum. Anthera margini clinandri dorso affixa, semi-immersa, erecta, acuminata; pollinia sectilia, anthera dehiscens a glandula rostellæ pendula. Capsula . . .—Herba terrestris habitu *Anætochili*, rhizomate repente, caule basi foliato ascendente simplici. Folia petiolata, late ovata, discoloria, picta. Flores parvuli, in spica laxa sessiles. Bracteæ parvæ. (*Char. ex ic. et descr. Blumei.*)

Species 1, Javanica, a nobis non visa.

261. *Lecanorchis*, Blume, *Mus. Bot. Lugd. Bat. ii. 188; Orch. Archip. Ind. 176, t. 62, 63, 66.*—Perianthium ad apicem ovarii urceolo calyciformi dentato cinctum. Sepala libera, subæqualia, erecto-patentia, angusta. Petala sepalis subsimilia. Labellum basi columnæ breviter adnatum, erectum, angustum, columnam amplexans, superne latius, concavum, subpatens, facie pubescente. Columna elongata, semiteres, superne clavata; stigma subrotundum, sub rostello brevi prominulum; clinandrium elevatum. Anthera margini clinandri affixa, semi-immersa, erecta, loculis distinctis; pollen granulose. Capsula . . .—Herbæ terrestres, aphyllæ; scapi e rhizomate ramoso erecti, simplices, tenues, vaginis parvis remotis v. prope basin majoribus approximatis. Flores mediocres, in racemo laxo breviter pedicellati v. subsessiles. Bracteæ parvæ. (*Char. ex ic. et descr. Blumei.*)

Species 2, altera Japonica, altera Javensis, a nobis non visæ.

Genus evidenter *Stereosandri* et *Aphyllorchidi* affine, urceolo ovarium coronante more *Epistephii* insigne.

262. *Aphyllorchis*, Blume, *Bijdr. t. 77, ex ejusd. Orch. Archip. Ind. 51, t. 13, 17.*—Sepala subæqualia, libera, erecta v. demum patentia. Petala sepalis similia nisi angustiora. Labellum ad basin columnæ sessile, subpatens, ungue brevi late 2-auriculato, lamina oblonga, indivisa v. 3-loba. Columna longiuscula, subteres (apice 2-auriculata?), exalata, apoda; stigma sub rostello brevi ovatum, concavum; clinandrium elevatum, cyathiforme v. subfornicatum. Anthera in margine clinandri brevissime stipitata, ovata, loculis contiguis; pollinia pulvereo-granulosa, anthera dehiscente libera v. rostello affixa. Capsula . . .—Herbæ terrestres, aphyllæ (rhizomate tuberoso v. fibris radicalibus fasciculatis?), scapo simplici vaginis parvis dissitis v. superioribus majoribus approximatis. Flores parvuli, in racemo laxo dissiti subsessiles, v. distincti pedicellati. Bracteæ parvæ.

Species 5?, Indiæ orientalis et Archipelagi Malayani incolæ.

Characteres plures ulterius scrutandi. Speciem typicam a Blumeo illustratam non vidimus, florus subsessilibus sepalis latiusculis. *A. montana*, Reichb. f. in *Linnaea* xli. 57 (*Apaturia montana*, Thw. Enum. Pl. Zeyl. 301, non Lindl.), differt floribus bene pedicellatis sepalis angustis. In specie inedita, in Sikkim a Hookero lecta, flores subsessiles, sepalis angustis, floris tamen structuram in specimine nimis compresso haud rite observavimus. *A. Hasseltii*, Blume, e Java, et *A. Spiculea*, Reichb. f., e Borneo, nobis ignotæ.

263. *Stereosandra*, Blume, *Mus. Bot. Lugd. Bat.* ii. 176; *Orch. Archip. Ind.* 30, t. 10, 11.—Sepala libera, subæqualia, erecta, angusta. Petala sepalis conformia. Labellum a basi columnæ erectum, sepalis vix latius, canaliculatum, indivisum, basi 2-glandulosum. Columna brevis, apice vix incrassata; stigma parvum, sub rostello vix prominente; clinandrium vix prominens, dente postico parvo. Anthera in dente clinandrii erecta, oblonga, obtusa, carnosa, solida, loculis ima basi breviter apertis; pollinia oblongo-linearia, pulvereo-granulosa, in caudicula longam producta, a rostello omnino libera. Capsula oblonga (nutans?).—Herba terrestris, aphylla, scapo e tubere oblongo carnoso erecto simplici, vaginis inferioribus approximatis, superioribus parvis dissitis. Flores mediocres, in racemo laxo breviter pedicellati. Bractæe breves, angustæ. (*Char. ex Blumeo.*)

Species 1, Javensis, a nobis non visa. Genus ex Blumeo *Epipogo* affine.

264. *Thelymitra*, *Forst. Char. Gen.* 97, t. 49.—Perianthium subregulare, patens. Sepala subæqualia, libera. Petala sepalis similia v. interdum paullo latiora. Labellum petalis simile, a columna bene distinctum. Columna brevis, late 2-alata, alis superne cum clinandrio membranaceo-dilatato in cyathum fornicatum v. varie lobatum v. 2-appendiculatum continuis, et basi ante columnam connatis; rostellum erectum, dorso antheram versus sæpius convexum, antice late concavum stigmatosum, ultra stigma breviter productum. Anthera erecta, nunc supra basin margini clinandrii affixa, nunc non longe a basi clinandrii, cucullata, connectivo ultra loculos discretos 2-valves sæpius producto; pollinia pulvereo-granulosa v. rarius fere solida, anthera dehiscente glandulæ terminali rostellum affixa. Capsula erecta, obovoidea v. oblonga, erostris.—Herbæ terrestres, tuberibus ovoideis, caule simplici 1-foliato. Folium lineare lanceolatum v. rarius ovatum, interdum crassiusculum, nec teres. Flores in racemo pedicellati, plures v. interdum subsolitarii. Bractæe flore breviores.

Species ad 20, quarum una ex Australia per Novam Zelandiam, Novam Caledoniam et Archipelagum Malayanum late dispersa, 3 v. 4 Novæ Zelandiæ propriæ, cæteræ omnes Australianæ. *Benth. Fl. Austral.* vi. 316. *Hook. f. Handb. N. Zeal. Fl.* 270. *Fitzger. Orch. Austral. cum tabb.* 3. *Reichb. f. Xen. Orch.* t. 196, 199.

Genus labello petalis conforme (ab andrœcio omnino discreto) insigne, in sectiones 3 dividitur:—

1. *Cucullaria*, Lindl. Clinandrium cum alis columnæ in cucullam latam apice varie lobatam v. fimbriatam antheram obtegentem productum. Huc pertinent species extra-Australianæ cum pluribus Australianis. *Sm. Exot. Fl.* t. 29. *Hook. f. Fl. Tasm.* t. 103. *A. Rich. Fl. Nouv. Zel.* t. 25. *Berggr. Nya, Nyzel. Faunerog.* 21, t. 5. *Blume, Orch. Archip. Ind.* t. 44, 48.

2. *Macdonaldia*. Clinandrium cum alis columnæ cyathiforme pone antheram productum, ea tamen brevius. Caulis tenuis, flexuosus, 1-2-florus. Species 2, Australianæ. *Hook. f. Fl. Tasm.* t. 101 B, 102 B.

3. *Biaurella*, Lindl. Clinandrium postice breve, columnæ lobi laterales erecti, antheræ æquilongi. Habitus nunc *Cucullariæ*, nunc *Macdonaldiæ*. Species 5, Australianæ. *Hook. f. Fl. Tasm.* t. 101 A, 102 A.

*MACDONALDIA*, Lindl. *Swan Riv. App.* 50, t. 9, includit sectiones *Macdonaldiam* et *Biaurellam*.

265. *Epiblema*, *R. Br. Prod.* 315.—Sepala subæqualia, libera, patentia. Petala sepalis similia. Labellum a columna patens, ungue lobis 2 erectis obovatis subcarnosis breviter connatis appendiculato, lamina ovata, concava, indivisa, facie prope basin appendicibus pluribus seu callis longe linearibus instructa. Columna brevissima, apice in alas 2 erectas petaloidæ seu lobos laterales clinandrii producta; rostellum breve, erectum, latum, postice (antheram versus) convexum; stigma latum; clinandrium etiam postice productum. Anthera erecta, margini clinandrii inter lobos affixa, breviter acuminata, loculis discretis; pollinia pulvereo-granulosa, anthera dehiscente glandulæ terminali rostellum affixa. Capsula . . .—Herbæ terrestris habitu *Thelymitræ* (*Cucullariæ*). Folium longe lineare, vaginis 1-2 superioribus interdum subfoliaceis. Flores 2 ad 5, in racemo brevi pedicellati. Bractæe breves.

Species 1, Australia austro-occidentalis incolæ, nuperrime etiam in Nova Zelandia a W. L. Traversio detecta. Genus excepto labello *Thelymitræ* nimis affine.

266. *Diuris*, *Sm. in Trans. Linn. Soc.* iv. 222.—Sepalum posticum erectum, latiusculum, basi columnam amplexans, superne patens coloratum, lateralialia subherbacea, linearia, sub labello patentia v. deflexa, longe parallela v. decussata. Petala sepalum posticum superantia, ungue longo sæpe subherbaceo, lamina dilatata colorata. Labellum a basi columnæ erectum v. patens, 3-fidum v. 3-partitum. Columna brevissima, rostello longo erecto marginibus membranaceo-dilatatis (seu columnæ alis erectis) antheram subamplectentibus, ultra stigma brevissime producto; stigma latum, faciem anticam (inferam) rostelli obtgens; clinandrium pone rostellum vix prominens. Anthera erecta, obtusa v. acuminata, rostello parallela et brevior v. vix longior; pollinia pulverea sed compacta, anthera dehiscente a glandula rostelli pendula, pollinario delapso rostellum 2-fidum relinquentia. Capsula erecta, obovoidea v. oblongo-turbinata, erostris.—Herbæ terrestres, tuberibus integris lobatisve, caule simplici erecto. Folia pauca, angusta, prope basin caulis, vaginis superioribus paucis. Flores in racemo plures, longiuscule pedicellati v. interdum ad 1-2 reducti, sepalis lateralibus elongatis et petalis prominulis conspicui.

Species ad 15, quoad limites sæpe haud facile definiendæ, omnes Australianæ. *Benth. Fl. Austral.* vi. 324. *Fitzger. Austral. Orch. cum tabb.* 2. *Sm. Exot. Bot.* t. 8, 9, 30. *Hook. f. Fl. Tasm.* t. 104, 105. *Bot. Mag.* t. 3156, 6201.

267. *Orthoceras*, *R. Br. Prod.* 316.—Sepalum posticum erectum, incurvum, fornicatum, lateralialia lineari-filiformia, incurvo-erecta. Petala brevia, plana, sessilia. Labellum a basi columnæ suberectum, lobis lateralibus latis, medio majore basi contracto calloso. Columna brevissima, lobis v. brachiis 2 erectis subteretibus ad latera antheræ ea vix brevioribus; rostellum erectum, ovatum, non marginatum, supra stigma latum, concavum, vix productum; clinandrium pone rostellum vix prominens. Anthera erecta v. leviter incurva, rostello paullo longior, loculis contiguis subæqualiter 2-valvibus; pollinia pulvereo-granulosa, anthera dehiscente a glandula rostelli pendula. Capsula oblonga, erecta.—Herbæ terrestres, glabra, tubere ovoideo, caule foliato simplici. Folia pauca, angusta. Flores majusculi, in spica laxa sessiles subdissiti. Bractæ longe lineari-acuminatæ, inferiores interdum flores excedentes.

Species 1, Australiæ et Novæ Zelandiæ incola. *Benth. Fl. Austral.* vi. 332. *Hook. f. Handb. N. Zæl. Fl.* 273. *Fitzger. Austral. Orch. cum tab.* 1. *A. Rich. Fl. Nov. Zel.* t. 25 (*Diuris*).

268. *Cryptostylis*, *R. Br. Prod.* 317. (*Zosterostylis*, *Blume, Bijdr.* 418, t. 32.)—Sepala subæqualia, angusta, tenuissima, perianthio aperto convoluto-subulata. Petala sepalis similia. Labellum superum, lata basi sessile, erectum, columnam involvens, sepalis longius, supra columnam contractum, dein in laminam angustam v. latam indivisam expansum. Columna brevissima, rostello erecto lato crasso postice (antheram versus) concavo breviter acuminato; stigma sub rostello crassum; clinandrium nunc brevissimum, nunc membranaceo-dilatatum, marginibus denticulatis cum marginibus rostelli subcontinuis. Anthera in margine clinandrii brevis v. intra clinandrium dilatatum erecta v. antrorsum inclinata, dorso sæpius 2-convexa, obtusa v. acuminata; pollinia pulvereo-granulosa, anthera dehiscente libera v. rostello affixa. Capsula oblonga, erecta, erostris.—Herbæ terrestres, glabræ, fibris radicalibus in rhizomate brevi crassis. Folia pauca v. solitaria, a basi scapi v. e rhizomate e gemma distincta rigide petiolata, oblonga v. angusta, membranacea. Scapus aphyllus, simplex, 2- $\infty$ -vaginatus. Flores majusculi, in racemo v. spica laxa breviter pedicellati v. subsessiles. Bractæ membranaceæ, acutæ.

Species 7, quarum 3 Indiæ orientalis v. Archipelagi Malayani incolæ, cæteræ Australianæ. *Lindl. Gen. et Sp. Orch.* 445, 446. *Benth. Fl. Austral.* vi. 332. *Blume, Orch. Archip. Ind.* 132, t. 45. *Wight, Ic.* t. 1748. *Bauer, Ill. Orch. Gen.* t. 17, 18. *Labill. Pl. Nov. Holl.* t. 212 (*Malaxis*). *Endl. Iconogr.* t. 17. *Hook. f. Fl. Tasm.* t. 108 A. *Fitzger. Austral. Orch. cum tab.* 1.

269. *Prasophyllum*, *R. Br. Prod.* 317.—Sepalum posticum (inferum) lanceolatum v. latum, concavum, sæpius fornicatum et interdum basi columnæ adnatum, lateralialia ei æquilonga v. latiora, libera v. plus minus connata, erecta, falcata. Petala sepalis sæpius

breviora, lanceolata v. linearia. Labellum (superum) ad basin columnæ sessile v. breviter unguiculatum v. apici pedis columnæ affixum, sæpius basi erectum et concavum, superne patens v. recurvum, ovatum v. lanceolatum, indivisum, facie lamina adnata instructum v. medio incrassatum. Columna brevissima, exalata, apice lobis v. brachiis 2 erectis sæpius longis planis ad latera rostellum instructa; rostellum sæpius elongatum, erectum, basi latius, subtus (antice) stigmatosus; clinandrium breve, marginibus cum brachiis columnæ continuus. Anthera pone rostellum erecta, rostello sæpius brevior, loculis distinctis; pollinia pulvereo-granulosa, anthera dehiscente stipiti filiformi v. lineari sæpius longo a glandula rostellum pendulo affixa. Capsula erecta v. subpatens, oblonga obovoidea v. rarius subglobosa, interdum obliqua.—Herbæ terrestres, glabræ, tuberibus ovoideis v. globosis, caule 1-foliato simplici. Folium in vagina longa nunc elongatum teres, nunc ad mucronem brevem reductum. Flores parvi, in spica laxa v. densa sessiles, perianthio supra ovarium sæpius abrupte inflexo. Bracteæ breves.

Species ad 26, 2 Novo-Zelandicæ, 1 Novo-Caledonica a nobis non visa, cæteræ Australianæ, quarum tamen una etiam in Nova Zelandia invenitur. *Benth. Fl. Austral.* vi. 335. *Hook. f. Handb. N. Zeal. Fl.* 272. *Reichb. f. Xen. Orch.* t. 190, 198; et in *Linnæa* xli. 57. *Fitzger. Austral. Orch. cum tabb.* 2.

Genus in sectiones sequentes dividitur:—

1. *Euprasophyllum*. Labellum ad basin columnæ apodæ sessile. *Hook. f. Fl. Tasm.* t. 109 ad 112.

2. *Podochilus*. Labellum ad basin columnæ apodæ, supra unguem brevem horizontalem basi obtusum, erectum.

3. *Gnoplesium*. Labellum in pede columnæ plus minus producto articulatam. Caulis tenuis, folio fere ad bracteam vaginantem reducto, floribus minimis. *Hook. f. Fl. Tasm.* t. 113. *GENO-PLESIUM*, *R. Br. Prod.* 319.

270. *Microtis*, *R. Br. Prod.* 320.—Sepalum posticum erectum, latum, incurvum, concavum, lateralia lanceolata v. oblonga, libera, patentia v. reflexa. Petala sepalis lateralibus similia v. minora. Labellum ad basin columnæ sessile, patens, oblongum, integrum v. 2-lobum, basi sæpius callosum, ealcaratum. Columna brevissima, subteres, apice 2-auriculata; stigma sub rostello brevi obtusum; clinandrium parum elevatum, antice cum auriculis columnæ continuum. Anthera margini clinandrii affixa, erecta; pollinia granulosa, libera v. demum in rostello sessilia. Capsula erecta, ovoidea v. breviter oblonga, erostris, sæpius parva, interdum minima.—Herbæ terrestres, glabræ, tuberibus parvis, caule 1-foliato. Folium elongatum, teres, basi breviter apertum et cum vagina clausa continuum. Flores parvi, dense spicati, sæpe patentes v. reflexi. Bracteæ parvæ.

Species nobis notæ 6, omnes Australianæ, quarum una etiam in Nova Zelandia obvia. *Benth. Fl. Austral.* vi. 346. *Hook. f. Handb. N. Zeal. Fl.* 266; *Fl. Tasm.* t. 118. *Endl. Iconogr.* t. 15. *Bot. Mag. t.* 3377, 3378. *Reichb. f. in Bonpl.* 1857, 36, speciem Javanicum addidit, a nobis non visam.

271. *Corysanthes*, *R. Br. Prod.* 328, et *App. Flind. Voy.* t. 10. (*Corybas*, *Salisb. Parad. Lond.* t. 83, *charactere falso*. *Calcearia*, *Blume, Bijdr.* 417, t. 33. *Nematoceras*, *Hook. f. Fl. N. Zel.* i. 249, t. 57.)—Sepalum posticum erectum, valde incurvum, concavum galeatum v. in stipitem contractum, lateralia libera, parva, linearia v. longe filiformia, patentia. Petala sepalis lateralibus similia v. 0. Labellum sub galea erectum, laxè tubulosum, margine obliquo breviter recurvo denticulato, v. in laminam ample concavam denticulatam v. fimbriatam reflexamque productum. Columna brevis, erecta, apice incrassata, 2-alata v. 2-auriculata; stigma sub rostello brevissimo latiusculum; clinandrium breve v. vix prominulum. Anthera in margine clinandrii erecta, loculorum valva exterior lata interior parva; pollinia oblonga, pulvereæ, libera v. demum in rostello sessilia. Capsula erecta, ovoidea v. oblonga.—Herbæ terrestres, nanæ, tuberibus parvis, 1-foliatæ, 1-floræ. Folium ovato-cordatum orbiculare v. reniforme. Flos pro planta majusculus,

supra folium sæpe subsessile, pedunculo tamen fructifero plus minus elongato. Bractea parva.

Species ad 15, Australiæ, Novæ Zelandiæ et Archipelagi Malayani incolæ. *Benth. Fl. Austral.* vi. 350. *Hook. f. Handb. N. Zeal. Fl.* 265; *Fl. Tasm.* t. 107. *Blume, Orch. Archip. Ind.* 173, t. 63, 64, 66 C. *Endl. Iconogr.* t. 18. *Bot. Mag.* t. 5357. *Hook. Ic. Pl.* t. 1120. *Fitzger. Austral. Orch. cum tabb.* 2. *Reichb. f. Xen. Orch.* t. 197 (*Corybas*).

Labellum in speciebus Javanicis basi 2-gibbum v. brevissimè 2-calcaratum, quod in typicis Australianis adhuc non observatur, rostellum etiam evidentius, sed characteres cæteri et habitus in toto genere eidem.

272. *Pterostylis*, R. Br. *Prod.* 323. (*Diplodium*, Sw. in *Gesellsch. Nat. Fr. Berlin. Mag.* iv. 84, t. 3).—Sepalum posticum erectum, incurvum, concavum, cum petalis galeatum, lateralia basi pedi columnæ adnata, plus minus connata in labium inferius erectum v. recurvum 2-lobum, lobis interdum longe acuminatis v. caudatis. Petala lanceolata, falcata, basi contracta, sub galea adnata. Labellum ad apicem pedis columnæ breviter unguiculatum, mobile, lamina lineari v. oblonga, basi supra unguem in appendicem brevem v. elongatam 2-fidam ciliatam v. penicillatam producta. Columna elongata, incurva, basi in pedem brevem producta, semiteres v. anguste 2-alata, ad latera rostellii utrinque ala quadrangulari v. dolabriformi instructa; stigma infra alas longe oblongum; clinandrium breve, antice sæpe in dentes v. lobos 2 erectos productum. Anthera a margine clinandrii erecta v. incumbens, loculis 2-valvibus, connectivo non producto; pollinia granulosa, libera v. demum in rostello sessilia. Capsula oblonga v. rarius obovoidea, erecta, erostris.—Herbæ terrestres, tuberibus parvis, caule v. scapo florente paucifoliato v. aphylo vaginato. Folia radicalia ad basin caulis v. e gemma distincta conferta, subrosulata, ovata, caulina dum adsint linearia v. lanceolata. Flores nunc majusculi solitarii, nunc minores v. parvi, in racemo breviter pedicellati. Bractæ sæpius parvæ.

Species ad 36, quarum 6 Novo-Zelandicæ, cæteræ omnes Australianæ, ex his tamen una etiam in Nova Zelandia obvia, altera in Nova Caledonia.—*Benth. Fl. Austral.* vi. 352. *Hook. f. Handb. N. Zeal. Fl.* 268. *Fitzger. Austral. Orchid. cum tabb.* 12.

Genus naturale et bene limitatum, in sectiones 2 sequentes commode dividitur:—

1. *Antennæa*. Perianthii labium inferius erectum concavum, lobis v. caudis galeam amplectentibus. *Labill. Pl. Nov. Holl.* t. 210 (*Disperis*). *Guillem. Ic. Pl. Austral.* t. 2, 6. *Hook. f. Fl. Tasm.* t. 114 A, B, 115, 116 (*fig. dextr.*). *Hook. Journ. Bot.* i. t. 136. *Bot. Mag.* t. 3085, 3086, 3172, 3400, 3401, 6351. *Reichb. f. Xen. Orch.* t. 187.

2. *Catochilus*. Perianthii labium inferius a basi patens, v. reflexum v. a medio recurvum. Labelli appendix basalis obtusa v. fere obsoleta. *Hook. f. Fl. Tasm.* t. 116, f. 1, 2, t. 117.

273. *Calceana*, R. Br. *Prod.* 329. (*Caleya*, *Endl. Iconogr.* t. 8).—Sepala subæqualia, linearia, posticum (ovario recurvo inferum) erectum, lateralia patentia v. reflexa. Petala sepalis lateralibus similia. Labellum ad basin columnæ v. ad apicem pedis articulatam, ungue lineari incurvo; lamina ovata v. oblonga, peltata, convexa, indivisa, infra medium affixa, supra lævis v. tuberculata. Columna elongata, apoda v. basi in pedem producta, late 2-alata; stigma sub rostello brevi latum; clinandrium postice parum elevatum, marginibus dilatatis cum alis columnæ continuis. Anthera in margine clinandrii erecta, mutica, loculis subdiscretis valvis subæqualibus; pollinia (si rite observata) in loculis 2-partita, granulosa, anthera dehiscente libera v. glandulæ rostellii affixa. Capsula erecta, ovoidea v. obovoidea.—Herbæ terrestres, glabræ, tuberibus parvis, caule 1-foliato sæpeque 1-vaginato. Folium prope basin caulis lineare lanceolatum v. oblongum. Flores 1 ad 3 rarius 4, breviter pedicellati. Bractæ acutæ.

Species 3, Australiæ extratropicæ incolæ. *Benth. Fl. Austral.* vi. 365. *Hook. f. Fl. Tasm.* t. 107 A. *Fitzger. Austral. Orch. cum tab.* 1.

In *C. majore*, Br., columnæ alæ petaloideæ basi brevissimo tantum cum ungue labelli connectuntur; in *C. minore*, Br., et in *C. nigrita*, Lindl., columnæ alæ in pedo columnæ continuæ, cyathum latum petaloideum formant; sepalum lateralia etiam breviter adnata.

274. *Drakæa*, Lindl. *Swan Riv. App.* 55, cum ic. xyl. (*Arthrochilus*, F. Muell. *Fragm.* i. 42.)—Sepala subæqualia, linearia, posticum erectum, lateralia patentia v. reflexa. Petala sepalis lateralibus similia. Labellum ad basin columnæ v. ad apicem pedis articulatam, mobile, ungue lineari incurvo; lamina angusta, peltata, convexa, infra medium affixa. Columna elongata, apoda v. basi in pedem producta, tenuis, apice v. simul basi et apice utrinque auriculis petaloideis appendiculata, cæterum exalata; stigma sub rostello erecto brevissimo v. longiusculo latum; clinandrium parum elevatum. Anthera in margine clinandrii erectum, muticum, loculis subdiscretis valvis subæqualibus; pollinia (se rite observata) in loculis 2-partita, granulosa, anthera dehiscente libera v. a glandula rostellii pendula. Capsula erecta, obovoidea v. oblonga, erostris.—Herbæ terrestres, glabræ, tuberibus parvis, caule simplici 1-foliato v. sub anthesi aphylo 1-3-vaginato. Folium dum adest latum, prope basin caulis. Flores in racemo plures, breviter pedicellati, v. in una specie solitarii. Bractæ parvæ, angustæ.

Species 3, Australianæ. *Benth. Fl. Austral.* vi. 367. *Reichb. f. Xen. Orch.* t. 189.

SPICULÆA, Lindl. *Swan Riv. App.* 56, est *D. ciliata*, Reichb. f., quæ a cæteris speciebus columna apoda parum differt, uti *Caleana major* a *C. minore* et *C. nigrita*. Genus cæterum *Caleanæ* valde affine.

275. *Aclanthus*, R. Br. *Prod.* 321.—Sepala libera, posticum erectum v. incurvum, concavum, acutum v. tenuiter acuminatum, lateralia patentia, filiformia v. in acumen filiforme producta. Petala sepalis breviora, lanceolata, patentia v. reflexa. Labellum petalis æquilongum, ad basin columnæ sessile v. subsessile, indivisum, læve v. 2-callosum. Columna elongata, semiteres v. 2-alata; stigma sub rostello brevi cavum; clinandrium brevissimum. Anthera erecta, ovata v. subglobosa, connectivo loculis breviora v. in acumen breve producta; pollinia in quoque loculo 4, ovoidea v. globosa, pulverea v. fere solida, appendice laxiore connexa v. fere libera, anthera dehiscens in rostello v. in glandula a rostello soluta sessilia. Capsula erecta, ovoidea v. obovoidea.—Herbæ terrestres, tenues, 1-foliatæ, glabræ, tuberibus parvis. Folium ovato-cordatum, in medio caule v. prope basin subsessile, vaginæ supra folium nullæ. Flores solitarii v. in racemo plures, breviter pedicellati. Bractæ parvæ.

Species 7, quarum 1 Novo-Zelandica, 2 Novo-Caledoniæ, a nobis non visæ, cæteræ omnes Australiæ orientalis incolæ. *Benth. Fl. Austral.* vi. 369. *Hook. f. Handb. N. Zeal. Fl.* 264; *Fl. Tasm.* t. 119. *Endl. Iconogr.* t. 16. *Hook. Journ. Bot.* i. t. 134. *Reichb. f. Xen. Orch.* t. 187; et in *Linnaea* xli. 56. *Fitzger. Austral. Orch. cum tab.* 1.

276. *Eriochilus*, R. Br. *Prod.* 323.—Sepala libera, posticum erectum, subincurvum, concavum, lateralia longiora, patentia, oblonga v. elliptica, in stipitem distinctum contracta. Petala sepalis postico parum breviora, angusta, erecta v. patentia. Labellum sepalis multo brevius, ungue erecto, lobis lateralibus parvis erectis, lobus medius recurvo-patens, convexus, indivisus, facie villosus. Columna erecta, longiuscula, sub stigmatum nunc utrinque auriculata v. ciliata, nunc nuda; stigma sub rostello parvo latum, prominens; clinandrium parum prominens. Anthera erecta, loculis contiguis, valvis exterioribus latis interiores occultantibus; pollinia in quoque loculo 2 superposita v. 4, ovoidea v. acuminata, pulverea sed ante dehiscentiam leviter subcerea apparent. Capsula erecta, oblonga, erostris.—Herbæ terrestres, sæpius glanduloso-pubescentes v. villosæ, tuberibus parvis, caule simplici 1-foliato. Folium ad basin caulis v. altius affixum, ovatum v. lanceolatum. Flores solitarii v. pauci, sessiles. Bractæ parvæ, ovatæ.

Species 5, omnes Australianæ. *Benth. Fl. Austral.* vi. 371. *Labill. Pl. Nov. Holl.* t. 211, f. 2 (*Epipactis*). *Endl. Iconogr.* t. 6. *Hook. f. Fl. Tasm.* t. 120 A.

277. *Zyperanthus*, R. Br. *Prod.* 325.—Sepala subæquilongia, libera, posticum erectum, incurvum, latum, concavum, lateralia angusta, erecta v. patentia. Petala sepalis lateralibus similia. Labellum sepalis brevius, ungue lato erecto interdum in lobos laterales dilatato, lobus medius ovatus v. lanceolatus, recurvus, indivisus, facie papillosus. Columna erecta

v. *incurva*, *exalata*; stigma sub rostello brevi latum, prominens; clinandrium elevatum, obliquum. Anthera erecta, dorso prope basin margini clinandrii affixa, loculis contiguus; pollinia oblonga, subteretia, pulvereo-granulosa. Capsula erecta, oblonga, erostris.—Herbæ terrestres, siccitate sæpe nigricantes, rhizomate breviter v. longe repente fibras fasciculatas emittente rarius tuberoso, caule foliato simplici. Folia in speciebus normalibus plura v. interdum unicum radicale. Flores mediocres v. majusculi, in racemo pauci, bracteis sæpè subfoliaceis.

Species 4 v. 6, quarum una Novo-Caledonica, altera Novo-Zelandica, cæteræ 2 v. 4 Australianæ. *Benth. Fl. Austral.* vi. 373. *Hook. f. Handb. N. Zeal. Fl.* 270; *Fl. Tasm. t.* 100 B. *Endl. Inconogr. t.* 7. *Fitzger. Austral. Orch. cum tabb.* 2.

*L. suaveolens*, Br., et *L. serratus*, Lindl., a Reichenbachio et in *Fl. Austral.* ad *Caladeniam* translati fuerunt ob habitum, sepalum posticum angustum et columnam late alatum, nuper tamen a Fitzgeraldo ad *Lyperanthum* restituuntur. Reichenbach totum genus cum *Caladenia* junxit, in *Linnaea* xli. 56 sub hoc nomine speciem Novo-Caledonicam descripsit, et nuperrime, in *Southern Science Record*, 1882, speciem alteram novam cum *L. elliptico*, Br., dubie pro genere novo sub nomine FITZGERALDIA, indicat.

278. *Burnettia*, Lindl. *Gen. et Sp. Orch.* 517.—Sepala subæqualia, libera, erecta v. conniventia, posticum incurvum concavum, lateralia falcata. Petala sepalis lateralibus similia. Labellum a basi columnæ erectum, sessile, concavum, indivisum, superne recurvum, facie medio lamellatum. Columna longiuscula, incurva, 3-alata; stigma sub rostello brevi erecto latum, concavum; clinandrium breve. Anthera in margine clinandrii erecta, basi contracta substipitata, loculis contiguus valvis exterioribus majoribus; pollinia pulvereo-granulosa, anthera dehiscente libera v. dorso rostello affixa. Capsula . . . —Herba humilis, sub anthesi aphylla, sed vaginis 1–2 laxis subfoliaceis instructa. Folium serotinum, in rhizomate petiolatum, ovatum. Flores in scapo simplici 2–3, pedicellati, erecti. Bractæ laxè vaginatæ.

Species 1, Tasmanica. *Benth. Fl. Austral.* vi. 375. *Hook. f. Fl. Tasm. t.* 107.

Genus valde affine *Caladenia*, quacum junxit Reichenbach f., differt habitu, sepalis petalisque conniventibus et labelli laminis.

279. *Cyrtostylis*, R. Br. *Prod.* 322.—Sepala subæquilonga, libera, posticum lineare v. lanceolatum, erectum, incurvum, concavum, lateralia anguste linearia, patentia. Petala sepalis lateralibus similia nisi breviora. Labellum a basi columnæ patens, breviter unguiculatum, planum, indivisum, callis 2 prope basin in lineas elevatas secus faciem productis. Columna elongata, incurva, ad latera stigmatis breviter 2-alata, rostello brevi; clinandrium parum prominens. Anthera erecta, subglobosa, loculis contiguus; pollinia in loculis gemina, plus minus convexa, pulvereo-granulosa, anthera dehiscente libera v. dorso rostello affixa. Capsula erecta, oblonga.—Herbæ terrestres, glabræ, 1-foliatæ, caule simplici tenui. Folium ad basin caulis sessile, latum, sæpius cordatum v. reniforme. Racemus pauciflorus, v. ad florem unicum reductus. Bractæ breves, latæ.

Species 3, quarum una Australiana, cæteræ Novæ Zelandiæ incolæ. *Benth. Fl. Austral.* vi. 376. *Hook. f. Handb. N. Zeal. Fl.* 264; *Fl. Tasm. t.* 119. *Hook. Journ. Bot. i. t.* 135. *Fitzger. Austral. Orch. cum tab.* 1.

280. *Caladenia*, R. Br. *Prod.* 323.—Sepala subæquilonga, libera, posticum erectum, angustum, concavum, lateralia plana, patentia, v. rarius omnia similia patentia. Petala angusta, erecta v. patentia. Labellum a basi columnæ erectum, lobis lateralibus erectis v. obsoletis, medio recurvo-patente indiviso, marginibus sæpe fimbriatis v. dentatis, facie varie callosa v. in una specie lævi. Columna longiuscula, erecta v. incurva, superne plus minus 2-alata; stigma sub rostello brevi latum, prominens: clinandrium parum elevatum. Anthera in margine clinandrii erecta, loculis contiguus valvis exterioribus latis interiores occultantibus connectivo sæpius superatis; pollinia in loculis 2-partita, subplana, pulvereo-

granulosa, anthera dehiscente libera v. dorso rostello affixa. Capsula oblonga, erecta.—Herbæ terrestres, sæpe villosulæ, tuberibus parvis, caule simplici 1-foliato v. in una specie aphylo. Folium ad basin caulis angustum, vagina scariosa stipatum. Flores pauci, laxè racemosi v. solitarii, sæpius erecti, pedicellati. Bracteæ parvæ.

Species ad 32, quarum 2 Novo-Zelandicæ, *Hook. f. Handb. N. Zeal. Fl.* 267; *Fl. N. Zel.* t. 56 B (excl. *C. bifolia*, ad *Chiloglottidem* referenda), cæteræ omnes Australianæ. *Benth. Fl. Austral.* vi. 376. *Fitzger. Austral. Orch. cum tabb.* 5 (qui species nonnullas in Flora Australiana junctas nunc in vivo melius observatas iterum separat). *Reichb. f. Xen. Orch. t.* 188.

Genus quoad limites quodammodo incertum. Reichenbach f. genera plurima a Lindleyo aliisque distincta in *Caladenia* includit, Fitzgerald *C. suaveolentem* et *C. serratam* ad *Lyperanthum* restituit, et, inter sectiones sequentes, nonnullæ facile pro generibus propriis habendæ:—

1. *Leptoceras*, Br. Sepala acuta v. obtusiuscula, posticum erectum v. incurvum, concavum. Petala erecta, linear-clavata, sepalis longiora (in cæteris sectionibus sepalis breviora). Species 2. *Hook. f. Fl. Tasm.* t. 121 A. *LEPTOCERAS*, *Lindl. Gen. et Sp. Orch.* 415.

2. *Phlebochilus*, Benth. Sepala obscure v. distincte acuminata, posticum incurvum, concavum, erectum v. cum columna reflexum. Labellum latum, venis coloratis divergentibus, indivisum v. lobo medio minimo terminatum. Species 3, occidentales.

3. *Calonema*, Lindl. Sepala acuminata, posticum erectum incurvum. Labelli venæ inconspicuæ, callis in facie 2-∞-seriatis. *Hook. f. Fl. Tasm.* t. 121 B, 122 A, B, 123 A. *Fielding, Sert. Pl.* t. 73.

4. *Eucaladenia*, Lindl. Sepala acuta v. obscure acuminata, rarius obtusa, posticum sæpius erectum, concavum. Labelli venæ inconspicuæ, callis in facie 2-∞-seriatis, basi interdum in hemicyclium confertis. *Sm. Exot. Bot. t.* 104 (*Arethusa*). *Endl. Iconogr. t.* 51. *Hook. f. Fl. Tasm.* t. 123 B, 124, 125.

5. *Pentisia*, Lindl. Sepala et petala omnia obtusa, subæqualia, patentia. Labellum et columna brevissima, calli in labello parvi, pluriseriati. Species 2, occidentales.

281. *Glossodia*, R. Br. *Prod.* 325.—Sepala subæqualia, libera, patentia. Petala sepalis subsimilia. Labellum ad basin columnæ sessile, indivisum, facie nudum sed basi callis appendicibusve 2 longiusculis in columnam erectis interdum inter se connatis instructum. Columna erecta, longiuscula, sæpe incurva, 2-alata; stigma sub rostello brevi latum; clinandrium membranaceum, cum alis columnæ continuum. Anthera in margine v. intra marginem clinandri erecta, loculis contiguis, valvis exterioribus latis, connectivo breviter acuminato; pollinia in loculis 2-partita, subplana, pulvereo-granulosa, anthera dehiscente libera v. dorso rostello affixa. Capsula erecta, oblonga, erostris.—Herbæ terrestres, 1-foliatæ, 1-2-floræ, habitu *Caladeniæ*, tuberibus parvis, caule simplici tenui sæpe piloso. Folium ad basin caulis oblongum v. lanceolatum, vagina scariosa stipatum. Flores erecti, breviter pedicellati, bracteis parvis.

Species 4, Australianæ. *Benth. Fl. Austral.* vi. 391.

Genus *Caladeniæ* (sect. *Pentisiæ*) valde affine, quæcum junxit Reichenbach, appendicibus ad basin labelli insigne, in sectiones 2 facile pro generibus distinctis habendas dividitur:—

1. *Euglossodia*, Endl. *Gen. Pl.* 1367. Labellum basi latum, biconvexum, pubescens. Clinandrium postico parum elevatum, anthera marginali. Species 2, orientales. *Endl. Iconogr. t.* 41. *Hook. f. Fl. Tasm.* t. 120. *Fitzger. Austral. Orch. cum tab.* 1.

2. *Elcutheranthera*, Endl. l.c. Labellum angustum, glabrum. Clinandrium postice valde elevatum, supra antheram intramarginalem fere cucullatum. Species 2, occidentales.

282. *Adenochilus*, *Hook. f. Fl. N. Zel.* i. 246, t. 56 A.—Sepala libera, posticum erectum v. antrosum inclinatum, latum, concavum v. subgaleatum, lateralia sublongiora, lanceolata, patentia. Labellum a basi columnæ erectum; lobi laterales lati, suberecti, medius angustus, recurvo-patens, facie vario callosa. Columna longiuscula, utrinque late alata; stigma sub rostello brevi latum, prominens; clinandrium late membranaceum, integrum v. 2-partitum, marginibus cum alis columnæ continuis. Anthera erecta, latiuscula, loculis contiguis subæqualiter 2-valvibus; pollinia in loculis 4, ovoidea, pulvereo-granulosa. Capsula oblonga, erecta, erostris.—Herbæ terrestres, tenues, 1-foliatæ, 1-floræ, habitu *Caladeniæ*. Folium in medio caule ovatum, amplexicaule; squamæ v. bracteæ

supra folium 2, dissitæ, quarum superior ad basin pedicelli appendiculam lineari-subulatam v. apice leviter dilatatam includit, quæ verisimiliter axeos continuatio, floris alterius rudimentum interdum ferens.

Species 2, altera Novo-Zelandica, *Hook. f. Handb. N. Zeal. Fl.* 265, altera nuper in Australia detecta. *Fitzger. Austral. Orch. cum tab. 1. F. Muell. Fragm. Phytogr. Austral. x.* 64.

283. *Chiloglottis*, *R. Br. Prod.* 322.—Sepala libera, posticum erectum, incurvum, concavum, basi contractum, lateralialia anguste linearia v. teretia, patentia v. reflexa. Petala lanceolata, falcata. Labellum a basi columnæ brevissime unguiculatum, ovatum v. obovatum, indivisum, facie varie callosum. Columna elongata, alis 2 latis ad apicem columnæ in lobos 2 erectos antheram sæpe æquantes productis; stigma sub rostello brevissimo latum; clinandrium postice breve, marginibus cum alis columnæ continuis. Anthera erecta, sessilis, oblonga, loculis contiguus; pollinia pulverea, in loculis vix divisa, anthera dehiscente libera v. rostello affixa. Capsula erecta, ovoides v. breviter oblonga, erostris.—Herbæ terrestres, tuberibus parvis. Folia 2, subradicalia. Scapus tenuis, 1-florus, præter bracteam florem subtendentem nudus v. prope basin 1-vaginatus. Flos mediocris, breviter pedicellatus.

Species 6, quarum 2 Novo-Zelandicæ, inclusa *Caladenia bifolia*, *Hook. f.*; 4 Australianæ. *Benth. Fl. Austral. vi.* 390. *Fitzger. Austral. Orch. cum tab. 1. Labill. Pl. Nov. Holl. t.* 211, f. 1 (*Epipactis*). *Bauer, Ill. Pl. Nov. Holl. t.* 8. *Hook. f. Fl. Tasm. t.* 108; *Handb. N. Zeal. Fl.* 269.

284. *Calochilus*, *R. Br. Prod.* 320.—Sepala subæqualia, libera, posticum erectum, latiusculum, concavum, lateralialia patentia. Petala multo minora, late falcata. Labellum sessile, patens v. pendulum, obovatum v. oblongum, indivisum, sepalis sublongius, facie dense ciliato-fimbriatum. Columna brevis, latiuscule 2-alata; stigma sub rostello brevi erecto latum; clinandrium postice breve, marginibus latioribus cum alis columnæ continuis. Anthera in margine v. intra marginem clinandrii sessilis, incumbens, ovata, apice interdum breviter recurva, loculis contiguus; pollinia pulvereo-granulosa, anthera dehiscente ad latera rostellii margini stigmatibus imposita. Capsula erecta, obovoides v. oblonga, erostris.—Herbæ terrestres, glabræ, tuberibus ovoideis, caule simplici 1-foliato. Folium elongatum, angustum, prope basin caulis, et vaginæ 2 v. 3 supra folium sæpe apice in acumen erectum subfoliaceum productæ. Flores in racemo pauci, breviter pedicellati. Bractæ parvæ.

Species 3, Australiæ orientalis incolæ, a Muellero in unam junctæ. *Benth. Fl. Austral. vi.* 314. *Endl. Iconogr. t.* 14. *Hook. f. Fl. Tasm. t.* 106 A. *Fitzger. Austral. Orch. cum tab. 1. Bot. Mag. t.* 3187.

285. *Arethusa*, *Linn. Gen. n.* 1014.—Sepala subæqualia, incurvo-erecta, angusta, basi cohærentia, lateralialia in ovario obliqua, basi sub labello in mentum breve connata. Petala sepalis subsimilia v. paullo latiora. Labellum erectum, angustum, basi cum columna connatum et in calcar descendens brevissime productum, lamina indivisa apice patente, facie sæpius villosa. Columna elongata, erecta, anguste alata, alis superne latioribus cum clinandrio membranaceo-dilatato, dentato v. subintegro continuis; stigma sub rostello prominulo transversum, angustum. Anthera intra marginem clinandrii breviter stipitata, incumbens v. fere pendula, obtuso conica, loculis septo imperfecto divisus; pollinia in loculis 2 (v. in unum cohærentia?), laxè tenuiterque granulosa, ecaudata, libera v. demum in rostello sessilia. Capsula longiuscula, maturam non vidimus.—Herbæ terrestres, tubere parvo, scapo florente aphylo v. 1-foliato paucivaginato uni-pauci-floro. Folium angustum v. folia e gemma distincta 2-3, serotina. Flos v. flores majusculi, erecti v. subnutantes. Bractæ parvæ.

Species 3, quarum una Japonica, scapo 1-phylo 1-floro; altera boreali-Americana scapo aphylo v. rarius vagina una in folium breve producta, 1- rarius 2-floro (*Lindl. Gen. et Sp. Orch.* 428. *Bauer, Illustr. Orch. Fructif. t.* 7. *Hook. Fenzl. Fl. t.* 170. *Bot. Mag. t.* 220A. *Lodd. Bot. Cab. t.* 1170); tertia Guatemalensis, scapo aphylo 2-4-floro (*Cuvier Lindl. Introd. Nat. Syst. ed.* 2, 446; *Gen. et Sp.*

*Orch.* 425. *Bot. Reg.* t. 1872.) Folia serotina in hac e gemma distincta evolvuntur, in duabus prioribus deesse videntur. Characteres florales in omnibus iidem.

286. *Calopogon*, R. Br. in *Ait. Hort. Kew. ed.* 2, v. 204. (*Cathea*, *Salisb. in Trans. Hort. Soc.* i. 300, *absque char.*)—Sepala libera, subæqualia, patentia. Petala sepalis similia. Labellum (superum), a basi columnæ patens, ascendens, ungue angusto v. lato, lamina dilatata ad apicem unguis barbata. Columna elongata, curvula, superne 2-alata; stigma sub rostello brevi transversum; clinandrium elevatum, integrum, marginibus cum alis continuus. Anthera margini v. paullo infra marginem clinandrii affixa, incumbens, convexa; pollinia in loculis solitaria (v. 2?) laxè granulosa, libera v. demum in rostello sessilia. Capsula . . .—Herbæ terrestres, tubere parvo, caule 1- rarissime 2-foliato supra folium esquamato. Folium gramineum. Flores majusculi, in racemo laxo plures, vix pedicellati. Bractæe parvæ.

Species editæ 4, Americæ borealis incolæ. inter se valde affines. *Lindl. Gen. et Sp. Orch.* 474. *Chapm. Fl. S. U. St.* 456. *Bart. Fl. N. Amer.* t. 68. *Bot. Mag.* t. 116. *Sweet, Brit. Fl. Gard.* t. 115. *Fl. des Serres*, t. 1036.

Specimen Cubense, Wright, n. 3317, a forma communi boreali *C. pulchellæ*, Br., vix differt spica longa floribunda.

287. *Pogonia*, Juss. *Gen. Pl.* 65.—Sepala subæqualia, libera, erecta v. rarius patentia. Petala sepalis similia v. sæpe latiora v. breviora, erecta v. cum labello declinata. Label- lum a basi columnæ erectum, liberum, ecalcaratum, nunc sessile lobis lateralibus columnam anguste amplexantibus, nunc in unguem contractum, lamina patente 3-loba v. indivisa, facie sæpius lineis 2 v. 4 callosis instructa. Columna elongata, apice leviter clavata, exalata, rostello brevi; stigma sub rostello oblongum v. latum; clinandrium plus minus elevatum, integrum v. denticulatum. Anthera in margine clinandrii substipitatum, plus minus incumbens, obtuse conica v. semiglobosa, loculis sæpe septo imperfecto semi-2-locellatis; pollinia in loculis solitaria v. in 2 divisa, tenuiter granulosa, ecaudata, libera v. demum in rostello sessilia. Capsula oblonga v. ovoidea, erecta v. (in *Triphoris* nonnullis et in *Nervilia*) pendula.—Herbæ terrestres, rhizomate varie tuberoso. Folia nunc in caule florente cœtanea solitaria v. pauca, nunc serotina e gemma solitaria, petiolo basi vagina stipato, lamina lata, scapo florente in eodem tubere e gemma distincta aphylo paucisquamato. Flores mediocres v. majusculi, solitarii v. in racemo secundi, nutantes v. rarius erecti.

Species ultra 30, in utroque orbe late dispersæ. *Lindl. Gen. et Sp. Orch.* 413. *Blume, Orch. Archip. Ind.* 147. *Reichb. f. Xen. Orch.* ii. 88.

Genus melius characteribus vegetationis quam floralibus in sectiones sequentes dividitur, quæ vix non genera naturalia præbent:—

1. *Nervilia*. Scapi floridi 1-3-vaginati, cæterum aphylli. Folia serotina, e gemma distincta solitaria, petiolo basi vagina stipato, lamina lata sæpe orbiculata v. fere reniformi. Flores sæpius in racemo breviter pedicellati, nutantes, secundi, rarius solitarii v. gemini. Stigma quam in *Eupogonia* brevius latiusque. Species ad 15, omnes gerontogæ tropicæ v. subtropicæ, ab Africa tropica usque ad Chinam, insulas maris Pacifici et Australiam extensæ. *Blume, Orch. Archip. Ind.* 150, t. 10, f. 4, t. 49, f. 2, t. 54 B, t. 56, 57. *Wight, Ic.* t. 1720, 1758. *Reichb. f. in Trans. Linn. Soc.* xxx. 142; in *Flora* 1365, 184, et 1872, 276; *Otia Hamb.* 60; et *Xen. Orch.* t. 126, f. 3 ad 6. *Bot. Mag.* t. 6125. *NERVILIA*, *Gaud. in Freyc. Voy. Bot.* 422, t. 35. *CORDYLA*, *Blume, Bijdr.* 416. *ROPHOSTEMON*, *Bl. Fl. Jav. Præf.* 6. *APLOSTELLIS*, *Thou. Orch. Illes Afr.* t. 24. *HAPLOSTELLIS*, *Endl. Gen. Pl.* 219.

2. *Eupogonia*. Caulis 1-foliatus, 1-bracteatus, 1-florus. Folium angustum v. oblongum. Bractea parva. Flos erectus v. inclinatus. Labellum sessile. Clinandrium sæpius denticulatum. Species 2, boreali-Americanae, quarum una etiam in Japonia obvia. *Hook. Exot. Fl.* t. 70. *Bot. Reg.* t. 148. *Blume, Orch. Archip. Ind.* t. 32, et t. 54 A. *Reichb. f. Xen. Orch.* t. 126, f. 1. *P. similis*, *Bl. (P. japonica*, *Reichb. f.)* ab A. Grayio ad *P. ophioglossoidem* reducitur.

3. *Cleistes*. Caulis clatus, 2-3-foliatus, 2-∞-bracteatus, 2-∞-florus. Bractæe foliaceæ. Flores maximi, subsessiles, suberecti. Labellum sæpius sessile. Clinandrium (an semper?) dentatum. Species, ex *Reichb. f. (Xen. Orch.* ii. 89) 11, Americanae tropicæ, plures tamen inter se male dis-

tinctæ. *Aubl. Pl. Gui. t.* 321 (*Limodorum*). *Reichb. f. Otia Hamb.* 81. *CLEISTES*, *L. C. Rich. in Mem. Mus. Par. iv.* 31, *nomen*. *Lindl. Gen. et Sp. Orch.* 409. *Hook. Ic. Pl. t.* 473.

4. *Triphora*. Caulis 2-3-foliatus, 2-∞-bracteatus, 2-∞-florus. Bracteæ foliaceæ uti folia latæ, sessiles. Flores mediocres, pedicellati, sæpe nutantes. Labellum (an semper?) unguiculatum. Clinandrium parum prominens, integrum. Species ad 8, Americæ borealis et tropicæ incolæ. *Blume, Orch. Archip. Ind. t.* 53, *f.* 3. *Reichb. f. in Ned. Kruidk. Arch. iv.* 321. *Bot. Reg. t.* 908. *TRIPHORA*, *Nutt. Gen. N. Amer. Pl. ii.* 192.

5. *Codonorchis*. Caulis medio v. supra medium verticillo foliorum 3-6 instructus, 1-florus. Folia lata, subsessilia. Sepala æqualia, patentia, petalis longiora. Species 2, Americanæ extra-tropicæ, altera borealis, sepalis quam petala multo longioribus linearibus, labello sessili, *Bart. Fl. N. Amer. t.* 67, *ISOTRIA* et *ODONECTIS*, *Rafin. in Desv. Journ. Bot. i.* (1808), 220, 221; altera australis, sepalis quam petala parum majoribus, labello unguiculato. *Pæpp. et Endl. Nov. Gen. et Sp. t.* 122. *Brongn. in Duperr. Voy. Cog. Bot. t.* 37, *f.* 1 (*Calopogon*). *CODONORCHIS*, *Lindl. Gen. et Sp. Orch.* 410. *Hook. f. Fl. Antarct. t.* 125.

*DIDYMOFLEXIS*, *Griff. in Calc. Journ. iv.* 383, *t.* 17, est verisimiliter *Pogonia* (*Nervilia*) species, sed specimina nulla adsunt vel in herb. Lindl. vel in aliis herbariis Kewensibus.

288. ? *Pogoniopsis*, *Reichb. f. Otia Hamb.* 82.—Sepala lineari-ligulata, curva, cum petalis subæqualibus conniventia. Labellum ima basi saccatum, lineare, antrorsum dilatatum, ambitu triangulum, in lacinias plures lineares bipectinato-solutum, antice rhombeum, callosum. Columna crassiuscula, 3-gona, utrinque juxta foveam porrecta; clinandrium erectum, vertice apice retusum, erosum. Anthera immersa, vertice emarginata; pollinia (ex ic. *Warming*) 2, inferne longitudinaliter foveata. Capsula...—Genus aphyllum, habitu *Monotropæ*. Radix fasciculata. Caulis crassiusculus, superne densius inferne distanter vaginatus. Racemus densiusculus. Bracteæ oblongo-ligulatæ, ciliato-serratæ, basi sagittatæ. (*Char. ex Reichb. f.*)

Species 1, Brasiliensis, a nobis non visa. Genus affine *Pogonia* dicitur. Pollinia auctor ipse non vidit.

289. ? *Chlorosa*, *Blume, Bijdr.* 420, *t.* 31.—Sepala subæqualia, libera, erecto-patentia, angusta, acuminata. Petala sepalis similia nisi minora. Labellum sepalis subsimile, sessile, erectum, columnam amplexans. Columna brevissima, crassa; stigma sub rostello brevissimo faciem columnæ obtegens; clinandrium vix prominens. Anthera sessilis, erecta, ovata, obtusa, loculis discretis; pollen pulvereo-granulosum. Capsula...—Herba terrestris v. epiphytica, fibris radicalibus in rhizomate brevi crassis fasciculatis, scapis floridis aphyllis paucivaginatibus erectis simplicibus. Folia in rhizomate solitaria, longe petiolata, late ovata, crassiuscula. Flores mediocres v. majusculi, in spica laxa sessiles. Bracteæ angustæ. (*Char. ex ic. et descr. Blumei.*)

Species 1, Javanica, a nobis non visa. *Lindl. Gen. et Sp. Orch.* 452. *Blume, Orch. Archip. Ind.* 134, *t.* 44.

Genus ab auctore cum *Cryptostyle*, Br., comparatum, nobis potius *Pogonia* approximandum videtur.

290. *Leucorchis*, *Blume, Mus. Bot. Lugd. Bat. i.* 31. (*Apetalon*, *Wight, Ic. v.* 22, *t.* 1758. *Epiphanes*, *Reichb. f. in Seem. Fl. Vit.* 295, *non Bl.*)—Sepalum posticum cum petalis æquilongis in labium superius 3-fidum connatum, lateralia in labium semi-2-fidum plus minus connata, basi cum pede columnæ mentum parvum formantia. Labellum pedi columnæ affixum (articulatum?), latissimum, sepalis vix brevius, indivisum, media facie præsertim prope basin papilloso-callosum. Columna longiuscula, basi in pedom brevem producta, superne anguste 2-alata, apice antice 2-denticulata; stigma sub rostello brevi latiusculum; clinandrium parum elevatum, integrum. Anthera in margine clinandrii brevissime stipitata, late ovata, convexa, inclinata v. subincumbens; pollinia (in loculis 2?) laxè tenuiterque granulosa. Capsula...—Herbæ tenuis, aphyllæ, rhizomate ramoso tuberifero. Scapi simplices, flexuosi, squamis paucis parvis. Flores parvi, in racemo pauci, breviter pedicellati. Bracteæ parvæ.

Species 2 v. 3, in graminosis Indiæ orientalis, Archipelagi Malayani et insulis maris Pacifici late dispersæ. *Blume, Orch. Archip. Ind.* 146, cum ic. xyl. Columnæ pes in icone Wightiana neglectus, certe adest in speciminibus suis.

291. *Gastrodia*, *R. Br. Prod.* 330. (*Gamoplexis*, *Falcon. in Trans. Linn. Soc.* xx. 293, t. 13, *analysis erronea*. *Epiphanes*, *Blume, Bijdr.* 421, t. 4.)—Sepala cum petalis in tubum ventricosum, apice 5-lobum antice breviter v. alte fissum connata, lobis brevibus ovatis æqualibus v. 2 interioribus (petalis) minoribus. Labellum pedi columnæ affixum, sepalis brevius, dorso perianthio breviter v. usque ad fissuram adnatum; lamina erecta, indivisa, media facie lineis 1-2-elevatis subcallosis instructa v. nuda. Columna elongata v. (in *G. Cunninghamii*) brevissima, semiteres v. anguste sub-2-alata, basi in pedem brevem nunc brevissimum producta, rostello parvo; stigma ad basin columnæ plus minus elevatum; clinandrium breve, antice sæpe 2-auriculatum. Anthera margini clinandrii affixa, incumbens, valde convexa v. semiglobosa; pollinia grosse granulosa, ecaudata. Capsula erecta, obovoidea turbinata v. ovoidea.—Herbæ terrestres, aphyllæ, rhizomate in tuber incrassato. Caulis simplex, vaginis laxis brevibus  $\infty$ -squamatus. Flores in racemo laxiusculo breviter pedicellati, erecti v. nutantes. Bractee breves v. angustæ.

Species 7, Indiæ orientalis, Asiæ occidentalis, Archipelagi Malayani, Australiæ et Novæ Zelandiæ incolæ. *Lindl. Gen. et Sp. Orch.* 384. *Blume, Orch. Archip. Ind.* 140, t. 52 ad 54. *Benth. Fl. Austral.* vi. 308. *Hook. f. Handb. N. Zeal. Fl.* 263; *Fl. Tasm.* t. 126. *Endl. Iconogr.* t. 5.

Perianthium in *G. sesamoide* antice breviter, in specie *Falconeriana* (quæ vix a *G. elata*, Bl., differt) usque ad medium, in *G. javanica*, fere ad basin fissum. Labelli forma variabilis est, sed nunquam vidimus petalis simile ut in icone *Falconeriana* delineatur.

292. *Yoonia*, *Maxim. in Bull. Acad. Sc. Petersb.* xviii. 68; *Mel. Biol.* viii. 645.—Sepala carnea, libera, patentia, oblonga, lateralia subinæquilatera. Petala sepalis paullo breviora, ovata, conniventia. Labellum cum petalis campanulato-connivens, iis æquale, liberum, lata basa sessile, suboblongum, concavum, apice contracto subforficatum, medio in sacculum brevem excavatum, læve. Columna labello brevior, erecta, plana, quadrata; stigma transversum, profunde excavatum, rostello obsoleto; clinandrii lobus medius triangulari-ovatus, laterales semi-ovati in alas columnam marginantes abeuntes. Anthera lobo medio adnata, persistens, longe rostrata, loculorum facies a margine solutæ; pollinia 4, oblonga, pulposa, sectilia, per bina caudiculis (stipitibus rostellii?) arachnoideo-viscidulis glandulæ affixa, quæ quasi semilunaris margini superiori stigmatis inserta. Capsula . . .—Herba aphylla, caulibus e rhizomate ramoso erectis crassis simplicibus, basi crebre sursum remote vaginis tectis. Flores majusculi, in racemo laxo 4-7, longe pedunculati. (*Char. ex descr. Maxim.*)

Species 1, Japonica, a nobis non nisi iconibus a Maximowiczio communicatis nota. *Benth. in Hook. Ic. Pl.* t. 1364. Genus videtur *Epipogo* affine.

293. *Epipogon*, *Gmel. Fl. Sibir.* i. 11, t. 2, f. 2. (*Epipogium*, *Lindl. et auct. plur.*)—Sepala subæqualia, libera, angusta, erecta v. demum patentia. Petala sepalis similia. Labellum ad basin columnæ sessile, ovatum, basi late concavum et in saccum seu calcar breve obtusum productum; lobi laterales auriculiformes v. obsoleti, medius patens, facie 2-4-seriatim papillosus. Columna brevis, apice incrassata, rostello brevi lato; stigma a rostello subdistans, latum, prominens; clinandrium breve v. membranaceo-dilatatum. Anthera marginalis v. intra marginem clinandrii substipitata, incumbens v. suberecta, dorso valde incrassata; pollinia in loculis solitaria, granulosa, anthera dehiscente sæpius stipitibus 2 filiformibus e rostellii glandula affixa. Capsula ovoidea, nutans.—Herbæ aphyllæ, rhizomate nodoso interdum in tuber subintegrum incrassato. Scapus simplex, squamis vaginantibus paucis. Flores in racemo laxo pauci, breviter pedicellati, patentes v. nutantes. Bractee floribus breviores.

Species 2, altera typica labello 2-auriculato, clinandrio brevi, per Europam et Asiam temperatam parciissime dispersa, *Lindl. Gen. et Sp. Orch.* 383. *Reichb. Ic. Fl. Germ.* t. 468. *Nees, Gen. Pl. Fl.*

*Germ. Monocot.* iii. n. 23. *Jacq. Fl. Austr.* t. 84. *Barla, Ic. Orch. Alp. Marit.* t. 11. *Bot. Mag. t.* 4821; altera ab Africa et Asia tropica usque ad Australiam extensa, labello integro, clinandrio membranaceo-dilatato. *Lindl. in Journ. Linn. Soc.* i. 176. *Benth. Fl. Austral.* vi. 308. *Reichb. f. in Bonpl.* 1857, 36. *GALERA, Blume, Bijdr.* 415, t. 3; *Orch. Archip. Ind.* 139, t. 52 et 54 E. *CERATOPHIS, Lindl. Gen. et Sp. Orch.* 383. *PODANTHERA, Wight, Ic.* v. 22, t. 1759.

294. *Zimodorum*, L. C. Rich. in *Mem. Mus. Par.* iv. 50, non Linn.—Sepala subæqualia, libera, erecta v. demum patentia, posticum incurvum concavum, lateralia subfalcata. Petala sepalis lateralibus similia nisi minora. Labellum basi cum columna in cyathum latum obliquum connatum, in calcar descendens longe productum, lamina ovata v. oblonga, apice patens, indivisa v. obscure sinuato-3-loba. Columna elongata, semiteres, apoda, rostello breviter ovato-triangulari erecto v. antrorsum inclinato; stigma sub rostello latum; clinandrium vix prominens. Anthera erecta v. leviter inclinata, loculis contiguis imperfecte 2-locellatis; pollinia oblonga, pulvereo-granulosa; anthera dehiscente sæpe in rostello erecta. Capsula majuscula, erecta, oblonga, erostris.—Herba terrestris, erecta, aphylla, rhizomate nodoso fibras subcarnosas emittente. Caulis elatus, vaginis longis plus minus obtectus. Flores majusculi, in spica elongata brevissime pedicellati, erecti, dissiti. Bracteæ membranaceæ, flores interdum subæquantes.

Species 1, per regionem Mediterraneam latissime dispersa, usque ad Europam centralem et Caucasum rarius extensa. *Lindl. Gen. et Sp. Orch.* 398. *Nees, Gen. Fl. Germ. Monoc.* iii. n. 22. *Reichb. Ic. Fl. Germ.* t. 481. *Barla, Icon. Orch. Alp. Marit.* t. 1 (analysis plerumque a Reichb. l. c. repetita).

295. *Chloræa*, Lindl. in *Quart. Journ. R. Instit.* i. 47.—Sepala libera, nunc subæqualia patentia, nunc posticum erectum incurvum v. fornicatum, lateralia patentia a postico varie difformia. Petala sæpius angusta, sub sepalo postico arcuato-conniventia v. patentia. Labelli unguis sæpius brevissimus interdum 2-callosus, a basi columnæ incurvo-ascendens v. ei rarius breviter adnatus; lamina superne patens, angusta v. lata, integra 3-loba v. fimbriata, facie sæpius  $\infty$ -lamellata v. calloso-glandulifera. Columna longiuscula v. mediocris, semiteres, antice sæpius concava interdumque apicem versus anguste 2-alata; stigma sub rostello brevi latum, concavum; clinandrium parum elevatum v. plus minus membranaceo-dilatatum. Anthera in margine clinandrii erecta, ovata v. oblonga, loculis contiguis septo longitudinali imperfecte 2-locellatis; pollinia in loculis sæpius 2-partita, pulvereo-granulosa, oblonga, basi sæpius recurva, anthera dehiscente libera v. rostello basi v. dorso affixa. Capsula erecta, ovoidea v. oblonga, erostris.—Herbæ terrestres, rhizomate brevi non tuberoso, fibris carnosiss fasciculatis. Caulis simplex, foliatus. Folia membranacea. Flores mediocres v. majusculi, in spica terminali numerosi, sessiles. Bracteæ membranaceo-scariosæ v. coloratæ, floribus sæpius parum breviores.

Species enumeratæ ultra 80, Americæ australis extratropicæ incolæ, pro maxima parte Chilenses. *Lindl. Gen. et Sp. Orch.* 399. *Reichb. f. Otia Hamb.* 51, et in *Linnæa* xxii. 862, et (sub *Asarca*) *ibid.* xxii. 861. C. Gay, *Fl. Chil.* v. 437, t. 63 ad 65, et (sub *Asarca*) *ibid.* 463, t. 66. *Philippi in Linnæa* xxix. 46, xxxiii. 240, et (sub *Asarca*) *ibid.* xxix. 55. *Pæpp et Endl. Nov. Gen. et Sp.* t. 46 ad 50, 52 ad 55, et (sub *Asarca*) *ibid.* t. 118 ad 121. *Brongn. in Duperr. Voy. Coq. Bot.* t. 44. *Bot. Reg.* 1845, t. 49. *Maund, Botanist,* t. 94.

*ASARCA*, Lindl. in *Quart. Journ. R. Instit.* i. 52, primum a *Chloræa* distincta fuit sepalis apice non incrassatis, dein ab auctore ipso in *Gen. et Sp. Orch.* 406, docente Pæppigio, sepalis magis patentibus, columna brevior et labello ima basi columnæ adnato, sed characteres, ut bene monet C. Gay, *Fl. Chil.* v. 463, valde incerti sunt et de specie in speciem variant. Pæppig ipse in *Asarca* admisit species columnæ brevi et columnæ elongata, et labello basi adhærente v. a basi libero.

*BIENERTIA*, Reichb. f. in *Bot. Zeit.* 1853, 3, t. 1, est species Boliviana, *Chloræam* cum *Asarca* arcte connectens, nec generice distinguere possumus.

*ULANTHA*, Hook. *Bot. Mag.* lvii., in *Indice* (*Neottia grandiflora*, Hook. l. c. t. 2956) est, ex Lindley, *Chloræa* species in Horto Botanico S<sup>te</sup> Vincentis culta, nec in India occidentali indigena.

296. *Etipanula*, Juss. *Gen. Pl.* 65.—Sepala libera, posticum erectum, integrum, concavum, lateralia angusta, elongata, patentia, apice pinnatim fimbriato-multifida v.

pectinata. Petala sepalo postico similia v. latiora, arcuato-conniventia v. patentia. Labellum a basi columnæ incurvo-ascendens, apice patens, indivisum v. margine fimbriatum. Columna longiuscula, semiteres; stigma sub rostello brevi latum, concavum; clinandrium parum elevatum. Anthera in margine clinandrii erecta, loculis contiguis imperfecte 2-locellatis; pollinia in loculis sub-2-partita, pulvereo-granulosa, oblonga, anthera dehiscente libera v. rostello basi v. dorso affixa. Capsula erecta, longe oblonga.—Herbæ terrestres, foliatæ, habitu et fibris radicalibus *Chlorææ*. Spicæ v. racemi nunc longiusculi multiflori nunc ad florem unicum reducti.

Species 3 v. 4, Americæ australis extratropicæ incolæ. *Lindl. Gen. et Sp. Orch.* 405. *Smith, Ic. Ined. t. 23 (Arethusa)*. *Pæpp. et Endl. Nov. Gen. et Sp. t. 51 (Chloræa)*. *Reichb. f. in Bot. Zeit.* 1853, t. 1, et in *Linnaea* xli. 51.

297. *Cephalanthera*, *L. C. Rich. in Mem. Mus. Par.* iv. 51.—Sepala libera, subæqualia, conniventia. Petala paullo minora. Labellum a basi columnæ erectum, sepalis inclusum, basi cavum gibbum v. breviter saccato-calcaratum; lobi laterales erecti, columnam amplectentes, medius latus concavus, vix patens. Columna longiuscula, semiteres, facie plana, exalata, rostello ultra marginem stigmatis lati non v. vix prominente; clinandrium postice breviter productum, erectum, concavum. Anthera in margine clinandrii erecta, interdum supra basin affixa, ovata v. semiglobosa, loculis contiguis; pollinia in loculis 2-partita, pulvereo-granulosa, inappendiculata, anthera dehiscente libera v. in stigmatis margini (rostello obsoleto) erecta. Capsula erecta, oblonga, erostis.—Herbæ terrestres, nunc foliatæ fibris radicalibus in rhizomate fasciculatis, nunc aphyllæ rhizomate nodoso. Folia dum adsint lanceolata v. oblonga, nervosa. Flores mediocres v. speciosi, in spica laxa sæpe dissiti, sessiles v. brevissime pedicellati, suberecti. Bractææ inferiores sæpe foliaceæ flores superantes.

Species ad 10, Europæ, Africæ borealis, Asiæ temperatæ et montanæ et Americæ borealis occidentalis incolæ. *Lindl. Gen. et Sp. Orch.* 411. *Reichb. Ic. Fl. Germ. t. 469 ad 472*. *Nees, Gen. Fl. Germ. Monocot.* iii. n. 21. *Barla, Ic. Orch. Alp. Marit. t. 2 ad 4*. *Sibth. Fl. Gr. t. 933 (Epipactis)*. *Decne. in Jacquem. Voy. Bot. t. 164*. *Wight, Ic. t. 1721*.

Icones supra citatæ species typicas indicant foliatis labello ecalcarato. *C. cucullata*, Boiss; *Reichb. Ic. Fl. Germ. t. 472, f. 2*, ex Oriente, et species 3 Japonicæ, Blume, *Orch. Archip. Ind. t. 65, 66*; *Franch. et Savat. Enum. Pl. Jap. 35* (ubi *C. chloiodophylla*, *Reichb. f. in Linnaea* xxv. 228, omissa est) a cæteris differunt labello basi saccato v. in calcar breve productum, et in *C. cucullata* folia sæpe more *Limodori* omnia ad vaginas membranaceas reducta.

*C. oregana*, *Lindl. in Herb. Kew.*; *Reichb. f. in Linnaea* xli. 53 (*Chloræa oregana*, *Nutt. MS.*), et *Chloræa Austine*, *A. Gray*, ex America boreali occidentali, sunt species subaphyllæ habitu *C. cucullatæ* sed labelli calcar deest.

*C. Thomsoni*, *Reichb. f. in Linnaea* xli. 54, e Sikkim, nobis ignota est.

298. *Epipactis*, *R. Br. in Ait. Hort. Kew. v. 201, pro parte*.—Sepala libera, patentia, subæqualia. Petala sepalis vix minora. Labellum ad basin columnæ sessile, latum, concavum, lobi laterales erecti, lamina articulata, patens, lata, indivisa, sæpius undulato-crispa. Columna brevis, antice plana v. concava; stigma sub rostello lato prominente transversum; clinandrium breve. Anthera in margine clinandrii erecta, ovata, parum convexa, loculis contiguis; pollinia (in loculis 2-partita) pulvereo-granulosa, anthera dehiscente libera v. glandulæ rostelli globosæ basi v. dorso affixa. Capsula oblonga, patens v. pendula, erostis.—Herbæ terrestres, foliatæ, rhizomate repente, caule simplici. Folia ovata v. lanceolata, plicato-venosa. Flores mediocres, virescentes v. purpurascens, in racemo secundo breviter pedicellati, nutantes. Bractææ herbaceæ, angustæ, inferiores sæpe flores superantes.

Species editæ ad 10, nonnullæ tamen potius *E. latifoliæ* varietates, per Europam Asiam temperatam et montanam et Americam borealem late dispersæ. *Lindl. Gen. et Sp. Orch.* 460. *Reichb. Ic. Fl. Germ. t. 483 ad 488*. *Nees, Gen. Fl. Germ. Monocot.* iii. n. 20. *Waldst. et Kit. Pl. Rar. Hung. t. 270*. *Barla, Ic. Orch. Alp. Marit. t. 5 ad 8*. *Wight, Ic. t. 1722, 1723*. *Blume, Orch. Archip. Ind. 184, t. 64, 66*. *Hook. Fl. Bor. Amer. t. 202*.

## TRIBUS IV. OPHRYDEÆ.

299. *Orchis*, Linn. Gen. n. 1009, *pro parte*.—Sepala libera, subæqualia, patentia v. in galeam conniventia. Petala sepalis subœsimilia v. æspissime minora. Labellum cum columna brevissime connatum, a basi patens v. pendulum, basi in calcar productum, lamina convexa v. concava, plus minus 3-loba v. rarius 4-5-loba. Columna brevissima, vix ultra basin labelli producta, facie lata concava stigmatifera, rostello cupulato v. saccifero; clinandrium erectum, non v. brevissime ultra loculos antheræ productum. Antheræ connectivum a clinandrio non distinctum, loculi adnati prominentes, paralleli, apicibus (inferis) convergentibus; pollinia in quoque loculo grosse granulosa in caudiculam lævem producta, caudiculis anthera dehiscente glandulæ unicæ v. glandulis 2 distinctis intra sacculum unicum rostellii affixis. Capsula oblonga, erecta, erostis.—Herbæ terrestres, rhizomate quotannis tuber novum integrum v. palmato-2-3-fidum formante, tubere annotino demum marcescente. Caulis erectus, simplex, foliis paucis longe vaginatis. Flores mediciores rarius parvi, in spica densa v. laxa sessiles v. in racemo brevissime pedicellati. Bractee nunc minimæ, nunc foliaceæ flores subsuperantes.

Species fere 80, Europæ, Asiæ temperatæ et Africæ borealis incolæ, cum 2 boreali-Americanis et 2 ex ins. Mascarensum. Lindl. Gen. et Sp. Orch. 258. Nym. Syll. Fl. Eur. 355. Walp. Ann. i. 793; iii. 574.

Genus apud Linnæum *Ophrydeas* omnes labello 1-calcarato includit, huic fere sententiæ reversi sunt Grenier et Godron, Fl. Fr. iii. 284, sed ab auctoribus recentioribus limitatur ad species quarum glandulæ caudicorum in sacculo unico rostellii nidulant. Plerique etiam pro speciebus veris eas solas admittunt quibus glandulæ 2 in sacculo unico distinctæ sunt etsi sæpissime arcte contiguae. Hæ sectionem formant *Euorchidem* et a Lindleyo in subsectiones 2 dividitur, *Androrchis* seu *Mascula*, sepalis lateralibus reflexis v. patentibus et *Herorchis* seu *Militaris* (STRATEUMA, Salisb. in Trans. Hort. Soc. i. 290 *absque char.*), sepalis conniventibus galeam referentibus. Reichb. Ic. Fl. Germ. t. 362 ad 378, 380 ad 414, 502 ad 512. Nees, Gen. Fl. Germ. Monocot. iii. n. 35. Barla, Iconogr. Orch. Alp. Marit. t. 28 ad 50. Moggr. Fl. Ment. t. 18, 42, 96. Brot. Phyt. Lusit. t. 87 ad 92 Sibth. Fl. Gr. t. 927, 928. Hook. Exot. Fl. t. 69.

Genera sequentia, pleraque monotypica, a variis auctoribus proposita, ab aliis ad sectiones *Orchidis* reducuntur, a qua characteribus lævioris momentu separantur.

TRAUENSTEINERA, Reichb. Fl. Sax. 87, ex Parlat. Fl. Ital. iii. 415, est *O. globosa*, Linn.; Reichb. Ic. Fl. Germ. t. 381, Barla, Ic. Orch. Alp. Marit. t. 16, ab auctoribus a genere distincta ob polliniorum glandulas more *Habenariæ* nudas nec in sacculo rostellii inclusas. Sacculus tamen in speciminibus siccis examinatis obrius fuit etsi tenerimus, et etiam delineatus videtur in ic. Barlaei, l. c. t. 16, f. 17. Species tamen *Orchidem* cum *Habenaria* (*Gymnadenia*) arcte connectere videtur.

BARLIA, Parlat. Fl. Ital. iii. 445, Barla, Ic. Orch. Alp. Marit. t. 25, est *O. longibracteata*, Biv.; Reichb. Ic. Fl. Germ. t. 379, Moggr. Fl. Ment. t. 17, species pulcherrima, petalis basi breviter columnæ adnatis et polliniorum caudiculis glandulæ unicæ indivisæ affixis.

LOROGLOSSUM, L. C. Rich. in Mem. Mus. Par. iv. 47 (HIMANTOGLOSSUM, Spreng. Syst. iii. 675), ab auctoribus recentioribus reducitur ad *O. hircinam*, Linn. speciebusque 2 ei affinibus, Reichb. Ic. Fl. Germ. t. 358 ad 360, Nees, Gen. Fl. Germ. Monocot. iii. n. 32, Barla, Ic. Orch. Alp. Marit. t. 24, a Lindleyo ad *Aceratem* relatas, labello longissimo loriformi pendulo breviter v. brevissime calcarato, et polliniorum caudiculis glandulæ unicæ indivisæ affixis.

COMPERIA, C. Koch in Linnaea xxii. 287, est *O. Comperiana*, Stev. in Mem. Soc. Imp. Nat. Mosc. vii. 259, t. 12, Reichb. Ic. Fl. Germ. t. 510, species distinctissima, grandiflora, sepalis in galeam coherentibus, labelli lobis 4 in caudas longe filiformes productis. Auctores cum *O. hircina* comparant, cui habitu quodammodo accedit, sed ex Reichb. f. ad *Orchides* veras pertinet (glandulis distinctis?). In flore a nobis examinato pollinia jam delapsa fuerunt.

ANACAMPTIS, L. C. Rich. in Mem. Mus. Par. iv. 47, est *O. pyramidalis*, Linn.; Jacq. Fl. Austr. t. 266, Reichb. Ic. Fl. Germ. t. 361, Nees, Gen. Fl. Germ. Monocot. iii. n. 34, Barla, Ic. Orch. Alp. Marit. t. 26, habitu et floribus *Habenariæ* (*Gymnadeniæ*) *conoposæ* similis, sed polliniorum caudiculis glandulæ unicæ in sacculo rostellii inclusæ affixis. Hæc species, cum *O. globosa*, *Orchidem* cum *Gymnadeniæ* typicis arcte connectit.

300. *Serapias*, Linn. Gen. n. 1012. (Helleborine, Pers. Syn. Pl. ii. 512.)—Sepala subæqualia, erecta, in galeam conniventia v. coherentia. Petala nunc minora nunc sepalis

vix breviora at multo angustiora. Labellum a basi columnæ breviter erectum, dein recurvo-patens, ealcaratum; lobi laterales latiusculi, breves, erecti, medius linguiformis v. latus, acuminatus, pendulus; discus sæpe vestitus, basi lamina glandulosa simplici v. duplici instructus. Columna brevis, lata, supra stigma contracta, rostello sacculifero; clinandrium erectum, ultra loculos antheræ varie productum. Antheræ connectivum a clinandrio non distinctum; loculi adnati, prominentes, subparalleli, apicibus (inferis) brevibus convergentibus; pollinia in quoque loculo grosse granulosa, caudiculis brevibus anthera dehiscente glandulæ unicæ (v. 2 arote contiguæ?) intra sacculum rostelli affixis. Capsula oblonga, erecta, obtuse costata, erostris.—Herbæ terrestres, habitu *Orchidis*, tuberibus indivisiis. Folia angusta. Flores sæpius majusculi, in spica pauci.

Species distinguendæ 4 v. 5, sæpe tamen intermediis v. hybridis connexæ, regionis Mediterraneæ incolæ, una usque ad ins. Azoricas extensa. *Lindl. Gen. et Sp. Orch.* 377. *Nees, Gen. Fl. Germ. Monocot.* iii. n. 24. *Reichb. Ic. Fl. Germ.* t. 438 ad 442. *Barla, Ic. Orch. Alp. Marit.* t. 17 ad 22. *Moggr. Fl. Ment.* t. 16, 94, 95. *Ten. Fl. Nap.* t. 98. *Todaro, Hort. Bot. Pan.* t. 7, 10. *Sibth. Fl. Gr.* t. 931, 932. *Hook. Exot. Fl.* t. 11. *Bot. Mag. t.* 5868, 6255. *Bot. Reg.* t. 1189.

ISLAS, *Notar. in Mem. Acad. Sc. Torin.* ser. 2, vi. 413, cum ic., est *Serapias triloba*, Viv.; *Reichb. Ic. Fl. Germ.* t. 438, sepalis demum patentibus, labelli lobis lateralibus latis explanatis, stirps rarissima, in variis locis præsertim in Italia hinc inde cum *S. cordigera* v. *S. longipetala* lecta, quæ ex Gren. et Godr. *Fl. Fr.* iii. 277 aliisque nonnullis auctoribus est hybrida inter *Serapiam* et *Orchidem lazifloram* v. *O. papilionaceam*, quod tamen ulterius probandum. Cfer. *Bot. Mag.* t. 6255.

301. *Aceras*, *R. Br. in Ait. Hort. Kew. ed.* 2, v. 191.—Sepala subæqualia, libera, in galeam conniventia. Petala sepalis minora. Labellum a basi columnæ patens v. pendulum, angustum, ealcaratum, 3-fidum, lobo medio 2-fido. Columna brevissima, lata, facio concava late stigmatosa, rostello brevissimo sacculifero; clinandrium erectum, rotundatum. Antheræ connectivum a clinandrio non distinctum; loculi adnati, prominentes, apicibus (inferis) convergentibus; pollinia in quoque loculo grosse granulosa, caudiculis brevibus, anthera dehiscente glandulæ unicæ intra sacculum rostelli affixis. Capsula erecta, breviter oblonga, costis obtuse prominulis.—Herba terrestris, habitu et tuberibus *Orchidis* integris. Flores parvi, in spica densa v. rarius elongata subsessiles. Bracteæ floribus breviores.

Species 1, Europæ imprimis occidentalis et Africæ borealis incola, in regione Mediterranea usque ad Græciam extensa. *Nees, Gen. Fl. Germ. Monocot.* iii. n. 26. *Reichb. Ic. Fl. Germ.* t. 357. *Barla, Ic. Orch. Alp. Marit.* t. 23.

Genus ab *Orchidis* sect. *Loroglosso* floribus parvulis et labello omnino ealcarato parum distinctum. *Lindley, Gen. et Sp. Orch.* 282, *Loroglossum* et *Neotincam* in *Acerati* inclusit.

302. *Ophrys*, *Linn. Gen.* n. 1011, pro parte. (*Arachnites*, *F. W. Schmidt, Fl. Boëm.* i. 74, pro parte.)—Sepala subæqualia, libera, sæpius concava, patentia. Petala sepalis minora, nunc minima. Labellum cum columna brevissime connatum, patens, ealcaratum v. (in *O. tabanifera*, Willd.) brevissime gibboso-calcaratum; lamina dependens, sæpius lata sepalisque longior, convexa, marginibus recurvis, integra v. breviter 3-loba, supra sæpius vestita, nunc prope basin 2-callosa v. 2-cornuta. Columna brevis, crassa, rostello 2-sacculato; clinandrium erectum, ultra loculos antheræ in acumen obtusum breve v. varie elongatum productum. Antheræ connectivum a clinandrio non distinctum; loculi distincti, adnati, apicibus (inferis) subparallelis; pollinia in quoque loculo singula, grosse granulosa, caudiculis tenuibus, glandulis intra sacculos rostelli distinctos immersis affixis. Capsula oblonga, erecta, erostris, obtuse costata.—Herbæ terrestres, habitu *Orchidis*, tuberibus indivisiis. Flores in racemo v. spica interrupta sæpius dissiti v. pauci, brevissime pedicellati v. sessiles. Bracteæ sæpius herbacæe, flore breviores.

Species enumerantur ultra 30, Europæ, Asiæ occidentalis et Africæ borealis incolæ, sed distinctio sæpe valde confusa, labelli forma in pluribus speciebus quam maxime variabili. *Lindl. Gen. et Sp. Orch.* 372. *Nym. Syn. Fl. Eur.* 359. *Walp. Ann.* i. 805; iii. 591. *Parlat. Fl. Ital.* iii. 529. *Nees, Gen. Fl. Germ. Monocot.* iii. n. 28. *Reichb. Ic. Fl. Germ.* t. 443 ad 465. *Barla, Ic. Orch. Alp.*

*Marit. t. 51 ad 62. Moggr. Fl. Ment. t. 19, 43 ad 46, 72. Brot. Phyt. Lusit. t. 87, 88, 90, 91. Sibth. Fl. Gr. t. 929, 930.*

*MYODIUM, Salisb. in Trans. Hort. Soc. i. 289, est Ophrys aranifera, Sm.*

303. *Merminium*, Linn. Gen. ed. i. 271.—Sepala subæqualia, libera, in galeam conniventia v. lateraliter patentia. Petala subsimilia v. minora. Labellum a basi columnæ continuum ei brevissime connatum, patens v. pendulum, angustum, 2-3-fidum v. indivisum, ecalcaratum, planum concavum v. brevissime lateque saccatum. Columna brevissima, stigmatibus utrinque in processus breves productis, apice 2-appendiculata v. nuda, rostello brevi v. medio prominente non (v. obscure?) sacculato; clinandrium erectum, latum, ultra loculos non productum. Antheræ connectivum a clinandrio non distinctum, loculi adnati, prominentes, paralleli v. apicibus (inferis) divergentibus; pollinia grosse glandulosa, caudiculis brevibus nunc brevissimis non conniventibus, glandulis nudis dissitis. Capsula oblonga, erecta, recta v. torta.—Herbæ tenues v. humiles, tuberibus integris, novello sæpe ab annotino fibra longa separato. Folia pauca, sæpius angusta, nunc solitaria v. fere reniformia. Flores parvi, dense subracemosi v. longe tenuiterque apicati.

Species ad 6, Europæ et Asiæ temperatæ et montanæ incolæ. *Lindl. Gen. et Sp. Orch. 304. Reichb. f. in Flora 1872, 276.*

Genus a *Habenaria* uti *Aceras* ab *Orchide* separatur labello ecalcarato. In specie typica, *Reichb. Ic. Fl. Germ. t. 415, Nees, Gen. Fl. Germ. Monocot. iii. n. 25, Barla, Ic. Orch. Alp. Marit. t. 11* (MONORCHIS, *Ehrh. Beitr. iv. 147, nomen*) labellum superum basi subsaccatum et rostellum in processum inter pollinarii glandulas productum. In *H. alpino*, *Lindl., Reichb. Ic. Fl. Germ. t. 416* (CHAMORCHIS, *L. C. Rich. in Mem. Mus. Par. iv. 49, Barla, Ic. Orch. Alp. Marit. t. 23; ЧАМОРЧИС, Spreng. Syst. iii. 702, Nees, Gen. Fl. Germ. Monocot. iii. n. 27*), labellum inferum planum, rostellum nudum. Ei generice associanda videtur *Aceras angustifolia*, *Lindl., Wight, Ic. t. 1691, Royle, Illustr. Bot. Himal. t. 87* (THISBE, *Falcon. in Lindl. Veg. Kingd. 183 c, nomen*), spica longa tenui laxa, et ab hac vix v. non specifice differt *A. longicruris*, *C. Wright in Mem. Acad. Philad. ser. 2, vi. 411, e Japonia. AOPLA, Lindl. Bot. Reg. sub t. 1701; Orch. Gen. et Sp. 304, est H. reniforme, Lindl., foliis 1-2 ovato-cordatis, floribus fere H. grandiflori, Lindl., stigmatibus v. rostelli processibus 2 longiusculis iis specierum nonnullarum Habenariæ similibus.*

*H. spirale*, *Reichb. f. in Bonpl. 1855, 213, ex ins. Bourbon, a nobis non visum, verisimiliter ad Arnottiam referendum.*

304. *Stenoglottis*, *Lindl. in Comp. Bot. Mag. ii. 209*.—Sepala libera, subæqualia, demum patentia. Petala sepalis similia nisi minora. Labellum a columna patens, angustum, sepalis longius, apice 3-fidum, ecalcaratum. Columna brevissima, stigmatibus utrinque in tuberculum v. lobum brevem terminatis (staminodiis ad latera clinandrii adnatis, *Hook. f.*), loculis discretis latiusculis adnatis, apicibus (inferis) brevibus; pollinia in loculis singula, grosse granulosa, caudiculis brevissimis dissitis, glandulis nudis. Capsula oblonga, erecta, erostris.—Herba terrestris, tuberibus v. fibris carnosissimis fasciculatis. Folia ad basin caulis conferta, oblonga. Flores parvuli, in spica tenui dissiti, subsecundi.

Species 1, Africæ australis incola. *Hurv. Thes. Cap. t. 56. Bot. Mag. t. 5872.*

Genus vix ab *Herminio* distinguendum, a *Lindley* ad florem imperfectum definitum. Rostelli labium inferius elongatum linguiforme deflexum in analysi in herb. *Lindl.* depictum et in charactero suo descriptum in speciminibus nostris deest, nec in analysi *Hookeriana* in *Bot. Mag. l. c.* delineatur, et margines elevati clinandrii seu staminodia a *Lindley* non detecta fuerunt.

*Stenoglottis culcarata*, *Reichb. f. in Flora 1865, 180, postea in Linnæa xli. 54, pro genere (Darlea) distincta, a nobis in Habenaria includitur.*

305. *Arnottia*, *A. Rich. Orch. Ties Fr. et Dourb. 33, t. 7*.—Sepala subæqualia, libera, concava, demum patentia. Petala sepalis angustiora nec longiora. Labellum cum columna continuum, patens, oblongum v. lineare, indivisum, ecalcaratum. Columna brevissima, rostello medio haud prominente, lobis lateralibus brevibus v. longiusculis cum

clinandrio continuis; stigmatis lobi v. stigmata 2 crassiuscula divaricata, ad latera columnæ interdum prominula. Anthera cum clinandrio erecta, lata, truncata v. ad angulos in lobos rostellii producta, loculis crassis v. parvis adnatis, apicibus (inferis) brevissimis v. longioribus lobis rostellii adnatis; pollinia in loculis singula, granulosa, caudiculis brevissimis v. longiusculis dissitis, glandulis nudis. Capsula erecta, oblonga v. fere linearis, erostris.—Herbæ terrestres, habitu *Cynorchidis*, fibris carnosiss fasciculatis, interdum in tubera incrassatis. Folia subradicalia, 1 v. 2, oblonga, membranacea. Flores parvuli, in spica laxiuscula sat numerosi. Bractæ flore breviores.

Species 2, Mauritanæ. *S. Moore in Bak. Fl. Maurit.* 338.

Genus primo aspectu *Cynorchidem* refert, sed characteres potius *Herminii* v. *Stenoglottidis*.

306. *Bartholina*, *R. Br. in Ait. Hort. Kew. ed. 2, v. 194.*—Sepala subæqualia, libera, erecta, angusta, subherbacea. Petala sepalis subæqualia, colorata. Labellum ima basi cum columna connatum, in calcar acutum productum, lamina patente lata longe fimbriato-multifida. Columna sub anthera brevis, rostellii lobo medio brevi reflexo, stigmatibus non productis; clinandrium erectum, longissimum, angustum, concavum, basi cum lobis lateralibus rostellii continuum. Antheræ connectivum a clinandrio non distinctum, loculis subparallelis adnatis, apicibus (inferis) longis usque ad apicem rostellii lobis adnatis; pollinia in loculis solitaria, grosse granulosa, caudiculis longissimis apice in glandulam dilatatis, intra valvas loculorum et lobos rostellii canaliculatos inclusis. Capsula . . .—Herba terrestres, 1-flora, basi 1-phylla. Folium orbiculato-reniforme, auriculis late rotundatis caulem amplectentibus. Flos nutans, lobis labelli filiformibus speciosus.

Species 1, Africæ australis incola. *Ker in Journ. Sc. R. Inst. Lond. iv. t. 6. Bot. Reg. t. 1653. Endl. Iconogr. t. 40.* Species duas a Lindl. Comp. Bot. Mag. ii. 210 ad floris magnitudinem distinctas vix pro varietatibus separare possumus.

307. *Euttonsea*, *Harr. Thes. Cap. t. 101.* (*Hallackia*, *Harr. l.c. t. 102.*)—Sepalum posticum erectum, unguiculatum, lanceolatum v. ovatum, lateralia majora, lata, obliqua, patentia. Petalorum ungues basi cum ungue sepali connati, longiusculi, lamina concava v. cucullata fimbriata. Labellum sessile, patens, latum, margine subglanduloso-fimbriatum, calcaratum. Columna infra rostellum brevissima, vix ulla, stigmatem parvo depresso; clinandrium latum, erectum, marginibus basi cum lobis lateralibus rostellii latis complicatis continuum. Antheræ connectivum a clinandrio non distinctum, loculis elevatis adnatis divergentibus, apicibus (inferis) brevibus incurvo-ascendentibus intra lobos rostellii complicatos subinclusis; pollinia in loculis solitaria, grosse granulosa, caudiculis parum elongatis, glandulis intra plicas rostellii plus minus inclusis. Capsula . . .—Herbæ terrestres, foliis paucis latis. Spica laxa, interrupta, floribus mediocribus.

Species 2, Africæ australis incolæ.

Genus ab omnibus distinguitur perianthii structura. *Hallackia* a specie typica parum differt antheræ loculis parallelis v. parum divergentibus, dum in *H. pulchra* apices bene distant, minus tamen recurvi sunt quam in icone delineati.

308. *Molothrix*, *L. C. Rich. in Mem. Mus. Par. iv. 55 (nomen).*—Sepala subæqualia, conniventia. Petala sepalis longiora, angusta, integra v. apice 2-∞-fida. Labellum basi columnæ adnatum, erectum, concavum v. a latere convolutum, apice anguste 3-∞-fidum, basi in calcar rectum v. recurvum productum. Columna brevissima, ad latera stigmatis parvi sæpius 2-auriculata; clinandrium erectum, latum, concavum v. fere cucullatum. Antheræ connectivum a clinandrio non distinctum, loculis inclusis distinctis ovoideis adnatis apicibus (inferis) vix productis v. brevibus; pollinia in loculis e granulis grossis in caudiculo brevissimo confertis, glandulis nudis parvis. Capsula ovoidea v. oblonga, erecta.—Herbæ terrestres, habitu fere *Herminii*. Folia ad basin caulis 1-2, sessilia, late ovata v. orbiculato-reniformia. Scapus tenuis, pilis reversis basi v. undique hirsutus. Flores parvi, in spica tenui v. densa secundi, sepalis pilosis v. glabratis; petala et labellum semper glabra.

Species ad 18, quarum 2 Abyssinice, cæteræ Africæ australis incolæ. *Lindl. Gen. et Sp. Orch.* 283, *et in Comp. Bot. Mag.* ii. 206. *Sond. in Linnæa* xix. 76. *Reichb. f. in Bonpl.* 1855, 213 (*Derameria*). *Benth. in Journ. Linn. Soc.* xviii. 353. *Hook. Ic. Pl.* t. 103.

Genus in integrum servatum nobis naturale videtur et bene limitatum. Sequentia Lindleyana includimus, quorum plurima in speciminibus manicis rite examinare nequivit auctor.

**SACCIDIUM**, *Lindl. Gen. et Sp. Orch.* 301, e specimine unico notum Burchelliano fructifero floribus emarceidis. Auctor a *Holothrice* distinxit sepalis basi saccatis, nobis tamen non magis cava videntur quam in pluribus aliis speciebus.

**MONOTRIS**, *Lindl. Gen. et Sp. Orch.* 303, pariter e specimine unico Burchelliano nota, cui sepala plus minus connata, quod tamen in nonnullis aliis speciebus observatum, et planta eadem videtur ac *H. parvifolia* a Lindleyo in herb. Benth. determinata.

**BUCCULINA**, *Lindl. in Comp. Bot. Mag.* ii. 209, ex exemplare unico Dregeano descripta, a cæteris *Holothricibus* paullulum differt perianthio magis aperto et columnæ auriculis paullo magis evolutis. Cæterum *H. parvifolia* similis est.

**SCOPULARIA**, *Lindl. Bot. Reg. sub t. 1701, Gen. et Sp. Orch.* 303, *et in Comp. Bot. Mag.* ii. 207; *Sond. in Linnæa* xix. 79, est species austro-Africana, habitu omnino *Holothricis*, sed petala 2-5-fida, et labelli lobi numerosi, in floribus perfectis breves, in superioribus cujusve spicæ ut videtur sterilibus longe filiformes.

**TRYPHIA**, *Lindl. Bot. Reg. sub t. 1701, Gen. et Sp. Orch.* 333, *et in Comp. Bot. Mag.* ii. 208; *Sond. in Linnæa* xix. 82; *Harv. Thes. Cap. t. 105*, species continet 2 austro-Africanas cum tertin Abyssinica, petalis ex Lindleyo labello adnatis, quod tamen nec in icone Harveiana delineatur, nec in floribus examinatis invenimus. Habitus omnino specierum typicarum.

**309. Micorneila**, *Lindl. Bot. Reg. sub t. 1701; Gen. et Sp. Orch.* 334.—Sepala subæqui-longa, posticum erectum concavum, lateralia angustiora patentia. Labellum a columna patens, basi in calcar infundibulare productum; lobi laterales breves, marginibus calcaris incumbentes, medius elongatus indivisus. Columna brevissima, stigmatē sub rostello cavo processibus nullis; rostellī lobi laterales elongati, lobis labelli plus minus adnati; clinandrium breve, latum, concavum, marginibus cum lobis lateralibus rostellī et labelli continuis. Antheræ connectivum a clinandrio non distinctum, loculis latis adnatis, apicibus (inferis) longis lobis rostellī applicitis horizontalibus parallelis; pollinia in loculis solitaria, grosse granulosa, caudiculis elongatis, glandulis nudis. Capsula obovoidea, erostris.—Herbæ terrestres, tenues, elongatæ, habitu *Habenariæ* specierum parviflorarum. Folia pauca, angusta. Spicæ elongatæ, laxæ, floribus parvis. Bractee parvæ.

Species 2, Madagascarienses.

Genus *Habenaria* (*Platanthera*) valde affine, differt imprimis lobis lateralibus labelli ad os calcaris lobos laterales rostellī ferentibus, et a Lindleyo pro appendicibus linguiformibus antheræ habitis.

**310. Habenaria**, *Willd. Spec. Pl.* iv. 44. (*Sieberia*, *Spreng. Anleit. Kenntn. Gewäch.* ii. 282.)—Sepala subæqualia, libera v. ima basi coherentia, erecto-conniventia v. sæpius lateralia v. omnia patentia. Petala sepalis sæpius minora, sed polymorpha, interdum profunde 2-loba. Labellum cum columna continuum sæpeque brevissime connatum, patens v. pendulum, ima basi breviter v. longe calcaratum, lamina patente v. pendula, angusta v. lata, indivisa v. 3-5-fida, lobis lateralibus interdum pectinato-ciliatis v. fimbriatis. Columna brevissima, apoda, rostello inter loculos antheræ sæpius dente v. lobo brevi erecto aucto; stigma 2-lobum v. stigmata sæpius 2 adnata v. in processus breves nunc brevissimos interdum valde elongatos heves v. papillosos producta; clinandrium erectum, antheræ loculos non excedens, interdum iis brevius. Antheræ connectivum a clinandrio non distinctum, loculis elevatis, interdum latis adnatis, parallelis v. divergentibus, apicibus (inferis) nunc brevissimis adnatis nunc elongatis horizontaliter liberis v. porrectis; pollinia in quocunque loculo grosse v. tenuiter granulosa, caudiculis brevibus v. valde elongatis, anthera dehiscente glandulis nudis affixis. Capsula ovoidea v. oblonga, erecta v. incurva, erostris v. in rostrum producta.—Herbæ terrestres, habitu *Orchidis*, tuberibus indivisis v. rarius digitatim lobatis, v. fibræ radicales carnosæ parum incrassatæ. Flores parvi v. magni, in spica sessiles v. in racemo breviter pedicellati bracteis variis.

Species notæ fere 400, per regiones temperatas calidioresque utriusque orbis latissime dispersæ.

Lindl. *Gen. et Sp. Orch.* 306; in *Comp. Bot. Mag.* ii. 208. Reichb. f. in Walp. *Ann.* i. 797, iii. 583; in *Bonpl.* 1854, 10; 1855, 213; 1856, 210; 1857, 35; *Xen. Orch.* iii. 17; *Otia Hamb.* 33, 50, 78, 9; in *Flora*, 1865, 178; in *Linnaea* xli. 17, 30, 50, 100; et in *Trans. Linn. Soc.* xxx. 139, t. 27.

Genus vastum, quoad columnam genitalium polymorphum, ab auctoribus nonnullis in genera plur divisum, quæ si species paucas tantum respicis distinctissima videntur, sed ob formas numerosas intermedias difficillime limitantur. Characteres etiam in speciminibus siccis male observantur et genus monographo perito sedulo commendatur. Interea catervæ sequentes sectiones plus minus distinctas formant.

1. *GYMNADENIA*, R. Br. in *Ait. Hort. Kew. ed. 2*, v. 191. Species normales, *G. conopsea*, *G. odoratissima* affinesque, Europæe v. Asiaticæ temperatæ, tuberibus lobatis, floribus parvulis in spica densa v. elongata numerosis sæpissime purpureis *Orchidibus* nonnullis prope accedunt. Sepala patentia; stigmata in processus non v. vix producta; anthere loculi fere contigui paralleli ultra rostellum non producti, glandulis pollinarii inter se parum distantibus. Reichb. f.  *Ic. Fl. Germ. t. 419 ad 424*. Nees, *Gen. Fl. Germ. Monocot.* iii. n. 33. Barla,  *Ic. Orch. Alp. Marit. t. 12*, 13. His adjungenda *NIGRITELLA*, L. C. Rich. in *Mem. Mus. Par.* iv. 48; Nees, *Gen. Fl. Germ. Monocot.* iii. n. 29; Reichb. f.  *Ic. Fl. Germ. t. 467*, species alpina, spica brevi densissima atropurpurea insignis, sed characteres omnino *G. conopsee* et *G. odoratissimæ* cum quibus formas hybridas (*N. fragrans*, Reichb.  *Ic. Fl. Germ. t. 466*, 513) facillime gignit. L. C. Richard *Nigritellam* distinxit ob polliniorum glandulas sacculis distinctis rostellis more *Ophrydis* inclusas, quod tamen ab auctoribus recentioribus non confirmatur, nec in speciminibus siccis nostris apparet.

Reichb. f. in *Otia Hamb.* 32, 51, in *Flora*, 1872, 276, et in *Linnaea* xli. 51, species 4 Asiaticas *Gymnadeniæ* addidit, a nobis non distincte recognitas.

2. *TINCA*, Bivon. in *Giorn. Sc. Sicil.* 1833, 149, ex Guss. *Syn. Fl. Sic.* ii. 540, non *Zoolog.* (NEOTINEA, Reichb. f.  *Poll. Orch. Comm.* 29, et in *Secm. Journ. Bot.* 1865, 1, t. 25), est *H. intacta* (*Aceras intacta*, Reichb. f.  *Ic. Fl. Germ. t. 500*; *A. secundiflora*, Lindl.  *Bot. Reg. t. 1525*) ab auctoribus generibus variis imprimis *Acerati* ascripta, a quo differt labello distincte calcarato, rostellum non sacculato, pollinarii glandulis nudis dissitis. A *Gymnadeniis* normalibus parum differt tuberibus indivisis, spica plus minus secunda, sepalis in galeam conniventibus. Stigmata in Journ. Bot. 1. c. delineantur crassa divergentia fere in processus extensa, quod vix in speciminibus siccis apparet. Huic speciei in eadem sectione associanda videtur *Gymnadenia cucullata*, Rich., Reichb. f.  *Ic. Fl. Germ. t. 418*.

3. *LEUCORCHIS*, E. H. F. Mey. *Preuss. Pfl. Gatt.* 50, non Bl. (BICCHIA, Parl.  *Fl. Ital.* iii. 396, Barla,  *Ic. Orch. Alp. Marit. t. 11*) est *H. alba* Br.; Reichb. f.  *Ic. Fl. Germ. t. 419*, ab auctoribus variis *Gymnadeniæ Peristylæ* v. aliis generibus ascripta. Fibre radicales fasciculatæ, carnosæ, non v. vix in tubera incrassatæ. Flores parvi, flavo-virentes v. albi, in spica longa conferti. Sepala ut in *Tinca* in galeam conniventia. Labelli calcar breve. Anthere loculi ut in *Gymnadenia* approximati, paralleli, apicibus brevibus. Species in Europa et Asia late dispersa.

Huic radicibus et colore florum conveniunt *Gymnadeniæ* boreali-Americane ab A. Grayio Man.  *Bot. N. U. St.* ed. 5, 499, per sectione *Habenariæ* admissæ (*Hook. Ecot. Fl. t. 81*). Inflorescentia, sepalis patentibus et calcare tenui *Gymnadeniis* Europæis accedunt, processus stigmatici tamen magis evoluti in *H. tridentata* erecti, in *H. nivea* labello appliciti; lobus medius rostellum in utraque specie erectus non stigmatosus.

4. *PERULARIA*, Lindl.  *Bot. Reg. sub t. 1701*,  *Gen. et Sp. Orch.* 281; Reichb. f.  *Ic. Fl. Germ. t. 426*, 519, species 2 continet, alteram boreali-Americanam, alteram boreali-Asiaticam, quas Reichb. f. pro unius varietatibus admittit. Racemi elongati floribus parvis, cæterum cum *Gymnadeniis* Americanis supra citatis conveniunt rhizomate potius fibras carnosas quam tubera emittente et polliniorum caudiculis brevibus inter se parum distantibus, differunt anthere loculorum valvis juxta extremitatem caudicularum dilatatis, glandulam demum includentibus. In pluribus speciebus *Habenariæ* glandula valvis inclusa v. semi-inclusa evadit.

5. *DEREHERIA*, Reichb. f.  *Poll. Orch. Comm.* 29, est *H. aphylla*, Br. (*Peristylus squamatus*, Hochst. in A. Rich.  *Fl. Abyss.* ii. 289) ex Abyssinia (et Arabia?), species humilis, sub anthesi aphylla, caulo dense squamato, spica densa, floribus parvulis, anthere loculorum valvis juxta extremitatem ut in *Perularia* dilatatis glandulam includentibus. *D. unifolia*, Reichb. f. in *Bonpl.* 1855, 213, est *Holothrixis* species.

6. *PERISTYLIS*, Blume,  *Bijdr.* 404, t. 30 (GENNARIA, Parl.  *Fl. Ital.* iii. 404. BENTHAMIA, A. Rich.  *Orch. Ins. Fr. et Bourb.* 43, t. 7; CYBELA, Falcon. in Lindl.  *Veg. Kingd.* 183c, nomen tantum),

species includit plures, foliatis, Europeas Asiaticas v. Africanas, parvifloras, spica tenui densa v. elongata. Sepala erecto-patentia v. in galeam conniventia; labelli calcar breve, clavatum globosum v. sacciforme, rarissime acutiusculum; antheræ loculi parum divergentes, apicibus brevibus v. longiusculis. *Lindl. Gen. et Sp. Orch.* 297. *Reichb. Ic. Fl. Germ.* t. 436 (*Platanthera*). *Wight, Ic.* t. 921, 1695 ad 1699. *A. Rich. Fl. Abyss.* t. 84, 85. *Hook. Bot. Misc.* i. t. 55. *Bot. Mag. t.* 3164, 3397. *Bot. Reg. t.* 1499 (*Hermidium*). *Reichb. f. Otia Hamb.* 34; et in *Trans. Linn. Soc.* xxx. 139.

7. *Cœloglossum*, *Hartm. Scand. Fl. ed.* 4, 283, genus prius ad *H. albidam* et *H. viridem*, Br., constitutum, serius in ed. 10, 204, ad *H. viridem* reductum est. Hæc species in Europa et Asia boreali late dispersa cum affini v. varietate *H. bracteata*, Br., ex America boreali, in *Peristylis* a Lindleyo includitur, ab aliis ad *Platantheram* refertur. Habitus, spica tenuis, flores parvi, et calcar breve *Peristylis*, et sepala pariter in galeam conniventia, sed antheræ loculi late divergentes *Platantheræ*. *Salisb. Parad. Lond. t.* 110 (*Orchis*). *Hook. Exot. Fl. t.* 175. *Sw. Brit. Fl. Gard. t.* 62. *Nees, Gen. Fl. Germ. Monocot. iii. n.* 31. *Reichb. Ic. Fl. Germ. t.* 434, 435 (*Platanthera*). Huic affinis etiam videtur *Platanthera satyrioides*, *Reichb. Ic. Fl. Germ. t.* 437, planta Rossica a nobis non visa.

*Cœloglossum*, *Lindl. Bot. Reg. sub t.* 1701; *Gen. et Sp. Orch.* 302; *Reichb. f. in Bonpl.* 1856, 321, et in *Linnaea* xli. 54 (*Lindbloomia*, *Fries in Lindbl. Bot. Notis.* 1843, 131, ex *Flora*, 1844, 733), species continet 5 asiaticas parvifloras, *Peristylum* cum *Platanthera* arcte connectentes, calcare in una specie brevi scrotiformi in cæteris tenui. *CHERADOPLECTRON*, *J. C. Schauer in Pl. Meyen.* 436, t. 13 C, est evidenter ex icone *Cœloglossum lacertiferum*, *Lindl.*, ad *Habenariam* translatum in *Benth. Fl. Hongk.* 362.

8. *Phyllostachya*, *Benth.*, species continet plures Asiaticas tropicas, cum una ex Africa tropica, a variis auctoribus sub *Gymnadenia Platanthera* v. *Habenaria* editas, et a *Reichenbachio*, *Otia Hamb.* 32, omnes ad *Gymnadeniam* relatas. Species pleræque inter majores, foliis gradatim in bracteis foliaceis abeuntibus, floribus mediocribus v. majusculis inferioribus axillaribus. Sepala et petala in galeam conniventia. Labelli calcar latum, obtuse conicum v. emarginatum, lamina sæpius ampla. Antherarum loculi parum divergentes, iis tamen *Platantheræ* similiores quam *Gymnadeniæ*. *Wight, Ic. t.* 1692, 1693. *Reichb. f. Xen. Orch. t.* 197. *Bot. Mag. t.* 5875 (*Endophia*).

His habitu affinis est *Habenaria lutea*, *Wight, Ic. t.* 919, species Indica, sepalis petalisque latis in globum conniventibus labellum includentibus insignis, cæterum *Habenariis* normalibus conveniens.

9. *PLATANTHERA*. *L. C. Rich. in Mem. Mus. Par. iv.* 48 (*LYSIA*, *Salisb. in Trans. Hort. Soc.* i. 288), genus ab auctore distinctum stigmatate fere ut in *Orchide* in facie columnæ lato concavo absque processubus lateralibus. Hi processus certe in *H. chlorantha* desunt, in *H. bifolia* tamen ei quam maxime affini adsunt breves ut bene indicatur in *Darw. Fertil. Orch.* 90, 91, et gradationes numerosæ inter illos et processus longos specierum plurimarum *Habenariæ* delineantur ab *A. Rich. Ann. Sc. Nat. ser. 2, xv. t.* 3 ad 5: genera igitur *Platanthera* et *Habenaria*, qualia ab auctoribus recentioribus distinguuntur, quam maxime artificialia sunt. *Habenaria geniculata* ex Himalaya characteribus cæteris multo magis *Platantheræ fimbriatæ* ex America boreali accedit quam *H. pectinata* et *H. intermedia*: stigmatis processus in *H. pectinata* et *H. intermedia* longissimi sunt teretesque apice stigmatoso dilatato, dum in *Platanthera Susannæ*, *Lindl.*, habitu iis simili, omnino desunt. Cæterum *Platantheræ* pleræque parvifloræ e regionibus temperatis hemisphæri borealis, sepalis sæpius omnibus patentibus, forte pro sectione distinguendæ a *Habenariis* typicis tropicis sepalo postico erecto galeato lateralibus patentissimis, stigmatis processubus in his quam in illis sæpius nec semper minus evolutis. In utraque sectione calcar sæpius longum. Sub *Platanthera* citantur præter *H. Susannæ* (*Sm. Exot. Bot. t.* 100, *Orchis*, *Wight, Ic. t.* 920; *Bot. Mag. t.* 3374), icones sequentes: *Reichb. Ic. Fl. Germ. t.* 427 ad 433. *Nees, Gen. Fl. Germ. Monocot. iii. n.* 30. *Barla, Ic. Orch. Alp. Marit. t.* 14, 15. *Hook. Fl. Bor. Amer. t.* 199 ad 201. *Pæpp. et Endl. Nov. Gen. et Sp. t.* 75 ad 77. *Andr. Bot. Rep. t.* 42. *Hook. Exot. Fl. t.* 87, 95, 135, 145, 224. *Bot. Mag. t.* 1668. *Bot. Reg. t.* 405. *Sweet, Brit. Fl. Gard. ser. 2, t.* 73. Confer etiam *Reichb. f. in Linnaea* xxv. 226; in *Bot. Zeit.* 1878, 75.

*MEYOSA*, *Blume, Bijdr.* 403, t. 1, a Lindleyo *Gen. et Sp. Orch.* 290, rite ad *Platantheras* auctorum reducitur.

*CENTROCHILUS*, *J. C. Schau. in Pl. Meyen.* 435, t. 13, videtur *H. (Platanthera) tipuloides*, *Lindl.*, species in Asia orientali late dispersa, ad *Platantheras* parvifloras pertinens.

*H. rotundifolia*, *Richardls (Platanthera, Lindl.)*, ex America boreali, ab *A. Gray* in *Amer. Journ. Sc. cxiv.* 72, ad *Orchidem* restituitur (*O. rotundifolia*, *Parsh.*), ob polliniorum glandulas sacculo inclasis, quod in speciminibus nuper ab *A. Gray* acceptis bene confirmare possumus. Habitu tamen potius *Habenariæ obtusæ* quam *Orchidi orbiculatæ* accedit.

*Gymnadenia spatulata* et *G. Chusua*, Lindl., ex India orientali, species evidenter *H. rotundifolia* valde affines, pariter a Reichenbachio ad *Orchidem* referuntur, sed in his sacculum distinctum in speciminibus siccis adhuc invenire nequimus. *G. Pinguicula*, Reichb. f., ex India orientali, est species humilis pauciflora, labelli calcare longo infundibulari insignis, cæterum præcedentibus affinis videtur sed columnæ structuram in speciminibus nostris examinare nequimus.

MITOSTIGMA, *Blume, Mus. Bot. Lugd. Bat.* ii. 189, est species Japonica, jam a Miquelio in *Ann. Mus. Lugd. Bat.* ii. 207, ad *Gymnadeniam* relata, inter *Habenarias* parvifloras recensenda.

PONERORCHIS, *Reichb. f. in Linnæa* xxv. 227, *Xen. Orch.* t. 8, planta japonica a nobis non visa, ex charactero et icona est verisimiliter *Habenariæ* species inter *Platantheras* parvifloras enumeranda, *P. tipuloidi*, Lindl., valde affinis, nisi ejusdem specimen depauperatum.

10. *Habenariæ typicæ* tropicæ, stigmatis processibus bene evolutis et sæpe longissimis, species numerosas includunt aliis characteribus inter se valde diversas, sed ex speciminibus siccis difficile in subsectiones distinctas separandas. Plurimæ inter grandifloras tam Africanæ quam Asiaticæ *Bonateæ* accedunt, sed rostellii lobus medius parvus v. linearis nec galeatus; parvifloræ nonnullæ, fere æquo jure ad sectiones *Platantheran* v. *Gymnadeniam* pertinent. Nonnullæ petalis bifidis facile ab aliis petalis indivisis separantur, etc. Interea icones sequentes ad *Habenarias* veras referimus, *Sm. Exot. Bot.* t. 99. *Wight, Ic.* t. 922 ad 927, 1694, 1701 ad 1715. *Harv. Thes. Cap.* t. 147. *A. Rich. Fl. Abyss.* t. 86 ad 88. *Hook. Exot. Fl.* t. 136, 169. *Bot. Mag.* t. 2726, 2947, 2957, 5196. *Bot. Reg.* t. 1858.

DISSORHYNCHIUM, *J. C. Schau. in Pl. Meyen.* 434, t. 13, est *Habenariæ* species, inter Asiaticas *Bonateæ* affines enumeranda.

BILABELLA, *Lindl. Bot. Reg. sub t.* 1701, in *Gen. et Sp. Orch.* 328 ad *Bonateam* reducta, ad species Africanas *Bonateæ* affines pertinet et eadem videtur ac *B. tetrapetala*, Lindl. in *Comp. Bot. Mag.* ii. 208. *Bonateæ* species novæ. *Sond. in Linnæa*, xix. 80, omnes ad *Habenariam* referendæ sunt.

ATE, *Lindl. Gen. et Sp. Orch.* 326, *Thw. Enum. Pl. Zeyl.* 309, *Wight, Ic.* t. 928 (et 1700?) species 2 Peninsula Indicæ orientalis et Zeylanicæ incolæ, a *Habenaria Heyneana* affinisque parum differt, nisi lobo laterali utrinque ad junctionem labelli cum columna breviter evoluta, quod plus minus observatur in nonnullis aliis speciebus.

BARLEA, *Reichb. f. in Linnæa* xli. 54 (non *Barlia*, Parl.), est species Africana tropica, parviflora, olim ab auctore ad *Stenoglottidem* relata, nobis *H. attenuate*, *Hook. f.*, affinis. Habitu *Timeæ* accedit, sed stigmatis processus 2 paralleli ut in *Habenariis* pluribus typicis anthera ipsa parum breviores sunt.

MACROCENTRUM, *Philippi, Sert. Mendoc.* ii. 42, species Chilensis a nobis non visa, ex charactero dato in omni-bus cum *Habenariis* typicis convenit.

SYMMERIA, *Grah. Cat. Pl. Bomb. Addend.* est species e peninsula Indicæ orientalis prius (ibid. 252) sub *Habenaria* descripta, dein pro genere proprio distincta ob petala sepalis postico coherentia.

MONTOLIVIA, *Reichb. f. Otia Hamb.* 107, species Abyssinica, nobis ab *Habenaria (Peristylis)* parum differre videtur labello prope basin supra unguonato, rostellis magis evolutis late obovatis supra stigma patente; calcar saccatum breve latumque.

ROEFFEORCHARIS, *Reichb. f. Otia Hamb.* 104, ad specimina Abyssinica, *Schimper, n.* 1327 descripta, *Habenariæ* affinis dicitur 'stigmatibus cruribus utrinque, deorsum et sursum porrectis, hinc bicurribus.' Specimina nostra sub eodem numero plurimis notis cum descriptione auctoris conveniunt, sed *Disæ* speciem ostendunt, calcare ad sepalum posticum nec ad labellum pertinente et stigmate more hujus generis ad basin columnæ labello adnato.

311. **Diplomeris**, *Don, Prodr. Fl. Nep.* 26. (*Diplochilus*, *Lindl. Bot. Reg. sub t.* 1499. *Paragnathis*, *Spreng. Syst.* iii. 675.)—Sepala subæqualia, libera, patentia, lanceolata. Petala sepalis majora, latiora. Labellum a columna patens, sessile, obovato-orbiculatum, indivisum, basi in calcar productum. Columna brevissima, rostellum inter antheras loculos amplo membranaceo-dilatato; stigmatis processus sub rostellis in laminam oblongam plus minus connati; clinandrium latum, antherarum loculis brevius. Antherarum connectivum a clinandrio non distinctum; loculis parallelis crassis adnatis, apicibus (inferis) longe incurvo-ascendentibus, lobis lateralibus rostellis applicitis; pollinia in loculis solitaria, granulosa, in caudiculis longissimas producta, glandulis nudis. Capsula . . .—Herbæ humiles, caulibus prope basin 1-3-foliatis 1-floris. Flos amplus, calcare longo. Bractea cucullata.

Species 2, Himalaicæ. *Lindl. Gen. et Sp. Orch.* 330.

Genus characteribus *Bonateæ* accedit, habitu et stigmate diversum.

312. *Bonatea*, Willd. *Spec. Pl.* iv. 43.—Sepala subæqualia, libera, diu in globum convinentia, lateralalia demum patentia. Petala angustiora, 2-partita v. rarius indivisa. Labellum basi columnæ adnatum, patens, angustum, 3-lobum, basi in calcar longum productum. Columna brevissima, rostello amplo galeato inter antheræ loculos valde elevato; stigmati processus 2 sub rostello longi erecti; clinandrium erectum, loculos antheræ non excedens. Antheræ connectivum a clinandrio non distinctum; loculis elevatis latis adnatis, apicibus (inferis) in lobos laterales rostelli longissime recurvo-ascendentibus; pollinia in loculis solitaria, grosse granulosa, caudiculis longissimis recurvo-ascendentibus, glandulis nudis. Capsula erecta, oblonga v. fusiformis, erostris.—Herbæ terrestres, erectæ, validæ, foliosæ, *Habenariis* majoribus habitu similes, tuberibus indivisis. Flores majusculi, in racemo sæpe specioso breviter pedicellati. Bractæ membranaceæ.

Species nobis notæ 3, forte ad 2 reducendæ, Africæ australis incolæ (*B. speciosa*, Willd., *B. foliosa*, Lindl., et *B. Bottoni*, Harv.). *Bauer, Illustr. Orch. Gen. t. 12, 13. Trim. in Journ. Linn. Soc. ix. 156, t. 1. Harv. Thes. Cap. t. 88. Bot. Mag. t. 2926.* Cæteræ omnes a Lindl. Gen. et Sp. Orch. 327, aliisque sub *Bonatea* enumeratæ, rostello inter antheræ loculos lobo parvo v. angusto instructo, ad *Habenariam* revocandæ sunt. Lindley nuperius et interdum Reichenbach f. genus totum ad *Habenariam* reduxit.

313. *Cynorchis*, Thon. *Orch. Iles Afr. in tab. synopt. et t. 13.* (*Cynosorchis*, Thon. l. c. t. 14, 15.)—Sepala subæqualia, concava, demum patentia. Petala sepalis similia v. minora. Labellum cum columna continuum, patens, sepalis longius, explanatum, 3-5-fidum, basi in calcar productum. Columna brevissima, rostello amplo erecto, lobo medio complicato lateralibus non v. vix brevior, stigmate in processus 2 crassos interdum oblongos v. clavatos producto; clinandrium erectum v. leviter reclinatum. Antheræ connectivum a clinandrio non distinctum; loculis crassis adnatis, apicibus (inferis) plus minus elongatis ascendentibus v. erectis lobis lateralibus rostelli applicitis v. adnatis; pollinia in loculis solitaria, grosse granulosa, caudiculis elongatis, glandulis nudis distantibus. Capsula erecta, anguste oblonga v. longe fusiformis, erostris v. breviter rostrata.—Herbæ terrestres, habitu *Habenariæ rotundifoliæ* affiniumque, radicibus fibrosis fasciculatis, tubere plus minus incrassato. Folia ad basin caulis pauca v. solitaria, lata v. rarius angusta. Racemi breves v. rarius elongati, laxiusculi, floribus mediocribus v. parvulis breviter pedicellatis. Bractæ angustæ.

Species ad 12, ins. Mascarensum et Africæ tropicæ incolæ. *Lindl. Gen. et Sp. Orch. 330. Reichb. f. in Bonplandia, 1855, 213. A. Rich. Orch. ins. Fr. et Bourb. t. 5, 6 (Gymnadenia, quoad analysin erronea). Bot. Reg. t. 1998.*

AMPHORCHIS, Thon. *Orch. Iles Afr.* (quoad *A. calcaratam*), est *C. squamata*, Lindl., a Blumeo Mus. Bot. Lugd. Bat. ii. 190, iterum a *Cynorchide* separata. A speciebus typicis differt floribus minoribus, rostelli lobis et antheræ loculorum apicibus brevioribus, lobus medius tamen rostelli more generis laterales aquans et late plicatus. Labellum a Blumeo integrum dicitur sed in *A. calcarata*, Thon., lobi laterales certe adsunt etsi parvi. In *A. occidentali*, Lindl. in Journ. Linn. Soc. vi. 139, ex Africa tropica, ovarium hirsutum est, in *A. calcarata*, Thon., sparse hirsutum v. fere glabrum. *A. laxiflora*, Blume, nobis ignota est.

314. *Hemipillia*, Linull. *Gen. et Sp. Orch. 296.*—Sepala subæquilonga, posticum concavum, lateralalia patentia, obliqua. Petala sepalis minora, indivisa. Labellum cum columna continuum, patens, latiusculum, basi in calcar productum. Columna brevissima, rostello inter antheræ loculos valde elevato latiusculo complicato; stigma in processus laterales non productum; clinandrium breve, latum, ultra antheræ loculos non productum. Antheræ connectivum a clinandrio non distinctum; loculis elevatis adnatis divergentibus, apicibus (inferis) in lobis lateralibus rostelli canaliculatis breviter productis; pollinia in loculis solitaria, grosse granulosa, caudiculis longiusculis, glandulis inter se distantibus, intra valvas loculorum et lobos rostelli subinclusis. Capsula . . .—Herbæ habitu *Habenariæ rotundifoliæ* affiniumque, caule basi 1-foliato, racemo paucifloro.

Species 2, Indiæ orientalis incolæ. *Reichb. f. in Trim. Journ. Bot. 1874, 197; Otia Hamb. 38.*

Genus a *Habenariis* citatis differt imprimis rostello fere *Bonateæ* nisi angustiore et bene complicato, *Cynorchidi* etiam valde affine sed stigmati processus nulli et patria longe distat.

315. **Glossula**, Lindl. Bot. Reg. t. 862. (Glossaspis, Spreng. Syst. Veg. iii. 675.)—Sepala subæqualia, libera, conniventia v. demum patentia. Petala sepalis paullo minora. Labellum cum columna continuum, patens, 3-partitum, lobis angustis elongatis laterali-bus filiformibus, basi in calcar vesiciforme productum. Columna brevissima, rostello inter antheræ loculos valde elevato concavo; stigmatis processus laterales oblongi, crassiusculi, apice glandulosi, sub rostello in labellum deflexi (v. ex ic. Lindl. suberecti); clinandrium erectum, latum, loculis antheræ subbreuius. Antheræ connectivum a clinandrio non distinctum; loculis elevatis crassis adnatis, apicibus (inferis) lobis lateralibus concavis rostelli applicitis, glandulis inter se distantibus intra lobos rostelli subinclusis. Capsula erecta, oblonga, erostris.—Herba terrestris, tubere indiviso. Folia ad basin caulis pauca. Spica tenuis, elongata, floribus parvulis subdisitis. Bractee angustæ, flore breviores.

Species 1, Chinæ et Cochinchinæ incolæ.

Genus characteres genitalium fere *Bonatee* ostendit, cum habitu et perianthio potius *Habevaria* sect. *Peristylis*, a Reichb. f. in Trans. Linn. Soc. xxx. 139 ad *Habenariam* reducitur.

316. **Satyrium**, Swartz in K. Vetensk. Acad. Nya Handl. Stockh. xxi. 214, non Linn. (Diplethrum, Pers. Syn. ii. 508.)—Sepala subæqualia, libera, cum petalis subsimilibus a labello aversa, patentissima v. reflexa. Labellum (superum) ad basin columnæ sessile, erectum, latum, concavum galeatum v. cucullatum, indivisum, extus in calcaria 2 descendente productum v. rarius 2-saccatum. Columna sub labello erecta, brevis v. longiuscula, teres, stigmatē specie terminali lato concavo v. 2-labiato labio superiore (rostello) sæpius majore. Anthera cum clinandrio in dorsum columnæ reflexa, loculis adnatis prominentibus distinctis subparallelis apicibus quoad antheram inferis sed anthera reflexa ascendentibus; pollinia in quoque loculo granulosa, in caudiculum demum interdum valde elongatam ob clinandrium reversum ascendente producta, anthera dehiscente glandulis sæpius majusculis nudis discretis v. rarius in unam connatis affixa. Capsula erecta, oblonga, erostris.—Herbæ terrestres, tuberibus indivisis. Folia in parte inferiore caulis pauca, rarius secus caulem elatum plurima. Spicæ sæpius dense floribundæ, floribus mediocribus v. majusculis rarius parvis. Bractee membranaceæ v. subfoliaceæ, interdum in spica juniore imbricatæ, sæpe demum arcte reflexæ, in una specie nana flores sub-superantes.

Species editæ fere 50, Indiæ orientalis, ins. Mascariensium et pro maxima parte Africæ australis et tropicæ incolæ. Lindl. Gen. et Sp. Orch. 335. Reichb. f. in Flora 1865, 182. Sond. in Linnæa xix. 83. Bauer, Illustr. Orch. Fructif. t. 12 ad 14. Ker in Journ. Sc. R. Institut. viii. t. 3. Wight, Ic. Pl. t. 929, 1716 ad 1718. A. Rich. Fl. Abyss. t. 89 ad 92. Jacq. Hort. Schænbr. t. 179 (Orchis). Andr. Bot. Rep. t. 315. Bot. Mag. t. 1512, 2172, 6625. Bot. Reg. t. 416, 703, 1840, t. 18. Lodd. Bot. Cab. t. 104.

SATYRIDIUM, Lindl. Gen. et Sp. Orch. 345, Harv. Thes. Cap. t. 87, species unica Capensis, a *Satyriis* typicis non differt nisi stigmatē solito minore (pariter tamen sub-2-labiato) et polliniorum glandulis in unam connatis.

AVICEPS, Lindl. Gen. et Sp. Orch. 345, species Capensis, est *Satyrium pumilum*, Thunb., uti jam coniecit Lindley, etsi petala a Thunbergio descripta in speciminibus haud invenit. Est planta pumila, dense foliata, bracteis foliaceis flores subsuperantibus. Flores in speciminibus nostris jam emarcidos examinare nequivimus. Bolus tamen, in Journ. Linn. Soc. xix. 237, specimine meliore nuperrimo examinato descriptionem Thunbergii omnino confirmavit, petalis præsentibus sed parvis basi cum sepalis in massam carnosam arcte coalitis.

317. ? **Pachites**, Lindl. Gen. et Sp. Orch. 301.—Sepala subæqualia, libera, patentia. Petala sepalis similia nisi paullo minora. Labellum patens, indivisum, calcaratum, petalis subsimile. Columna cylindræa, rostello terminata crassissimo carnosissimo ad utrumque latus auriculato; stigma sub rostello brachiis 2 linearibus erectis appendiculatum. Anthera cum clinandrio in dorsum columnæ reflexum; loculis parallelis adnatis, apicibus inferis sed reversione antheræ erectis brevibus; pollinia . . . Capsula erecta, anguste oblonga, erostris.—Herba terrestris, foliosa, habitu *Discæ* specierum nonnullarum. Folia linearia, erecta. Spica elongata, teres, crassa, floribus parvis numerosis sessilibus. Bractee lineares, flores subæquantes.

Species 1, Africæ australis incola, ex specimine unico Burchelliano fructifero floribus jam emarceidis nota, et quoad characteres ulterius probanda.

318. *Disa*, Berg. *Pl. Cap.* 348.—Sepala æquilonga, libera, posticum galeatum, nunc dorso v. basi in calcar polymorphum productum, nunc saccatum umbonatum v. planum, lateralia patentia. Petala nunc sepalis lateralibus similia, nunc minora obliqua v. valde polymorpha. Labellum a basi columnæ patens, ecalcaratum, sepalis sæpius minus et sessile, v. interdum longe unguiculatum, lamina indivisa sub-3-loba v. lacero-fimbriata. Columna brevis, crassiuscula; rostellum lobi laterales erecti v. apice supra glandulas recurvi, medius parvus; stigma ad basin columnæ a rostellum distans, carnosum pulvinatum v. elevato-cupulatum, plus minus basi labelli adnatum, integrum. Anthera cum clinandrio sub-erecta reclinata v. in dorsum columnæ reflexa, loculis elevatis parallelis adnatis, apicibus (inferis) extremitate reverso-erectis v. ascendentibus interdum longiusculis, lobis lateralibus rostellum applicitis; pollinia in loculis solitaria, laxè granulosa, caudiculis sæpius elongatis, glandulis 2 nudis discretis affixa. Capsula oblonga, angusta v. fere linearis, erecta.—Herbæ terrestres, habitu *Habenariæ*, tuberibus indivisis, caule nunc elato folioso, nunc tenui paucifolio v. foliis ad squamas vaginantes reductis. Flores in una specie maximi solitarii v. gemini, in aliis majusculis v. mediocribus laxè spicati v. racemosi, nunc parvi dense longeque spicati v. interdum fere in corymbum conferti v. ad 1 v. 2 reducti. Bracteæ sæpius floribus breviores.

Species ad 50, Africæ tropicæ et australis et ins. Mascarensium incolæ. *Lindl. Gen. et Sp. Orch.* 346, et in *Hook. Lond. Journ.* i. 15. *Sond. in Linnaea* xix. 89. *Reichb. f. in Flora* 1865, 161; in *Linnaea* xx. 688; *Otia Hamb.* 105. *Bauer, Illustr. Orch. Gen.* t. 14. *Ker in Journ. Sc. R. Inst. Lond.* iv. t. 6, v. t. 1. *Lindl. Sert. Orch.* t. 49. *Harv. Thes. Cap.* t. 41, 84 ad 86. *A. Rich. Fl. Abyss.* t. 93, 94. *Hook. Ic. Pl.* t. 214. *Bot. Mag.* t. 4073, 4091, 6529, 6532. *Bot. Reg.* t. 324, 926.

Genus quoad habitum, petalorum et labelli formam, et antheram suberectam v. magis minusve reflexam polymorphum, a Lindley et Reichenbachio in sectiones 12 divisum quarum tamen aliæ monotypicæ potius species quam sectiones, aliæ characteribus valde incertis definitæ v. quam maxime artificiales. *Trichochila* tamen distinguitur foliis ad basin caulis confertis gramineis fere filiformibus et labello nunc sessili nunc longissime unguiculato sæpius dentato v. lacero-fimbriato; et *Disella* floribus parvis dense spicatis. De columnæ structura cfr. Bolus in *Journ. Linn. Soc.* xix. 233, qui rite *D. barbata*, Sw., ad *Herscheliæ* refert.

PENTHEA, *Lindl. Introd. Nat. Syst. ed.* 2, 446; *Gen. et Sp. Orch.* 360; et in *Journ. Linn. Soc.* vi. 138, *Sond. in Linnaea*, xix. 104, species 7 v. 8, Africæ occidentalis australis v. tropicæ continet, a *Disa* separatas ob sepalum posticum omnino ecalcaratum, sed ex *Harv. Thes. Cap.* i. 63, species intermediæ occurrunt, et *Penthea* cum *Disa* jungenda, quod confirmat Bolus.

319. *Herschelia*, *Lindl. Gen. et Sp. Orch.* 362.—Sepala subæquilonga, libera, posticum late galeatum, basi in calcar breve basi conicum productum, lateralia ovata v. oblonga, plana, patentia. Petala minora, in acumen obliquum varie curvum producta. Labellum a basi columnæ patens, ecalcaratum, sessile, integrum v. fimbriatum. Columna brevis, crassiuscula; rostellum lobi 3 angusti erecti, laterales incurvi cum medio æquilongo recto glandulam includentes; stigma ad basin columnæ transverse adnatum, a rostellum distans, carnosum, pulvinatum, distincte didymum. Anthera cum clinandrio erecta v. leviter reclinata; loculis elevatis parallelis, apicibus (inferis) brevibus; pollinia in loculis solitaria, subglobosa, laxè granulosa, caudiculis brevibus glandula unicæ integræ affixa. Capsula anguste oblonga v. subclavata, erecta.—Herbæ terrestres *Disis* o sectione *Trichochila* simillimæ. Tubera indivisa. Folia radicalia longa, angusto linearia, fere filiformia, caulina ad squamas vaginantes reducta. Flores mediocres, laxè spicati.

Species 2, Africæ australis incolæ. *Bolus in Journ. Linn. Soc.* xix. 234; *H. celestis*, *Lindl.* (*Disa graminifolia*, Swartz; *Ker in Journ. Sc. R. Inst. Lond.* vi. t. 1, f. 2) et *H. barbata*, Bolus (*Disa barbata*, Swartz, *Lindl. Gen. et Sp. Orch.* 354) ejus forte varietates sunt *Disa lacera*, Sw., et *D. multifida*, *Lindl.*

*Lindl. Gen. et Sp. Orch.* 356.—Sepala æquilonga, libera, posticum erectum, subincurvum, galeatum, basi in calcar descendens productum, lateralia patentia.

Petala erecta, angusta, subfalcata, sæpe carnosula. Labellum a basi columnæ patens, angustum, carnosum, indivisum, ecalcaratum. Columna brevissima, rostello (an semper?) amplo membranaceo subplicato vix lobato; stigma sub rostello ad basin labelli crassum, carnosum, pulvinatum. Anthera cum clinandrio reclinata, lata, loculis elevatis adnatis, apicibus (inferis) horizontalibus v. ascendentibus convergentibus; pollinia in loculis solitaria, grosse granulosa, caudiculis longiusculis post dehiscientiam glandulæ unicæ (duabus connatis?) affixis. Capsula erecta, oblonga v. angusta.—Herbæ terrestres, foliatæ, tuberibus indivisis, habitu *Disæ* specierum nonnullarum. Folia angusta. Flores parvuli v. mediocres, in spica sæpius densa subsessiles. Bractæ membranaceæ, flores sæpe sequentes.

Species ad 12, Africæ australis incolæ. *Lindl. l. c. Sond. in Linnæa* xix. 100. *Bot. Reg. t.* 210 (*Disa*).

Genus *Disæ* valde affine, differt rostello amplo, pollinarii glandulis in unam concretis et quodammodo perianthii forma sed characteres in vivo ulterius probandi. Bolus tamen pro genere distincto admittit.

321. *Schizodium*, *Lindl. Gen. et Sp. Orch.* 358.—Sepala subæquilonga, posticum erectum, concavum v. galeatum, basi in calcar descendens productum, lateralia libera, patentia. Petala erecta v. patentia, angusta, basi dilatata v. lobata. Labellum a basi columnæ patens, liberum, supra unguem latum concavum v. fere saccatum contractum, ecalcaratum; lamina angusta v. lata, indivisa. Columna brevissima, rostello prominente 2-lobo; stigma ad basin columnæ crasse carnosum, pulvinatum, a labello liberum. Anthera cum clinandrio reclinata v. reflexa, lata, loculis latis adnatis parallelis, apicibus (inferis) brevibus horizontalibus v. ascendentibus rostelli lobis adnatis; pollinia in loculis solitaria, grosse granulosa, caudiculis breviusculis, glandulis arcte approximatis v. distantibus. Capsula erecta, obovoidea v. oblonga, sæpe incurva.—Herbæ terrestres, tenues, tuberibus indivisis. Folia subradicalia, sæpius parva, patentia, petiolata, ovata v. spatulata.

Species ad 10, Africæ australis incolæ. *Lindl. l. c. Reichb. f. in Linnæa* xx. 694.

Genus a *Disa* differt imprimis habitu et labello a stigmate omnino libero.

322. *Brownleca*, *Harv. in Hook. Lond. Journ.* i. 16.—Sepala æquilonga, posticum erectum, concavum v. galeatum, ecalcaratum, lateralia patentia, obliqua. Petala sepalis lateralibus subsimilia v. magis obliqua, basi sæpe-sepalo postico leviter coherentia. Labellum margine cum columna connatum, brevissimum, valde concavum v. saccatum nec calcaratum, lamina minima angusta erecta. Columna brevissima, rostello erecto valde prominente sub-2-lobo; stigma sub rostello latum, crassiusculum, a latere sæpius utrinque in processum parvum productum, a labello liberum. Anthera cum clinandrio brevissimo reflexa, loculis majusculis prominentibus adnatis, apicibus (inferis) horizontalibus in lobos rostelli ascendentibus; pollinia in loculis solitaria, laxè granulosa, caudiculis brevibus, glandulis distinctis. Capsula erecta, breviter v. longe oblonga, erostria.—Herbæ terrestres, glabræ, caule debili longiusculo, medio 1-2-foliato. Folia membranacea, latiuscula v. angusta. Flores in una specie majusculi, laxè breviterque racemosi, in altera parvi, dense spicati, in tertia inflorescentia intermedia.

Species 4, Africæ australis incolæ. *Sond. in Linnæa* xix. 106. *Harv. Thes. Cap. t.* 103, 104.

Genus certe *Disæ* affine, etsi stigma vix pulvinatum.

323. ? *Forficaria*, *Lindl. Gen. et Sp. Orch.* 362.—Sepala libera, concava, posticum majus, lateralia æstivatione imbricans, ecalcaratum. Petala libera, setacea, genuflexa, hirsuta. Labellum carnosum, truncatum, liberum, nanum, ecalcaratum. Columna brevissima, stigmate adnato excavato; rostellum . . . Anthera reclinata, loculis adnatis, apicibus (reflexis) brevibus; pollinia . . . Capsula erecta, oblonga, erostria.—Herba terrestris, habitu fere *Disæ* sect. *Trichochile*. Folia radicalia conferta, longe lineari-subulata, rigida. Scapus aphyllus, squamis paucis distantibus. Spica laxa, pauciflora. Bractæ flore breviores.

Species 1, Austro-Africana, e specimine unico Dregeano in herb. *Lindl.* nota. Hujus flores examinare nequimus, sed vix cum analysi *Lindleyana* convenire videntur, et genus quoad characteres et affinitates valde dubium remanet.

324. *Brachycorythis*, *Lindl. Gen. et Sp. Orch.* 363.—Sepala libera, conniventia v. demum patentia, lateralalia postico ealcarato sæpius latiora, obliqua. Petala sepalis lateralibus similia nisi angustiora. Labellum a basi columnæ patens, liberum, ungue amplo concavo subcarnoso sulcatoque ealcarato apice contracto, lamina dilatata 3-dentata. Columna brevis, rostello inter glandulas brevi erecto 2-lobo, extus utrinque processu pulviniformi instructo; stigma ad basin columnæ magnum, carnosum, concavum, a labello liberum. Anthera cum clinandrio erecta v. leviter reclinata, lata, loculis latis adnatis parallelis, apicibus (inferis) brevibus rostelli lobos erectos amplectentibus; pollinia in loculis solitaria, grosse granulosa, caudiculis breviusculis, glandulis majusculis contiguas. Capsula erecta, anguste oblonga.—Herbæ terrestres, foliosæ, tuberibus indivisis elongatis. Folia sessilia, gradatim in bracteas foliaceas abeuntia. Spica floribunda, bracteis lanceolatis foliaceis flores sæpius parvulos superantibus.

Species 4 v. 5, Africæ australis et tropicæ occidentalis incolæ. *Lindl. l.c. Reichb. in Flora* 1865, 183; *Otia Hamb.* 59, 104. *Harv. Thes. Cap. t.* 53, 54.

Genus habitu facile distinctum, a *Schizodio* differt sepalo postico ealcarato.

*B. tenuior*, *Reichb. f. in Flora* 1865, 183, e Natal, nobis ignota, ex descriptione vix congener videtur.

325. *Schizochilus*, *Sond. in Linnæa*, xix. 78.—Sepala libera, conniventia, demum patentia, lateralalia postico ealcarato vix majora. Petala sepalis minora, obliqua. Labellum basi cum columna connatum, patens, ungue lato concavo basi in calcar descendens producto apice contracto, lamina integra v. 3-fida. Columna brevis, rostello inter glandulas elevato lato integro subgaleato; stigma ad basin columnæ elevatum, carnosum, concavum. Anthera cum clinandrio erecta v. leviter reclinata, lata, loculis elevatis adnatis parallelis, apicibus (inferis) brevibus rostelli lobis lateralibus adnatis; pollinia in loculis solitaria, grosse granulosa, caudiculis brevibus, glandulis dissitis. Capsula parva, ovoidea v. oblonga, erecta.—Herbæ terrestres, glabræ, infra medium foliatæ, tuberibus . . . Folia angusta, superiora parva, distantia. Flores parvi, dense spicati, subsecundi. Bracteæ angustæ, floribus breviores.

Species 4, Africæ australis incolæ.

Genus a Reichenbachio f. in *Flora*, 1867, 116, cum *Brachycorythide* jungitur, sed nobis bene distinctum videtur habitu, labelli calcare cum ungue cavo *Brachycorythidis* (etiam in *Schizochilo* supra calcar observando) non comparando, rostelli forma, aliisque notis.

326. *Platycoryne*, *Reichb. f. in Bonpl.* 1855, 212.—Sepalum posticum erectum, latum, galeatum, acutum, ealcaratum; lateralalia libera, reflexa, angusta. Petala basi columnæ subadnata, angusta, inæqualiter 2-loba. Labellum cum basi columnæ continuum, patens, lineare, indivisum, basi in calcar longum productum. Columna sub anthera brevissima, rostelli lobis lateralibus dilatatis, medio erecto crassiusculo subcomplicato; stigma ad basin columnæ labello subadnatum, crassissimum, elevatum, pulvinatum. Anthera erecta v. subreclinata, connectivo basi a clinandrio non distincto superne tamen libero lato; loculis magnis adnatis parallelis, apicibus (inferis) longiusculis divergentibus lobis lateralibus rostelli adnatis; pollinia in loculis solitaria, multiglandulosa, caudiculis elongatis, glandulis nudis dissitis. Capsula . . .—Herba terrestris. Folia pauca, parva, angusta, distantia, breviter lateque vaginantia. Flores mediocres, breviter laxèque spicati. Bracteæ late vaginantes, fere cucullatæ.

Species 1, Madagascariensis.

Genus *Disæ* (*Penthea*) valde affino.

327. *Pterygodium*, *Sw. in K. Vetsensk. Acad. Nya Handl. Stockh.* xxi. 217, t. 3 E.—Sepalum posticum cum petalis sæpe majoribus in galeam connivens et plus minus coherens, lateralalia postico aequalia v. minora, libera, patentia v. reflexa. Labellum basi columnæ adnatum ultra antheram productum in laciniam (appendiculam *auct. pl.*) incurvo-erectam polymorpham explanatam galeatam v. cucullatam, dorso appendicula patente (lamina *auct. pl.*) angusta v. lata indivisa dentata v. 2-3-loba instructum. Columna brevissima, stigmate transverso v. rostello utrinque in processum brachiatum v.

polymorphum producto. Antheræ connectivum late membranaceum, emarginatum v. 2-partitum, basi a clinandrio non distinctum, cum lateribus rostellii continuum, loculis adnatis, apicibus (inferis) in rostello ascendentibus v. abrupte erectis; pollinia in loculis solitaria, granulosa, caudiculis brevibus v. elongatis, glandulis nudis. Capsula erecta, oblonga, costis obtusis interdum valde prominentibus.—Herbæ terrestres, aliæ paucifloræ v. rarius 1-floræ, habitu *Ophrydis*, aliæ erectæ, elatæ, foliosæ, spica floribunda, habitu *Habenariæ* specierum majorum. Tubera in speciebus paucis observata indivisa.

Species ad 10, Africæ australis incolæ. *Lindl. Gen. et Sp. Orch.* 366. *Sond. in Linnæa* xix. 109. *Reichb. f. in Flora* 1867, 117. *Ker in Journ. Sc. R. Inst. Lond.* vi. t. 1, viii. t. 3, ix. t. 4. *Harv. Thes. Cap. t.* 94. Species Abyssinicæ Richardii a Reichenbachio rite ad *Disperim* referuntur.

Genus labello apice dorsoque varie producto facile cognoscendum, quoad ejusdem formam et processus columnæ variat de specie in speciem, quod in speciminibus sicis difficillime observatur; in serie 2 habitu dividitur. Anthera ut in *Disa* sæpius plus minus reflexa, sed in *P. volucris*, Sw. (OMMATODIO, *Lindl. Gen. et Sp. Orch.* 365) ut in *Disæ* serie *Macrantharum* suberecta est.

328. **Disperis**, Sw. in *K. Vetensk. Acad. Stockh. Nya Handl.* xxi. 218. (*Dryopeia*, Thou. *Orch. Iles Afr.* t. 1 ad 3. *Dipera*, Spreng. *Syst. Veg.* iii. 676.)—Sepalum posticum angustum, cum petalis latissimis concavis in galeam latam antice apertam v. fere clausam connivens v. sæpius agglutinatum, lateralia libera, patentia, membranacea, obliqua, dorso sæpiissime calcarata v. saccata. Labellum angustum, columnæ ultra antheram adnatum, apice sub-2-labiatum 2-brachiatum v. varie dilatatum v. appendiculatum. Columna brevis, labello omnino adnata; stigma transversum, interdum processibus 2 contortis appendiculatum. Anthera cum clinandrio suberecta v. reflexa, loculis distinctis parallelis v. arcte contiguis adnatis, apicibus (inferis) brevibus; pollinia in loculis solitaria, granulosa, caudiculis brevibus, glandulis dissitis. Capsula erecta, oblonga, erostris v. breviter rostrata.—Herbæ terrestres, teneræ, tuberibus indivisis. Folia secus caulem pauca dissita, v. rarius 2 subopposita, nunc angusta, nunc cordato-amplexicaulia. Flores mediocres, solitarii pauci v. plures laxè spicati. Bractæ subherbaceæ, lanceolatae v. ovatae, interdum flores subæquantes.

Species ad 20, Indiæ orientalis, Africæ tropicæ et australis et ins. Mascarensium incolæ. *Lindl. Gen. et Sp. Orch.* 369, et in *Hook. Lond. Journ.* i. 14. *Reichb. f. in Flora* 1865, 180; in *Linnæa* xxii. 860, xli. 55; *Otia Hamb.* 73, 102. *Ker in Journ. Sc. R. Inst. v.* t. 1, f. 2, 3, et vi. t. 1. *Harv. Thes. Cap. t.* 106, 148, 171, 172. *Wight, Ic.* t. 930, 1719.

In *D. capensi*, Sw., sepala in acumen longum tenue producantur. In specie Abyssinica (*Schimper*, n. 1295), cæterum *D. oppositifoliæ* simillima, sepalum posticum angustum petala longe superat et *Disæ* calcar simulat.

329. **Corycium**, Sw. in *K. Vetensk. Acad. Nya Handl. Stockh.* xxi. 220.—Sepalum posticum angustum, cum petalis latissimis basi concavis v. saccatis in galeam connivens v. agglutinatum, lateralia membranacea, fere ad apicem connata. Labelli unguis columnæ inter antheræ loculos adnatus, lamina erecta v. incurvo-incumbens transverse lunata v. divaricato-2-loba v. quasi sagittata auriculis longe productis parallelis, dorso in appendicem cuneatam v. 2-lobam sæpe producta. Columna brevissima, labello adnata, rostello latiusculo undulato v. breviter lobato; stigma parvum v. 2-pulvinatum. Anthera in dorsum columnæ reversa, v. ei adnata, loculis inter se distantibus labelli unguem marginantibus v. sub eo suboccultis, apicibus brevissimis inferis at ob reversionem antheræ ascendentibus; pollinia in loculis solitaria, grosse granulosa, caudiculis brevibus, glandulis parvis. Capsula sessilis, erecta, oblonga, interdum breviter rostrata.—Herbæ terrestres, foliosæ, tuberibus indivisis. Folia angusta, plana v. undulato-crispa. Flores parvi v. mediocres, in spica densa numerosi. Bractæ flores haud superantes.

Species ad 10, Africæ australis incolæ. *Lindl. Gen. et Sp. Orch.* 368. *Sond. in Linnæa* xix. 110. *Reichb. f. in Linnæa* xix. 375. *Ker in Journ. Sc. R. Inst.* vi. t. 1, viii. t. 3. *Bauer, Illustr. Orch. Gen. t.* 15. *Bot. Reg.* 1838, t. 45.

In analysi *Baueriana*, f. 5, labellum a dorso, in f. 4, a facie spectatur, appendix dorsalis in ha

specie (*C. bicolor*), lamina late cordata v. sublunata longior est. In *C. crisp*o labellum in lobos 2 angustos divaricatos (stigmatis brachia, *Lindl.*?) dividitur, appendice dorsali (labello, *Lindl.*) longe obovata retusa; in *C. exciso* lamina basi in aurículas 2 longissimas angustas parallelas producitur; in *C. latifolio*, *Harv.*, lamina terminalis lanceolata v. subcordata est, appendice nulla dorsali.

330. *Ceratandra*, *Eckl.*; *Lindl. Gen. et Sp. Orch.* 363.—Sepalum posticum erectum, cum petalis in galeam agglutinatum, lateralia libera, patentia, plana. Labellum columnæ adnatum, ultra antheras unguiculatum, patens, lamina lunata v. transversa, nuda v. appendiculata. Columna brevis, labello adnata; rostellum lobi laterales elongati, erecti, canaliculati v. a latere convoluti, medius brevissimus v. ampliatus; stigma sub rostellum transversum, interdum 2-lobum v. 2-partitum. Anthera cum clinandrio reflexa, loculis adnatis, apicibus inferis at ob reversionem antheræ erectis lobis lateralibus rostellum applicitis v. subinvolutis; pollinia in loculis solitaria, granulosa, caudiculis longiusculis erectis, glandulis nudis.—Capsula erecta v. subpatens, anguste oblonga, erostris.—Herbæ terrestres, foliosæ, fibris irregulariter in tubera incrassatis. Folia angusta. Flores mediocres, in racemo denso v. spica conferti, breviter pedicellati v. sessiles, rarius pauci laxi racemosi. Bracteæ flore breviores.

Species 7 v. 8, Africæ australis incolæ. *Sond. in Linnæa*, xix. 108. *Bauer, Illustr. Orch. Gen.* t. 16.

*C. Harveyana*, *Lindl.* l.c. 365, pro sectione (*Evota*) separatur, ob rostellum amplissimum sinuatum fere galeatum, lobis vix distinctis. Flores in herb. *Lindl.* solo vidimus, ubi structuram examinare nequimus.

#### TRIBUS V. CYPRIPEDIÆ.

331. *Cypripedium*, *Linn. Gen. n.* 1015. (*Criosanthes*, *Raf. in Journ. Phys.* lxxxix. 102).—Sepala patentia, libera v. lateralia sæpius sub labello ad apicem connata. Petala libera, nunc sepalis multo angustiora nunc sublitoria. Labellum sessile, patens, inflato-calceiforme; lobi laterales ad basin calceoli parvi, auriculiformes, inflexi v. patentes. Columna brevis, teres. Antheræ perfectæ 2, ad latera rostellum sessiles v. brevissime stipitatæ, subglobosæ, loculis parallelis contiguis; pollen granulosum; antheridium pone rostellum erectum v. incumbens, late laminiforme v. carnosum, facie interdum loculos 2 imperfectos ferens. Rostellum inter antheras perfectas erectum v. antrorsum inflexum, breve, apice in discum rotundatum 3-angulare v. 3-lobum subtus (antice) papilloso-stigmatosum dilatatum. Capsula elongata v. oblonga, 1-locularis (placentis intrusis sed medium cavi non attingentibus).—Herbæ terrestres v. rarius epiphyticæ, rhizomate brevi v. repente, caule erecto simplici varie foliato. Pedunculus terminalis, simplex, 1- rarius 2-florus, v. rarissime flores plures foliaceo-bracteati. Flores speciosi, pedicellati.

Species editæ ultra 40, plures tamen vix distinctæ, Europæ, Asiæ temperatæ et tropicæ, Americæ borealis et Mexici incolæ. *Lindl. Gen. et Sp. Orch.* 525. *Reichb. f. in Walp. Ann.* iii. 602; in *Bonpl.* 1855, 227; in *Bot. Zeit.* 1862, 214; 1863, 128; 1865, 99. *Salisb. in Trans. Linn. Soc.* i. 76, t. 2, 3 (ubi nomina specifica Aitoniana perperam mutata). *Blume, Orch. Archip. Ind.* 164. Præter icones infra citatas genus in diariis hortulanorum recentioribus passim illustratur.

Species ex habitu et foliis facile in series 3 sequentes distribuuntur:—

1. *Foliosæ*. Folia secus caulem 3-co. alterna, venis prominentibus percursa. Species Americane Europæ v. Asiæ temperatæ. *Reichb. Ic. Fl. Germ.* t. 496 ad 498. *Nees, Gen. Fl. Germ. Monocot.* iii. n. 12. *Barla, Ic. Orch. Alp. Marit.* t. 63. *Dene. in Jacquem. Voy. Bot.* t. 166. *Blume, Orch. Archip. Ind.* t. 60. *Hook. Fl. Bor. Amer.* t. 206. *Bot. Mag.* t. 216, 911, 2938, 3024, 5855. *Bot. Reg.* t. 1534, 1666; 1846 t. 58. *Sweet, Brit. Fl. Gard. ser. 2, t. 1.*

Inter species Americanas *C. passerinum*, *Reichb.*, et *C. californicum*, *A. Gray*, insignes sunt floribus solito minoribus et capsula brevi. *ARISTINUM*, *Beck, Bot. N. and Midl. U. S.* 352, est *C. arietinum*, *Bot. Mag.* t. 1569; *Sweet, Brit. Fl. Gard.* t. 213, species parvula angustifolia, sepalis lateralibus fere a basi liberis.

2. *Diphyllæ*. Folia 2, venis prominentibus percursa v. membranacea. Species temperatæ. Huc

includuntur *C. acaule*, Ait., ex America boreali, foliis ad basin caulis scapiformis approximatis. *Bot. Mag. t. 192. Sweet, Brit. Fl. Gard. ser. 2, t. 161. C. guttatum*, Sw., ex Asia temperata, foliis secus caulem dissitis, *Reichb. Ic. Fl. Germ. t. 495*, et *C. japonicum*, Thunb., et *C. debile*, Reichb. f. e Japonia, foliis in medio caule suboppositis. *Blume, Orch. Archip. Ind. t. 59.*

3. *Coriaceæ*. Folia ad basin caulis scapiformis 1-2-flori conferta, coriacea, sæpe angusta. Species omnes tropicæ Asiaticæ usque ad Borneo extensæ. *Blume, Rumphia, iv. 56, t. 195, 198; Orch. Archip. Ind. t. 58. Lindl. Collect. Bot. t. 32. Wight, Ic. t. 1760. Hook. Exot. Fl. t. 34, 35. Bot. Mag. t. 2129, 3412, 4234, 4901, 4900, 5024, 5349, 5362, 5508, 5513, 5791, 5922, 6175, 6296, 6432, 6490. Bot. Reg. t. 788, 1991; 1842, t. 17. Reichb. f. Xen. Orch. t. 103, 132, 133, 141, 161, 162, 201, 209.*

332. *Selenipedium*, *Reichb. f. Xen. Orch. i. 3, t. 2, 27, 44, 62, 181.*—Sepala patentia, posticum liberum, lateralibus sub labello ad apicem connata. Petala libera, nunc sepalis multo angustiora interdum longe caudata, nunc sepalis sublatis obtusa. Labellum sessile, patens, inflato-calceiforme (nisi abnorme). Columna brevis, teres. Antheræ perfectæ 2, ad latera rostellii sessiles v. brevissime stipitatæ, subglobosæ, loculis parallelis contiguis; pollen granulosum; antheridium pone rostellum erectum v. incumbens late laminiforme v. carnosum. Rostellum inter antheras perfectas breve, erectum v. antrorsum inclinatum, apice in discum subtus (antice) papilloso-stigmatosum dilatatum. Ovarium perfecte 3-loculare. Capsula elongata, 3-locularis.—Herbæ terrestres, rhizomate brevi v. repente, caule erecto varie foliato. Pedunculus terminalis, simplex v. ramosus, æ-florus. Flore speciosi v. rariis mediocres, pedicellati.

Species ad 10, Americæ australis montanæ incolæ. *Reichb. f. in Seem. Bot. Her. t. 44. Hook. Ic. Pl. t. 658. Bot. Mag. t. 5466, 5614, 5970, 6217 (ic. omnes sub Cypripedio).*

Genus a *Cypripedio* vix nisi ovario perfecte septato et patria distinguitur. Species in series 2 distribuuntur:—

1. *Coriaceæ*. Folia ad basin caulis conferta, coriacea. Racemus laxis, sæpe ramosus, floribus speciosis. Bractææ sæpius spathaceæ. Huc referuntur icones omnes supra citatæ.

2. *Folioseæ*. Folia secus caulem alterna, venis prominentibus percursa, angusta. Flores in racemo densiusculo mediocres v. parvuli. Bractææ ovatæ, patentibus. Huc *S. palmifolium*, Reichb. f. *Xen. Orch. t. 2*, cum specie ei valde affini, utraque e Guiana. Habitus ei *Apostasia* accedit.

UROPEIDUM, *Lindl. Orch. Linden. 28; Brongn. in Ann. Sc. Nat. ser. 3, xiii. 113; Reichb. f. Xen. Orch. i. 32, t. 15; Regel, Gart. Fl. t. 315*, est species Colombiana, *S. caudato* in omnibus conformis, nisi labello non calceolato, sed petalis conforme v. basi paullo latiore concavoque. Est verisimiliter, sententia Blumei aliorumque, varietas monstruosa v. abnormis etsi persistens, quæ eandem rationem habet *Selenipedio*, quam *Aclinia Dendrobio*, *Paxtonia Spathoglottidi*, *Argyrorchis Macodi*, etc.

333. *Apostasia*, *Blume, Bijdr. 423, t. 5, et Nov. Pl. Fam. in Ann. Sc. Nat. ser. 2, ii. 93. (Niemeyera, F. Muell. Fragm. Phyt. Austral. vi. 96.)*—Sepala petala et labellum consimilia, æqualia, libera, patentia v. recurva. Columna brevis. Antheræ perfectæ 2, ad latera rostellii breviter stipitatæ, angustæ, erectæ, loculis parallelis contiguis sæpe parum inæqualibus; pollen granulosum; antheridium pone rostellum erectum angustum v. 0. Rostellum (stylus) ad apicem columnæ erectum, elongatum, apice in discum parvum stigmatosum integrum v. 3-dentatum dilatatum. Ovarium perfecte 3-loculare. Capsula linearis, 3-locularis.—Herbæ terrestres, rhizomate brevi, caule erecto simplici undique foliato. Folia angusta, venis prominentibus percursa. Spicæ in axillis summis v. in apice caulis sessiles, confertæ, simplices v. ramosæ, sæpissime patentibus v. recurvæ. Flores parvi, sessiles. Bractææ angustæ.

Species ad 4, Indiæ orientalis Archipelagi Malayani et Australiæ tropicæ incolæ. *R. Br. in Wall. Pl. As. Rar. i. 74, t. 84, 85. Bauer, Illustr. Orch. Fruct. t. 15. Griff. Ic. Pl. As. t. 282. Benth. Fl. Austral. vi. 395. Reichb. f. Xen. Orch. t. 196; et in Flora, 1872, 278.*

Characteres florales et fructus, labello excepto, parum a *Selenipedio* differunt, et habitus et folia ab illis *Selenipedi palmifolii* haud dissimilia.

334. *Neuwiedia*, *Blume, Nov. Pl. Fam. in Ann. Sc. Nat. ser. 2, ii. 93.*—Sepala et petala consimilia, æqualia, libera, conniventia v. demum patentia. Labellum petalis

paullo latius, subspathulatum, cæterum simile. Columna<sup>3</sup> brevis. Antheræ perfectæ 3, erectæ, stipitatæ, angustæ, loculis parallelis contiguis, 2 ad latera rostelli, tertium posticum; pollen granulosum. Rostellum (stylus) ad apicem columnæ erectum, elongatum, apice in discum parvum antrosum obliquum stigmatosum dilatatum. Ovarium perfecte 3-loculare. Capsula ovoideo-3-quetra, breviter rostrata.—Herbæ terrestres, rhizomate brevi, caule erecto simplici foliato. Folia longa, in petiolum contracta, venis elevatis percursa. Spica terminalis, densa, simplex, sæpe elongata. Flores parvi, sessiles. Bracteæ angustæ, flores interdum superantes.

Species 3, Malaccæ et Archipelagi Malayani incolæ. *Reichb. f. Xen. Orch.* ii. 13, 215, t. 106, et in *Bonpl.* 1857, 58.

## ORDO CLXX. SCITAMINEÆ.

Endl. Gen. 221. Horaninow, Prod. Monogr. Scitam. Petropoli, 1862, folio, cum tabb. 4. MUSCÆ, ZINGIBERACEÆ et MARANTACEÆ, Lindl. Veg. Kingd. 163 ad 169. MUSCÆ et CANNÆ, Juss. Gen. Pl. 61, 62.

*Flores* hermaphroditi v. rarius polygami, irregulares. *Perianthium* superum, ad normam duplici serie 3-merum, exterius calycinum, interius corollinum, segmentis tamen sæpe varie connatis v. uno alterove deficiente. *Sepala* nunc libera, valde imbricata, parum inæqualia v. uno latiore, nunc in calycem tubulosum 3-5-dentatum v. spathaceo-fissum connata, rarius basi tubo corollæ adnata, sæpius tenuia rigidula, interdum colorata v. herbacea. *Corolla* basi tubulosa limbo 3-partito, v. petala 3 a basi soluta v. in unum concavum v. fere spathaceum connata, laciniis petalisve valde inæqualibus v. rarius subæqualibus. *Andræcium* ad normam duplici serie 3-merum sed valde irregulare; stamina nunc 5 æqualia libera sexto deficiente v. parvo, nunc sæpius unum solum perfectum, cæteris in staminodia petaloidea irregulariter polymorpha basi varie connata mutatis. *Antheræ* lineares, nunc loculis 2 parallelis contiguis v. connectivo petaloideo dissitis, nunc loculo 1 solo ad marginem connectivi petaloidei. *Ovarium* inferum, 3-loculare, v. loculis 2 parvis vacuis specie 1-loculare, v. rarius revera 1-loculare placentis 3 parietalibus v. perfecte 2-loculare. *Stylus* terminalis, elongatus, indivisus, nunc ut videtur simplex excentricus, liber v. plus minus andræcio unilateraliter adnatus, apice in stigma globosum v. oblongum, sæpe obliquum v. inflexum, vertice foveolatum v. 2-labiatum sæpeque ciliatum incrassatum, nunc e 3 verisimiliter compositus, centralis, liber, stigmatibus brevi v. oblongo 3-6-dentato v. 3-fido; ubi stylus simplex excentricusque adsunt sæpe in vertice ovarii ad latera styli stylodia 2 lineari-subulata v. pulviniformia, libera v. inter se connata, v. rarius andræcio lateraliter adnata parumque prominula. *Ovula* in quoque loculo solitaria a basi erecta, v.  $\infty$  placentis axilibus rarius parietalibus 1- $\infty$ -seriatim affixa, horizontalia v. ascendentia, anatropa. *Fructus* calyce persistente coronatus v. perianthio toto deciduo nudatus, 3-locularis v. abortu 1-2-locularis, nunc carnosus indehiscens, nunc loculicide 3-valvis, v. pericarpio tenuiore lateraliter rumpens. *Semina* 1- $\infty$ , sæpius globosa oblonga v. irregulariter angulata, inappendiculata, arillo varie carnosio lacero v. stipposo fulta v. fere involuta; testa membranacea v. coriacea, ad hilum plus minus intrusa; integumentum internum tenue, albumini adnatum v. ad hilum incrassatum. *Albumen* copiosum, album, durum v. interdum plus minus farinaceum. *Embryo* in canali centrali albuminis erectus rectus incurvus v. hippocrepicus, interdum vitello tenui v. sat copioso involutus, radícula juxta hilum sæpius prominente.

Herbæ sæpius perennes, inter majores, rhizomate horizontali duro v. varie tuberoso, rarius annuæ. Caulis nunc abbreviatus v. vix ullus, nunc elatus simplex basi foliorum delapsorum cicatricibus annulatus. Folia nunc omnia subradicalia vaginis interdum circa scapum convolutis caulem simulantibus, nunc in caule florifero v. sterili solitaria v. plura, vaginis caulem involventibus; lamina supra vaginam sessilis v. petiolata, sæpius ampla,

venis numerosis crebris parallelis a costa media divergentibus valde obliquis v. subtransversis. Scapus seu pedunculus florifer terminalis v. e rhizomate inter folia nascens, rarius axillaris, simplex v. rarius ramosus. Bracteæ primariæ nunc foliaceæ imbricatæ nunc cymbiformes dissitæque, bifariæ v. quaquaversæ, in paucis generibus minimæ v. obsoletæ. Flores sub quaque bractea solitarii v. sæpius 2- $\infty$ , singuli bracteolæ membranaceæ v. spathaceæ stipati, v. in paucis generibus bracteolæ deesse videntur.

Species ad 450, per regiones calidiores utriusque orbis late dispersæ, perpaucae extra tropicos extensæ.

Ordo naturalissimus, tam foliis quam floribus bene limitatus, nec cum ullo alio generibus intermediis connexus.

## FORMÆ ABNORMES.

Ovarium 1-loculare placentis parietalibus in generibus 4 prioribus, perfecto 2- nec 3-loculare in *Tapinochilo*.

## CONSPECTUS GENERUM.

**Tribus I. Zingibereæ.** Calyx tubulosus v. spathaceus. Stamen 1, anthera 2-loculari; staminodia petaloidea 2 lateralibus varia v. obsoleta, labellum indivisum 2-fidum v. 2-partitum, omnia basi corollæ tubo adnata. Ovarii loculi v. placentæ parietales 3, rarissime 2,  $\infty$ -ovulati; stylus (simplex) tenuis, liber, apice loculis antheræ amplexus, stigmatibus subcapitato loculos sæpius superante; stylobia 2 libera v. subconnata. Embryo rectus. Embryo centralis, rectus.

\* *Ovarium 1-loculare, placentis 3 parietalibus.*

1. MANTISIA. Corollæ tubus elongatus. Staminodia lateralibus filiformia, in medio filamenti elongati opposita, patentia. Caules foliati steriles; scapus florifer ramosus, aphyllus.—*Ind. or.*

2. GLOBA. Corollæ tubus elongatus. Staminodia lateralibus ovata, lobis corollæ approximatisque similia. Filamentum elongatum nudum; anthera nuda v. a latere v. basi appendiculata. Thyrsus v. racemus laxus, in caule foliato terminalis.—*Ind. or., Archip. Malay.*

3. GUILLAINIA. Corollæ tubus elongatus. Staminodia lateralibus petalis breviora, erecta, basi cum labello conniventia. Filamentum elongatum, petaloideum; anthera connectivo apice producto appendiculata. Inflorescentia in caule foliato terminalis, longe spicata.—*Nov. Caled.*

4. HEMIORCHIS. Corollæ tubus brevis. Staminodia lateralibus lobis corollæ approximatis quibus subsimilia. Filamentum breve; anthera inappendiculata. Scapus florifer aphyllus, spica simplici, bracteis caducis.—*Burma.*

\*\* *Ovarium longe ultra medium v. sæpiissime perfecte 3-loculare, placentis axilibus.*† *Staminodia lateralibus ampla petaloidea.*

5. ROSCOEA. Spica in caule foliato terminalis, bracteis 1-floris paucis membranaceis imbricatis v. dissitis. Staminodia lateralibus erecta, basi angustata. Filamentum inter staminodia erectum; antheræ connectivum basi in calcar 2-fidum productum.—*Himalaya.*

6. KEMPERIA. Spica in caule foliato terminalis v. in scapo aphylo præcox, bracteis 1-floris membranaceis imbricatis. Filamentum breve; antheræ connectivum basi nudum, petaloideum, ultra loculos sæpe productum.—*Ind. or., Archip. Malay., Afr. trop.*

7. GASTROCHILUS. Spica in caule foliato terminalis v. in scapo aphylo præcox, bracteis secundis membranaceis imbricatis. Filamentum breve; anthera inappendiculata; *labellum concavum*.—*Burma, Malacca.*

8. HEDYCHIUM. Spica v. thyrsus in caule foliato terminalis, densa v. laxa, bracteis 1- $\infty$ -floris imbricatis v. dissitis. Filamentum elongatum, angustum; antheræ connectivum inappendiculatum. *Ind. or., Archip. Malay.*

9. CURCUMA. Spica dense strobiliformis, bracteis concavis v. cucullatis 2- $\infty$ -floris basi imbricatis apice patentibus sæpe coloratis. Staminodia lateralibus basi cum filamentum petaloideo connata. Anthera basi 2-calcarata loculis contiguus.—*Asia, Afr. et Australia intertrop., ins. maris Pacifici.*

10. HITCHENIA. Spica strobiliformis *Curcumæ*, bracteis coloratis rigidioribus. Staminodia

lateralis lobis corollæ similia v. minora. Filamentum angustum, complicatum; anthera ecalcarata, loculis connectivo petaloideo separatis.—*Ind. or.*

†† *Staminodia lateralibus parva dentiformia v. 0, rarius longiora angusta labello adnata.*

11. *TAPEINOCYLUS*. Inflorescentia strobiliformis, bracteis latis concavis imbricatis apice recurvis. Anthera ecalcarata, connectivo ultra loculos brevi rotundato. Ovarium 2-loculare.—*Archip. Malay., Austral. trop.*

12. *AMOMUM*. Inflorescentia strobiliformis, in scapo aphylo brevissimo v. elongato, rarissime in caule foliato terminalis, bracteis imbricatis sæpius 2-3 floris. Filamentum breve; antheræ loculi apice divergentes, connectivo ibidem plus minus dilatato brevi, v. ultra loculos in cristam integram v. 3-lobam producto.—*Ind. or., Archip. Malay., ins. maris Pacifici, Afr. trop.*

13. *CYPOSTIGMA*. Scapi florentes aphylli, e rhizomate flexuoso-ascendentes, fere a basi floriferi, bracteis parvis dissitis 1-2-floris. Filamentum breve; antheræ connectivum in cristam 3-lobam dilatatum.—*Zeylania.*

14. *ELETTARIA*. Scapi florentes longi, aphylli, flexuosi, fere a basi floriferi, bracteis membranaceis dissitis 2-3-floris. Filamentum brevissimum; antheræ loculi usque ad apicem contigui, connectivo non dilatato.—*Ind. or. penins., Zeylania.*

15. *ZINGIBER*. Inflorescentia *Amomi*. Filamentum breve; antheræ loculi contigui, connectivo ultra loculos in appendicem longam linearem producto.—*Ind. or., Archip. Malay., ins. Mascar. et maris Pacifici.*

16. *COSTUS*. Inflorescentia strobiliformis, in caule foliato terminalis, sessilis, v. rarius in scapo brevi aphylo, bracteis latis imbricatis. Antheræ loculi approximati, in medio filamento petaloideo elongato adnati.—*Utriusque orbis reg. trop.*

17. *BURBIDGERA*. Racemus terminalis, bracteis caducis. Corollæ tubus elongatus. Filamentum brevissimum; antheræ connectivum ultra loculos in appendicem longam lanceolatam concavam productum. Fructus linearis.—*Borneo.*

18. *LEPTOSOLENA*. Panicula terminalis. Corollæ tubus elongatus. Filamentum breve; antheræ connectivum ultra loculos non productum. — *Ins. Philippinæ.*

19. *STROBIDIA*. Panicula terminalis, bracteis caducis. Corollæ tubus brevis. Antheræ connectivum ultra loculos in appendicem ellipsoideam incurvam productum. Ovarium ellipsoideum.—*Sumatra.*

20. *ALPINIA*. Thyrsus racemiformis v. panicula terminalis. Filamentum elongatum; antheræ connectivum latiusculum, loculis brevius, v. in appendicem brevem latam productum. Fructus globosus.—*Asia trop. et subtrop., Australia, ins. Pacif.*

21. *RENEALMIA*. Thyrsus racemiformis v. racemus in scapo aphylo v. rarius in caule foliato terminalis. Filamentum brevissimum; antheræ connectivum angustissimum, apice basique loculis brevius. — *Amer. et Afr. trop.*

**Tribus II. Marantæ.** Sepala libera v. in tubum conniventia vix coherentia. Stamen 1; anthera 1-locularis, in andrœcii lobo v. filamento lateralis; staminodia petaloidea, in andrœcium irregulariter et varie lobatum basi connata; andrœcii tamen lobi sæpius 5 v. 6, quorum 1 v. 2 laterales, 1 anticus labellum dictus, 2 v. 3 postici, quorum 1 v. 2 cucullati, 1 antherifer. Ovarii loculi 1-ovulati; stylus simplex, excentricus, andrœcio inclusus intusque plus minus lateraliter adnatus, superne incurvus v. involutus, stigmate valde obliquo v. a latere sub-2-labiato. Embryo valde incurvus v. hippocrepicus.

Andrœcii lobi sæpe de specie in speciem variant et characteres quos præbent, in paucis speciebus adhuc rite observati, rarius ad genera distinguenda sufficiunt, et ulterius ad vivum confirmandi v. reformandi; sequentes interdum plerique ex inflorescentia deducti.

\* *Ovarium specie 1-loculare, loculis 2 minimis vacuis. Genera (speciebus 2 exceptis) Americana.*

22. *ISCHNOSPHEON*. Inflorescentia spiciformis, bracteis convolutis rhachiin floresque arete includentibus. Corollæ tubus tenuis.—*Amer. trop.*

23. *MARANTA*. Inflorescentiæ rami tenues, pauciflori. Bractee sub ramulis angustæ, convolute, rhachiin arete includentes. Flores pedicellati, ebracteati. Corollæ tubus cylindricus, interdum basi gibbus.—*Amer. trop.*

24. *STROMANTHE*. Inflorescentia in pedunculo longo sæpius composita, brevis, laxiuscula. Bractee bracteolæque sæpius coloratæ, patentes, diu persistentes. Petala a basi solvenda.—*Brasilia.*

25. **THALIA.** Inflorescentia paniculata. Bracteæ sub ramis patentes, deciduæ. Flores secus ramulos ultimos laxè spicati, per paria bracteis caducis inclusi. Petala libera v. vix basi connata.—*Amer. et Afr. trop.*

26. **MYRSMA.** Spicæ unilaterales, solitariae v. per 2-5 confertæ, bracteis complicatis secundis 2-seriatim imbricatis persistentibus. Flores sub quaque bractea ∞, per paria breviter bracteolati. Corollæ tubus brevis.—*Brasilia, Guiana, Madagascar.*

\* \* *Ovarium sæpissime 3-loculare, 3-ovulatum. Genera (Calathea excepta) gerontogea.*

27. **CLINOGYNE.** Inflorescentiæ terminalis rami tenues, pauciflori. Bracteæ sub ramulis angustæ, convolutæ, rhachin arcuè includentes, diu persistentes, demum sæpe deciduæ. Flores gemini, breviter pedicellati. Petala in tubum conniventia vix cohærentia. Ovarium interdum 1-ovulatum.—*Ind. or., Afr. trop.*

28. **TRACHYPHYNIUM.** Inflorescentia terminalis, simplex v. parce ramosa, spiciformis. Bracteæ complicatæ, primum imbricatæ, anthesi peracta caducissimæ. Flores gemini. Petala basi in tubum conniventia. Ovarium dense papillosum. Capsula tuberculosa v. echinata, 3-valvis.—*Afr. trop.*

29. **THAUMATOCOCUS.** Spicæ e rhizomate in scapo brevi aphylo imbricato-bracteata, floribus geminis. Corollæ tubus brevis. Fructus lævis, crassus, carnosus, triqueter, indehiscens.—*Afr. trop.*

30. **PHYNIUM.** Inflorescentia strobiliformis capitata v. interrupte spicata, in folii petiolo specie lateralisi, scapo nempe v. pedunculo folii vagina arcuè involuto. Corollæ tubus sæpius brevis. Fructus indehiscens v. 3-valvis.—*Ind. or., Archip. Malay.*

31. **CALATHEA.** Inflorescentia strobiliformis v. capitata, imbricato-bractea, v. rarius laxius spiciformis, pedunculo in caule foliato terminali v. rarius scapo e rhizomate aphylo. Flores sub quaque bractea sæpius ∞. Corollæ tubus sæpius tenuis.—*Amer. trop., rarius Afr. trop.*

**Tribus III. Cannæ.** Sepala libera. Stamen 1, anthera 1-loculari in andrœcii lobo laterali, lobis cæteris 4 andrœcii (staminodiis) nudis. Ovarii loculi ∞-ovulati; stylus simplex, ima basi tubo andrœcii adnatus, superne liber complanatus, stigmate terminali adnato interdum uno latere breviter decurrente. Capsula papillosa tuberculosa v. echinata. Embryo centralis, rectus.

32. **CANNA.** Racemus in caule foliato terminalis, simplex v. parce ramosus, floribus speciosis sub quaque bractea solitariis.—*Utriusque orbis reg. calid. (in orb. vet. inquilina?).*

**Tribus IV. Musæ.** Sepala libera v. in tubum spathaceo-fissum connata. Stamina perfecta 5, libera, antheris linearibus 2-locularibus, sexto imperfecto v. deficiente. Stylus centralis, liber, stigmate 3-6-dentato v. 3-fido.

33. **HELICONIA.** Sepala libera v. lateralialia corollæ adnata. Corollæ tubus brevis, limbus elongatus concavus genitalia involvens. Ovarii loculi 1-ovulati. Fructus indehiscens v. in cocos secedens.—*Amer. trop. (in Asia trop. inquilina?).*

34. **MUSA.** Calyx tubulosus, mox spathaceo-fissus. Corolla inclusa, genitalia involvens. Ovarii loculi ∞-ovulati. Fructus carnosus, indehiscens.—*Orb. vet. reg. trop.*

35. **STRELITZIA.** Sepala libera. Petalum exterius breve latum concavum, lateralialia longa, angusta, uno latere connata, altero latere longe appendiculata. Capsula loculicide 3-valvis.—*Afr. austr.*

36. **RAVENALA.** Sepala libera. Petala longa, angusta, libera, inappendiculata, exterius lateralibus brevius. Capsula loculicide 3-valvis.—*Madagasc., Bras. bor., Guiana.*

#### GENUS EXCLUSUM.

**NYCTOPHYLAX**, Zipp. in *Flora*, 1829, 286, *absque char.*, est planta timorensis, ab auctoribus recentioribus non recognita nec ullibi quantum scimus definita, et nomen delendum.

#### TRIBUS I. ZINGIBEREÆ.

1. **Mantisia**, Sims, *Bot. Mag. t.* 1320.—Calyx tubuloso-campanulatus, breviter 3-lobus. Corollæ tubus elongatus, tenuis; lobi 3, ovati, patentes, quorum 2 plani, tertius paullo major, concavus. Staminodia lateralialia lineari-subulata, in medio filamento opposita,

patentia; labellum deflexum, emarginatum v. breviter 2-dentatum; filamentum elongatum, incurvum; antheræ loculi 2, oblongi, discreti, connectivo ad utrumque latus alato-dilatato ultra loculos non producto, marginibus integris v. emarginatis. Ovarium 1-loculare, placentis parietalibus; stylus excentricus, filiformis, in canali filamenti receptus, stigmatē parvo. Fructus . . .—Caules foliati steriles, foliis in ordine angustis, acumine longo torto. Scapi florentes aphylli, thyrso laxo. Bractæ tenuiter membranaceæ, subscariosæ, violaceæ. Flores pallide violacei, labello flavo.

Species 2, Indiæ orientalis incolæ, quarum *M. saltatoria*, Sims, sola a nobis visa. *Horan. Prod. Monogr. Scitam.* 19. *Andr. Bot. Rep.* t. 615. *Rosc. Scitam.* t. 112. *Roxb. Corom. Pl.* t. 230 (ic. omnes sub *Globba*).

2. **Globba**, *Linn. Mant. n.* 1287, *pro parte*. (*Manitia*, *Giske, Prælect. Linn.* 209. *Hura*, *Kœn. in Retz, Obs.* iii. 49. *Sphærocarpos*, *Gmel. Syst.* i. 9.)—Calyx tubuloso-campanulatus, breviter 3-lobus. Corollæ tubus elongatus; lobi 3, ovati, tertio sæpius paullo majore concavo. Staminodia lateraliter petaloidea, corollæ lobis similia v. longiora iisque approximata; labellum deflexum, emarginatum, postice breviter 2-appendiculatum, basi cum filamentum in cupulam connatum; filamentum elongatum, incurvum, canaliculatum; antheræ loculi 2, contigui v. parum distantes, connectivo utroque latere membranaceo-dilatato ultra loculos non producto. Ovarium 1-loculare, placentis parietalibus; stylus excentricus, filiformis, in canali filamenti receptus, stigmatē ultra loculos turbinato v. fere urceolato; stylodia filiformia. Fructus globosus v. oblongus, pericarpio siccitate membranaceo demum irregulariter rupto v. (ex Roxburghio) ab apice 3-valvi. Semina subglobosa, arillo (an semper?) crasso spongioso lacero.—Caules e rhizomate annui, erecti, in ordine haud elati. Folia lanceolata, rarius ovata, sæpius in acumen anguste caudiforme producta. Thyrsus in caule foliato terminalis, rarius ad racemum reductus, ramulis seu pedunculis simplicibus sæpius 2-∞-floris. Bractæ nunc caducissimæ, nunc persistentes foliaceæ, dissitæ v. imbricatæ; in pluribus speciebus bractæ inferiores tantum persistunt imbricatæ, vacuæ v. bulbillos rugosos foventes. Flores flavi v. rarius violascentes.

Species ad 24, Indiæ orientalis et Archipelagi Malayani incolæ. *Horan. Prod. Monogr. Scitam.* 19. *Miq. Fl. Ind. Bat. Suppl.* 612.

Genus a Horaninovio aliisque in sectiones 4, forte nimis artificiales, ex antheræ indole dividitur:—

1. *Aplanthera*. Anthera inappendiculata, loculis connectivo angustissimo v. vix ullo arcu approximatis. Huc *G. suaveolens*, Sm. *Exot. Bot.* t. 117, *G. ophioglossa*, Wight, *Ic.* t. 2002, *G. orizensis*, Roxb. *Corom. Pl.* t. 229, species nobis ignota, ex icone a *G. suaveolente* parum differt foliis acumine filiformi destitutis, floribus minoribus. *G. orizensis*, Wall. *Cat.*, est ipsa *G. suaveolens*, quæ ad *Aplantheram*, nec ad *Ceratantheram* pertinet.

2. *Careyella*. Anthera inappendiculata, loculis connectivo vix iis latiore separatis. Huc *G. Careyana*, *Rosc. Scitam.* t. 110, *Lodd. Bot. Cab.* t. 691. *G. sessiliflora*, *Bot. Mag.* t. 1428.

3. *Ceratanthera*. Anthera basi appendiculis seu calcaribus 2 acuminatis v. setiformibus integris instructa. Huc *G. pendula*, Roxb. *Corom. Pl.* t. 228. *CERATANTHERA*, *Lestib. in Ann. Sc. Nat. ser.* 2, xv. 341.

4. *Marantella*. Antheræ connectivum ad utrumque latus in appendicem marginatam v. bifidam expansum. Bractæ sæpe ovate, herbaceæ, persistentes. Huc *G. marantina*, Linn.; Sm. *Exot. Bot.* t. 103. *Rosc. Scitam.* t. 111. *Lodd. Bot. Cab.* t. 100. *G. Schomburgkii*, *Bot. Mag.* t. 6298. *G. versicolor*, Sm. *Exot. Bot.* t. 117, f. a, b, c. *G. marantinoides*, Wight, *Ic.* t. 2001. (*G. bracteosa*, *Horan.*)

*COLEBROOKIA*, *Don, apud Lestib. in Ann. Sc. Nat. ser.* 2, xv. 341, includit *Careyellam* et *Marantellam*.

3. **Guillainia**, *Vieill. in Bull. Soc. Linn. Norm.* x. 92.—Calyx tubulosus, coloratus, apice 3-dentatus. Corollæ tubus elongatus; lobi aequales, obtusi, erecti. Staminodia lateraliter petaloidea, petalis breviora, erecta, basi cum labello conniventia; labellum majus, subsaccatum, 3-lobum, lobo medio minore; filamentum petaloideum, elongatum, ultra

antheram in appendicem brevem productum. Ovarium inferum (1-loculare?), placentis 3 parietalibus; stigma complanato-infundibuliforme, ciliatum. Fructus . . .—Herba rhizomate tuberoso, foliis *Globbæ*. Inflorescentia terminalis, longe spicata, floribus sæpius geminis in axilla bracteæ latæ concavæ erectæ ciliatæ coloratæ. (*Char. ex Vieillard.*)

Species 1, Novo-Caledonica, a nobis non visa.

4. *Hemiorchis*, Kurz in *Journ. Asiat. Soc. Beng.* xlii. 108, t. 8.—Calyx brevis, superne campanulatus, 3-fidus. Corollæ tubus calyce brevior; lobi tubo longiores, ovati, posticus lateralibus latior. Staminodia lateralialia petaloidea, lobis lateralibus corollæ similia, basi corniculo parvo aucta; labellum paullo longius, latum, valde concavum, fere saccatum; filamentum breve; anthera erecta, loculis approximatis, connectivo angusto ultra loculos non producto. Ovarium ovoideum, 1-loculare, placentis 3 parietalibus; stylus filiformis, stigmatē parvo subgloboso. 'Capsula 1-locularis, subplicato-10-sulcata, 3-valvis. Semina conica, basi albo-arillata.'—Rhizoma crassum, repens. Folia post anthesin erumpentia, a nobis non visa. Scapi aphylli, pallidi, tomentelli, bracteis tenuiter membranaceis plus minus tecti. Spica terminalis, simplex, primum densa, per anthesin elonganda, floribus numerosis parum distantibus albo-virescentibus, labello aurantiaco. Bracteæ breves, hyalinæ, sub anthesi deciduæ.

Species 1, Burmanica.

5. *Roscoea*, Sm. *Exot. Bot.* t. 108.—Calyx longe tubulosus, 2-3-dentatus, membranaceus, plus minus spathaceo-fissus. Corollæ tubus sæpius elongatus, superne breviter ampliatus, lobi 3, posticus erectus incurvus concavus, laterales patentes v. recurvi. Staminodia lateralialia petaloidea, erecta, conniventia, oblongo-spathulata, basi contracta; labellum maximum, emarginatum v. 2-fidum; filamentum inter staminodia lateralialia breve, erectum; anthera linearis, medium versus filamenti affixa, loculis contiguis, connectivo basi in calcar longum incurvum semi-2-fidum v. fere 2-partitum producto. Ovarium 3-loculare; stylus cum filamento erectus, stigmatē ultra loculos globoso v. turbinato apice ciliato. Fructus oblongus, demum sæpe 3-valvis. Semina ovoidea, arillo plus minus cupulato; embryo centralis, linearis, rectus.—Rhizoma e fibris crassis carnosis fasciculatis. Folia angusta v. subcordato-lanceolata, vaginis longis laxis nunc amplissimis. Inflorescentia terminalis, fasciculata v. spicata, sessilis v. pedunculata. Flores singuli bractea spathacea stipati, purpurei cærulei v. flavi.

Species 6, Himalayanæ. Horan. *Prod. Monogr. Scitam.* 20. *Rosc. Scitam.* t. 64. *Hook. Exot. Fl.* t. 144. *Wall. Pl. As. Rar.* t. 242, 255. *Royle, Ill. Pl. Himal.* t. 89, f. 1 ad 3. *Wight, Ic.* t. 2013. *Bot. Mag.* t. 4630. *Bot. Reg.* 1840, t. 61. *Lodd. Bot. Cab.* t. 1404.

Icones supra citatæ *Roscoeas* genuinas referunt, quibus flores in fasciculum seu capitulum conferti, nunc intra vaginam superiorem sessile, nunc longe pedunculatum, purpurei v. cærulei; corollæ tubus elongatus, tenuis; ovarium angustum, capsula oblonga pericarpio membranaceo lateraliter fisso vix valvato. CAUTELÆ, *Royle, Ill. Pl. Himal.* 361, sectionem v. fere genus distinctum præbet, cui flores in spica exserta plus minus dissiti (an semper?) flavi; corollæ tubus vix calyce excedens; ovarium breve, latum; capsula globosa, pericarpio coriaceo 3-valvi, valvis demum patentissimis sub placentâ carnosâ semina diu retinentibus. Huc pertinent *R. gracilis*, Sm. (*R. lutea*, Royle, l. c. t. 89, f. 2), *R. spicata*, Sm. (*R. elatior*, Sm., ex char. dato, specimen tamen Smithianum in Herb. Hook. est *R. gracilis*), et species adhuc inedita.

6. *Æmperfia*, Linn. *Gen.* n. 7; *Hort. Cliff.* t. 3.—Calyx hyalinus v. membranaceus, longe tubulosus, 2-3-dentatus, superne breviter spathaceo-fissus. Corollæ tubus elongatus, exsertus; lobi lanceolati, acuti, æquales, patentes v. reflexi. Staminodia lateralialia ample petaloidea, ovata, basi sæpe breviter unguiculata, patentia; labellum 2-fidum v. 2-partitum, rarius integrum, staminodiis lateralibus subsimile v. basi maculatum, nunc amplissimum; anthera in filamento brevissimo erecta, loculis linearibus dissitis ad margines connectivi lati concavi ultra loculos in cristam petaloideam integram v. dentatam producti. Ovarium 3-loculare; stylus filiformis, stigmatē ultra loculos antheræ globoso v. turbinato apice ciliato. Fructus ovoideus v. oblongus, pericarpio tenui. Semina subglobosa, arillo lacero brevi;

embryo centralis, linearis, rectus.—Fibræ radicales sæpius tuberoso-incrassatæ. Folia in caule sæpius brevi pauca. Spicæ in caule foliato v. in scapo radicali squamato terminales.

Species ad 18, Africæ et Asiæ tropicæ incolæ. *Horan. Prod. Monogr. Scit.* 21.

Genus commode dividitur in sectiones 3, ad inflorescentiam solam tamen definitas:

1. *Protanthium*, Horan. Scapi florentes breves, densiflori, aphylli, ante caules foliiferos e rhizomate protensi. Folia interdum ampla. *Rosc. Scitam.* t. 95, 97. *Jacq. Hort. Schanbr.* t. 317. *Red. Lil.* t. 49. *Wall. Pl. As. Rar.* t. 56. *Wight, Ic.* t. 2029. *Bot. Mag.* t. 920, 5763, 6054.

CIEŃKOWSKIA, *Solms in Schweinf. Beitr. Fl. Æthiop.* 167, t. 1, species Africana labello maximo 2-fido, antheræ crista petaloidea longa integra v. utroque latere 1-dentata, est ipso auctore fatente species *Kampferiæ* ad *Protanthium* pertinens.

2. *Stachyanthesis*. Scapi florentes elongati, aphylli, floribus longe spicatis bracteis dissitis. Huc pertinent *K. scaposa* ex India orientali (*Monolophus scaposus*, Dalz., Wight, *Ic.* t. 2030), *K. rosea*, Schweinf. ex Africa, et species nova Khasyana.

MONOLOPHUS, *Wall. Pl. As. Rar.* i. 24, t. 24; *Horan. Prod. Monogr. Scitam.* 22, quoad *K. v. M. linearem*, Wall., et *K. v. M. secundum*, Wall., caule tenero  $\infty$ -foliato, inflorescentia terminali subspicata, *Stachyanthesis* cum *Soncoro* connectit.

3. *Soncorus*, Horan. Flores pauci, caulem brevem foliatum terminantes. Folia sæpe pauca, haud raro ad 2 subæssilia suboppositaque reducta. *Rosc. Scitam.* t. 92 ad 94, 96. *Red. Lil.* t. 144. *Wall. Pl. As. Rar.* t. 27. *Wight, Ic.* t. 899. *Bot. Mag.* t. 850, 5600. *Bot. Reg.* t. 173, 1212. *Lodd. Bot. Cab.* t. 587, 980.

TRITOPHUS, *Lestib. in Ann. Sc. Nat. ser.* 2, xv. 341, est *K. (Soncorus) ovalifolia*, Roxb. *Corom. Pl.* t. 278, antheræ crista 3-4-dentata.

CADALVENA, *Fenzl in Sitzungsber. Akad. Wiss. Wien*, li. 130, species Æthiopica, ab auctore a *Kampferia* separatur ob ovarium apice 2-loculare 2-ovulatum cæterum faretum, quod verisimiliter ex observatione ovarii imperfecti sumptum fuit. In speciminibus a Schweinfurthio communicatis ovaria sæpe abortiva, in uno perfecto loculos 3 invenimus  $\infty$ -ovulatos et planta omnino *Kampferiæ* (*Soncori*).

7. *Gastrochilus*, *Wall. Pl. As. Rar.* i. 22, t. 24, 25.—Calyx brevis, spathaceo-fissus. Corollæ tubus exsertus, interdum longissimus; lobi æquales, conniventes, nutantes. Staminodia lateralia petaloidea, lobis corollæ latiora nec longiora; labellum maximum, latum, concavum fere saccatum, integrum, margine sinuato-crispum; anthera in filamento brevissimo erecta, loculis parallelis dissitis ad margines connectivi lati ultra loculos non producti. Ovarium 3-loculare, loculis  $\infty$ -ovulatis; stylus filiformis, stigmate ultra loculos subgloboso. Fructus . . .—Herba habitu *Kampferiæ*, rhizomate repente v. fibroso, tuberibus subsessilibus fasciculatis. Folia ampla. Flores nunc in caule foliato unilateraliter spicati, bracteis secundis imbricatis, nunc in scapo radicali aphylo bracteato pauci.

Species 3 v. 4, Burmanicæ. *Horan. Prod. Monogr. Scitam.* 22. *Bot. Mag.* t. 3930, 4010.

8. *Medyetium*, *Koen. in Retz Obs.* iii. 73.—Calyx tubulosus, 3-dentatus. Corollæ tubus elongatus; lobi angusti, æquales, patentes. Staminodia lateralia nunc lobis corollæ similia v. etiam angustiora, nunc latiora, petaloidea, obovali-oblonga spathulata v. late ovata; labellum petaloideum, amplum, emarginatum, v. angustius integrum 2-fidumve; filamentum elongatum, angustum, complicatum, canaliculatum v. fere filiforme; anthera sæpissime linearis, loculis contiguis infra insertionem sæpe breviter productis, connectivo tenuissimo nec apice cristato nec basi calcarato. Ovarium 3-loculare, loculis  $\infty$ -ovulatis; stylus filiformis, stigmate ultra loculos antheræ parvo subgloboso, foveola parva. Capsula loculicide 3-valvis. Semina subglobosa, arillo vario; embryo centralis, rectus, crassiusculus.—Rhizoma horizontale, tuberosum. Caules erecti, foliati, sæpius elati. Folia utrinque basi stipula appressa aucta v. nuda. Thyrsus terminalis, spiciformis, sæpius pulcherrimus, nunc densus bracteis latis herbaceis imbricatis, nunc longior, bracteis plus minus dissitis. Flores sub quaque bractea solitarii v. plures, bracteas superantes, singuli bracteola complicata stipati.

Species ad 25, Asiæ tropicæ incolæ. *Horan. Prod. Monogr. Scit.* 29. *Wall. in Hook. Kew Journ.* v. 321 (excl. *H. scaposo* ad *Kampferiam* referendo). *Rosc. Scitam.* t. 47 ad 63. *Hook. Exot. Fl.* t.

46. *Roxb. Corom. Pl. t. 251. Sm. Exot. Bot. t. 107. Wight, Ic. t. 2008 ad 2012. Bot. Mag. t. 708, 2078, 2300, 2378, 2637, 2969, 3039, 4516. Bot. Reg. t. 157, 526, 767, 774, 1209. Lodd. Bot. Cab. t. 604, 653, 723, 856, 1785, 1795, 1881, 1902.*

Genus a Roscoe et serius a Horaninow in series 2 dividitur: 1, *Gandasulium*, Horan., stamine labello brevior v. rarius vix longior; et 2, *Macrostemium*, Horan., stamine labello multo longior; a Wallichio minus apte in series A. *Coronariæ*, bracteis in spica densa arcte imbricatis, et B. *Spicatæ*, bracteis in spica elongata dissitis sæpe patentibus.

*H. Horsfieldii*, Br., sectionem *Brachychilum*, Br., ex Wall. in Hook. Kew Journ. v. 376 format, labello nano retuso sessili, stigmate quasi 2-labiato labio inferiore elongato. Species vix congener videtur. Specimina nobis desunt. In *H. villosa*, Roxb., specieque affini, anthera abbreviata, loculis ad basin connectivi crassi divergentibus.

GAMOCYLUS, *Lestib. in Ann. Sc. Nat. ser. 2, xv. 341*, est *H. speciosum*, Wall. Pl. As. Rar. t. 285, a Wallichio ipso serius ad varietatem *H. Gardneri*, Wall., reductum, a *Lestiboudoiso* generice separatur ob labellum integerrimum acutiusculum nec emarginatum.

9. *Curcuma*, Linn. Gen. n. 6. (Stissera et Erndlia, Giske, *Prælect. Linn.* 207, 209).—Calyx tubulosus, 2-3-dentatus, interdum hinc breviter fissus. Corollæ tubus brevis v. elongatus, superne dilatatus; lobi ovati v. oblongi, subæquales v. posticus longior breviterque acuminatus. Staminodia lateralialia petaloidea, basi cum filamento anguste petaloideo plus minus connata, petalum 3-fidum lobo medio antherifero simulantia; labellum paullo majus, superne dilatatum. integrum emarginatum v. 2-fidum; anthera in filamento petaloideo sessilis, loculis contiguis, connectivo latiore basi in calcar 2 producto. Ovarium 3-loculare, loculis  $\infty$ -ovulatis; stylus filiformis, stigmate ultra loculos antheræ erecto v. inflexo, aequali v. dorso gibbo antice 2-labiato ciliato. Capsula globosa, pericarpio membranaceo sub-3-valvi. Semina ovoidea v. oblonga, lævia, arillo nunc brevi, nunc lacero laciniis semen superantibus; embryo linearis, rectus, tenuis v. crassiusculus.—Rhizoma crassum, fibris tuberiferis. Caules erecti, 1-10-pedales. Folia sæpe ampla. Florum thyrsi densissimi, strobiliformes, oblongi v. elongati, bracteis concavis v. cucullatis amplis imbricatis apice rotundatis, superioribus sæpe vacuis coloratis pulcherrime comosis. Flores sub quaque bractea 2- $\infty$ , sessiles, singuli bracteola spathacea stipati. Fructus intra bracteas inclusi.

Species enumeratæ ultra 30, Asiæ tropicæ incolæ, usque ad Africam tropicam Australiam tropicam et insulas maris Pacifici extensæ, nonnullæ tamen cultæ v. varietates e culturaeductæ, et fere omnes in speciminibus exsiccatis difficillimo determinandæ. Horan. *Prod. Monogr. Scit.* 22. Berg. *Darst. Offic. Gew. t. 34 a. Rosc. Scitam. t. 99 ad 109. Rea. Lil. t. 473. Salisb. Par. Lond. t. 96. Jacq. Hort. Vind. iii. t. 4 (Anomum). Roxb. Corom. Pl. t. 151, 201. Wall. Pl. As. Rar. t. 10, 57. Wight, Ic. t. 2005, 2006. Bot. Mag. t. 1546, 4435, 5620, 5821, 5909. Bot. Reg. t. 886.*

Horaninow l. c. species distribuit in series 3: *Exantha*, scapis lateralibus, v. extrafoliaceis; *Amphiantha*, scapis lateralibus et centralibus; et *Mesantha*, scapis centralibus, quæ tamen non semper bene distincte videntur. C. Roscoeana, Wall., potius ad *Hitcheniam* referenda.

10. *Hitchenia*, Wall. in Trans. Med. Phys. Soc. Calc. vii. 215.—Calyx tubulosus, membranaceus, 3-dentatus. Corollæ tubus elongatus, lobi 3, subæquales, oblongi v. lineares. Staminodia lateralialia petaloidea, lobis similia nisi minora; labellum lobis corollæ longius, angustum, superne oblongum, recurvum, 2-dentatum; filamentum labello æquilongum, angustum, complicatum; anthera terminalis, loculis dissitis ad margines connectivi lati inappendiculati calcarati. Ovarium 3-loculare, loculis  $\infty$ -ovulatis; stylus filiformis, stigmate ultra loculos antheræ haud magno clavato antice transverse foveolato. Capsula obovato-3-gona, pericarpio rigide membranaceo varie rupto nunc 3-valvi.—Herbæ habitu et inflorescentia omnino (*Curcuma*), bractee tamen thyrsi sæpius rigidiores striatæque.

Species 3 v. 4, Indiæ provinciarum orientalium incolæ. Horan. *Prod. Monogr. Scit.* 24 (*errore Litchinia*). Huc pertinent *H. glauca*, Wall., e Burma; *H. Careyana*, Wall. Cat. Herb. Ind. 6595 sub *Curcuma*, e Silhet, ejus corollæ lobi, labium et filamentum multo angustiora quam in *H. glauca*; species nova Malayana ejus tamen corollas imperfectas examinare nequimus; et ad *Hitcheniam* potius quam *Curcumam* referimus *H. (C.) Roscoeana*, Wall. Pl. As. Rar. t. 9, Bot. Mag. t. 4667.

11. *Tapeinochilus*, Miq. in. *Ann. Mus. Lugd. Bat.* iv. 101, t. 4.—Calyx herbaceus, breviter tubulosus, apice 3-fidus. Corollæ tubus brevis, lobi breves, subæquales v. posticus paullo latior. Stamina lateraliter linearia, cum labello brevi erecto truncato connata; filamentum petaloideum, cum connectivo oblongo continuum, labello paullo brevius, apice rotundum, loculos paullo superans; antheræ loculi adnati, approximati, ecalcarati. Ovarium 2-loculare,  $\infty$ -ovulatum; stylus filiformis, stigmatibus dilatato plano exappendiculato apice ciliato; stylodia in unum lineare apice 2-dentatum coalita. Capsula calyce rigidulo coronata, rimis 2 lateralibus sæpe irregularibus dehiscens. Semina angulata, arillo parvo.—Caulis foliatus, elatus, sæpe ramosus, foliorum vaginis obtectus. Folia in vaginis subsessilia, decidua. Florum thyrsus terminalis, magnus, strobiliformis, densissimus, bracteis latis rigide coriaceis basi imbricatis superne recurvo-patentibus acutis, calycibusque pulchre coccineis. Flores sub quaque bractea 1–3; corollæ pallide flavescentes, bracteas vix superantes.

Species 1, Archipelagi Malayani et Australiæ tropicæ incolæ. Specimina nostra omnia fructifera, characteres corollæ et androcii ex ic. et descr. Miquelii sumpsimus.

12. *Amomum*, Linn. *Gen. n.* 2.—Calyx tubulosus v. superne dilatatus, apice 3-fidus. Corollæ tubus nunc vix calycem excedens, nunc tenuis longeque exsertus, lobi 3, æquales, patentes, v. posticus paullo latior erectiorque. Stamina lateraliter ad dentes parvos reducta; labellum sæpius amplum, rotundatum v. basi convolutum, integrum v. late 3-lobum; filamentum breve, planum; antheræ erectæ loculi elongati, glabri v. dense pilosi, apice divergentes, cæterum fere contigui, connectivo a basi angusta apice inter loculos dilatato, iis nunc subbrevisiore sinuato, nunc sæpius ultra loculos in appendicem seu cristam brevem integram seu magnam rotundatam integram v. varie 3-fidam producto. Ovarium 3-loculare,  $\infty$ -ovulatum; stylus tenuis, stigmatibus ultra loculos antheræ nunc parvo subgloboso, nunc crasso dorso subgibbo; stylodia longiuscula, linearia, carnosula. Fructus globosus v. oblongus, interdum in rostrum crassiusculum attenuatus, pericarpio crassiusculo lævi rugoso v. echinato, indehiscens v. irregulariter ruptus. Semina globosa v. obovoideo-truncata.—Rhizoma nunc horizontale crassum, nunc elongatum repens. Caulis foliati sæpius steriles. Scapi florentes e rhizomate aphylli squamis obiecti nunc sub inflorescentia brevissimi nunc elongati. Inflorescentia strobiliformis, globosa oblonga v. elongata, bracteis coriaceis imbricatis. Flores intra bracteas solitarii v. sæpius 2–3-ni, singuli bracteola spathiformi stipati, sessiles, corollæ limbo solo v. rarius tubo elongato e bracteis exserto. In speciebus perpaucis inflorescentia in caule foliato terminalis sessilis.

Species ad 50, Africæ et Asiæ tropicæ incolæ, usque ad Australiam tropicam et insulas maris Pacifici extensæ. *Horan. Prod. Monogr. Scit.* 28 (*Amomum*), 31 (*Geanthus* et *Donacodes*). *Oliv. et Hamb. in Journ. Linn. Soc.* vii. 109.

Genus, sectione *Cenolopho* excepto, naturale facileque distinctum, a pluribus auctoribus in genera 2 dividitur ad antheræ connectivum limitata, caractere tamen non semper bene definito, nobis potius pro sectionibus habenda videntur.

1. *Geanthus*. Scapi florentes aphylli. Antheræ connectivum apice parum dilatatum loculos non v. breviter superans. Species omnes Asiaticæ Australiæ v. ins. maris Pacificæ. *GRANTHUS*, *Reinw. in Syll. Pl. Soc. Batav.* ii. 5. *Elettaria* sect., *Blume, Enum. Pl. Jav.* i. 51.

Sectio facile in series 3 dividitur: a. *Longiflora*, scapo florido abbreviato, corollæ tubo tenui calyce duplo saltem longiore. Huc *Elettaria coccinea*, Bl., *E. glaberrima*, Zoll. et Mor., affinesque. b. *Breviscapæ*, inflorescentia in rhizomate fere sessili v. scapo brevi fulto. Corollæ tubus calyce inclusus v. vix exsertus. Species numerosæ. Huc *Alpinia costata*, Roxb. Pl. Corom. t. 252, *A. linguiformis*, Roxb. l. c. t. 276. *Elettaria fatens*, Bl., *E. rosea*, Teijsm. et Binn., *E. nemoralis*, Thw., *E. cannaecarpa*, Wight, Ic. t. 2007, *Amomum Ceruga*, Seem. Fl. Vit. t. 89, *A. Scottii*, F. Muell. Fragm. Phytogr. Austral. viii. 24, affinesque. c. *Scapose*, inflorescentia globosa, interdum bracteis exterioribus majoribus involucreta, scapo elongato squamato fulta: *Elettaria floribunda* et *E. involucreta*, Thw., e Zeylanis; *A. Fenzlii*, Kurz in Journ. Asiat. Soc. Beng. xlv. t. 12, cum speciebus 3 v. 4 ex Archipelago Malayano. Huc etiam referenda *Alpinia magnifica*, Rosc. Scitam. t. 75, Bot. Mag. t. 3192 (*PHÆOMERIA* Lindl. Introd. Nat. Sys. ed. 2, 446; *NICOLAIA*, *Horan. Prod. Monogr. Scitam.* 32, t. 1).

DONACODES, *Blume, Enum. Pl. Jav.* i. 64, si rite ad eam referimus species 3 Archipelagi Malayani cum *Amomo subulato*, Roxb. Corom. Pl. t. 277, a sectione *Geantho* parum differt connectivo ultra loculos in appendicem brevissimam rotundatam v. truncatam producto.

ACHASMA, *Griff. Notul.* iii. 426, *lc. Pl. As.* t. 355 ad 357, et STENOCHASMA, *Griff. Notul.* iii. 431, *lc. Pl. As.* t. 358, 359, quorum specimina non vidimus, ex iconibus omnino *Amomi* sect. *Geanthum* referunt, excepto labello anguste linguiformi.

ETLINGERA, *Giseke, Prælect. Linn.* 209, est *A. littorale*, Kœn., species ex descr. Kœnigii in Retz, Obs. iii. 52 ad *Geanthum* pertinens.

2. *Euamomum*. Scapi florentes aphylli. Antheræ connectivum ultra loculos in cristam latam integram v. 3-lobam productum. MAROGNA, TORYMENES, et ALEXIS, *Salisb. in Trans. Hort. Soc.* i. 282, 283, *absque char.*

Species numerosæ, inter quas fere 20 Africanæ, quibus labellum sæpius magnum, antheræ crista 3-loba, lobis lateralibus divaricatis, intermedio interdum 2-dentato. *Sims in Kœn. et Sims, Ann. Bot.* i. 13. *Sm. Exot. Bot.* t. 111. *Hook. Kew Journ.* iv. t. 5. *Bct. Mag.* t. 4603, 4764, 5250, 5761, 5987.

Species Asiaticæ quoad cristam variant fere de specie in speciem. In *A. Cardamomo*, Linn.; Roxb. Corom. Pl. t. 227, *A. Melegueta*, Rosc. Scitam. t. 98, *A. masticatorum*, Thw., *A. Dallachyi*, F. Muell. *Fragm. Phyt. Austral.* viii. 25, paucisque aliis, crista 3-loba ut in speciebus Africanis; in *A. dealbato*, Roxb., et *A. sericeo*, Roxb., crista brevis truncata fere *Donacodis*; in *A. pterocarpo*, Thw., lata transversa integra; in *A. graminifolio*, Thw., *A. maximo*, Roxb., Bot. Reg. t. 929, *A. corynostachyo*, Wall. Pl. As. Rar. t. 58, ampla, petaloidea, fere orbiculata, integra; in specie Zeylanica, Thwaites, n. 3864, lata, lobis 2 rotundatis cum intermedio minore triangulari.

Capsula in speciebus Africanis sæpe majuscula, interdum longiuscule rostrata, in Asiaticis valde variat, in *A. sericeo*, Roxb., et *A. dealbato*, Roxb., in longitudinem  $\infty$ -alata; in *A. aculeato*, Roxb., et *A. echinato*, Willd., dense echinata.

Scapi in *Euamomo* variant breves pauciflori v. longiores inflorescentia dense globosa; in *A. giganteo*, Oliv. et Hanb., scapus valde elongatus, spicis pluribus dissitis.

HORNSTEDTIA, Retz, Obs. vi. 18 (GREENWAYA, *Giseke, Prælect. Linn.* 206), includit *A. scyphiferum*, Kœn., et *A. Leonurum*, Kœn.; MEISTERA, *Giseke, l.c.* 205, est *A. n. 5*, Kœn.; WURFBAINIA, *Giseke, l.c.* 206, est *A. uliginosum*, Kœn.; PALUDANA, *Giseke, l.c.* 207, est *A. n. 2*, Kœn., genera omnia ex descriptione fusiori Kœnigii in Retz Obs. iii. confecta, et omnia ad *Euamomum* referenda.

3. *Cenolophon*. Spica in caule foliato terminalis, brevis, supra folium ultimum sessilis. CENOLOPHON, *Horan. Prod. Monogr. Scitam.* 36, vix tamen *Blumei*; qui inflorescentiam racemosam descripsit. Huc pertinet *A. vitellinum*, Lindl. Bot. Reg. 1847, t. 52, et *Electaria rufescens*, Thw. Enum. Pl. Zeyl. 430, species tamen omnes hucusque imperfecte notæ nec in speciminibus examinare potuimus.

DIRACODES, *Blume, Enum. Pl. Jav.* i. 55, a Miquelio cum *Alpinia* comparata, ex charactero brevi auctoris ab *Amomo* non differt nisi inflorescentia terminali, et omnino cum *Cenolopho*, Horan., convenire videtur. Antheræ crista 2-loba dicitur.

GEOCALLIS, *Horan. Prod. Monogr. Scit.* 33 (*Renealmia fasciculata*, Rosc. Scitam. t. 66) ad iconem pictoris in Lucknow indigenæ descripta, est verisimiliter *Amomi* species male delineata.

13. *Cyphostigma*, Benth. in Hook. *lc. Pl.* t. 1380.—Calyx supra basin elongatam pedicelliformem laxè tubulosus, 3-dentatus, per anthesin spathaceo-fissus. Corollæ tubus tenuis, e calyce breviter exsertus; lobi 3, angustè oblongi, subæquales, revoluti-patentes. Staminodia lateralia 0; labellum sessile, orbiculato-reniforme, patens, late sub-3-lobum, lobo medio magis prominente sub-2-fido; anthera in filamentum brevi erecta, loculis contiguis v. apice leviter divergentibus, connectivo angusto ultra loculos in cristam petaloideam orbiculatam crenulato-crispam dilatato. Ovarium globosum v. ovoideum, basi saltem 3-loculare,  $\infty$ -ovulatum; stylus filiformis, stigmate ultra antheram breviter exserto crasso oblongo basi in gibbum carnosum subproducto apice circa foveolam ciliato. Fructus . . .—Rhizoma horizontale, crassum, caule brevissimo. Foliorum vaginæ convolutæ, sæpe pedales caulem simulant, lamina ampla vix petiolata. Scapi floridi aphylli, e rhizomate flexuoso-ascendentes, squamis spathaceis semitici. Flores intra squamas subdissitas solitarii v. gemini, singuli bracteola spathacea calyce multo brevior stipati.

Species 1 Zeylanica, *C. pulchellum*, Benth. (*Amomum pulchellum*, Thw. Enum. Pl. Zeyl. 318).

Andræcium fere *Amomi*, sed inflorescentia valde diversa.

14. *Eleotaria*, Maton in Trans. Linn. Soc. x. 250. (Cardamomum, Salisb. in Trans. Hort. Soc. 1, 282, absque char.)—Calyx membranaceus, tubulosus, breviter 3-lobus. Corollæ tubus cylindraceus, vix e calyce exsertus; lobus posticus oblongus, suberectus, concavus, laterales angustiores recurvo-patentes. Stamina lateralibus ad dentes parvos erectos reducta; labellum obovoideum, lobis corollæ paullo longius, apice patens, late sub-3-lobum; anthera ad faucem corollæ fere sessilis, linearis, loculis usque ad apicem contiguis, connectivo inconspicuo nec ultra loculos producto. Ovarium 3-loculare,  $\infty$ -ovulatum; stylus filiformis, stigmatibus ultra loculos antherarum parvo. Fructus subglobosus v. ovoideo-oblongus, pericarpio crassiusculo, indehiscens. Semina obovoidea, truncata, rugosa (exarillata?); embryo crassiusculus, rectus.—Rhizoma horizontale, crassum. Caules foliati steriles, foliis paucis longis latiusculis. Scapi aphylli, longi, flexuosi, fere a basi florentes, bracteis dissitis membranaceis spathaceis jam sub anthesi sæpius emarcidis. Flores sub quaque bractea 2 v. 3, breviter pedicellati, singuli bracteola complicata stipati.

Species v. fide Thwaitesii varietates 2, imprimis ad fructus formam distinctæ, Zeylanie et Peninsula Indiarum orientalis incolæ. White in Trans. Linn. Soc. x. t. 5 (*Amomum*). Berg, Darst. Offic. Gew. t. 34 c. Roxb. Corom. Pl. t. 226.

15. *Zingiber*, Adans. Fam. ii. 66.—Calyx membranaceus v. hyalinus, tubulosus, breviter 3-lobus. Corollæ tubus cylindraceus, superne parum dilatatus; lobi angusti, posticus erectus, incurvus, concavus, laterales patentes. Stamina lateralibus basi cum labello connata v. præter lobos laterales labelli 0; labellum v. labelli lobus medius lateralibus major, integer v. breviter 2-fidus, interdum crispulus; anthera in filamentum brevi erecta, oblonga, loculis inter se parum distantibus, connectivo ecalcarato ultra loculos in appendicem linearem v. subulatam producto. Ovarium 3-loculare,  $\infty$ -ovulatum; stylus filiformis, stigmatibus ultra loculos antherarum sæpius parvo subgloboso. Capsula globosa v. oblonga, pericarpio haud crasso, irregulariter rupta. Semina sæpius majuscula, oblonga, arillo lacero laciniis nunc brevibus, nunc elongatis semen longe superantibus.—Rhizoma horizontale, tuberosum. Caules foliati variant floriferi v. steriles. Thyrsi spiciformes, densi, strobiliformes v. longiusculi, bracteis imbricatis, nunc in scapo radicali aphyllis vaginis oblecto, nunc in caule foliato terminales v. in pedunculo recurvo laterales. Flores sub quaque bractea 1-3, singuli bracteola spathacea stipati.

Species enumeratæ ad 30, sed vix 20 bene distinctæ, Indiarum orientalis, Archipelagi Malayani, ins. Mascarenensium et maris Pacifici incolæ. Horan. Prod. Monogr. Scitam. 27. Gertn. Fruct. i. 33, t. 12. Van Hall, Obs. Zingib., Lugd. Bat., 1858, cum tabb. 2.

Genus ad inflorescentiam in sectiones sequentes dividitur:—

1. *Cryptanthium*, Horan. Inflorescentia in rhizomate sessilis v. in scapo brevi terra semi-immersa. —Rosc. Scitam. t. 86 ad 89. Wall. Pl. As. Rur. t. 55. Wight, Ic. t. 2004.

2. *Lampuzium*, Horan. Inflorescentia in scapo longiusculo erecto aphyllis epigæa. Rosc. Scitam. t. 83 ad 85. Roxb. Corom. Pl. t. 253. Berg, Darst. Officin. Gew. t. 34 b. Sm. Exot. Bot. t. 112. Jacq. Hort. Vind. iii. t. 54 (*Amomum*). Wight, Ic. t. 2003. Andr. Bot. Rep. t. 555. Bot. Mag. t. 1426, 2000, 6019. JEGERA et DIETRICHIA, Giseke, Prælect. Linn. 203, 208. CASSUMUNAR, Colla, Nov. Scit. Gen. Comm., Taurini, 1830, cum tab. 1.

3. *Pleuranthesis*. Inflorescentia in pedunculo a latere caulibus foliatis recurvo. Stamina lateralibus brevibus, liberis, incurvis. Species unica nota, Z. Clarkei, King mss., e Sikkim, Hook. f. et Thoms., G. King.

4. *Dymczewiczia*. Inflorescentia in caule foliato terminalis. Rosc. Scitam. t. 90, 91. DYM-CZEWCZICIA, Horan, Prod. Monogr. Scitam. 26. Horaninow genus suum distinxit præter inflorescentiam, staminodiiis lateralibus 2 ovatis petaloideis, quæ in Zingibere deesse dicuntur. Semper tamen adesse videntur nunc parvula libera, sæpius tamen cum labello plus minus a latere coalita et pro lobis lateralibus suis descripta. In Z. (*Dymczewiczia*) capitato pariter cum labello basi connata sunt.

ZERUMBERT, Lætib. in Ann. Sc. Nat. ser. 2, xv. 329, includit species omnes quibus staminodia lateralibus minima v. labello alto adnata.

16. *Costus*, Linn. Gen. n. 3. (Banksea, Koen. in Retz, Obs. iii. 75. Tiana, Gmel. Syst. i. 9. Hellenia, Retz, Obs. vi. 18. Planora, Giseke, Prælect. Linn. 205. Jacuanga,

*Lestib. in Ann. Sc. Nat. ser. 2, xv. 329, 341. Gissanthe, Salisb. in Trans. Hort. Soc. i. 279, absque char.*)—Calyx laxe tubulosus, sæpius brevis, apice 3-fidus. Corollæ tubus brevis, lobi oblongi petaloidei, subæquales. Staminodia lateralialia 0 (v. minuta?); labellum amplum, obovatum, basi cucullatum, apice patens; filamentum petaloideum cum connectivo oblongo plano integro loculos longe superante continuum; antheræ loculi in medio connectivo adnati approximati, apice breviter divergentes. Ovarium 3-loculare,  $\infty$ -ovulatum, placentis axilibus interdum in parte superiore undulato-crispis; stylus filiformis; stigmatibus semilunari ciliato, interdum nec in omnibus speciebus appendice dorsali crassiuscula v. plana quasi 2-labiato. Capsula globosa v. ovoidea, sæpe 3-sulca, calyce coronata, demum inter costas lateraliter dehiscens. Semina obovoidea v. subglobosa, breviter arillata, testa lævi; embryo in canale centrali rectus, crassus. — Caules elati, foliati, vaginis interdum laxis in ligulam latam productis obtecti, lamina sessili v. breviter petiolata decidua. Spica crassa, globosa v. ovoidea, strobiliformis, terminalis, inter folia ultima sessilis v. rarius in scapo aphyllis; bractæ latæ, imbricatæ. Flores speciosi, coccinei albi flavi v. rosei.

Species ad 25, Americæ, Africæ, Asiæ et Australiæ inter tropicos incolæ. *Horan. Prod. Monogr. Scitam. 36. Rosc. Scitam. t. 77 ad 82. Jacq. Ic. Rar. t. 1, 202 (Alpinia); Fragm. t. 67, 77 ad 80. Lestib. in Ann. Sc. Nat. ser. 2, xv. t. 21. Wight, Ic. t. 2014. Ruiz et Pav. Fl. Per. t. 3, 4. Bot. Mag. t. 4979, 5894. Bot. Reg. t. 665, 683, 899, 1594.*

In *C. maculata*, Rosc., *C. globosa*, Bl., aliisque paucis caules foliati elongati sterilesque; scapi florigeri breves, vaginis obtectis omnibus aphyllis v. summis breviter laminiferis. In speciebus nonnullis Africanis v. Brasilianis folia sub spica brevi pauca lata conferta patentiaque quasi rosulata, caule infra rosulam brevi v. elongato; bractæ in his angustæ; andræcium omnino *Costi*.

17. *Burbridgea*, Hook. f. Bot. Mag. t. 6403.—Calyx anguste tubulosus, truncatus, obscure 2-3-dentatus. Corollæ tubus elongatus; lobi laterales patentes, late oblongi, posticus latior erectus. Staminodia lateralialia 0; labellum erectum, longe stipitatum, concavum, apice breviter dilatatum in laminam ovato-cordatam breviter 2-fidam; filamentum breve; antheræ loculi inter se parum distantes, connectivo ultra loculos in appendicem longam petaloideam late linearem producto. Ovarium 3-loculare,  $\infty$ -ovulatum; stylus filiformis, stigmatibus ultra loculos antheræ parvo obliquo. Fructus longe siliquæformis. Semina (immatura) fusiformia, arillo lacero.—Rhizoma repens. Caulis erectus, foliis nitidis. Flores in racemo terminali speciosi, breviter pedicellati, singuli bractea angusta spathacea caducissima stipati.

Species 1, Borneensis.

18. *Leptosolena*, Presl, Rel. Hank. i. 111, t. 18.—Calyx anguste tubulosus, truncatus, obscure 2-dentatus. Corollæ tubus elongatus, tenuis; lobi 3, patentes, subæquales. Staminodia lateralialia 0; labellum oblongo-ovatum (in icone anguste oblongum), lobis corollæ longius, pendulum; filamentum breve, basi postice squama ovata diaphana (staminodia lateralialia?) munitum; antheræ loculi apice divergentes, connectivo non producto. Ovarium 3-loculare, loculis  $\infty$ -ovulatis; stylus filiformis, stigmatibus ultra loculos antheræ infundibuliformi ciliato. Capsula 3-locularis.—Caulis foliatus erectus, foliis angustis. Inflorescentia terminalis, sessilis, composita, laxiuscula; floribus erectis. Corollæ tubus 3-pollicaris. (*Char. ex ic. et descr. Preslii.*)

Species 1, ins. Philippinarum incolæ, a nobis non visa. Videtur *Burbridgeæ* affinis.

19. *Strobidia*, Miq. Fl. Ind. Bat. Suppl. 614.—Calyx laxè subcampanulatus, 3-dentatus, demum spathacco-fissus. Corollæ tubus brevis; lobi subæquales, posticus angustus deflexus, laterales paullo latiores horizontales sub labello conniventes. Staminodia lateralialia parva, linearia, labello partim adnata; labellum erectum, fornicato-concavum; filamentum strictum, florem superans, superne transiens in connectivum latum incurvum apice prope loculorum verticem utrinque minute tuberculatum. Ovarium 3-loculare, loculis  $\infty$ -ovulatis; stylus filiformis, stigmatibus . . . Capsula baccata.—Caulis erectus,

gracilis. Panícula terminalis, ramis alternis brevibus. Bracteæ sub ramulis parvæ; bracteolæ latæ, imbricatæ. (Char. ex Miq.)

Species 1, Sumatrana, a nobis non visa.

20. *Alpinia*, Linn. Gen. n. 4. (Catimbium, Juss. Gen. Pl. 62. *Languas*, Koen. in Retz, Obs. iii. 64. *Heritiera*, Retz, Obs. vi. 17, t. 1. *Buekia*, Albina et Martensia, Giseke, Praelect. Linn. 204, 207. *Galanga*, Salisb. in Trans. Hort. Soc. i. 281, absque char.)—Calyx laxè tubulosus, breviter 3-lobus, interdum demum spathaceo-fissus. Corollæ tubus brevis v. calyce paullo longior; lobi patentes, postico sæpius latiore. Staminodia lateralía parva dentiformia, v. linearia, v. 0; labellum patens, sæpius latum, corollam superans; filamentum elongatum, nunc fere filiforme, nunc latiusculum concavum; antheræ loculi discreti, connectivo latiusculo nunc loculis brevior, nunc apice bifido v. in appendicem brevem rotundatam v. truncatam loculos superantem producto. Ovarium 3-loculare, loculis co-ovulatis; stylus filiformis, basi interdum (in *A. Galanga*) in glandulam stylii similem incrassatus, stigmatè ultra loculos antheræ subgloboso ciliato; stylii glanduliformia, carnosa, crassiuscula, erecta v. depressa. Fructus globosus, siccus v. baccatus, indehiscens v. rarius 3-valvis. Semina in quoque loculo sæpius placenta carnosa a pericarpio solubili (arillo?) involuta.—Rhizoma horizontale v. repens, caulibus erectis foliatis. Flores in thyrso racemiformi v. rarius laxè paniculato in caule foliato terminali. Bracteæ membranaceæ, spathiformes v. parvæ; bracteolæ sub quoque flore nunc breves cupulatæ truncatæ per anthesin delapsæ v. emarcidæ, nunc membranaceæ alabastrum omnino includentes.

Species notæ fere 40, Asiæ tropicæ et subtropicæ, Australiæ et ins. maris Pacifici incolæ. Horan. Prod. Monogr. Scitam. 33. Benth. Fl. Austral. vi. 264. Hance in Journ. Linn. Soc. xiii. 6. Rosc. Scitam. t. 67 ad 74 et t. 76 (*Hellenia*). Jacq. Fragm. t. 68 (*Zerumbet*). Red. Lil. t. 60, 174 (*Globba*). Sm. Exot. Bot. t. 106. Andr. Bot. Rep. t. 501 (*Hellenia*). Griff. Ic. Pl. As. t. 353, 354. Wight, Ic. t. 206 ad 208. Presl, Symb. t. 43; Rel. Hænk. t. 17 et t. 21 (*Hellenia*). Seem. Fl. Vit. t. 87, 88. Bot. Mag. t. 1900, 1903. Bot. Reg. t. 141, 328, et t. 1037 (*Hellenia*).

Horaninow genus in sectiones 2 dividit: *Ethanum*, bracteis parvis nunc minimis, bracteolis majoribus membranaceis; et *Catimbium*, bracteis primariis magnis membranaceis. *Ethanum*, Salisb., est *Rencaalmia racemosa* quam Horaninow cum *R. caribæa* (nostro sensu inepte) ad *Alpiniam* revocat.

HELLENIA, Willd. Spec. Pl. i. 4, Horan. Prod. Monogr. Scit. 35, a nonnullis ad *A. chinensem*, *A. cæruleam* affinesque paucas limitatur et pro genere proprio servatur, antheræ connectivo apice crista brevi appendiculato, et fructus pericarpio crustaceo nec carnoso; sed fructus omnino idem in *A. Allugha*, Rosc., a Willdenowio ad *Helleniam* a plerisque ad *Alpiniam* relata, connectivo inappendiculato, et connectivi appendicula in speciebus paucis ubi producitur, sæpius brevissima est.

*Amomum parviflorum*, Presl, Rel. Hænk. t. 19, stirps Philippinensis, scapo florente laterali v. radicali interdum ramoso, floribus parvis in thyrso spiciformi denso, ex speciminibus Cumingianis n. 1327 ad *Alpiniam* (*Helleniam*) referendum videtur.

KOLOWRATIA, Presl, Rel. Hænk. i. 115, t. 20, ex ic. et descr. habitum et flores præbet *Alpinia* cujusdam *A. giganteæ*, Bl., affinis. Capsula tamen lanceolato-linearis dicitur, 2-locularis et 2-sperma et seminis forma a *Scitamincis* omnino aliena. An revera ad eandem plantam pertinet?

CENOLOPHOS, Blume, Enum. Pl. Jav. 60, a Horaninowio ad species nonnullas refertur ab *Amomo* distinctas inflorescentia terminali quas pro sectione *Amomi* habemus. Character brevis Blumei tamen plantam indicat inflorescentia racemosa et habitu *Alpinia*, nec a speciebus typicis hujus generis differre videtur nisi antheræ connectivo in cristam subrotundam obsolete 4-dentatam producto. Genus valde dubium, nec a Miquelio nec a Horaninowio nec a nobis visum.

MONOCYSTIS, Lindl. Introd. Nat. Syst. ed. 2, 445, est *Hellenia abnormis*, Lindl. in Trans. Hort. Soc. vii. 60, planta a seminibus Chinensibus culta, quæ ex descriptione fusiore in omnibus cum *Alpinia* (*Hellenia*) *Chinensi* convenit, excepto ovario intus spongioso, 1-loculari, ovulo unico excentrico e basi loculi oblique erecto. Specimen non vidimus, verosimiliter casu abnorme.

21. *Rencaalmia*, Linn. f. Suppl. 7. (*Ethanum* et *Gethyra*, Salisb. in Trans. Hort. Soc. i. 281, 282, absque char. *Peperidium*, Lindl. Introd. Nat. Syst. ed. 2, 446.)—Calyx

cupulatus v. laxe tubulosus, breviter 3-lobus. Corollæ tubus brevis v. rarius calyce longior; lobi diu erecti v. demum patentes, subæquales v. posticus latior concavus. Staminodia lateralia linearia, breviter dentiformia v. longiuscula; labellum obovatum, erectum, concavum, truncatum, corollam non superans; filamentum brevissimum, planum; anthera erecta, loculis discretis, connectivo tamen angustissimo apice basique loculis brevior. Ovarium 3-loculare, loculis  $\infty$ -ovulatis; stylus filiformis, stigmatē ultra loculos antheræ clavato v. infundibuliformi; stylodia depressa, glanduliformia, annulum fere perfectum circa basin styli formantia. Capsula globosa, a latere irregulariter dehiscens. Semina pauca, subglobosa, testa basi valde intrusa umbilicata.—Caulis foliati mediocres v. elati. Racemi v. thyrsi racemiformes nunc e rhizomate in scapo aphylo squamato, nunc ad apicem caulis foliati terminales. Bracteæ membranaceæ, haud imbricatæ. Flores sub quaque bractea 1-3 v. plures; bracteolæ in aliis speciebus sub ovario membranaceæ, spatheæ, alabastrum involventes, in aliis sub pedicello minimæ.

Species ad 14, Americæ tropicæ incolæ, cum una ex Africa tropica occidentali. *Horan. Prod. Monogr. Scit.* 32. *Rosc. Scitam.* t. 65. *Jacq. Fragm.* t. 74 ad 76 (*Alpinia*). *Ruiz et Pav. Fl. Per. et Chil.* t. 2 (*Amomum*). *Pæpp. et Endl. Nov. Gen. et Sp.* t. 134 ad 136. *Bot. Mag.* t. 2494. *Bot. Reg.* t. 777.

*R. racemosa* et *R. caribæa* a Horaninovic ad *Alpiniam* remouentur ob inflorescentiam in caule foliato terminalem, sed characteres florales uti patria omnino *Renealmia*.

## TRIBUS II. MARANTÆÆ.

22. *Ischnosiphon*, Kœrn. in *Nouv. Mém. Soc. Imp. Nat. Mosc.* xi. 316, t. 10, 11, et in *Bull. Soc. ejusd.* 1862, i. 80. (Hymenocharis, Salisb. in *Trans. Hort. Soc.* i. 276, absque char.)—Sepala libera, angusta, brevia v. longa angustissimaque. Corollæ tubus cylindræus, tenuis, elongatus, lobi 3, subæquales v. interdum valde inæquilati. Androcii tubus supra faucem corollæ abbreviatus; lobi petaloidei 5, lateralis unicus; labellum latum, intus oblique cristatum; cucullati (an semper?) 2, quorum unus a latere lobulo reflexo auctus; staminifer angustus v. uno latere dilatatus, anthera margini adnata 1-loculari. Ovarium specie 1-loculare, 1-ovulatum, loculis 2 parvis vacuis; stylus inclusus, tubo breviter adnatus, superne involutus, stigmatē incrassato obliquo. Capsula ovoideo-oblonga (vertice dehiscens?). Semen erectum, oblongum, arillo ubi notus carnosus in stipite seminis reflexo; embryo hippocrepicus.—Herbæ sæpius elatæ nunc altissimæ, ramosæ; caulis foliatus inflorescentia terminatus v. fasciculos laterales ferens, alios foliatos alios florentes. Inflorescentia v. ejus rami spicas simulantes, bracteis complicato-convolutis secus rhachin dissitis v. approximatis rhachin floresque arcte includentibus. Flores intra quamque bracteam  $\infty$ , bracteolis angustis separati, corollarum apicibus androciique lobis solis e bractea exsertis.

Species enumerat Kœrnicke 16, Americæ tropicæ incolæ. *Horan. Prod. Monogr. Scitam.* 11. *Jacq. Fragm.* t. 72, 73 (*Maranta*). *Rudgc. Pl. Gui.* t. 2, 3, 37 (*Maranta*). *Rosc. Scitam.* t. 42 (*Phrymum*).

Huc etiam rito a Kœrnickio relatæ videntur *Calathea leucophæa*, *C. laxa*, et *C. polyphylla*. *Pæpp. et Endl. Nov. Gen. et Sp.* ii. 29, t. 129 ad 131, etsi ovarium 2-3-ovulatum dicitur (an errore?); flores et inflorescentia delineati et descripti omnino *Ischnosiphonis*.

23. *Maranta*, Linn. *Gen.* n. 5.—Sepala 3, angusta, subæqualia. Corollæ tubus cylindræus, æqualis v. (in *M. bicolor*) basi refractus fere gibbus; lobi subæquales. Androcii tubus supra faucem corollæ abbreviatus, nunc vix e tubo corollæ prominens; lobi petaloidei forma et ratione varia, 1 v. 2 laterales sæpe ampli; labellum amplum v. lateralibus brevius, intus oblique v. excentrice varie cristatum; cucullatus nudus v. a latere lobulum reflexum v. loculi rudimentum ferens; staminifer petaloideus, anthera uniloculari margini adnata. Ovarium specie 1-loculare 1-ovulatum, loculis 2 minimis vacuis; stylus inclusus, tubo stamineo adnatus, superne involutus, stigmatē late obliquo concavo fere 2-labiato. Fructus ovoideus v. oblongus, rarius 3-angulatus, obliquus, gibbus v. prorsus

æqualis, pericarpio carnosio sæpius viridi. Semen erectum, arillo exteriori viridi, interiore scarioso lacero, stipatum, testa fere crustacea; embryo albumine solido inclusus, hippocrepicus.—Rhizoma varie tuberosum v. repens. Caules nunc breves herbacei paucifoliati, nunc elatiores, ramosi, basi interdum sublignosi. Folia in vaginis plus minus petiolata. Inflorescentia terminalis, laxè dichotoma, parce tamen ramosa v. interdum subsimplex, ramulis paucioris. Bracteæ sub ramulis angustæ, spathaceæ, ramulum arcte includentes. Pedicelli breves, 1-flori, sæpe gemini, ebracteolati.

Species ad 10, Americæ tropicæ incolæ, una alterave interdum in orbe vetere introducta. *Horan. Prod. Monogr. Scitam.* 9. *Körn. in Bull. Soc. Imp. Nat. Mosc.* 1862, i. 32 (quoad sect. *Eumarantam*). *Rosc. Scitam.* t. 25 ad 30, 32. *Hayne, Arzn. Gew.* ix. t. 25, 26 (ic. a *Rosc. imitatæ*). *Wall. Pl. As. Rar.* t. 286 (specimen *hortense*). *Bot. Mag.* t. 2307, 2398. *Bot. Reg.* t. 786. *Lodd. Bot. Cab.* t. 921, 1924. *Regel, Gartenfl.* t. 220. *Saund. Ref. Bot.* t. 237.

**MARANTOPSIS**, *Körn. in Bull. Soc. Imp. Nat. Mosc.* 1862, i. 97, est *Maranta lutea*, Jacq. Ic. Rar. t. 201, cum specie ut videtur *Stromanthe*.

Species Asiaticæ a *Körn. in Bull. Soc. Imp. Nat. Mosc.* 1862, i. 97, est *Maranta lutea*, Jacq. Ic. Rar. t. 201, cum specie ut videtur *Stromanthe*.

24. **Stromanthe**, *Sond. in Hamb. Gart. Zeit.* v. (1849) 225. (*Marantæ* sect., *Körn. in Bull. Soc. Imp. Nat. Mosc.* 1862, i. 54.)—Sepala 3, libera, ovali-oblonga, tenuia, æqualia, corollam æquantia. Petala 3, a basi solvenda, sepalis parum angustiora. Androcii tubus brevis; lobi petaloidei valde irregulares, 2 laterales angusti inæquales plus minus spathulati; labellum intus crista obliqua instructum; cucullati obliqui; staminifer angustus, anthera 1-loculari adnata. Ovarium specie 1-loculare, 1-ovulatum, loculis 2 parvis vacuis; stylus inclusus, basi tubo stamineo adnatus, superne inflexus subinvolutus, stigmate oblique incrassato-dilatato. Fructus subglobosus, calyce diu coronatus, pericarpio carnosulo. Semen subconforme, erectum; embryo intra albumen valde curvatus v. hippocrepicus.—Rhizoma crassum, horizontale. Caules foliati erecti, subramosi, basi foliorum vaginis longis obiecti. Folia in vaginis brevissime petiolata. Inflorescentia in pedunculo terminali longo laxiuscula, plus minus composita, sæpius a basi ramosa lataque, rarius angusta fere racemiformis, tota colorata sæpius sanguinea. Bracteæ bracteoleque spathiformes, coloratæ, patentes, diu persistentes, ramulos inflorescentiæ sæpe superant.

Species 3, Brasilianæ. *A. Gris in Ann. Sc. Nat. ser. 4, ix.* 185, t. 6. *Lemaire, Jard. Fleur.* t. 401. *Bot. Mag.* t. 4646, ic. in *Fl. des Serres*, t. 785, et in *Lemaire, Jard. Fleur.* t. 268 (*Thalia*) *repetita*, cum una ex America centrali (*Körn.*) nobis ignota. Huc etiam pertinere videtur *Thalia hexantha*, *Pæpp. et Endl. Nov. Gen. et Sp.* ii. 24, t. 132, cujus tamen specimina non vidimus.

25. **Thalia**, *Lin. Gen.* n. 8. (*Peronia, DC. in Red. Lil.* vi. t. 342.)—Sepala 3, libera, æqualia, membranacea, corollæ æqualia v. multo breviora. Petala 3, libera v. vix basi brevissime connata, æqualia v. posticum vix latius. Androcii tubus brevis, lobi petaloidei valde irregulares, lateralis (unicus?) latiusculus; labellum latum, intus crista obliqua auctum; cucullati 2, alter lobulo reflexo auctus, alter angustus (interdum planus v. deficiens?); staminifer angustus, anthera 1-loculari lateraliter adnata. Ovarium specie 1-loculare 1-ovulatum, loculis 2 parvis vacuis; stylus basi breviter tubo stamineo adnatus, inclusus, crassiusculus, involutus, stigmate crasso a latere 2-labiato dorso gibboso-appendiculato. Capsula oblongo-ovoidea v. globosa, pericarpio haud crasso. Semen 1, erectum, arilli laciniis 2-3 involutis brevibus; embryo hippocrepicus.—Herbæ annuæ? Folia pauca, ampla, florale nunc conforme nunc cæteris multo angustius. Panicula terminalis. Bracteo sub ramulis patentes, deciduæ. Flores secus ramulos per paria laxè spicati, paribus intra bracteam membranaceam spathaceam breviter pedicellatis, bracteis cum fructu v. cum floribus abortientibus deciduis, rhachin sæpe flexuosam denudantibus.

Species ad 5, Americæ tropicæ incolæ v. usque ad Americæ borealis civitates australiores extensæ, una etiam in Africa tropica obvia. *Körn. in Bull. Soc. Imp. Nat. Mosc.* 1862, i. 73. *Rosc. Scitam.* t. 45, 46. *Nees in Linnaea* vi. t. 4. *Bot. Mag.* t. 1690.

26. *Myrosma*, Linn. f. *Suppl.* 8, 80. (Marantæ sect. *Saranthe* et *Xerolepis*, Kœrn. in *Bull. Soc. Imp. Nat. Mosc.* 1862, i. 58, 66.)—Sepala 3, libera, corollæ æqualia v. paullo breviora. Corollæ tubus brevis, cylindraceus, lobi patentes, parum inæquales v. posticus lator. Androcii tubus supra corollæ tubum brevis; lobi petaloidei valde irregulares, 2 laterales patentes obovoidei inæquales; labellum latum, intus crista obliqua instructum; 1 v. 2 plus minus cucullati; staminifer brevis angustus, anthera 1-loculari hinc adnata. Ovarium specie 1-loculare, 1-ovulatum, loculis 2 minimis vacuis; stylus inclusus, basi tubo stamineo adnatus, superne involutus, stigmate a latere 2-labiato dorso appendiculato. Fructus ovoideo-oblongus, sæpe truncatus, pericarpio siccitate tenui. Semen 1, erectum, arillo in lacinias carnosulas apice inflexas diviso; embryo albumine inclusus, hippocrepicus. —Rhizoma tuberosum. Caules erecti, breves. Folia pleraque radicalia, caulina pauca, vaginis petiolisque longis. Spicæ terminales v. in axillis superioribus solitariae v. plures confertæ, complanatae, unilaterales, bracteis distiche imbricatis complicatis secundis. Flores sub quaque bractea plures, bractea fere omnino inclusi, per paria bracteola brevi complicata stipati.

Species ad 12, quarum una Madagascariensis, cæteræ Americæ tropicæ incolæ.

*Thalanthus macropus*, Klotzsch in Rich. Schomb. *Reise Brit. Gui.* iii. 1125 (nomen tantum), est species typica, *M. cannaefolium*, Linn. f. (*Calathea Myrosma*, Lindl.), in Guiana frequens; icon tamen *Phrynii myrosomatis*, Rosc. Scitam. t. 39, nequaquam convenit, bracteis undique imbricatis nec secundis, videtur vera species *Calathea*. *Thalia unilateralis*, Poepp. et Endl. *Nov. Gen. et Sp.* ii. 24, t. 133, cum speciebus 2 Brasilianis, *Gardner*, n. 3461 et 3462, omnino *Myrosmati* conveniunt. Species Brasilianas a Kœrnickio descriptas non vidimus. *Phrynium unilaterale*, Baker in Saund. *Ref. Bot.* t. 312, species Madagascariensis (*M. madagascariensis*, Benth.), ab Americanis paullulum differt sepalis corollæ tubo multo brevioribus. *Phrynium setosum*, Rosc. Scitam. t. 41 (*SARANTHE*, Kœrn. in *Reg. Gartenz.* 1858, 79), est species Brasiliensis, *M. setosum*, Benth., inflorescentia dense setoso-hispida insignis. Roscoe capsulam errore 3-spermam dixit.

27. *Clinogyne*, Salisb. in *Trans. Hort. Soc.* i. 276, nomen tantum.—Sepala 3, libera, æqualia, brevina, angusta. Petala 3, subæqualia, in tubum longiusculum conniventia vix tamen connata, apice breviter patentia. Androcii tubus longiusculus; lobi petaloidei valde irregulares, laterales (1 v. 2?) obovati, patentes; labellum obovatum, intus costa obliqua instructum; cucullatus obliquus; staminifer angustus v. unilateraliter dilatatus, anthera 1-loculari margini adnata. Ovarium 3-loculare, loculis 1-ovulatis, ovula tamen 1-2 interdum mox abortiva; stylus inclusus, tubo stamineo alte adnatus apice involutus, stigmate dilatato. Fructus globosus compressus v. 3-dymus, indehiscens, 1-3-spermus. Semina subglobosa, arillo lacero laciniiis carnosulis sub semine inflexis v. involutis; embryo hippocrepicus.—Caules e rhizomate tuberoso v. sublignoso erecti, foliati, sæpe ramosi. Inflorescentia terminalis (*Maranta*), laxè dichotoma, tenuis v. interdum ample paniculata, ramulis virgatis. Bractee sub ramulis angustæ, spathaceæ, ramulum arcte includentes. Pedicelli breves, intra bracteas gemini.

Species 7 v. 8, Indiæ orientalis et Africæ tropicæ incolæ, habitu et inflorescentia *Marantæ*, florum structura *Phrynio* affiniore. In *C. dichotoma* (*Phrynio dichotomo*, Roxb.) fructus turbinatus, crassiusculus, vertice truncatus, 2-dymus 2-spermus v. 3-dymus 3-spermus, plus minus rugosus, angulis acutiusculis; in *C. grandi* (*Maranta grandi*, Miq. *Fl. Ind. Bat. Suppl.* 616, *Phrynio dichotomo*, Kœrn. in *Nouv. Mém. Soc. Nat. Mosc.* xi. t. 8, 9, non Roxb.) globosus est, levissimus, nitidus, 1-spermus; in *C. virgata* (*Maranta virgata*, Wall.; Wight,  *Ic.* t. 2015) compressus, 2-spermus, v. globosus 1-spermus.

Species Africanæ includunt *C. filipedem* (*Phrynium filipes*, Benth. in Hook. *Fl. Nig.* 532), cum 3 adhuc ineditis. *Maranta cuspidata*, Rosc. Scitam. t. 31, ex icone videtur species *C. filipedi* valde affinis nisi eadem. Specimina Schweinfurthiana n. 3103 speciem indicant *C. grandi* affinem, sed fructus 3-locularis est 3-spermus.

28. *Trachyphrynium*, Benth. *gen. nov.* — Sepala 3, libera, subæqualia, latiuscula, corollæ tubum æquantia. Petala 3, unguibus erectis in tubum conniventibus (nec connatis?), laminis patentibus oblongis æqualibus v. postica parum latiore. Androcii

tubus e corolla breviter exsertus ampliatus; lobi petaloidei 2 laterales obovati, inæquales; labellum latum, intus oblique fere in longitudinem cristatum; cucullatus parum dilatatus; staminifer irregularis, anthera a latere adnata 1-loculari. Ovarium papillis carnosius dense vestitum, 3-loculare, loculis 1-ovulatis; stylus inclusus, basi tubo stamineo adnatus, apice incurvus, sub stigmate dorso crassiuscule appendiculatus, stigmate inflexo 2-valvi. Capsula subglobosa, 3-dyma, 3-locularis, v. abortu 2-dyma 2-locularis, pericarpio crassiusculo extus dense tuberculoso v. echinato, in valvas 3 v. abortu 2 breviter v. usque ad basin dehiscens. Semina ovoidea v. globosa, nigra, arillo reflexo, laciniis carnosulis linearibus arcte confertis flexuoso-convolutis.—Caulis elati, ramosi, interdum basi sublignosi, erecti v. subscandentes, foliati. Inflorescentia terminalis v. intra folia summa sessilis, spiciformis, simplex v. ramis paucis divaricatis. Bracteæ complicatæ, ante anthesin arcte imbricatæ alabastra includentes, anthesi peracta caducissimæ rhachin nudam flexuosam more *Thalie* relinquentes. Flores sub quaque bractea in pedicello brevissimo gemini, sessiles, in una specie a collectore albi dicuntur, in altera rubri, in tertia pallide cærulei.

Species nobis adsunt 4 v. 5, Africæ tropicæ occidentalis incolæ, quarum una etiam in terra Niam-niam a Schweinfurthio lecta sub n. 3061.

29. *Thaumatococcus*, Benth. gen. nov.—Sepala 3, libera, subæqualia, corolla parum breviora. Corollæ tubus breviter cylindraceus, lobi obovales, subæquales. Androcii tubus supra faucem corollæ brevis; lobus petaloideus lateralis unicus, oblique ovalis; labellum latum, undulatum; cucullatus . . . ; staminifer angustus, anthera 1-loculari a latere adnata. Ovarium 3-loculare, loculis 1-ovulatis; stylus crassiusculus tubo stamineo basi adnatus, apice inflexus, stigmate oblique incrassato dorso appendiculato. Fructus crasse carnosus, truncatus, obtuse 3-queter, angulis tamen siccitate acutis fere alatis, indehiscens, 3-locularis. Semina in loculis solitaria, erecta, magna, ovata, compressiuscula, arillo crasso mucilaginoso siccitate duro nitidissimo omnino involuta; testa albumini farinaceo adnata et embryo hippocrepicus omnino normales.—Rhizoma lignosum, repens, caulibus brevissimis. Folia e rhizomate oriunda vaginis paucis brevibus stipata, petiolo recto longissimo, lamina ampla. Scapi breves e rhizomate ascendentes, fere a basi floriferi, bracteis erectis spathaceis subimbricatis obtecti. Flores intra bracteas gemini, bracteola stipati, vix bracteas excedentes.

Species 1, Africæ tropicæ occidentalis incolæ, ubi fructus *Katempe* dictus cum fructu *Bumelia dulcissima* 'bacca miraculosa' nuncupatur. Bennett in *Pharmac. Journ.* xiv. 161, cum ic. (*Phrynium Danielli*).

Species a Horaninovia perperam cum *Calathea colorata* et *Stromanthe sanguinea* (*Phrynio*, Hook.) associata, a quibus longe differt habitu inflorescentia floribus et fructu.

30. *Phrynium*, Willd. Spec. Pl. i. 17. (Phyllodes, Lamour. Fl. Coch. 13.)—Sepala 3, angusta. Corollæ tubus calyce brevior v. vix longior, lobi 3, anguste oblongi, subæquales. Androcii tubus e corolla breviter exsertus; lobus petaloideus lateralis integer v. 3-fidus (rarius laterales 2?); labellum latum, intus transverse cristatum; cucullatus 1 v. interdum 2, altero hinc lobulo reflexo aucto; staminifer linearis, uno latere interdum petaloideo-appendiculatus, anthera 1-loculari a latere adnata. Ovarium 3-loculare, loculis 1-ovulatis, v. in speciebus ceterum similibus loculis 2 parvis vacuis 1-ovulatum evadit; stylus basi tubo stamineo adnatus, inclusus, superne involutus, stigmate incrassato a latere 2-valvi. Fructus ovoideus globosus v. 2-3-dymus, pericarpio crassiusculo demum tenuiore interdum dehiscente. Semina 1-3, ovoidea v. oblonga, erecta, angulata v. compressiuscula, arillo carnosio brevi reflexo.—Caulis foliati in rhizomate repente brevissimi, foliis subradicalibus, petiolis longis erectis caulem simulantibus; floriferi erecti, 1-foliati v. rarius  $\infty$ -foliati inflorescentia laterali capitata v. spicata ad basin v. specie in medio petiolo sessili. Bracteæ primariæ serie simplici imbricatæ v. approximato. Flores sub quaque bractea sæpius numerosi, per paria bracteola complicata stipati, bracteolis etiam sæpe

pluribus vacuis præsertim in speciebus globoso-capitatis. Folium caulis floriferi interdum ad vaginam absque lamina reductum.

Species fere 20, Indiæ orientalis, Archipelagi Malayani et Africæ tropicæ incolæ. *Körn. in Bull. Soc. Imp. Nat. Mosc.* 1862, i. 100, excl. *sp.*

Species commode in series 3 distribuuntur:—

1. *Capitatae*. Inflorescentia dense globoso-capitata, bracteis imbricatis. Huc *P. capitatum*, Willd., *P. imbricatum*, Roxb., *P. densiflorum*, Blume, affinesque Indiæ fructu sæpius 3-spermo. *Wight, Ic. t.* 2016, cum *P. parvifloro*, Roxb.; *Rosc. Scitam. t.* 34, fructu 1-spermo.

2. *Subbaccatæ*. Florum fasciculi ut in *Capitatis* densi, e spicis brevibus bracteatis compositi. Fructus fere baccatus, indehiscens. Arillus in vivo mucilaginosus seminis dimidium obtegens. Species 3, Africanæ: 1. *P. brachystachyum*, *Körn.* (*Maranta brachystachya*, Benth. in Hook. Fl. Nigr. 531) glabrum, spicis 2-3, fructiferis vix 2-pollicaribus, bracteis subimbricatis. 2. *P. villosum*, vaginis inflorescentiaque molliter villosis, spicis 3-4, fructiferis laxis vix 2-pollicaribus. Folia quam in *P. brachystachyo* angustiora. Bractæ angustiores longioresque. Pedicelli præter flores 2 normales, sæpius rudimenta 2 bulbiformia ferunt. 3. *P. macrostachyum*, folio florali ultrapedali latissime ovato, spicis fructiferis 4-8-pollicaribus. Ad sinum *Ambas, Mann, n.* 1335.

3. *Spicate*. Bractæ ut in *Capitatis* flores  $\infty$  arcte includentes, sed secus rhachin plus minus elongatam dispositæ. Huc *P. sumatranum*, *Miq. Fl. Ind. Bat. Suppl.* 616, quod verisimiliter idem ac *P. spicatum*, Roxb., ovario 3-ovulato; *P. zeylanicum* (*Maranta spicata*, Thw.), ovario 1-ovulato, loculis 2 minimis vacuis, cæterum *P. sumatranum* simillimum; *P. fasciculatum*, *Körn.* (*Calathea fasciculata*, Presl, Rel. Hænk. t. 16), e Philippinis; et species 4 Africanæ, quarum 2 caule florifero 1-foliato *P. sumatranum* valde affines, et 2 caule florifero plurifoliato, etsi inflorescentia ut in cæteris in petiolo folii ultimi specie lateralis. Huc includitur, *P. ramosissimum*, Benth. in Hook. Fl. Nig. 532 (*Mann, n.* 1907) petalis brevibus latissimis insigne, cum specie affini adhuc inedita.

*P. dichotomum*, Roxb., *P. virgatum*, Roxb., et *P. filipes*, Benth., species a *Körn. in Phrynioreteute*, ab aliis ob habitum ad *Marantam* relatæ, genus formant *Clinogyne*, *Salisb.*

31. *Calathea*, G. F. W. Mey. *Prim. Fl. Esseq.* 6.—Sepala 3, libera, æqualia, valde imbricata. Corollæ tubus tenuis, calyce brevior v. multo longior; lobi 3, patentes, æquilongi, postico sæpius latiore. Androcii tubus e corolla brevissime exsertus; lobi petaloidei varii, lateralis sæpius latus; labellum latum, intus (an semper?) ecristatum; cucullatus uno latere plus minus appendiculatus; staminifer angustus v. uno latere petaloideo-dilatatus, anthera 1-loculari a latere adnata. Ovarium 3-loculare loculis 1-ovulatis v. rarius loculis 2 parvis vacuis specie 1-loculare 1-ovulatum; stylus basi tubo stamineo adnatus, inclusus, superne incurvus v. involutus, dorso apice plus minus papilloso-appendiculatus, stigmatem inflexo a latere 2-valvi. Fructus ovoideus truncatus v. 3-dymus, pericarpio sæpius siccitate tenui. Semina 3, rarius 1-2, erecta, ovoidea, truncata, arillo reflexo e laciniis linearibus flexuosis confertis; embryo hippocrepicus.—Caulis e rhizomate tuberoso v. repente sæpe elati, foliati, interdum humiles. Inflorescentia in caule foliato terminalis v. rarius in scapo brevi aphylo radicalis, nunc strobiliformis globoso-capitata v. dense spiciformis, bracteis imbricatis quaquaversis, exterioribus interdum dilatatis involuerantibus v. summis vacuis comosis, nunc longius spicata, bracteis subdistichis. Flores intra quamvis bracteam sæpius plures, bracteolis numerosis intermixti.

Species notæ ad 60, quarum 2 Africæ tropicæ occidentalis, cæteræ omnes Americæ tropicæ incolæ. *Körn. in Bull. Soc. Imp. Nat. Mosc.* 1862, i. 111, in sectiones sequentes distribuendæ:—

1. *Eucalthea*. Spicæ solitariæ v. paucæ, in caule foliato pedunculatæ v. rarius subsessiles, bracteis latis coriaceis laxè imbricatis distincte distichis subspiraliter 2-seriatis v. rarius quaquaversis. *Jacq. Fragm. t.* 63, 64, 69, 70 (*Maranta*). *Bot. Mag. t.* 6205. Huc forte referendum *Phrynium dicephalum*, Poepp. et Endl. *Nov. Gen. et Sp. t.* 128, cujus specimina non vidimus. Inflorescentia *Eucaltheæ*, sed spicæ et bractæ multo minores. Hæc nunc bractæas *Eucaltheæ* oppositas describit, quod in genere nunquam vidimus.

*Eucaltheæ* affines sunt species 2, ex Africa tropica occidentali, *C. Mannii*, Benth., foliis summis longe petiolatis confertis spica inter folia unica subsessili sub-2-pollicari, bracteis coriaceis distichis acuminatis ultrapollicaribus, *Fernando Po, Mann, n.* 1173; et *C. conferta*, Benth., foliis summis longe petiolatis confertis, spicis inter folia pluribus sessilibus confertis, 1-1½-pollicaribus, bracteis

paucis latis obtusis quaquaversis imbricatis spica tota parum brevioribus. Ad montem Cameroon, altit. 3000 ped. *Mann*, n. 2144.

2. *Macropus*. Pedunculus longus subradicalis, spica unica, bractea majuscula convoluta v. paucæ dissitæ. Huc *C. tubispatha*, Bot. Mag. t. 5542, *C. villosa*, Lindl. Bot. Reg. 1845, t. 14; Bot. Mag. t. 4973, cum specie tertia inedita a Gardnery in prov. Ceara lecta; et quarta, *C. Glaziosi*, Benth., e Rio Janeiro, *Glaziov*, n. 8044, cui inflorescentia *Macropodis*, sed vaginæ pedunculus et spica undique mollissime villosæ, spica densa ultrapollinaris, bracteis distichis, floribus parvis.

3. *Breviscapus*. Spicæ strobiliformes, in scapo brevi subradicali solitariae; bracteis acuminatis imbricatis quaquaversis. Corollæ tubus sæpius e bracteis exsertus. *Rosc. Scitam.* t. 33 (*Phrynium*). Bot. Reg. t. 932. *Pæpp. et Endl. Nov. Gen. et Sp.* t. 125, 126. *Baker in Saund. Ref. Bot.* t. 311. *Regel, Gartenfl.* t. 255. Huc etiam verisimiliter referendum *Phrynium pachystachyum*, *Pæpp.* et *Endl. Nov. Gen. et Sp.* t. 127, a nobis non visum.

4. *Pseudophrynium*. Spicæ strobiliformes, crassæ, in caule foliato brevi v. elato solitariae, pedunculatæ, bracteis quaquaversis imbricatis rotundatis appressis v. apice subfoliaceo-patentibus. *Rosc. Scitam.* t. 36 ad 38, 40 (*Phrynium*). *Jacq. Fragm.* t. 71. Bot. Mag. t. 1928. Bot. Reg. t. 385 (*Maranta*), 962, 1210. *Lodd. Bot. Cab.* t. 1148, 1781, 1879. *Regel, Gartenfl.* t. 167, 515. *C. longibracteata*, Lindl. Bot. Reg. t. 1020, *Lodd. Bot. Cab.* t. 1719; *Pseudophrynium* cum *Monostiche* connectit.

5. *Microcephalum*. Species humiles. Spicæ parvæ, paucifloræ, in scapo subradicali solitariae, bracteis imbricatis quaquaversis. Huc pertinent *C. Makoyana*, Belg. Hort. 1872, t. 25. *C. guianensis*, Kl., affinesque 3.

6. *Monostiche*. Inflorescentia in pedunculo longo capitata, bracteis confertissimis quaquaversis herbaceo-acuminatis patentibus. *MONOSTICHEÆ*, *Körn. in Regel Gartenfl.* 1858, 88. Huc pertinent *Maranta capitata*, Ruiz et Pav. Fl. Per. et Chil. t. 5, *C. Veitchiana*, Bot. Mag. t. 5535, species vix a præcedente distincta, et *Phrynium coloratum*, Bot. Mag. t. 3010. *Phrynium comosum*, *Rosc. Scitam.* t. 35, his potius quam aliis affine est. Capsula haud raro nec semper 1-sperma evadit. *Monostiche Danieli*, *Horan.*, a præcedentibus valde diversa, est *Thaumatococcus* nobis.

*Phrynium ellipticum*, *Rosc. Scitam.* t. 44, a nobis non visum, ab omnibus *Calathæis* differre videtur inflorescentia laxa, a *Körn. in Regel Gartenfl.* dubie ad *Lechnosiphonem* refertur.

*GEOPHYTE*, *Nees* in *Linnaea* vi. 337, est genus spurium e *Calathææ* et *Marantæ* speciebus foliis pictis compositum.

### TRIBUS III. CANNÆ.

32. *Canna*, *Linnaea Gen.* n. 1.—Sepala 3, corollæ tubo arcte appressa, imbricata, obtusa. Petala 3, basi breviter v. longiuscule cum andrœcio in tubum connata, apice recurvo-patentia, angusta, subæqualia. Andrœcium petaloideum, basi breviter tubulosum, lobi angusti v. cuneato-oblongi, 3 exteriores nunc subæquales imbricati, nunc 2 plus minus connati tertio libero, nunc omnino deficientes; 2 interiores angustiores, quorum unus antherifer alter nudus; anthera linearis, 1-locularis, lobo petaloide a latere adnata. Ovarium 3-loculare, loculis  $\infty$ -ovulatis; stylus linearis, complanatus, ima basi tubo stamineo adnatus paullo altius tubum fere in loculos 2 dividens, ultra tubum liber, sæpe leviter dilatatus, vertice stigmatosus, papillis etiam interdum ad marginem interiorem breviter decurrentibus; adsunt etiam interdum in loculo majore tubi staminei stylodia 2 parva tubo hinc adnata. Capsula globosa v. ovoidea, extus papillosa tuberculosa v. echinata, evalvis, pericarpio deliquescente demum fibroso. Semina globosa, testa membranacea v. carnea siccitate subcrustacea; embryo in centro albuminis duri obovoideus, sæpe compressus, rectus.—Herbæ erectæ, sæpe elatæ, foliatæ. Flores speciosi, in racemo terminali simplici v. parce ramoso erecti v. rarius penduli, sub quaque bractea solitarii, breviter pedicellati v. subsessiles; bractææ membranaceæ, dissitæ, ovarium sæpius æquantibus. Perianthium sæpe leviter obliquum, non tamen 2-labiatum ut ab auctoribus pluribus dicitur, nam lobi exteriores (labium superius auctorum) interiores (labium inferius) a basi omnino includunt.

Species vix 30, omnes Americanæ tropicæ v. subtropicæ, quarum una per regiones calidiores utriusque orbis latissime dispersa, et aliæ 2 v. 3 in orbe veteri hinc inde obviæ, verisimiliter inquilinæ. A hortulanis species ultra 100 enumeratæ, sunt pro maxima parte varietates hortenses inter

se parum diversæ. Horaninow, *Prod. Monogr. Scitam.* 14, species 66 recenset. Regel. in *Ind. Sem. Hort. Petrop.* 1866, ad 25 bene notas reducit, præter nonnullas adhuc dubias. A Roscoco, quem secutus est Regel, in series 3 sequentes distribuuntur:—

a. Lobi exteriores andrœcii 3, distincti, inter se sæpius parum inæquales. *Rosc. Scitam.* t. 1 ad 14. *Wawra in Pr. Maxim. Reise, Bot.* 143, t. 22. *Red. Lil.* t. 201, 331, 354. *Hook. Exot. Fl.* t. 47, 53, 228. *Bot. Mag.* t. 454, 2302, 2316, 2323, 2498, 3437. *Bot. Reg.* t. 206, 470, 576, 771, 772, 775, 776, 1311, 2004. *Lodd. Bot. Cab.* t. 449, 622, 634, 1693. *Fl. des Serres x.* t. 1055.

b. Lobi exteriores andrœcii 2 (duobus in unum integrum v. 2-fidum coalitis). *Rosc. Scitam.* t. 15 ad 22. *Bot. Mag.* t. 2085, 2317, 4854. *Bot. Reg.* t. 773, 1231, 1276, 1358. *Lodd. Bot. Cab.* t. 1950.

c. Lobi exteriores andrœcii omnino deficientes. *Rosc. Scitam.* t. 23, 24. *Ruiz et Pav. Fl. Per. et Chil.* t. 1. *Lodd. Bot. Cab.* t. 743. *DISTEMON, Bouché in Linnæa*, xviii. 494.

*ACHIRIDA*, *Horan. Prod. Monogr. Scitam.* 18, t. 2, est *C. iridiflora*, *Ruiz et Pav.*; *Bot. Mag.* t. 1968, *Bot. Reg.* t. 609, floribus longis speciosis pendulis insignis, sed characteres omnino *Cannæ* seriei a. *C. iridiflora*, *Carr. in Rev. Hort.* 1875, 291, forma pulchra a *Ruiziana* distincta, hybrida dicitur hortensis.

*EURYSTYLUS, Bouché in Linnæa* xviii. 485, est *C. flaccida*, *Dill.*; *Rosc. Scitam.* t. 6, *Red. Lil.* t. 107; *Salisb. Ic. Rar.* t. 2; *Lodd. Bot. Cab.* t. 562, species boreali-Americana e serie a, lobis petaloideis andrœcii latissimis insignis.

#### TRIBUS IV. MUSEÆ.

33. *Heliconia*, *Linn. Mant. n.* 1297.—Sepala 3, linearia, libera v. lateralialia plus minus corollæ adnata. Corollæ tubus brevis, latus, interdum fere globosus, limbus elongatus, apice sub-3-lobus, lobis lateralibus tamen multo minoribus, et uno sæpe obsoleto. Stamina perfecta 5, ad apicem tubi affixa, æqualia, filamentis linearibus, sextum ad staminodium lineare v. oblongum anantherum plus minus petaloideum perfectis multo minus reductum; antheræ lineares, 2-loculares. Ovarium 3-loculare, loculis 1-ovulatis; stylus centralis, filiformis, stigmate parum incrassato denticulato. Fructus ovoideus v. breviter oblongus, truncatus, pericarpio crassiusculo indehiscente, 3-locularis v. abortu 1-2-locularis. Semina in loculis solitaria, erecta, testa ad hilum plus minus intrusa; embryo in cavo centrali albuminis duriusculi erectus, brevis.—Caulis e rhizomate perenni specie erecti, elati, foliati, revera tamen (an semper?) e vaginis foliorum elongatis convolutis scapum seu pedunculum involventibus compositus. Foliorum lamina ampla. Inflorescentia terminalis, pedunculata, erecta v. recurvo-pendula. Bractæ spathacæ, secus rhachin flexuosam dissitæ, sæpius pulchre coloratæ, nunc angustæ, submembranacæ, primum erectæ, mox patentes, nunc late cymbiformes complicatæ, basi rhachi adnatæ, coriacæ, patentissimæ. Flores intra basin spathæ fasciculati, pedicellati, fasciculorum rhachi interdum parum elongata racemum unilateralem intra spatham inclusum formantes.

Species ad 25, Americæ tropicæ incolæ, quarum uua interdum in orbe vetere hinc inde inquilina. *Horan. Prod. Monogr. Scitam.* 38. *L. C. Rich. in Nov. Act. Nat. Cur.* xv., *Suppl.* 13, 24, t. 8 ad 12. *Hook. f. in Journ. Linn. Soc.* vii. 68. *Wawra in Pr. Maxim. Reise, Bot.* 142, t. 21. *Ruiz et Pav. Fl. Per. et Chil.* t. 303 ad 305. *Red. Lil.* t. 151, 382, 383. *Jaeg. Hort. Schanbr.* t. 48, 49. *Hook. Exot. Fl.* t. 190. *Fisch. Sert. Petrop.* t. 20. *Andr. Bot. Rep.* t. 124, 640. *Bot. Mag.* t. 502, 4375, 4685, 5315, 5416, 5613. *Bot. Reg.* t. 374, 1648. *Maund, Botanist.* t. 101.

*HELICONIOPSIS*, *Miq. Fl. Ind. Bat.* iii. 590, species Amboinensis, a nobis non visa (*Heliconia buccinata*, *Roxb. Fl. Ind.* i. 670), ex descriptione auctoris omnino cum *Heliconia Bihai*, *Linn.*, convenit. Hæc species, in America calidiore late dispersa, etiam in aliis regionibus hinc inde occurrit, an olim ex America introducta? Specimina vidimus e Nova Caledonia, *Pancher*.

34. *Musa*, *Linn. Gen. n.* 1141.—Calyx elongatus, striatus, primum tubulosus, mox spathaceo-fissus, apice 3-fidus 3-dentatus v. 5-dentatus, dentibus 2 accessoriis dum adsint e sinubus oriundis sæpe acutioribus. Corolla calyce inclusa breviorque v. in *M. rosacea* ei subæqualis, genitalia involvens, apice varie truncato-dentata. Stamina perfecta 5, filamentis crassiusculis filiformibus; antheræ lineares, erectæ, 2-loculares, loculis parallelis

contiguus; staminis sexti rudimentum interdum adest parvum, rarius lineare staminibus perfectis brevius. Ovarium 3-loculare, loculis  $\infty$ -ovulatis; stylus e basi crassiuscula filiformis, centralis, stigmate subgloboso breviter 6-dentato. Fructus carnosus, indehiscens, 3-locularis. Semina subglobosa v. irregulariter angulata, ad hilum sæpe excavata, testa crassa dura apice basique albumine farinaceo intrusa; embryo sub hilo prominens, subtruncatus, in margine albuminis dilatatus.—Caulis e petiolorum basibus convolutis constans, erectus, elatus, interdum quasi arborescens. Folia ampla, longa. Scapus e foliorum centro protrusus, racemo longo terminali. Bractæ magnæ late spatuliformes, secus rhachin dissitæ. Flores fasciculati, sessiles, plerique abortu unisexuales, ♂ intra bractæas superiores, ♀ intra inferiores, alii tamen adsunt ♀ sed sæpius steriles.

Species editæ ultra 20, regionum tropicarum orbis veteris incolæ, nonnullæ tamen ad varietates cultas reducendæ. Horan. *Prod. Monogr. Scitam.* 40. L. C. Rich. in *Nov. Act. Nat. Cur.* xv., *Suppl.* 11, t. 1. Gärtn. *Fruct.* t. 11. Colla in *Mem. Acad. Torin.* xxv. 333, t. 13 ad 15. Kirk in *Journ. Linn. Soc.* ix. 128. *Red. Lil.* t. 307, 308, 443. Jacq. *Hort. Schænbr.* t. 445, 446. Roxb. *Corom. Pl.* t. 223, 275, 300. Wight, *Is.* t. 2017 (quoad fig. 4 et 5 male). Andr. *Bot. Rej.* t. 47. *Bot. Mag.* t. 1559, 3849, 3850, 5223, 5224, 5402, 5975. *Bot. Reg.* t. 706. Lodd. *Bot. Cab.* t. 475, 615, 684. *Pact. Mag.* iii. 51 cum ic.

In *M. paradisiaca*, Linn., et affinibus corolla brevis, lata, plus minus 2-3-loba, lobis lateralibus latis, medio anguste acuminato interdum obsoleto; in *M. coccinea*, Roxb., calyx apice 3-dentatus, dentibus lateralibus dorso seta rigida reflexa armatis, medio breviter 2-appendiculato; corolla calyce parum brevior, angusta, striata, ei *Heliconiæ* similis, lobis 2 lateralibus parvis; in *M. rosacea*, Jacq., lobi laterales corollæ vix conspicuæ.

ENSETE, Bruce, a Horaninovio *Prod. Monogr. Scitam.* 40, pro genere proprio distinguitur ob staminodium loco staminis sexti bene evolutum, et fructum abortu 1-4-spermum nec polyspermum; sed staminodium parvum etiam in aliis speciebus sæpe adest, et seminum numerus in genere valde variabilis.

35. *Strelitzia*, Ait. *Hort. Kew.* i. 285, t. 2.—Sepala 3, libera, longa, carinata, lateralia concava, tertium acutissime acuminatum, carina valde elevata marginibus recurvis revolutivæ. Petala inter se valde dissimilia, exterius breve, latum, concavum, fere cucullatum, lateralia longa, linearia, uno latere sibimet coherentia, dorso in longitudinem lamina petaloidea decurrente appendiculata, circa genitalia convoluta. Stamina 5, petala subæquantia; antheræ lineares, 2-loculares, filamento longiores. Ovarium 3-loculare, loculis  $\infty$ -ovulatis; stylus filiformis, elongatus, stigmate e basi crassiuscula in ramos 3 lineares e petalis exsertos diviso. Capsula (nec a nobis nec a botanicis recentioribus visa) ex Gärtnero obovoideo-oblonga, 3-quetra, loculicide 3-valvis. Semina in loculis pauca, superposita, arillo lanato v. villosa 2-valvi ad medium tecta; embryo . . .—Rhizoma nunc hypogeum nunc in caulem erectum, lignosum, cicatricibus foliorum delapsorum annulatum productum. Folia in vaginis longis scapum seu pedunculum involventibus sessilia v. petiolata, ampla, flabellatim bifaria. Scapus terminalis v. in axillis superioribus e foliorum vaginis breviter exsertus. Bractæ magnæ, spathaceæ, cymbiformes, acuminatæ, ad apicem scapi solitariæ v. 2 parum distantes. Flores magni, speciosi, intra spatham pauci, breviter pedicellati, perianthio longe exserto.

Species 4 v. 5, Africæ australis incolæ. Horan. *Prod. Monogr. Scitam.* 42. L. C. Rich. in *Nov. Act. Nat. Cur.* xv., *Suppl.* 12, 17, t. 2, 3. Gärtn. *Fruct.* ii. 270, t. 139 (*Heliconia*). *Red. Lil.* t. 77, 78. Andr. *Bot. Rep.* t. 432. *Bot. Mag.* t. 119, 120, 4167, 4168. *Bot. Reg.* t. 516. *Reg. Gartenfl.* t. 235.

*S. Nicolai*, Regel, ab *S. angusta*, Thunb. (*Heliconia alba*, Linn.), non differre videtur.

36. *Ravenala*, Adans. *Fum.* ii. 67. (*Urania*, Schreb. *Gen. Pl.* 212.)—Sepala 3, libera, longa, angusta, acuminata, subæquilonga, intermedio lateralibus latiore, carina valde prominente. Petala 3, exterius cæteris brevius, angustum, subcomplicatum, lateralia longa, angusta, sepalis similia nisi paullo minora, inappendiculata, genitalia amplectentia. Stamina 5, petalis paullo breviora; antheræ lineares, 2-loculares, filamento multo longiores. Ovarium

3-loculare, loculis multiovulatis; stylus filiformis, elongatus, subangulatus, stigmatibus oblongo-clavato breviter 6-dentato. Capsula ovoideo-3-quetra v. oblonga, loculicide 3-valvis. Semina in quoque loculo numerosa, 2- $\infty$ -seriatim superposita, transverse oblonga, arillo fimbriato-lacero subinclusa; embryo . . .—Caulis nunc brevis foliis subradicalibus, nunc erectus lignosus (usque ad 30-pedalis) cicatricibus foliorum delapsorum annulatus. Folia magna conferta, flabellatim bifaria, petiolis longis basi concavis vix vaginatis. Scapi v. pedunculi in axillis superioribus petiolo breviores v. longiores. Bractee spathaceae, plures, cymbiformes, acuminatae, bifariam patentes. Flores in spatha plures, magni, brevissime pedicellati, intra spatham brevissime racemosi, perianthiis longe exsertis.

Species 2, altera Brasiliæ borealis et Guianæ, altera Madagascariæ incolæ. *Horan. Prod. Monogr. Scitam.* 43. *L. C. Rich. in Nov. Act. Nat. Cur.* xv, *Suppl.* 12, 19, t. 4 ad 8 (*Urania*). *Sonnerat, Voy. Ind. Or.* iii. 244, t. 124 ad 126. *Jacq. Hort. Schænbr.* t. 93. *Endl. Iconogr.* t. 42.

*PHENAKOSPERMUM*, *Endl. Prod. Fl. Norf.* 35, in *Adnot.*; *Miq. Stirp. Surin.* 212, t. 62, 63, genus propositum fuit ad speciem Americanam characteribus minimi valoris a Madagascariense separatam. Utraque variare videtur caule nunc brevissimo nunc lignoso  $\infty$ -pedali.

## ORDO CLXXI. BROMELIACEÆ.

*Endl. Gen.* 181. *Lindl. Veg. Kingd.* 147.

*Flores* regulares, hermaphroditi v. rarius abortu dioici. *Perianthium* superum semisuperum v. inferum, duplici serie 3-merum, exterius calycinum, e sepalis 3 liberis v. rarius basi in tubum connatis, aestivatione convoluto-imbricatis; interius corollinum, e petalis 3 unguibus sæpius in tubum conniventibus v. connatis, laminis erectis v. patentibus aestivatione convoluto-imbricatis. *Stamina* 6, intra basin corollæ affixa, nunc omnia libera, nunc 3 sepalis opposita libera, 3 petalis opposita iisque plus minus adnata, nunc omnia corollæ alte adnata specie sub apice tubi affixa; filamenta filiformia v. crassiuscula. *Antheræ* lineares, rarius oblongæ, nunc medio dorso affixæ versatiles, nunc prope basin v. rarius ima basi affixæ, erectæ, loculis 2 parallelis contiguis longitudinaliter dehiscentibus, connectivo inappendiculato. *Ovarium* inferum semisuperum v. si superum lata basi affixum, 3-loculare. *Stylus* elongatus filiformisque v. abbreviatus, interdum præter ramos stigmatosos subnullus; stigmata (v. styli ramuli stigmatosi) 3, brevia v. linearia, introrsum papillosa, erecta v. recurvo-patentia, haud raro sigillatim torta v. omnia in massam ovoideam contorta. *Ovula* in quoque loculo  $\infty$ , sæpius numerosa, angulo centrali affixa, anatropa, ascendentia horizontalia v. pendula, interdum ad chalazum breviter appendiculata. *Fructus* nunc carnosus perianthio toto emarcido v. sepalis solis coronatus, indehiscens v. a latere irregulariter ruptus, nunc siccus, ab apice libera septicide v. rarius loculicide 3-valvis. *Semina* oblonga ovata v. linearia, testa membranacea undique nucleo appressa v. apice basique rarius circumcirca in appendiculam producta. *Albumen* farinaceum, copiosum. *Embryo* parvus, rarius lineari-acuminatus, juxta hilum in cavo parvo v. sulco albuminis collocatus, rarius longius intrusus.

*Herbæ* epiphyticae v. saxicolæ, rarissime terrestres, caule præter scapum v. pedunculum florentem sæpius brevi, rarius elongato undique foliato. Folia sæpius ad basin caulis dense rosulata, interdum longissima, nunc rigida pungentia et margine spinuloso-serrata, nunc mollia angusta integerrima sæpeque furfuracea, rarius secus caulem pendulum sparsa. Inflorescentia terminalis v. rarissime lateralis; spicata v. varie paniculata, pedunculo v. scapo interdum valde elongato squamis bracteeformibus instructa. Bractee primariæ haud raro amplæ, coloratæ, imbricatæ dissitæ v. exteriores involucrantes, interdum parvæ

v. minutæ. Flores sub quaque bractea solitarii v. plures, fasciculati v. subapicati, singuli sæpe bracteola spathiformi basi stipati v. fere inclusi

Species plus minus notæ vix 350, omnes Americanæ, tropicæ v. subtropicæ. plures tamen, exsiccata difficiliter v. rarius floriferæ, in herbariis nostris desunt et ulterius recognoscendæ.

Ordo naturalis et facile distinctus, nulli arcte affinis, ab *Amaryllidaceis* bene separatur habitu, perianthio exteriori distincte calycino, albumine farinaceo et embryonis situ, a Linnæo in genera duo *Bromeliæ* et *Tillandsiæ*, ab auctoribus recentioribus in tribus 3 optime limitatas divisus. Has tamen J. G. Beer rejecit, et in "Die Familie der Bromeliaceen" Wien, 1857, systema proposuit novum, hortulanis forte commodum, imprimis ad variationes vegetationis constructum, sed characteribus floribus et fructu fere undique neglectis, botanicis minime conveniens.

#### FORMÆ ARBORÆ.

Flores dioici in *Hechtia*.

Antheræ in annulum circa stylum connatæ in *Guzmania*.

Capsula loculicida 3-valvis in *Puya*, septicida 3-valvis valvis 2-fidis quasi 6-valvis in *Dyckia*.

#### CONSPECTUS GENERUM.

**Tribus I. Bromeliæ.** Ovarium inferum, ovulis horizontalibus v. pendulis. Fructus carnosus, indehiscens v. a latere rumpens. Semina inappendiculata. Folia sæpissime spinosissima (excepta *Ronbergia*).

\* *Sepala ad apicem ovarii inter se libera. Petala basi v. alte in tubum coalita.*

1. **STREPTOCALYX.** Panícula terminalis. Sepala lata, valde imbricata. Corollæ tubus longus. *Bras. trop., Guiana.*

2. **BROMELIA.** Panícula terminalis. Sepala ovato-oblonga v. linearia, parum imbricata. Petala basi in tubum brevem connata. — *Ind. occid., Amer. trop.*

3. **KARATAS.** Capitulum terminale, densum, inter folia superiora involucrentia sessile. Sepala oblonga v. angusta. — *Amer. trop.*

4. **GREIGIA.** Capitulum crassum, inter folia inferiora sessile, bracteis acutis imbricatis spinoso-serratis. Sepala angusta. Corollæ tubus longus. — *Chile.*

\*\* *Calycis v. perianthii tubus supra ovarium cyathiformis v. breviter cylindricus, sepalis ad apicem tubi v. cyathi inter se liberis. Petala libera v. basi breviter connata.*

5. **CRYPTANTHUS.** Capitulum densum, inter folia subsessile, bracteis exterioribus foliaceis, interioribus bracteolisque parvis. Petala basi in tubum brevem connata. — *Brasilia.*

6. **DISTEGANTHUS.** Spicæ strobiliformes, in rhizomate subsessiles, bracteis imbricatis. Petala libera, basi circa stamina interiora convoluta. — *Cayenna.*

7. **RONBERGIA.** Thyrsus terminalis, dense spiciformis. Petala et stamina libera. — *Nov. Grenada.*

8. **OCHAGAVIA.** Spica terminalis. Petala et stamina libera. — *Ins. Juan Fernandez.*

9. **PORTIA.** Spica terminalis, longa v. brevis densaque. Petala libera. Stamina 3 libera, 3 petalis alte adnata.

10. **RHODOSTACHYS.** Capitulum terminale, densum, inter folia conferta sessile. Ovarii v. perianthii cyathus brevis. Petala et stamina libera. — *Chile, Colombia, Guiana.*

\*\*\* *Sepala petalæque ad apicem ovarii libera.*

11. **ANANAS.** Inflorescentia dense strobiliformis. Ovaria fructusque receptaculo carnosum basi adnata v. omnino inclusa. Bractee in strobilo maturo parum prominentes. — *Amer. trop.*

12. **ÆCHMEA.** Spica simplex v. ramosa v. panicula, sæpissime terminalis, floribus distichis v. quaquaversis, bracteis sæpius parvulis, rarius spica in capitulum contracta bracteis imbricatis. Ovula in loculis ∞. Stigmata sæpissime spiraliter contorta. — *Amer. trop.*

13. **ARBOCOCOCCUS.** Flores minimi, in panicula laxa, bracteis minutis. Ovula in loculis 1-2. — *Bras. bor., Guiana.*

14. **BILLBERGIA.** Racemus v. panicula angusta, terminalis. Sepala quam in *Æchmea* angustiora, erecta. Petala longiora. Stigmata linearia, vix contorta. — *Amer. trop.*

15. **QUEMELLA.** Inflorescentia strobiliformis, bracteis membranaceis laxè imbricatis utroque latere transversim plicatis. Sepala ovata. Petala angusta. — *Brasilia.*

**Tribus II. Pitcairniacæ.** Ovarium superum lata basi affixum, v. basi toro plus minus immersum semisuperum, superne semper liberum, ovulis ascendentibus. Fructus capsularis, 3-valvis. Seminum testa apice basique in appendiculam linearem integram v. circumcirca in alam membranaceam producta, v. rarius semina inappendiculata. Folia sæpissime spinoso-serrata.

16. **BRACCHINIA.** Panicula pyramidalis, ampla, floribus parvis. Filamenta brevissima, basi connata. Ovarium apice breviter tantum liberum. Capsula clavata, septicide 3-valvis. Semina utrinque anguste appendiculata.—*Brasilia*.

17. **PITCAIRNIA.** Racemus terminalis, simplex v. parce ramosus, floribus angustis sæpius speciosis. Filamenta libera. Ovarium pro maxima parte liberum; stylus filiformis. Capsula septicide 3-valvis. Semina utrinque anguste appendiculata v. (in *Pepinia*) ala parva rarius circumdante appendiculata, v. rarius omnino nuda.—*Amer. trop.*

18. **PUYA.** Racemus terminalis, simplex v. pyramidato-ramosus. Perianthia quam in *Pitcairnia* patentiora. Stylus filiformis. Capsula *loculicide* 3-valvis. Semina circumcirca alata.—*Andes Amer. austr.*

19. **ENCHOLIRION.** Racemus simplex, dense floribundus, pedicellis quaquaversis sæpe fasciculatis. Stylus abbreviatus. Capsula angusta, septicida, valvis introrsum clausis semina includentibus. Semina breviter stipitata, apice inappendiculata.—*Brasilia*.

20. **DYCKIA.** Spica in scapo axillari simplex v. ramosa, elongata, dissitiflora. Petala uno latere valde dilatata. Stylus infra stigmata subnullus. Capsula septicide 3-valvis, valvis 2-fidis. Semina plana, inæqualiter marginata.—*Brasilia*.

21. **HECHTIA.** Flores *dioici*, secus pedunculum prælongum simplicem v. ramosum dissite glomerati. Stylus abbreviatus. Capsula profunde 3-sulca, septicide 3-valvis. Semina breviter appendiculata.—*Mexico*.

**Tribus III. Tillandsiæ.** Ovarium lata basi affixum, superum v. rarius basi toro leviter immersum, ovulis ascendentibus. Fructus capsularis, septicide 3-valvis, valvis (saltem endocarpii) introrsum subclausis semina omnino includentibus. Seminum testa basi in stipitem apice sæpius in appendiculam producta, in fila numerosa demum sæpe patentia fissa, pappum simulans. Folia integerrima.

22. **SODIROA.** Sepala ad medium in tubum connata, apice lata patentia. Petalorum ungues intra tubum angustissimi. Caules dependentes, foliis gramineis, apice pauciflori.—*Andes Amer. austr.*

23. **CARAGUATA.** Sepala erecta, valde imbricata. Petala alte in tubum coalita, filamentis intus alte adnatis. Inflorescentia terminalis, nunc densissime capitata, nunc plus minus elongata angusta v. dense pyramidata.—*Ind. occid., Amer. trop.*

24. ? **SCHLUMBERGERIA.** Omnia *Caraguata* nisi inflorescentia laxior ramosa.—*Amer. austr.*

25. **GUZMANIA.** Sepala erecta. Petala basi in tubum convoluta, superne in limbum cupulatum 3-fidum connata. Antheræ in anulum circa stylum connatæ. Spica simplex.—*Ind. occid., Amer. trop.*

26. **TILLANDSIA.** Sepala erecta. Petala et stamina libera. Seminum stipes cum testæ filis infra nucleum longa, appendix ultra nucleum brevis. Inflorescentia varia, simplex v. ramosa.—*Amer. trop. et bor.*

27. **CATOPsis.** Sepala erecta. Petala et stamina libera. Seminum stipes cum testæ filis brevis, appendix ultra nucleum cum testæ filis longissima flexuosa. Inflorescentia simplex v. ramosa, floribus quam in *Tillandsia* minoribus.

#### GENUS EXCLUSUM.

**WELDENIA**, Schultes in Endl. Gen. 185 dubie *Bromeliaceis* ascripta, est **Commelinaceæ**.

#### TRIBUS I. BROMELIÆ.

1. **Streptocalyx**, Beer, *Bromel.* 141 — Sepala supra ovarium libera, lata, valde imbricata, mucronulata. Petala alte in tubum connata, apice ovata, patentia. Stamina prope apicem tubi affixa, æqualia, filamentis complanatis; antheræ prope basin affixæ, corollam non excedentes. Ovarium inferum, ovulis in loculis  $\infty$ , horizontalibus v. pendulis; stylus filiformis, stigmatibus spiraliter contortis. Fructus . . . — Folia ampla, rosulata, spinoso-serrata. Panicula terminalis, floribunda; ramuli nunc simplices pauciflori, bractæas mem-

branceas coloratas vix superantes, floribus sessilibus, nunc divisi, bracteas minores superantes, floribus longe pedicellatis.

Species 3, Brasiliæ tropicæ et Guianæ incolæ.

2. *Bromelia*, Linn Gen. n. 395, pro parte. (Agallostachys, Beer, *Bromel.* 35.)—Sepala supra ovarium libera, ovato-oblonga v. linearia, erecta. Petala basi in tubum brevem connata, supra tubum erecto-conniventia, apice latiore patentia, basi (an semper?) esquamata. Stamina omnia corollæ tubo affixa, petalis breviora; antheræ lineares, erectæ, juxta basin affixæ. Ovarium inferum, ovulis in loculis  $\infty$  horizontalibus v. pendulis; stylus filiformis, stigmatibus vix tortis apice oblique introrsum papillois. Fructus (ex Gærtn.) ovoideus, carnosus. Semina in loculis  $\infty$ ; embryo juxta hilum parvus, intrusus. —Folia pleraque subradicalia, rosulata, longa, rigida, margine plus minus spinulososerrata. Panícula terminalis, ampla, pyramidata v. angusta, ramulis dense v. laxè  $\infty$  floribus, bractea membranacea spathiformi v. rarius parvula stipatis. Flores singuli breviter pedicellati, bracteola minima v. laxè membranacea.

Species 4 v. 5, Americæ tropicæ incolæ: *B. chrysantha*, Jacq. Hort. Schœnbr. t. 55; *B. Pinguin*, Linn.; Red. Lil. t. 396 (ANANAS, Gærtn. Fruct. t. 11); *B. fastuosa*, Lindl. Collect. t. 1; *B. sylvestris*, Willd.; Bot. Mag. t. 2392, et *B. antiacantha*, Bertol. Misc. iv. t. 1. In hac specie ovarii loculos vidimus septis spuriis fere in locellos 2 divisos.

*Bromelia*, Plum., nomen fuit potius specificum quam pro genere definitum, apud Linnæum omnes *Bromeliaceas* includit ovario infero, hodie species 5 Linneanæ omnes ad genera diversa ab uno alterove auctore referuntur. Nos cum pluribus botanicis, pro specie typica habemus *B. Pinguin*, quæ *Agallostachys*, Beer. *B. Ananas*, Linn., est *Ananas*, Adans. *B. Karatas*, Linn., est *Karatas*, Adans. *B. lingulata* et *B. nudicaulis* in *Echmea* includuntur.

3. *Karatas*, Adans. Fam. ii. 67. (Nidularium, Lemaire, Jard. Fleur. iv., Misc. 60, t. 411. *Regelia*, Lemaire, Illustr. Hort. 1860, sub t. 245, non Schau.)—Sepala supra ovarium libera, oblonga v. angusta, erecta. Petala basi v. alte in tubum connata, apice obtusa, erecta v. vix patentia. Stamina omnia tubo corollæ affixa, petalis breviora; antheræ lineares, erectæ, basi v. juxta basin inter lobos basales affixæ. Ovarium inferum, ovulis in loculis  $\infty$  horizontalibus v. pendulis; stylus filiformis, stigmatibus brevibus vix tortis. Fructus (in *K. Plumieri*) oblongo-fusiformis, carnosulus, 3-locularis, demum (in sicco) loculicidè dehiscens. Semina numerosa, ovata, plus minus compressa, testa crassiuscula; embryo prope hilum parvus obovoideus breviter oblique intrusus. Folia rosulata, sæpe longissima, spinoso-serrata. Flores in capitulum densum sessile simplex v. compositum terminale conferta, foliis floralibus a basi spathacea linearibus dense cincti, receptaculo lato carnosio parum convexo v. breviter conico, singuli bractea membranacea stipati.

Species ad 10, Indiæ occidentalis et Americæ australis tropicæ incolæ, Brasiliænæ plures. Morren in Belg. Hort. 1872, 129, t. 11 ad 13. Wawra in (Esterr. Bot. Zeitschr. 1880, 112. Jacq. Hort. Vind. t. 31, 32; Ic. Rar. t. 60 (*Bromelia*). Red. Lil. t. 457 (*Bromelia Karatas*, species a *K. Plumieri*, Morr., distincta). Bot. Mag. t. 2892 et 5502 (*Billbergia*) et t. 6024. Reg. Gartenfl. t. 211 (*Bromelia*) et t. 224. Lemaire, Illustr. Hort. 1860, t. 245.

Wawra l. c. *Karatas* a *Nidulario* distinguit antheris in priore basifixis in *Nidulario* dorsifixis, in omnibus speciebus tamen filamentum cum connectivo dorsali continuum, inter lobos basales antheræ liberum est, differentia inter lobos basales abbreviatos v. elongatos parum valet.

4. *Greigia*, Regel, Gartenfl. xiv. (1865) 137, t. 474.—Sepala supra ovarium libera, longa, angusta, leviter imbricata. Corollæ tubus longus, cylindraceus, limbus campanulatus, 3-partitus, segmentis ovatis. Stamina ad apicem tubi affixa, filamentis brevibus; antheræ magnæ, corolla paullo breviores. Ovarium inferum, 3-quetrum v. fere 3-alatum, ovulis in loculis  $\infty$  horizontalibus v. pendulis; stylus filiformis, stigmatibus breviter linearibus erectis. Fructus siccus, duriusculus, fibrosus (indehiacens?), apice 3-queter, basi in stipitem longum contractus. Semina . . . —Folia rosulata, longa, angusta, rigida, spinoso-

serrata. Florum capitulum crassum, inter folia inferiora sessile; bracteæ rigidæ, acutæ, spinoso-serratæ, imbricatæ, exteriores involucentes ovato-lanceolatæ, interiores circa flores angustæ. Flores numerosi, in receptaculo subconico sessiles, singuli bracteolis sæpius 3 angustis stipati.

Species 2?, Chileuses. *Philippi in Linnaea*, xxxiii. 246 (*Bromelia*). *Carrière in Rev. Hortic.* 1880, 255.

5. **Cryptanthus**, *Otto et Dietr. Allgem. Gart. Zeit.* 1836, 298. (*Pholidophyllum*, *Vis. Sem. Hort. Patav.* 1847, 4, ex eod. in *Mem. Istit. Venet.* v. 343.)—Sepala supra perianthii basin seu ovarii apicem tubulosum distincta, imbricata. Petala basi in tubum brevem connata, superne oblonga patentia. Stamina tubo corollæ affixa, 3 petalis opposita iis paullo altius adnata; antheræ oblongæ, corolla paullo breviores. Ovarium inferum, ovulis in loculis  $\infty$  horizontalibus v. pendulis; stylus filiformis, stigmatibus lineari-lanceolatis recurvo-patulis vix tortis. Fructus subbaccatus, indehiscens. Semina . . .—Folia rosulata, conferta, recurvo-patentia, spinuloso-serrata. Flores in capitulo terminali intra folia subsessili plures, singuli ad axillas foliorum floralium gradatim ad bracteas parvas reductorum sessiles, bracteolis parvis stipati.

Species Brasiliæna, ejus formæ plures a hortulanis distinctæ, a Bakero ad unam reducuntur. *Bot. Reg. t.* 1157 (*Tillandsia*). *Bot. Mag. t.* 5270 (*Billbergia*). *Baker in Saund. Ref. Bot. t.* 287. *Wawra in Pr. Maxim. Reise, Bot.* 163, t. 87. *Morren, Belg. Hortic.* 1881, t. 17.

MADVIGIA, *Liebm. in Ann. Sc. Nat. ser. 4, ii.* 373, *Walp. Ann.* vi. 66, a Morrenio ad *Cryptanthum* reducitur. Descriptio auctoris differt petalis a basi liberis.

6. **Disteganthus**, *Lemaire, Fl. des Serres*, 1847, t. 227.—Sepala supra perianthii basin seu ovarii apicem cyathiformem basi in tubum connata, superne ovata, imbricata. Petala libera, basi conniventia, superne patentia. Stamina cum petalis affixa, libera, interiora sub pelliculis petalorum tubulatim involuta; antheræ dorsifixæ. Ovarium inferum, loculis 3-4-ovulatis; stylus filiformis, stigmatibus spiraliter convolutis. Bacca capsularis, calyce marcescente coronata.—Folia rosulata, spinoso-serrata. Spicæ in rhizomate subsessiles, strobiliformes, squamis coloratis imbricatis, summis flores flavos fœventibus. (*Char. ex Lemaire.*)

Species 1, Cayennensis, a nobis non visa. Genus cum 2 sequentibus nobis non nisi ex descriptionibus v. iconibus notum, omnia videntur hinc *Cryptantho* hinc *Rhodostachyo* affinia.

7. **Ronnbergia**, *Morren ex André, Illustr. Hortic.* 1874, 120, t. 177.—Sepala supra perianthii basin v. ovarii apicem cyathiformem distincta, erecta, ala unilaterali marginata, contorto-imbricata. Petala in tubum convoluta, apice breviter patentia. Stamina libera, filamentis filiformibus; antheræ breviter lineares, inclusæ. Ovarium inferum, ovulis in loculis  $\infty$  pendulis; stylus filiformis, stigmatibus brevibus contortis. Fructus . . .—Caulis erectus. Folia ampla, integerrima, longe petiolata. Thyrsus terminalis, dense spiciformis, bracteis inferioribus longis angustis erectis, superioribus parvis. Flores cærulei, iis *Billbergia* subsimiles. (*Char. ex ic. et descr. André.*)

Species 1, Novo-Granatensis, a nobis non visa.

Genus structura florum videtur *Rhodostachyo* affine, sed inflorescentia diversa, et foliis integerrimis in tribu anomalum.

8. **Ochagavia**, *Philippi in Ann. Sc. Nat. ser. 4, vii.* 107.—Sepala supra perianthii basin v. ovarii apicem tubulosum affixa, erecta. Petala intra sepala affixa, libera. Stamina intra petala affixa, libera, filamentis filiformibus basi dilatatis; antheræ oblongo-lineares, infra medium dorsifixæ. Ovarium inferum, loculis  $\infty$ -ovulatis; stylus filiformis, apice stigmatoso incrassatus, truncatus, sub-3-lobus. Fructus baccatus.—Caulis (pedales) dense foliati, foliis breviusculis subtus argenteo-lepidotis spinoso-serratis. Spica terminalis, floribus roseis, bracteis elongato-rhombis. (*Char. ex Philippi.*)

Species 1, ins. Juan Fernandez incolæ, a nobis non visa. Genus evidenter *Rhodostachyo* affine.

9. *Portea*, *C. Koch, Ind. Sem. Hort. Berol.* 1856, *App.* 7.—Sepala supra perianthii basin seu ovarii apicem cyathiformem distincta, ovata v. ovato-lanceolata, valde imbricata, apice obliqua aristata. Petala elongata, libera, erecta, basi intus squamis 2 fimbriatis appendiculata. Stamina 3 petalis alte adnata, 3 libera petalis alterna; antheræ versatiles, petalis breviores. Ovarium inferum, loculis  $\infty$ -ovulatis; stylus filiformis, stigmatibus linearibus in massam ovoideam spiraliter convolutis. Fructus . . .—Caules breves, foliis numerosis rosulatis elongatis rigidis spinuloso-serratis. Pedunculus terminalis, squamis coloratis spathaceis obtectus, inflorescentia in specie typica elongata, bracteis membranaceis squamis pedunculi similibus nisi majoribus, primum imbricatis demum sæpe dissitis. Flores sub bracteis superioribus solitarii, sub inferioribus 2–3-ni. Petala iis *Billbergiæ* similia, bracteas non superantia.

Species 3 v. 4, Americanæ, v. crissimiliter Brasilianæ. *Walp. Ann.* vi. 67. *Houlet in Rev. Hort.* 1870, 230, cum ic. *Regel, Gartenfl.* 1875, 166, t. 829 (*Billbergia*). *Baker in Saund. Ref. Bot. t.* 285 (*Hohenbergia*). Specimen Uruguayense, *Gibert, n.* 1414, a Morrenio ad *P. Legrellianam* (*Orthogiesiam palliolatam*, Morr.) relatum, nobis videtur speciem pluribus notis distinctam indicare.

*ORTOGIESIA*, *Regel, Gartenfl.* 1867, 193, t. 547, species a nobis non visa, ex caractere dato a *Portea* non differre videtur nisi inflorescentia (juniore) abbreviata inter folia sessili.

10. *Rhodostachys*, *Philippi in Linnæa*, xxix. 57, xxx. 201. (*Ruckia*, *Regel, Gartenfl.* 1868, 69, t. 571).—Sepala supra perianthii basin seu ovarii apicem cyathiformem distincta, erecta, valde imbricata. Petala libera, imbricata, basi sæpius intus glandulis v. squamellis 2 parvis instructa. Stamina libera, filamentis filiformibus; antheræ breviter v. longiuscule lineares, petala subæquantes v. breviter exsertæ. Ovarium inferum, ovulis in loculis  $\infty$  horizontalibus v. pendulis; stylus filiformis, stigmatibus vix tortis. Fructus . . .—Folia rosulata, longa, linearia, rigidula, spinuloso-serrata. Capitulum terminale, intra folia floralia numerosa involucrentia sessile. Flores in receptaculo hemisphærico v. breviter conico subsessiles, singuli bractea ovata sæpius ciliato-denticulata stipati.

Species editæ 6 v. 7, Chile Colombiæ v. Guianæ incolæ. *Rudge, Pl. Gui.* t. 49. *Lin l. in Part. Fl. Gard.* ii. t. 65. *C. Gay, Fl. Chil.* t. 67 (omnes sub *Bromelia*), quarum nobis adsunt 3, *Bromelia bicolor*, Ruiz et Pav.; Morren, Belg. Hort. 1873, t. 14, foliis anguste linearibus floralibus basi rubris cæterum viridibus; *Hecktia pitcairniæfolia*, Verlot in Rev. Hort. 1868, 211, cum ic. foliis ut in *R. bicolor*, basi rubris cæterum viridibus sed latioribus, et *Bromelia Joinvillei*, Morren in Belg. Hort. 1876, t. 10, foliis latioribus, floralibus plerisque viridibus, nonnullis intimis undique rubris v. basi viridibus superne rubris. *Bromelia longifolia*, Rudge, cæteræque nobis non nisi ic. nibus et descriptionibus notæ sunt.

11. *Ananas*, *Adans. Fam.* ii. 67. (*Ananassa*, *Lindl. Bot. Reg. sub t.* 1068, et t. 1081.)—Sepala supra ovarium libera, lata, acuminata, arcuata, leviter imbricata. Petala erecta, leviter imbricata, basi mediantibus filamentis leviter coherentia, cæterum libera, intus basi sæpius squamellis 2 minimis instructa. Stamina 3, petalis alterna, libera v. iis lateraliter leviter coherentia, 3 petalis opposita iisque basi adnata; antheræ lineares, corolla breviores. Ovarium inferum, carnosum, rhachi crassa lata basi adnatum v. omnino immersum, ovulis in loculis pluribus horizontalibus v. pendulis; stylus filiformis, stigmatibus linearibus rectis v. leviter incurvis. Fructus carnosus, ima basi v. omnino receptaculo carnosus immersus; omnes ejusdem inflorescentiæ cum bracteis et rhachi v. receptaculo in syncarpium strobiliforme connati, v. si partim decidui, basin relinquentes persistentem. Semina pauca, ovoidea v. oblonga, compressiuscula, testa tenuiter coriacea appressa; embryo juxta hilum parvus, intra albumen intrusus v. semi-immersus.—Caulis brevis, densæ v. parce foliatus, foliis longis spinoso-serratis. Inflorescentia terminalis, strobiliformis, globosa ovoidea v. oblonga, densissima, floribus quaquaversis sub quaque bractea solitariis sessilibus v. immersis; bracteæ apice tantum plus minus prominentes, sæpe spinuloso-dentatæ; surmæ vacuæ, plus minus foliaceo-dilatate, haud raro comam viviparam formant.

Species 5 v. 6, Americæ tropicæ incolæ, v., si formas cultas *A. sativæ* pro speciebus distinctis descriptas retineas, usque ad 8 v. 10 aestimantur. *Ram. et Schult. Syst.* vii. 1283. *Morren, Belg. Hort.* 1872, t. 17, 19; 1878, 140, t. 4, 5. *DC. in Mem. Soc. Phys. Gen.* vii. 161, cum tabb. 2. *Bot. Mag.* t. 1554, 5025.

Auctores plures genus limitant ad *A. sativum*, Schult.; hæc species, originis adhuc incertæ, a temporibus antiquissimis culta et varietates numerosas præbens, insignis est syncarpio maximo succulentofere semper coma coronato. Formæ sic dictæ in America australi sylvestres, v. ab incolis pro fibra cultæ, syncarpio multo minore minusque succoso nec eduli gaudent. Ab his genericè distinguere nequimus ACANTHOSTACHYUM, *Link. Klotzsch et Otto, Ic. Pl. Rar.* i. 24, t. 9, strobilo minore angustiore vix comato, sed florum structura omnino *A. sativi*, et bractææ, basi cum fructu connatæ, in receptaculo cum pericarpio basi persistunt post lapsum partis maximæ fructus. *Æchmea Veitchii*, *Baker in Bot. Mag.* t. 6329; *Morren, Belg. Hort.* 1878, t. 9 (*Chevaliera*), characteres præbet *Acanthostachyos*, sed caulis seu scapus florifer præter squamas vaginantes aphyllus est. *CHEVALIERA*, *Gaudich. Voy. Bonit. Bot.* t. 61, 62, species 2 Brasilienses a nobis non visæ, ex iconibus multo melius ad *Ananas* quam ad *Æchmeam* referendæ videntur.

12. *Æchmea*, *Ruiz et Pav. Prod.* 47, t. 8; *Syst. Veg.* 83; *Fl. Per. et Chil.* iii. 37, t. 264.—Sepala supra ovarium libera, sæpius lata, valde imbricata. Petala libera v. basi median-tibus filamentis leviter cohærentia, erecta v. apice breviter patentia, intus basi sæpius squamulis 2 instructa. Stamina 3 petalis alterna libera v. iis leviter cohærentia, 3 petalis opposita iisque basi adnata; antheræ lineares, corolla breviores. Ovarium inferum, sæpius 3-quetrum et basi attenuatum, loculis ∞-rarius 2-3-ovulatis; stylus filiformis, stigmatibus linearibus v. oblique dilatatis plus minus spiraliter convolutis. Fructus brevis, sepalis coronatus, carnosulus v. siccus, indehiscens v. a latere fissus. Semina numerosa, parva nunc minima, oblonga v. fere linearia, recta v. incurva, teretia v. angulata, nuda v. appendice parva cellulosa coronata; embryo juxta hilum sæpius longe acuminatus non v. vix albumini intrusus.—Herbæ sæpius brevicaules, foliis confertis v. rosulatis longis rigidis plus minus spinuloso-serratis. Pedunculus (excepta *Æ. paniculata*) terminalis, floribus nunc in spica simplici quaquaversis, nunc in ramulis paniculæ sæpius angustè distichis v. quaquaversis, intra bractæas sessilibus v. rarius pedicellatis. Bractææ sæpius parvæ, rarius flores subsuperantes imbricatæque.

Species ad 60, Americæ australis incolæ. *Baker in Trim. Journ. Bot.* 1879, 129 (excl. sp. n. 11 ad 13 quas ad *Ananas* referimus). *Waura in Österr. Bot. Zeitschr.* 1880, 116.

Genus in sectiones sequentes pro maxima parte a Bakerianis mutuatas dividimus:—

1. *Amphilepis*. Spicæ plures, simplices v. rarius 2-fidæ, compressæ, secus pedunculum seu paniculæ axin sessiles v. pedunculatæ. Bractææ sub floribus ovatæ, complicatæ, rigidæ, striatæ, bifariam imbricatæ; bracteolæ minimæ. Species 3, Indiæ occidentalis incolæ.

2. *Platyæchmea*. Spicæ in paniculam simplicem dispositæ. Bractææ bifariæ, sub floribus nunc membranacæ latissimæ laxæ subullatæ, nunc latæ striatæ subcarinatæ, v. fere cartilaginæ complicato-carinatæ enerves. Sepala oblonga, mucronata. *Lindl. in Part. Fl. Gard.* iii. t. 80 (*Billbergia*). *Vell. Fl. Flum. Ic.* iii. t. 138 (*Tillandsia*). *Bot. Mag.* t. 5447. *Lemaire, Jard. Fleur.* t. 269. *Morren, Belg. Hort.* 1881, t. 13.

3. *Pironneaua*. Spicæ breves, in panicula simplici sessiles v. pedunculatæ. Bractææ quaquaversæ, confertæ, imbricatæ. *Salisb. Parad. Lond.* t. 40. *Reichb. Iconogr. Exot.* t. 239, 240. *Lodd. Bot. Cab.* t. 801 (omnes sub *Bromelia*). *Vell. Fl. Flum. Ic.* iii. t. 135 (*Tillandsia*). *Bot. Mag.* t. 5668. *PIRONNEAU*, *Gaudich. in Voy. Bonit. Bot.* t. 63.

4. *Euæchmea*. Panicula longa, laxa, ramulis brevibus paucifloris cymoso-ramosis rarius 1-floris, floribus dissitis, lateralibus sessilibus, terminali v. solitario infra bracteam pedicellato. Bractææ cyathiformes, cuspidatæ. Huc species typica Floræ Peruvianæ, *Æ. paniculata* *Ruiz et Pav.* t. 264, scapo laterali, et *Æ. platynema* (*Pironneaua*, *Gaud.* in *Voy. Bonit. Bot.* t. 64), quoad inflorescentiam et bractæas *Æ. paniculatæ* conformis, sed pedunculus centralis et flores minores.

5. *Lamprococcus*. Panicula longa, laxa, ramulis brevibus v. laxifloris *Euæchmæ*, sed bractææ minutæ v. 0, et flores interdum parvi. *Rev. Hort.* 1875, 311, cum ic. *Bot. Mag.* t. 4293, 5235. *LAMPROCOCCUS*, *Beer, Bromel.* 103, *Regel, Gartenfl.* t. 539, 694. *Morren, Belg. Hort.* 1861, t. 11. *Waura in Pr. Maxim. Reise, Bot.* 162, t. 28. *ANDROLEPIS*, *Bromgn. in Morren, Cat. Brom. (nomen tantum) ex Morr.*

6. *Hohenbergia*. Spicæ laxiusculæ v. confertifloræ, in panicula simplici dispositæ, floribus sessilibus quaquaversis sæpius parvulis. Bractæe parvæ nec imbricatæ. *Pöpp. et Endl. Nov. Gen. et Sp. t. 159. Knowles et Westc. Fl. Cab. t. 134. Bot. Mag. t. 3186, et t. 3304 (Billbergia). Baker in Saund. Ref. Bot. t. 284. Morren, Belg. Hortic. 1862, 97, cum ic. (Hoplophytum). HOHENBERGIA, Schult. Syst. vii. 71, 1251. Morren, Belg. Hortic. 1879, t. 18.*

*H. Legrelliana*, Baker in Saund. Ref. Bot. t. 285, est *Portea* species.

7. *Pothuava*. Spica simplex, densa, floribus numerosis sessilibus quaquaversis. Bractæe sæpius parvæ, interdum membranaceæ cyathiformes, vix tamen imbricatæ. *Bot. Mag. t. 4832, 6441. Saund. Ref. Bot. t. 286 (Hohenbergia). Hook. Exot. Fl. t. 143 (Bromelia). ПОТУАВА, Gaudich. Voy. Bonite, Bot. 116, 117. HOPILOPHYTUM, Morren, Belg. Hortic. 1865, cum ic. absque num.; 1873, t. 5.*

Ad *Pothuavam* etiam referendum est *MACROCHORDIUM, De Vriese, Beer, Bromel. 145*, bracteis membranaceis cyathiformibus v. angustis. Huc *Æ. bromeliæfolia*, Baker (*Tillandsia bromeliæfolia*, Rudge, Pl. Gui. t. 50; *Bromelia melanantha*, Bot. Reg. t. 766); *Macrochordium luteum*, Regel Gartenfl. t. 544, affinesque. *ECHINOSTACHYS, Brongn. in Planch. Hort. Donat. 25; Bot. Mag. t. 6321. Morren, Belg. Hortic. 1880, t. 13 (Æchmea)*, bracteis mucronato-subaristatis, est pariter *Æchmea* species.

*ANDROLEPIS, Brongn. ex Houlet in Rev. Hortic. 1870, 12*, species nobis ignota, a C. Kochio, Wochenschr. iv. 190, ad *Pothuavam* refertur.

8. ? *Pectinaria*. Inflorescentia densa, breviter pyramidata v. capituliformis sed ramosa, bracteis imbricatis pectinato-serratis. Huc *Æ. fasciata*, Bot. Reg. t. 1130, Bot. Mag. t. 4883, Fl. des Serres, t. 207 (omnes sub *Billbergia*); *Æ. pectinata*, Baker, et *Æ. Burchellii*, Baker, quoad specimen n. 3487, species omnes quoad characteres revidendæ.

Specimen Burchellianum n. 3323 (*Bromelia aurantiaca*, Burch.), a Bakero in *Æ. Burchellii* inclusum, est, fide Morrenii, *Nidularii* species (ad *Karatas* referenda).

9. ? *Canistrum*. Inflorescentia densa fere capituliformis, bracteis exterioribus membranaceis amplis involucratis. Flores omnino *Æchmea* apparent etsi habitus alienus. Species enumerat Baker 3. *CANISTRUM, Morren, Belg. Hortic. 1873, 257, t. 15; 1874, 376, t. 16; 1879, t. 13, 14.*

13. *Arsoeococcus, Brongn. in Ann. Sc. Nat. ser. 2, xv. 370.*—Sepala supra ovarium libera, minima, ovata, membranacea, imbricata. Petala sepalis paullo longiora, libera, esquamata. Stamina libera, æqualia; antheræ dorsifixæ, petalis paullo breviores. Ovarium inferum, ovulis in quoque loculo 1-2, collateraliter pendulis; stylus filiformis, stigmatibus brevibus erectis. Fructus late ovoideus, subcarnosus, indehiscens. Semina pauca, interdum abortu solitaria, oblonga, testa nigra; embryo juxta hilum parvus, intra albumen farinosum parum intrusus.—Caules e rhizomate subrepente erecti, basi vaginis foliorum obtecti; vaginæ inferiores nudæ, superiores lamina longa angusta parce spinoso-serrata instructæ. Panicula terminalis, pedunculata, ampla, laxa, cymoso-composita. Bractæe secus ramos flexuosos distantes, parvæ. Flores minuti, sub bracteis sessiles.

Species 1, Brasiliæ borealis et Guianæ incola.

14. *Billbergia, Thunb. Dec. Pl. Bras. 30, ex Schult.*—Sepala supra ovarium libera, erecta, leviter imbricata. Petala elongata, libera, nunc anguste linearia, erecta v. apice parum dilatata patentiaque v. demum revoluta, basi sæpius squamulis 2 integris lacerisve instructa. Stamina intra petala affixa, libera, v. 3 petalis opposita iis plus minus adnata, filamentis filiformibus; antheræ versatiles, petalis vix breviores v. subexsertæ. Ovarium inferum, ovulis in loculis numerosis horizontalibus v. pendulis; stylus filiformis, stigmatibus linearibus incurvis subtortis. Fructus . . .—Folia conferta, patentia, spinoso-serrata. Panicula terminalis, dense thyrsoidæa v. laxior, haud raro ad racemum reducta. Flores sessiles v. breviter pedicellati, quam in *Æchmea* longiores, intra bractæas solitarii v. in ramulo brevi 2-3-ni. Inflorescentia variat erecta v. recurvo-pendula.

Species ad 20, Americæ tropicæ incolæ. *Schult. Syst. vii. 1254 (excl. sp.). Walp. Ann. vi. 72. Wawra in Österr. Bot. Zeitschr. 1880, 115. Pöpp. et Endl. Nov. Gen. et Sp. t. 157. Hook. Exot. Fl. t. 41, 42. Bot. Mag. t. 1732 (utr. sub *Bromelia*), t. 4756, 4835, 5090, 5114, 6342, 6432. Bot. Reg. t. 203, 344 (*Bromelia*), t. 1068. Lodd. Bot. Cab. t. 76 (*Tillandsia*). Morren, Belg. Hortic. 1866,*

t. 11; 1871, t. 1, 14; 1872, t. 1; 1873, t. 1, 16, 17; 1874, t. 1, 8; 1875, t. 1, 13; 1876, t. 1, 15, 20, 22; 1877, t. 3; 1878, t. 1; 1880, t. 8; 1881, t. 5. Colla in *Mem. Acad. Torin.* xxvi. t. 19 (*Pourretia*).

*HELICODEA*, Lemaire, *Illustr. Hort.* xi. t. 421, est *B. zebrina*, Lindl.; Lodd. Bot. Cab. t. 1912; Morren, Belg. Hort. 1872, t. 4; Bot. Mag. t. 2686 (*Bromelia*), species insignis inflorescentiæ indumento furfuraceo, sepalis latioribus, petalis per anthesin insigniter revolutis, antheris angustissimis linearibus fere basifixis. Fructus in hac crassus, ovoides, rugosus, sulcatus, fissuris lateralibus irregulariter dehiscens, in cæteris speciebus nobis ignotus, nec quantum scimus adhuc descriptus.

*LIBONIA*, Lemaire, *Illustr. Hort.* ii. t. 48, est *Billbergia marmorata*, Lemaire l.c. *JONGHEA*, Lemaire, *Jard. Fleur.* ii. t. 180, est *Billbergia splendida*, Lemaire l.c., genus utrumque ab auctore dubie propositum.

15. *Quesnelia*, Gaudich. *Voy. Bonite, Bot.* t. 54. (Lievena, *Regel, Gartenfl.* 1880, 289, t. 1024.)—Sepala supra ovarium libera, ovata, imbricata. Petala libera, angusta, apice in laminam patentem dilatata, basi intus squamellis 2 denticulatis instructa. Stamina 3, petalis alterna, libera, 3 petalis opposita iis basi adnata; antheræ oblongo-lineares, prope basin dorsifixæ, petalis breviores. Ovarium inferum, supra loculos breviter cupulatum; stylus filiformis, stigmatibus in massam oblongam spiraliter contortis. Fructus . . .—Folia conferta, longa, spinuloso-serrata. Pedunculus terminalis, elatus, squamis spathaceis obtectus. Inflorescentia strobiliformis, simplex, ovoidea v. oblonga, crassa. Bractæ quaquaversæ, laxe imbricatæ, membranacæ, coloratæ, sub apice utroque latere transversim plicatæ. Flores sub quaque bractea solitarii, apice breviter exserti.

Species 3 v. 4? Brasilienses. Morren, Belg. Hort. 1881, t. 4 (18?). *Fl. des Serres*, t. 1028 (*Billbergia*). *Wawra in Æsterr. Bot. Zeitschr.* 1880, 149, quoad species inflorescentia strobiliformi; Wawra tamen ad *Quesneliam* ducit species omnes *Billbergiæ* quarum stamina petalis opposita iis basi adnata, character ut videtur interdum valde incertus.

## TRIBUS II. PITCAIRNIÆ.

16. *Brocchinia*, Schult. *Syst.* vii. 70, 1250.—Sepala petaloidea, oblonga, erecta. Petala sepalis subsimilia nisi paullo latiora, basi contracta, intus nuda. Stamina filamenta brevia, libera v. basi cum calyce corollaque breviter connata. Ovarium fere inferum, brevi tantum parte intra florem prominens, ∞-ovulatum; stylus brevis, 3-gonus, stigmatibus brevibus erectis v. patentibus. Capsula clavata, subcylindracea v. obtuse 3-quetra, dura, apice breviter septicide 3-valvis. Semina ascendentia, imbricata, oblonga, compressa, apice basique in appendicem ensiformem membranaceam v. crassiusculam producta.—Folia rosulata v. erecta, late ligulata, abrupte acuminata acumine subcalloso, margine integerrima. Panícula terminalis, ampla, pyramidalis, furfuraceo-scabra v. glabra. Bractæ sub ramis spathacæ, acumine interdum pungente, superiores parvæ. Flores secus ramos fasciculati v. sparsi, parvi nunc minimi.

Species 3, typica Brasiliensis, a nobis non visa, 2 Guianenses, inclusa *Cordyline micrantha*, Baker in Gard. Chron. 1880, ii. 243.

*B. Plumieri*, Griseb. Fl. Brit. W. Ind. 593, characteres Schultzeanos *Brocchinie* non præbet. Specimina Imrayana ad *Pitcairniæ* pertinere videntur.

17. *Pitcairnia*, Lhér. *Sert. Angl.* 7, t. 11. (Hepetis, Sw. *Prod. Fl. Ind. Occid.* 56.)—Sepala libera, lanceolata, acuta, imbricata, rigidula. Petala libera, unguiculata, erecta v. apice patentia, basi intus sæpius squamellis 2 minutis instructa. Stamina intra petala affixa, libera, filamentis filiformibus v. complanatis; antheræ lineares, juxta basin dorsifixæ. Ovarium lata basi affixum v. toro plus minus immersum, superne v. fere omnino liberum, ovulis in loculis numerosis ascendentibus; stylus elongatus filiformis, stigmatibus linearibus spiraliter tortis. Capsula septicide 3-valvis. Semina numerosa, testa nucleo lineari v. parvulo adnata, in speciebus plerisque apice basique in appendiculam linearem sæpius setiformem producta, appendicula tamen in sect. *Pepinia* rara v. 0; embryo parvus, in albumine farinaceo leviter intrusus.—Folia nunc ad basin caulis brevis,

nunc ad apicem caulis plus minus elongati, conferta v. rosulata, rigida et spinoso-serrata v. tenuiora integerrimaque. Racemus terminalis, simplex v. parum ramosus, interdum in spicam confertus, elongatus v. ad fasciculum pauciflorum reductus. Bracteæ nunc minimæ, nunc calycem sequantes v. amplæ, patentes v. interdum laxè imbricatæ, herbacæ v. coloratæ. Flores pedicellati v. subsessiles, sæpe speciosi.

Species ad 70, Americæ tropicæ incolæ, *Baker in Trim. Journ. Bot.* 1881, 225, in sectiones sequentes a Bakerianis parum mutatas distribuendæ:—

1. *Cephalopitcairnia*. Flores in caule brevissimo intra folia imbricata v. rosulato-patentia sessiles. *Bot. Mag.* t. 4591. *Bot. Reg.* 1840, t. 71 (*Puya*). *Lindl. in Part. Fl. Gard.* iii. t. 86 (*Puya*). *Lemaire, Jard. Fleur.* t. 291.

In *P. heterophylla*, Beer, caulis fere bulbiformis, folia alia imbricata breviter simpliciter spinescentia v. spinoso-serrata, alia superiora elongata integerrima. In specie Colombiana ei affini, scapus e centro foliorum breviter exsertus, capitulum pauciflorum ferens. In *P. tabulaformis*, Lindl.; Morren, Belg. Hort. 1862, 257, cum ic.; Lemaire, Illustr. Hort. t. 344, folia omnia latiuscula, plano-patentia, conferta, floribus in centro rosulæ sat numerosis.

2. *Eupitcairnia*. Pedunculus plus minus elongatus, racemum simplicem v. rarius ramosum ferens. Bracteæ sæpius parvulæ. Semina utrinque subetaceo-appendiculata. *Jacq. f. Ecl.* t. 79. *Red. Lil.* t. 73 ad 76. *Ruiz et Pav. Fl. Per. et Chil.* t. 258 ad 260. *Presl, Rel. Hænk.* t. 23 (*Pourretia*). *Wawra in Pr. Maxim. Reise, Bot.* t. 27. *Andr. Bot. Rep.* t. 249, 322. *Link, Kl. et Otto, Ic. Pl. Rar.* t. 25. *Bot. Mag.* t. 824, 856, 1416, 1462, 1547, 2657, 2813, 4540, 4709, 4770, 4775, 5356, 6318, 6480, 6600, 6606. *Bot. Reg.* t. 1011, 1069, 1092. *Lemaire, Jard. Fleur.* t. 127, 407. *Fl. des Serres*, t. 844, 847. *Regel, Gartenfl.* t. 53, 557, 781. *Illustr. Hort.* xx. t. 139. *Rev. Hort.* 1875, 251, cum ic. ORTHOPETALUM, Beer, *Brom.* 70.

COCHLIOPETALUM, Beer, *Brom.* 68, species paucas continet, petalis demum insigniter revolutis. *Bot. Mag.* t. 2411, 2642. *Lodd. Bot. Cab.* t. 722. *Regel, Gartenfl.* t. 114. *Illustr. Hort.* xxii. t. 205.

3. *Neumannia*. Racemus seu potius spica elongata v. rarius brevis densa v. interrupta. Bracteæ ovatæ v. lanceolatæ, amplæ, calycem obtegentes, imbricatæ v. rarius dissitæ. *Link, Kl. et Otto, Ic. Pl. Rar.* t. 1. *Bot. Mag.* t. 4241, 4309, 4696, 4705, 5225, 6535. *Regel, Gartenfl.* t. 113. *Fl. des Serres*, t. 162, 253, 254, 915. *Rev. Hort.* 1881, 390, cum ic. NEUMANNIA, *Brongn. in Ann. Sc. Nat. ser.* 2, xv. 369. PHLOMOSTACHYS, Beer, *Brom.* 45. LAMPROCONUS, *Lemaire, Jard. Fleur.* ii. sub t. 127.

4. *Pepinia*. Semina nuda v. apice basique v. circumcirca ala brevi plana membranacea appendiculata. PEPINIA, *Brongn. ex Illustr. Hort.* xvii. 32, t. 5. Species quoad inflorescentiam in series 2 distribuendæ: a. Racemus densus v. longiusculus inter folia ad apicem caulis conferta sessilis. Huc *P. punicea*, Lindl., et *P. aphelandraeflora*, Lemaire. b. Racemus longus laxus interdum ramosus, floribus longe pedicellatis. Folia ad basin subbulbiformem caulis conferta. Huc *P. nuda* et *P. consimilis*, Baker, *P. ferruginea*, *Ruiz et Pav.*; *Bot. Mag.* t. 5234 (*P. asterotricha*, *Pæpp. et Endl. Nov. Gen. et Sp.* t. 158. MELINONIA, *Brongn. in Morr. Cat. Brom. Jard. Liège*, 1873, nomen tantum), et *P. cærulea* (*Puya cærulea*, *Miers in Lindl. Bot. Reg.* 1840, t. 11).

18. *Puya*, *Molin. Hist. Chil. ed. Angl.* i. 130, 288, char. valde manco. (*Pourretia*, *Ruiz et Pav. Prod.* 46, t. 7; *Syst. Veg.* 80; *Fl. Per. et Chil.* iii. 33, t. 256, 257.)—Sepala libera, oblonga v. lanceolata, erecta, leviter imbricata. Petala libera, basi in tubum latum conniventia, superne subæqualiter patentia, latiuscula. Stamina libera, filamentis filiformibus; antheræ oblongæ v. lineares, dorsifixæ. Ovarium superum, lata basi affixum, 3-loculare, ovulis numerosis; stylus elongatus, stigmatibus brevibus subpatentibus. Capsula oblonga v. pyramidata, profunde 3-sulca, loculicide 3-valvis. Semina numerosa, compressa, ala membranacea cincta, placentis affixa primum in axi connatis, capsula dehiscente inter se solvendis et valvarum centro valde prominenti adhærentibus.—Folia nunc ad basin caulis, nunc ad apicem caulis elati crassi elongata, conferta, spinoso-serrata. Racemus terminalis, simplex v. pyramidato-ramosus. Flores sub bracteis solitarii, speciosi.

Species 3 v. 4, Peruvianæ v. Chilenses. *Pæpp. et Endl. Nov. Gen. et Sp.* t. 156. *Gaudich. Voy. Bonite, Bot.* t. 41 ad 44. *Fisch. Serp. Petrop.* t. 19. *Bot. Mag.* t. 4715, 5732. *Regel, Gartenfl.* t. 225.

*P. virescens*, Hook. *Bot. Mag.* t. 4991, cujus specimen non vidimus, a Kochio ad *Pitcairnia* relata, est ex Morren *Schlumbergeria* species.

19. *Encholirion*, Mart. in *Schult. Syst.* vii. 68, 1233. (*Prionophyllum*, C. Koch, *App.* iv., *Sem. Hort. Berol.* 1873, 3.)—Sepala libera, brevina, ovata, imbricata. Petala multo longiora, libera, angusta, erecta v. a basi subpatentia. Stamina libera, filamentis filiformibus; antheræ dorsifixæ. Ovarium superum, lata basi affixum, elongatum, in stylum brevem productum, loculis  $\infty$ -ovulatis; stigmata linearia, erecta, subtorta. Capsula anguste 3-gona, in valvas introrsum clausas seu carpella distincta septicide dehiscens. Semina numerosa, parva, brevissime stipitata, apice inappendiculata.—Folia rosulata, longa, angusta, rigida, valide spinuloso-serrata. Racemus terminalis, simplex v. parce ramosus, longus, dense floribundus, pedicellis fasciculatis quaquaversis, bracteis minimis.

Species ad 6, Brasilienses. Præter speciem typicam *E. spectabile*, Mart., huc pertinere videntur, *Dyckia montevidensis*, et *D. catharinensis*, C. Koch.

*Encholirion Augustæ*, Schomb., est *Caraguatæ* species.

20. *Dyckia*, *Schult. Syst.* vii. 65, 1194.—Sepala libera, ovata, imbricata. Petala longiora, basi angustata, superne latere uno valde dilatata, convoluto-imbricata, demum patentia. Stamina libera v. basi cum petalis breviter connata, filamentis filiformibus v. crassiusculis; antheræ prope basin affixæ. Ovarium superum, lata basi affixum, 3-quetrum, elongato-pyramidatum, loculis  $\infty$ -ovulatis; stylus subnullus, stigmatibus linearibus subtortis. Capsula 3-sulca, septicide 3-valvis, valvis alte 2-fidis. Semina (in *D. rariflora*) numerosa, plana, horizontaliter superposita, margine incrassato a nucleo solubili uno latere in membranam parvam attenuato; embryo basi ex albumine prominens, acumine secus marginem extenso.—Folia dense rosulata, crassiuscula, spinuloso-serrata. Spica in scapo (an semper?) axillari elongata, simplex v. ramosa, floribus sessilibus dissitis bractea parva stipatis.

Species ad 6, Brasiliæ. *Bot. Mag.* t. 3449. *Bot. Reg.* t. 1782. *Lemaire, Jard. Fleur.* t. 224. *Saund. Ref. Bot.* t. 236.

In *D. rariflora*, Schult., stamina basi cum petalis in cupulam connata, in cæteris speciebus a basi libera. In *D. frigida*, Hook. f. *Bot. Mag.* t. 6294 (*GABRIELIA encholirioides*, Gaudich. *Voy. Bonite*, *Bot.* t. 115), filamenta crassiuscula, libera. Huic etiam valde affinis est ex descriptione, *CORTEN-DORFIA florida*, Schult. *Syst.* vii. 64, 1193. *NAVIA*, Schult. l. c. 65, 1195, ex descriptione includit species 2 *Dyckie* fructiferae. Fructum speciei typicæ *Dyckie* auctor non vidit.

21. *Hechtia*, *Klotzsch ex Zucc. in Abhandl. Akad. Wiss. Münch.* iii. 239, t. 6.—Flores abortu dioici. Sepala libera, ovata, imbricata. Petala paullo longiora, breviter connata, in limbum subcampanulatum patentia. Stamina in flore ♂, staminodia in flore ♀, ima basi corollæ adnata, filamentis cæterum liberis, corolla parum breviora; antheræ oblongæ, prope basin affixæ. Ovarium in flore ♀ pyramidato-3-quetrum, lata basi affixum v. toro breviter immersum, 3-loculare,  $\infty$ -ovulatum; stylus brevis nunc brevissimus, stigmatibus 3 linearibus; ovarii rudimentum in flore ♂ sæpe stylos 3 nudos filiformes fert. Capsula profunde 3-sulca, fere 3-partita, septicide 3-valvis, valvis subclausis (v. carpellis distinctis), marginibus tantum in axi coherentibus demum solvendis integris. Semina subsessilia, linearia, ascendencia, testa appressa plerumque ultra nucleum in appendicem brevem producta.—Folia dense rosulata, longa, rigida, valide spinoso-dentata. Pedunculus terminalis, prælongus, simplex v. parce ramosus, floribus secus rhachin glomeratis parvulis, glomerulis dissitis sessilibus hinc inde in spicas breves abeuntibus. Flores ♂ foemineis similes nisi paullo minores.

Species 2 v. 3, Mexicanæ. *H. Ghiesbreghtii*, Lemaire, *Illustr. Hort.* x. t. 378, *Bot. Mag.* t. 5842, ab *H. glomerata*, Zucc., non differre videtur, et auctor ipse ad eam reduxit *Dasyllirion pitcairniaefolium* ab eo prius editum. *H. cordylinoides*, Baker in *Bot. Mag.* t. 6554, est species inflorescentia laxiore ramosiore et floribus minoribus (♂ solis adhuc notis) insignis. *H. stenopetala*, Kl., nobis ignota est. *H. pitcairniaefolia*, Verl., est *Rhodostachys* species.

## TRIBUS III. TILLANDSIÆ.

22. *Sedirea*, André in *Bull. Soc. Bot. Fr.* xxiv. 167.—Sepala ad medium in tubum cylindraceum connata, superne valde dilatata, in alabastro convoluta-imbricata, per anthesin patentia. Petala intra calycem angustissima, inferne plus minus coherentia, laminis e calyce exsertis ovatis patentibus. Stamina “tubo adnata, inclusa, dorsifixæ, antheris sagittatis connatis” (André). Ovarium liberum, 3-loculare, placentis axilibus, ovulis numerosis; stylus filiformis, apice clavatus, stigmatibus 3 brevibus. Capsula 3-gona, coriacea (*Tillandsiæ*). Semina angusta, numerosa, erecta, basi in stipitem demum in fila fissum pappiformem producta.—Caules ab arboribus pendentes, 1-3-pedales et ultra, usque ad inflorescentiam foliati, basi radicales et vaginis emarcidis obiecti. Folia linearia, caricina v. graminea, basi in vaginam brevem dilatata. Flores speciosi, ad apicem caulis pauci, ad axillam bractearum coloratarum solitarii, breviter pedicellati, flavescentes v. virescentes, folio florali ad basin inflorescentiæ spathaceo-coloratæ.

Species 3, Andium Colombiæ et Ecuadoriæ incolæ. Specimina typica non vidimus, duo tamen nobis adsunt evidenter iis proxime affinia, uno in provincia Antioquia a Kalbreyero, altero ad flumen Pastasia in Ecuadoria a Pearceo lecto. In floribus examinatis stamina jam delapsa fuerunt. Genus perianthii indole ab omnibus facillime distinctum.

23. *Caraguata*, Lindl. *Bot. Reg. sub t.* 1068.—Sepala erecta, rigidula, valde imbricata, basi sæpius breviter connata, cæterum libera. Petala alte in tubum connata, laminis liberis patentibus. Stamina tubo fere omnino adnata, antheræ ad apicem tubi fere sessiles, erectæ, liberæ. Ovarium liberum, lata basi affixum, loculis  $\infty$ -ovulatis; stylus filiformis, stigmatibus breviter linearibus erectis tortis. Capsula 3-gona (*Tillandsiæ*), septicide dehiscens, valvis subclausis. Semina angusta, numerosa, basi in stipitem longum demum in fila fissum subpappiformem producta.—Folia integerrima, inferiora conferta, basi crassa lata concavaque, superiora minora angustiora, summa sub inflorescentia interdum majora involucrentia. Inflorescentia terminalis, densa, capituliformis, v. plus minus elongata. Flores sub quaque bractea  $\infty$ , conferti.

Species notæ 5, Indiæ occidentalis, Americæ centralis v. Colombiæ incolæ.

In specie typica *C. ligulata*, Lindl., inflorescentia dense globosa v. fere depressa, copiose involucrentia; specimina nostra fructifera, sed ex Jacq. Stirp. Amer. 92, t. 62, 3-pollicaris est; in *C. Zahnii*, Hook. f. Bot. Mag. t. 6059, Morren, Belg. Hort. 1873, t. 19, flores multo minores et inflorescentia laxior exinvolucrenta. *C. splendens*, Planch. in Fl. des Serres, t. 1091, videtur *C. ligulata* affinis sed bractearum involucrentes minores magis coloratæ et flores indescripti. Planta Cubensis, Wright, n. 678, a Grisebachio ad *C. ligulatam* relata, est certe diversa et forte *Tillandsiæ* species. In *C. Augustæ* (*Encholirion Augustæ*, Schomb.), ex speciminibus Rob. Schomb. n. 687, Rich. Schomb. n. 1021, inflorescentia quam in præcedentibus paullo longior, bracteis laxiusculis, inferioribus acuminatis; in *C. musaica*, André in Illustr. Hortie. xxiv. t. 268 (Massangha, Morren in Belg. Hortie. 1877, 59, 199, t. 8), scapus squamatus elongatus, bractearum exteriores coloratæ florentibus non longiores, sed characteres florales omnino *Caraguatæ*; in *C. Vanvolxemii*, André in Illustr. Hortie. xxv. t. 326, inflorescentia elongata, bracteis coloratis subdissitis.

24. ? *Schlumbergeria*, Morren, Belg. Hortie. 1878, 311; 1879, 225, 360, t. 19.—Sepala erecta, convoluta-imbricata, libera. Petala alte in tubum connata, laminis liberis patentibus v. demum reflexis. Stamina tubo adnata, filamentis apice breviter liberis recurvis; antheræ dorsifixæ. Ovarium liberum, lata basi affixum, loculis  $\infty$ -ovulatis; stylus filiformis, stigmatibus recurvis crassiusculis non tortis. Capsula 3-gona (*Tillandsiæ*). Semina numerosa, basi in stipitem longum demum in fila fissum subpappiformem producta.—Folia rosulata, integerrima, longe ligulata. Flores mediocres v. majusculi, in spica ramosa laxiuscule dispositi; bractearum calyce breviores, bracteolæ spathaceæ calycem amplectentes. (*Char. ex Morren.*)

Species 2, Austro-Americaniæ, a nobis non visæ. Morren speciei typicæ adjunxit *Puyam virescentem*, Hook. Bot. Mag. t. 4991, cujus specimina nobis desunt. Genus verisimiliter cum *Caraguata* jungendum.

25. *Guzmania*, Ruiz et Pav. *Fl. Per et Chil.* iii. 37, t. 261.—Sepala erecta, rigidula, imbricata, basi breviter in tubum connata. Petalorum unguis in tubum convoluti v. coherentes, laminæ in limbum campanulatum 3-fidum connatæ. Stamina plus minus petalorum unguibus adhærentia, filamentis apice liberis; antheræ dorsifixæ, lineari-sagittatæ, in anulum circa stigmata intra limbum corollæ connatæ. Ovarium liberum, lata basi affixum, loculis  $\infty$ -ovulatis; stylus filiformis, stigmatibus oblongis v. breviter linearibus erectis. Capsula (*Tillandsia*) 3-gona, septicide dehiscens, valvis subclausis. Semina angusta, numerosa, basi in stipitem longum demum in fila fissum subpappiformem producta.—Caules basi foliati, foliis longis basi dilatatis concavis integerrimis, superioribus ad squamas foliaceas reductis. Spica terminalis, bracteis foliaceis imbricatis, inferioribus viridibus, superioribus coloratis. Flores sub quaque bractea solitarii.

Species 3 v. 4, Americæ tropicæ ab Ecuatoria usque ad Indiam occidentalem incolæ. *Schult. Syst.* vii. 1231. *Hook. Exot. Fl.* t. 163 bis. *Lindl. Collect.* t. 8. *Bot. Mag.* t. 5220. *Lodd. Bot. Cab.* t. 462. *Fl. des Serres*, t. 918, 1089.

In *G. tricolore*, Ruiz et Pav., et in *G. erythrolepide*, Brongn., ei valde affini, spica longa densa bracteis imbricatis quaquaversis; adsunt tamen species 2, altera a Seemannio ad Loja Ecuatoriæ lecta, altera Novo-Granatensis, floribus minoribus paucioribus in spica brevi bracteis distichis.

26. *Tillandsia*, Linn. *Gen.* n. 396. (Renealmia, Linn. *Gen. ed.* 1, 340, non Linn. f.)—Sepala erecta, rigidula, libera, valde imbricata. Petala libera, decidua, unguibus erectis in tubum conniventibus, laminis patentibus. Stamina intra petala affixa, libera, filamentis filiformibus; antheræ oblongo-lineares, erectæ, petalis breviores v. interdum exsertæ. Ovarium superum, lata basi affixum v. rarius toro leviter immersum, ovulis in loculis numerosis ascendentibus; stylus filiformis, stigmatibus brevibus patentibus. Capsula oblonga v. linearis, septicide 3-valvis, exocarpio interdum solubili membranaceo cujusve valvis subplano; valvæ endocarpii v. interdum pericarpii totius marginibus placentiferis inflexis subclausæ, maturitate inter se solvendæ, quasi carpella libera efficiunt. Semina numerosa, longe linearia, ascendentia, nucleo parvo oblongo basi in stipitem longe filiformem producta, testa tenui ultra nucleum breviter, secus stipitem longe, in appendicem linearem maturitate in fila numerosa capillaria fissam producta, hæc fila demum, a basi (hilo minuto) soluta et in nucleum persistentia, pappum simulant; nuclei stipes ipse capillaris intra fila testæ iis similis est; embryo in parte inferiore nuclei sæpius albumine superiore farinaceo longior.—Herbæ epiphyticæ v. saxicolæ, rarissime terrestres; glabræ v. sæpe plus minus furfuracæ. Folia angusta, integerrima. Spica terminalis simplex v. composita, rarius ad pedunculum 1-florum reducta. Bractee variæ. Flores sub quaque bractea solitarii.

Species plus minus notæ fere 120, Americæ tropicæ incolæ, paucæ usque ad Americam borealem extensæ. *Roem. et Schult. Syst.* vii. 1199. *Walp. Ann.* vi. 94. *C. Koch, App.* 4, *Ind. Sem. Hort. Berol.* 1873. *Griseb. in Nachr. K. Gesellsch. Wiss. Göttingen*, 1864, 14. *Wawra in (Esterr. Bot. Zeitschr.* 182, 218 (*Friesia*) et 221 (*Tillandsia*).

Genus sat polymorphum, a variis auctoribus in plura divisum, sed in integrum servatum nature est et bene limitatum. Sectiones sequentes præsertim ad inflorescentiam distinctæ.

1. *Strepsia*. Pedunculi 1-flori, 2-3-bractenti, interdum 2-3-flori, floribus singulis 1-bracteatis. Stylus brevis. Indumentum furfuraceum. *STREPSIA*, *Nutt. Gen.* i. 208, *T. usneoidem* et *T. recurvatam*, includens. Auctores recentiores sectionem ad *T. usneoidem*, Linn., Morren, Belg. *Hortic.* 1877, t. 17, *Bot. Mag.* t. 6309 limitant, foliis secus caulem elongatum pendulum dissitis. *T. recurvata*, *Nutt.*, affinesque, foliis in caule brevi confertis, sectionem seu genus formant *DIAPHORANTHERMA*, *Beer, Brom.* 153. *Baker in Trin. Journ. Bot.* 1878, 236. *Ruiz et Pav. Fl. Per. et Chil.* t. 270, f. b, 271, f. a, c.

2. *Wallisia*, Regel. Spica in pedunculo longiusculo simplex, brevis, bracteis distichis. Petalorum laminæ amplæ, latæ, patentès. Stylus sæpius ut in *Strepsia* brevis. Species paucæ Americæ australis extratropicæ incolæ. *Reg. Gartenfl.* xviii. 193, t. 619. *Illustr. Hortic.* t. 610 (*Friesia*). *Morren, Belg. Hortic.* 1870, t. 12; 1871, t. 20. *PHYTARRHIZA*, *Vis. in Mem. Islit. Venet.* v. 340, cum tab. 1. *Morren, Belg. Hortic.* 1879, t. 20. *AMALIA*, *Hort. Hisp.*, nomen ab Endlichero aliisque memoratum at forte adhuc ineditum. Planta jam anno 1825 in Horto Barcinonensi culta fuit

sub nomine *Amalie acrisincola*, Bahl. In *Wallisia* typicis stylus brevis, stigmatibus brevibus connatis omnino *Streptis*; in *T. ziphioide*, Bot. Mag. t. 5562, Bot. Reg. t. 105, stylus elongatus *Platystachya*, sed spica brevis pauciflora et petalorum laminæ amplæ *Wallisia*. *T. (Wallisia)*, *Hamaleana*, Morren, Belg. Hort. 1870, t. 5, species nobis ignota, ex icone ab hac sectione differt inflorescentia ramosa.

3. *Platystachya*. Spica nunc elongata simplex, nunc sæpius plus minus composita, bracteis distichis imbricatis v. dissitis. Petala elongata, basi intus non squamata, laminis parvulis. Stamina haud raro exserta. Stylus elongatus. Species numerosæ. Jacq. *Stirp. Amer.* t. 63. Hook. *Exot. Fl.* t. 173, 205. Gaudich. *Voy. Bonite* t. 67, 68. Ruiz et Pav. *Fl. Per. et Chil.* t. 265 ad 268, 270 b. Presl, *Rel. Hænk.* t. 24. Saund. *Ref. Bot.* t. 288. Bot. Mag. t. 3275, 4288, 5287. Bot. Reg. t. 749. Morren, Belg. Hort. 1869, t. 18; 1871, t. 12; 1872, t. 23; 1876, t. 14, 16; 1877, t. 15, 18; 1878, t. 18; 1879, t. 6, 10; 1880, t. 15. PLATYSTACHYA, C. Koch ex Beer, *Bromel.* 80, pro parte. ALLARDTIA, Dietr. in *Allgem. Gartenz.* 1852, 241; Antoine in *Esterr. Bot. Zeitschr.* 1878, 56, cum ic. Huc etiam certe referenda fide Morrenii, BONAPARTEA, Ruiz et Pav. *Fl. Per. et Chil.* iii. 38, quoad *B. juncea*m, t. 262 (ACANTHOSPOREA, Spr. Syst. ii. 25), fructus analysi in icone Pavoniana falsa. *B. strobilantha*, Ruiz et Pav. l. c. t. 263, est versimiliter species altera *Tillandsiæ* e sectione *Anoplophyto*.

4. *Vriesia*, a *Platystachya* differt petalis basi intus squamellis 2 instructis. Inflorescentia simplex v. rarius ramosa. Ovarium in specie typica *T. psittacina* et in *T. splendens*, Brongn. (*Vriesia speciosa*, Hook.), toro breviter immersum, in cæteris speciebus lata basi affixum. Gaudich. *Voy. Bonite*, Bot. t. 65, 66, 69, 70. Wavra in Pr. Maxim. *Reise*, Bot. t. 25, 26, 86. Bot. Mag. t. 2841, 4382, 4415, 5108, 6014, 6435. Regel, *Gartenfl.* t. 518, 671. Morren, Belg. Hort. 1870, t. 85; 1874, t. 14; 1875, t. 23; 1878, t. 14; 1880, t. 1, 15. Illustr. Hort. t. 516 (pleræque sub *Vriesia*). VRIESIA, Lindl. Bot. Reg. 1843, t. 10.

*T. (Vriesia) ringens*, Griseb., e Cuba et Panama, insignis est floribus maximis in panicula parce ramosa dissitis paucis, perianthio valde incurvo.

5. *Anoplophytum*, a *Platystachya* differt bracteis in spica brevi v. longiuscula quaquaversis. Bot. Mag. t. 5229, 5246. Morren, Belg. Hort. 1880, t. 11. ANOPOPHYTUM, Beer, Brom. 39. Morren, Belg. Hort. 1878, t. 13; 1881, t. 11.

PITYROPHYLLUM, Beer, Brom. 79, est *T. ionantha*, Planch. in Fl. des Serres, t. 1006, Bot. Mag. t. 5892, species humilis, floribus paucis longis in medio rosulo foliorum sessilibus, stylo longo exserto; cui addidit Morren, Belg. Hort. 1878, t. 11, *T. brachycaulon*, Schlecht.

6. *Conostachya*, Griseb. Inflorescentia ramosa, densa, bracteis magnis imbricatis quaquaversis, exterioribus sæpius foliaceis. Species paucæ, andinæ, iconibus nullis adhuc illustratæ. *T. Malsinei*, Baker, Bot. Mag. t. 6495, ab auctore huc relata, melius a Morrenio inter *Vriesias* inclusa.

27. *Catopsis*, Griseb. in Nachr. Gesellsch. Wiss. Götting. 1844, 10, 21. (Pogospermum, Brongn. in Ann. Sc. Nat. ser. 5, i. 327. Tussacia, Klotzsch ex Beer, Brom. 99, non aliorum.)—Sepala libera, erecta, obtusa, valde imbricata. Petala sepalis vix v. rarius subduplo longiora, libera v. leviter cohærentia, erecta v. apice breviter patentia. Stamina libera, inclusa. Ovarium superum, lata basi affixum, loculis  $\infty$ -ovulatis; stylus brevissimus v. subnullus, stigmatibus erectis patentibus v. recurvis. Capsula (*Tillandsiæ*) septicide dehiscens valvis subclausis. Semina ascendentia, oblonga, basi in stipitem nunc semine breviora rarius longiora attenuata, apice ultra nucleum in appendicem nunc brevissimam nunc longissimam producta, testa basi et ultra nucleum in fila numerosa capillaria fissa pappum simulans; embryo (ubi notus) ad basin albuminis parvus, in albumen farinaceum breviter intrusus.—Folia in caule brevi membranacea v. crassiuscula, integerrima. Spica terminalis, simplex v. sæpius paniculato-ramosa. Flores secus ramulos rectos v. flexuosos sessiles, remoti v. distiche conferti, quam in *Tillandsia* minores, bracteis brevibus.

Species ad 8?, Indiæ occidentalis, Mexici et Andium Americæ australis incolæ. Ruiz et Pav. *Fl. Per. et Chil.* t. 269, 271 b. Hook. *Exot. Fl.* t. 218. Link, Kl. et Otto, Ic. Pl. Rar. t. 40 (omnes sub *Tillandsia*).

Grisebach errore semina pendula descripsit, appendice stipite nuncupata et vice versa. *Tussacia*, Willd., a Boerio citata, ex charactero manco in Schult. Syst. vii. 10, 57, est planta longe aliena sed adhuc dubia.

## ORDO CLXXII. HÆMODORACEÆ.

Endl. Gen. 170. Lindl. Veg. Kingd. 151.

*Flores* hermaphroditi, regulares v. parum irregulares. *Perianthium* corollinum v. extus tomentosum lanatumve, supra v. circa ovarium persistens, v. demum circumscisse deciduum, tubo 0 v. plus minus evolutu, segmenta v. lobi 6, distincte 2-seriata, v. specie uniseriatim induplicato-valvata v. plana leviter imbricata. *Stamina* nunc 6, tubo v. fauci v. lobis ipsis perianthii affixa v. opposita, omnia perfecta v. 1-3 ad staminodia reducta, nunc 3, lobis interioribus opposita; filamenta filiformia, longa v. brevissima, inter se libera, v. ima basi in anulum connata. *Antheræ* ovatæ oblongæ v. lineares, sæpe sagittatæ, basi v. inter lobos basales v. dorso prope basin affixæ, erectæ v. demum versatiles, loculis 2 parallelis rima longitudinali introrsum v. a latere v. rarius poris terminalibus dehiscentibus. *Ovarium* inferum, semi-inferum v. lata basa excepta intra perianthium liberum, 3-loculare v. rarius septis jam sub anthesi deliquescentibus sub-1-loculare. *Stylus* filiformis v. rarius abbreviatus v. subnullus, apice stigmatoso vix v. parum incrassato 3-sulco, v. rarius stigmata 3 demum brevissime patentia. *Ovula* in quoque loculo placentæ axili affixa, nunc solitaria v. pauca collateralia hemi-anatropa, nunc ∞, anatropa. *Capsula* nunc superne v. omnino libera perianthio persistente vestita, supra basin denudata, loculicide 3-valvis, nunc omnino infera, perianthio coronata, varie dehiscens v. indehiscens. *Semina* in loculis plurima pauca v. solitaria, v. interdum in toto fructu unicum, globosa oblonga angulata v. plano-compressa; testa crassiuscule membranacea, coriacea v. tenuis. *Embryo* parvus, a hilo distans v. ei proximus, in foveola marginali situs v. intra marginem albuminis carnosius in canali centrali breviter rarius longius intrusus.

Herbæ perennes, glabræ v. tomento farinoso v. lana intricata vestitæ, rarius pilosæ. Rhizoma breve, tuberosum, haud raro vaginis foliorum emarcidorum fibrosis cormum formans, fibris radicalibus sæpe fasciculatis. Folia ad basin v. infra medium caulem sæpius conferta, sæpe disticha, anguste linearia v. a latere complanata subensiformia, vaginis equitantibus, rarius quaquaversa. Inflorescentia terminalis, nunc ample paniculata v. thyrsioidea, nunc dense cymosa v. simpliciter spicata racemosa capitata v. ad flores 1-2 reducta. Bracteæ sæpius parvulæ.

Species enumeratæ ad 120, Australiæ imprimis austro-occidentalis, Africæ australis, Americæ borealis v. australis v. Asiæ mediæ v. orientalis incolæ.

Ordo sat naturalis et accurate limitatus genera continens plurima parva sed inter se bene distincta, *Bromeliaceis* quodammodo accedit ovario in eadem serie infero semi-infero v. libero, et embryonis situ; folia interdum iis *Iridearum* accedunt, characteres plures *Amaryllidearum*, a quibus imprimis embryonis situ distinguendus. *Ophiopogonæ* et *Conantheræ*, a plerisque botanicis *Liliaceis* anomalis adscriptæ, ab hoc ordine differunt et *Hæmodoraceis* melius convenire videntur ovario sæpius plus minus infero, et embryone in albumine intruso nec inclusio.

## CONSPECTUS GENERUM.

**Tribus I. Subhæmodoreæ.** Perianthium persistens; segmenta distincte 2-seriata, interiora exterioribus plus minus obiecta, tubo supra ovarium 0 v. rarius breviter evolutu. Stamina 3 v. rarius 6.

\* *Stamina* 3. *Ovula in loculis* 1-2 v. pauca, collateralia.

1. **HÆMODORUM.** Inflorescentia varia, semper glabra. Ovarium fere liberum, loculis 2-ovulatis. Semina peltata.--*Australia.*

2. **WACHENDORFIA.** Panicula effusa v. thyrsiformis, sæpe villosa. Perianthium obliquum, segmentis posticis decurrentibus. Ovarium liberum, pilosum, loculis 1-ovulatis. Semina late raliter affixa.--*Afr. austr.*

3. *SCHIECKIA*. Panicula thyrsiformis, villosula. Perianthium æquale, segmentis exterioribus decurrentibus. Ovarium liberum, glabrum, loculis 3-5-ovulatis. Semina in loculis sæpius 2.—*Amer. trop.*

4. *HAGENBACHIA*. Inflorescentia gracilis, ramosa, pedicellis secus ramos geminis. Perianthii segmenta patentia. Filamenta segmentis interioribus alte adnata. Ovarium liberum, loculis 2-ovulatis.—*Brasilia*.

5. *DILATRIS*. Inflorescentia cymosa, tomentosa v. viscoso-villosa. Ovarium inferum, loculis 1-ovulatis. Semina plana v. convexiuscula.—*Afr. austr.*

6. *LACHNANTHES*. Inflorescentia cymosa, tomentoso-lanata. Ovarium inferum, loculis 5-6 ovulatis. Semina pauca, peltata.—*Amer. bor.*

7. *BARBERETTA*. Racemus gracilis, simplex, glaber. Ovarium liberum, abortu 1-loculare 1-ovulatum.—*Afr. austr.*

\*\* *Stamina 3. Ovula in loculis numerosa.*

8. *XIPHIDIUM*. Panicula simplex, glabra. Ovarium liberum.—*Amer. trop.*

\*\*\* *Stamina 6. Ovula in loculis 1 v. 2, collateralia. Fructus abortu 1-locularis, 1-spermus.*

9. *LANARIA*. Inflorescentia cymosa, plumoso-lanata. Perianthii tubus brevis. Filamenta lobis alte adnata. Ovarium fere inferum, loculis 2-ovulatis.—*Afr. austr.*

10. *PELEBOCARYA*. Herba ciliato-pilosa. Inflorescentia cymoso-paniculata. Flores parvi, tubo 0. Ovarium inferum, loculis 1-ovulatis, septis sæpe evanidis.—*Australia*.

**Tribus II. Conostyleæ.** Perianthium persistens; lobi subæquales, specie uniseriatim subvalvata. Stamina 6. Ovarii loculi (excepta *Macropidia*) ∞-ovulati.

11. *TRIBONANTHES*. Flores lanati, solitarii v. pauci capitati v. cymosi. Perianthii segmenta patentia, basi in tubum latum subconnata. Filamenta brevia, erecta, in appendices integras v. dentatas producta. Ovarium liberum.—*Australia austr. occid.*

12. *CONOSTYLIS*. Inflorescentia capitata v. dense cymosa, plumoso-tomentosa v. villosa. Filamenta nuda. Ovarium inferum.—*Australia*.

13. *BLANCOA*. Flores plumoso-lanati, pauci, magni, penduli, racemosi. Perianthium tubulosum, rectum. Ovarium angulis solis adnatum.—*Australia austr. occid.*

14. *ANIGOZANTHOS*. Flores plumoso-lanati, magni, dense spicati v. racemosi, secundi. Perianthium tubulosum, limbo obliquo. Ovarium inferum. Capsula apice 3-valvis.—*Australia austr. occid.*

15. *MACROPIDIA*. Flores plumoso-lanati, magni, dense spicati. Perianthium tubulosum, limbo obliquo patente. Ovarium inferum, loculis 1-ovulatis. Semina cum pericarpium valvis a septis persistentibus decidua.—*Australia austr. occid.*

16. *LOPHIOLA*. Panicula cymosa, albo-lanata, floribus parvulis. Ovarium fere liberum. Capsula 3-valvis.—*Amer. bor.*

17. *ALETRIS*. Spica longa, simplex, floribus parvulis lepidoto-farinosis. Ovarium semiinferum. Capsula 3-valvis.—*Amer. bor., Asia or.*

**Tribus III. Ophiopogonæ.** Perianthium marcescens, sub fructu persistens; segmenta subæqualia, consimilia, plana. Stamina 6. Ovarii loculi 2-ovulati. Pericarpium post anthesin ruptum nec auctum. Semina bacciformia, subglobosa, exserta. Racemus simplex. Flores parvuli.

18. *PELIOSANTHES*. Perianthii tubus supra ovarium brevis, limbus rotato-patens. Filamenta brevissima, in anulum faucem perianthii sublaudentem connata, antheris parvis ovatis. Stigma in vertice conico ovarii subsessile. Folia longe petiolata, latiuscula.—*Ind. or., Archip. Malay.*

19. *OPHIPOGON*. Perianthium supra ovarium erecto-patens. Filamenta erecta, distincta, antheris linearibus breviora. Stylus longiusculus. Folia longe linearia v. rarius petiolata latioraque.—*Ind. or., Asia or., Japonia.*

20. *LIRIOPE*. Perianthium a basi ovarii patens. Filamenta subhypogyna, distincta, antheris oblongis subæquilongæ. Stylus columnaris. Folia longe linearia.—*Japonia, China.*

21. *SANSEVIERIA*. Perianthii tubus longus, tenuis. Filamenta filiformia. Ovarium liberum, lata basi affixum.—*Afr. trop. et austr., Ind. or.*

**Tribus IV. Conantheræ.** Perianthium demum circa v. supra ovarium circumscisse deciduum, segmenta subæqualia consimilia v. exteriora parum dissimilia, plana. Stamina v. staminodia 6, æqualia v. 1 v. 3 cæteris dissimilia; antherarum loculi sæpius poro terminali v. rarius brevi dehiscentes. Ovarii loculi (excepto *Odontostomo*)  $\infty$ -ovulati. Capsula superne loculicide dehiscens. Flores laxè paniculati v. rarius racemosi v. solitarii.

22. **CONANTHERA.** Perianthii tubus campanulatus. Stamina omnia perfecta, antheris consimilibus linearibus in eorum conniventibus.—*Chili*.

23. **CYANELLA.** Perianthii tubus 0. Stamina omnia perfecta, 3 tamen sæpe cæteris dissimilia.—*Afr. austr.*

24. **ZEPHYRA.** Perianthii tubus brevis, angustus. Stamina 4 perfecta, 2 ad staminodia reducta.—*Chile*.

25. **TECOPHILÆA.** Perianthii tubus brevis, angustus. Stamina 3 perfecta, unilateralia, 3 lateris oppositi ad staminodia reducta.—*Chile*.

26. **ODONTOSTOMUM.** Perianthii tubus cylindraceus, lobi patentes v. reflexi. Stamina omnia perfecta, antheris consimilibus ovoideis erectis. Ovarii loculi 2-ovulati.—*California*.

#### GENERA EXCLUSA.

**VELLOZIA** et **BARBACENIA**, Vand., a nonnullis in *Hæmodoraceis* inclusæ, ad **Amaryllideas** referendæ.

#### TRIBUS I. EUHÆMODORÆÆ.

1. **Hæmodorum**, Sm. in *Trans. Linn. Soc.* iv. 213.—Perianthii tubus 0; segmenta subæqualia v. exteriora breviora. Stamina 3, ad basin segmentorum interiorum affixa, filamentis liberis sed in flore aperto basi segmentis involutis; antheræ ovatæ oblongæ v. lineares. Ovarium sub anthesi inferum v. vertice plano v. 3-dymo parum prominens, 3-loculare; stylus indivisus, stigmate vix incrassato; ovula in loculis 2, collateralia, placentæ axili crassiusculæ lateraliter affixæ, hemianatropa. Capsula superne accreta, sæpe fere omnino supera, 3-dyma, rimis 3 loculicide dehiscens. Semina plana, ovata v. orbiculata, marginibus acutis v. fere in alam productis, placentæ crasso-carnosæ peltatim affixæ, collateralia; embryo parvus, a hilo distans, albumine carnosio parum intrusus.—Herbæ erectæ, glabræ, fibris radicalibus fasciculatis sæpe crasse carnosis. Caulis basi haud raro leviter incrassatus, reliquiis fibrosis foliorum vetustorum obtectus cormum simulans. Folia radicalia basi vaginantia, equitantia, a latere complanata v. teretia, sæpe longa; caulina pauca, breviora. Flores sæpius parvuli, ad apicem caulis capitati fasciculati cymosi paniculati v. interrupte spicati. Bractæe parvæ. Perianthii segmenta circa fructum persistentia. Inflorescentia siccitate nigra, glaberrima.

Species 17, Australianæ. *Benth. Fl. Austral.* vi. 418. *Endl. Iconogr. t.* 98. *Hook. Io. Pl. t.* 866. *Bot. Mag. t.* 1610.

2. **Wachendorfia**, Linn. *Gen. n.* 61. (*Pedilonia*, Presl, *Nov. Pl. Gen.*, Prague, 1829, cum ic.)—Perianthium obliquum, tubo 0; segmenta angusta v. obovato-oblonga, exteriora præsertim posticum a cæteris sæpe dissimilia in pedicellum decurrentia, interiora 2 postica basi exterioribus adnata, anticum a basi liberum. Stamina 3, ima basi segmentorum interiorum affixa v. fere libera, filamentis filiformibus; antheræ sagittatæ, subversatiles. Ovarium basi latiusculum affixum, cæterum liberum, dense pilosum, 3-dymum, 3-loculare; stylus filiformis, sæpe basi flexus, stigmate vix incrassato; ovula in loculis solitaria, lateraliter affixa, hemianatropa. Capsula 3-dyma, lobis a latere valde compressis acutis quasi 3-alata, 3-locularis, loculicide dehiscens. Semina in loculis solitaria, lateraliter affixa, testa in *W. thyrsiflora* levi, in *W. paniculata* dense echinata; embryo parvus, oblongus v. anguste conicus, albumine carnosio duriusculo semi-immersus.—Rhizoma breve, in tubera oblonga v. globosa incrassatum. Caulis erectus, basi interdum incrassatus. Folia pauca, ensiformia v. rarius linearia, interdum magna, plus minus plicatovenosa. Panicula terminalis, nunc ampla effusa, nunc longa anguste thyrsiformis floribunda, sæpe villosa. Flores flavi.

Species enumeratæ 7, sed vix 3 bene distinctæ videntur, Africæ australis incolæ. *Ram. et Schult. Syst. i.* 485. *Gært. Fruct. t.* 15. *Sm. Ic. Pict. t.* 5. *Red. Lil. t.* 93. *Andr. Bot. Rep.* 398. *Bot. Mag. t.* 614, 616, 1060, 1166, 2610.

3. *Schiekia*, Meissn. *Gen. Pl.* 397; *Comm.* 300. (Troschelia, Klotzsch in Rich. Schomb. Reise, 1066.)—Perianthium vix obliquum, tubo 0; segmenta angusta, exteriora ad pedicellum æqualiter decurrentia, interiora 2 postico breviter adnata, anticum a basi liberum. Stamina perfecta 3, quorum 1 basi segmento antico affixum, 2 segmentis superioribus opposita vix tamen adnata, adsunt etiam interdum staminodia 1-2 ananthera segmentis exterioribus opposita. Ovarium basi lata affixum, cæterum liberum, glabrum, 3-dymum, 3-loculare; stylus filiformis, stigmatè vix incrassato; ovula in loculis pauca, sæpius 3-5, hemianatropa, pendula. Capsula 3-dyma, lobis acutiusculis omnino *Wachendorffii*, loculicide 3-valvis. Semina in quoque loculo sæpius 2 perfecta.—Rhizoma breve, subterrosum. Caulis elati. Folia ad basin caulis conferta, ensiformia v. linearia, venosa. Panicula anguste thyrsiformis, floribunda, villosula. Flores nutantes, quam in *Wachendorfia* minores, perianthio circa capsulam persistente.

Species 1, Brasiliæ, Guianæ et Venezuelæ incolæ. *H. B. et K. Nov. Gen. et Sp.* t. 698 (*Wachendorfia*).

4. *Hagenbachia*, Nees et Mart. in *Nov. Act. Nat. Cur.* xi. 18, t. 2.—Perianthii tubus 0; segmenta subæqualia, patentia. Stamina 3, filamentis segmentis interioribus alte adnatis; antheræ prope apicem segmentorum fere sessiles, breves, cordatæ. Ovarium liberum, 3-dymum, 3-loculare; stylus filiformis, stigmatè vix incrassato; ovula in loculis 2, collateralia. Capsula 3-dyma, loculicide 3-valvis. Semina compressa.—Fibræ radicales fasciculatæ. Folia radicalia conferta, longa, laxè ensiformia, striata. Scapus subaphyllus, tenuis, ramosus. Flores parvi, breviter pedicellati, pedicellis geminis per paria secus ramos dissitis. Bractææ parvæ. (*Char. ex Nees et Mart.*)

Species 1, Brasiliensis, a nobis non visa. *Ram. et Schult. Syst. i. Mant.* 353.

5. *Dilatris*, Berg, *Pl. Cap.* 9, t. 3, f. 5.—Perianthii tubus 0; segmenta subæqualia, ovata subcariosa, v. angusta viscoso-villosa. Stamina 3, ad basin segmentorum interiorum affixa, filamentis erectis liberis longiusculis rigidulis; antheræ ovatæ v. oblongæ, versatiles. Ovarium globosum v. ovoideum, fere omnino inferum, apice brevissime liberum, convexum, 3-loculare; stylus filiformis, stigmatè vix incrassato; ovula in loculis solitaria, placentæ crassæ v. peltatæ lateraliter affixa. Capsula globosa v. ovoidea, demum loculicide 3-valvis? Semina in loculis solitaria, orbiculata v. late ovata, plana v. concaviuscula, testa nigra.—Rhizoma breve, crassum. Caulis erectus, rigidulus, præter inflorescentiam simplex. Folia ad basin caulis conferta, disticha, equitantis, ensiformia v. linearia, rigidula. Inflorescentia terminalia, cymosa, plus minus composita, in *D. corymbosa*, Thunb. tenuiter subfloccoso-tomentosa, in *D. viscosa*, Thunb. viscoso-villosa.

Species 2, Africæ australis incolæ. *Ram. et Schult. Syst. i.* 483 (*excl. D. Heritiera*). *Gærtn. f. Fruct.* iii. t. 182. *Sm. Exot. Bot.* t. 16.

6. *Lachnanthes*, Ell. *Bot. S. Car. and Georg.* i. 47. (*Heritiera*, Gmel. *Syst. Nat.* ii. 113, non Ait. *Gyrotheca*, Salisb. in *Trans. Hort. Soc.* i. 327, *absque char.*)—Perianthii tubus 0; segmenta angusta, 3 exteriora paullo minora. Stamina 3, ad basin segmentorum interiorum affixa, filamentis filiformibus segmentis sublongioribus; antheræ oblongæ, versatiles. Ovarium inferum, vertice planum, 3-loculare; stylus elongatus, stigmatè vix incrassato; ovula in loculis pauca (ad 6), circa marginem placentæ peltatæ stipitatæ collateraliter affixa. Capsula globosa (demum 3-valvis?). Semina pauca, orbiculata, plana, placentæ peltatim affixa, omnino *Hæmodori*.—Rhizoma brevissimum, interdum stoloniferum, fibris radicalibus fasciculatis. Caulis præter inflorescentiam simplex. Folia pauca, longa, plana, angusta, disticha, basi equitantis. Inflorescentia terminalis, dense cymosa, plus minus composita, tomentoso-lanata. Flores quam in *Lophiola* paullo majores, perianthio persistente tomentoso-lanato.

Species 1, boreali-Americana. *Mich. Fl. Bor. Amer.* t. 4 (*Heritiera*).

7. *Barberetta*, Harv. *Gen. S. Afr. Pl. ed.* 2, 377.—Perianthii tubus 0, segmenta subæqualia, patentia, tenuia, glabra. Stamina 3, ad basin segmentorum interiorum affixa, filamentis filiformibus segmenta superantibus; antheræ parvæ, ovatæ, dorso supra basin

affixæ. Ovarium liberum, glabrum, obliquum, loculo 1 perfecto, 1 v. 2 parvis vacuis; stylus filiformis, terminalis sed ob loculos 2 vacuos excentricus apparet, stigmatē vix incrassato; ovulum in loculo perfecto 1, placentæ crassiusculæ lateraliter affixum. Fructus . . .—Caulis prope basin in tuber globosum incrassatus. Folia pauca, plana, laxiuscula, flaccida, venis ad 5 cæteris validioribus percursa. Racemus terminalis, elongatus, gracilis, simplex. Pedicelli filiformes 1-flori, basi bractea lineari complicata amplexi. Perianthium aureum, tenuiter petaloideum, parvulum.

Species 1, Africæ australis incola.

8. *Xiphidium*, *Aubl. Pl. Gui.* 33, t. 11.—Perianthii tubus 0; segmenta æqualia, oblonga, patentia, basi non decurrentia. Stamina 3, ad basin segmentorum interiorum affixa, filamentis brevibus; antheræ oblongæ, majusculæ, erectæ. Ovarium liberum, 3-loculare; stylus filiformis, apice stigmatoso obtuso 3-sulco; ovula in loculis numerosa, pendula. Capsula globosa, loculicide 3-valvis. Semina numerosa, parvula, subglobosa v. leviter angulata, testa verruculosa; embryo ad marginem albuminis duriusculi leviter intrusus.—Rhizoma breve. Folia latiuscule linearia v. longe lanceolata, disticha, membranacea, equitantia. Flores parvuli, glabri, secus ramos simplices paniculæ breviter pedicellati, unilaterales.

Species a nonnullis distinguuntur 2, apud alios unius varietates sunt, Americæ tropicæ a Brasiliæ usque ad Indiam occidentalem incolæ. *Ram. et Schult. Syst.* i. 487, *Mant.* 320. *Walp. Ann.* i. 842. *Griseb. Cat. Pl. Cub.* 252. *Bot. Mag. t.* 5055.

9. *Zanaria*, *Ait. Hort. Kew.* i. 462. (*Argolasia*, *Juss. Gen.* 60. *Augea*, *Retz, Obs.* v. 3, *absque char.*)—Perianthium supra ovarium breviter tubulosum; lobi lineares, tubo sublongiores, exteriores paullo breviores. Stamina 6, filamentis lobis perianthii alte adnatis apice breviter liberis; antheræ oblongæ, versatiles. Ovarium fere inferum, apice conico intra perianthium breviter libero, 3-loculare; stylus filiformis, stigmatē vix incrassato; ovula in loculis 2, collateralia, a latere prope basin affixa. Capsula subglobosa, perianthio coronata, vix dehiscens, abortu 1-locularis, 1 sperma. Semen globosum, testa coriacea fere crustacea nigra nitida, albumine carnoso; embryo minimus.—Rhizoma breve, lignosum. Caulis basi fibris rigidis foliorum vetustorum reliquiis obtectus, validus, præter inflorescentiam simplex. Folia subradicalia, longe linearia, plana, rigidula, venosa. Inflorescentia terminalis, cymosa, plus minus composita, undique lana plumosa densissime obtecta.

Species 1, Africæ australis incola. *Ram. et Schult. Syst.* vii. 294. *Schweitzl. Iconogr.* i. t. 62. *Lam. Illustr. t.* 34 (*Argolasia*).

10. *Phlebocarya*, *R. Br. Prod.* 301.—Perianthii tubus 0, segmenta subæqualia. Stamina 6, ad basin segmentorum affixa, filamentis brevibus liberis; antheræ erectæ, basifixæ, lineares, rimis lateralibus dehiscentes. Ovarium inferum, primum 3-loculare, sed septis sæpe jam sub anthesi deliquescentibus mox 1-loculare v. valde imperfecte septatum; stylus subulatus, stigmatē vix incrassato; ovula in loculis solitaria, a basi ascendentia. Fructus indehiscens, perianthio persistente coronatus. Semen sæpius abortu unicum, erectum, testa membranacea, albumine carnoso.—Herbæ pilosæ, rhizomate brevi. Folia radicalia fasciculata, anguste linearia v. subulata, longiuscula, rigidula, sæpius ciliata. Scapi seu caules florentes inter folia aphylli iisque breviores, tenues, sæpius 2-fidi v. dichotomi. Flores ad apices ramorum parvuli, dense v. laxè cymulosi, cymulis sæpius paniculatis.

Species 3, Australiæ austro-occidentalis incolæ. *Benth. Fl. Austral.* vi. 424. *Hook. Ic. Pl.* t. 1175, 1176.

## TRIBUS II. CONOSTYLÆ.

11. *Tribonanthes*, *Endl. Nov. Stirp. Dec.* 27; *Iconogr. t.* 109.—Perianthii segmenta subæqualia, basi in tubum brevem campanulatum connata v. conniventia, laminis patenti-

bus. Stamina 6, filamentis tubo perianthii applicitis v. adnatis, superne breviter erectis in appendices 2 breves integras v. dentatas productis; antheræ sagittatæ, inter appendices filamentis affixæ, connectivo sæpe ultra loculos producto. Ovarium liberum, 3-loculare, apice conico in stylum brevem producto; ovula in loculis numerosa, placentæ  $\infty$ -seriatim affixa. Capsula apice conico perianthio persistente inclusa, loculicide 3-valvis. Semina numerosa, obovata, plano-compressa.—Rhizoma v. caudex brevis, in tubera plura subglobosa tunicis membranaceis involuta incrassatus. Caulis simplex, foliis paucis linearibus. Flores dense lanati, ad apicem caulis solitarii, v. pauci in cymam v. capitulum terminale conferti. Bractee parvæ v. rarius una alterave capitulum æquans.

Species 5, Australiæ austro-occidentalis incolæ. *Benth. Fl. Austral.* vi. 426.

12. *Conostylia*, *R. Br. Prod.* 300.—Perianthii tubus supra ovarium campanulatus v. breviter cylindraceus, rarius 0 v. longiusculus; lobi subæquales, specie 1-seriati, fere induplicato-valvati, v. 3 interiores paullo minores. Stamina 6, basi loborum affixa, filamentis brevibus; antheræ oblongæ v. lineares, basi sagittatæ. Ovarium inferum v. semi-inferum, apice conicum, 3-loculare; stylus filiformis, apice stigmatoso vix incrassato 3-sulco v. breviter 3-fido; ovula in loculis  $\infty$ , sæpe numerosa, placentis stipitatis affixa. Capsula apice conico loculicide 3-valvis. Semina, ubi nota, pauca, oblonga, rugulosa; embryo prope hilum parvus, vix albumini carnosulo intrusus.—Rhizoma breve, interdum stolonifer, v. caulis ipse basi fasciculato-ramosus v. quasi prolifer. Folia ad basin caulis v. ramorum conferta, sæpe disticha, linearia subteretia v. a latere complanata rigidulaque. Scapi v. pedunculi inter foliorum fasciculos nunc brevissime 1-2-flori, nunc plus minus elongati, nudi v. paucisquamati. Flores in capitulum v. cymam densam terminalem conferti, cum inflorescentia tota plus minus plumoso-tomentosi v. villosi.

Species 32, omnes Australianæ. *Benth. Fl. Austral.* vi. 428. *F. Muell. Fragm. Phytogr. Austr.* ix. 50.

Genus in sectiones sequentes dividitur:—

1. *Brachycaulon*. Perianthium usque ad ovarium in segmenta 6 divisum. Antherarum loculi a basi discreti, penduli. Placentæ parvæ, pauciovulatæ.

2. *Catospora*. Perianthii tubus plus minus evolutus. Antheræ sagittatæ. Placentæ cujusve loculi recurvæ, dilatatæ, subtus  $\infty$ -ovulatæ. *Lindl. Swan Riv. App.* t. 6. *A. Rich. Serot. Astrolab.* t. 28 (*quoad placentas male*). *Hook. Ic. Pl.* t. 853. *Fl. des Serres*, t. 259.

3. *Eucoconostylis*. Perianthii tubus plus minus evolutus. Antheræ sagittatæ. Placentæ stipitatæ, vix recurvæ, ovulis numerosis undique obtectæ. *Bot. Mag.* t. 2989.

4. *Androstemma*. Perianthii tubus elongatus, lobis angustis. Filamenta elongata. Placentæ peltatæ, margine  $\infty$ -ovulatæ. *ANDROSTEMMA*, *Lindl. Swan Riv. App.* 46. *Field, Serot. Pl.* t. 33.

13. *Blancoa*, *Lindl. Swan Riv. App.* 45.—Perianthium cylindraceum, tubo longo; lobi æquales, erecti, breves, fere induplicato-valvati. Stamina 6, ad apicem tubi affixa, filamentis brevissimis; antheræ ovato-oblongæ. Ovarium tubo perianthii inclusum oique angulis 3 adnatum, inter angulos fere a basi liberum, apice breviter conicum, 3-loculare; stylus longe filiformis, stigmate vix incrassato; ovula in loculis  $\infty$ , placentæ adnatæ affixa. Capsula perianthio persistente inclusa, apice conico loculicide 3-valvis. Semina pauca, oblonga, striata.—Caulis breves, in rhizomate fasciculati v. ima basi ramosi. Folia conferta, disticha, equantia, linearia, a latere complanata, rigidula. Flores ad apicem caulis pauci, majusculi, breviter racemosi, penduli, dense plumoso-lanati.

Species 1, Australiæ austro-occidentalis incola. *Benth. Fl. Austral.* vi. 441.

14. *Anigozanthes*, *Labill. Voy.* i. 409, t. 22. (*Anigosia*, *Salisb. in Trans. Hort. Soc.* i. 327. *Schwægrichenia*, *Spreng. Syst.* ii. 26.)—Perianthium subcylindraceum, plus minus incurvum, tubo longo superne parum v. vix ampliato, latere inferiore sæpe profundo fisso; limbus obliquus, lobis lanceolatis angustissime subvalvatis, inferioribus sæpius altius solutis. Stamina ad apicem tubi inæqualiter affixa, filamentis brevibus; antheræ ovatæ v. breviter oblongæ. Ovarium inferum, apice planum v. conicum; stylus elongatus, filiformis, stig-

mate parum v. vix incrassato; ovula in loculis  $\infty$ , sæpius numerosa, placentæ prominenti affixa. Capsula intra perianthium persistens, apice breviter loculicide 3-valvis. Semina perfecta pauca, testa crassiuscula striata v. rugosa.—Rhizoma sæpius crassum, horizontale. Caulis validus. Folia pleraque radicalia, linearia v. ensiformia, interdum teretia, vix disticha. Inflorescentia simplex v. dichotome ramosa, undique plumoso-lanata. Flores magni, secus ramorum v. pedunculi apicem breviter pedicellati v. subsessiles, conferti, rubri purpurascentes virides v. flavescentes.

Species 8, Australiæ austro-occidentalis incolæ. *Benth. Fl. Austral.* vi. 441. *Red. Lil. t.* 176. *Salisb. Parad. Lond. t.* 97. *Lindl. Swan Riv. App. t.* 6. *Bot. Mag. t.* 1151, 3875, 4180, 4507. *Bot. Reg. t.* 2102 et 1838, t. 37. *Maund, Botanist, t.* 67. *Paxt. Mag. v.* 271, cum ic. *Sweet, Brit. Fl. Gard. ser. 2, t.* 265. *Lemaire, Jard. Fleur. t.* 40.

15. **Macropidia**, *Drumm. in Hook. Kew Journ.* vii. 57.—Perianthium subinfundibuliforme, incurvum, tubo superne in faucem ampliato; limbus valde obliquus, lobis longiusculis angustis subvalvatis sub anthesi patentibus. Stamina ad faucem affixa, filamentis longis filiformibus; antheræ oblongo-lineares. Ovarium inferum, apice truncatum, 3-loculare; stylus elongatus filiformis, stigmate leviter clavato; ovula in loculis solitaria, lateraliter affixa. Fructus perianthio coronatus, siccus, 3-locularis, pericarpio demum in valvas 3 a basi soluto, septis duplicatis crassis cartilagineis demum induratis ad axin connatis post semina delapsa persistentibus. Semina in loculis solitaria, 3-quetra, cum pericarpium valvis adnatis sigillatim decidua, testa coriacea; embryo prope basin albuminis carnosus minutus.—Rhizoma crassum caulis validus et habitus *Anigozanthi*. Indumentum plumoso-lanatum, præsertim in floribus atrum. Folia longe ensiformia, striata. Inflorescentia dichotome ramosa. Flores magni, ad apices ramorum dense spicati, secundi.

Species 1, Australiæ austro-occidentalis incolæ. *Benth. Fl. Austral.* vi. 446 (*errore Macropodia*). *Bot. Mag. t.* 4291 (*Anigozanthos*).

16. **Lophiola**, *Ker in Bot. Mag. t.* 1596.—Perianthium campanulatum, alte divisum, lobis subvalvatis alternis paullo minoribus. Stamina 6, basi loborum affixa iisque breviora, filamentis filiformibus; antheræ oblongæ, juxta basin affixæ, demum sæpius recurvæ. Ovarium basi adnatum, cæterum liberum, apice conicum, 3-loculare; stylus filiformis, stigmate vix incrassato; ovula in loculis  $\infty$ , placentis adnatis 2-seriatim affixa, ascendente. Capsula perianthio persistente inclusa basi que adnata, ab apice conico loculicide 3-valvis. Semina plurima, ascendente, oblongo-teretia, leviter incurva, testa tenui albida; embryo parvus, intra basin albuminis carnosus leviter intrusus.—Rhizoma tenuiter stoloniferum. Folia ad basin caulis pauca, linearia, plana, disticha, equitantia. Panicula terminalis, subdichotome cymosa, densiuscula, undique lana albida vestita. Flores parvuli, flavidi, perianthio extus dense lanato.

Species 1, boreali-Americana. *A. Gray, Man. Bot. N. U. St. ed. 5,* 514. *Pursh, Fl. Bor. Amer. t. 6* (*Conostylis*).

17. **Aletis**, *Linn. Gen. n.* 428. (*Stachypogon*, *Klotzsch in Pr. Waldem. Reise, Bot. 49, t.* 94).—Perianthium tubuloso-campanulatum, lobis brevibus subæqualibus subvalvatis erecto-patentibus. Stamina 6, ad basin loborum affixa, filamentis brevissimis; antheræ ovatæ. Ovarium ima basi v. ad medium inferum, superne liberum, conicum, 3-loculare; stylus brevis v. longiusculus, 3-partibilis, stigmate vix incrassato; ovula in quoque loculo  $\infty$ , placentæ elongatæ 2-seriatim affixa. Capsula basi infera, cæterum perianthio persistente inclusa, loculicide 3-valvis. Semina parva, oblonga.—Rhizoma breve, fibris radicalibus fasciculatis. Folia radicalia v. ad basin scapi conferta, lanceolata v. linearia. Scapus elongatus, simplex, aphyllus. Flores parvuli, punctis lepidotis minutis obiecti quasi farinosi, in spicam longam simplicem primum densam demum laxam dispositi, singuli ad axillam bractee parvæ sessiles v. breviter pedicellati.

Species ad 8, Americæ borealis, Japoniæ, Chinæ, Indiæ orientalis et Borneo incolæ. *Ram. et Schult. Syst. vii.* 626. *Willd. Hort. Berol. t. 8* (*Wurmbea*). *Bot. Mag. t.* 1418. *Lodd. Bot. Cab. t.* 1161.

## TRIBUS III. OPHIOPOGONÆ.

18. *Peliosanthes*, Andr. Bot. Rep. t. 605, 634. (Teta, Roxb. Hort. Beng. 24, nomen; Fl. Ind. ii. 165. Bulbospermum, Blume, Enum. Pl. Jav. 15.)—Perianthii tubus supra ovarium brevis, late campanulatus; limbus rotato-patens, lobis 6 latis obtusis subæqualibus. Stamina 6, filamentis brevissimis in annulum faucem subclaudentem connatis; antheræ in annulo subsessiles, ovatæ, loculis introrsum dehiscentibus. Ovarium vertice conico excepto inferum, 3-loculare; stigma in vertice ovarii sessile, 3-lobum; ovula in loculis 2, a basi erecta, anatropa. Pericarpium post anthesin ruptum nec auctum. Semina abortu perpauca, in fructu sæpe solitaria, maturatione exserta, oblonga v. globosa, bacciformia, basi reliquiis emarcidis floris imposita, testa crassa carnea v. succulenta; embryo oblongus, acuminatus, intra basin albuminis carnosiusculi plus minus intrusus.—Rhizoma breviter horizontale. Folia radicalia longe petiolata, lanceolata v. latiuscula, utrinque acuminata, venis elevatis subplicata, petiolis basi vaginis imbricatis subdiastichis stipatis. Flores parvuli, virentes v. luride violacei, in spica v. racemo simplici dispositi, ad bracteas scariosas solitarii v. rarius fasciculati, breviter pedicellati.

Species ad 8, Indiæ orientalis et Archipelagi Malayani incolæ. Kunth, Enum. Pl. v. 306. Baker in Journ. Linn. Soc. xvii. 503. Red. Lil. t. 415. Wight, Ic. t. 2051, 2052. Bot. Mag. t. 1302, 1532.

19. *Ophiopogon*, Ker in Bot. Mag. t. 1063. (Flueggia, L. C. Rich. in Schrad. Neues Journ. ii. 8, t. 1, f. A, non Willd. Slatertia, Desv. Journ. Bot. i. 243. Chloopsis, Blume, Enum. Pl. Jav. 14.)—Perianthii tubus 0; segmenta supra ovarium distincta, subæqualia, sub anthesi patentia. Stamina 6, basi segmentorum affixa iisque breviora, filamentis brevibus erectis; antheræ oblongæ v. lineares, erectæ, basifixæ, loculis a latere subintrorsum dehiscentibus. Ovarium inferum, vertice lato planum v. medio depressum, 3-loculare; stylus longiuscule columnaris, stigmate parvo 3-dentato; ovula in loculis 2, collateralia, erecta, anatropa. Pericarpium post anthesin ruptum nec auctum. Semina abortu perpauca, interdum solitaria, maturatione exserta, globosa v. oblonga, bacciformia, basi reliquiis emarcidis floris imposita, testa crassa carnea v. succulenta; embryo teres, intra basin albuminis carnosiusculi interdum fere ad medium intrusus.—Rhizoma breve, crassum, fibris radicalibus interdum tuberoso-incrassatis, v. stoloniferum. Caulis foliatus brevissimus, v. interdum magis evolutus simplex. Folia nunc conferta longeque linearia *Liriopsis*, nunc oblongo-lanceolata in petiolum angustata, fere *Peliosanthis*, vaginis imbricatis margine sæpe scariosis. Scapi v. pedunculi inter folia radicalia 1-2 v. in caule foliato solitarii terminales. Racemus simplex, bracteis parvis scariosis. Flores violacei cærulescentes v. albi, quam in *Liriopæ* interdum paullo majores, ad quamvis bracteam sæpe fasciculati, breviter v. longiuscule pedicellati.

Species 4, Indiæ orientalis et Asiæ orientalis usque ad Japoniam incolæ. Kunth, Enum. v. 301 (Flueggia). Baker in Journ. Linn. Soc. xvii. 500 (Flueggia). Red. Lil. t. 80 (Convallaria). Wight, Ic. t. 2050. Royle, Illustr. Pl. Himal. t. 96. Lodd. Bot. Cab. 1876.

20. *Liriopæ*, Lour. Fl. Coch. 200. (*Ophiopogon*, Kunth, Enum. Pl. v. 297, et auct. plur.)—Perianthii tubus 0, segmenta circa ovarium distincta, subæqualia, per anthesin patentia. Stamina 6, hypogyna, filamentis crassiuscule filiformibus erectis; antheræ oblongæ, erectæ, filamentis breviores, basifixæ, loculis subintrorsum dehiscentibus. Ovarium superum, toro carnosio tamen medio leviter immersum, vertice leviter depressum, 3-loculare; stylus columnaris, stigmate parvo 3-dentato; ovula in loculis 2, collateralia, erecta, anatropa. Pericarpium post anthesin ruptum nec auctum. Semina abortu perpauca, interdum solitaria, maturatione exserta, globosa, bacciformia, basi reliquiis emarcidis floris imposita, testa crassa carnea v. succulenta; embryo teres, intra basin albuminis carnosiusculi breviter intrusus.—Rhizoma breve, crassum, interdum stoloniferum. Caulis brevissimus, foliis confertis longe linearibus, vaginis brevibus membranaceis v. margine scariosis imbricatis. Scapi v. pedunculi inter folia 1-2, elongati, simplices. Flores

parvuli, violacei v. albidii, racemosi, ad bracteas scarioras fasciculati, pedicellis apice articulatis.

Species 1, Japoniæ et Chinæ incolæ. *Baker in Journ. Linn. Soc.* xvii. 499. *Bot. Mag. t.* 5348. *Bot. Reg. t.* 593. *Lodd. Bot. Cab. t.* 694. *Ker in Bot. Mag.* sub t. 1063 hanc speciem dubie tantum ad genus suum *Ophiopogonem* junxit, a botanicis recentioribus iterum separatur sed a pluribus infauste sub nomine *Keriano* descripta, *Loureiriano* antiquiore neglecto.

21. *Sansevieria*, *Thunb. Prod. Pl. Cap.* 65. (*Acyntha*, *Medik. Theodora*, 76. *Salmia*, *Cav. Ic.* iii. 24, t. 246.)—Perianthii tubus tenuis, nunc longissimus, apice in faucem parum amplius; lobi angusti, æquales, subpatentes, demum interdum fere ad medium tubum solvendi. Stamina 6, tubo ad basin segmentorum affixa iisque æqualia v. parum breviora, filamentis filiformibus; antheræ oblongæ v. lineares, dorsifixæ, loculis discretis medio sæpe breviter tantum connexis a latere subintrorsum dehiscentibus. Ovarium liberum, toro crassiusculo lata basi affixum, 3-loculare; stylus filiformis, elongatus, stigmate parum dilatato indiviso; ovula in loculis solitaria, erecta. Pericarpium tenuissime membranaceum, post anthesin stylo delapso mox deliquescens nec auctum. Semina 1–3, nunc omnia perfecta magna globosa bacciformia basi inter se cohærentia, nunc 1 v. 2 parva, abortiva, testa laxa crassiuscula carnosæ v. succulenta, integumento interno tenui appresso; embryo intra basin albuminis carnosus intrusus, teres.—Rhizoma breve, crassum, interdum stoloniferum. Folia rosulata, crassa, cartilaginea, intus fibrosa, sæpe elongata, subplana v. teretia. Scapus simplex, elatus, validus. Flores mediocres v. longi, in racemo sæpe denso ad bracteas scarioras fasciculati, pedicellis apice articulatis.

Species enumeratæ 10, Africæ tropicæ et australis et Indiæ orientalis incolæ. *Kunth, Enum. Pl.* v. 15. *Baker in Journ. Linn. Soc.* xiv. 546; in *Trans. Linn. Soc. Bot.* i. 253. *Jacq. Hort. Vind. t.* 84 (*Aletris*). *Red. Lil. t.* 290, 330. *Roxb. Corom. Pl. t.* 184. *Lindb. in Act. Soc. Sc. Fenn.* x. t. 5. *Bot. Mag. t.* 1179, 2634, 5093. *Bot. Reg. t.* 160.

#### TRIBUS IV. CONANTHEREÆ.

22. *Conanthera*, *Ruiz et Pav. Fl. Per. et Chil.* iii. 68, t. 301. (*Cumingia*, *Don in Sweet, Brit. Fl. Gard. t.* 257, et ser. 2, t. 88.)—Perianthium infundibuliforme, tubo brevi nunc brevissimo; lobi longiores, oblongi, subæquales, per anthesin patentes v. reflexi. Stamina 6, fauci affixa, lobis breviora, omnia perfecta, filamentis brevissimis; antheræ erectæ, lineares, in conum conniventes, loculis apice v. fere ad basin introrsum dehiscentibus, connectivo membranaceo ultra loculos in acumen integrum v. 2-fidum producto. Ovarium semi-inferum v. vertice convexo excepto inferum, 3-loculare; stylus subulatus, stigmate parvo; ovula in loculis ∞, 2-seriata. Capsula, basi turbinata excepta, supera, ovoideo-3-quetra, apice loculicide dehiscens. Semina ovoidea, testa appressa; embryo in albumine carnosio longiuscule intrusus.—Cormus hypogæus, tunicis fibroso-reticulatis. Folia radicalia v. ad basin caulis pauca, linearia v. lineari-lanceolata. Caulis erectus, superne paniculato-ramosus, bracteis minimis. Flores cærulei, laxè paniculati, pedicellis ebracteolatis.

Species 3 (v. 4?), Chilenses. *Baker in Journ. Linn. Soc.* xvii. 493. *Miers in Trans. Linn. Soc.* xxiv. 506, 507, t. 53 (*Conanthera* et *Cumingia*). *Hook. Exot. Fl. t.* 214. *Bot. Mag. t.* 2496. *Bot. Reg. t.* 1193. *Lodd. Bot. Cab. t.* 904.

*Cumingia*, *Don*, ab auctoribus distinguitur perianthii segmentis altius in tubum subcampanulatum connatis v. conniventibus, minusque superne patentibus; tubus tamen adest in specie typica *Pavoniana*, etsi brevior, et in *C. trimaculata*, *Don* in *Sweet Brit. Fl. Gard.* ser. 2, t. 88, multo brevior delineatur quam in *C. campanulata*, *Don*.

23. *Cyanella*, *Linn. Gen. n.* 420.—Perianthii tubus 0; segmenta usque ad ovarium distincta v. ima basi brevissime connata, patentia, subæqualia. Stamina 6, basi segmentorum affixa, omnia perfecta at sæpe dimorpha, filamentis brevissimis v. filiformibus; antheræ oblongæ v. oblongo-lineares, erectæ, obtusæ, ecalcaratæ, loculis apice breviter v. rima longiore introrsum dehiscentibus. Ovarium semi-inferum, v. basi lata concava

excepta superum, 3-loculare; stylus filiformis, stigmatē parvo; ovula in loculis  $\infty$ , 2-seriata. Capsula ovoideo-3-quetra, loculicide dehiscens. Semina ovoidea, testa appressa, embryo in albumine carnosio intrusus.—Cormus fibroso-tunicatus, v. (ex icone *C. orchioideis*) rhizoma crasse tuberosum annulatum. Folia radicalia v. ad basin caulis pauca, lanceolata v. linearia. Caulis simplex v. parce ramosus. Flores violacei rosei flavi v. albi, laxo racemosi paniculati v. solitarii, pedicellis ebracteolatis. Bracteæ parvæ v. obsoletæ.

Species 4 v. 5, Africæ australis incolæ. *Kunth, Enum. Pl.* iv. 635. *Baker in Journ. Linn. Soc.* 496. *Jacq. Ic. Rar.* t. 447; *Hort. Vind.* iii. t. 35. *Red. Lil.* t. 373. *Gertn. Fruct.* t. 17. *Andr. Bot. Rep.* t. 141. *Bot. Mag.* t. 568, 1252. *Bot. Reg.* t. 1111. *Lodd. Bot. Cab.* t. 732. *Saund. Ref. Bot.* t. 259.

*TRIGELLA*, *Salisb. Gen. Pl. Fragm.* 46, est *C. alba*, Linn., foliis radicalibus lineari-teretibus scapisque 1-floris dense fasciculatis, antheris omnibus æqualibus consimilibus. *PHARETRELLA*, *Salisb. l. c.* 47, est *C. orchioideis*, Jacq., foliis latiusculis, caule  $\infty$ -floro, antheris 3 majoribus filamentis brevibus, 3 minoribus filamentis longioribus. In cæteris speciebus folia linearia v. lanceolata, caulis  $\infty$ -florus, anthera una cæteris sæpius major, filamentō breviorē.

24. *Zephyra*, *Don in Edinb. N. Phil. Journ.* xiii. 236. (*Dicolus*, *Philippi, Descr. Pl. Nuev.* ii. (1873), 74.)—Perianthium basi breviter et anguste tubulosum; lobi multo longiores, obovato-oblongi, plani, subæquales. Stamina fauci affixa, lobis multo breviora, 4 perfecta quorum 3 collateralia, filamentis brevibus, staminodia 2, staminibus perfectis uno latere alterna, linearia, apiculo parvo instructa; antheræ perfectorum oblongæ, infra medium dorsifixæ, basi calcaratæ, loculis apice poris v. rimis brevibus dehiscentibus. Ovarium semi-inferum v. ad  $\frac{2}{3}$  superum, 3-loculare; stylus subulatus, stigmatē parvo; ovula in loculis  $\infty$ , 2-seriata. Capsula, basi turbinata excepta, supera, ovoideo-3-quetra, apice loculicide dehiscens. Semina  $\infty$ , ovoidea, testa laxiuscula; embryo in albumine carnosio longiuscule intrusus.—Rhizoma profunde hypogæum a nobis non visum. Caulis erectus, paucifolius, superne paniculato-ramosus. Folia linearia v. infima lineari-lanceolata, basi longe vaginata, superiora in bracteas parvas abeuntia. Flores cerulei, laxo subcorymboso-paniculati, pedicellis tenuibus ebracteolatis.

Species 1, Chilensis. *Miers in Trans. Linn. Soc.* xxiv. 503, t. 53. *Baker in Journ. Linn. Soc.* xvii. 496.

25. *Tecophilæa*, *Bert.*; *Colla in Mem. Accad. Sc. Torin.* xxxix. 19, t. 55. (*Distrepta*, *Miers, Trav. Chil.* ii. 529, ex eod. in *Trans. Linn. Soc.* xxiv. 504. *Phyganthus*, *Pæpp. et Endl. Nov. Gen. et Sp.* ii. 71, t. 200. *Pœppigia*, *Kunze in Reichb. Consp.* 212\*.)—Perianthium supra ovarium breviter et anguste tubulosum; lobi multo longiores, obovato-oblongi, plani, subæquales. Stamina fauci affixa, lobis multo breviora, 3 perfecta, unilateralia, filamentis brevibus basi dilatatis, 3 staminodia ad latus alterum floris linearia, apiculo parvo instructa; antheræ perfectorum oblongæ, infra medium dorsifixæ, basi calcaratæ, loculis apice poris v. rimis brevibus dehiscentibus. Ovarium vertice conico excepto inferum, 3-loculare; stylus subulatus, stigmatē parvo; ovula in loculis  $\infty$ , 2-seriata. Capsula vertice conico loculicide dehiscens. Semina  $\infty$ , ovoidea, testa appressa; embryo in albumine carnosio longiuscule intrusus.—Cormus hypogæus, fibroso-tunicatus. Folia radicalia pauca v. unicum, basi vagina longa scariosa inclusa, lamina patente lineari v. lanceolata. Scapus basi cum foliis vagina inclusus, cæterum aphyllus, 1-florus v. laxo pauciflorus. Flores cerulei, pedicello longiusculo nudo v. prope basin bracteola parva instructo.

Species 2, Chilenses. *Baker in Journ. Linn. Soc.* xvii. 496. *Regel, Gartenfl.* t. 718.

26. *Odontestomum*, *Torr. Bot. Whipple Exped.* 94 (150), t. 24.—Perianthium hypocrateriforme, tubo cylindræo æquali; lobi 6, subæquales, patentes v. reflexi; coronæ squamellæ 6, lineares, breves, lobis alternæ, ad faucem ab annulo stamineo bene distinctæ. Stamina 6, fauci intra squamellas æqualiter affixa, lobis breviora, filamentis

inferne complanatis basi in anulum connatis; antheræ erectæ, basifixæ, ovoideæ, didymæ, loculis poro terminali dehiscentibus. Ovarium basi lata excepta superum, 3-loculare; stylus filiformis, stigmatē parvo; ovula in loculis 2, collateralia, ascendētia. Capsula basi lata excepta supera, subglobosa, 3-dyma, loculicide dehiscens. Semina in loculis 1-2, obovoidea, erecta, testa appressa; embryo in albumine caroso longiuscule intrusus.—Cormus fibroso-tunicatus. Caulis erectus, ramosus. Folia linearia, pleraque infra medium caulem conferta, longe vaginata, sub ramis solitaria, minora. Flores parvuli, albidī v. flavidi, secus ramos racemosi, breviter pedicellati. Bractææ sub pedicellis lineares, summæ minimæ, bracteola in pedicello parva.

Species 1, Californica. *S. Wats. Bot. Calif.* ii. 160. *Baker in Journ. Linn. Soc.* xi. 436 (*Odon-tostemum*).

### ORDO CLXXIII. IRIDÆ.

Endl. Gen. 164. Lindl. Veg. Kingd. 159. *Baker in Journ. Linn. Soc.* xvi. 61. Klatt, Ergänzungen und Berichtigungen zu Baker's Systema, Halle, 1882 (ex Abhandl. Naturf. Gesellsch. Halle, xv.).

*Flores* hermaphroditi, regulares v. oblique irregulares. *Perianthium* supra ovarium v. ovarii rostrum corollinum, marcescens, demum deciduum, tubo 0 v. plus minus evolutō; segmenta v. lobi 6, distincte 2-seriata, nunc omnia subæqualia similiaque, nunc interiora exterioribus minora v. majora v. forma nec textu dissimilia, v. limbus obliquus lobis posterioribus majoribus. *Stamina* 3, segmentis lobisve exterioribus opposita, tubo v. faucī affixa v. plus minus segmentis adnata; filamenta filiformia, libera v. plus minus in tubum coalita. *Antheræ* ovatæ oblongæ v. lineares, nunc erectæ basifixæ v. breviter supra basin dorsifixæ, nunc plus minus sagittatæ inter lobos basales affixæ demumque versatiles, loculis 2 parallelis contiguīs v. connectivo angusto separatis, rimis longitudinālibus extrorsum v. lateraliter dehiscentibus. *Ovarium* inferum, usque ad apicem 3-loculare v. rarius in rostrum tenue solidum productum, placentis axilibus, v. rarissime 1-loculare, placentis 3 parietalibus. *Stylus* filiformis, superne sæpiissime 3-fidis, ramis subulatis v. apice varie dilatatis appendiculatisve, indivisis 2-fidis v. laceris, summo vertice v. superne introrsum stigmatosis. *Ovula* in quoque loculo  $\infty$ , sæpius numerosa, rarius ad 1-2 reducta, anatropa. *Capsula* globosa obovoidea oblonga v. rarius linearis, interdum 3-dyma v. 3-loba, perianthio delapso annulo prominente v. linea circulari (perianthii basi v. cicatrice) coronata, intra anulum haud raro latiuscule plana v. leviter convexa (false operculata dicta), ab apice v. usque ad basin in valvas 3 loculicide dehiscens. *Semina* pauca v. numerosa, 2-seriatim superposita, rarius in loculis solitaria, funiculis brevibus sæpius brevissimis, estrophiolata, globosa v. mutua pressione angulata v. interdum compresso-plana; testa membranacea v. leviter spongioso-incrassata. *Albumen* corneum, semen implens. *Embryo* parvus, a hilo parum distans, intra albumen perfecte inclusus.

*Herbæ* perennes. *Rhizoma* nunc lignosum, nunc repens v. stoloniferum, nunc brevissimum fibras fasciculas emittens a cormi nucleo non distinctum, interdum in caudicem erectum infra folia brevissimum v. rarius elongatum ramosumque productum. *Caules* herbacei, in rhizomate fasciculati v. unicus terminalis, v. rhizomate non evolutō basi cum foliorum vetustiorum vaginis in bulbum seu cormum tunicatum incrassati; interdum supra bulbum brevissimi v. obsoleti. Folia ad basin caulis v. caudicis ramorum plerumque conferta, nunc circa caulem fasciculata et anguste linearia, nunc sæpius disticha, a latere complanata basi vaginata et equitantiā, in caule ipso sæpius pauca v. præter floralia et spathas 0. Inflorescentia terminalis v. ex axilla folii floralis simplex v. ramosa, v. interdum pedunculi plures fasciculati. *Spathæ* (bractææ spathacææ) terminales v. laterales, membranacæ scariosæ v. herbacæ striatæque, concavæ v. complicatæ, flores bractæasque 1- $\infty$  amplectentes v. arcte includentes. Flores si solitarii sessiles v. rarius

pedicellati, si plures sæpius pedicellati, revera intra spatham in cymam unirameam (ripidium) dispositi, sed rhachi brevissima fasciculati apparent, perianthio solo spatham superante. Bractee intra spatham tot quot flores, rarissime in spatha uniflora desunt, interdum spathæ subaimiles nisi breviores haud raroque magis scariosæ, interdum in spatha uniflora ea sublatores 2-nerves 2-carinatæ v. 2-fidæ. Capsulæ maturæ intra spatham sessiles inclusæque v. pedicello accrescente rarius ab initio e spatha exsertæ.

Species notæ paullo ultra 700, per regiones temperatas tropicasque utriusque orbis latissime dispersæ, in regione Mediterranea et Africa australi copiosissimæ, in America tamen haud raræ, in Australia plurimæ, in Asia paucæ.

Ordo facile distinctus, *Amarylloideis* accedit ovario infero et seminum structura, sed constanter differt staminibus 3 solis segmentis exterioribus perianthii oppositis evolutis, et antheris extrorsum v. a latere nec introrsum dehiscentibus.

#### FORMÆ ABNORMES.

Stamina 2 sola perfecta, filamentis tertio ananthero in *Diplarrhena*.

Ovarium uniloculare placentis 3 parietalibus in *Hermodactylo*; apice in rostrum tenue perianthii tubum simulans productum in speciebus nonnullis *Iridis* et *Morææ*.

#### CONSPECTUS GENERUM.

**Tribus I. MORSEÆ.** Spathæ terminales v. pedunculatæ, rarissime paucæ secus caulem subsessiles. Flores in spatha 2-∞, rarissime ad unum reducti, pedicellati v. rarius subsessiles. Bractee intra spatham concavæ v. carinatæ, floribus oppositæ. Styli rami antheris oppositi iisque sæpe appliciti, sæpius 2-lobi v. 2-appendiculati; stigmata nunc ad basin nunc ad apices loborum ab apicibus antherarum parum distantia. Caules in rhizomate evoluto ebulbosi v. leviter bulbosi in *Iridis* speciebus pluribus, in *Morææ* sect. *Diele*, in *Hermodactylo* et in *Marica*, in cæteris omnibus bulbis tunicatus rhizomate non evoluto.

Tribus a 2 sequentibus distinguitur imprimis styli ramis antheris oppositis.

Excepta: styli rami 2-partiti, lobis sub anthesi inter antheras patentibus in *Hexaglottide*.

\* *Styli rami 2-alati, alis ultra antheras in lobos petaloideos productis; stigmata immediate supra antheras ad basin loborum transversa.*

1. *IRIS*. Perianthii segmenta basi in annulum v. tubum connata, interiora exterioribus dissimilia, sæpius minora erectiora, rarius inter exteriora patula.—*Eur., Afr. bor., Asia temp., Amer. bor.*

2. *HERMODACTYLUS*. Omnia *Iridis* nisi ovarium 1-loculare, placentis parietalibus. Capsula 1-locularis, subinflata.—*Gallia merid., Italia, Græcia.*

3. *MORÆA*. Perianthii segmenta inter se a basi distincta, interiora exterioribus sæpius multo minora erectiora, nunc angustissima v. minima v. 3-fida, rarius exterioribus similia nisi minora.—*Afr. trop. et austr., Madagascaria, Australia.*

\*\* *Styli rami exalati v. rarius 3-alati, ultra antheras in lobos 2-3 producti v. minute dentati; stigmata prope apicem antheræ transversa v. patentia. Filamenta libera.*

4. *MARICA*. Perianthii tubus 0, segmenta interiora exterioribus minora, erecta, sæpius flexuosa v. apice recurva. Styli rami ultra stigma in lobos 2-3 erectos teretes v. planos producti. Caules e rhizomate brevi ebulbosi.—*Amer. et Afr. trop.*

5. *CYPELLA*. Perianthium et stylus *Maricæ*. Bulbus tunicatus.—*Amer. austr. trop. et subtrop.*

6. *TRIMEZIA*. Perianthium *Cypellæ*. Styli rami ultra stigma non producti v. brevissime 2-dentati, dentibus obtusis v. setaceis.—*Ind. occid., Amer. centr.*

\*\*\* *Styli rami ad basin antherarum 2-fidi, v. rarius indivisi, antheris paullo breviores v. viz longiores apice solo stigmate; stigmatum rudimenta interdum ad basin loborum patentia. Filamenta in tubum connata.*

7. *TIGIDIA*. Perianthii tubus 0, segmenta libera, patentia, interiora exterioribus multo minora obtusa undulata. Styli rami 2-partiti, lobis subulatis.—*Amer. occid. a Chile a Mexicum.*

8. **RIGIDELLA.** Perianthii tubus 0, segmenta exteriora basi in cupulam conniventia cæterum patentissima, interiora multo minora, erecta, intra cupulam occulta v. tubo stamineo appressa. Styli rami 2-partiti, lobis subulatis.—*Mexico, Amer. centr.*

9. **ALOPHIA.** Perianthii tubus 0, segmenta interiora exterioribus patentibus multo minora, erecta, acuta, plana. Styli rami breviter 2-fidi, lobis linearibus v. leviter dilatatis.—*Texas, Amer. austr. extratrop., Brasilia.*

10. **FERRARIA.** Perianthii tubus brevis, campanulatus, lobi subæquales, patentes. Styli rami complanati, sæpe 2-fidi, apice fimbriato-multisetosi.—*Afr. austr.*

11. **HOMERIA.** Perianthii tubus brevissimus, lobi subæquales, erecto-patentes. Styli rami indivisi, lineares v. latiusculi, apice 2-dentati v. fimbriati.—*Afr. austr.*

## GENUS ANOMALUM.

12. ? **HEXAGLOTTIS.** Perianthii tubus 0, segmenta subæqualia rotato-patentia. Filamenta vix connata. Styli rami 2-partiti, lobi subulati, in alabastro antheris oppositi, denum antheras amplectentes inter easque patentes.—*Afr. austr.*

**Tribus II. Sisyrinchieæ.** Spathæ terminales v. pedunculatæ, rarissime secus caulem sessiles. Flores in spatha in *Croceis* solitariæ, in cæteris omnibus sæpissime 2-∞, pedicellati v. rarius subsessiles. Bractæ intra spatham concavæ v. carinatæ, floribus oppositæ. Stylus infra ramos staminibus longior, v. si brevior rami antheris alterni, summo vertice v. introrsum in longitudinem stigmatosi.

Subtribus 1. *Croceæ.* *Bulbus seu cormus tunicatus.* *Spathæ 1-floræ, in pedunculis seu scapis terminales.* *Genera gerontogea extratropica.*

13. **CROCUS.** Pedunculi seu scapi intra folia radicales. Perianthii tubus longissimus, tenuis, lobi conniventes. Styli rami cuneati dentati v. varie lobati, vertice solo stigmatosi.—*Reg. Mediterr., Eur. et Asia med.*

14. **SYRINGODEA.** Pedunculi seu scapi intra folia radicales. Perianthii tubus longissimus, tenuis, lobi patentissimi v. conniventes. Styli rami subulati, indivisi, superne introrsum stigmatosi.—*Afr. austr.*

15. **GALAXIA.** Pedunculi intra folia cum iis ad apicem caudicis brevis subhypogæi fasciculati. Perianthii tubus tenuis. Filamenta in tubum connata. Stylus apice petaloideo-dilatatus, fimbriatus v. cuneato-3-lobus, vertice solo stigmatosus.—*Afr. austr.*

16. **ROMULEA.** Pedunculi intra folia radicales v. in caule elongato plures. Perianthii tubus brevissimus, rarius longiusculus. Styli rami subulati, apice plus minus 2-fidi, lobis introrsum stigmatosis.—*Eur. occid., reg. Mediterr., Afr. occid. et austr.*

Subtribus 2. *Cipureæ.* *Bulbus seu cormus tunicatus.* *Spathæ 2-∞-floræ, rarissime 1-floræ.* *Perianthii tubus 0 v. brevissimus, lobi v. segmenta æqualia v. interiora paullo minora.* *Genera omnia Americana.*

17. **CIPURA.** Spathæ ad apicem caulis plures, angustæ, fasciculatæ. Filamenta libera. Styli rami indivisi, petaloideo-dilatati. Capsulæ e spatha exsertæ.—*Amer. trop.*

18. **SPHENOSTIGMA.** Spatha terminalis v. paucæ longiuscule pedunculatæ. Filamenta libera. Styli rami indivisi, lanceolati v. cuneati. Capsulæ e spatha exsertæ.—*Amer. trop.*

19. **ELBUTHERINE.** Spatha terminalis v. paucæ pedunculatæ. Filamenta libera. Stylus brevissimus, ramis longis subulatis indivisis. Capsulæ spatha inclusæ.—*Amer. trop.*

20. **CALYDORÆA.** Spatha terminalis v. paucæ pedunculatæ rarissime sessiles. Filamenta libera. Stylus elongatus, ramis indivisis subulatis v. apice leviter clavatis. Capsulæ e spatha exsertæ.—*Amer. trop. et subtrop.*

21. **GELASINE.** Spatha terminalis. Filamenta in tubum brevem connata. Stylus brevis, ramis brevibus obtusis indivisis.—*Amer. austr. extratrop.*

22. **NEMASTYLIS.** Spatha terminalis v. paucæ pedunculatæ. Filamenta breviter v. in tubum longum connata. Stylus ramis 2-partitis specie 6-fidus, lobis subulatis.—*Amer. trop. et bor.*

Subtribus 3. *Eusisyrinchieæ.* *Rhizoma brevissimum fibris radicalibus fasciculatis, v. repens, caule terminali non bulloso (exceptis Bobartia filiformi et Keitia).* *Spathæ 2-∞-floræ, rarissime 1-floræ.* *Perianthii tubus 0 v. brevissimus, lobi patentes, æquales v. interiores paullo majores v. minores.*

23. *DIPLARRHENA*. Spatha terminalis, addita interdum altera inferiore. Perianthii lobus posterior ceteris major. Antheræ perfectæ 2, filamentis tertio ananthero. Capsulæ e spatha exsertæ. Semina plana.—*Australia*.

24. *LIBERTIA*. Spathæ bracteæque breves, laxæ, membranaceæ, in panicula v. secus pedunculum sessiles, florum cymulam v. capitulum non omnino includentes. Perianthii segmenta aequalia v. interiora paullo majora. Filamenta libera v. basi breviter connata.—*Chile, Australia, Nov. Zel.*

25. *BELLMCANDA*. Inflorescentia 2-3-chotoma. Spathæ terminales bracteæque membranaceo-scariosæ. Filamenta libera. Capsulæ valvæ demum reflexæ, axin placentiferam persistentem erectam liberantes. Semina majuscula.—*Ind. or., China, Japonia*.

26. *ORTHOANTHUS*. Spathæ oblongæ, sessiles v. pedunculatæ, interdum fasciculatæ. Flores brevissime pedicellati. Filamenta libera v. basi brevissime connata. Styli rami filiformes. Capsulæ spatha inclusæ.—*Amer. austr. extratrop. et Andin., Australia*.

27. ? *KRITIA*. Spathæ ovatæ, pedunculatæ. Filamenta ima basi brevissime connata. Styli rami applanati.—*Afr. austr.*

28. *BOBARTIA*. Spatha terminalis v. plures fasciculatæ, singulæ bracteis bifariam imbricatis stipatæ. Filamenta libera. Capsulæ e spathis exsertæ.—*Afr. austr.*

29. *SISYRINCHIUM*. Spatha terminalis v. plures fasciculatæ. Filamenta plus minus in tubum connata, rarissime libera. Styli rami tenues, indivisi. Capsulæ e spatha exsertæ. Fibræ radicales ad basin caulis fasciculatæ.—*Amer. bor. et austr., Hibernia*.

30. *TAPEINIA*. Spatha terminalis, 1-flora. Herba nana densissime cæspitosa-ramosa. Cætera *Sisyrynchii*.—*Terr. Magell.*

Subtribus 4. *Aristeæ*. Rhizoma nunc brevissimum fibris radicalibus fasciculatis, nunc repens v. lignosum et in caudicem erectum abiens. Perianthii tubus plus minus evolutus. Capsulæ spatha sæpissime inclusæ.

31. *PATERSONIA*. Spathæ terminales geminæ. Perianthii tubus tenuis, lobi exteriores lati patentes, interiores parvi erecti v. 0. Filamenta in tubum connata. Stylus sæpius sub ramis articulatus.—*Australia*.

32. *SYMPHYSTEMON*. Spathæ 1-2, inter folia sessiles v. pedunculatæ. Perianthium infundibuliforme, lobis suberectis aequalibus. Filamenta in tubum connata, superne libera, filiformia; antheræ versatiles. Styli rami filiformes. Fibræ radicales fasciculatæ. — *Amer. austr. extratrop. et Andin.*

33. *CHAMELUM*. Spatha terminalis v. plures aggregatæ. Perianthii tubus tenuis, lobi subæquales. Filamenta in tubum brevem connata; antheræ longæ, erectæ. Styli rami brevissimi, recurvi. Rhizoma breviter repens.—*Chile*.

34. *SOLENOMELUS*. Spatha terminalis. Perianthii tubus tenuis; lobi subæquales. Filamenta in tubum cylindraceum connata; antheræ breves, erectæ, subsessiles. Stylus indivisus, vertice solo ciliato-stigmatosus. Rhizoma breve.—*Chile*.

35. ? *CLEANTHE*. Spatha terminalis. Perianthii tubus brevis; lobi patentes, interiores exterioribus duplo majores. Styli rami obovati. Rhizoma breve.—*Afr. austr.*

36. *ARISTEA*. Spathæ sæpius 1-2-floræ, vario capitata cymulose corymbosæ v. ramos dichotomos inflorescentiæ terminantes, rarius plurifloræ. Perianthii tubus tenuis, sæpius brevis, lobi aequales, rotato-patentes. Filamenta libera. Stylus elongatus, 3-dentatus v. breviter obovato-3-lobus. Caudex nunc brevissimus nunc plus minus lignosus interdum fruticoso-ramosus.—*Afr. austr.*

37. *WITSENIA*. Spathæ 1-floræ, bracteis bifariam imbricatis spatha ipsa longioribus stipatæ. Perianthii tubus longus, cylindraceus; lobi breves, erecti, æquales. Filamenta libera. Stylus minute 3-dentatus. Caudex fruticosus, ramosus.—*Afr. austr.*

38. *KLATIA*. Inflorescentia et habitus *Witsenia*. Perianthii tubus brevis, lobi longi, erecti, filiformes, filamentis similes nisi superne leviter linear dilatati.—*Afr. austr.*

**Tribus III. Ixiæ.** Spathæ 1-floræ, secus pedunculum seu ramos inflorescentiæ sæpius plures, sessiles. Flos intra spatham sessilis, bractea 2-nervi 2-carinata v. 2-fida stipatus. Bulbus seu cornus in omnibus præter *Schizostylum* tunicatus. Genera omnia gerontogea, paucis speciebus exceptis Africana.

Tribus a præcedentibus imprimis inflorescentia distinguitur. Series et genera sequentia inter se characteribus valde incertis distincta, formis sæpe intermediis juncta.

\* *Perianthium regulare v. parum obliquum, stylo staminibusque subrectis. Styli rami indivisi.*

39. SCHIZOSTYLIS. Styli rami subulati, parte integra multo longiores. Caulis basi non v. vix bulbosus, fibris radicalibus fasciculatis. Spathæ virescentes, lanceolatæ.—*Afr. austr.*

40. HESPERANTHA. Styli rami subulati, parte integra multo longiores. Bulbus seu cormus ut in omnibus sequentibus tunicatus. Spathæ virescentes.—*Afr. austr. et trop.*

41. GEISSORHIZA. Stylus elongatus, ramis subulatis v. vix dilatatis. Spathæ virescentes, sæpius lanceolatæ.—*Afr. austr., Madagasc.*

42. DIERAMA. Stylus elongatus, ramis apice cuneato-dilatatis. Paniculæ rami breviter filiformes, in vivo penduli. Spathæ scariosæ Ixiæ.—*Afr. austr. et trop.*

43. STREPTANTHERA. Stylus elongatus, ramis apice cuneato-dilatatis sub-2-lobis. Anthæræ demum spiralliter tortæ. Spathæ membranaceo-scariosæ more *Sparaxeos* lineis brunneis notatæ. Herbæ humiles, paucifloræ.—*Afr. austr.*

44. IXIA. Styli rami lineares, recurvi, indivisi. Spathæ breves, latæ, membranaceo-scariosæ, sæpe 3-dentatæ.—*Afr. austr.*

*Perianthium regulare v. parum obliquum. Stamina subrecta. Stylus rectus v. superne lateralis, ramis tenuibus 2-fidis superne introrsum stigmatosis.*

45. FREESIA. Perianthii tubus tenuis, curvus, fauce longe campanulata. Spathæ Ixiæ, breves, campanulatæ.—*Afr. austr.*

46. LAPEYROUSIA. Perianthii tubus tenuis, rectus v. superne leviter incurvus, fauce brevi. Filamenta brevissima. Spathæ herbacæ.—*Afr. austr. et trop.*

47. WATSONIA. Perianthii tubus curvus, superne ampliatus. Filamenta longiuscula. Spathæ oblongæ lanceolatæ v. angustæ.—*Afr. austr.*

48. MICRANTHUS. Perianthium parvulum, rectum, tubo brevi, fauce lata. Spathæ parvæ, numerosæ, in spica longa strictæ eleganter distichæ.—*Afr. austr., ins. Mascar.*

\*\*\* *Perianthium sæpe obliquum irregulare v. incurvum, staminibus plus minus unilateralibus. Stylus superne e staminibus lateralis, ramis indivisis.*

49. ACIDANTHERA. Perianthii tubus longus rectus v. leviter incurvus, lobi subæquales, erecto-patentes. Styli rami subulati v. anguste membranacei. Spathæ dissitæ, angustæ.—*Afr. austr. et trop.*

50. BABIANA. Perianthium infundibulare, tubo recto sæpius longo, lobi nunc subæquales *Acidanthæræ*, nunc valde inæquales *Antholyzæ*. Inflorescentia sæpius simplex, densa, pilosa. Folia sæpius plicato-venosa.—*Afr. austr.*

51. CROCOSMA. Perianthii tubus cylindraceus, subincurvus, apice non ampliatus, lobi patentes subæquales. Styli rami apice dilatati, denticulati. Capsula subinflato-globosa late 3-loba, spatham subsuperans. Panicula laxa.—*Afr. austr.*

52. MELASPHERULA. Perianthium tubo subnullo campanulatum, segmentis parum inæqualibus setaceo-acuminatis. Styli rami apice leviter cuneato-dilatati. Capsula late divaricato-3-loba, loculis sæpius 2-spermis. Panicula ampla, laxa. Spathæ parvæ, latæ.—*Afr. austr.*

53. TRITONIA. Perianthii tubus tenuis, brevis v. longus, apice non ampliatus, limbus concavus v. campanulatus, æqualis v. obliquus. Styli rami tennes, v. apice clavati v. leviter dilatati. Capsula ovoidea v. oblonga. Spathæ membranacæ, breves, sæpe dentatæ.—*Afr. austr.*

54. SPARAXIS. Perianthii tubus brevis, in faucem ampliatus, limbus parum inæqualis. Styli rami tennes. Spathæ scariosæ, lineis brunneis notatæ, apice fimbriato-dentatæ.—*Afr. austr.*

55. SYNNOTIA. Perianthium infundibuliforme, tubo brevi v. longo, limbo valde inæquali, lobo postico magno erecto. Spathæ scariosæ, lineis brunneis notatæ.—*Afr. austr.*

56. GLADIOLUS. Perianthium plus minus incurvum, limbo inæquali. Spathæ sæpius lanceolatæ, herbacæ.—*Eur., reg. Mediterr., Afr. trop. et austr., ins. Mascar.*

57. ANTHOLYZA. Perianthii tubus basi tenuis, faux longa tubulosa, incurva, limbus parum v. valde inæqualis.—*Afr. austr.*

#### GENERA EXCLUSA.

TECOPHILÆA, Bert., ad tribum *Conantherearum* inter *Hæmodoraceas* refertur.

CAMPYNEMA, Labill., in Flora Australiensi in *Iridcis* inclusum, melius ad *Amaryllideas* restituendum.

## TRIBUS I. MORAEAE.

1. *Iris*, Linn. Gen. n. 59.—Perianthii segmenta infra medium unguiculata, erecta, basi contracta, in tubum brevem nunc brevissimum rarius longiusculum connata (ovariorostro interdum tubum longum tenuem simulante), 3 exteriorum laminae plus minus dilatatae, patentes v. reflexae, 3 interiora angustiora undique erecta v. apice subpatentia, interdum minima. Stamina ad basin segmentorum exteriorum affixa, filamentis filiformibus liberis v. rarius stylo agglutinatis; antherae lineares, basifixae, styli ramis arcte applicitae v. agglutinatae, extrorsum dehiscentes. Ovarium 3-loculare, loculis  $\infty$ -ovulatis, apice rotundatum acuminatum v. in rostrum nunc breve nunc longum tenueque perianthii tubum simulans sed intus fartum productum; stylus toro ovarium v. rostrum terminanti impositus, intra perianthii tubum liber, saepius brevis; rami 3, stylo ipso saepius longiores supra antheras recurvi, utroque latere alati, alis ultra antheram in lobos 2 erectos petaloideos (stigmatis labium interius auct. plur.) productis; stigmata ad basin loborum styli ramum terminantia, transversa, integra v. partita. Capsula oblonga, brevis v. longiuscula, nunc teres, 3- v. 6-costata v. laevis, nunc distincte 3-quetra, angulis interdum valde prominentibus acutisque, apice obtusa v. breviter rostrata v. in rostrum longum tenue intus fartum productum, infra rostrum 3-locularis, breviter v. rarius usque ad basin loculicide dehiscens; rostrum, si breve, dehiscentia 3-fidum, ad apices valvarum persistens, si longum, varie marcescens v. demum disruptum. Semina saepius globosa v. pressione angulata v. compressa, testa interdum inaequaliter spongioso-incrassata; embryo in albumine corneo longitudine variat.—Rhizoma nunc lignosum, horizontale v. repens, rarius tenuius et longe repens, nunc brevissimum. Caules solitarii v. fasciculati, simplices v. ramosi basi interdum in bulbum tunicatum, rarius in cornum, incrassati, tunicis, dum persistent, laevibus brunneisque v. in fibras solutis. Folia ad basin caulis linearia, tenuia, v. plana ensata disticha et equitantia, secus caulem pauca. Spatha unica, terminalis, v. paucae secus caulem simplicem dissitae, v. ad apicem caulis confertae, interdum omnes pedunculatae in paniculam laxam dispositae. Flores in spatha saepius 2- $\infty$ , rarius solitarii, plus minus pedicellati.

Species fere 100, Europae, Africae borealis, Asiae temperatae et Americae borealis incolae. Baker in Gard. Chron. 1876 (*Iris*); in Journ. Linn. Soc. xvi. 122 (*Xiphion*) et 136 (*Iris*). Klatt in Linnæa xxxiv. 568 (*Xiphion*), 573 (*Coresantha*), 576 (*Gynandris*), 578 *Oncocyclus*, 587 (*Neubeckia*), et 591 (*Iris*); Ergän. und Bericht. 27 (*Xiphion* et *Juno*), 35 (*Iris*), 39 (*Evansia* et *Oncocyclus*).

Genus conspicuum, naturale, facileque dignoscendum, quodammodo tamen polymorphum, et a variis auctoribus varie restrictum v. extensum. Tausch in Rœm. et Schult. Syst. i. Mant. Addit. 369, sectiones 6 proposuit, quarum 3, *Limniris*, *Xyridion* et *Spathula*, a Bakero in subgenus suum *Apogon* junctae sunt; *Pogiris*, Tausch, est *Pogoniris*, Baker; *Lophiris*, Tausch, est *Evansia*, Baker; et *Xiphion*, Tausch, a Bakero pro genere proprio recipitur.

Spach, Revis. Irid. in Ann. Sc. Nat. ser. 3, v. 89, *Iridem* in subgenera 16 divisit, a Bakero in variis subgeneribus suis v. generibus distributa.

Alefeld, in Bot. Zeit. 1863, 290, 297, genus distinctum *NEUBECKIAM* proposuit, ad species varias perianthio tubo longissimo crociformi. Hic tamen latet error; in *Croco* tubus verus elongatus tenuisque adest, stylum liberum includens, in *Neubeckia* rostrum ovarii tubum simulat, sed intus fartum est et vertice torum styliferum ad basin tubi brevis perianthii fert.

Parlatore, Nov. Gen. e Spec. Monocot. 34, genera 3 ab *Iride* separavit, *Hermodactylon*, *Gynandris* et *Xiphion*; in *Xiphio* præter species *Xiphii*, Baker, includit etiam *Neubeckias* plures, et ovarii rostrum pro perianthii tubo stylo adnato descripsit, sed stylus nequaquam intra rostrum continetur.

Klatt in Bot. Zeit. 1872, 497, 513, *Iridem* limitavit ad species unguibus loborum exteriorum perianthii barbatis et species perianthiis nudis (*Apogon*, Baker) in genera 2 novæ distribuit, *XYRIDION*, Klatt, l. c. 499, et *IONIRIS*, Klatt, l. c. 502, quorum characteres bene intelligere nequimus, quosque nuper in Ergän. und Bericht. sub silentio prætermittit.

Inter tot discrepantias, sectiones et subsectiones sequentes a generibus subgeneribusque Bakeri parum mutatae, etsi vix semper naturales, commode admittendae videntur.

1. *Euiris*. Rhizoma plus minus evolutum nunc brevissimum fasciculato-nodosum, nunc crassum horizontale v. repens, nunc tenue elongatum v. stoloniferum. Caules ad apicem rhizomatis solitarii

v. fasciculati v. secus rhizoma plures basi haud incrassati v. subbulbosi, non tunicati sed interdum (in *I. songarica*, Pall., *I. tenuifolia*, Pall., affinibusque) foliorum emarcidorum reliquiis fibrosis dense obtecti fere cormiformes. Perianthii segmenta interiora (an semper?) bene evoluta, erecta v. rarius superne patentia. *Reichb. Ic. Fl. Germ. t. 327 ad 347. Jacq. Fl. Austr. t. 1 ad 5. Waldb. et Kit. Pl. Rar. Hung. t. 57, 226. Brot. Phytoz. Lusit. t. 96. Desf. Fl. Atl. t. 5. Sibth. Fl. Græc. t. 39, 40. Ledeb. Ic. Fl. Ross. t. 101, 102, 342. Wall. Pl. As. Rar. t. 86. Royle, Illustr. Pl. Himal. t. 91, f. 2. Ic. numerosissimæ in Red. Lil.; Jacq. Ic. Rar., Bot. Mag., aliisque diariis hortulanorum.*

Huc includimus subsectiones 5 (subgenera, Baker): 1. *Hexapogon*, perianthii segmentorum omnium unguis barbati. 2. *Pogoniris*, perianthii segmentorum exteriorum unguis barbati. 3. *Onocyclus*, perianthii segmenta exteriora facie pilosa. 4. *Apogon*, perianthii segmenta omnia nuda; et 5, *Evansia*, perianthii segmentorum exteriorum unguis cristati.

ONOCYCLUS, *Siemss. in Bot. Zeit.* 1846, 706, pro genere proprio ab auctore distinguitur imprimis ad capsulae valvas apice (mediante rostro?) coherentes, lateraliter in longitudinem dehiscentes, et semina strophiole nivea instructa. Fructus maturi nobis desunt.

EVANSIA, *Salisb. in Trans. Hort. Soc. i.* 303, *absque char.*, est *I. japonica*, Thunb., species Chinensis et Japonica, a cæteris subgeneris *Evansia*, Baker, diversa styli ramorum alis petaloideis longe ciliato-fimbriatis. Inflorescentia laxè paniculata in genere rara est.

2. *Diaphane*. Bulbus v. cormus in rhizomate brevissimo unicus, tunicis fuscis membranaceis v. fibrosis (interdum a fibris *I. songarice* parum diversis). Perianthii segmenta imberbia, interiora magna. *Baker in Journ. Linn. Soc. xvi.* 122 (*Xiphii* subgen.). *Boiss. Voy. Esp. t. 170. Desf. Fl. Atl. t. 4. Bieb. Cent. Pl. Ross. t. 11. Red. Lil. t. 212, 337. Bot. Mag. t. 679, 686, 687, 5577, 5890, 5928, 5981, 6033. Lodd. Bot. Cab. t. 1829. Sweet, Brit. Fl. Gard. ser. 2, t. 189. Reg. Gartenfl. t. 452. DIAPHANE, *Salisb. in Trans. Hort. Soc. i.* 305, *absque char.**

3. *Juno*. Bulbus v. cormus in rhizomate brevissimo unicus. Perianthii segmenta imberbia, interiora minima erecta v. inter unguis exteriorum patentia. *Baker in Journ. Linn. Soc. xvi.* 123 (*Xiphii* subgen.). *Brot. Phytoz. Lusit. t. 95. Desf. Fl. Atl. t. 6. Red. Lil. t. 189, 211. Bot. Mag. t. 1. Bot. Reg. t. 1876. Sweet, Brit. Fl. Gard. t. 255. JUNO, Tratt. in Ræm. et Schult. Syst. i.* 471, 474, *absque char. et ejusd. Ausw. Gartenpf. i.* 135, *ex Aschers. in Bot. Zeit.* 1864, 112. THELYSIA, *Salisb. in Trans. Hort. Soc. i.* 303, *absque char.*; *Parlat. Fl. Ital. iii.* 316. COSTIA, *Willk. in Bot. Zeit.* 1860, 131. CORESANTHE, *Alef. in Bot. Zeit.* 1863, 298. Alefeld tamen antheram unam solam perfectam (in *I. persica*) dixit, quod verisimiliter in flore casu abnormi observavit; in speciminibus nostris antheras 3 perfectas vidimus.

4. *Gynandriris*. Cormus in rhizomate brevissimo unicus v. annotino subpersistente duplex. Perianthii segmenta nuda. Filamenta stylo agglutinata at solubilia. Species editæ 5, a Bakero omnes ad *I. Sisyrinchium*, Linn., reductæ, sed forte 2 v. 3 bene distinguendæ. *Cav. Ic. t. 193. Red. Lil. t. 29, 458. Ten. Fl. Nap. t. 4. Sibth. Fl. Græc. t. 42. Bot. Mag. t. 1407 (Moræa), et t. 6096 (Xiphion). Sweet, Brit. Fl. Gard. t. 110 (Moræa). GYNANDRIRIS, *Parlat. Nuov. Gen. e Spec. Monocot.* 49.*

CHAMOLETTA, *Adans. Fam. ii.* 60, includit *Diaphanem Junonem* et *Gynandriridem*. XIPHION, *Parlat.*, includit *Diaphanem* cum speciebus nonnullis *Apogonis*, Bak. XIPHION, Baker, includit *Junonem* et *Diaphanem*.

2. *Hermodactylus*, *Adans. Fam. ii.* 60, *char. manco*.—Perianthii tubus brevis, rectus; lobi 3 exteriores basi erectiusculi, superne reflexo-patentes, interiores multo minores, erecto-patentes, lineares lanceolati v. subulati, setaceo-acuminati. Stamina ad basin loborum exteriorum affixa, filamentis lineari-subulatis liberis; antheræ lineares, styli ramis appliciti. Ovarium oblongum, subinflatum, apice in rostrum tenue productum, 1-loculare, placentis 3 parietalibus in loculo parum prominentibus; stylus brevis, ramis 3 supra antheram recurvis 2-alatis, alis ultra antheram in lobos 2 petaloideos productis; stigmata ad basin loborum transversa, 2-partita. Capsula ovoideo-oblonga, subinflata, inter placentas in valvas 3 dehiscens. Semina  $\infty$ , subglobosa, testa apice incrassata; embryo in albumine corneo minimus.—Rhizoma sublignosum, crassiusculum, horizontale. Folia ad basin caulis intra vaginas scariosas pauca, longa, linearia, 4-gona (quod in speciminibus siccis rarius apparet). Folium florale longo spathiforme. Spathæ longæ, angustæ, 1-floræ, complicatæ, bractea interiore complicata fere hyalina. Flos breviter stipitatus.

Species 3 distinxit *Sweet, Brit. Fl. Gard. ser. 2, t. 146*, quas *Baker in Journ. Linn. Soc. xvi.* 141

in unam junxit Gallie meridionalis Italie et Græciæ incolam. *Klatt in Linnæa*, xxxiv. 582. *Reichb. Ic. Fl. Germ.* t. 348. *Sibth. Fl. Græc.* t. 41. *Red. Lih.* t. 48. *Bot. Mag.* t. 531. *Fl. des Serres*, t. 1083 (ic. omni. sub *Iride*).

Genus ab auctoribus *Iride* inclusum, vix differt nisi ovario hic solum in toto ordine 1-loculari. Adanson ab *Iride* separavit ob perianthium ebarbatum et verisimiliter species plures includit. Parlatore primum in Nuov. Gen. e Spec. Monocot. 45, characteres veros illustravit. De *Hermodactylo* antiquorum cfr. Planch. *Hermodactes*, Thèse, Paris, 1856, cum tab.

3. *Moræa*, *Linn. Gen.* n. 60.—Perianthii tubus 0; segmenta ad apicem ovarii v. ovarii rostri filiformis libera, sæpe unguiculata, exteriora sæpius basi erectiuscula, maculata, supra medium reflexa v. patentissima, interiora angustiora, omnino erecta v. superne patentia, nunc multo minora v. angustissima, interdum 3-loba, rarius omnia fere a basi patentia consimiliaque, nisi interiora paullo angustiora. Stamina segmentis interioribus opposita, filamentis ima basi dilatatis interdumque liberis, sæpius plus minus in tubum circa stylum connatis, apice breviter filiformibus; antheræ lineares, styli ramis arcte applicitæ. Ovarium 3-loculare, obtusum v. rarius in rostrum longum tenue perianthii tubum simulans productum, ovulis in loculis numerosis; stylus intra stamina brevis v. longiusculus, rami 3 erecti v. supra antheras recurvi, utroque latere alati, alis ultra antheram in lobos 2 erectos petaloideos productis; stigmata ad basin loborum transversa, integra v. 2-partita. Capsula ovoidea oblonga v. rarius linearis v. subglobosa, loculicide dehiscens. Semina ovoidea v. subglobosa, plus minus angulata; embryo in albumine corneo minimus v. longiusculus.—Bulbus v. cormus in rhizomate brevissimo solitarius, v. caulis in rhizomate brevi fibroso bulbosus. Folia sæpius ad basin caulis pauca, nunc angustissime linearia, nunc ensiformia longaque, floralia spathacea interdum longe acuminata. Spathæ angustæ, nunc in caule tenui solitariae terminales, nunc in inflorescentia ramosa interdum composita plures, intra folia floralia pedunculatæ; herbaceæ, complicatæ. Flores in spatha sæpius pauci, interdum 2 tantum, rarius plurimi, omnes pedicellati, capsulis e spatha sæpius exsertis.

Species ad 40, Africae tropicae et australis, ins. Mascarensium et Australiae incolae. *Baker in Journ. Linn. Soc.* xvi. 129 (*Moræa*) et 132 (*Vicusseuxia*); *Trans. Linn. Soc. Bot.* i. 270. *Klatt in Linnæa*, xxxiv. 557, et 583 (*Diates*). *Jacq. Ic. Rar.* t. 224, 225; *Hort. Schönbr.* t. 197; *Hort. Vind.* iii. t. 20. *Red. Lih.* t. 71. *Andr. Bot. Rep.* t. 45 (*Iris*). *Salish. Parad. Lond.* t. 10. *Bot. Mag.* t. 577, 613, 750, 759, 771, 1012, 1045, 1061, 1238, 1276, 1284, 5785. *Bot. Reg.* t. 312.

Genus certe *Iridis* quam maxime affine, sed constanter distinguendum videtur perianthii segmentis inter se a basi distinctis et omnino liberis v. rarius basi columnæ stamineæ agglutinatis, et sæpissime filamentis plus minus monadelphis. Patria etiam diversa. Perianthii segmenta quodammodo polymorpha, sed genera nonnulla a variis auctoribus separata, non satis definita videntur.

*FREUCHENIA*, *Eckl. Verz. Pfl. Samml.* 14, est *M. ramosa*, Ker, *Bot. Mag.* t. 771 (*M. bulbifera*, *Jacq. Hort. Schönbr.* t. 197, *Bot. Mag.* t. 5785) species insignis rhizomate brevissimo seu bulbo non tunicato sed bulbillas numerosas radicibus brevibus rigidis ramosis intermixtis emittente, bulbilla etiam ad axillas foliorum sæpe apparent. Est fide Bakeri certe *Iris ramosa*, Herb. Thunb., etsi auctor errore quodam flores minores dixit.

*DIATES*, *Salish. in Trans. Hort. Soc.* i. 307, absque char., est *M. iridioides*, Linn., cui associavit Baker et ad sectionem *Iridis* transtulit ob caules bulbosos, *M. catenulatam*, Ker, *M. bicolorum*, Spr., et *M. Robinsonianam*, F. Muell. Flores tamen omnino *Morææ* nec *Iridis*. Perianthii segmenta omnia patentia observantur etiam in *Moræis* nonnullis typicis. Ad *Diates* refert Baker icones sequentes. *Jacq. Hort. Schönbr.* t. 196. *Bot. Mag.* t. 693. *Bot. Reg.* t. 1074, 1404. *Lodd. Bot. Cab.* t. 1861, 1886. *Fl. des Serres*, t. 744. *Diates Huttoni*, Baker in *Bot. Mag.* t. 6174, ab auctore serius ad *Moræam spathaceam*, Ker, non Thunb., refertur.

*VICUSSEUXIA*, *Delaroché ex DC. in Ann. Mus. Par.* ii. 136, t. 42, a *Moræa* distincta fuit, imprimis perianthii segmentis interioribus ab exterioribus patentibus valde diversis, angustis erectis 3-fidis 3-dentatis v. si integris angustissimis v. minimis. Genus a Bakero servatur charactero o filamentis altius monadelphis sumpto. *Klatt in Linnæa*, xxxiv. 542, 620, *Vicusseuxiam* a subordine suo *Iridearum genuinarum* ad *Suyrinchium* transfert, nobis tamen a *Moræa* nequaquam separanda videtur. Segmenta enim interiora in speciebus pluribus Africanis tropicis a Bakero ad *Moræam*

relatis parva sunt angustissima v. 3-fida, et vix latiora in *M. angusta*, Ker, paucisque aliis austro-Africanis, et in *Moræis* normalibus, filamenta variant de specio in speciem altius v. brevius connata v. in paucis speciebus basi potius contigua quam coherentia.

HYMENOSTIGMA, *Hochst. in Flora*, 1844, 24, genus propositum fuit ad species 2 Abyssinicas characteribus *Vicusseuxiæ*, perianthii segmentis interioribus angustissimis erectis, in una integris in altera 3-fidis. Baker utrasque ad *Moræam* refert.

HELIXYRA, *Salisb. in Trans. Hort. Soc.* i. 305, absque char., est *M. longiflora*, Ker, in *Bot. Mag.* t. 712, cui perianthii tubus longus tenuis dicitur. Planta nobis non nisi ex icone nota, sed quod tubus vocatur est, verisimiliter in *M. longiflora*, et certe in *M. Burchellii*, Baker (ut in speciebus pluribus *Iridis*), ovarii rostrum elongatum. Baker in *Journ. Linn. Soc.* xvi. 132, has duas species cum *Iride Sisyrinchio*, Linn., in sectionem suam *Helixyram Morææ* junxit.

Icones sequentes a Bakero ad *Vicusseuxiam* referuntur. *Jacq. Ic. Rar.* t. 221, 222; *Hort. Schænbr.* t. 10 (*Iris*). *Red. Lil.* t. 42. *Andr. Bot. Rep.* t. 364. *Bot. Mag.* t. 168, 571 (*Iris*), 593, 696, 702, 772, 1047, 1247. *Fl. des Serres*, t. 423.

Klatt, *Ergänz. und Bericht.* 31, 34, 40, genera *Moræam*, *Vicusseuxiam* et *Dietem* admisit et species 4 novas prioris descripsit.

4. *Marica*, Ker in *Bot. Mag.* t. 654, non ejusd. *ibid.* t. 655, nec Schreb.—Perianthii tubus 0; segmenta libera, exteriora patentia, ovata v. oblonga, interiora angustiora, a basi erecta, apice recurva, varie undulata v. incrassata. Stamina segmentis exterioribus opposita, filamentis a basi brevissime dilatata erectis liberis filiformibus; antheræ lineares, erectæ, styli ramis v. angulis arcte applicitæ v. agglutinatæ, extrorsum dehiscentes. Ovarium 3-loculare, loculis ∞-ovulatis; stylus basi breviter filiformis, ramis acute 3-quetris v. 3-alatis erectis, angulo exteriori antheræ applicito, angulis lateralibus v. omnibus ultra antheram in lobos erectos acuminatos productis: stigmata ad basin loborum transversa, 2-fida v. 2-partita, breviter horizontaliter patentia. Capsula ovoidea v. oblonga, obtusa v. truncata, loculicide dehiscens. Semina globosa v. mutua pressione angulata, testa crassiuscule membranacea; embryo in albumine durissimo brevis.—Caulis in rhizomate brevi erectus, sæpius validus, bulbosus. Folia ad basin caulis disticha, elongata, ensiformia, basi equitantia, florale unicum, late ensatum, angulis in caulis alas 2 longe decurrentibus. Spathæ in axilla folii floralis sæpius 2, inæqualiter pedunculatæ v. altera sessilis. Flores in spatha plures, pedicellati. Capsulæ e spatha exsertæ.

Species 9 enumerat Baker in *Journ. Linn. Soc.* xvi. 149, quarum 1 Africæ tropicæ occidentalis, cæteræ Americæ tropicæ orientalis incolæ. *Lindl. in Trans. Hort. Soc.* vi. t. 1. *Hook. Exot. Fl.* t. 222. *Red. Lil.* t. 56 (*Moræa*). *Andr. Bot. Rep.* t. 255 (*Moræa*). *Link et Otto Ic. Pl. Sel.* t. 58. *Bot. Mag.* t. 654, 3713, 3809, 6380. *Bot. Reg.* t. 713. *Lodd. Bot. Cab.* t. 1164. *Klatt in Mart. Fl. Bras.* iii. i. t. 66 (*Cypella*); *Ergänz. und Bericht.* 40.

Genus quoddam florum structuram valde affine *Cypellæ* cui olim adjunxit Klatt, sed habitu et caulo bulboso satis distinctum videtur. Stylus etiam paullulum diversus est.

5. *Cypella*, *Herb. in Bot. Mag.* sub t. 2637. (*Polia*, *Ten. Mem. Polia in Mem. Acad. Pontan.* anno non dato, t. 2, et in *Duchartre Rev. Bot.* ii. 125).—Perianthium tubo nullo basi concavum; segmenta libera, anguste v. late unguiculata, exteriora obovata patentia, interiora multo angustiora, erecta, varie undulato-flexuosa, apice recurva. Stamina segmentis exterioribus opposita, filamentis a basi dilatata liberis breviter filiformibus; antheræ lineares, erectæ, superne angulis styli arcte applicitæ, extrorsum dehiscentes. Ovarium 3-loculare, loculis ∞-ovulatis; stylus basi breviter filiformis, superne sub ramis angulato-3-alatus, alis ultra antheras in lobos 2 v. 3 erectos planos rectos v. incurvo- v. recurvo-patentes aequales v. tertio multo brevioribus productis; stigmata ad basin loborum ab angulo exteriori divergentia, parva v. longiuscula. Capsula breviter v. longe oblonga, obtusa v. truncata, demum plus minus loculicide dehiscens. Semina numerosa, ubi nota plus minus depresso-complanata.—Bulbus tunicatus. Folia ad basin caulis pauca, nunc angustissima tenuia, nunc in speciebus caule validiore latiora, plicato-venosa. Spathæ angustæ, nunc in caule tenui solitariae, nunc in caule validiore paucæ v. sat numerosæ, ad folia floralia interdum fasciculatæ, inæqualiter pedunculatæ v. hinc inde

una sessili. Flores in spathis ultimis 1-2-rarius 3, singuli bracteola angusta complicita stipati.

Species 4 v. 5, Americæ australis extratropicæ v. Bolivianæ incolæ. *Bot. Mag. t. 2599 (Tigridia). Bot. Reg. t. 949 (Moræa). Sweet, Brit. Fl. Gard. ser. 2, t. 33.*

Baker in Journ. Linn. Soc. xvi. 128, species 2 admittit, quibus tamen addendæ videntur: 1. *Ferraria pusilla*, Link et Otto Ic. Pl. Sel. t. 59, a Klattio ad *Cypellam* a Bakero ad *Hesperosiphon* relata; 2. *C. peruviana*, Baker in Bot. Mag. t. 6213, quæ typus generis *HESPEROSIPHON*, Baker in Journ. Linn. Soc. xvi. 127, et cui valde affinis nisi eadem est species Boliviana a Mandonio et a Pentlandio lecta; 3. *C. plumbea*, Lindl., *PHALOCALLIS*, Herb. in Bot. Mag. t. 3710, *Fl. des Serres*, t. 395, 1466, *Klatt in Mart. Fl. Bras. iii. i. t. 66*. Hæc species a typica *C. Herberti* differt imprimis lobis 2 erectis ramorum styli latiusculis incurvo-falcatis quasi conum obtusum formantibus, et stigmatibus parvis parum prominentibus, dum in *C. Herberti*, lobi 2 erecti angusti, tertius dum adsit multo brevior, erectus, et stigmata horizontaliter patentia, lobo tertio interdum parum breviora, omnia tamen in speciminibus nostris siccis variabilia videntur. *C. peruviana*, quoad styli ramorum lobos, intermedia videtur inter *C. plumbeam* et *C. Herberti*, priori tamen propinquior. *C. gigantea* et *C. paludosa*, Klatt, *Ergänz. und Bericht. 30, 31, e Brasilia*, nobis ignotæ sunt.

Staminodia a Lindleyo in Bot. Reg. 1838, Misc. 71, descripta, in speciminibus nostris desunt.

6. *Trimesia*, Salisb. in Trans. Hort. Soc. i. 308, nomen tantum, Herb. in Bot. Reg. 1844, Misc. 88. (Lansbergia, De Vriese, *Epimetr. Ind. Sem. Hort. Lugd. Bat. 1846, 2. Xanthocromyon*, Karst. in Bot. Zeit. 1847, 694, nomen tantum. Poarchon, *Allem. Tract. Rio Jan. 1849, cum ic. Remaclea*, Morren, *Bely. Hort. iii. 1, t. 1.*)—Perianthium tubo nullo basi concavum v. subangustatum; segmenta libera, breviter unguiculata, exteriora lata, patentia v. concavo-conniventia, interiora multo angustiora brevioraque, erectiuscula v. apice reflexa v. concava. Stamina segmentis exterioribus opposita, filamentis liberis brevibus filiformibus; antheræ erectæ, lineares, superne v. fere in toto ramis styli applicitæ, extrorsum dehiscentes. Ovarium 3-loculare, loculis oo-ovulatis; stylus brevis, angulis 3 in ramos erectos v. parum divergentes antheras vix superantes continuis; hi rami apice quasi truncati, dentibus 2 posticis nunc obtusis vix prominulis, nunc setaceis erectis brevissimis v. longioribus; stigmata ad apices ramorum supra antheras antica, parva, horizontalia. Capsula ovoidea subglobosa v. breviter oblonga, 3-sulca, obtusa, apice loculicide 3-valvis.—Bulbus seu cormus tunicatus. Folia ad basin caulis pauca, longa, nunc plana tenuiter venosa costa prominente, nunc teretia junciformia, florale unicum v. caulis omnino aphyllus. Spatha unica, terminalis, v. 2-3 ex axilla folii floralis longe pedunculatæ. Bractææ rigide, striatæ, v. interiores plus minus scariosæ. Flores intra spatham plures, interdum numerosi, pedicellati. Capsulæ e spatha exsertæ.

Species ad 6, Indiæ occidentalis et Americæ australis incolæ. Baker in Journ. Linn. Soc. xvi. 126 (*Lansbergia*). Jacq. *Stirp. Amer. t. 7. Red. Lil. t. 172. Bot. Mag. t. 416* (ic. omnes sub *Iride*). Klatt in Mart. *Fl. Bras. iii. i. t. 67 (Lansbergia) et t. 68 (Remaclea); Ergänz. und Bericht. 29.*

In specie vulgari per Americam tropicam late dispersa, *T. martinicensis*, Herb. (quæ forte species 2 includit), folia plana, tenuiter venosa, costa prominente; pedunculi e folio floralis solitarii v. 2-3-ni elongati; styli rami quasi truncati, dentibus apicalibus 2 brevissimis obtusis stigmate patente, ut optime illustratur in icone Allemani *Poarchi* sui, et minus feliciter in icone Klattiana *Remaclea. Lansbergia caracasana*, Vr., ex descriptione Vriesiana et icone Klattiana, species videtur bene distincta, habitu graciliore, floribus multo minoribus, et styli ramorum dentibus apicalibus brevissime setaceis; stigma non delineatur et specimina non vidimus. *T. meridensis*, Herb., nobis ignota, species *T. martinicensis* affinis dicitur sed multo speciosior. In *T. juncifolia*, Klatt, folia radicalia perpaucâ, longa, junciformia, caulis omnino aphyllus 1-3-petalis, spatha unica terminalis, styli ramorum dentes apicales longiuscule lineari-setaceæ (nec plani ut in *Cypella*), et stigmata ad basin dentium seu loborum parum prominentia. Species Klattianæ a Bakero numeris 2 ad 5 designatæ nobis ignotæ sunt, sed ex descriptionibus Klattianis in Mart. *Fl. Bras. iii. i. 526*, vix a *T. juncifolia* differre videntur.

7. *Tigridia*, Ker in Kom. et Sims Ann. Bot. i. 246. (*Beatonia*, Herb. in Bot. Mag. sub t. 3779. *Hydrotaenia*, Lindl. Bot. Reg. 1838, Misc. 67, 1842, t. 39.)—Perianthium basi

concavum, tubo 0; segmenta libera, exteriora latissime unguiculata, lamina lata patente v. incurva, interiora exterioribus multo minora, erecto-patentia, sæpius obtusa, plus minus undulata. Stamina intra segmenta affixa, filamentis in tubum cylindraceum connatis; antheræ ad apicem tubi sessiles, patentes, styli ramis oppositæ. Ovarium 3-loculare, loculis  $\infty$ -ovulatis; stylus intra tubum stamineum filiformis; rami ad apicem tubi 2-partiti, lobis anthera brevioribus lineari-subulatis apice stigmatosis, dente ad basin loborum loco stigmatis *Cypellæ* breviter subulato v. glanduliformi nec papilloso v. 0. Capsula oblonga v. lineari-oblonga, apice convexa, breviter loculicide 3-valvis. Semina mutua pressione sæpius angulata.—Bulbus tunicatus. Folia ad basin caulis pauca, angusta, v. latiora et plicato-venosa, caulina v. floralia sæpe 2-3, dissita. Spatha unica terminalis, v. 2 ad axillam folii floralis longe et inæqualiter pedunculatæ. Flores in spatha pauci, in una specie maximi.

Species ad 7, Mexici, Americæ centralis, Peruviae et Chile incolæ. *Baker in Journ. Linn. Soc.* xvi. 135. *Cav. Diss. Monad. t.* 189 (*Ferraria*), 192, f. 2 (*Sisyrinchium*). *Red. Lil. t.* 6 (*Ferraria*). *Andr. Bot. Rep. t.* 178 (*Ferraria*). *Klatt in Linnaea* xxxi. 566, et in *Mart. Fl. Bras.* iii. 1, t. 69 (*Beatonia*), et t. 70. *Bot. Mag. t.* 532 (*Ferraria*) et t. 6295. *Link. Kl. et Otto, Ic. Pl. Rar. t.* 20, 34. *Sweet, Brit. Fl. Gard. t.* 128. *Fl. des Serres, t.* 908, 2174.

Herbert in *Bot. Reg.* 1843, Misc. 72, speciem typicam grandifloram, *T. pavoniam*, a *Beatoniis* floribus minoribus distinguit imprimis styli ramorum lobis in priore secus margines in *Beatonia* apice solo stigmatosis. In speciminibus siccis distinctio haud bene apparet; papillas stigmatosas in utraque vix breviter decurrentes vidimus. *Hydrotenia*, Lindl., ex ic. et descr. a *Beatonia* non differt nisi dente ad basin loborum stigmatosorum paullo evidentiore et tenui.

8. **Rigidella**, Lindl. *Bot. Reg.* 1840, t. 16, et *Misc.* 35.—Perianthium basi cupulatum, tubo nullo; segmenta 3 exteriora unguibus brevibus latis patentia v. reflexa, late oblonga, interiora erecta, stylo appressa, intra cupulam occulta, v. angusta tubum stamineum subæquantia. Stamina intra petala affixa, filamentis in tubum cylindraceum connatis; antheræ in tubo sessiles, erectæ, angulis seu ramis styli oppositæ, extrorsum dehiscentes. Ovarium angustum, 3-loculare, loculis  $\infty$ -ovulatis; stylus intra tubum stamineum filiformis, ramis basi breviter crassis mox 2-partitis, lobis lineari-subteretibus erecto-recurvis antheras non excedentibus apice introrsum breviter papillosis, adest etiam sæpius ad basin loborum dens brevis patens stigma *Cypellæ* referens, sed non papillosus. Capsula oblonga, apice convexa, breviter loculicide 3-valvis. Semina subglobosa.—Bulbus tunicatus. Folia radicalia pauca, longa, interdum lata, plicato-venosa, in petiolum longe contracta; floralia longe acuminata. Spathæ longæ, membranaceæ, pedunculos 2-3 longos ad axillas foliorum floralium terminantes. Flores in spatha  $\infty$ , interdum numerosi, longe pedicellati. Capsulæ exsertæ.

Species editæ 3, Mexici et Americæ centralis incolæ. *Bot. Reg.* 1841, t. 68. *Part. Mag.* vii. 247, xiv. 121 cum ic. *Fl. des Serres, t.* 502, 2215.

9. **Alopha**, Herb. in *Bot. Mag.* sub t. 3779. (Trifurcia, Herb. l. c. *Herbertia*, *Sweet, Brit. Fl. Gard. t.* 222.)—Perianthium tubo 0, patens; segmenta libera, 3 exteriora breviter unguiculata patentia obovata v. late oblonga, 3 interiora multo minora, acuta, erecta v. vix patentia. Stamina intra perianthium affixa, filamentis in tubum cylindraceum connatis; antheræ ad apicem tubi sessiles, lineares, apice demum sæpe tortæ, styli ramis appressæ. Ovarium 3-loculare, loculis  $\infty$ -ovulatis; stylus intra tubum stamineum filiformis; rami 3, divergentes, antheris arcte applicitisque breviores, superne 2-lobi, lobis breviter lineari-bus v. leviter membranaceo-dilatatis in parte superiore margine papillosis. Capsula breviter oblonga, apice truncata v. convexa, loculicide 3-valvis. Semina sat numerosa, mutua pressione angulata.—Bulbus tunicatus. Folia pauca, anguste linearia, v. si paullo latiora leviter plicato-venosa. Spathæ angustæ, herbacæ, complicatæ, solitariae, terminales; v. in una specie 2-3 ad axillam folii floralis longe inæqualiterque pedunculatæ. Flores intra spatham plures, longo pedicellati; bractæ spatha incluse. Capsulæ exsertæ.

Species 3 v. 4, Americanæ. *Baker in Journ. Linn. Soc.* xvi. 133. *Bot. Mag. t.* 3862. *Lodd. Bot. Cab. t.* 1547 (omnes sub *Herbertia*).

Species typica Texana, *A. Drummondiana*, Herb., includit *Herbertiam oerulcam*, et *H. Drummondianam*, Herb.; species altera Montevidensis, *A. pulchella*, nob., includit *Herbertiam pulchellam*, Sweet, et *H. lineatam*, Klatt, Ergänz. und Bericht. 34, formam Chilensem a Montevidensi parum diversam. Species 2 Brasilienses, *H. brasiliensis*, Baker, et *H. unguiculata*, Baker, distincte videntur. *H. umbellata*, Klatt in Mart. Fl. Bras. iii. i. 530, t. 69, stylo longo ramis brevibus patentibus capsulis aliisque notis characteres *Sisyrinchii* præbet, sed bulbus tunicatus, an ad *Gelasinem* referenda? Filamenta in alabastro brevissima, vix connata.

LABRENTIA, Klatt, Ergänz. und Bericht. 28, species Colombiana a nobis non visa (*Moræa linearis*, H. B. et K. Nov. Gen. et Sp. i. 321), est, ex charactero dato, verisimiliter *Alophia* species (cui olim a Klattio relata), styli ramis ad basin loborum utrinque denticulo instructis, quod interdum observatur in *Rigidella* et *Tygridia*. Plantæ olim a Klattio ad *Alophiam linearem* relatæ sub *Sphenostigmatæ* v. sub *Calydorea* querendæ.

10. *Ferraria*, Linn. Gen. n. 1018.—Perianthii tubus brevis, campanulatus; lobi 6, patentes, æquales, lanceolati v. oblongi, basi sæpe contracti, margine undulato-crispi. Stamina basi tubi affixa, filamentis in tubum connatis (v. interdum conniventibus?); antheræ ad apicem tubi sessiles v. subsessiles, breves, patentes, loculis interdum basi divergentibus. Ovarium lineare, 3-loculare, loculis  $\infty$ -ovulatis; stylus intra tubum stamineum filiformis, rami 3, antheris oppositi, petaloideo-dilatati, plani v. complicati, sæpe 2-fidi v. 2-partiti, apice fimbriato-multiseti, setis superne v. apice papillosis. Capsula anguste oblonga, breviter acuminata, membranacea, 3-valvis. Semina (vide Kerti) in tribu majuscula.—Bulbus seu cornus tunicatus, caule foliato superne dense breviterque ramoso. Folia ensiformia, inferiora longa. Spathæ longæ, rigidulæ, complicatæ, striatæ, caulem ramulosque brevissimos terminantes. Flores intra spatham plures, longiuscule pedicellati, bracteis angustis hyalinis. Capsulæ e spatha exsertæ.

Species 6, Africæ australis incolæ. Baker in Journ. Linn. Soc. xvi. 105. Klatt in Linnaea, xxxiv. 624. Jacq. Hort. Schæubr. t. 450 (*Moræa*); Hort. Vind. t. 63. Cuv. Diss. Monal. t. 190, f. 1. Red. Lil. t. 28. Andr. Bot. Rep. t. 285. Bot. Mag. t. 144, 751. Lodd. Bot. Cab. t. 1356. Sweet, Brit. Fl. Gard. t. 148, 161, 192.

11. *Homeria*, Vent. Dec. Gen. Nov. 5.—Perianthium campanulatum v. subinfundibuliforme, tubo brevissimo in faucem ampliato; lobi 6, subæquales, erecto-patentes, integri. Stamina ad basin faucis affixa, filamentis in tubum connatis; antheræ ad apicem tubi sessiles, lineares, ramis styli oppositæ sæpiusque arcte applicitæ. Ovarium lineare, 3-loculare, loculis  $\infty$ -ovulatis; stylus tubo stamineo inclusus v. breviter exsertus; rami 3, nunc vix antheris longiores nunc omnino exserti, breviter divergentes, lineares v. latiusculi, apice breviter cuneati, 2-dentati v. fimbriati, vertice papillosi. Capsula linearis v. anguste oblonga, membranacea, obtusa, demum loculicida 3-valvis. Semina . . .—Bulbus tunicatus. Folia pauca, longa, angusta. Spathæ caulem simplicem v. ramulos brevissimos erectos terminantes, longæ, striatæ. Flores in spatha  $\infty$ , longe pedicellati, bracteis interioribus hyalinis. Capsulæ e spatha exsertæ.

Species 5, Africæ australis incolæ. Baker in Journ. Linn. Soc. xvi. 104. Klatt in Linnaea, xxxiv. 626. Jacq. Hort. Schæubr. t. 12; Ic. Rar. t. 226 (*Moræa*). Red. Lil. t. 171, 250 (*Sisyrinchium*). Andr. Bot. Rep. t. 401 (*Moræa*). Bot. Mag. t. 1033, 1103, 1283, 1612 (*Moræa*). Sweet, Brit. Fl. Gard. t. 152, 178, et scr. 2, t. 178.

12. ? *Hexaglottis*, Vent. Dec. Gen. Nov. 6.—Perianthium tubo 0 subrotatum; segmenta oblonga, integra, æqualia, patentia. Stamina segmentis exterioribus opposita, filamentis brevibus basi leviter dilatatis vix connatis; antheræ erectæ, sagittatæ, longæ, rectæ, v. demum subtortæ. Ovarium lineare, 3-loculare, loculis  $\infty$ -ovulatis; stylus brevis, ramis antheris oppositis iisque vix æquilongis fore ad basin 2-partitis, lobis tenuibus apice papillosis demum (ex iconibus) inter antheras patentibus easque amplectentibus. Capsula linearis, 3-quetra, membranacea, obtusa, demum loculicida 3-valvis. Semina . . .—Bulbus tunicatus. Caulis ramosus, ramis elongatis virgatis v. flexuosis. Folia pauca, longa, linearia, rigidula. Spathæ secus ramos sessiles, angustæ, complicatæ, rigidulæ, rhachin floresque arcte amplectentes. Flores in spatha plures, bracteis angustis toruibus oppositi, pedicellati. Bractee incluse; capsula exserta.

Species 2 v. 3, inter se valde affines, Africae australis incolæ. *Baker in Journ. Linn. Soc. xvi. 99. Jacq. Hort. Vind. iii. t. 90 (Ixia); Ic. Rar. t. 228 (Moræa). Bot. Mag. t. 695 (Moræa). Saund. Ref. Bot. t. 24 (Homeria).*

Perianthium primo aspectu ei *Homeria* simile, sed tubus 0, filamenta libera et styli rami 2-partiti, his notis et inflorescentia fere *Sisyrinchiearum*, sed styli rami in alabastro examinati antheris more *Moræarum* oppositi.

PLANTIA, *Herb. in Bot. Reg. 1844, Misc. 89*, ex caractere dato, est verisimiliter *Hexaglottidis* species.

## TRIBUS II. SISYRINCHIEÆ.

13. *Crocus*, *Linna. Gen. n. 55. (Crociris, Schur, Sert. Pl. Transs. 73, ex ejusd. Enum. Pl. Transs. 653.)*—Perianthium infundibuliforme, tubo longo tenui superne in faucem ampliato; lobi æquales, erecto-patentes. Stamina fauci affixa, perianthio breviora, filamentis brevibus liberis; antheræ erectæ, lineares, filamentis longiores, basi sæpius breviter sagittatæ, inter lobos basifixæ. Ovarium oblongum, 3-loculare, loculis ∞-ovulatis; stylus filiformis, elongatus, ramis lineari-cuneatis apice sæpius dentatis lobatis v. multifidis, extremitate sola stigmatis. Capsula oblonga, membranacea, loculicide 3-valvis. Semina subglobosa, testa carnosula; albumen carnosum v. subcorneum.—Cormi tunicæ membranaceæ fibrosæ v. reticulatæ. Folia radicalia, longe linearia, non disticha, basi vaginis scariosis cincta. Caulis intra folia sub folio florali non evolutus. Foliolum florale (*spatha basalis* dictum) dum adsit, in corno sessile, vagina longa, undique hyalino-scariosum, pedunculos radicales seu scapos 1-∞ basi involvens, in speciebus nonnullis deest, in aliis adsunt 2-3. Spatha in pedunculo seu scapo terminalis, membranacea, ovarium involvens. Flos in spatha unicus, sessilis; adest etiam sæpe intra spatham bractea angusta hyalino-scariosa.

Species enumeratæ 67, imprimis regionis Mediterraneæ incolæ, pauca usque ad Europam centralem, Caucasum, mare Caspicum et Asiam centralem extensæ. *Herb. in Journ. Hort. Soc. ii. 249. Baker in Gard. Chron. 1873. G. Maw in Gard. Chron. 1881, et Monogr. egreg. cum tabb. ∞ mor edend. Reichb. Ic. Fl. Germ. t. 355 ad 361. Gracils, Ramill. Pl. Espan. t. 4. Brot. Phytogr. Lusit. t. 94. Moggr. Fl. Ment. t. 20, 40. Tenore, Mem. Crochi, Fl. Nap. Napoli 1826, cum tabb. 4. Sibth. Fl. Græc. t. 35. Chaub. et Bory, Fl. Pelop. t. 2, 3. Bieb. Cent. Pl. Ross. t. 1. Icones præterea numerosissimæ in diariis operibusque variis hortulanorum.*

14. *Syringodea*, *Hook. f. Bot. Mag. t. 6072.*—Perianthium hypocrateriforme v. infundibuliforme, tubo longo gracillimo; lobi subæquales, patentes. Stamina fauci affixa, erecta, filamentis brevibus liberis; antheræ lineari-sagittatæ. Ovarium oblongum, 3-loculare, loculis ∞-ovulatis. Stylus filiformis, elongatus, ramis linearibus tenuibus indivisis superne introrsum papillosis. Capsula . . . Herbæ pusillæ. Bulbi v. cormi tunicæ leves. Caulis inter folia brevissimus. Folia filiformia, basi squamis hyalinis inclusa. Spathæ intra folia subsessiles, angustæ, hyalinæ. Flos in spatha unicus, subsessilis v. breviter pedicellatus, sub ovario ad apicem pedicelli bractea hyalina angusta stipatus.

Specie 3, Austro-Africanæ. *Baker in Trim. Journ. Bot. 1876, 67.*

Species typica, *S. pulchella*, *Hook. f.* ab omnibus *Irideis* differt perianthii lobis stellato-patentibus apice incurvis 2-lobis; in *S. bicolor* et *S. filifolia*, *Baker*, lobi minus patentes integerrimi. Hæ species a *Klattio* ad *Romuleam* referuntur, differunt tamen tubo longo tenui et styli ramis integerrimis.

15. *Galaxia*, *Thunb. Nov. Gen. 50; Diss. Acad. i. 49, t. 2.*—Perianthium infundibuliforme, tubo tenui superne in faucem ampliato; lobi æquales, erecto-patentes, oblongi v. ovati, obtusi. Stamina fauci affixa, filamentis in tubum connatis; antheræ lineares, breviter sagittatæ. Ovarium oblongum, 3-loculare, loculis ∞-ovulatis; stylus filiformis, ultra antheras in stigma petaloideum campanulatum limbratum v. cuneato-3-lobum margine papillosum dilatatus. Capsula oblonga, truncata v. fere fusiformis, membranacea, loculicide 3-valvis. Semina numerosa, minima, subglobosa.—Herbæ nanæ, caulis supra cormum sub terra simplex, 1-2-squamatus v. nudus, ad terræ superficiem fasciculum densum foliorum et spatharum ferens. Folia extima 1-2 ad vaginas hyalinas reducta,

cætera linearia v. latiuscula, sæpius brevia, basi hyalino-vaginata. Spathæ inter folia sessiles, florem unicum sessilem cum bractea hyalina includentes, si inflorescentiam in speciminibus siccis difficile observandam rite intelligimus.

Species 2 v. 3, Africæ australis incolæ. *Baker in Journ. Linn. Soc.* xvi. 103. *Klatt in Linnæa*, xxxii. 782; *Ergänz. und Bericht.* 51. *Red. Lil. t.* 246. *Jacq. Ic. Rar. t.* 291. *Cav. Diss. Monad.* t. 189. *Andr. Bot. Rep. t.* 94, 164. *Bot. Mag. t.* 1208, 1292.

16. *Romulea, Maratti, Diss. Romul. et Saturn., Romæ, 1772, 13, t. 1.* (*Trichonema, Ker in Bot. Mag. t.* 575.)—Perianthium infundibuliforme, tubo brevissimo v. rarius elongato; lobi æquales, erecto-patentes, integri. Stamina fauci affixa, filamentis liberis (v. brevissime connatis?); antheræ lineari-sagittatæ, circa stylum conniventes. Ovarium oblongum, 3-loculare, loculis  $\infty$ -ovulatis; stylus filiformis, antheras superans, ramis filiformibus nunc abbreviatis 2-fidis v. 2-partitis, introrsum in longitudine papillois. Capsula globosa ovoidea v. oblonga, obtusa, membranacea, loculicide 3-valvis. Semina globosa v. angulato-compressa.—Bulbi tunicæ læves. Caulis nunc brevissimus inter folia occultus, nunc breviter evolutus ramosus. Folia radicalia linearia interdum subulata, vagina rarius lanceolato-dilatata, caulina sub pedunculis similia nisi minora. Spathæ ad axillas foliorum floralium longe pedunculatæ, tenuiter herbacæ, acutæ, complicatæ. Flores in spatha unicus, subsessilis v. breviter pedicellatus. Bractea sub ovario ad apicem pedicelli spatha sæpius brevior, interdum latior, haud raro subscariosa.

Species enumeratæ 54, Europæ occidentalis, regionis Mediterraneæ, Africæ occidentalis et australis incolæ, plures tamen ad varietates reducendæ. *Baker in Journ. Linn. Soc.* xv. 86. *Parlat. Fl. Ital.* iii. 241. *Klatt in Linnæa*, xxxiv. 659 (*Trichonema*); *Ergänz. und Bericht.* 64. *Jacq. Ic. Rar. t.* 271, 272. *Red. Lil. t.* 88, 251. *Reichb. Ic. Fl. Germ. t.* 356. *Lange, Pl. Nov. Hisp. t.* 34. *Ten. Fl. Nap. t.* 3, 203, et in *Atti Acad. Nap.* iii. t. 7. *Moggr. Fl. Ment. t.* 91 ad 93. *Vis. Fl. Dalm. Suppl. t.* 2. *Sibth. Fl. Græc. t.* 36. *Jord. et Fourn. Ic. Fl. Eur. t.* 106 ad 110. *Webb. Phytogr. Canar. t.* 222. *Andr. Bot. Rep. t.* 170. *Bot. Mag. t.* 265, 575, 1225, 1244, 1392, 1476. *Bot. Reg.* 1847, t. 40 (ic. veter. sub *Isia*, poster. sub *Trichonema* v. *Romulea*).

SPATALANTHUS, *Sweet, Brit. Fl. Gard. t.* 300, videtur *Romuleæ* species *R. speciosa*, *Bot. Mag. t.* 1476 simillima. Filamenta ut in hac specie brevissima delineata, sed breviter connata, quod in *R. speciosa* non apparet.

17. *Cypripa, Aubl. Pl. Gui. i.* 38, t. 13. (*Marica, Schreb. Gen. Pl. 37.*)—Perianthii tubus brevissimus, segmenta latiuscula, plana, distincte v. vix unguiculata, exteriora patentia, interiora subsemilia nisi minora et erectiora. Stamina basi segmentorum affixa, filamentis liberis filiformibus; antheræ oblongo-lineares. Ovarium 3-loculare, loculis  $\infty$ -ovulatis; stylus filiformis; rami antheras superantes apice v. fere a basi petaloideo-dilatati, integerrimi v. ciliolati (margine papillosi?). Capsula ovoidea v. oblonga, obtusa v. truncata, loculicide 3-valvis. Semina globosa v. angustata.—Bulbus tunicatus, caule infra inflorescentiam simplici aphylo. Folia radicalia pauca, nunc angustissima, nunc paullo latiora et plicato-venosa. Spathæ angustæ, in fasciculo terminali plures interdum numerosæ, ad axillam folii floralis longi sessiles v. brevissime pedunculati. Flores intra spathas singulas pauci, interdum ad unum reducti, pedicellati. Capsulæ e spatha exsertæ.

Species ad 4, Indiæ occidentalis Mexici et Americæ australis incolæ. *Baker in Journ. Linn. Soc.* xvi. 125. *Klatt in Mart. Fl. Bras. iii. i. t.* 64; *Ergänz. und Bericht.* 28. *Bot. Mag. t.* 646. Huc etiam referenda videtur *Cypella gracilis*, *Baker in Journ. Linn. Soc.* xvi. 129, quoad specimina Tweediana a Klattio in herb. Kew. incaute *Polia gracilis* nominata, *P. gracilis*, *Klatt in Linnæa*, xxxi. 645 (*Ferraria*, *Link. Kl. et Otto*), est vera *Cypella* species, in *Ergänz. und Bericht.* prætermisssa videtur.

18. *Sphenostigma, Baker in Journ. Linn. Soc.* xvi. 124.—Perianthium explanatum, tubo subnullo; segmenta obovata, patentia, subæqualia v. interiora paullo minora. Stamina basi perianthii affixa, filamentis brevissimis v. longiusculis; antheræ erectæ, oblongo-lineares. Ovarium 3-loculare, loculis  $\infty$ -ovulatis; stylus filiformis, elongatus, ramis plus minus dilatatis indivisis lanceolatis v. cuneatis apice papillois. Capsula obovoidea oblonga v. fere linearis, apice truncata v. convexa, loculicide 3-valvis. Semina

globosa v. angulata.—Bulbus tunicatus. Folia pauca, longa, plicato-venosa. Inflorescentia supra folium florale simplex v. parce ramosa. Spatha unica terminalis v. paucæ, longe pedunculatæ, acuminatæ lanceolatæ v. elongatæ, herbacæ. Flores in spatha pauci, pedicellati; bractea infima sæpe herbacea spathæ subsimilis, cæteræ v. omnes breviores tenuiores. Capsulæ e spatha exsertæ.

Species nobis adsunt 5, Americanæ tropicæ. *S. Sellowianum*, Baker (*Alophia Sellowiana*, Klatt in Mart. Fl. Bras. iii. i. 516, t. 65), e Brasilia, et *S. lineare* (*Alophia linearis*, Klatt in Linnæa quoad plantam Colombianam), styli ramis apice hyalinis cuneatis, *S. gracile* (*Cypella gracilis*, Baker in Journ. Linn. Soc. xvi. 129) styli ramis apice hyalinis lanceolatis, *S. longispatha* (*CARDIOSTIGMA longispatha*, Baker in Journ. Linn. Soc. xvi. 102), planta Mexicana a Herbertio ad *Gelasinam*, a Klattio ad *Rotherbem*, et a Bakero prius ad *Calydoream* relata, styli ramis cuneatis sed quam in cæteris crassioribus. *Alophia linearis*, Klatt, quoad specimina Brasiliana, Gardn., est *Calydorea Gardneri*, Baker. Specimina Spruceana n. 3063 e Baños speciem *Sphenostigmatis* adhuc ineditam indicant. *Sphenostigma angustifolium* et *S. cæruleum*, Klatt, Ergän. und Bericht. 29, e Brasilia, nobis ignotæ sunt.

19. **Eleutherine**, Herb. in Bot. Reg. 1843, sub t. 57. (Galatea, Salisb. in Trans. Hort. Soc. i. 310, absque char.)—Perianthium tubo 0 explanatum; segmenta oblonga, basi contracta, æqualia, patentia. Stamina basi perianthii affixa, filamentis brevibus liberis; antheræ erectæ, lateraliter v. subintrorsum dehiscentes. Ovarium oblongum, 3-loculare, loculis ∞-ovulatis; stylus brevissimus, ramis subulatis indivisis apice stigmatosis. Capsula oblonga, apice truncata, loculicide 3-valvis. Semina ovoidea v. mutua pressione angulata.—Bulbus tunicatus, brunneus. Folia radicalia longa, acuminata, basi longe contracta, plicato-venosa, caulina præter florale 0. Inflorescentia ad axillam folii floralis laxè flexuoso-ramosa, interdum ad pedunculos 2-3 reducta. Spathæ in caule v. pedunculis terminales, oblongæ vix v. non acuminatæ. Flores intra spatham plures, breviter pedicellati, bracteis spatha parum brevioribus. Capsulæ intra spatham omnino inclusæ v. vix apice breviter prominentes.

Species genuinæ 2 v. 3, sub *E. plicata*, Herb., in herbariis confusæ, Indiæ occidentalis et Americæ australis tropicæ incolæ. Baker in Journ. Linn. Soc. xvi. 100. Cav. Diss. Monad. t. 191, f. 1 (*Sisyrinchium*). Jacq. Ic. Rar. t. 227 (*Moræa*). Rd. Lil. t. 352 v. in textu 353 (*Sisyrinchium*). Bot. Mag. t. 655 (*Marica*).

His addidit Herbert in Bot. Reg. 1843, t. 57, speciem humilem hexandram, ad specimen unicum in horto enatum patria ignota descriptam. In herbariis nostris deest, et species valde dubia remanet verisimiliter ex ordine excludenda.

20. **Calydorea**, Herb. in Bot. Reg. 1843, Misc. 85. (Botherbe, Steud. ex Klatt in Linnæa, xxxi. 562.)—Perianthium tubo subnullo explanatum v. basi breviter campanulatum; lobi basi contracti, patentes, æquales v. interiores paullo minores. Stamina basi perianthii affixa, filamentis erectis liberis; antheræ lineares, apice sæpe flexuoso-recurvæ. Ovarium 3-loculare, loculis ∞-ovulatis; stylus filiformis, ramis subulatis divaricatis apice stigmatoso sæpe leviter clavatis v. emarginatis. Capsula obovoidea, truncata, loculicide 3 valvis. Semina globosa v. angulata.—Bulbus tunicatus, brunneus, levis. Folia radicalia pauca, angusta, interdum fere filiformia, floralia in caule simplici 1-2. Spatha unica, terminalis, v. paucæ pedunculatæ v. sessiles, angustæ, acutæ v. acuminatæ. Flores intra spatham paucæ, pedicellatæ, bractea exteriore spathacea interdum spatha ipsa paullo longiore. Capsulæ e bracteis exsertæ.

Species ad 8, Americæ australis extratropicæ v. tropicæ et Mexici incolæ. Baker in Journ. Linn. Soc. xvi. 101 (excl. *C. punctata* ad *Nemastylidem* referenda). Klatt in Mart. Fl. Bras. iii. i. 543, t. 71 (ROTHERBE); Ergän. und Bericht. 53. Bot. Mag. t. 3544 (*Sisyrinchium*).

21. **Gelasine**, Herb. in Bot. Mag. t. 3779, excl. sp. n. 2 ad 4.—Perianthium tubo brevissimo subinfundibuliforme fere campanulatum; lobi æquales, obovati, erecto-patentes. Stamina fauci affixa, filamentis in tubum brevem connatis; antheræ in tubo subsessiles, lineares, rectæ, connectivo angusto. Ovarium 3-loculare, loculis ∞-ovulatis; stylus

*brevis*, ramis seu lobis stigmatosis brevibus obtusis indivisis. Capsula oblonga, apice truncata v. convexa, loculicide 3-valvis. Semina globosa v. angulata.—Bulbus tunicatus. Caulis simplex. Folia pauca, lanceolato-lineariter, plicato-venosa. Spatha unica, terminalis, longiuscula, herbacea, striata. Flores in spatha  $\infty$ , pedicellati; bractea infima spathæ subsimilis nisi paullo minor tenuiorque, interiores magis v. omnino scariosæ. Capsulæ e spatha exsertæ.

Species 1, Americæ australis extratropicæ incola. *Baker in Journ. Linn. Soc.* xvi. 106.

22. *Nemastylis*, Nutt. in *Trans. Amer. Phil. Soc.* v. 157. (*Nemostylis*, *Herb. in Bot. Mag.* sub t. 3779. *Eustylis*, *Engelm. et Gray, Pl. Lindh.* 27, 28. *Chlamydostylis*, *Baker in Trim. Journ. Bot.* 1876, 185.)—Perianthium tubo subnullo explanatum; segmenta obovata, æqualia v. interiora paullo minora. Stamina basi perianthii affixa, filamentis nunc brevissime nunc longiuscule in tubum connatis; antheræ erectæ, apice sæpe tortæ, connectivo angusto v. inter loculos latiusculo. Ovarium 3-loculare, loculis  $\infty$ -ovulatis; stylus brevis, ramis 2-partitis inter antheras patentibus, lobis æqualibus subulatis apice minute papillosis. Capsula oblonga v. rarius subglobosa, apice truncata, loculicide 3-valvis. Semina globosa v. pressione angulata.—Bulbus tunicatus. Folia angusta, longa, interdum subteretia, rarius anguste ensiformia, floralia 1–2. Spathæ oblongæ v. angustæ, in caule simplici unica terminalis, v. pauca longe pedunculatæ, striatæ, vix acuminatæ. Flores in spatha pauci v. sat numerosi, pedicellati; bractea infima spathæ sæpe subæqualis, interiores minores. Capsulæ e spatha exsertæ.

Species ad 6, Mexici et Americæ borealis et tropicæ incolæ. *Baker in Journ. Linn. Soc.* xvi. 102 et 107 (*Nemastylis* et *Chlamydostylis*). *Fl. des Serres*, t. 2171.

In specie typica Nuttallii filamenta breviter basi membranaceo-dilatata, brevissime connata, antheræ demum contortæ, connectivo angusto; capsula subglobosa. In *Eustyle*, *Engelm. et Gray*, filamenta *Nemastylidis*, antheræ rectæ connectivo inter loculos latiusculo; capsula oblonga. In *Chlamydostylis* plerisque filamenta in tubum longiusculum cylindraceum connata; in *C. Mediceæ*, *Bak.*, tamen vix altius connata quam in specie typica; in *C. tenui* antheræ *Nemastylidis*, in cæteris speciebus potius *Eustylidis*. *C. multiflora*, *Baker*, cui referenda *Calydorea punctata*, *Baker*, species includere videtur 2 v. 3, inter se affines sed distinctas. Genus in integrum servatum a cæteris *Sisyrinchieis* facile distinguitur styli ramis specie 6 subulatis (3 2-partitis). In *N. furcata*, *Klatt*, in *Mart. Fl. Bras.* iii. i. 515, t. 65, specie Montevidense a nobis non visa, styli rami ex ic. et descr. apice breviter tantum bifidi, *Baker* hanc speciem forte non immerito ad *Calydoream* refert.

23. *Diplarrhena*, *Labill. Voy.* i. 157, t. 15.—Perianthium parum inæquale, tubo 0; segmenta basi erecta, 3 exteriora superne patentia, obovata, postico lateralibus paullo majore et concaviusculo, 3 interiora minora, angustiora, minus patentia. Stamina filamenta segmentis exterioribus opposita, breviter, libera, posticum anantherum, lateralia inæqualia, antheris oblongo-linearibus. Ovarium 3-loculare, loculis  $\infty$ -ovulatis; stylus filiformis, staminibus multo longior, apice ramis 2 tenuissime membranaceis late obovatis v. flabellatis margine crispa papillosis, ramo tertio minimo v. obsoleto. Capsula oblonga, acute 3-quetra, loculicide 3-valvis. Semina plano-compressa, irregulariter orbiculata, in quoque loculo arcte 1-seriatim superposita; testa crassiuscule membranacea.—Rhizoma breve, caule terminali erecto simplici v. parce ramoso. Folia ad basin caulis longa, angusta, rigida, leviter, distiche equitantia. Spatha terminalis, rigida, acuminata, addita interdum altera inferiore. Flores in spatha plures, pedicellati; bractea exterior spathæ subsimilis nisi brevior, interiores inclusæ, tenuiores, interdum scariosæ. Capsulæ o spatha exsertæ.

Species 2, Australiæ regionis australis et Tasmaniæ incolæ. *Benth. Fl. Austral.* vi. 399.

24. *Libertia*, *Spreng. Syst. Veg.* i. 127, 168. (*Renealmia*, *R. Br. Prodr. Addenda*, non *Linn. f.* *Nematostigma*, *A. Dietr. Spec. Pl.* ii. 509.)—Perianthium campanulatum v. explanatum, tubo 0; segmenta libera, parum inæqualia v. interiora latiora. Stamina intra segmenta affixa, filamentis liberis v. basi breviter connatis; antheræ sagittatæ, versatiles,

loculis lateraliter dehiscentibus. Ovarium 3-loculare, loculis  $\infty$ -ovulatis; stylus brevis, ramis longiusculis, lineari-filiformibus v. anguste membranaceo-dilatatis, inter antheras patentibus, papillis stigmatosis terminalibus v. secus margines breviter decurrentibus. Capsula subglobosa obovoidea v. breviter oblonga, obtusa v. truncata, 3-sulca, loculicide 3-valvis. Semina angulata v. compressa, lævia v. foveolato-rugosa.—Rhizoma repens, caule terminali tenui v. elato. Folia ad basin caulis distiche imbricata, equitantia, linearia v. anguste ensiformia, sæpius rigidula, prominenter venosa. Cymulæ nunc laxè umbelliformes, nunc dense fere capituliformes, laxè paniculatæ v. secus pedunculum simplicem v. parce ramosum sessiles. Spathæ bracteæque breves, laxæ, membranaceæ v. scariosæ, flores pedicellatos non includentes.

Species 8, Chile, Australiæ et Novæ Zelandiæ incolæ. *Baker in Journ. Linn. Soc.* xvi. 152. *Hook. f. Handb. N. Zel. Fl.* 274; *Fl. Tasm.* t. 129. *Benth. Fl. Austral.* vi. 412. *Klatt in Linnæa*, xxxi. 380, et in *Mart. Fl. Bras.* iii. i. t. 68. *Bot. Mag.* t. 3294, 6263. *Bot. Reg.* t. 1630.

25. **Selaunca**, *Adans. Fam.* ii. 60. (*Pardanthus*, *Ker in Kæn. et Sims, Ann. Bot.* i. 246.)—Perianthium tubo brevissimo explanatum; lobi patentes, oblongi, subæquales. Stamina basi perianthii affixa, filamentis filiformibus liberis; antheræ lineares, vix sagittatæ, basifixæ. Ovarium obovoideum, 3-loculare, loculis  $\infty$ -ovulatis; stylus filiformis, ramis elongatis apice dilatatis emarginatis papillis terminalibus. Capsula obovoidea, membranacea, loculicide 3-valvis, valvis dehiscentia irregulariter reflexis axin centralem erectum placentiferum relinquentibus. Semina majuscula, subglobosa, axi persistenti diu affixa, testa nifida laxa intus succulenta; embryo in centro albuminis cornei normalis, brevis.—Caules e rhizomate repente erecti, validi. Folia ensiformia, equitantia. Inflorescentia 2-3-chotome ramosa, foliis floralibus sub ramis primariis viridibus spathaceis, superioribus spathisque terminalibus membranaceo-scariosis. Flores intra spatham numerosi, pedicellati, bracteis scariosis oppositi. Capsulæ majusculæ, exsertæ.

Species 1, Indiæ orientalis Chinæ et Japoniæ incolæ, jam diu in hortis culta et hinc inde in variis regionibus inquilina. *Gertn. Fruct.* i. 40, t. 13 (*Ixia*). *Red. Lil.* t. 121. *Bot. Mag.* t. 171 (*Ixia*). *Fl. des Serres*, t. 1632 (*Pardanthus*).

26. **Orthrosanthus**, *Sweet, Fl. Austral.* t. 11.—Perianthium tubo brevi nunc brevissimo explanatum; lobi ovati v. oblongi, subæquales, patentes. Stamina basi perianthii affixa, filamentis liberis v. basi dilatata in cyathum brevissimum connatis; antheræ erectæ, oblongæ. Ovarium oblongo-lineare, 3-loculare, loculis  $\infty$ -ovulatis; stylus brevissimus, ramis filiformibus inter antheras patentibus apice stigmatoso vix dilatatis. Capsula oblonga, truncata, basi attenuata, loculicide 3-valvis. Semina ovoidea v. mutua pressione angulata.—Rhizoma lignosum, brevissimum. Folia linearia v. anguste ensiformia, longa, rigidula v. graminea, ad basin caulis equitantia. Inflorescentia terminalis, simplex v. ramosa; spathæ oblongæ, secus ramos sæpius dissitæ, sessiles v. pedunculatæ, interdum plures bractea spathacea inclusæ, bracteis interioribus membranaceis v. scariosis. Flores in quaque spatha sæpius 2- $\infty$ , brevissime pedicellati.

Species 7, Americæ australis andinæ v. extratropicæ v. Australiæ occidentalis incolæ. *Baker in Journ. Linn. Soc.* xvi. 112. *Benth. Fl. Austral.* vi. 410. *Bot. Reg.* t. 1090 (*Sisyrinchium*). *Lodd. Bot. Cab.* t. 1474.

*O. polystachyus*, *Benth.*, ex Australia austro-occidentali, a cæteris differt spathis (præter terminalem) pluribus secus ramos sessilibus.

*Klatt, Ergän. und Bericht.* 46, species Americanas ad *Solenomelum* transfert, nobis uti *Bakero* melius *Orthrosantho* convenire videntur.

27. ? **Zeitia**, *Regel in Act. Hort. Petrop.* v. 639.—Perianthium supra basin 6-partitum; lobi patentes, obovati, interiores paullo minores, cæterum consimiles. Stamina ima basi perianthii affixa, filamentis plano-compressis basi tantum connatis sursum liberis sensim attenuatis; antheræ lineari-oblongæ, erectæ, basifixæ. Ovarium 3-loculare, loculis

multiovulatis; styli rami lineares, plani, glabri, indivisi v. rarius ramulus unus ad medium 2-fidus.—Caulis e bulbo evolutus, 4-5-phyllus. Folia ensiformia, decrecentia, inferius v. 2 inferiora solitaria, superiora 3 in apice caulis conferta, alterna, subspathiformia, supremum minutum. Flores dense spicati, spicis pedunculatis axillaribus ovatis, spatha 2-valvi (spatha cum bractea) suffultis. Spatha herbacea, ovata, amplexicaulis, spicam involvens. Bracteæ sub pedicellis ovato-lanceolatae, membranaceo-hyalinae, imbricatæ, pedicellos paullo superantes. (*Char. ex Reg.*)

Species unica, Natalensis, a nobis non visa. Ex descriptione auctoris affinis videtur *Orthrosantho* et *Bobartie*, quæ genera tamen sæpius bulbosa. An *Bobartie* species *B. filiformi* (pariter bulbosæ) affinis? an ad *Orthrosanthum* referenda?

28. *Bobartia*, Ker, *Gen. Irid.* 29.—Perianthium explanatum, tubo 0; segmenta oblonga v. ovata, æqualia, patentia. Stamina basi perianthii affixa, filamentis brevibus liberis; antheræ lineares, erectæ. Ovarium obovoideum v. turbinatum, 3-loculare, loculis ∞-ovulatis; stylus brevis; rami longi, filiformes v. superne leviter applanati, indivisi, apice breviterque introrsum papilloso. Capsula globosa v. turbinata truncataque, loculicide 3-valvis. Semina mutua pressione angulata, testa crassiuscule membranacea.—Rhizoma fibrosum; caulis in *B. filiformi* basi in cormum globosum incrassatus, in cæteris speciebus subæqualis. Folia radicalia pauca, anguste linearia, ensiformia v. subteretia, caulina perpauca v. 0. Spicæ ad apicem caulis plures fasciculatæ, v. unica terminalis, folio florali erecto quasi caulem continuante stipatæ. Spicæ ipsæ e bracteis pluribus coriaceis complicatis bifariam imbricatis constantes, quarum exteriores vacuæ, ab extima brevissima gradatim auctæ, ad summam multo longiorem seu spatham flores 2-3 bracteasque totidem minores arcte involventem. Flores pedicellati. Capsulæ e spatha exsertæ.

Species ad 6, Africæ australis incolæ. *Baker in Journ. Linn. Soc.* xvi. 114. *Klatt in Linnæa*, xxxiv. 554. *Thunb. Diss. de Moræa*, t. 1, f. 1, 2, t. 2, f. 1. *Bot. Reg.* t. 229 (*Marica*). *Lodd. Bot. Cab.* t. 1900 (*Xyris*).

*BOBARTIA*, *Linn. Fl. Zeyl.* 17; *Lam. Illustr.* t. 40, est *Cyperus arenarius*, Retz, descriptio ulterior tamen in *Amœn. Acad.* i. 387, pro parte ex icone Plukenetiana et descriptione Schofferi sumpta fuit, pro parte e specimine *Morææ spathaceæ*, Thunb., ut jam indicavit Schumacher in *Skriv. Nat. Hist. Selak. Kiøbenh.* iii. 8, qui genus delendum dixit. Ker (eo tempore Gawler) primum genus *Iridearum* constituit sub nomine Linneano *Bobartie*.

29. *Sisyrinchium*, *Linn. Gen.* n. 1017. (*Souza, Vell. Fl. Flum.* 273,  *Ic.* vii. t. 1 ad 3.)—Perianthium tubo subnullo explanatum concavum v. latissime campanulatum; lobi subæquales, obovati v. oblongi. Stamina basi perianthii affixa, filamentis basi v. alto in tubum connatis v. rarius (in sect. *Nuno*) a basi liberis; antheræ variæ, erectæ v. versatiles. Ovarium globosum v. breviter oblongum, 3-loculare, loculis ∞-ovulatis; stylus filiformis, brevis v. antheras longe superans; rami indivisi, nunc brevissimi, nunc elongato-filiformes, antheris alterni, summo apice stigmatosi. Capsula globosa obovata v. breviter oblonga, sæpius truncata, loculicide 3-valvis.—Radices in rhizomate brevissimo fasciculato-fibrosæ, fibris interdum carnosio-incrassatis. Caulis basi æquales v. leviter in cormum incrassati, teretes v. ancipites. Folia radicalia v. ad basin caulis conferta, lineari-teretia v. plus minus ensiformia, semper angusta, caulina pauca v. 0. Spatha nunc unica terminalis, nunc rarius præter terminalem nonnullæ secus caulem sessiles. Flores in quaque spatha plures, pedicellati. Capsulæ e spatha exsertæ.

Species ad 50, omnes Americanæ, tropicæ v. extratropicæ, quarum una hinc indo in variis regionibus inquilina in Hibernia indigena dicitur. *Baker in Journ. Linn. Soc.* xvi. 115. *Klatt in Linnæa*, xxxi. 63 et 371; in *Mart. Fl. Bras.* iii. i. 534; *Ergänz. und Bericht.* 42.

Sectiones 2, a Lemaireo propositas et a Klattio acceptas, *Sisyrinchium* et *Androsolen* intelligere nequimus. *Baker* sectiones 4 distinctit, imprimis ad caulis foliorumque indolem et inflorescentiam plus minus compositam, quæ tamen vix satis definitæ. Sequentes, pro maxima parte a *Herbertio* indicatæ, ad floris structuram stabilitæ, nobis certiores videntur.

1. *Bermudiana*. Perianthium explanatum v. rarius basi concavum. Filamenta in tubum cylindraceum fere ad apicem connata; antheræ ad apicem tubi fere sessiles, breves, circa stylum infra ramos confertæ. Flores cæruleæ purpurascens v. rarius albidæ purpureo-striati. *Baker in Journ. Linn. Soc.* xvi. 116, n. 8 ad 13, 26, 35, 38 ad 41. *Klatt in Mart. Fl. Bras.* iii. t. 70, f. 2, t. 71, f. 1 ad 3. *Cav. Diss. Monad.* t. 192, f. 1, 190, f. 2. *Red. Lil.* t. 149, 282. *Bot. Mag.* t. 94, 464, 2312. *Bot. Reg.* t. 646 (*Marica*). *Lodd. Bot. Cab.* t. 1220, 1979. *BERMUDIANA*, *Adans. Fam.* ii. 60.

Sectio *Cephalanthum* a Bakero distincta fuit imprimis spathis dense multifloris. Species 4 priores, n. 38 ad 41, characteres cæterum omnino *Bermudianæ* ostendunt. *S. marginatum* et *S. palmifolium* ad *Echthronema* pertinent.

2. *Echthronema*. Perianthium explanatum. Filamenta basi v. sæpius ad medium in tubum cylindraceum connata, superne libera, patentia; antheræ versatiles. Styli rami longi, tenues, superne sæpe canaliculati. Flores flavi. *Willd. Hort. Berol.* t. 91. *Red. Lil.* t. 47, 275. *Link, Kl. et Otto, Ic. Pl. Rar.* t. 10. *Hook. Ic. Pl.* t. 218?, 219, 513. *Bot. Mag.* t. 2116, 2117, 2313. *Bot. Reg.* t. 1067, 1914 (1915 in textu). *Baker in Journ. Linn. Soc.* xvi. 116, n. 4, 14 ad 37, 42 et 43 (excl. *S. iridifolia* et *S. Glaziovii* ad *Bermudianam* pertinentibus). *ECHTHRONEMA*, *Herb. in Bot. Reg.* 1843, *Misc.* 85. *HYDASTYLUS*, *Salisb. in Trans. Hort. Soc.* i. 310, *abque char.*

Sectio *Spathirhachis*, *Klatt*, qualis a Bakero reducitur, species includit 5, ex America australi extratropica, floribus omnino *Echthronematis*, sed spathæ nonnullæ præter terminalem secus caulem seu pedunculum sessiles, et bractæ intra spatham sæpe insigniter scariosæ. *S. cuspidatum* tamen interdum *S. graminifolio*, *Liudl.*, prope accedit, cui spathæ inferiores sessiles 1 v. 2 sæpe adsunt, uti jam in *Bot. Mag.* t. 3197 delineatur, et in *S. monastachyo*, *Baker*, spatha sæpe unica terminalis ut in *Echthronematibus* typicis. Ad *Spathirhachin* referuntur, *Sm. Ic. Pict.* t. 9. *Jacq. Hort. Schenbr.* t. 11 (*Moræa*). *Cav. Ic.* t. 104. *Red. Lil.* t. 66. *Bot. Mag.* t. 701 (*Marica*). *Lodd. Bot. Cab.* t. 1870.

In *S. striato*, *Sm.*, perianthium basi breviter subcampanulatum, lobis patentibus interdum pallidissime tantum flavescentibus v. fere albidis insigniter striatis, sed characteres *Echthronematis*.

3. *Eriphilema*. Perianthium late concavum, subcampanulatum. Filamenta basi in tubum connata v. convoluta, medio sæpius dilatata (tubo ibidem inflato) superne libera, filiformia. Styli rami longiusculæ filiformes. Flores purpurei v. rosei. *ERIPHILEMA*, *Herb. in Bot. Reg.* 1843, *Misc.* 85. Huc pertinent *S. grandiflorum*, *Dougl.* *Bot. Reg.* t. 1364, *Bot. Mag.* t. 3509, *Sweet, Brit. Fl. Gard.* ser. 2, t. 338, *Fl. des Serres*, t. 146, *S. junceum*, *E. Mey.*, et *S. Philippii*, *Klatt*; in hac specie tamen tubus stamineus vix inflatus.

4. ? *Nuno*. Perianthium fere *Bermudianæ* sed filamenta a basi libera filiformia. Species 2, America australis extratropica incolæ. *S. Nuno*, *Bert.*, Colla in *Mem. Acad. Torin.* xxxix. t. 54, et *S. filifolium*, *Gaudich.*, *Hook. f. Fl. Ant.* t. 126. Sectio vix non pro genere proprio habenda.

Nomen Linneanum a nonnullis in *Sisyringium* v. in *Syorkhynchium* mutatum ob etymologiam varie explanatam, in forma tamen pristina retinendum derivatione incerta.

30. *Tapetia*, *Juss. Gen.* 59.—Perianthium tubo subnullo ima basi subcampanulatum; lobi patentes, ovati, interioribus parum angustioribus. Stamina intra basin perianthii affixa, filamentis breviter in tubum connatis, superne liberis; antheræ longiusculæ, infra medium dorsifixæ. Ovarium 3-loculare, ovulis  $\infty$  in parte inferiore loculorum affixis; stylus filiformis, ramis indivisis subulatis apice stigmatoso vix dilatatis. Capsula subglobosa, 3-sulca, loculicide 3-valvis, valvis coriaceis dehiscentia patentissimis. Semina obovoidea, embryo parvo.—Herba nana, perennis, densissime cæspitosa, ebulbosa. Folia linearia, distiche conferta. Spatha terminalis, flore unico pedicellato, folia vix excedente, pedicello bracteis 2 dissitis instructo.

Species 1, *Magellanica*. *Hook. f. Fl. Ant.* ii. 353, t. 129. *Cav. Diss. Monad.* t. 189, f. 4.

31. *Paterstonia*, *R. Br. Prod.* 303. (*Genosiris*, *Labill. Pl. Nov. Holl.* i. 13, t. 9.) —Perianthii tubus tenuis, interdum longus; lobi 3 exteriores lati, patentes, 3 interiores parvi, erecti, nunc minuti v. 0. Stamina basi loborum affixa, filamentis plus minus in tubum connatis; antheræ erectæ, oblonge v. lanceolatae, connectivo interdum inter loculos leviter dilatato. Ovarium 3-loculare, loculis  $\infty$ -ovulatis; stylus filiformis, antheras superans, sæpius prope basin antherarum v. sub ramis constrictus v. articulatus; rami obovati v. oblongi, in alabastro reflexi, demum patentes, margine

papilloſi. Capsula oblonga v. linearis, loculicide 3-valvis. Semina (immatura) angusta, sæpe angulata, perfecte matura nobis ignota.—Rhizoma breve. Folia radicalia v. ad basin caulis simplicis conferta, disticha, anguste linearia, graminea v. rigida. Spathæ 2, ad apicem caulis quasi in spicam oblongam v. lanceolatam confertæ, singulæ folio florali spathiformi stipatæ. Flores in spatha 2-∞, rarius solitarii, sessiles v. brevissime pedicellati; bracteæ membranaceæ, plus minus scariosæ. Capsula spatha inclusa.

Species 19, Australiæ extratropicæ v. subtropicæ incolæ. *Benth. Fl. Austral.* vi. 400, *Sweet, Fl. Austral.* t. 15, 39. *Endl. Iconogr.* t. 50. *Bot. Mag.* t. 1041, 2677. *Bot. Reg.* t. 51, 1839, t. 60. *Lodd. Bot. Cab.* t. 768, 1182.

32. **Symphystemon**, *Miers in Trans. Linn. Soc.* xix. 97. (*Psithyrisma*, *Herb. in Bot. Reg.* 1843, *Misc.* 85. *Susarium*, *Philippi in Linnæa*, xxxiii. 248, quoad *S. nigricans*.)—Perianthium tubo longiusculo infundibulare; lobi erecto-patentes, subæquales. Stamina fauci affixa, filamentis basi in tubum cylindraceum connatis, superne breviter v. longe filiformibus; antheræ oblongæ, versatiles. Ovarium obovoideum, 3-loculare, loculis ∞-ovulatis; stylus filiformis, ramis filiformibus antheras superantibus apice tenuibus v. subclavatis. Capsula ovoideo-globosa, apice truncata, loculicide 3-valvis. Semina angulata, testa crassiuscula.—Radices fibrosi, more *Sisyrinchii* fasciculati. Folia radicalia linearia, conferta. Scapus nunc brevissimos folia non excedens, nunc elatiusculus aphyllus v. folio florali unico. Spathæ virides, in *S. acauli* 1-2 inter folia subsessiles, in *S. utriculoide* sæpius 2 ex axilla folii floralis pedunculatæ. Flores in spatha plures, pedicellati, bractea exteriori spathæ subsimili, interioribus plus minus scariosis; perianthium flavum albidum v. purpureo-striatum. Capsulæ e spatha exsertæ.

Species 2 v. 3, Americæ australis extratropicæ v. andinæ incolæ. *Baker in Journ. Linn. Soc.* xvi. 121 (*Solenomelis* sect.). *Cav. Diss. Monad.* t. 191, f. 3 (*Sisyrinchium*). *Bot. Reg.* t. 1283.

Genus potius *Sisyrinchio* quam *Solenomeli* affine videtur.

33. **Chamelum**, *Philippi in Linnæa*, xxxiii. 250.—Perianthium tubo tenui infundibulare; lobi erecto-patentes, subæquales. Stamina fauci affixa, filamentis in tubum cylindraceum connatis; antheræ erectæ, breviter stipitatæ, tubo longiores. Ovarium oblongum, 3-loculare, loculis ∞-ovulatis; stylus filiformis, antheris demum longior, ramis brevissimis recurvis apice acuto stigmatosis. Capsula ovoidea, loculicide 3-valvis. Semina . . .—Caulis e rhizomate breviter repente humiles. Folia pauca, linearia, latiuscula v. subteretia. Spathæ terminales, solitariae v. plures aggregatæ, herbaceæ, striatæ. Flores in spatha 2 v. pauci, brevissime pedicellati; bractea exteriori spathæ subsimilis, interiores plus minus scariosæ. Perianthium flavum. Capsula spatha inclusa.

Species 2, Chilenses. *Baker in Journ. Linn. Soc.* xvi. 121 (*Solenomelis* sect.). Genus antheris et stylo tam a *Solenomeli* quam a *Symphystemone* bene distinctum videtur. *C. andinum*, a Philippo in *Linnæa* xxix. 62 ad *Sisyrinchium* relatum fuit, stylo non descripto, postea in *Linnæa* xxxiii. 250 inexacte ad *Susarium* (*Symphystemon*) translatum.

34. **Solenomelus**, *Miers in Trans. Linn. Soc.* xix. 95, t. 8. (*Cruikshanksia*, *Miers, Trav.* ii. 529. *Lechlera*, *Grisch. in Lechl. Pl. Chil. Eres.* n. 2966.) Perianthii tubus tenuis, superne in faucem ampliatus; lobi subæquales, patentes. Stamina fauci affixa, filamentis in tubum cylindraceum sæpe glanduloso-villosum connatis; antheræ breviter oblongæ, ad apicem tubi subsessiles, circa stylum arcu conniventes. Ovarium lineare, 3-loculare, loculis ∞-ovulatis; stylus filiformis, indivisus, vix demum apice e tubo stamineo exsertus, vertice stigmatoso ciliato-papilloso. Capsula oblonga, 3-sulca, loculicide 3-valvis. Semina dimidiato-ovoidea, testa dura.—Caulis in rhizomate brevi subfasciculati, basi interdum leviter incrassati. Folia radicalia v. ad basin caulis conferta, linearia, plana v. angustissima, socus cauli m. perpauci. Spatha unica terminalis, v. paucæ longo pedunculatæ,

fere *Orthosanthi*, oblongæ v. lanceolatæ, herbacæ, striatæ. Flores in spatha plures, breviter pedicellati; bractea exterior spathæ subsimilis, interiores plus minus scariosæ. Perianthium flavum. Capsulæ spatha inclusæ.

Species 2, Chilenses. *Baker in Journ. Linn. Soc.* xvi. 121 (*S. chilensis* et *S. Lechleri*). *Bot. Mag.* t. 2965 (*Sisyrinchium*). *Fl. des Serres*, t. 255 (*Sisyrinchium*).

35. ?*Cleanthe*, *Salisb. in Trans. Hort. Soc.* i. 312.—Perianthii tubus brevis; lobi patentes, obovali-oblongi, interiores exterioribus 2–3-plo majores. Stamina fauci affixa, filamentis liberis; antheræ lineares. Ovarium lineare, pedicelliforme; stylus elongatus, inclinatus, ramis stigmatosis brevibus obovato-dilatatis. Capsula linearis.—Caulis in rhizomate fasciculati v. solitarii. Folia radicalia v. ad basin caulis numerosa, disticha, anguste ensiformia. Spatha terminalis, lanceolata, acuminata. Flores in spatha pauci, breviter pedicellati, bractea exteriore spathæ subsimili, interioribus minoribus.

Species 1, Africæ australis incolæ, a nobis non visa. *Thunb. Diss. Moræa* t. 1 (*Moræa melaleuca*). *Bot. Mag.* t. 1277 (*Aristea*). Genus, non nisi ex his iconibus et descriptionibus notum, dubium remanet, sed imprimis segmentis interioribus perianthii maximis inter *Irideas* insigne videtur.

36. *Aristea*, *Ait. Hort. Kew. ed.* 1, i. 67.—Perianthii tubus tenuis, brevis v. bracteas superans; lobi subæquales, rotato-patentes. Stamina fauci affixa, filamentis brevibus liberis; antheræ erectæ, oblongo-lineares. Ovarium 3-loculare, loculis ∞-ovulatis; stylus filiformis, sæpe elongatus, apice indivisus brevissime 3-dentatus v. lobis 3 brevibus cuneato-dilatatis margine stigmatosis. Capsula ovata v. oblonga, 3-quetra, angulis interdum valde prominentibus acutis, loculicide 3-valvis. Semina sæpius compressa.—Fibri radicales fasciculatæ v. sæpius rhizoma plus minus evolutum, caule terminali haud raro breviter lignoso interdum fruticoso ramoso, rarius caules plures fasciculati. Folia ad basin caulis v. in ramis distiche conferta, angusta, equitantia, ensiformia v. graminea, brevina v. elongata. Spathæ 1–2-floræ, rarius ∞-floræ, nunc ad apicem caulis v. ramorum dichotomorum solitarie, nunc plures secus ramos pedunculatæ v. sessiles, nunc parvæ, breviter pedunculatæ, in corymbum terminalem compositum dispositæ. Flores intra spatham brevissime v. distincte pedicellati. Bracteæ sæpeque spatha ipsa plus minus scariosæ laceræque. Capsulæ e spatha vix v. breviter exsertæ.

Species ad 15, Africæ australis et tropicæ et Madagascarie incolæ. *Baker in Journ. Linn. Soc.* xvi. 110 (excl. *A. melaleuca*); in *Trans. Linn. Soc. Bot.* i. 270. *Klatt in Linnæa*, xxxiv. 548; *Ergänz. und Bericht.* 47. *Red. Lil.* t. 462. *Andr. Bot. Rep.* t. 10, 160. *Bot. Mag.* t. 458, 605, 1231.

Genus quoad habitum et inflorescentiam sat polymorphum, flores forma et colore cæruleo in omnibus fere speciebus consimiles videntur. In speciebus inflorescentia dichotoma spathæ interdum ∞-floræ, bractea infima spathæ subsimili, stylus sæpe 3-dentatus; in *A. cyanca* styli lobi late cuneato-dilatati; in *A. capitata* spathæ numerosæ, ∞-floræ, secus caulem confertæ, v. in thyrsium longum dispositæ, inflorescentia speciminibus nonnullis *Libertia formosæ* necedente, styli dentes brevissime obtusi; in *A. spirali*, *Morr.*, spathæ quam in cæteris longiores, ∞-floræ, secus caulem plures sessiles, styli lobi brevissimi obovati, capsula linearis; in *A. corymbosa* (*Witsenia corymbosa*, *Ker. Bot. Mag.* t. 895. *Sm. Exot. Bot.* t. 68. *Red. Lil.* t. 453. *Lodd. Bot. Cab.* t. 254. *Maund, Botanist* t. 202. *NIVENIA*, *Vent. Dec. Gen. Nov.* 5. *GENLISEA*, *Reichb. Consp.* 60), caulis more *Witsenia* fruticosus, spathæ parvæ, 1–2-floræ, in corymbo composito numerosæ breviter pedunculatæ, sed flores omnino *Aristeæ*, et caulis basi breviter lignosus ramosusque in aliis nonnullis speciebus. *A. fruticosus*, *Pers.*, a *Thunbergio* ad *Witseniam* a *Baker* ad *Niveniam* relatu, tum ab *A. corymbosa* quam a cæteris speciebus differt habitu humili ramoso dense folioso, spathis (1–2-floris?) inter folia solitariis sessilibus. Habitu potius *Tapinia* accedit, sed flores (quos in speciminibus nostris haud bene examinare potuimus) omnino *Aristeæ* convenire videntur. *A. spiralis*, *Ker.*; *Bot. Mag.* t. 520 (*Moræa*), a cæteris speciebus differt colore floris non cæruleo.

*WIEDOWIA*, *Eckl. Verz. Dfl. Samml.* 16, planta Capensis indescrita nec a nobis visa, ab auctore intermedia dicitur inter *Sisyrinchium* et *Aristeam*, a *Steudelio* *Nomencl.* ad *Aristeam* refertur.

37. *Witsenia*, *Thunb. Gen. Nov.* 34, t. 17.—Perianthii tubus elongatus, cylindraceus, superne leviter incrassatus; lobi erecti, conniventes, exteriores oblongi concavi crassius-

culi dorso tomentosi, interiores breviores, plani subscariosi, apice solo tomentelli. Stamina fauci affixa, perianthio breviora, filamentis crassiusculis liberis; antheræ oblongo-lineares, erectæ, basifixæ. Ovarium 3-loculare, glandula annulari circa styli basin coronatum, loculis  $\infty$ -ovulatis; stylus filiformis, e perianthio subexsertus, apice stigmatoso minute 3-dentatus. Capsula coriacea, nitidula, loculicide 3-valvis. Semina pauca, angulata, matura non vidimus.—Caulis lignosus, elatus, ramosus, compressus, acutangulus. Folia erecta, ensiformia, equitantia, rigidula, superiora minor conferta. Bracteæ ad axillas foliorum superiorum  $\infty$ , rigidae, complicatæ, quasi in spica bifariam imbricatæ, ab inferioribus ad 2 summas gradatim auctæ. Spathæ ad axillas bractearum summarum sæpius geminæ, bractea multo minores. Flos intra spatham 1 (v. 2?) subsessilis, bracteas imbricatas longe superans. Bractea seu bracteola intra spatham ea paullo brevior.

Species 1, Africæ australis incola. *Baker in Journ. Linn. Soc.* xvi. 108. *Red. Lil. t.* 245, 463. *Bot. Reg. t.* 5. *Maund, Botanist, t.* 125. *Fl. des Serres, Aug.* 1846, t. 4.

38. *Klattia*, *Baker in Journ. Linn. Soc.* xvi. 109.—Perianthii tubus brevis, cylindraceus, ad os constrictus; lobi æquales, erecti, unguibus longe lineari-subulatis filamentis similibus, superne vix in ligulam erectam linearem obtusam dilatatis. Stamina ad apicem tubi cum lobis inserta, iisque primo aspectu simillima, filamentis leviter applanatis; antheræ erectæ, longe lineari-sagittatæ. Ovarium obovoideum, infra apicem crassum solidum 3-loculare, ovulis in loculis solitariis v. perpaucis; stylus filiformis, apice stigmatoso minute 3-dentatus. Capsula brevis, apice indurata, loculicide 3-valvis. Semina in loculis solitaria, immatura oblonga, angulata v. compressa.—Caulis more *Witseniæ* lignosus, ramosus. Folia disticha, conferta, ensiformia, equitantia, rigidula, summa gradatim in bracteas bifariam imbricatas abeuntia. Flores intra bracteas summas gemini (v. 3-4!) sessiles, singuli spatha bracteas multo breviora bracteolaque subsimili stipati. Perianthii lobi filamentiformes, cum filamentis veris styloque e bracteis longe exserti. Capsulæ bracteis inclusæ.

Species 1, Africæ australis incola (*Witsenia partita*, Ker).

Flores, apud Klattium in Linnæa xxxiv. 546, in quæque spica 10 ad 15, in speciminibus nostris paria 2 intra bracteas 1-2 superiores invenimus, comam densam filamentorum formantes.

### TRIBUS III. IXIÆ.

39. *Schizostylis*, *Backh. et Harv. in Bot. Mag. t.* 5422.—Perianthii tubus tenuis, vix in faucem brevissimam amplius; lobi æquales, oblongi v. ovati, patentes. Stamina ad faucem affixa, filamentis filiformibus liberis; antheræ lineares, sagittatæ. Ovarium 3-loculare, loculis  $\infty$ -ovulatis; stylus brevis, ramis longis filiformibus indivisis, introrsum in longitudine papillosis. Capsula obovoidea v. oblonga, vertice truncata, 3-sulca, membranacea, loculicide 3-valvis. Semina numerosa, angulata.—Caulis in rhizomate fasciculati, bulbosi v. basi leviter bulboso-incrassati. Folia linearia v. anguste ensiformia. Spathæ secus pedunculum simplicem dissitæ, subdistichæ, virescentes, lanceolatæ, complicatæ. Flos in spatha sessilis. Bractea spatha angustior, virescens v. subscariosa, 2-carinata. Perianthium speciosum, rubrum.

Species 2, Africæ australis incolæ. *Baker in Journ. Linn. Soc.* xvi. 108. *Klatt in Linnæa*, xxxv. 380. *Lemaire, Illustr. Hortic. t.* 394 (a *Bot. Mag. repetit.*). *Fl. des Serres, t.* 1637.

40. *Mesperantha*, *Ker in Kœn. et Sims, Ann. Bot.* i. 224.—Perianthii tubus tenuis, longiusculus, abbreviatus v. brevissimus, rectus v. decurvus; limbus patens v. demum reflexus, lobi angusti, subæquales, v. exteriores sæpe paullo majores rigidiore et intensius colorati. Stamina ad faucem affixa, filamentis brevibus erectis; antheræ lineari-sagittatæ, erectæ. Ovarium obovoideum v. oblongum, 3-loculare, loculis  $\infty$ -ovulatis; stylus brevis sæpius brevissimus, ramis multo longioribus filiformibus superne introrsum papillosis. Capsula membranacea, obtusa, loculicide 3-valvis. Semina globosa v. angulato-compressa.—Bulbi tunicæ læves, coriaceæ, interdum a basi solutæ deorsum imbricatæ, caule sim-

plici v. unifræmo. Folia pauca, anguste linearia. Spathæ secus pedunculum sessiles, dissitæ, secundæ v. quaquaversæ, virescentes, complicatæ v. carinatæ, erectæ v. vix patentes. Flos in spatha sessilis; bractea spatha multo brevior, 2-nervis v. 2-carinata.

Species ad 20, Africæ australis et tropicæ incolæ. *Baker in Journ. Linn. Soc.* xvi. 95. *Klatt in Linnæa*, xxxiv. 647; *Ergänz. und Bericht.* 59. *Jacq. Ic. Rar.* t. 276, 279, 280. *Red. Lil.* t. 441. *Andr. Bot. Rep.* t. 44, 59. *Bot. Mag.* t. 566, 573, 790, 1054, 1254, 1379, 1475 (ic. pleræque sub *Ixia*).

*I. radiata* in icone Redouteana, t. 441, styli ramoso solito breviores ostendit, et species *Geissorhiza* accedere videtur.

41. *Geissorhiza*, *Ker in Kön. et Sims, Ann. Bot.* 1. 223.—Perianthium infundibuliforme, tubo brevi tenui apice breviter ampliato; lobi subæquales, plus minus patentes, basi sæpe angustati. Stamina ad faucem affixa, filamentis brevibus liberis; antheræ lineari-sagittatæ, rectæ v. apice recurvæ, rarius demum tortæ. Ovarium obovoideum v. oblongum, 3-loculare, loculis ∞-ovulatis; stylus filiformis, longiusculus, ramis linearibus recurvis indivisis parte integra brevioribus, superne interdum leviter membranaceo-dilatatis introrsum ab apice breviter v. longiuscule papillosis. Capsula obtusa, membranacea, loculicide 3-valvis. Semina subglobosa v. angulato-compressa.—Bulbi tunicæ læves, fibrosæ, v. deorsum imbricatæ. Caulis simplex v. parum ramosus. Folia pauca, linearia, angustissima, rarius latius ensiformia. Pedunculus unicus, terminalis, seu pauci e folii summæ vagina. Spathæ secus pedunculum paucæ, dissitæ, interdum solitariae, inferiores sæpius herbacæ, acutæ, superiores v. interdum omnes plus minus scariosæ, obtusæ v. denticulatæ. Flos in spatha sessilis, bractea spatha breviori scariosa striata sæpius breviter 2-loba. Perianthii tubus rarius spatham excedens.

Species ad 24, v. ex Klattio 31, quarum una Madagascariensis, cæteræ omnes Africæ australis incolæ. *Baker in Journ. Linn. Soc.* xvi. 93 (excl. *G. erecta*, *G. alpina* et *G. lutea* ad *Hesperantham* referendis). *Klatt in Linnæa*, xxxiv. 650; *Ergänz. und Bericht.* 56.

Genus vix characteribus certis ab *Ixia* distinctum, differt sæpius perianthii limbo minus expanso et spathis saltem inferioribus herbaceis acutis, in sectiones 2 a *Bakero* dividitur: 1. *Rochea*, perianthii tubo spatham non excedente. *Bot. Mag.* t. 597, 598 (*Ixia*), 672, 1255, 5877. *Andr. Bot. Rep.* t. 245 (*Ixia*). *Sweet, Brit. Fl. Gard.* t. 138. *Rochea*, *Salisb. in Trans. Hort. Soc.* i. 322, absque char. 2. *Weihæa*, perianthii tubo tenui e spatha exserto. *Bot. Mag.* t. 584. *WEIHÆA*, *Eckl. Verz. Pf. Samml.* 22.

*G. Bojeri*, *Baker*, e Madagascaria, ab Africanis differt capsula longa angusta subcylindracea, sed omnino congener videtur.

42. *Dierama*, *C. Koch in Walp. Ann.* vi. 42.—Perianthium infundibuliforme, tubo brevi in faucem ampliato; lobi subæquales, erecto-patentes. Stamina supra basin faucis affixa, filamentis brevibus rectis; antheræ lineares, erectæ, sagittatæ. Ovarium 3-loculare, loculis ∞-ovulatis; stylus filiformis, rectus, ramis indivisis recurvis apice plus minus cuneato-dilatatis. Capsula obtusa, membranacea, loculicide 3-valvis. Semina subglobosa v. angulato-compressa.—Bulbi tunicæ cum basibus foliorum vetustiorum in fibras numerosas rigidas persistentes solutæ. Folia longa, angusta, inferiora equitantia a latere complanata, superiora pauca, parva. Panicula terminalis, elongata, ramulis filiformibus in vivo pendulis, in speciminibus siccis erecti apparent. Spathæ in ramulis sessiles, scarioso-hyalinæ, vix striatæ, apice laceræ, sæpius 3-fidæ. Flos intra spatham sessilis, bractea spatha angustiore 2-fida.

Species 2 v. 3, florum magnitudine et colore distinctæ, sed ut videtur intermediis connexæ, Africæ tropicæ et australis incolæ. *Baker in Journ. Linn. Soc.* xvi. 99. *Klatt in Linnæa*, xxxii. 751 (errore *Dierama*); *Ergänz. und Bericht.* 54. *Bot. Mag.* t. 5555. *Bot. Reg.* t. 1360 (*Sparaxis*).

*D. cupuliflorum*, *Klatt in Deeken Reise, Bot.* 73, t. 3, quod etiam a Thomsonio in Africa tropica lectum fuit, a forma typica austro-Africana *D. penduli* distinguere nequimus.

43. *Streptanthera*, *Sweet, Brit. Fl. Gard.* t. 209, et ser. 2, t. 122.—Perianthii tubus brevissimus, campanulatus; lobi æquales, rotato-patentes. Stamina fauci affixa, filamentis brevibus erectis liberis; antheræ lineares, demum tortæ. Ovarium 3-loculare, loculis

∞-ovulatis; stylus filiformis, antheras breviter superans, ramis stigmatosis breviter cuneato-dilatatis 2-lobis. Capsula subglobosa, loculicide 3-valvis. Semina globosa.—Herbæ humiles, bulbosæ. Folia ensiformia, lanceolata, erecta v. falcato-patentia. Pedunculi in axillis superioribus 2-3. Spathæ secus pedunculum sessiles, 2-3 v. ad unicum reductæ, membranaceo-scariosæ, maculis brunneis linearibus more *Sparaceos* notatæ, apice dentatæ v. laceræ. Flos in spatha unicus, sessilis, bractea 2-dentata spatha paullo minore.

Species 2, Africæ australis incolæ. *Baker in Journ. Linn. Soc.* xvi. 92. *Lodd. Bot. Cab. t.* 1359. *Part. Mag. Bot.* i. 8, *cum ic.*

Specimen unicum nobis adest, genitalibus in flore unico a vermibus exesis et characterem imprimis ex iconibus citatis sumpsimis. Genus videtur *Sparaxi* affine, sed perianthii forma et genitalibus rectis potius *Ixia* v. *Geissorhiza* accedens.

44. *Ixia*, *Linn. Gen.* n. 56. (Würthia, *Regel, Gartenfl.* ii. 98, t. 46.)—Perianthium infundibuliforme v. hypocraterimorphum, tubo tenui brevi v. longiusculo, apice æquali v. leviter ampliato; lobi subæquales, plus minus patentés, sæpius subrotati. Stamina ad faucem affixa, filamentis brevibus erectis liberis v. basi connatis; antheræ lineares, plus minus sagittatæ, erectæ v. apice recurvæ, prope basin affixæ. Ovarium obovoideum v. oblongum, 3-loculare, loculis ∞-ovulatis; stylus filiformis, ramis linearibus recurvis indivisis parte integra brevioribus, introrsum ab apice breviter v. longiuscule papillois. Capsula obtusa, membranacea, loculicide 3-valvis. Semina subglobosa v. angulato-compressa.—Bulbi v. cormi tunicæ læves v. fibrosæ. Caulis simplex v. parum ramosus. Folia ad basin caulis conferta, anguste ensiformia, erecta, rigidule venosa, secus caulem pauca parva. Spathæ secus pedunculum terminalem seu ramos breves erectos sessiles, sæpe secundæ, breves, latæ, membranaceo-scariosæ, carinatæ v. concavæ, sæpe 3-dentatæ. Flos in spatha unicus, sessilis, bractea spathæ subsimili nisi parum brevior 2-carinata 2-dentata v. interdum 2-partibili.

Species ad 25, Africæ australis incolæ, plures valde variabiles et inter se difficillime distinguendæ. *Baker in Journ. Linn. Soc.* xvi. 90 et 96 (*Ixia* et *Morphixia*). *Klatt in Linnea* xxxiv. 635; *Ergänz. und Bericht.* 48 (*Morphixia*) et 61 (*Ixia*).

Genus vix in sectiones distinctas dividitur; series sequentes characteribus nimis incertis separantur.

In speciebus typicis perianthii tubus brevis v. rarius elongatus, usque ad apicem tenuis; filamenta libera v. vix ima basi subconnata. *Jacq. Ic. Rar. t.* 275, 278; *Hort. Schenbr. t.* 18 ad 23. *Red. Lil. t.* 30, 64, 86, 126, 137, 138, 140, 426, 466. *Vent. Choix, t.* 10; *Jard. Cels. t.* 48. *Andr. Bot. Rep. t.* 23, 29, 50, 155, 159, 186, 196, 232, 256. *Bot. Mag. t.* 128 (in *textu* 127), 522, 539, 549, 589, 594, 623, 624, 629, 789, 846, 1285, 1378. *Bot. Reg. t.* 530. *Lodd. Bot. Cab. t.* 15.

Sect. *Eurydice*, *Pers. Syn.* i. 48, differt filamentis plus minus sed basi distincte connatis. *Red. Lil. t.* 41 (*Galaxia*). *Andr. Bot. Rep. t.* 203, 211, 213, 250, 392. *Bot. Mag. t.* 607. Hue etiam potius quam *Ixiis* typicis referenda videtur *I. columellaris*, *Bot. Mag. t.* 630.

*MORPHIXIA*, *Ker, Gen. Irid.* 105 (*HYALIS*, *Salisb. in Trans. Hort. Soc.* i. 317, *absque char.* *Morphixia brevicollis*, *Baker*), ab auctoribus distinguitur perianthii tubo minus tenui, ad faucem interdum leviter ampliato; styli rami etiam interdum leviter membranaceo-dilatati. *M. capillaris*, *Ker*, quoad formam perianthii et styli ramos a varietatibus nonnullis *Ixiæ polystachyæ* ægre distinguenda est. *Jacq. Ic. Rar. t.* 281, 282. *Red. Lil. t.* 431, 432. *Bot. Mag. t.* 570, 617, 1013.

*Morphixia longicollis*, *Baker* (*FREXSIA*, *Eckl. Verz. Pfl. Samml.* 30, *non aliorum*), a *Kerio* ad *Tritoniam* relatæ, insignes sunt tubo perianthii longissimo, quam in cæteris speciebus præsertim superne crassiore; a *Tritonia* parum differunt perianthio et stylo rectis. Hue *Jacq. Ic. Rar. t.* 263 (*Gladiolus*). *Red. Lil. t.* 34. *Bot. Mag. t.* 256, 1173, 1502, 1503 (*Tritonia*).

*I. anemoneflora*, *Jacq.*, et *I. fragrans*, *Jacq.*, *Baker in Journ. Linn. Soc.* xvi. 91, nobis melius ad *Sparaxin* referendæ videntur. *I. fucata*, *Ker in Bot. Mag. t.* 1379, *Baker, l.c.*, ad *Hesperantham*.

45. *Freesia*, *Klatt in Linnea*, xxxiv. 672, *pro parte non Eckl.*—Perianthii tubus e basi tenui curvus, in faucem longe campanulatam ampliatum, limbus parum obliquus, lobis subæqualibus ovatis patentibus. Stamina intra faucem affixa, filamentis liberis filiformibus; antheræ lineares, sagittatæ. Ovarium ovoideum, 3-loculare, loculis ∞-ovulatis; stylus filiformis, stamina demum superans, ramis tenuibus 2-fidis, lobis vix dilatatis recurvis introrsum papillois. Capsula ovoidea v. subglobosa, loculicide 3-valvis. Semina (imma-

tura) depresso-globosa v. angulata.—Bulbi v. cormi tunicæ fibrosæ. Folia plana, angusta, haud rigida, supra basin caulis conferta. Inflorescentia simplex v. parce ramosa; spathæ in parte superiore patente ramorum unilaterales, breves, ovatæ. Flos in spatha unicus, sessilis, bractea spathæ subæquali 2-carinata.

Species 2, Africæ australis incolæ. *Baker in Journ. Linn. Soc. xvi. 163. Jacq. Ic. Rar. t. 241 (Gladiolus). Red. Lil. t. 124, 419 (Gladiolus). Bot. Reg. t. 135 (Tritonia). Lodd. Bot. Cab. t. 1820 (Tritonia). Reg. Gartenfl. t. 808. Klatt in Zeitschr. Schweiz. Gartenb. 1881, t. 3.*

46. **Lapeyrousia**, *Pourr. in Mem. Acad. Sc. Toulouse, 1786, ex eod. in Journ. Phys. xxxv. (1789), 425. (Meristostigma, A. Dietr. Sp. Pl. ii. 593. Peyrousia, Sweet, Hort. Brit. 499. Ovieda, Spreng. Syst. i. 147.)*—Perianthium infundibuliforme v. fere hypocraterimorphum, tubo tenui interdum longissimo recto v. superne leviter incurvo in faucem brevem sæpius dilatato; lobi subæquales, patentes, v. 2 paulo longiores. Stamina ad faucem affixa, filamentis brevibus liberis; antheræ oblongo-lineares. Ovarium 3-loculare, loculis  $\infty$ -ovulatis; stylus filiformis, demum sæpius elongatus, ramis filiformibus 2-fidis, lobis introrsum in longitudine papillosis. Capsula globosa v. ovoidea, loculicide 3-valvis. Semina parva, subglobosa v. angulato-compressa.—Bulbi seu cormi tunicæ fibrosæ v. rigide striatæ basiue circumscissæ. Habitus valde varius, foliis sæpius paucis. Spathæ herbacæe, nunc inter folia conferta sessiles, nunc secus pedunculum seu ramos inflorescentiæ plures sessiles approximatae v. dissitæ. Flos in spatha unicus, sessilis, bractea spatha brevior 2-nervi v. 2-carinata.

Species ad 18, Africæ australis et tropicæ incolæ. *Baker in Journ. Linn. Soc. xvi. 154. Klatt in Linnæa, xxxii. 776 (Ovieda); Ergänz. und Bericht. 25.*

Genus imprimis ad inflorescentiam in series sequentes dividitur:—

1. *Galaxioidæ*. Caulis humilis. Spathæ herbacæe, densissime confertæ et foliis floralibus quasi involucriatæ, habitum fere *Galariæ* præbentes. Huc *L. fasciculata*, Ker, et affines. *Jacq. Ic. Rar. t. 292 (Galaxia). SOPHRONIA, Licht. in Ræm. et Schult. Syst. i. 482.*

2. *Haplostachyæ*. Caulis humilis, simplex. Spathæ herbacæe, secus pedunculum simplicem plures, approximatae. Huc *L. fissifolia* et affines. *Jacq. Ic. Rar. t. 268 (Gladiolus). Bot. Mag. t. 1246, et L. odoratissima, Baker in Trans. Linn. Soc. Bot. i. 273, t. 36.*

3. *Spathacææ*. Caulis mediocrius v. brevis. Spathæ secus ramos divaricatos plures, herbacæe. *Jacq. Ic. Rar. t. 269, 270 (Gladiolus). Bot. Reg. t. 1903. Sweet, Brit. Fl. Gard. t. 143, et ser. 2, t. 39.*

4. *Anomathecææ*. Folia longa. Spathæ parvæ secus ramos paucos elongatos subdissitæ. *Bot. Mag. t. 606. ANOMATHECA, Ker in Kæn. et Sims, Ann. Bot. i. 227. Klatt in Linnæa, xxxii. 774; Ergänz. und Bericht, 21. Baker in Journ. Linn. Soc. xvi. 153. ANOMAZA, Salisb. in Trans. Hort. Soc. i. 323, absque char.*

5. *Corymbosææ*. Inflorescentia corymboso-ramosa, sæpe ramosissima. Spathæ parvæ, secus ramulos breves paucæ, approximatae. *Jacq. Ic. Rar. t. 288 (Ixia). Andr. Bot. Rep. t. 35 (Ixia). Bot. Mag. t. 595. Peters, Reise Mossamb. Bot. t. 58.*

6. *Dichotomææ*. Inflorescentia laxè dichotoma. Spathæ longæ, angustæ, ad apices ramorum solitariæ v. rarius 2, inferiore distante. Perianthium longum. Huc *L. fragrans*, Baker in Trans. Linn. Soc. Bot. i. 272, antheris valde inæqualibus, *L. cyanescens*, Baker, l. c., antheris subæqualibus, et *L. fistulosa*, Baker.

47. **Watsonia**, *Mill. Dict. (Neuberia, Eckl. Verz. Pfl. Samml. 37. Meriana, Trew, Pl. Sel. Elvret. 11, t. 40.)*—Perianthii tubus basi tenuis, curvus v. recurvus, superne amplius; lobi subæquales, ovati oblongi v. lanceolati, per anthesin patentes. Stamina intra faucem affixa, filamentis liberis filiformibus longiusculis; antheræ oblongo-lineares, versatiles, perianthio breviores. Ovarium 3-loculare, loculis  $\infty$ -ovulatis; stylus filiformis, superne lateralis, ramis brevibus sæpe inæqualibus 2-fidis, lobis filiformibus interdum brevissimis superne introrsum papillosis. Capsula globosa ovoidea v. breviter oblonga, loculicide 3-valvis. Semina globosa v. angulato-compressa.—Bulbi tunicæ rigide fibrosæ. Caulis sæpe elatus. Folia longe ensiformia, rigidula, venosa, costa sæpe prominente. Spicæ longæ, simplices v. parce ramosæ. Spathæ lanceolatae oblongæ v. angustæ, sæpe numerosæ, secus ramos quaquaversæ v. subdistichæ, dissitæ v. subimbricatæ. Flos in spatha unicus, sessilis, bractea interdum 2-fida.

Species enumerat Klatt 25, Africæ australis incolæ. *Baker in Journ. Linn. Soc.* xvi. 157 (excl. sect. *Microanthus*). *Klatt in Linnæa*, xxxii. 735; *Ergänz. und Bericht*. 17. *Jacq. Hort. Schænbr.* t. 13; *Id. Rar. t.* 229 ad 232, 234, 235. *Red. Lil. t.* 11 (*Gladiolus*), 343, 399. *Bot. Mag. t.* 418 et 441 (*Antholyza*), 533, 537, 601, 608, 631, 1072, 1193 ad 1195, 1406, 1530. *Andr. Bot. Rep. t.* 56 et 192 (*Antholyza*), 335 (*Gladiolus*).

**BELLIA**, *Eckl. Vers. Pfl. Samml.* 43, includit species 3 v. 4, a Bakero sub *W. punctata*, Ker, pro varietatibus conjunctas, caule humili tenui, spica simplici, spathis quam in typicis minoribus minus appressis, floribus mediocribus v. parvis, tubo tenui vix in faucem ampliato. Hic tubus in *W. Zeyheri* brevissimus, in *W. punctata* longior, in una varietate longissimus vix apice incurvus. Species cæterum *Lapeyrouseis* spicatis valde affines. *Andr. Bot. Rep. t.* 177 (*Ixia*).

**LOMBENIA**, *Pourr. in Mem. Acad. Sc. Toulouse* 1786, ex eod. in *Journ. Phys.* xxxv. (1789) 425 (errore *LEMBONIA*, *Pers. Syn.* i. 44), species in ins. Borbonia a Commersonio lecta a nobis non visa, ex descriptione omnino *Watsoniæ* convenit, exceptis stigmatibus 5 (nec 6) an in flore imperfecto observatis?

48. *Microanthus*, *Pers. Syn. Pl.* i. 46.—Perianthium infundibuliforme, rectum, tubo brevi in faucem ampliato; lobi subæquales, oblongi v. angusti, patentes. Stamina fauci affixa, filamentis filiformibus liberis; antheræ versatiles, filamentis breviores. Ovarium obovoideum, 3-loculare, loculis pauciovulatis; stylus filiformis, ramis tenuibus haud longis apice breviter 2-fidis introrsum stigmatosis. Capsula parva, obovoideo-3-quetra, obtusa, membranacea, demum loculicidè dehiscens. Semina in loculis solitaria v. rarius gemina, anguste oblonga, angulata, erecta.—Bulbi v. cormi tunicæ fibrosæ. Caulis simplex v. parum ramosus. Folia linearia, teretia, fistulosa, v. anguste ensiformia. Spica tenuis, longa, stricta, dense floribunda. Spathæ parvæ, numerosæ, eleganter distichæ, margine inferiore scariosæ. Flores parvuli, cærulei v. albi, intra spatham sessiles, bractea scariosa.

Species 2 v. 3, Africæ australis et ins. Mascarensium incolæ. *Baker in Journ. Linn. Soc.* xvi. 159 (*Watsoniæ* sect.). *Klatt in Linnæa*, xxxii. 744. *Jacq. Hort. Schænbr. t.* 16 (*Gladiolus*). *Red. Lil. t.* 96 et 198 (*Ixia*). *Bot. Mag. t.* 523 et 553 (*Ixia*). *Lodd. Bot. Cab. t.* 1577.

49. *Acidanthera*, *Hochst. in Flora*, 1844, 25. (Sphærospora, *Klatt in Linnæa*, xxxii. 725).—Perianthii tubus longus, tenuis, rectus v. leviter incurvus, in faucem parum amplius; lobi subæquales, erecto-patentes, oblongi v. fere lineares. Stamina ad faucem affixa, filamentis filiformibus liberis v. medio subcoherentibus; antheræ lineares, erectæ v. versatiles, connectivo interdum nec semper acuminatæ. Ovarium 3-loculare, loculis co-ovulatis; stylus filiformis, superne lateralis, ramis indivisiis subulatis v. membranaceo-complanatis recurvis, apice introrsum papillois. Capsula oblonga, membranacea, loculicidè 3-valvis. Semina globosa v. angulata.—Cormi tunicæ læves v. fibrosæ. Caulis erectus, simplex v. parce ramosus. Folia pauca, linearia, plana, tenuiter venosa. Spathæ secus caulem v. ramos sæpius paucæ, dissitæ, angustæ, secundæ. Flos in spatha unicus, sessilis, bractea spatha minore tenuioreque, 2-nervi v. 2-fida.

Species ad 12, Africæ tropicæ et australis incolæ. *Baker in Journ. Linn. Soc.* xvi. 159. *Houtt. Handl. Pfl. Kund.* xii. t. 78, f. 2 (*Ixia*). *Monatschr. Preuss. Gartenb. Ver.* 1876, t. 1.

Genus *Tritonia* speciesbus longifloris valde affine, et *T. capensis*, Ker, *Bot. Mag. t.* 618 et 1531 (a *Jacq. Ic. Rar. t.* 261 ad *Gladiolum*, a Bakero in *Journ. Linn. Soc.* xvi. 168 ad *Montbretiam*, relata) cum *Montbretia pauciflora*, *Baker l.c.*, nobis melius *Acidantheræ* convenire videntur. *HOOTTVYNIA*, *Houtt. Handl. Pfl. Kund.* xii. 448, t. 85, f. 3, ab auctoribus ad *Tritoniam capensem* refertur, sed icon spatham brevem exhibit *Tritonia* nec *Acidantheræ* et forma perianthii male cum *T. capensæ* convenit.

50. *Babiana*, *Ker in Koen. et Sims, Ann. Bot.* i. 233.—Perianthium infundibuliforme, tubo recto longo v. rarius brevi, superne in faucem sæpius longam ampliato, lobi nunc subæquales, erecto-patentes, angusti, unguiculati v. basi vix contracti, nunc valde inæquales, postico elongato erecto inferioribus multo brevioribus patentibus. Stamina fauci affixa, filamentis filiformibus liberis; antheræ lineari-sagittatæ. Ovarium ovoideum, 3-loculare, loculis co-ovulatis; stylus filiformis, elongatus, superne lateralis, ramis indivisiis, apice

stigmatoso breviter cuneato v. anguste membranaceo rarius subulato. Capsula ovoidea, sæpe subinflata, loculicide 3-valvis. Semina globosa v. angulata, testa sæpe carnosula.— Bulbi seu cormi tunicæ fibrosæ. Caules sæpius breves, in plerisque speciebus cum foliis pubescentes v. pilosi. Folia sæpius rigidula, plicato-venosa, rarius angustiora læviaque. Inflorescentia sæpius simplex, dense spicata, plus minus pilosa, inter folia subsessilis, rarius longior ramosaque. Spathæ angustæ, longæ v. breves, rigidulæ striatæ v. membranacæ. Flos in spatha unicus, sessilis, bractea membranacea 2-nervi 2-carinata v. 2-fida.

Species fere 30, quarum una insulæ Socotra, cæteræ omnes Africæ australis incolæ. *Baker in Journ. Linn. Soc.* xvi. 164. *Klatt in Linnaea*, xxxii. 765; *Ergänz. und Bericht.* 13.

Genus quoad species plerasque naturale sed male definitum, imprimis inflorescentia foliis et indumento dignoscendum, characteribus floralibus variis nunc *Acidantheræ* nunc *Antholyzæ* accedit. In sectiones sequentes dividitur:—

1. *Eubabiana*. Spica simplex, brevis, densa, inter folia sæpius subsessilis iisque brevior. Spathæ quaquaversæ v. subdistichæ. Styli rami sæpius anguste membranaceo-dilatati, obtusi. *Jacq. Hort. Schœnbr. t.* 14, 15 (*Gladiolus*); *lc. Rar. t.* 253. *Andr. Bot. Rep. t.* 137. *Bot. Mag. t.* 576, 638, 1019. Huc pertinet etiam *B. socotrana*, Hook. f. *Bot. Mag. t.* 6585, ex ins. Socotra.

2. *Acaste*. Spica laxa, basi sæpius breviter ramosa. Styli rami apice breviter cuneati v. clavati. *Jacq. Ic. Rar. t.* 237 ad 239 (*Gladiolus*), t. 284 ad 287 (*Ixia*). *Red. Lil. t.* 142 (*Gladiolus*). *Bot. Mag. t.* 410 (*Ixia*), 583, 621, 626, 637, 1053. *ACASTE*, *Salisb. in Trans. Hort. Soc. i.* 322 (absque char.).

3. *Antholyzoides*. Spica densa, unilateralis, spathis secundis. Perianthii tubus longus nunc subæqualis, nunc valde inæqualis. Styli rami subulati. *Jacq. Ic. Rar. t.* 264, 266. *Red. Lil. t.* 44, 364, in *textu* 361. *Andr. Bot. Rep. t.* 5. *Bot. Mag. t.* 680, 847. *Lodd. Bot. Cab. t.* 1006. In *B. ringente*, Ker, perianthium fere *Antholyzæ æthiopice*, Linn., in *B. tubata*, Sweet, et in *B. tubiflora*, Ker, inflorescentia omnino hujus sectionis sed perianthii lobi vix inæquales; styli rami in speciminibus examinatis non dilatati, sed in iconibus nonnullis apice breviter cuneati v. emarginati delineantur.

51. *Crocasma*, *Planch. in Fl. des Serres, t.* 702.—Perianthii tubus cylindraceus, incurvus, apice non ampliatus; limbus demum a basi brevissime concava patens, segmentis oblongis parum inæqualibus. Stamina ad faucem affixa, filamentis longis superne unilateralibus; antheræ lineares, versatiles. Ovarium 3-loculare, loculis ∞ (8-10-) ovulatis; stylus elongatus, superne lateralis, ramis filiformibus apice stigmatoso dilatatis denticulatis. Capsula subinflato-globosa, 3-sulca, brevissime lateque 3-loba. Semina pauca, majuscula, testa crassiuscula.—Bulbi seu cormi tunicæ tenues, fibrosæ. Caulis elatus, paniculato-ramosus. Folia longa, ensiformia, venosa. Spathæ secus ramos paniculæ dissitæ, breves, integræ. Flos in spatha unicus sessilis, bractea membranacea v. subscariosa spathæ subæquali lata 2-carinata sæpeque 2-fida. Perianthium anthesi ineunte leviter incurvum, genitalibus subexsertis. Capsula etsi sessilis spatham æquans v. superans, valvis coloratis demum patentibus, seminibus globosis diu persistentibus.

Species 1, Africæ australis et tropicæ incola. *Baker in Journ. Linn. Soc.* xvi. 163 (*Tritoniæ sect.*). *Klatt in Linnaea*, xxxii. 764. *Bot. Mag. t.* 4335. *Bot. Reg.* 1847, t. 61 (*Tritonia*). *Klotzsch in Peters, Reise, Mossamb. Bot. t.* 57 (*Crocanthus*).

52. *Melasphaerula*, *Ker in Bot. Mag. t.* 615. (*Diasia*, *DC. in Bull. Soc. Philom. Par.* iii. 1803, 151 bis. *Aglæa*, *Pers. Syn. i.* 46.)—Perianthium campanulatum, tubo subnullo; segmenta parum inæqualia, oblongo-lanceolata, setaceo-acuminata. Stamina basi perianthii affixa, filamentibus filiformibus, superne unilateralia; antheræ oblongæ. Ovarium breve, late 3-lobum, 3-loculare, loculis 2-3-ovulatis; stylus filiformis, stamina superans, ramis tenuibus indivisis apice stigmatoso leviter cuneato-dilatatis. Capsula brevis, lata, divaricato-3-loba, angulis acutis fere alatis, loculicide 3-valvis. Semina in quoque loculo sæpius 2, ovata, compressa, testa crassiuscula apice subspungiosa.—Bulbus seu cormus parvus, tunicis brunneis lævibus. Folia in caule plura, graminea. Panicula ampla, laxa, ramulis fere filiformibus. Bractæ ad basin ramorum 2, setacæ, altera ramulum subtendens integra, altera interior ad basin ramuli 2-fida. Spathæ parvæ, latæ, obtusæ, tenuiter membranacæ v. hyalinæ, 1-nerves, secus ramulos dissitæ. Flos in

spatha unicus, sessilis, bractea spathæ simili nisi latiore et 2-nervi. Capsulæ lobi spatham a latere excedentes.

Species 1, Africæ australis incolæ. *Baker in Journ. Linn. Soc.* xvi. 167. *Klatt in Linnaea*, xxxii. 746 (*Diasia*). *Jacq. Ic. Rar.* t. 236 (*Gladiolus*). *Red. Lil.* t. 54 et 163 (*Diasia*). *Andr. Bot. Rep.* t. 62 (*Gladiolus*). *Lodd. Bot. Cab.* t. 1444.

53. *Tritonia*, *Ker in Koen. et Sims, Ann. Bot.* i. 227. (*Waitzia*, *Reichb. Conspect.* 60.)—Perianthii tubus tenuis, rectus, nunc brevissimus nunc elongatus, rarius apice leviter incurvus; limbus concavus v. late campanulatus, subregularis v. parum obliquus, lobi lati, omnes similes v. 3 inferiores basi callo v. macula instructi, v. interdum paullo minores. Stamina basi limbi affixa, filamentis filiformibus liberis; antheræ lineares, sagittatæ, sæpius versatiles. Ovarium 3-loculare, loculis  $\infty$ -ovulatis; stylus filiformis, superne lateralis, ramis indivisis tenuibus v. sæpius apice stigmatoso leviter dilatato clavato v. retuso. Capsula membranacea, ovoidea v. oblonga, spatha sæpius brevior, loculicide 3-valvis. Semina globosa v. angulato-compressa.—Bulbi v. corni tunicæ fibrosæ. Caulis simplex v. parum ramosus. Folia pauca, anguste linearia v. latiora ensiformiaque, sæpe falcata. Spathæ secus pedunculum seu ramos paucos dissitæ, breves, membranaceæ, sæpe 3-dentatæ. Flos intra spatham unicus, sessilis, bractea spatha paullo brevior, 2-nervi v. 2-carinata.

Species ad 24, Africæ australis incolæ. *Baker in Journ. Linn. Soc.* xvi. 161, 167 (*Tritonia* et *Montbretia*). *Klatt in Linnaea*, xxxii. 752, 755 (*Montbretia* et *Tritonia*).

Perianthii forma variat de specie in speciem, sed variationes in specimenibus siccis sæpe parum conspicuæ et in iconibus non semper accurate delineatæ. In *Tritoniis* typicis tubus brevis, limbus latus, subæqualis, lobi nunc omnes consimiles immaculati, nunc (in *T. miniata*) 3 inferiores v. (in *T. deusta*) 3 exteriores basi maculati. Ad hanc seriem pertinent species *Bakeri* n. 1 ad 6 et icones sequentes. *Jacq. Hort. Schæmbr.* t. 24; *Fragm.* t. 32, f. 2. *Red. Lil.* t. 87, 89, 335. *Andr. Bot. Rep.* t. 134 (ic. omnes sub *Ixia*). *Bot. Mag.* t. 184, 581, 609, 622.

*MONTBRETIA*, *DC. in Bull. Soc. Philom. Par.* iii. (1803) 151 bis, et in *Red. Lil.* t. 53, pro genere proposita fuit ad *T. securigeram*, *Ker* (*Gladiolum*, *Bot. Mag.* t. 383), ob callos ad basin segmentorum 3 inferiorum insigniter prominentes; forma perianthii cæterum vix minus regularis quam in speciebus typicis. *T. flava*, *Bot. Reg.* t. 747 (*Montbretia*, *Baker*), ex icone perianthium *T. securigeræ* exhibit, etsi calli minus prominentes. In *T. lineata*, *Ker* (*Montbretia*, *Baker*), ex iconibus *Redoutianis* *Lil.* t. 55, et 400, perianthium vix irregulare absque callis, in icone tamen *Bot. Mag.* t. 487 incurvum delineatur et obliquum fere *Gladioli*, cui ab auctore refertur. In *M. laxifolia*, *Baker* in *Trans. Linn. Soc.* xxix. t. 101 A, ex Africa tropica, perianthium pariter vix irregulare, ecallosum.

*Montbretia strictifolia*, *Klatt, M. Pottsi*, *Baker in Gard. Chron.* 1877, ii. 424, affinesque nonnullæ a *Tritoniis* v. *Montbretiis* typicis differunt imprimis perianthii lobis angustioribus.

*Tritonia capensis*, *Ker*, et *Montbretia pauciflora*, *Baker*, nobis melius cum *Acidanthera* convenire videntur ut jam supra indicavimus. Cæteræ *Tritoniæ* longitubæ (*Montbretia longicollis*, *Baker*, n. 3 ad 6) a speciebus typicis tam *Tritoniæ* quam *Montbretiæ* recedunt perianthii tubo longissimo superne parum ampliato sæpeque incurvo, et *Tritoniam* cum *Acidanthera* connectunt; spathæ tamen omnino *Tritoniæ*. *Jacq. Ic. Rar.* t. 262, 267. *Andr. Bot. Rep.* t. 142 (omn. sub *Gladiolo*). *Bot. Mag.* t. 678, 1275.

*DICHONIA*, *Laws. ex Salisb. in Trans. Hort. Soc.* i. 320, absque char., species continet 2, a *Bakero* pro sectione *Tritoniæ* admissas, perianthii limbo supra tubum tenuem fere rotato, lobis oblongis basi contractis subæqualibus, antheris brevibus. Characteres fere *Ixiæ*, sed stamina et stylus plus minus lateralia. *Jacq. Ic. Rar.* t. 275. *Red. Lil.* t. 127, 433. *Andr. Bot. Rep.* t. 14, 128. *Bot. Mag.* t. 599, 629 (ic. omn. sub *Ixia*). *AGNETTA* *Eckl. Verz. Pfl. Samml.* 23, pro parte.

*Klatt, Ergänz. und Bericht.* 23, *Tritoniam* restringit ad species longitubas quæ *Tritoniam* cum *Acidanthera* et *Ixia* ipsa connectunt, et *Tritoniæ* nostræ typicæ genus *TRITONIXIAM* formant, *Klatt, l. c.* 21.

54. *Sparaxis*, *Ker in Koen. et Sims, Ann. Bot.* i. 225.—Perianthii tubus brevis, tenuis, in faucem breviter campanulatam ampliat; lobi 6, erecto-patentes, æquales v. parum inæquales. Stamina ad basin faucis affixa, filamentis erectis superne unilaterali-bus; antheræ lineares, erectæ v. apice incurvæ. Ovarium 3-loculare, loculis  $\infty$ -ovulatis;

stylus filiformis, superne lateralis, ramis longiuscule filiformibus indivisis superne recurvis introrsum papillois. Capsula membranacea, ovoidea v. oblonga, loculicide 3-valvis. Semina globosa v. angulato-compressa.—Bulbi v. cormi tunicæ fibrosæ. Caulis simplex v. parce ramosus. Folia pauca, plana, ensiformia v. late linearia, erecta v. falcata. Spathæ paucæ, dissitæ, v. interdum solitariae, latæ, scariosæ, striatæ v. sæpius lineis brevibus brunneis notatæ, apice fimbriato-dentatæ, dentibus sæpius 1-3-subulatis. Flos intra spatham unicus, sessilis, majusculus, flavus, bractea spatha multo angustiore 2-dentata. Capsula spatha inclusa.

Species ad 5, v. ex Klattio 11, Africæ australis incolæ. *Baker in Journ. Linn. Soc.* xvi. 98. *Klatt in Linneæ*, xxxii. 747; *Ergänz. und Bericht.* 55. *Jacq. Hort. Schænbr.* t. 17; *Ic. Rar.* t. 273, 274, 283. *Andr. Bot. Rep.* t. 48, 87. *Red. Lil.* t. 85, 109, 128, 129, 139, 362. *Bot. Mag.* t. 381, 541, 545, 779, 1482. *Bot. Reg.* t. 258. *Sweet, Brit. Fl. Gard.* t. 160, et ser. 2, t. 131, 383 (*ic. veteriores omnes sub Ixia*).

*Ixia anemoniflora*, *Red. Lil.* t. 85, non *Jacq.*, eadem videtur ac *I. fragrans*, *Jacq.*, sed rite a *Kerio* ad *Sparaxin* relata, etsi perianthium magis expansum sit. *I. anemoniflora*, *Jacq. Ic. Rar.* t. 273, videtur species distincta ei affinis.

55. *Synnotia*, *Sweet, Brit. Fl. Gard.* t. 150 (*sphalmate*, *Synnetia ex emend. sub num. poster.*).—Perianthium infundibuliforme, tubo tenui brevi v. elongato recto v. apice incurvo in faucem ampliato; lobi erecto-patentes, inæquales, postico majore erecto, 3 infimis minoribus reflexo-patentibus. Stamina ad basin faucis affixa, filamentis erectis unilateralibus; antheræ lineares. Ovarium 3-loculare, loculis ∞-ovulatis; stylus filiformis, superne lateralis, ramis brevibus recurvis indivisis introrsum papillois. Capsula membranacea, ovoidea v. oblonga, loculicide 3-valvis. Semina globosa v. angulato-compressa.—Bulbi seu cormi tunicæ rigide fibrosæ. Caulis simplex v. parum ramosus. Folia pauca, plana, linearia v. ensiformia, flaccida. Spathæ secus caulem dissitæ, latiusculæ, membranaceo-scariosæ, apice lacera v. fimbriato-dentatæ, lineis brunneis brevibus more *Sparazeos* notatæ. Flos intra spatham unicus, majusculus, sessilis, bractea spathæ simili nisi paullo minore 2-nervi, 2-fida. Capsula spatha inclusa.

Species 3, Africæ australis incolæ. *Baker in Journ. Linn. Soc.* xvi. 169. *Klatt in Linneæ*, xxxii. 749. *Jacq. Ic. Rar.* t. 240, 258 (*Gladiolus*). *Bot. Mag.* t. 548 (*Ixia*).

Genus a *Kerio* in *Sparaxi* inclusum, cui valde affine nec differt nisi perianthio magis irregulari.

56. *Gladiolus*, *Linn. Gen.* n. 57.—Perianthium plus minus incurvum, tubo brevissimo v. elongato oblique infundibuliformi, fauce plus minus ampliata v. brevissima; lobi inæquales, summus sæpius maximus, erectus convexus v. incurvus, inferiores minores, erecti v. patentes, 3 sæpe maculati, omnes sæpius basi angustati interdum unguiculati. Stamina fauci affixa, sub lobo summo incurva, filamentis liberis; antheræ lineares. Ovarium 3-loculare, loculis ∞-ovulatis; stylus filiformis, cum staminibus incurvus sæpiusque superne plus minus lateralis; rami tenues, indivisi, apice stigmatoso clavato v. petaloideo-dilatato. Capsula obovoidea v. breviter oblonga, obtusa, integra v. breviter 3-dyma, membranacea v. chartacea, loculicide 3-valvis. Semina ovoidea globosa compressiuscula v. angulata, angulis haud raro in alas angustas expansis, testa crassiuscule membranacea, interdum subspongiosa.—Bulbi tunicæ membranaceæ, brunneæ, v. fibrosæ. Caules sæpe elati. Folia ensiformia v. anguste linearia. Spathæ sæpissime lanceolatæ, herbaceæ, erectæ, in spicam laxam unilateralem dispositæ. Flores in spatha solitarii, sessiles, sæpius speciosi, in spica secunda unilateraliter inclinati, bractea intra spatham ei subsimili nisi sæpius minore et 2-nervi.

Species fere 90, Europæ mediæ, regionis Mediterraneæ, Africæ tropicæ et australis et ins. Mascarenensium incolæ. *Baker in Journ. Linn. Soc.* xvi. 170; in *Trans. Linn. Soc. Bot.* i. 267. *Klatt in Linneæ*, xxxii. 689; *Ergänz. und Bericht.* 3.

Genus in sectiones sequentes dividitur:—

1. *Eugladiolus*. Perianthii segmenta oblongo- v. obovato-spathulata, basi angustata v. præsertim inferiora unguiculata. *Jacq. Ic. Rar.* t. 242 ad 252, 254 ad 257. *Reichb. Iconogr. Eur.* t. 598 ad

600, 643; *Lc. Fl. Germ. t.* 349 ad 353. *Ness, Gen. Fl. Germ. Monocot. iii. n.* 9. *Guss. Pl. Inarim. t.* 14. *Sibth. Fl. Græc. t.* 37, 38. *Oliv. in Trans. Linn. Soc. xxix. t.* 100, *f.* 1. *Red. Lil. t.* 35, 36, 122, 123, 125, 136, 267, 273, 314, 377, 425. *Salisb. Parad. Lond. t.* 8. *Andr. Bot. Rep. t.* 11, 19, 27, 99, 111, 147, 188, 219, 227, 240, 589. *Bot. Mag. t.* 86, 135, 272, 538, 562, 574, 578, 582, 591, 602, 610, 625, 632, 645, 647, 618, 719, 727, 823, 874, 992, 1042, 1098, 1483, 1564, 1575, 1665, 2585, 3032, 3686, 5127, 5565, 5373, 5384, 5944, 6202. *Bot. Reg. t.* 1442. *Lodd. Bot. Cab. t.* 1756. *Sweet, Brit. Fl. Gard. ser. 2, t.* 140, 281. *Szund. Rif. Bot. t.* 23; et ic. numerosæ var. hortensium v. hybridarum in diariis variis hortulanorum. Huc pertinent etiam genera *SYMPHYDOLON*, *BALLOSPORUM*, *OPHIOLYZA*, *HYPRISSA*, et *RANISIA*, *Salisb. Gen. Pl. Fragm.* 142, 143, et *SPHÆROSPORA*, *Sweet, Hort. Brit.* 501.

2. *Hebea*. Perianthii segmenta rotundata rhomboidea v. obovata, interdum cuspidata, omnia v. præsertim inferiora unguiculata. Spathæ herbaceæ. Styli rami interdum brevissime 2-fidæ. Species omnes austro-africanæ. *Jacq. Ic. Rar. t.* 259, 260. *Andr. Bot. Rep. t.* 8, 122, 241. *Bot. Mag. t.* 586, 592, 688. *Bot. Reg. t.* 169. *Sweet, Brit. Fl. Gard. t.* 156. *Нявна, Pers. Syn. i.* 44.

3. *Schweiggera*. Perianthii segmenta obovata v. oblonga, longe unguiculata. Spathæ parvæ, brunneæ, rigidulæ. Flores quam in præcedentibus minores. *Thunb. Diss. t.* 1, *f.* 4. *Jacq. Obs. t.* 78. *Lodd. Bot. Cab. t.* 1022 (*Antholyza*). Klatt, *Ergänz. und Bericht.* 12, *Schweiggeram* cum speciebus nonnullis *Hebeæ* ad *Antholyzam* transfert.

57. *Antholyza*, *Linn. Gen. n.* 58. (*Cunonia*, *Mill. Dict.* Petamenes, *Salisb. in Trans. Hort. Soc. i.* 324, *absque char.*)—Perianthii tubus e basi tenui in faucem incurvam longe tubulosam amplius; limbi obliqui lobi oblongi v. angusti, sæpius inæquales, summo cæteris paullo v. multo longiore et erectiore. Stamina intra faucem affixa, filamentis filiformibus longis linearibus plus minus unilateralibus; antheræ lineari-sagittatæ, dorsifixæ, sæpius versatiles. Ovarium 3-loculare, loculis ∞-ovulatis; stylus filiformis, superne lateralis, ramis filiformibus abbreviatis, apice stigmatoso obtuso v. leviter dilatato. Capsula ovoidea, obtusa, membranacea, loculicide 3-valvis. Semina haud numerosa, plus minus angulata v. compressa, angulis obtusis v. in alas angustas expansis.—Bulbi seu cormi tunicæ membranaceæ v. fibrosæ, interdum fibris longis rigidis foliorum emarcidorum coronatæ. Caules sæpe elati. Folia ensiformia v. anguste linearia. Spathæ lanceolatæ v. ovato-lanceolatæ, quam in *Gladiolo* sæpius multo breviores coloratæque, in spicam laxam v. densam unilateralem v. disticham dispositæ. Flores in spatha solitarii, sessiles, sæpius speciosi, bractea intra spatham ea sæpius minore et 2-nervi.

Species ad 14, Africa australis et tropicæ incolæ. *Baker in Journ. Linn. Soc. xvi.* 178, et in *Trans. Linn. Soc. Bot. i.* 270. Klatt in *Linnæa*, xxxii. 729, xxxiv. 544, et xxxii. 726 (*Anisanthus*); *Ergänz. und Bericht.* 10.

Perianthii forma variat ut in *Bahiana* fere de specie in speciem, sed genus in toto servatum sat naturale. In speciebus typicis lobus posticus elongatus incurvus, 4 inferiores multo breviores subæquales, patentes. *Red. Lil. t.* 12, 110, 387. *Andr. Bot. Rep. t.* 166 (*Gladiolus* s), 32, 210. *Bot. Mag. t.* 561, 567, 1172. *Bot. Reg. t.* 1159, et 1838, t. 35 (*Tritonia*).

*ANISANTHUS*, *Sweet, Brit. Fl. Gard. ser. 2, t.* 81, est *A. caffra*, Ker, perianthii lobo postico elongato incurvo, 2 lateralibus multo brevioribus fere orbiculatis, 2 infimis minimis angustis.

In *A. saccato*, *Baker (Anisantho saccato, Klatt)*, perianthii tubus ad basin faucis antice saccatus fere calcaratus.

In *A. paniculata*, Klatt, perianthii tubus quam in cæteris tenuior, et inflorescentia ab omnibus diversa. Spathæ secus ramos paniculæ insigniter distichæ.

Genus *Anisanthus* a Klattio, *Ergänz. und Bericht.* 10, restituitur, sed characteres nobis valde incerti videntur.

*HOMOGLOSSUM*, *Salisb. in Trans. Hort. Soc. i.* 325, *absque char.*; *Baker in Journ. Linn. Soc. xvi.* 161, species continet 3 ab *Antholyza* separatas ob perianthii lobos minus inæquales; posticus tamen fere semper cæteris major et in *Homoglosso lucidior*, *Baker*, lobi vix magis æquales sunt quam in *Antholyza nervosa*, *Thunb.* Huc referuntur, *Jacq. Ic. Rar. t.* 233. *Andr. Bot. Rep. t.* 38. *Bot. Mag. t.* 450, 569. *Red. Lil. t.* 369 (*omnes sub Gladiolo*). Species nonnullæ a Klattio, *Ergänz. und Bericht.* 7, ad *Gladiolum* revocantur.

ORDO CLXXIV. **AMARYLLIDÆ.**

Endl. Gen. 174. Lindl. Veg. Kingd. 155. Herb. 'An Appendix,' Lond. 1821, 8vo; 'Amaryllidacæ,' Lond. 1837, 8vo. *HYPOXIDÆ*, Endl. Gen. 173; Lindl. Veg. Kingd. 154. *VELLOZIEÆ*, Endl. Gen. 172.

*Flores* hermaphroditi, regulares v. parum irregulares. *Perianthium* supra ovarium v. ovarii rostrum corollinum, sæpius marcescens demumque deciduum, rarius in fructu persistens, tubo 0 v. plus minus evoluta; segmenta v. lobi 6, distincte 2-seriata, nunc omnia subæqualia similiaque, nunc interiora exterioribus minora v. majora v. parum dissimilia, v. limbus obliquus, lobis cujusve seriei inter se parum inæqualibus. *Stamina* 6, rarissime 3 v.  $\infty$ , segmentis lobisve opposita, tubo v. fauci v. segmentorum basibus affixa; filamenta filiformia, libera v. basi membranaceo-dilatata, membranæ sæpe plus minus in cyathum connexis. *Anthæræ* oblongæ lineares v. rarius ovato-globosæ, nunc erectæ basifixæ v. breviter supra basin dorsifixæ v. inter lobos basales affixæ, nunc medio dorso affixæ versatilesque, loculis 2 parallelis contiguis rimis longitudinalibus introrsum rarius lateraliter usque ad basin v. rarius apice tantum dehiscentibus. *Ovarium* inferum, usque ad apicem 3-loculare v. rarissime in rostrum tenue solidum productum, placentis axilibus, v. rarissime 1-loculare, placentis 3 parietalibus. *Stylus* filiformis v. rarius columnaris, sæpius indivisus; stigma terminale sæpe parvum subcapitatum v. non incrassatum plus minus distincte 3-sulcum, nunc in ramos 3 breves erectos v. recurvo-patentes divisum, rarius in stylo columnari rami stigmatosi 3, crassi, erecti. *Ovula* in quoque loculo  $\infty$ , 2-seriatim superposita, rarius ad 1-2 reducta, anatropa. *Fructus* capsularis v. succulentus, globosus obovoideus v. oblongus, interdum 3-dymus v. 3-lobus, loculicida 3-valvis v. a latere varie dehiscens v. indehiscens. *Semina* numerosa pauca v. ad 1-2 reducta, in placentis sessilia v. funiculis brevissimis affixa, globosa mutua pressione angulata v. plano-compressa, testa sæpius nigra appressa membranacea v. laxa crassiuscula, rarius valde carnosio- v. spongioso-incrassata. *Albumen* carnosum, solidum, rarius corneum, semen implens. *Embryo* parvus, albumine inclusus, rarius dimidium albuminis attingens.

Herbæ perennes rarius suffrutescentes v. frutices. Rhizoma nunc repens v. tuberosum v. in caudicem lignosum brevem v. ramosum productum, nunc brevissimum a basi bulbi non distinctum fibras fasciculatas emittens. Caulis nunc brevissimus, foliorum vetustiorum vaginis incrassatis v. emarcidis obtectus, quibuscum bulbum format tunicatum, et intra bulbum sæpe brevissime ramosus, nunc elongatus sparse foliatus, v. elatior simplex v. ramosus. Folia nunc e bulbo pauca, linearia loriformia v. angusta venis parallelis contiguis, v. latiora petiolata venis subdistantibus venulis transversis connexis, nunc in caudice brevi v. ad apices ramorum numerosa dense conferta v. secus caulem sparsa rarius disticha. Pedunculus seu scapus florens aphyllus semper terminalis, etsi in bulbis nonnullis ob innovationes jam evolutas lateralis appareat. Flores in pedunculo seu scapo sæpius umbellati, umbella rarius ad florem unicum reducta, pedicellati v. rarius sessiles. Bractæ membranaceo-scariosæ v. coloratæ rarius herbacæ, exteriores sub umbella 1-2 v. interdum  $\infty$ , latæ, involucrium formantes, interiores sub pedicellis singulis angustæ, lineares, sæpe parvæ v. interdum omnino desunt. Inflorescentia intra umbellam in vivo observata nunc centripeta nunc centrifuga dicitur, in speciminibus siccis haud tuto determinatur. In *Hypoxideis* *Agaveisque* inflorescentia racemosa exinvolucrata.

Species bene notæ vix 650, per regiones temperatas calidioresque utriusque orbis late dispersæ, in locis siccis apricis petrosis arenosisque frequentiores quam in montanis, in regione Mediterranea, Africa australi et America australi numerosæ, in Asia paucæ.

Ordo quoad seminum structuram et embryonis situm *Irideis* et *Liliaceis* convenit, a prioribus habitu et præsertim staminibus seriei exterioris constanter evoluit facile distinguitur, cum *Liliaceis* tamen arctius connectitur et limitibus nimis artificialibus separatur, ob ovarium constanter inferum, rarissime summo vertice intra basin perianthii prominens. Auctores igitur nonnulli ordines duos in

unum jungunt. Species tamen intermediæ inter tot et tantas utriusque ordinis perpaucae adsunt, et magis utile videtur *Amaryllideas* pro ordine proprio servare.

## FORMÆ ABNORMES.

Stamina 3 tantum, perianthii segmentis interioribus opposita in *Pauridia*, plus quam 6 in nonnullis nec in omnibus speciebus *G. ethyllidis*, *Velloziæ* et *Barbaceniæ*.

Antherarum loculi extrorsum dehiscentes in *Campynemate*.

Ovarium abortu 1-loculare, 1-ovulatum in *Calostemmate*, 1-loculare, placentis 3 parietalibus i *Leontochiro*.

Styli 3 distincti in *Campynemate*, stylus stigmatibus erectis brevior in plerisque *Hypoxideis*.

## CONSPECTUS GENERUM.

**Tribus I. Hypoxideæ.** Rhizoma tuberosum v. minimum, fibris radicalibus fasciculatis, v. cormus fibroso-tunicatus. Folia radicalia v. rarissime in caule perpauca. Flores in scapo solitarii v. laxè v. dense spicati v. racemosi, rarius subumbellati. Perianthium sæpius usque ad ovarium v. ovarii rostrum partitum persistensque haud magnum. Embryo sæpius a hilo plus minus distans.

1. ? *CAMPYNEMA*. Perianthii tubus 0. Ovarium erostre. Styli 3, breves, distincti, crassiusculi. Capsula 3-quetra, loculicide 3-valvis. Caulis gracilis v. nanus, 1-florus v. laxè pauciflorus.—*Tasmania*.

2. ? *PAURIDIA*. Perianthii tubus brevis. Ovarium erostre. Stylus brevis, columnaris, stigmatibus 1-3 linearibus. Stamina 3. Caulis brevis, tenuis, laxè pauciflorus.—*Afr. austr.*

3. *HYPOXIS*. Perianthii tubus 0. Ovarium erostre. Stylus brevis, columnaris, stigmatibus 3 erectis crassis distinctis v. in massam oblongam confertis. Capsula (an semper?) sub apice circumscissè dehiscens. Scapi graciles, 1-flori, v. elatiores floribus racemosis v. subumbellatis.—*Asia trop.*, *Australia*, *Afr. trop. et austr.*, *Amer. austr. et bor.*

4. *CUSCULIGO*. Perianthii tubus 0, sed ovarium sæpe in rostrum longum tenue perianthii tubum simulans productum. Stylus brevis, columnaris, stigmatibus 3 erectis appressis. Fructus succulentus, indehiscens. Spicæ v. racemi inter folia sessiles v. longe pedunculatæ.—*Asia*, *Afr.*, *Australia et Amer. trop.*, *Afr. austr.*

**Tribus II. Amaryllææ.** Scapus e bulbo tunicato rarius imperfecto aphyllus. Flores ad apicem scapi solitarii v. sæpius plures umbellati, bracteis 1, 2 v. ∞ membranaceis involucrati, additis sæpe inter pedicellos bracteis nonnullis linearibus v. setaceis.

Subtribus 1. Coronatæ. Corona ad apicem tubi perianthii indivisa v. ∞-partita. Stamina intra tubum affixæ eoque v. saltem corona breviora; antheræ erectæ, basi v. juxta basin affixæ. Genera omnia gerontogea.

5. *CRYPTOSTEPHANUS*. Perianthium tabulosum, incurvum. Corona in squamulas 12 oblongas æquales divisa.—*Afr. trop. occid.*

6. *NARCISSUS*. Perianthium hypocraterimorphum. Corona indivisa, tubulosa, campanulata, cyathiformis v. rarius ad lineam parum productam reducta.—*Eur.*, *reg. Mediterr.*, *Asia temp.*

7. *TAFELINANTHUS*. Perianthium infundibuliforme. Corona e squamellis 6 minimis.—*Hispan.*, *Afr. bor. occid.*

Subtribus 2. Genuinæ. Corona 0 v. in generibus paucis squamellæ nonnullæ juxta basin filamentorum usque multo breviores. Filamenta faucis subæqualiter v. sæpius inæqualiter affixæ, a basi filiformia v. leviter incrassata nec (excepto *Chlidantho*) membranaceo-alata.

\* *Antheræ erectæ, basi v. inter lobos basales affixæ.*

† Genera gerontogea extratropica hemispherii borealis. Perianthii tubus 0. Antheræ filamentis longiores.

8. *GALANTHUS*. Perianthii segmenta exteriora patentia, interiora multo breviora, erecta. Antheræ breviter v. vix ad medium dehiscentes.—*Eur.*, *Asia occid.*

9. *LEUCOION*. Perianthii segmenta æqualia. Antheræ breviter v. vix ad medium dehiscentes.—*Eur. media, reg. Mediterr.*

10. *LAPIDEA*. Perianthii segmenta æqualia. Antheræ basi usque ad medium sagittato-2-lobæ.—*Hispan. austr.*

†† *Genera austro-Africana. Perianthii tubus 0 v. brevis. Antheræ parvæ, ovate, filamentis filiformibus.*

11. *HESSEA.* Perianthii tubus 0, segmenta subæqualia, patentia. Filamenta interdum basi incrassata.—*Afr. austr.*

12. *CARPOLYZA.* Perianthii tubus brevis, segmenta subæqualia, patentia. Filamenta a basi filiformia.—*Afr. austr.*

††† *Genera gerontogea extratropica. Perianthium infundibuliforme tubo brevi v. longo lobis erecto-patentibus, varius hypocraterimorphum. Antheræ oblongæ v. longiusculæ.*

13. *STERNBERGIA.* Scapus brevis, sæpius 1-florus. Perianthium infundibuliforme. Fructus carnosulus, vix dehiscens. Semina subglobosa, sæpe strophiliolata.—*Reg. Mediterr., Eur. med. et or.*

14. *UNGERNIA.* Umbella ∞-flora. Perianthium infundibuliforme. Capsula 3-loba, 3-valvis. Semina valde compressa, in alam expansa.—*Persia.*

15. *ANOIGANTHUS.* Umbella 1-∞-flora. Perianthium tubo brevi infundibuliforme. Antheræ profunde sagittato-2-lobæ. Capsula globoso-3-quetra, 3-valvis. Semina oblonga.—*Afr. austr.*

16. *GETHYLLIS.* Scapus 1-florus. Perianthium tubo longo hypocraterimorphum. Stamina (interdum plus quam 6) fauci æqualiter affixa, filamentis brevissimis.—*Afr. austr.*

17. *AFODOLIBION.* Scapus 1-florus. Perianthium tubo longo infundibuliforme. Stamina fauci inæqualiter affixa, filamentis brevissimis.—*Afr. austr.*

†††† *Genera Americana. Perianthii tubus longissimus, cylindræus. Antheræ oblongo-lineares.*

18. *COOPERIA.* Scapus 1-florus, bractea involucrante unica spathacea. Filamenta brevissima, non dilatata.—*Reg. Mex., Tex.*

19. *CHLIDANTHUS.* Umbella pauciflora, bracteis involucrantes 2. Filamenta inæqualia, basi membranaceo-dilatata.—*Amer. austr.*

\*\* *Antheræ oblongæ v. lineares, dorsifixæ, versatiles.*

† *Genera Americana. Squamule hæud raro in perianthii fauce ad basin filamentorum parvæ v. breves. Ovula in loculis ∞, rarius 2 a placenta distincta. Semina nigra.*

20. *HAYLOCKIA.* Scapus 1-florus, brevissimus, sub anthesi cum bractea unica spathacea hypogæus. Perianthii tubus longissimus.—*Amer. austr. extratrop.*

21. *ZEPHYRANTHES.* Scapus evolutus, 1-florus, bractea unica spathacea integra v. 2-fida. Perianthii tubus brevis v. longiusculus; squamellæ circa stamina parvæ v. 0.—*Amer. trop. et subtrop.*

22. *SPREKELLA.* Scapus evolutus, 1-florus, bractea unica, spathacea. Perianthii (speciosi) tubus 0, segmentum posticum ascendens, infimum concavum, genitalia recipiens. Squamellæ inter filamenta parvæ.—*Mexico.*

23. *HIPPEASTRUM.* Umbella ∞-flora, rarius ad florem unicum reducta, bracteis involucrentibus 2 distinctis. Perianthii tubus brevis v. elongatus. Corona v. squamellæ circa v. inter stamina parvæ. Ovula in loculis ∞.—*Amer. austr.*

24. *PLACHA.* Umbella ∞-flora. Perianthii tubus brevissimus. Corona circa stamina membranacea, filamentis 2-3-plo brevior, in segmenta 6 anguste petaloidea fere ad basin divisa. Cætera *Hippeastri*.—*Chile.*

25. *GRIFFINIA.* Umbella ∞-flora. Perianthii tubus brevis v. 0. Corona (an semper?) 0. Stamen posticum ascendens v. deficiens, cætera declinata. Ovula in localis 2, a basi erecta. Folia petiolata.—*Brasilia.*

†† *Genera gerontogea v. amphigea. Corona 0. Ovula in loculis 2-∞, in placenta carnosâ 2-seriata, arcte sessilia v. subimmersa. Semina pauca, crassa, varie difformia.*

26. *CRINUM.* Perianthii tubus longus, rectus v. incurvus, lobi lineares v. lanceolati. Flores speciosi, in umbella sessiles v. rarius breviter pedicellati.—*Utriusque orbis reg. trop., Amer. bor., Afr. austr.*

27. *AMARYLLIS.* Perianthii declinati tubus brevis, lobi oblongo-lanceolati. Flores magni, in umbella pedicellati.—*Afr. austr.*

28. AMMOCHARIS. Perianthii tubus rectus, mediocris; lobi longi, angusti, apice sæpe revoluti. Ovarium sæpe breviter rostratum. Flores in umbella longiuscule pedicellati.—*Afr. austr.*

††† *Genera gerontogea. Squamula circa filamenta 0. Ovula in loculis ∞, 2-seriatim superposita, a placenta distincta.*

29. LYCORIS. Umbella ∞-flora. Perianthium infundibuliforme, tubo plus minus elongato, lobi angusti.—*Japonia, China, Asia med.*

30. BRUNSVIGIA. Umbella ∞-flora. Perianthii tubus subnullus, lobi angusti v. lanceolati. Filamenta a basi filiformia. Folia sæpius lata.—*Afr. austr.*

31. NERINE. Omnia *Brunsvigiæ* nisi filamenta ima basi incrassata v. infra insertionem prominenter producta. Folia sæpius loriformia.—*Afr. austr.*

32. STRUMARIA. Umbella ∞-flora. Perianthium subcampanulatum, tubo subnullo. Filamenta erecta, ima basi v. medio dilatata et angulis styli plus minus adnata.—*Afr. austr.*

33. VALLOTA. Flores in umbella ∞, magni, erecti, pedicellis brevibus. Perianthium late infundibuliforme, tubo brevi, loborum sinubus callo parvo instructis. Semina basi in alam producta. Bractæ involucrantæ sæpe 3.—*Afr. austr.*

34. CYRTANTHUS. Flores in umbella ∞, rarius 1-2, plus minus recurvi. Perianthium infundibuliforme, tubo fauceque longis, lobis brevibus. Semina basi in alam producta. Bractæ involucrantæ sæpe 3.—*Afr. austr. et trop.*

†††† *Genera gerontogea. Squamula circa filamenta 0. Ovula in loculis pauca, in medio loculo fasciculata v. collateralia.*

35. CLIVIA. Flores in umbella ∞, pedicellati. Perianthium angustum v. subcampanulatum, tubo brevi v. subnullo. Ovula in loculis (an semper?) 6. Bractæ involucrantæ ∞.—*Afr. austr.*

36. HÆMANTHUS. Flores in umbella densa numerosi, pedicellati. Perianthii tubus brevis rarius tenuis, lobi angusti. Ovula in loculis 1-2. Bractæ involucrantæ ∞, sæpe coloratæ.—*Afr. austr. et trop.*

37. BUPHANE. Flores in umbella ∞, longe pedicellati. Perianthii tubus brevis, lobi angusti. Ovula in loculis 2. Bractæ involucrantæ 2.—*Afr. austr. et trop.*

Subtribus 3. Cyathiferae. Corona perianthii 0. Stamina fauci equaliter affixa, filamentis basi membranaceo-dilatatis v. callo dentibusve lateralibus auctis, membranis in cyathum (perperam corona dictum) connatis v. rarius distinctis v. ad anulum vix prominentem reductis. Flores in umbella ∞, pedicellati.

Excepta. Stamina basi callo nec alis aucta in *Callipsyche*, alæ angustissimæ v. valde reductæ v. obscuræ in *Eustephia*, in speciebus nonnullis *Urceolineæ*.

\* *Genera Americana. Ovula in loculis ∞, rarius 2-3 superposita. Folia sæpe lata, petiolata.*

38. HYLINE. Perianthii tubus brevissimus, lobi longi angustissime lineares. Filamenta longissima, cyatho basali brevissimo. Ovula numerosa.—*Brasilia.*

39. EUCROSIA. Perianthii tubus brevis, obliquus; lobi oblongi, conniventes. Filamenta declinata, longissime exserta, basi plus minus connata, introrsum callosa. Ovula numerosa.—*Andes.*

40. CALLIPSYCHE. Omnia *Eucrosiæ*, nisi filamenta basi introrsum callosa tantum, nec connata.—*Andes.*

41. EUCHARIS. Perianthii tubus cylindræus, rectus v. recurvus, lobi latiusculi patentes. Cyathus stamineus petaloideus, integer v. inter filamenta lobatus v. partitus. Ovula in loculis 2-∞.—*Andes.*

42. CALLIPHURIA. Perianthium infundibuliforme, tubo brevi fere a basi in faucem ampliato. Filamentorum membranæ basales distinctæ v. vix hinc inde connatæ, ad utramque latum filamentum in dentem erectum productæ. Ovula in loculis 2-3, superposita.—*Andes.*

43. EUSTEPHIA. Perianthium angustum, tubo brevi, lobis longis. Filamenta ultra medium utrinque angustissime marginata, marginibus apice in setas divaricatas productis. Ovula in loculis ∞.—*Peruvia.*

44. URCEOLINA. Perianthium rectum v. recurvum, tubo supra ovarium contracto, fauce

ampliata tubulosa v. urceolata; lobi breves, erecti v. apice patentes. Filamentorum membranæ basales obscure v. distinctæ, nec in cyathum connatæ. Ovula in loculis  $\infty$ .—*Andes*.

45. *PHÆDRANASSA*. Perianthium angustum, lobis longis erectis v. apice breviter patentibus. Filamentorum membranæ basales sæpius annulo connexæ. Ovula in loculis  $\infty$ .—*Andes*.

46. *STENOMESSON*. Perianthium rectum v. recurvum, longe tubulosum; lobi breves, erecti v. patentes. Filamentorum membranæ basales in cyathum margine lobatum connatæ. Ovula in loculis  $\infty$ .—*Amer. trop.*

**\*\* Genus gerontogœum. Ovula in loculis  $\infty$ .**

47. *PANCRATIUM*. Perianthium infundibuliforme, tubo sæpius elongato, fauce ampla; lobi angusti, erecto-patentes. Filamentorum membranæ basales in cyathum petaloideum margine sæpius varie lobatum connexæ.—*Reg. Mediterr., ins. Canar., Ind. or., alibi inquilina.*

**\*\*\* Genera Americana. Ovula in quoque loculo 2, a basi ascendentia.**

48. *HYMENOCALLIS*. Perianthii tubus longus, cylindraceus; lobi lineares. Filamentorum membranæ basales in cyathum petaloideum rectum latum v. rotato-expansum connatæ.—*Amer. trop. et bor.*

49. *ELISENA*. Perianthii tubus brevissimus; lobi longi, lineares. Filamentorum membranæ basales in cyathum petaloideum declinatum v. recurvum late tubulosum v. campanulatum connexæ.—*Andes*.

Cfr. etiam 25, *GRIFFINIAM*.

**\*\*\*\* Genera gerontogœa. Ovula in quoque loculo 2-3, in medio loculo collateralia v. conferta.**

50. *VAGARIA*. Perianthium infundibuliforme, tubo tenui; lobi angusti. Filamenta basi membranaceo-dilatata et utrinque dente aucta, membranis vix in cyathum connexis. Folia loriformia.—*Syria*.

51. *EURYCLES*.—Perianthium infundibuliforme, tubo tenui; lobi latiusculi. Filamentorum membranæ basales in cyathum brevem latum margine ad latera filamentorum utrinque dente auctum connexæ. Folia lata, petiolata.—*Australia, Archip. Malay.*

52. *CALOSTEMMA*. Perianthium infundibuliforme, tubo tenui; lobi latiusculi. Filamentorum membranæ basales alte in tubum margine varie dentatum connexæ. *Ovarium abortu 1-loculare, 1-2-ovulatum.* Folia nunc loriformia nunc lata petiolata.—*Australia.*

**Tribus III. Alstroemerieæ.** Caulis e rhizomate fibroso v. tuberoso, v. rarius e basi bulbosa, plus minus foliatus. Flores in umbella terminali v. inflorescentia parum irregulari plures. Bracteæ variae. Perianthium tubo 0, subinfundibuliforme v. fere cylindraceum. Ovarii loculi  $\infty$ -ovulati.

53. ? *IXIOLIRION*. Bulbus tunicatus. Caulis erectus tenuis. Umbella irregularis. Semina angulato-compressa.—*Asia media et occid.*

54. *ALSTROEMERIA*. Bulbus 0. Caules erecti v. ascendentes. Umbella varia. Perianthii segmenta ejusve seriei inter se parum dissimilia. Semina globosa.—*Amer. austr. trop. et extratrop.*

55. *BOMAREA*. Bulbus 0. Fibræ radicales sæpius tuberiferae. Caules sæpius scandentes. Umbella varia. Perianthium regulare, segmentis ejusve seriei inter se æqualibus. Semina globosa.—*Amer. austr., Mexico.*

56. *LEONTOCHIR*. Habitus *Alstroemerieæ*. Umbella densa. Perianthium regulare, segmentis omnibus in unguem contractis. *Ovarium 1-loculare, placentis parietalibus.* Semina subglobosa.—*Chile.*

**Tribus IV. Agaveæ.** Folia ad apicem rhizomatis v. caudicis plus minus evoluti dense conferta, sæpe longa, in scapo v. pedunculo rara parvaque v. sæpius 0. Scapus seu pedunculus terminalis, simplex v. apice ramosus, floribus secus rhachin ramosve racemosis v. anguste thyrsoidis. Perianthium sæpe persistens.

57. *POLIANTHES*. Rhizoma tuberosum. Racemus longus, simplex, floribus geminis. Perianthii tubus longiusculus sæpius incurvus, superne ampliatus; lobi erecto-patentes. *Ovarium* vertice intra perianthium conicum.—*Mexico.*

58. **BRAYOA.** Caulis basi bulbosus, tunicatus. Racemus longus, simplex, floribus geminis. Perianthii tubus longus, basi incurvus, apice non ampliatus; lobi breves. Ovarium vertice intra perianthium convexum.—*Mexico.*

59. **BESCHONERIA.** Caudex brevissimus, crassus. Scapus elatus, simplex v. superne laxè paniculatus, floribus secus rhachin v. ramos breves pendulis. Perianthium angustum, tubo subnullo. Stamina perianthium non excedentia.—*Mexico.*

60. **AGAVE.** Caudex brevis crassus, v. evolutus erectus. Scapus elatus, interdum giganteus. Flores secus rhachin simplicem sparsi, v. in fasciculos v. cymas conferti thyrsium speciosum formantes. Perianthii tubus sæpius brevis. Stamina perianthio longiora. Stylus filiformis.—*America austr. et bor.*

61. **FURCRAEA.** Caudex erectus. Panicula maxima, patenter ramosa. Flores secus ramos sparsi v. 2-3-nati fasciculati. Perianthii tubus subnullus. Stamina perianthio breviora, filamentis basi strumoso-incrassatis. Stylus infra medium strumoso-incrassatus.—*Amer. calid. in orbe vetere inquilina.*

62. **DORYANTHES.** Caulis elatus. Flores bracteis coloratis subinvoluti, fasciculis spicisve in capitulum magnum confertis v. in thyrsium longum dispositis. Perianthii tubus brevis. Stamina perianthio breviora, filamentis vix basi incrassatis.—*Australia.*

**Tribus V. Velloziceæ.** Caulis lignosus, sæpe ramosus, foliis ad apices ramorum confertis. Pedunculi 1-flori, intra foliorum fasciculum solitarii v. pauci. Perianthium sæpius persistens. Stamina 6-18.

63. **VELLOZIA.** Perianthii tubus supra ovarium vix ullus.—*Brasilia, Afr. trop. et austr., Madagascaria.*

64. **BARBACENIA.** Perianthii tubus cum ovario continuus, brevis v. elongatus.—*Brasilia, Guiana, Venezuela.*

**CHERADODIA, Herb. Amaryll. 87,** pro genere proposita fuit ad characterem mancum *Strumarie chilensis*, Molina, Saggio, ed. 2, 130. Stirps ab incolis 'Thekel' dicta, a nullo alio auctore recognita et verisimiliter descriptio plantas diversas refert. 'Tekel' incolarum est ex C. Gayio *Libertia species*. Genus *Herbertianum* omnino delendum.

#### TRIBUS I. HYPOXIDEÆ.

1. ? **Campynema, Labill. Pl. Nov. Holl. i. 93, t. 121.** (Campylonema, *Schult. Syst. vii. 96, 1507.*)—Perianthium tubo 0, 6-partitum; segmenta discreta, subæqualia, patentia. Stamina 6, ad basin segmentorum affixa iisque breviora, filamentis brevibus demum sæpe recurvis; antheræ oblongæ, erectæ, basi breviter 2-fidæ, loculis extrorsum dehiscenlibus. Ovarium erostre, 3-loculare; styli 3, a basi distincti, crassiusculi, obtusi, vertice stigmatosi, primum erecti, demum recurvi; ovula in loculis  $\infty$ , superposita, anatropa. Capsula turbinata v. elongata, perianthio persistente coronata, plus minus 3-quetra, apice breviter v. inter angulos longitudinaliter dehiscens. Semina subglobosa, testa (in *C. lineari*) spongiosa, estrophiliolata; embryo albumine carnosio inclusus.—Fibræ radicales fasciculatæ. Folia radicalia linearia. Caulis nunc tenuis, foliis perpaucis parvis, 1-florus v. flores paucos laxè racemosos ferens, nunc inter folia breviter nanus, 1-florus. Flores erecti, pedicellati. Bracteæ minimæ.

Species 2, Tasmaniae incolæ. *Benth. Fl. Austral. vi. 414.*

Genus antheris extrorsum dehiscenlibus et stylis a basi distinctis in ordine anomalum, melius tamen a F. Muellero ad *Hypoxideas* quam a Benthamico ad *Irideas* approximatum. Semina *C. linearis*, Labill., ab illis *Hypoxidis* valde diversa; in *C. pygmæa*, F. Muell., matura non vidimus.

2. ? **Pauidia, Harv. Gen. Pl. Fl. Cap. ed. i. 341.**—Perianthium subinfundibuliforme, tubo brevi; lobi 6, subæquales, patentes. Stamina 3, ad basin loborum interiorum affixa, filamentis brevibus; antheræ lineares, erectæ, basi breviter 2-lobæ. Ovarium 3-loculare; stylus brevis, columnaris; stigmata nunc 3 linearia erecta, conniventia, undique papillosa, æqualia v. inæqualia, nunc unum solum erectum perfectum, 2 minima sterilia patentia, v. interdum stylo abortivo flos  $\sigma$  evadit; ovula in quoque loculo  $\infty$ . Capsula oblonga, pericarpio membranaceo, sæpe incurva v. obliqua et abortu 1-locularis, rarius recta et

perfecte 3-locularis. Semina  $\infty$ , parva, globosa.—Herba glabra, nana, gracilis, *Hypoxidi minute*, Thunb., similis. Cormi tunice fibroso-reticulatæ. Folia anguste linearia. Pedunculi in caule brevi pauci, 1-flori. Flores parvi.

Species 1, Africæ australis incola. *Baker in Journ. Linn. Soc.* xvii. 125. *Thunb. Diss. Lixia*, n. 2, t. 1 (*iconem non vidimus*).

Stigmata ex Harveio 3 erecta perfecta, 3 minima sterilia, quod tamen nobis non occurrit, in floribus pluribus examinatis semper in toto 3 invenimus perfecta v. sterilia.

3. *Hypoxis*, Linn. *Gen.* n. 417.—Perianthium tubo 0, 6-partitum; segmenta subæqualia, patentia. Stamina 6, ad basin segmentorum affixa iisque breviora, filamentis brevibus; antheræ lineares v. ovatæ, erectæ, juxta basin integram v. distincte 2-lobam dorsifixæ. Ovarium erostre, 3-loculare; stylus brevis, columnaris, stigmatibus 3 erectis oblongis crassius inter se distinctis v. in massam oblongam confertis; ovula in loculis  $\infty$ , 2-seriata. Capsula globosa v. oblonga, pericarpio membranaceo v. herbaceo, perianthio persistente diu coronata, demum (an semper?) sub apice circumscissæ dehiscens. Semina parva, subglobosa, testa crustacea sæpius nigra, nitida v. verruculosa, hilo laterali plus minus rostello (strophio) appendiculato; embryo albumine laxo carnosio interdum fere farinaceo inclusus.—Rhizoma parvum tuberosum, v. cormus tunicis membranaceis v. fibrosis vestitus. Folia radicalia, nunc linearia v. fere subulata lævia, nunc latiuscula brevia v. elongata sæpeque prominenter venosa. Scapi inter folia nunc graciles 1-flori, nunc elatiores, floribus pluribus subumbellatis v. racemosus. Bractæ dum adsint, parvæ, lineares.

Species enumeratæ 51, Asiæ tropicæ, Australiæ, ins. Mascarensum, Africæ tropicæ et australis, et Americæ tropicæ et borealis incolæ. *Baker in Journ. Linn. Soc.* xvii. 98; in *Trans. Linn. Soc. Bot.* i. 265.

Genus a Bakero in sectiones 2 sequentes dividitur:—

1. *Ianthe*. Planta glaberrima. Pedunculi seu scapi 1-flori v. in sola *H. aquatica*, Linn. f., apice umbelliferi. Stigmata sæpissime discreta. *Jacq. Fragm.* t. 7, f. 4; *IC. Rar.* t. 368, 369. *Red. Lil.* t. 169. *Hook. f. Fl. Tasm.* t. 130. *Andr. Bot. Rep.* t. 101, 171, 195, 236. *Bot. Mag.* t. 662, 709, 917, 1010, 1223. *Lodd. Bot. Cab.* t. 802, 1074. *Fl. des Serres*, t. 1027. *IANTHE*, *Salisb. Gen. Pl. Fragm.* 44. *SPILOXENE*, *Salisb. l. c.*, est *H. stellata*, Linn., cui pericarpium lateraliter rumpens dicitur. Capsulæ dehiscencia rarius e speciminibus siccis probanda.

2. *Euhypoxis*. Planta plus minus pilosa villosa v. tomentosa. Pedunculi seu scapi sæpius 2- $\infty$ -flori. Stigmata sæpissime, nec semper, concreta. *Royle, Ill. Pl. Himal.* t. 91. *Labill. Pl. Nov. Holl.* t. 108. *Seub. in Mart. Fl. Bras.* iii. i. t. 7. *Sm. Spicil.* t. 16. *Jacq. IC. Rar.* t. 370 ad 372. *Red. Lil.* t. 170, 350. *Bot. Mag.* t. 710, 711, 3696, 4817, 5690, 6035. *Bot. Reg.* t. 159, 663. *Lodd. Bot. Cab.* t. 710, 970. *Lemaire, Jard. Fleur.* t. 303.

*NIOBEA*, *Willd. Rel.; Schult. Syst.* vii. 762, species 2 *Hypoxidis* includit, caractere nullo distincto a cæteris separatas.

4. *Cureuligo*, *Gærtn. Fruct.* i. 63, t. 16. (*Fabricia*, *Thunb. in Fabric. It. Norv.* 29, ex *Endl. Gen.* 173. *Empodium*, *Salisb. Gen. Pl. Fragm.* 43. *Forbesia*, *Eckl. Verz. Pfl. Samml.* 4.)—Perianthium, supra ovarium v. ovarii rostrum tubiforme (falso tubum perianthii dictum), 6-partitum; segmenta subæqualia, patentia. Stamina 6, ad basin segmentorum affixa, filamentis brevibus; antheræ lineares, basi v. inter lobos basales affixæ, erectæ, perianthio breviores. Ovarium 3-loculare, sæpe in rostrum interdum longum productum; stylus brevis, columnaris, stigmatibus 3 oblongis erectis appressis; ovula in quoque loculo 2- $\infty$ , funiculo interdum longiusculo suspensa, anatropa. Fructus plus minus succulentus, indehiscens. Semina subglobosa, testa nigra crustacea, ad hilum sæpius appendice rostelliiformi (strophio) instructa; embryo parvus, albumine carnosio molli v. subfriabili inclusus.—Rhizoma breve, nunc crassum plus minus tuberosum, nunc cormum formans tunica reticulato-fibrosa obtectum. Folia radicalia sæpius longo lanceolata, plicato-venosa, nunc parvula linearia, nunc maxima pluripedalia. Flores spicati v. racemosi; spicæ nunc inter folia sessiles paucifloræ, nunc longe pedunculatæ, densæ, recurvæ. Bractæ lineares, laxæ v. primum imbricatæ. Inflorescentia tota haud raro villosa.

Species ad 12, Asiæ tropicæ, Australiæ, Africæ tropicæ et australis, et Americæ tropicæ incolæ. *Baker in Journ. Linn. Soc.* xvii. 119 (*Mollineria*) et 122; in *Trans. Linn. Soc. Bot.* i. 266.

Genus *Hypoxidis* valde affine differt fructu succulento indelisciente et quoad species plerasque ovario apice in rostrum interdum longum tenuisque tubum perianthii simulans producto, hoc rostrum tamen semper intus solidum est, summo vertice stylus in centro perianthii ferens. In sectiones sequentes dividitur:—

1. *Molincria*. Ovarium more *Hypoxidis* erostre, v. (e.g. in *C. gracilis*, Wall. varietate) in rostrum ovario ipso brevius productum. *Wight, Ic. t.* 2044 ad 2046 (*Hypoxis*). *Bot. Reg. t.* 770. *Regel, Gartenfl. t.* 771. *MOLLINERIA*, Colla, *Hort. Ripul. App.* ii. in *Mem. Acad. Turin.* xxxi. 333, t. 18.

2. *Empodium*. Ovarii rostrum nunc ovario ipso paullo longius (e.g. in *C. latifolia*) nunc longissimum fere filiforme. *Kotschy, Pl. Tinn. t.* 22. *Rozb. Corom. Pl. t.* 13. *Wight, Ic. t.* 2042, 2043. *Labill. Ser. austr. Caled. t.* 24. *Jacq. Hort. Schænbr. t.* 80 (*Gethyllis*); *Ic. Rar. t.* 367 (*Hypoxis*). *Red. Lil. t.* 260 (*Hypoxis*). *Bot. Mag. t.* 1076, 2034. *Bot. Reg. t.* 345, 754. *Lodd. Bot. Cab. t.* 443.

*C. seychellensis*, Baker, ab omnibus cæteris differt foliis maximis, more *Carludovicæ* 2-fidis, petiolo spinoso-serrato. Ovarium pedicellatum, angustum, loculis 2–3-ovulatis in rostrum pluripollicare productum.

## TRIBUS II. AMARYLLÆÆ.

5. *Cryptostephanus*, Baker in *Trim. Journ. Bot.* 1878, 193, t. 197.—Perianthium tubulosum, incurvum, superne parum ampliatum; lobi breves, subæquales, subpatentes; corona ad apicem tubi e squamis 12 anguste oblongis erectis æqualibus. Stamina in medio tubo æqualiter affixa, filamentis brevissimis; antheræ tubo inclusæ, erectæ, oblongæ, in cylindrum conniventes, prope basin dorsifixæ. Ovarium 3-loculare; stylus columnaris, antheras vix attingens, vertice stigmatoso parum dilatato; ovula in loculis ∞, 1–2-seriatim superposita. Bacca, a nobis non visa, ex Bakero globosa, coccinea, seminibus in loculis 1–2 turgidis.—Caulis in rhizomate brevissimo basi subbulbosus, vaginarum basibus tunicatus. Folia loriformia, coætanea. Flores in umbella densa numerosi, parvuli, breviter pedicellati, purpurascens. Bractæ breves, angustæ, nonnullæ exteriores involucentes paullo latiores longioresque.

Species 1, in Africa Angolensi a Welwitschio lecta. Coronæ squamellæ nobis minime staminodia videntur, etsi nonnullæ apicem versus papillis substipitatis instructæ essent, et forte interdum pollinem colligunt nec emittunt.

6. *Narcissus*, Linn. *Gen. n.* 403. (*Narcisseæ*, *Herb. Amaryll.* 292 ad 329, *Kunth, Enum. Pl. v.* 704 ad 758).—Perianthium hypocrateriforme, tubo cylindræo in faucem vix ampliato v. rarius anguste campanulato; lobi subæquales, ovati v. rarius angusti, patentes v. reflexi; corona ad apicem tubi erecta, nunc magna tubulosa v. campanulata, nunc brevior late cyathiformis v. interdum ad lineam parum prominentem reducta, semper indivisa, margine integerrima denticulata v. rarius fimbriata. Stamina 6, intra tubum affixa eoque sæpissime inclusa, nunc omnia juxta faucem inclusa v. 3 v. omnia demissiora, filamentis brevissimis, nunc omnia intra medium tubi affixa, filamentis longis, tubo nec corona longiora; antheræ oblongæ v. lineares, basi sæpius plus minus 2-lobæ, medio dorso v. juxta basin affixæ. Ovarium 3-loculare; stylus filiformis, stigmate parvulo 3-lobato; ovula in loculis ∞, interdum numerosa, placentis axilibus 2-seriatim affixa. Capsula 3-locularis, pericarpio membranaceo, breviter v. fere ad basin loculicide 3-valvis. Semina subglobosa v. angulata, testa nigra.—Bulbus tunicatus. Folia linearia v. loriformia coætanea v. serotina. Flores sæpius in umbella pauci, interdum solitarii, nunc plures ob pedicellos inæquales subracemosi apparent. Bractea involucrens tam in polyanthis quam in monanthis unica, spathacea, basi plus minus tubulosa, membranacea, interiores haud raro adsunt anguste lineares v. setacæ.

Species ad 20, Europæ mediæ, et regionis Mediterraneæ imprimis occidentalis incolæ, una specie per Asiam mediam usque ad Chinam et Japoniam extensa. *Burbridge, Narcissus, Lond.* 1875, cum tab. 48. *Reichb. Ic. Fl. Germ. t.* 364 ad 370. *Nees, Gen. Fl. Germ. Monocot. iii. n.* 4. *Jord. et Fourn. Ic. Pl. Eur. t.* 176 ad 195 (*Hermione*). *Lois. Fl. Gall. t.* 7. *Graells, Ramill. Pl. Esp. t.* 5 ad 8.

*Schousb. Jagttag. Vestr. Marok, t. 2. Desf. Fl. Atl. t. 82. Dur. Expl. Alg. t. 47. Ten. Fl. Nap. t. 26, 27. Guss. Pl. Inarim, t. 15. Moggr. Fl. Ment. t. 22, 23, 41, 70, 71, 90. Sibth. Fl. Gr. t. 308. Icones etiam numerosæ ad specimina culta delineatæ in Red. Lil., Bot. Mag. diariisque variis hortulanorum.*

Salisbury in Trans. Hort. Soc. i. 343 et seq., species 36 distribuit in genera 7: *AJAX*, *CORBULARIA*, *QUELTIA*, *GANYMEDES*, *PHILOGYNE*, *HERMIONE*, et *NARCISSUS*. Haworth in Monogr. Narciss. 1831, cum Sweet, Brit. Fl. Gard. ser. 2, i. edita, species hortenses 146 admisit, et generibus Salisburyanis addidit 9: *OILBUS*, *ASSARACUS*, *ILLUS*, *DIOMEDES*, *TROS*, *SCHIZANTHERES*, *JONQUILLA*, *CHLORASTER*, et *HELENA*. Herbert, Amaryll. 292, genera hæc ad 6 reduxit, inter quæ *Corbularia* (*N. Bulbocodium*, Linn.) et *Ajax* (*N. pseudonarcissus*, Linn.) distinctiora sunt corona maxima et staminibus longis, in *Corbularia* incurvis, in *Ajace* rectis. Parlatores, Fl. Ital. iii. 106 et seq. species 37 Italianas fusius descripsit et genera *Ajax* et *Queltia* (*N. odoris*, Linn., et *N. incomparabilis*, Curt.) admisit, speciebus cæteris Italianis ad *Narcissum* restitutis. J. Gay in Ann. Sc. Nat. ser. 4, x. 76 præter *Ajacem*, admisit etiam *Corbulariam* et *Ganymedem* (*N. triandrum*, Linn.), *Queltiam* tamen cum cæteris speciebus ad *Narcissum* reduxit, et (p. 95) genus novum proposuit *AURELIAM*, ad *N. Broussonetii*, speciem a *N. serotina*, Linn., parum distinctam corona ad lineam vix prominentem reducta. Salisbury tandem in opere posthumo Genera Plantarum Fragm. 99 ad 102, nomina generica nova addidit 9: *CYDENIS*, *PANZA*, *PATROCLUS*, *CHIONE*, *PLATEANA*, *VENIERA*, *TITTEUS*, *PRASITHELES*, et *ARGENOPH*.

Baker in revisione optima in Gard. Chron. 1869, in opere citato Burbidgei repetita cum emendationibus, genus naturalissimum *Narcissum* in integrum restoravit, et species auctorum ad 21 reduxit, in series 3 imprimis ad coronæ rationem cum limbo perianthii distributas. Species plures tamen valde confusæ remanent, ob formas numerosas hybridas v. aliter e cultura oriundas.

7. *Tapeinanthus*, Herb. Amaryll. 190. (*Tapeinægle*, Herb. in Bot. Reg. 1847, t. 22, f. 4. Carregnoa, Boiss. Voy. Hisp. 605. Gymnoterpe, Salisb. Gen. Pl. Fragm. 108.)—Perianthium infundibuliforme, tubo brevissimo; segmenta anguste oblonga, erecto-patentia, subæqualia; corona ad os tubi e squamellis 6 minimis integris v. 2-fidis interdum fere obsoletis. Stamina 6, tubo intra coronam affixa, 3 cæteris paullo demissiora, filamentis brevibus; antheræ oblongæ, curvulæ, medio dorso affixæ. Ovarium 3-loculare; stylus filiformis, stigmatē parvo; ovula in loculis ∞, 2-seriata. Capsula oblonga (loculicide 3-valvis?). Semina pauca, parva, ellipsoidea, nigra, lucida.—Bulbus parvus, tunicatus. Folium perfectum ex J. Gayo unicum, serotinum, filiforme, basi vagina parva stipatum. Scapus tenuis (3-4-pollicaris). Flores 1-2, intra bracteam involucentem basi tubulosam pedicellati, flavi. Bractea interior angustissima.

Species 1, Hispaniæ australis et agri Tingitani incola, J. Gay in Ann. Sc. Nat. ser. 4, x. 98 (*Caregnoa*). Cav. Ic. t. 207 (*Panocratum*). Specimina nostra, prope Cadix mense Octobri lecta, foliis carent.

Nomen *Tapeinanthus* a Boissiero in DC. Prod. xii. 436 generi Labiatarum impositum, et a nobis incaute supra ii. 1207 admissum, mutandum erit, nam genus Herbertianum jure prioritatis gaudet.

8. *Galanthus*, Linn. Gen. n. 401.—Perianthii tubus 0; segmenta ima basi in annulum epigynum connata, cæterum libera, 3 exteriora ovali-oblonga, patentia, 3 interiora multo breviora, obovata, emarginata v. 2-loba, erecta. Stamina 6, foveolis annuli perianthii affixa, filamentis brevibus; antheræ elongatæ, erectæ, apiculatæ, loculis superne v. usque ad medium 2-valvatim dehiscentibus, valva interiore minore. Ovarium globosum v. obovoideum, 3-loculare; stylus in centro annuli perianthii ab eo distinctus, subulatus, stigmatē parvo; ovula in quoque loculo ∞, ascendentia. Capsula dum scapo adhæret carnea, apice perianthio delapso truncata v. annulo diu persistente coronata, maturescens sæpius scapo recurvo telluri incumbens, demum a planta liberata apice plus minus loculicide 3-valvis, v. seminibus perfectis integra remanet putrescitque. Semina ellipsoidea, testa sæpius pallida tenui, strophio prominente instructa.—Bulbus tunicatus. Folia pauca, linearia v. lanceolata, margine interdum plicata. Scapus solidus. Flos intra bracteam spathaceam erectam angustam unicus, breviter pedicellatus, candidus, pendulus.

—Species 3, Europæ et Asiæ occidentalis incolæ. Kunth, Enum. Pl. v. 469. Baker in Trim. Journ. Bot. 1878, 166. Reichb. Ic. Fl. Germ. t. 363. Nees, Gen. Fl. Germ. Monocot. iii. n. 7. Jacq. Fl. Austr. t. 313. Red. Lil. t. 200. Bot. Mag. t. 2162, 6166. Bot. Reg. t. 545. Icones ∞ varietatum cultarum in diariis plurimis hortulanorum inveniuntur. Capsulæ maturescentiam descripsimus ex Jacq. Fl. Austr. iv. 7 et ex observationibus fusioribus in J. Gay mss.

9. *Leucoium*, Linn. Gen. n. 402. (Nivaria, Mœnch, Meth. 279.)—Perianthium late campanulatum, tubo 0; segmenta subæqualia, ovata v. oblonga, ima basi in annulum epigynum connata, cæterum libera. Stamina annulo basali perianthii affixa, filamentis brevibus; antheræ oblongo-lineares, erectæ, basifixæ, loculis superne rima brevi rarius infra medium antheræ continuata dehiscentibus. Ovarium ovoideo-oblongum v. subglobosum, 3 locale; stylus erectus, superne v. jam infra medium incrassatus 3-queterque, v. totus tenuis, stigmatē parvo; ovula in loculis ∞. Capsula obovoidea pyriformis v. subglobosa, loculicide 3-valvis, valvis tamen interdum apice solo v. tardius irregulariterque solvendis. Semina globosa, testa nunc tenui appressa, nunc laxa crustacea, strophiolata v. nuda.—Bulbus tunicatus. Folia pauca, nunc angustissime linearia, nunc plana loriformia. Scapus 'fistulosus.' Flores in umbella pauci v. ad unum reducti, sæpius penduli. Bractea involucrans unica, spathacea, basi subtubulosa.

Species ad 9, Europæ mediæ et regionis Mediterraneæ fere totius incolæ. Kunth, Enum. Pl. v. 471 ad 477 (*Leucoium*, *Erinosma* et *Acis*). Baker in Trim. Journ. Bot. 1878, 166.

Genus a nonnullis in tria dividitur, quæ tamen cum Bakero potius pro sectionibus habemus:—

1. *Erinosma*. Scapus 1-florus v. rarissime 2-florus. Stylus superne 3-gono-dilatatus. Capsula pyriformis, apice breviter dehiscens. Semina ovoidea, sæpe strophiolata, pallida v. fusca, testa tenui solubili. (*L. vernum* affinesque). Reichb. Ic. Fl. Germ. t. 362. Jacq. Fl. Austr. t. 312. Bot. Mag. t. 46, 1993. ERINOSMA, Herb. Amaryll. 330.

2. *Euleucoium*. Flores in umbella 2–6, inæqualiter pedicellati. Stylus et capsula *Erinosmatis*. Semina majora, nigra, testa laxa crustacea. (*L. æstivum* affinesque). Reichb. Ic. Fl. Germ. t. 362. Nees, Gen. Fl. Germ. Monocot. iii. n. 6. Jacq. Fl. Austr. t. 203. Red. Lil. t. 135. Salisb. Parad. Lond. t. 74. Bot. Mag. t. 1210. Lodd. Bot. Cab. t. 1478.

3. *Acis*. Plantæ graciles, floribus minoribus in umbella pluribus rarius solitariis. Stylus tenuis. Capsula subglobosa, usque ad basin 3-valvis. (*L. autumnalis* affinesque). Lois. Fl. Gall. t. 8. Moggr. Fl. Ment. t. 21. Reichb. Iconogr. Eur. t. 703, 704; Ic. Fl. Germ. t. 362. Red. Lil. t. 150, 217. Salisb. Parad. Lond. t. 21. Bot. Mag. t. 960. Bot. Reg. t. 544. Sweet, Brit. Fl. Gard. t. 297. ACIS, Salisb. Parad. Lond. sub t. 74. Jord. et Fourr. Ic. Pl. Eur. t. 64. RUMINIA, Parlat. Due Nuov. Gen. Monocot. 3, ex ejusd. Fl. Ital. iii. 84. Jord. et Fourr. Ic. Pl. Eur. t. 65.

10. *Lapiedra*, Lag. Nov. Gen. et Sp. in Elench. Hort. Matr. 14.—Perianthii tubus 0; segmenta subæqualia, patentia, ima basi in annulum epigynum brevissimum connata. Stamina annulo basali perianthii affixa, lobis breviora, filamentis filiformibus; antheræ longæ, erectæ, ad medium sagittato-bilobæ, inter lobos affixæ, loculis 2-valvatim dehiscentibus. Ovarium 3-locale; stylus filiformis, stigmatē parvo; ovula in loculis ∞. Capsula depresso-globosa, sub-3-dyma, apice loculicide 3-valvis. Semina in quoque loculo 1–2, majuscula, ovoidea, testa crassiuscula.—Bulbus tunicatus. Folia serotina, loriformia. Flores in umbella plures, pedicellati, albi, segmentis linea viridi percursis. Bractæ involucranes 2, angustæ, membranaceo-scariosæ; interiores desunt.

Species 1, Hispaniæ australis incolæ, Kunth, Enum. Pl. v. 694. Boiss. Voy. Hisp. 604, t. 171.

11. *Hessea*, Herb. Amaryll. 289, t. 29, non Berg. (Periphanes, Salisb. Gen. Pl. Fragm. 118.)—Perianthii tubus 0; segmenta subæqualia, stellato-patentia. Stamina ima basi segmentorum affixa, filamentis filiformibus basi sæpe incrassatis v. dilatatis interdum brevissime connatis; antheræ parvæ, ovato-globosæ, basifixæ, loculis lateralibus parallelis. Ovarium 3-locale; stylus columnaris, infra medium v. ima basi præsertim ineunte anthesi incrassatus, flore aperto sæpe æqualis; ovula in loculis pauca. Capsula parva, globosa, sub-3-dyma, loculicide 3-valvis. Semina in loculis 2–3, subglobosa.—Bulbus tunicatus. Folia linearia v. subulata, serotina v. cœtanea. Scapus 'solidus.' Umbella multiflora, pedicellis evolutis sæpius subæqualibus patentissimis. Bractæ involucranes 2, subæquales.

Species ad 5, Africæ australis incolæ. Kunth, Enum. Pl. v. 625 (*Imhofia*) et 630 (*Hessea*). Jacq. Hort. Schanbr. t. 71, 72 (*Amaryllis*). Lhér. Sert. Angl. t. 17 (*Amaryllis*). Bot. Mag. t. 1363 (*Strumaria*).

IMHOFIA, Herb. App. 18; Amaryll. 290, t. 29, quam in *Hessea* includimus, species continet 3 v. 4,

stylo infra medium magis intumescente. In *H. filifolia* (*I. filifolia*, Herb.), Ait. Hort. Kew. ed. 1, t. 5, Jacq. Ic. Rar. t. 361, Bot. Reg. t. 440, tumor latissimus supra basin styli; *H. gemmata* (*I. gemmata*, Herb.), Bot. Mag. t. 1620, quæ genus *GEMMARIA*, Salisb. Gen. Pl. Fragm. 127, ex icone ab *H. filifolia* differre videtur foliis latis; in *H. Burchelliana* (*I. Burchelliana*, Herb.) stylus ima basi tantum, præsertim ineunte anthesi, incrassatus; in specie forte adhuc inedita (*Zeyher*, n. 1661), filamenta ima basi brevissime connata, et perianthii segmenta vix non in tubum brevissimum connata.

12. *Carpolyza*, Salisb. Parad. Lond. t. 63. (Hessea, Berg. ex Schlecht. Linnæa, i. 252.) —Perianthii tubus brevis, lobi subæquales, patentes. Stamina ad basin loborum affixa iisque breviora, filamentis filiformibus liberis; antheræ parvæ, ovoides, basifixæ, erectæ, loculis lateralibus parallelis. Ovarium 3-loculare; stylus columnaris, in longitudinem leviter 3-sulcus, vix v. parum incrassatus, stigmatem parvo patenter 3-lobo; ovula in loculis pauca. Capsula parva, depresso-globosa, 3-dyma, loculicide 3-valvis. Semina in loculis sæpius 2-3, angulato-globosa. —Bulbus parvus, tunicatus. Folia filiformia, cœtanea v. serotina. Scapus tenuis, sæpe filiformis, infra medium haud raro spiralter tortus. Flores in umbella 2-5 v. interdum ad unum reducti, pedicellis filiformibus. Bractæ involucranes 2, lineares.

Species 1, Africæ australis incola. Herb. Amaryll. 292, t. 29. Kunth, Enum. Pl. v. 629. Lhér. Serot. Angl. t. 13 (*Amaryllis*). Jacq. Ic. Rar. t. 363 (*Crinum*). Bot. Mag. t. 1383 (*Strumaria*). Andr. Bot. Rep. t. 92 (*Crinum*).

Genus, cum *Hessea*, interdum *Strumariæ* refertur, sed antherarum forma facillime distinguitur.

13. *Sternbergia*, Waldst. et Kit. Pl. Rar. Hung. ii. 172, t. 159. —Perianthium infundibuliforme, rectum, tubo brevi v. longiusculo; lobi lineares v. lanceolati, æquales, erecto-patentes. Stamina fauci v. basi loborum æqualiter affixa, perianthio breviora, filamentis filiformibus liberis; antheræ oblongæ, erectæ, prope basin dorsifixæ, loculorum valvis latiusculis. Ovarium 3-loculare; stylus filiformis, stigmatem parvo v. in lobos 3 breves obtusos patentes diviso; ovula in quoque loculo ∞, 2-seriata. Fructus carnosulus, ovoideus v. oblongus, vix dehiscens. Semina subglobosa, strophio fungoso semicincta v. nuda, testa tenuiter crustacea nigra. —Bulbus tunicatus. Folia serotina v. cœtanea. Scapus brevis, nunc brevissimus, 'solidus.' Flos sæpius unicus. Bractæ membranaceæ hyalina, basi tubulosa, ovarium involvens; nunc rarius flores 2 sessiles intra bractæas 2 involucranes angustas.

Species editæ ad 12, Europæ orientalis et regionis Mediterraneæ incolæ, a Bakero ad 5 reductæ. Herb. Amaryll. 186. Kunth, Enum. Pl. v. 698. Baker in Trim. Journ. Bot. 1878, 166. Reichb. Ic. Fl. Germ. t. 372, 373. Nees, Gen. Fl. Germ. Monocot. iii. n. 5. Sibth. Fl. Græc. t. 310, 311. Red. Lil. t. 148. Bot. Mag. t. 290 (*Amaryllis*). Bot. Reg. t. 2008. Regel, Gartenfl. t. 576.

Baker species 5 priores Kunthii ad typicam *S. colchicifloram*, Waldst. et Kit., reducit, foliis serotinis, tubo perianthii tenui longiusculo, et cæteras pro sectione *Oporantho* distinxit, foliis cœtaneis perianthii tubo brevi v. brevissimo in faucem ampliato; in his etiam strophium *S. colchicifloræ* deesse videtur, et stigma vix lobatum. Oporanthus, Herb. App. 38; Amaryll. 188.

14. *Ungernia*, Bunge in Bull. Soc. Imp. Nat. Mosc. 1875, ii. 271. —Perianthium infundibuliforme, rectum, tubo superne parum ampliato; limbus anguste campanulatus, lobis subæqualibus erecto-patentibus. Stamina tubo parum inæqualiter affixa, perianthio breviora, filamentis filiformibus liberis; antheræ oblongæ, erectæ, dorsifixæ, loculorum valvis latiusculis. Ovarium 3-loculare; stylus filiformis, stigmatem minuto; ovula in loculis ∞. Capsula subgloboso-3-dyma, fere in lobos 3 globosos divisa, pericarpio membranaceo loculicide 3-valvi. Semina ∞, valde compressa, in speciminibus nostris immatura, ex Bungeo obovato-suborbiculata, testa fragili atra in alam expansa. —Bulbus magnus, tunicatus. Folia ignota. Scapus solidus. Flores in umbella plures, longiuscule pedicellati, 'pallide miniati.' Bractæ 2 involucranes latiusculæ, interiores paucæ, lineari-setaceæ.

Species 1, Persica. Florum structura fere *Sternbergiæ*; differt imprimis statura, umbella ∞-flora, et seminibus.

15. *Aneiganthus*, Baker in *Trim. Journ. Bot.* 1878, 76.—Perianthium infundibuliforme, rectum, tubo brevi; lobi angusti v. lanceolati, æquales, erecto-patentes, tubo longiores. Stamina fauci affixa, alterna lobis interioribus altius adnata, perianthio breviora, filamentis antheris sæpius brevioribus; antheræ longiusculæ, erectæ, profunde sagittato-2-lobæ, inter lobos affixæ. Ovarium 3-loculare; stylus filiformis, stigmatibus recurvis tenuibus v. membranaceo-dilatatis introrsum papillois; ovula in loculis  $\infty$ , 2-seriata. Capsula globoso-triquetra v. oblonga, pericarpio membranaceo loculicide 3-valvi. Semina  $\infty$ , oblonga, basi attenuata, perfecte matura tamen non visa.—Bulbus tunicatus. Folia serotina linearia v. coætanea loriformiaque. Flores flavi, in umbella  $\infty$  v. 1-2, pedicellati. Bractee involucrantæ 2, lanceolatæ v. angustæ; interiores dum adsint linearisetacæ.

Species 2, Africæ australis incolæ. Harv. *Thes. Cap. t.* 139 (*Cyrtanthus*). Genus potius *Sternbergia* quam *Cyrtantho* affine videtur.

16. *Gethyllis*, Linn. *Gen. n.* 590. (Abapus, Adans. *Fam. ii.* 57, *char. falso*. Papiria, Thunb. in *Act. Lund. i.* 111, *ex ejusd. Nov. Gen. Pl. i.* 14.)—Perianthium hypocraterimorphum, tubo longo gracili apice haud ampliato; lobi subæquales, lineares v. lanceolati, patentes. Stamina 6 v.  $\infty$  (usque ad 18), fauci æqualiter affixa, filamentis brevissimis erectis; antheræ lineares, basi v. inter lobos basales affixæ, erectæ, mox recurvæ v. tortæ. Ovarium 3-loculare; stylus elongatus, filiformis, stigmatibus brevissimis obtusis; ovula in loculis  $\infty$ , distincta, 2-seriata. Fructus succulentus, oblongus v. clavato-cylindraceus. Semina a nobis non visa, ex R. Br. globosa, in pulpa gelatinosa nidulantia, testa laxa hyalina, integumento interiore albumini arcte adhærente.—Bulbus tunicatus. Folia serotina, linearia, interdum filiformia et spiraliter convoluta. Scapus brevissimus 'solidus.' Flos solitarius. Bractea membranaceo-hyalina, interdum 2-fida.

Species 4 v. 5, Africæ australis incolæ. Kunth, *Enum. Pl. v.* 694. Baker in *Trim. Journ. Bot.* 1878, 166. Jacq. *Hort. Schænbr. t.* 79. Bot. *Mag. t.* 1088. Bot. *Reg. t.* 1016. Excludendæ tamen inter species a Kunthio enumeratas *G. lanceolata*, Linn. f., quæ *Apodolirii* species, et *G. acaulis*, Blanco, verisimiliter ad *Curculiginem* referenda.

Stylus ex Ker in Bot. *Mag. t.* 1088, inferne cum tubo perianthii consolidatus, in speciminibus tamen siccis a nobis examinatis semper intra tubum liberum vidimus. In plerisque speciebus stylus vix antheras superat; Bolus in *Journ. Linn. Soc. xviii.* 396, sectionem *Clinostylem* proposuit ad speciem novam styli parte exserta 6-8 lin. longa declinataque, quod etiam observamus in speciminibus nonnullis Burchellianis *G. afræ*, Linn. f. Stylus verisimiliter ineunte anthesi brevis demum elongatur, v. in diversis floribus ejusdem speciei longitudine variat.

17. *Apodolirion*, Baker in *Trim. Journ. Bot.* 1878, 74; et in *Hook. Ic. Pl. t.* 1388.—Perianthium infundibuliforme, erectum, tubo longo gracili in faucem angustam ampliato; lobi erecto-patentes, subæquales, anguste lanceolati v. oblongi. Stamina fauci affixa, 3 lobis interioribus opposita altius adnata, filamentis brevissimis filiformibus; antheræ lineares, basi v. inter lobos basales affixæ, erectæ v. apice rarius recurvæ. Ovarium 3-loculare; stylus filiformis, stigmate capitato vix lobato; ovula in loculis  $\infty$ , 2-seriata. Fructus junior anguste oblongus, maturum non vidimus.—Bulbus tunicatus. Folia serotina v. coætanea, linearia v. anguste loriformia. Scapi in eodem bulbo interdum 2, breves nunc brevissimi. Flos unicus. Bractea angusta, membranaceo-hyalina.

Species 4, Africæ australis incolæ. Præter illas a Bakero l. c. enumeratas huc pertinet etiam *Gethyllis lanceolata*, Linn. f.

18. *Cooperia*, Herb. in Bot. *Reg. t.* 1835.—Perianthium hypocraterimorphum v. infundibuliforme, tubo longo nunc longissimo cylindraceo v. apice in faucem dilatato; lobi subæquales, ovati, patentes. Stamina fauci affixa, filamentis brevissimis liberis; antheræ lineares, erectæ, conniventes, juxta basin dorsifixæ. Ovarium 3-loculare; stylus filiformis, tubo perianthii brevior v. parum exsertus, stigmate parvulo 3-dymo v. breviter 3-lobo; ovula in loculis  $\infty$ , 2-seriata. Capsula subglobosa v. depressa, demum 3-dyma v. late

3-loba, loculicide 3-valvis. Semina numerosa, horizontalia, densissime superposita, oblonga v. cuneata, plus minus compressa, testa nigra crassiuscule membranacea.—Bulbus tunicatus. Folia pauca, anguste linearia v. loriformia. Pedunculi seu scapi longi, basi spatha hyalina intra folia occulta stipati. Flos ad apicem scapi intra bracteam spathaceam integram v. 2-fidam sessilis v. breviter pedicellatus.

Species 2, regionis Mexicano-Texanæ incolæ. *Herb. Amaryll.* 178, t. 24, 42. *Kunth, Enum. Pl.* v. 478. *Baker in Trim. Journ. Bot.* 1878, 166.

In specie typica *C. Drummondii*, *Herb.*, *Bot. Mag.* t. 3482, flos intra bracteam sessilis, tubo perianthii longissimo usque ad limbum subæquali. *SCEPTRANTHUS*, *Grah. in Edinb. N. Philos. Journ.* xx. 413, est *C. pedunculata*, *Herb.*, *Bot. Mag.* t. 3727; Sweet, *Brit. Fl. Gard. ser.* 2, t. 328 (*Zephyranthes*) flore intra bracteam sessili, perianthii tubo quam in præcedente multo brevior apice in faucem dilatato, et genus cum *Zephyranthe* connectit, etsi antheræ potius *Cooperiæ*.

19. **Chlidanthus**, *Herb. Append.* 46; *Amaryll.* 190, t. 27. (Coleophyllum, *Klotzsch in Allgem. Gartenzeit.* 1840, 185).—Perianthium infundibuliforme, tubo longo cylindraceo vix in faucem ampliato; lobi subæquales, superne recurvo-patentes. Stamina fauci affixa, erecta, lobis multo breviora, filamentis basi membranaceo-dilatatis alternis brevioribus; antheræ oblongo-lineares, erectæ, dorso prope basin affixæ. Ovarium 3-loculare; stylus filiformis, elongatus, stigmatibus breviter linearibus recurvis; ovula in loculis ∞, 2-seriata. Capsula oblonga, demum loculicide 3-valvis. Semina numerosa, plano-compressa, dense superposita, testa nigra.—Bulbus tunicatus. Folia longa, linearia v. loriformia. Scapus 'solidus.' Flores in umbella pauci, subsessiles v. breviter pedunculati. Bractæ involucrentes 2, longe acuminatæ, interiores non vidimus. Perianthium flavum, tubo pluripollicari.

Species v. varietates 2 v. 3, Americæ australis incolæ, imprimis ad specimina hortensia descriptæ, patria ab auctoribus varie dicta Buenos Ayres, Chili, Lima v. Mexico. Specimina sylvestria sola *Matthewsiana* vidimus e Chachapoyas Peruvix, n. 3180. *Kunth, Enum. Pl.* v. 653. *Lindl. Collect. Bot.* t. 34. *Bot. Reg.* t. 640.

20. **Haylockia**, *Herb. in Bot. Reg.* t. 1371.—Perianthium infundibuliforme, tubo longo tenui; lobi obovati, subæquales, erecto-patentes. Stamina fauci affixa, lobis breviora, subæqualia, 3 tamen lobis interioribus paullo altius adnata, filamentis breviter filiformibus; antheræ lineares, medio dorso affixæ, versatiles. Ovarium 3-loculare; stylus filiformis, tubo perianthii inclusus, stigmatibus breviter linearibus; ovula in loculis ∞, 2-seriata. Capsula brevis, 3-dyma, loculicide 3-valvis. Semina 'complanata, dorso rotundata, testa nigra.'—Bulbus tunicatus. Folia serotina, anguste linearia. Scapus per anthesin brevissimus, hypogæus, fructifer paullo elongatus. Flos intra bracteam spathaceam unicus, sessilis, pallide sulphureus.

Species 1, Americæ australis extratropicæ incolæ. *Kunth, Enum. Pl.* v. 480.

21. **Zephyranthes**, *Herb. App.* 36; *Amaryll.* 170, t. 24, 29, 35.—Perianthium infundibuliforme, rectum v. leviter declinatum, tubo nunc brevissimo nunc plus minus elongato, superne in faucem ampliato; lobi æquales v. parum inæquales, basi angustati et interdum fere ad basin tubi solvendi, superne erecto-patentes. Stamina fauci affixa, æqualia v. 3 paullo breviora, erecta v. parum declinata; antheræ lineares, longæ v. breves, dorsifixæ. Ovarium 3-loculare; stylus filiformis, interdum elongatus, superne sæpius declinatus, stigmate plus minus 3-fido; ovula in loculis ∞, 2-seriata.—Capsula subglobosa v. depressa, demum 3-dyma v. 3-loba, loculicide 3-valvis. Semina oblonga, angulato-compressa v. plana, testa nigra.—Bulbus tunicatus. Folia pauca, linearia v. loriformia, costanea v. serotina. Scapus elongatus, 'fistulosus.' Flos intra bracteam spathaceam integram v. apice 2-fidam basi tubulosam semper solitarius, pedicellatus v. rarius sessilis, erectus v. parum declinatus, roseus albus purpurascens v. flavescens, in eadem specie interdum versicolor.

Species fere 30, Americæ calidioris incolæ, a Bonaria usque ad Texam et Mexicum extensæ, addita una ex Africa tropica occidentali. *Kunth, Enum. Pl.* v. 480. *Baker in Trim. Journ. Bot.* 1878, 166. *S. Wats. in Proc. Amer. Acad.* xiv. 300. *Philippi in Linnæa*, xxix. 65. *Red. Lil. t.* 31. *Bot. Mag. t.* 239, 1586, 2464, 2485, 2537, 2583, 2593, 2594, 2607, 3596. *Bot. Reg. t.* 724, 821, 902, 1345, 1361, 1746, 1967; 1845, t. 54. *Sweet, Brit. Fl. Gard. ser. 2, t.* 14, 70. *Lodd. Bot. Cab. t.* 1419, 1677, 1761, 1771, 1899. *Saund. Ref. Bot. t.* 356 (ic. veteriores pleræque sub *Amaryllide*, recentiores nonnullæ sub *Habrantho*). *ARVIELA, Salisb. Gen. Pl. Fragm.* 135.

Genus *Hippeastro* valde affine, quoad characteres florales vix limitibus certis definiendum. In speciebus typicis perianthium erectum nec declinatum, et squamellæ ad basin filamentorum desunt, in aliis tamen hi characteres variant, et distinctio nobis melius in inflorescentia petenda. Scapus in *Zephyranthe* semper 1-florus, bractea involucrante unica basi tubulosa, nec unquam bracteas interiores lineares v. setaceas deteximus, dum in *Hippeastris* paucis 1-floris, bracteæ involucrantes semper 2 distinctæ, sæpeque adest bractea interior setacea, umbellam ad florem unicum reductam indicantes.

*Z. sessilis*, Herb., ab omnibus differt flore intra bracteam spathaceam sessili.

*ARGYROPSIS, Ræm. Ensæt.* 125, est *Z. candida*, Herb., cui stigmata seu stigmatis lobi brevissimi obtusissimi, quod etiam in *Z. Lindleyana*, Herb., observatur.

*HABRANTHUS, Herb. in Bot. Reg. t.* 1345 genus propositum fuit ad *Z. Andersonianam*, quæ a *Zephyranthis* typicis non differt nisi staminibus inæqualibus distincte declinatis, sed in formis pluribus pro varietatibus descriptis v. depictis stamina omnino ad normam recta sunt. Herbert postea, *Amaryll.* 156, species plures addidit *Habrantho*, floribus umbellatis, quas Baker rite ad *Hippeastrum* refert. Herbert *Habranthum* tam a *Zephyranthe* quam a *Hippeastro* distinxit squamellis perianthii ad basin filamentorum in membranam connexis. Hæ squamellæ tamen in diversis speciebus sæpius diversæ sunt, nec semper in *Zephyranthis* typicis omnino desunt, in speciebus per plurimis non descriptæ et in speciminibus siccis difficillime observantur, nec bene pro characteribus genericis utendæ.

*PYROLIRION, Herb. App.* 37; *Amaryll.* 183, t. 23, 29, genus imprimis ad *Amaryllidem auream* Ruiz et Pav. *Fl. Per. et Chil.* iii. 56, t. 286 conditum, nobis videtur *Zephyranthis* species *Z. carinata*, Herb. affinis, stigmatibus apice paullo magis incrassatis. Huic addit Baker speciem Bolivianam, *Mandon*, n. 1194, stigmatibus seu ramis styli multo longioribus, apice breviter tantum incrassatis papillosisque.

22. *Sprekella, Heist. Besch. von Brunsvigia*, 19.—Perianthium valde declinatum, tubo nullo; segmenta parum inæqualia, fere in ungues contracta, a basi distincta, posticum ascendens, infimum concavum, genitalia recipiens. Stamina basi segmentorum affixa, in infimum declinata, eoque parum breviora, basi squamellis parvis interstincta, filamentis filiformibus; antheræ oblongo-lineares, medio dorso affixæ, demum recurvæ. Ovarium 3-loculare; stylus elongatus, stigmatibus linearibus recurvis; ovula in loculis ∞, 2-seriata. Capsula globoso-3-quetra, loculicide 3-valvis. Semina plano-compressa, ovata v. orbiculata, testa nigra.—Bulbus tunicatus. Folia serotina, loriformi-linearia. Scapus 'fistulosus.' Flos intra bracteam spathaceam basi tubulosam apice 2-fidam solitarius, pedicellatus, magnus, speciosus. Bracteæ interiores 0.

Species 1, Mexicana. *Kunth, Enum. Pl.* v. 507. *Red. Lil. t.* 5. *Bot. Mag. t.* 47 (*Amaryllis*). *Bot. Reg.* 1841, t. 16. *Sweet, Brit. Fl. Gard. ser. 2, t.* 144.

Genus *Zephyranthi* imprimis *Z. carinata* et *Z. concolori* affine, differt flore magno declinato tubo obsoleto, etc. *S. Cybister*, Herb., cum Lindleyo ad *Hippeastrum* referimus, nec longe ab *H. Regine*, Herb., differt.

23. *Hippeastrum, Herb. App.* 31; *Amaryll.* 135.—Perianthium infundibuliforme, plus minus declinatum, tubo nunc brevissimo nunc plus minus elongato, superne in faucem ampliato, lobi parum inæquales, basi angustati et interdum fere ad basin tubi solvendi, superne erecto-patentes; squamellæ ad faucem inter v. circa basin filamentorum sæpe adsunt. Stamina fauci inæqualiter affixa, declinata v. ascendens, perianthio sæpius breviora, filamentis liberis elongatis; antheræ oblongæ v. oblongo-lineares, dorsifixæ, versatiles, demum haud raro curvæ. Ovarium 3-loculare; stylus filiformis, elongatus, stigmatibus nunc linearibus recurvo-patentibus nunc brevissimis obtusis; ovula in loculis

∞, 2-seriata. Capsula globosa v. ovoidea, 3-sulca v. 3-dyma, loculicide 3-valvis. Semina (ubi nota) plano-compressa, testa nigra.—Bulbus tunicatus. Folia loriformia, latiuscula v. anguste linearia. Scapus 'fistulosus.' Flores in umbella 2-∞, rarissime ad unum reducti, pedicellati, sæpius magni. Bracteæ involucrantès semper 2, distinctæ; interiores lineares v. filiformes sæpissime adsunt 1-∞.

Species ultra 50, Americæ tropicæ v. australis extratropicæ incolæ. *Kunth, Enum. Pl.* v. 514. *Baker in Trim. Journ. Bot.* 1878, 79 (excl. sect. *Zephyritis*).

Genus Americanum, primo aspectu *Amaryllidem* (Africanam) refert, sub quo genere icones pleræque infra citatæ querendæ sunt, ovulis tamen seminibusque facile distinguendum, et squamellæ ad basin staminum in planta Africana omnino deesse videntur. In sectiones sequentes non semper accurate limitatas dividitur:—

1. *Habranthus*. Folia angusta. Flores in umbella sæpius pauci, rarius ad unum reducti, bracteis involucrantibus tamen semper 2. Flores mediocres, latiuscule infundibuliformes, parum declinati. Species pleræque extratropicæ. *Bot. Mag.* t. 1125, 2597, 2639, 3961. *Bot. Reg.* t. 849, 1148, 1396, 1417, 1638; 1842, t. 35. *Sweet, Brit. Fl. Gard. ser.* 2, t. 107, 213. *Lodd. Bot. Cab.* t. 1760. *Saund. Ref. Bot.* t. 332 (*Phycella*). *HABRANTHUS*, *Herb. Amaryll.* 156, quoad species umbellifloras. *MYOSTEMMA*, *Salisb. Gen. Pl. Fragm.* 135.

*RHODOPHIALA*, *Presl, Bot. Bemerk.* 115, genus evidenter ad specimina Cumingiana e Valparaiso n. 395 definitum, est *Hippeastri* (*Habranthi*) *advoca* var. *RHODOPHIALA*, Philippi, a Bakero pro sectione admissa, a cæteris *Habranthis* vix distinguenda floribus adhuc paucioribus, stigmatibus brevissimis. In *R. uniflora*, Phil., et *R. modesta*, Phil., flos sæpius unicus, sed bracteæ 2 involucrantès et interiores setaceæ omnino *Hippeastri* nec *Zephyranthis*. *RHODOLIRION*, *Philippi in Linnæa* xxix. 65, ab auctore a *Rhodophiala* distinguitur tubo perianthii longiusculo. *Rhodolirion montanum*, Phil., tamen omnino eadem species videtur ac *Rhodophiala uniflora*, Phil. *Chlidanthus Cumingii*, *Presl, Bot. Bemerk.* 115, si rite ad eam referimus specimina Cumingiana n. 865, est *Hippeastrum* (*Habranthus*) *Bagnoldi*, *Baker*, male descriptum.

2. *Phycella*, a *Habrantho* parum differt perianthio angustius infundibuliformi, fauce longa angusta, superne parum ampliata, lobis brevibus erecto-patentibus. Species 2, Chilenses. *Bot. Mag.* t. 2399. *Bot. Reg.* t. 809, 1913. *Lodd. Bot. Cab.* t. 1746. *PHYCELLA*, *Lindl. Bot. Reg.* sub t. 928 et t. 1341.

Philippi species plures novas descripsit sub *Habrantho*, *Rhodophiala* et *Phycella*, in *Linnæa* xxix. 66; *Descr. Nuev. Pl.* ii. (1873), 66.

3. *Euhippeastrum*. Folia sæpius lata. Umbellæ ∞-floræ. Flores sæpius magni, valde declinati, perianthio late infundibuliformi tubo brevi. Species tropicæ, *Karst. Fl. Colomb.* t. 102. *Lhér. Sert. Angl.* t. 14, 15. *Jacq. Hort. Schænbr.* t. 63. *Lindl. Collect. Bot.* t. 12. *Red. Lil.* t. 9, 10, 32, 424. *Andr. Bot. Rep.* t. 179, 358. *Bot. Mag.* t. 129, 305, 453, 657, 1943, 2113, 2273, 2278, 2475, 2983, 3311, 3523, 3549, 5645, 5883. *Bot. Reg.* t. 23, 38, 164, 199, 226, 234, 444, 534, 719, 988, 1038, 1188. *Lodd. Bot. Cab.* t. 484, 864, 1082, 1204, 1449. *Regel, Gartenfl.* t. 809. *Saund. Ref. Bot.* t. 358; cum ic. numerosis in variis diariis hortulanorum imprimis varietatum cultarum. *LEOPOLDIA*, *Herb.*, genus in *Bot. Mag.* sub t. 2113, et in *Trans. Hort. Soc.* iv. 181 dubie propositum. *LAIS*, *ASCHAMIA*, *OMPHALISSA* et *CHONAIIS*, *Salisb. Gen. Pl. Fragm.* 134, 135. Iluc etiam pertinere videtur. *Sprekelia Cybister*, *Herb.* in *Bot. Reg.* 1840, t. 33; *Bot. Mag.* t. 3872, etsi differat staminibus elongatis.

4. *Macropodastrum*, *Baker*. Omnia *Euhippeastri*, nisi perianthii tubus valde elongatus fere *Crini*, sed characteres essentialès omnino *Hippeastri*. *Lindl. Collect. Bot.* t. 11. *Bot. Mag.* t. 2573, 3542, 3771. *Bot. Reg.* t. 876. *Lodd. Bot. Cab.* t. 1200. Stigmata in *H. solandriiflora*, *Herb.*, brevissima, in *H. ambiguo*, *Herb.*, longa recurva. Species prior tropica, illa extratropica.

24. *Placea*, *Miers in Bot. Reg.* 1841, t. 50.—Perianthium subinfundibuliforme, parum declinatum, tubo brevissimo v. ad anulum reducto; lobi subæquales, superne patentes v. demum recurvi; corona ad basin loborum circa filamenta iisque 2-3-plo brevior, membranacea, erecta, in lobos 6 angustos emarginatos fere ad basin divisa. Stamina intra coronam affixa, perianthio breviora, declinata, filamentis filiformibus liberis; antheræ oblongæ, medio dorso affixæ, versatiles, non curvæ. Ovarium 3-loculare; stylus declinatus, stigmatibus brevissimis obtusis; ovula in loculis ∞, 2-seriata. Capsula . . . — Bulbus tunicatus. Folia linearia, carinata. Scapus 'fistulosus.' Flores in umbella plures, pedicellati. Bracteæ involucrantès 2, anguste laucolatae, interiores ∞, anguste lineares.

Species 3? Chilenses. *Kunth, Enum. Pl. v. 503. Baker in Trim. Journ. Bot. 1878, 169. Philippi in Linnaea, xxix. 67; Descr. Nuev. Pl. ii. (1873), 65. Genus Hippeastro valde affine, differt corona perfectius evoluta.*

25. *Grismia*, *Ker in Bot. Reg. sub t. 444, et t. 511.*—Perianthium infundibuliforme, declinatum, tubo brevissimo v. 0; segmenta basi longe angustata, parum inæqualia, superne v. demum fere a basi patentia. Stamina ad basin segmentorum affixa iisque non longiora, filamentis filiformibus, uno sæpius assurgente v. interdum deficiente, cæteris 5 v. rarius omnibus declinatis; antheræ oblongæ, medio dorso affixæ, demum sæpe curvæ. Ovarium 3-loculare; stylus elongatus, declinatus, stigmatē nunc vix incrassato indiviso, nunc distincte 3-fido; ovula in loculis 2, collateralia, a basi ascendentia. Capsula ovoidea v. subglobosa, loculicide 3-valvis. Semina in loculis sæpe abortu solitaria, erecta, ovoidea, crassa, testa nitida nigra v. pallida.—Bulbus tunicatus. Folia sæpius lata, in petiolum interdum longum contracta, venis numerosis venulis transversis connexis, rarius angustiora et vix v. non petiolata. Scapus 'solidus.' Flores in umbella sat numerosi, plus minus pedicellati. Bractæ involucrantēs 2, scariosæ, interiores lineares plures.

Species 7 v. 8, omnes Brasilianæ. *Kunth, Enum. Pl. v. 542. Baker in Trim. Journ. Bot. 1878, 167. Vell. Fl. Flum. Ic. iii. t. 117 (Amaryllis). Bot. Mag. t. 5786, 6367. Bot. Reg. t. 163 (Amaryllis). Fl. des Serres, t. 1667.*

In *G. Liboniana*, Lem. *Jard. Fleur. t. 290*, folia basi contracta at non petiolata; stamina declinata 5, sexto (an semper?) deficiente; in *G. Blumenavia*, Carr. *Rev. Hort. 1867, 32*, cum ic. (*Bot. Mag. t. 5666*) folia vix petiolata; stamina 6 omnia declinata.

26. *Crinum*, *Linn. Gen. n. 405.*—Perianthium infundibuliforme v. fere hypocraterimorphum, tubo longo recto v. incurvo cylindræo v. apice in faucem ampliato; lobi lineares lanceolati v. anguste oblongi, recurvi patentes v. conniventes. Stamina fauci affixa, lobis sæpius parum breviora v. longiora, filamentis distinctis filiformibus declinatis v. divergentibus; antheræ lineares v. oblongo-lineares, medio dorso affixæ, demum sæpius curvæ. Ovarium 3-loculare; stylus filiformis, stigmatē minimo subcapitato; ovula in loculis pauca v. sat numerosa, rarius 2 tantum, cum placenta axili crassiuscula continua, adnata, sæpe parum prominula. Capsula irregulariter subglobosa, pericarpio membranaceo v. coriaceo, demum irregulariter rupta. Semina pauca, crassa, irregulariter compresso-globosa, testa crassa; albumen crassissime carnosum, embryo tamen normali.—Bulbus tunicatus, sæpius magnus, apice haud raro in collum productus. Scapus 'solidus.' Folia sæpius numerosa, longa, angusta v. latiuscula. Flores in umbella ∞, magni, sessiles v. breviter pedicellati. Bractæ involucrantēs 2, membranacæ, latæ v. angustæ, interiores ∞, lineares, interdum perpaucæ.

Species enumeratæ ultra 60, per regiones tropicas et subtropicas utriusque orbis præsertim in arenosis maritimis late dispersæ, usque ad Americam borealem, Africam australem et Australiam extensæ, plures tamen nonnisi in hortis notæ verisimiliter reducendæ. *Kunth, Enum. Pl. v. 547. Baker in Trim. Journ. Bot. 1878, 168, 195, et in Gard. Chron. 1881, i. et ii.*

Genus a Bakero in sectiones sequentes dividitur:—

1. *Stenaster*. Perianthium sæpius erectum, tubo recto æqualiter cylindræo; lobi lineares, patentes v. reflexi. Filamenta æqualiter divergentia. *Wight, Ic. t. 2021, 2022. Kotschy, Pl. Tinn. t. 21. Jacq. Hort. Schænbr. t. 495. Red. Lil. t. 408. Bot. Mag. t. 1073, 1605, 2208, 2231, 2301, 2684, 2908. Bot. Reg. t. 52, 171, 179, 1049. Lodd. Bot. Cab. t. 346, 362, 650.*

2. *Platyaster*. Perianthii tubus rectus v. leviter incurvus; lobi lanceolati, patentes v. ascendentes. Filamenta æqualiter divergentia. Sectio vix a *Stenastere* distincta. *Jacq. Hort. Schænbr. t. 202, 494. Red. Lil. t. 27. Hook. Exot. Fl. t. 200. Bot. Mag. t. 1034, 1232, 2355, 2397, 2522, 2531, 2592, 2635, 2636, 6525, 6570. Bot. Reg. t. 679. Lodd. Bot. Cab. t. 31.*

3. *Codonocrinum*. Perianthii tubus curvus, superne sæpius in faucem ampliat, lobi declinati, oblongo-lanceolati, usque ad medium v. altius conniventes. Stamina cum stylo declinata. *Wight, Ic. t. 2019, 2020. Wall. Pl. As. Rar. t. 145. Jacq. Ic. Rar. t. 362; Hort. Schænbr. t. 429. Red. Lil. t. 62, 181, 347. Salisb. Parad. Lond. t. 52. Andr. Bot. Rep. t. 169, 390, 478. Bot. Mag. t. 661, 915, 923, 1171, 1178, 1253, 2121, 2133, 2180, 2217, 2292, 2463, 2466, 6113, 6381, 6483,*

6512, 6545. *Bot. Reg. t. 303, 426, 546, 579, 615, 623, 1297; 1844, t. 2. Lodd. Bot. Cab. t. 669 (ic. vet. plures sub Amaryllide). TÆNAIS et ERIGONE, Salisb. Gen. Pl. Fragm. 115.*

*C. brachynema*, Herb., *Bot. Mag. t. 5937*, ab omnibus differt filamentis erectis anthera brevioribus. Semina specierum perpaucarum vidimus, plurima a *Herb. Amaryll. t. 44*, delineata. Confer etiam *A. Braun in Verh. K. Akad. Wiss. Berlin, 1859, 168, et in Ann. Sc. Nat. ser. 4, xiv. 5.*

27. **Amaryllis**, Linn. *Gen. n. 406, pro parte.* (Callicore, Link, *Handb. i. 193, pro parte.* Belladonna, Sweet, *Hort. Brit. 506.*)—Perianthium infundibuliforme, declinatum, leviter incurvum, tubo brevi; lobi longi, oblongo-lanceolati, infra medium v. altius conniventes, apice patentes. Stamina fauci affixa, lobis sæpius parum breviora, filamentis distinctis filiformibus declinatis; antheræ lineares, medio dorso affixæ, demum curvæ. Ovarium 3-loculare; stylus filiformis, stigmate minimo subcapitato; ovula in loculis  $\infty$ , cum placenta axili crassiuscula continua, adnata. Capsula irregulariter subglobosa, pericarpio demum irregulariter rupto. Semina pauca, crassa, irregulariter compresso-globosa; albumen crassissime carnosum.—Bulbus tunicatus. Folia coætanea v. serotina, loriformia v. latiuscula. Scapus 'solidus.' Flores in umbella  $\infty$ , magni, pedicellati. Bractæe involucentes 2, membranaceæ, latiusculæ, interiores paucæ, lineares.

Species 1, Africæ australis incola. *Kunth, Enum. Pl. i. 600. Red. Lil. t. 180, 479. Bot. Mag. t. 733, 1450. Bot. Reg. t. 714.*

Genus apud auctores veteres species fere omnes inclusit e tribu *Amaryllearum* perianthio obliquo v. declinato, hodie ad *A. Belladonna*, Linn., limitatum, cum *Crino* solo convenit ovario seminibusque, et ab hujus sectione *Codonocrino* parum distinguitur, imprimis perianthii tubo brevi.

28. **Ammocharis**, Herb. *App. 17; Amaryll. 241, t. 33.* (Palinetes, Salisb. *Gen. Pl. Fragm. 116.*)—Perianthium infundibuliforme, rectum, tubo cylindraceo; lobi longi, angusti, subæquales, erecto-patentes, demum sæpius apice revoluti. Stamina fauci affixa, lobis subæqualia, filamentis filiformibus rectis; antheræ oblongo-lineares, medio dorso affixæ, sæpius curvæ. Ovarium 3-loculare, superne haud raro in rostrum breve productum; stylus filiformis, elongatus, stigmate parvo capitato; ovula in loculis  $\infty$ , globosa, placentæ crassiusculæ adnatæ 2-seriatim affixa, arcte sessilia v. semi-immersa. Capsula (a nobis non visa) 'anguste turbinata apice abrupte contracta. Semina pauca, carnosæ, inæqualiter tuberoso-laxata.'—Bulbus tunicatus. Folia falcato-ligulata. Scapus 'solidus.' Flores in umbella  $\infty$ , longiuscule pedicellati. Bractæe involucrantæ 2, latæ, membranaceæ, interiores lineari-setaceæ.

Species nobis notæ 2 (*A. falcata* et *A. coranica*, Herb.), Africæ australis incolæ. *Kunth, Enum. Pl. v. 611. Jacq. Hort. Vind. iii. t. 60 (Crinum). Bot. Mag. t. 1443 (Brunsvigia). Bot. Reg. t. 139 et 1219 (Amaryllis).*

Genus potius *Crino* quam *Brunsvigiæ* affine, *A. Slateriana*, Kunth, est tamen vera *Brunsvigiæ* species.

29. **Lycoris**, Herb. *App. 20; Amaryll. 229.*—Perianthium infundibuliforme, tubo cylindraceo plus minus evoluto; lobi longi, angusti, subæquales. Stamina fauci affixa, lobis breviora æqualia v. multo longiora, rectiuscula v. declinata; antheræ oblongæ, medio dorso affixæ, non curvæ. Ovarium 3-loculare; stylus filiformis, stigmate non v. vix incrassato; ovula in loculis  $\infty$ , 2-seriata. Capsula ovoidea v. subglobosa, basi obtusa, apice interdum breviter contracta, matura nobis deest. Semina . . .—Bulbus tunicatus. Folia loriformia v. linearia, breviora v. elongata, serotina. Scapus 'solidus.' Flores in umbella  $\infty$ , pedicellati. Bractæe involucrantæ 2, angustæ v. lanceolatae.

Species 3, Japoniæ, Chinæ et Asiæ mediæ incolæ. *Kunth, Enum. Pl. v. 544. Lhér. Sert. Angl. t. 15 bis. Jacq. Hort. Schænbr. t. 73. Red. Lil. t. 61. Andr. Bot. Rep. t. 95. Bot. Mag. t. 409. Bot. Reg. t. 506, 611 (ic. vet. plures sub Amaryllide).*

Genus *Brunsvigiæ* et *Nerini* affine, differt imprimis tubo perianthii bene evoluto. Stamina in *L. radiata*, Herb. (OREXIS, Salisb. *Gen. Pl. Fragm. 117*), perianthio duplo longiora, in *L. aurea*, Herb., perianthium parum excedunt, in *L. Severzovii*, Regel, *Gartendf. 1877, 259, t. 914*, distincte

breviora. *Nerine japonica*, Miq. in Ann. Mus. Lugd. Bat. ii. 139, est *L. radiata*, Herb. *L. radiata*, Miq. l. c., tamen ex descr. videtur *L. Severzovii*, Reg. Specimina japonica ab Oldhamio lecta omnino cum Regelianis ex Asia centrali conveniunt.

30. **Brunsvigia**, Heist. Besch. v. Brunsv., Braunschweig, 1755, cum tabb. 3.—Perianthii recti v. incurvi segmenta angusta v. lanceolata, a basi erectiuscula patentia v. recurva, ima basi vix in annulum seu tubum brevissimum connata. Stamina prope basin segmentorum affixa, iisque sæpius æquilonga, recta v. sæpius declinata, filamentis filiformibus ima basi vix incrassatis; antheræ oblongæ, medio dorso affixæ, non curvæ, interdum dimorphæ, nonnullæ cæteris duplo fere majores. Ovarium 3-loculare; stylus filiformis, stigmatibus parum dilatato rarius patenter 3-lobis; ovula in loculis  $\infty$ , 2-seriata. Capsula obovoidea v. turbinata, sæpe magna, costis prominentibus 3-quetra, basi contracta. Semina in loculis  $\infty$ , oblonga, funiculis longis lineari-appendiculatis affixa, testa crassiuscula.—Bulbus magnus, tunicatus. Folia serotina, lata, sæpe humi appressa, interdum scabra. Scapus solidus. Flores in umbella  $\infty$ , pedicellis validis, speciosi. Bractee involucentes 2, latæ v. lanceolatæ, interiores  $\infty$  filiformes.

Species 7 v. 8, Africæ australis incolæ. Kunth, Enum. v. 605. Herb. Amaryll. 280, t. 22, 32. Jacq. Hort. Schænbr. t. 68, 70, 74. Red. Lil. t. 370 ad 372. Bot. Mag. t. 1619, 2578. Bot. Reg. t. 192, 193, 954, 1335; 1842, t. 11. Saund. Ref. Bot. t. 330; (ic. veter. pleræque sub *Amaryllide*).

31. **Nerine**, Herb. in Bot. Mag. t. 2124; App. 18; Amaryll. 283. (*Loxanthes*, Salisb. Gen. Pl. Fragm. 117.)—Perianthii segmenta angusta, a basi erectiuscula patentia v. revoluta, ima basi vix in annulum v. tubum brevissimum connata. Stamina prope basin segmentorum affixa iisque sæpe æquilonga, recta v. declinata, filamentis filiformibus ima basi incrassatis v. infra insertionem continuis; antheræ oblongæ, medio dorso affixæ, non curvæ, interdum dimorphæ, nonnullæ cæteris multo majores. Ovarium 3-loculare; stylus filiformis, stigmatibus parvo sub-3-dymo v. breviter 3-lobis; ovula in loculis  $\infty$ , distincta, 2-seriata. Capsula subglobosa v. depressa, nunc 3-dyma v. 3-loba. Semina in loculis pauca, interdum solitaria, angulata 'viridula,' testa crassiuscula.—Bulbus tunicatus. Folia loriformia, interdum latiuscula, coetanea v. serotina. Scapus validus, 'solidus.' Flores in umbella  $\infty$ , pedicellati, speciosi, erecti v. parum declinati.

Species ad 9, Africæ australis incolæ. Kunth, Enum. Pl. v. 615, quas in series 2 distribuit: 1. *Regulares* (GALATEA, Herb. in Bot. Mag. sub t. 2113), staminibus fere erectis. Jacq. Hort. Schænbr. t. 64 ad 66. Red. Lil. t. 33, 274. Andr. Bot. Rep. t. 163. Bot. Mag. t. 294, 725, 1089, 1090. 2. *Distortæ*, staminibus plus minus declinatis. Jacq. Hort. Schænbr. t. 67, 69; Hort. Vind. iii. t. 13. Red. Lil. t. 115, 450. Bot. Mag. t. 369, 726, 2407, 5901, 6547. Bot. Reg. t. 172, 497. Saund. Ref. Bot. t. 329 (ic. vet. plures sub *Amaryllide*).

*N. japonica*, Miq., ad *Lycorem* referenda est.

32. **Strumaria**, Jacq. Ic. Rar. t. 356 ad 360. (Eudolon, Stylago, Pugionella et Hymenotron, Salisb. Gen. Pl. Fragm. 127, 128.)—Perianthium campanulatum, tubo sub-nullo; segmenta æqualia, erecto-patentia. Stamina ima basi segmentorum affixa iisque sæpius sublongiora, filamentis erectis infra medium membranaceo-dilatatis et cum angulis styli plus minus connatis; antheræ oblongæ, medio dorso affixæ, rectæ. Ovarium 3-loculare; stylus infra medium v. altius latiuscule 3-angulatus v. fere 3-alatus; ovula in loculis  $\infty$ , sæpius pauca, 2-seriata. Capsula subglobosa, 3-dyma. Semina in quoque loculo sæpius 2 v. 3, angulato-globosa.—Bulbus tunicatus, crassiusculus. Folia loriformia. Scapus 'solidus.' Flores in umbella  $\infty$ , pedicellis filiformibus subæqualibus parum patentibus. Bractee involucentes 2, lanceolatæ, interiores minores, paucæ.

Species editæ 6, Africæ australis incolæ. Herb. Amaryll. 287, t. 29, 39. Kunth, Enum. Pl. v. 622.

Specierum 2 tantum specimina nobis adsunt, cæteræ, ex iconibus solis notæ, non semper bene distinctæ videntur, etsi a Salisburio pro generibus propriis habentur.

33. *Valloia*, *Herb. App.* 29; *Amaryll.* 133, 414.—Perianthium infundibuliforme, rectum, erectum, tubo brevi, fauce ampliata; lobi oblongo-ovati, basi callo parvo connexi. Stamina basi loborum affixa iisque breviora, erecta, æqualia, filamentis filiformibus in fauce decurrentibus; antheræ oblongæ, medio dorso affixæ, non curvæ. Ovarium 3-loculare; stylus filiformis, subdeclinatus, stigmatе parvo; ovula in loculis numerosa, oblonga, 2-seriata. Capsula (ex *Herb. Amaryll.* 414) oblongo-ovata, a basi dehiscens. Semina majora fere semipollicaria, nucleo ad apicem compresso oblique transverso, basi in alam longam foliaceam contracta; inferiora cujusve loculi minora rectiora.—Bulbus tunicatus. Scapus robustus, 'fistulosus.' Flores magni, in umbella  $\infty$ , sessiles v. breviter pedicellati. Bracteæ involucrantеs 2-3, membranaceæ, latiusculæ, interiores  $\infty$ , angustiores v. lineares.

Species 1, Africæ australis incola. *Kunth, Enum. Pl.* v. 531. *Jacq. Hort. Schænbr. t.* 62. *Bot. Mag. t.* 1430. *Bot. Reg. t.* 552.

34. *Cyrtanthus*, *Ait. Hort. Kew. ed.* 1, i. 414. (*Timmia*, *Gmel. Syst. Veg.* i. 538. *Gastronema*, *Herb. App.* 30, et in *Bot. Mag. t.* 2291. *Cyphonema*, *Herb. in Bot. Mag. Adnot. sub t.* 3710 et 3747. *Monella*, *Herb. App.* 29. *Eusipho*, *Salisb. Gen. Pl. Fragm.* 139).—Perianthium anguste infundibuliforme, basi v. superne recurvum, tubo longo v. abbreviato, fauce longa ampla; lobi multo breviores, erecto-patentes. Stamina fauci altius v. profundius affixa, recta v. declinata, perianthio breviora, filamentis brevibus v. longiusculis; antheræ oblongæ, medio dorso affixæ, non curvæ. Ovarium 3-loculare; stylus filiformis, stigmatе in *C. obliquo* parvo indiviso, in plerisque 3-fido lobis angustis interdum longiusculis; ovula in loculis  $\infty$ , oblonga, 2-seriata. Capsula nunc basi v. a latere varie rupta, nunc perfecte loculicide 3-valvis. Semina compressa, basi in alam producta.—Bulbus tunicatus. Folia elongata, angusta, interdum flexuosa. Scapus 'fistulosus.' Flores in umbella plures v. rarius ad unum reducti, pedicellati v. subsessiles, nunc a basi recurva penduli, nunc leviter tantum recurvo-declinati. Bracteæ involucrantеs 2 v. paucae, membranaceæ, interiores  $\infty$ , multo angustiores v. filiformes.

Species ad 15, Africæ australis incolæ, cum una ex Africa tropica. *Herb. Amaryll.* 128. *Kunth, Enum. Pl.* v. 533. *Jacq. Hort. Schænbr. t.* 75, 76. *Lhér. Sert. Angl. t.* 16. *Rcd. Lil. t.* 182, 381, 388. *Andr. Bot. Rep. t.* 265. *Bot. Mag. t.* 271, 1133, 2291, 2471, 2534, 5218, 5374. *Bot. Reg. t.* 162, 167, 168, 503, 1462. *Lodd. Bot. Cab. t.* 368, 947, 1945. *Reg. Gartenfl. t.* 960. *Saund. Ref. Bot. t.* 355.

*Gastronema*, *Herb.*, sectionem format, perianthii tubo latiore, rite a *Kunth* ad *Cyrtanthum* reductam. *C. breviflorus*, *Harv.*, est *Anoiganthus*, *Bak.*

35. *Clivia*, *Lindl. Bot. Reg. t.* 1182. (*Imantophyllum*, errore *Imatophyllum*, *Hook. Bot. Mag. t.* 2856. *Himantophyllum*, *Spreng. Gen. Pl.* 276).—Perianthium tubuloso-infundibulare v. fere campanulatum, erectum v. recurvum, segmentis distinctis v. præsertim ineunte anthesi basi in tubum brevem cohærentibus. Stamina supra basin segmentorum affixa, perianthium sæpius superantia, filamentis filiformibus; antheræ oblongæ, medio dorso affixæ, non curvæ. Ovarium 3-loculare; stylus elongatus, stigmatе breviter 3-partito v. parvo; ovula in quoque loculo pauca (semper 6 vidimus) in medio loculo conferta, oblonga. Bacca (ex *Hook.*) globosa, indehiscens. Semina pauca, oblongo-sub-3-quetra, testa laxa pulposa, integumento interiore appresso.—Bulbus imperfectus, foliorum vaginis crassis laxè involutus. Scapus compressus, solidus. Flores in umbella sat numerosi, pedicellati. Bracteæ involucrantеs plures, lanceolate, interiores lineari-setaceæ.

Species 3, Africæ australis incolæ. *Kunth, Enum. v.* 584. *Lodd. Bot. Cab. t.* 1906. *Regel, Gartenfl. t.* 434. *Fl. des Serres, t.* 1877 (*Imantophyllum*).

In specie typica, *C. nobili*, *Lindl. l.c.* (*Imatophyllo Aitoni*, *Hook. Bot. Mag. t.* 2856), et in *C. Gardeni*, *Hook. Bot. Mag. t.* 4895, perianthium fere tubulosum, recurvum v. pendulum. *C. miniata* *Hortul.* differt perianthio latiore subpatente erecto v. parum declinato staminibus divergentibus et a *Lindleyo*, *Gard. Chron.* 1854, 119, dubie ad *Valloiam* refertur, demum a *Hookero*, *Bot. Mag. t.* 4783, pro genere proprio *IMANTOPHYLLO*, a *Clivia* distincto habetur, sed characteres essentielles nobis cum *Clivia* bene convenire videntur. Genus quoad perianthium *Cyrtantho* valde affine, involucrum fere *Hemanthi*.

36. *Hæmanthus*, Linn. Gen. n. 400.—Perianthium rectum, erectum, tubo cylindraceo nunc brevissimo, nunc tenui sed brevi; lobi longiores, angusti, æquales. Stamina fauci æqualiter affixa, lobis sæpe longiora, filamentis filiformibus; antheræ parvæ, oblongæ, medio dorso affixæ, non curvæ. Ovarium 3-loculare v. jam sub anthesi abortu 1-loculare; stylus filiformis, stigmatē parvo v. breviter 3-fido; ovula in loculis solitaria v. 2 collateralia, majuscula, pendula. Bacca globosa v. oblonga. Semina sæpe abortu solitaria, loculum v. baccam totam replentia, testa membranacea.—Bulbus tunicatus. Folia 2 v. pauca in seriebus infra distinctis diversa. Scapus solidus, sæpe compressus. Flores in umbella densa fere capituliformi numerosi, pedicellis tenuibus sæpius brevibus. Bracteæ involucentes  $\infty$ , sæpe numerosæ coloratæ umbellam fere obtegentes, nunc pauciores tenuiores laxiores; interiores angustæ v. lineares.

Species ad 30, quarum 5 Africæ tropicæ, cæteræ Africæ australis incolæ. Kunth, Enum. Pl. v. 586. Baker in Gard. Chron. 1877, et in Trim. Journ. Bot. 1878, 166. Gærtn. Fruct. t. 11. Jacq. Hort. Schænbr. t. 56 ad 61 et 407 ad 413. Red. Lil. t. 39, 204, 320, 398. Andr. Bot. Rep. t. 318. Bot. Mag. t. 961, 1075, 1239, 1315, 1523, 1618, 1705, 1995, 3373, 3870, 4745, 5314, 5378, 5532, 5881, 5903, 6364. Bot. Reg. t. 382, 509, 984. Lodd. Bot. Cab. t. 240, 602, 702, 912, 1948.

Genus a Herbertio in series 3, ad foliorum indolem, divisum, a Salisbury in genera 5, characteribus male definitis, nec facile in speciminibus siccis observandis. Species tamen plurimæ in series 2 sequentes facile distribuendæ:—1. Folia in bulbo plura, sæpe undulata, basi in vaginas semet involventes contracta, scapo laterali. Huc pertinent *GYAXIS* (*H. puniceus*, Linn.) et *NÆRISSA* (*H. multiflorus*, Linn.) *Salisb. Gen. Pl. Fragm.* 131, speciesque paucæ affines. 2. Folia in bulbo 2, lata, sessilia, plana, haud raro ante anthesin evanida, scapo inter folia evoluta. Huc pertinent species numerosæ, genera *HÆMANTHUS* et *MELICHO*, *Salisb. l.c.* 130 formantes. *DIACLES*, *Salisb. l.c.* 130, est *H. virescens*, Herb., cui folia ad basin scapi 3-4, pubescentia v. ciliata.

37. *Euphane* (prius *Boophane*), *Herb. App.* 18; in *Bot. Mag. sub t.* 2578; *Amaryll.* 239, t. 22, 36, f. 7, 8.—Perianthium rectum, infundibuliforme v. hypocraterimorphum, tubo brevi; lobi æquales, lineares, erecto-patentes v. reflexo-patentissimi. Stamina fauci affixa, lobis longiora v. vix breviora, filamentis filiformibus; antheræ oblongæ, medio dorso affixæ. Ovarium 3-loculare; stylus filiformis, stigmatē parvo; ovula in loculis 2, collateralia (ex Kunth 2-4). Capsula obovoideo-3-quetra v. subglobosa, pericarpio membranaceo loculicida 3-valvi. Semina adhuc immatura globosa, lævia, in capsula sæpe abortu solitaria v. perpauca, matura ex Kunthio bulbiformia.—Bulbus tunicatus, sæpius magnus. Folia serotina, loriformia. Scapus 'solidus.' Flores in umbella numerosi, longe pedicellati. Bracteæ involucentes 2, latæ, interiores paucæ, breves, setaceæ.

Species bene notæ 2, Africæ tropicæ et australis incolæ, inter se pluribus notis dissimiles. In *B. toxicaria*, Herb.; Jacq. *Fragm.* t. 30 et 41 (*Hæmanthus*); *Bot. Mag.* t. 1217 (*Hæmanthus*); *Bot. Reg.* t. 567 (*Brunsvigia*), perianthium fere *Brunsvigia* sed tubus angustus distinctior, et ovula semper in quoque loculo 2 tantum nec  $\infty$  vidimus. In *B. ciliari*, Herb.; Jacq. *Fragm.* t. 40, 41 (*Hæmanthus*); *Bot. Reg.* t. 1153 (*Brunsvigia*), quæ genus *CROSSYNE*, *Salisb. Gen. Pl. Fragm.* 116, perianthii tubus campanulatus fere globosus, lobi reflexo-patentissimi; ovula pariter in quoque loculo 2 invenimus. *B. angolensis*, Baker in Trim. Journ. Bot. 1878, 197, perianthii tubo longissimo aliisque characteribus ad *Crinum* referenda est.

38. *Hyline*, *Herb. in Bot. Mag. sub t.* 3779.—Perianthii tubus vix ullus v. ad annulum reductus; lobi longissimi, lineares. Stamina ad basin loborum affixa, filamentis longissimis filiformibus basi membrana brevissima connatis; antheræ lineares, medio dorso affixæ. Ovarium oblongum, 3-loculare; stylus filiformis (stigmatē parvo); ovula in loculis  $\infty$ , funiculis distinctis 2-seriatim ascendentiâ. Fructus junior obovoideus, maturus ignotus.—Folia longe lanceolata, basi contracta. Flores in umbella  $\infty$ , pedicellati. Bracteæ involucentes 2, scariosæ, basi latiusculæ, interiores paucæ, lineares.

Species 1, Brasiliensis, e specimine unico Gardneriano floribus jam marcescentibus notâ. Kunth, Enum. Pl. v. 584.

39. *Eucrosia*, *Ker in Bot. Reg. t.* 207.—Perianthium tubo brevissimo obliquum v. leviter curvum; lobi oblongi conniventes. Stamina ad apicem tubi æqualiter affixa, declinata, longissime exserta, filamentis ima basi plus minus connatis, intus ad insertionem

callis prominulis auctis; antheræ oblongæ, medio dorso affixæ, non curvæ. Ovarium 3-loculare; stylus filiformis, stigmate parvo; ovula in loculis numerosissima, 2-seriata. Capsula (immatura) globoso-3-quetra v. 3-dyma. Semina numerosa, oblonga, angulato-compressa.—Bulbus tunicatus. Scapus ab aliis solidus dicitur, ab aliis fistulosus. Folia latiuscula, petiolata. Flores in umbella  $\infty$ , pedicellati, declinati. Bracteæ sæpius omnes lineares, 2 involucrantes basi plus minus dilatatæ.

Species 1, Andium Ecuadorense incolæ. *Kunth, Enum. Pl.* v. 504. *Hook. Exot. Fl.* t. 209. *Bot. Mag.* t. 2490.

40. *Callipsyche*, *Herb. in Bot. Reg.* 1842, *Misc.* 49; 1845, t. 45.—Perianthium tubo brevi cylindraceo obliquum; lobi oblongi, conniventes v. demum subpatentes. Stamina ad apicem tubi æqualiter affixa, e perianthio longissime exserta, declinata, filamentis distinctis basi intus callis oblongis prominulis auctis; antheræ oblongæ, medio dorso affixæ, non curvæ. Ovarium 3-loculare; stylus filiformis, stigmate parvo v. subcapitato; ovula in loculis numerosissima, 2-seriata. Capsula (immatura) 3-quetra v. a latere 3-loba. Semina  $\infty$ , oblonga, angulato-compressa.—Bulbus tunicatus. Folia 2, petiolata, oblonga v. latiuscula. Scapus 'fistulosus.' Flores in umbella  $\infty$ , interdum numerosi, pedicellis declinatis haud longis. Bracteæ omnes lineares, involucrantes 2-3 latiores, interiores plurimæ.

Species 3, Andium Ecuadorense et Peruviae incolæ. *Kunth, Enum. Pl.* v. 506. *Baker in Saund. Ref. Bot.* t. 167, 168. Genus vix ac ne vix ab *Eucrosia* differt filamentis a basi liberis.

41. *Eucharis*, *Planch. in Fl. des Serres*, t. 788.—Perianthii tubus cylindraceus, rectus v. recurvus, apice breviter in faucem amplius; lobi subæquales, latiusculi, patentes. Stamina fauci æqualiter affixa, lobis breviora, filamentis basi in membranam petaloideam dilatatis, membranis nunc in cyathum margine dentatum v. truncatum connatis, nunc distinctis v. multo reductis; antheræ lineares, medio dorso v. prope basin 2-lobam affixæ. Ovarium 3-loculare, loculo uno tamen interdum jam sub anthesi abortiente; stylus filiformis, stigmate breviter obtuseque 3-loba; ovula in loculis 2- $\infty$ , 2-seriatim superposita. Fructus ovoideus depresso-globosus v. 3-dymus, pericarpio tenui demum rupto. Semina (immatura) majuscula, abortu pauca v. solitaria.—Bulbus tunicatus. Folia petiolata, lata, venis dissitis venulis transversis tenuissimis connexis. Flores in umbella plures, candidi, speciosi. Bracteæ  $\infty$ , angustæ, quarum 2-3 exteriores involucrantes latiores.

Species 3, Andium Colombiæ incolæ. *Bot. Mag.* t. 4971. *Fl. des Serres*, t. 957, 1216. *Reg. Gartenfl.* t. 254.

Genus *Calliphuria* valde affine et species inter se characteribus diversis separandæ. In *E. grandiflora*, *Planch. (E. amazonica, Lindl.)*, cyathus stamineus perfectus, amplus, margine inter filamenta undulatus v. 2-lobus; ovarii loculi multiovulati. In *E. candida*, *Planch.*, membranæ staminæ latæ contiguae sed vix nisi ima basi connatæ, ad latera filamentorum utrinque dentatæ; ovarii loculi 2-ovulati. In *E. subdentula (Calliphuria subdentula, Baker in Bot. Mag.* t. 6289) membranæ staminæ multo minores, sæpe edentulæ, basi tamen plus minus in cyathum connatæ; ovarii loculi (in fl. examinatis) 6-ovulati.

42. *Calliphuria*, *Herb. in Bot. Reg.* 1844, *Misc.* 87.—Perianthium infundibuliforme, tubo fere a basi in faucem gradatim ampliato; lobi subæquales, lanceolati. Stamina fauci æqualiter affixa, lobis breviora, filamentis basi in membranam petaloideam dilatatis, membranis distinctis v. hinc inde connatis ad utrumque latus filamenti in lobum seu dentem erectum productis; antheræ lineares, medio dorso affixæ. Ovarium 3-loculare, loculo uno interdum jam sub anthesi abortiente; stylus filiformis, stigmate breviter obtuseque 3-loba; ovula in loculis 2, rarius 3, in medio loculo superposita. Fructus parvus, subglobosus, pericarpio tenui demum rupto. Semina in toto fructu sæpius solitaria v. gemina, majuscula, atra, crassiuscula.—Bulbus tunicatus. Folia petiolata, late oblonga, venis subdissitis venulis transversis connexis. Flores in umbella plures, albi, tenuiter pedicellati. Bracteæ  $\infty$ , omnes angustæ, 2-3 exteriores involucrantes latiores.

Species 2 v. 3, Andium Colombiæ incolæ: *C. Hartwegiana*, *Herb.*; *Kunth, Enum.* v. 692; *Bot. Mag.* t. 6259, cum altera adhuc inedita parum distincta. *C. subdentulam*, *Baker*, ad *Eucharidem* referimus.

43. *Eustephia*, Cav.  *Ic.* iii. 20, t. 238.—Perianthium anguste infundibuliforme, fere cylindraceum, tubo brevi; lobi longi, erecti. Stamina tubo æqualiter affixa, perianthio subæquilonga, filamentis distinctis ad duo tertias utrinque angustissime alatis, alis apice in setas divaricatas productis, filamento supra setas filiformi; antheræ oblongæ, medio dorso affixæ. Ovarium 3-loculare; stylus filiformis, stigmatē parvo capitato; ovula in loculis ∞, 2-seriata. Fructus . . .—Bulbus tunicatus. Scapus leviter compressus. Flores in umbella plures, pedicellati, demum recurvi v. penduli. Bractæe involucentes 2, anguste lanceolatae, interiores lineari-setaceæ. Perianthium coccineum, apice virescens. Filamentorum alæ infra setas parum prominulæ.

Species 1, a Cavanillesio aliisque ad specimina hortensia descripta, adest tamen in herb. Hook. specimen unum in Peruvia a Macleano lectum verisimiliter indigenum. *Kunth, Enum. Pl.* v. 514. *Baker in Trim. Journ. Bot.* 1878, 41. Genus primum a Herbertio in dubium revocatum, serius tamen, in *Bot. Mag.* sub t. 3865, recognovit et characteres rite indicavit.

44. *Urceolina*, Reichb. *Comp.* 61. (*Urceolaria*, *Herb. App.* 28; *Amaryll.* 193. *Colonia*, *Schult. Syst.* vii. 53, 893.)—Perianthium rectum, demum recurvum v. pendulum, tubo supra ovarium contracto, dein in faucem v. limbum oblongo-tubulosum v. urceolatum ampliato; lobi subæquales, conniventes v. connati, apice solo breviter patentes. Stamina fauci æqualiter affixa, perianthium sæpius excedentia, filamentis rectis ima basi plus minus membranaceo-dilatatis, membranis distinctis v. vix in anulum seu lineam parum prominulam conjunctis; antheræ oblongæ, infra medium dorsifixæ, non curvæ. Ovarium 3-loculare; stylus filiformis, elongatus, stigmatē parvo; ovula in loculis ∞, 2-seriata. Capsula ovoideo-globosa v. subpyramidata, 3-dyma v. sub-3-loba. Semina parva, oblonga v. subglobosa.—Bulbus tunicatus. Scapus 'solidus.' Folia plana, ovata oblonga v. angusta, in petiolum contracta. Flores in umbella ∞, longiuscule pedicellati. Bractæe involucentes 2, scariosæ, interiores lineares paucæ.

Species 3, Andium Americæ australis incolæ. In specie typica, *U. pendula*, *Herb.*; *Kunth, Enum. Pl.* v. 644 (*Collania*); *Bot. Mag.* t. 5464; Ruiz et Pav. *Fl. Per. et Chil.* t. 287 (*Crinum*), perianthium citrinum, limbo latiusculo urceolato apice virescente, membranæ basales filamentorum tenuissimæ perfecte v. imperfecte in lineam transversam connexæ. In *U. latifolia* (*LEPERIZA, Herb. App.* 41; *Amaryll.* 195; *Kunth, Enum. Pl.* v. 643; *Bot. Mag.* t. 4952); Ruiz et Pav. *Fl. Per. et Chil.* t. 284, f. b. (*Pancratium*), perianthium omnino *U. pendula*, nisi paullo angustius, et linea transversa inter filamenta (ex icone) magis conspicua, specimina tamen nobis desunt. *U. miniata* (*PENTLANDIA, Herb. in Bot. Reg.* 1839, t. 68, *Kunth, Enum. Pl.* v. 635; *SPHÆROTELE, Link, Kl. et Otto, Ic. Pl. Sel.* t. 38, non *Presl*) differt foliis angustioribus (latiora tamen vidimus quam in icone delineata semperque petiolata), perianthio miniato lobis brevibus solutis et filamentis basi angustius dilatatis, membranæ haud raro in tubo breviter transversæ, non tamen in anulum connatæ et in floribus diversis plus minus extensæ. *Stenomesson croceum*, Hook. *Bot. Mag.* t. 3615, excl. syn. est ex W. *Herb.* verisimiliter eadem species ac *U. miniata*, quoad analysē imperfecte delineata. Species hæc omnes nobis congeneres videntur et *Stenomesso* valde affines, differunt filamentorum membranæ basalibus obscuris nec in cyathum perfectum connatis. *Leperiza eucrosioides*, Baker, ad *Phædranassam* referenda videtur.

45. *Phædranassa*, *Herb. in Bot. Reg.* 1845, *Misc.* 16, t. 17.—Perianthium anguste infundibuliforme v. fere cylindraceum, tubo sæpius brevi superne leviter ampliato; lobi longi, subæquales, angusti, conniventes, apice breviter patentes. Stamina fauci æqualiter affixa, erecta, perianthium sæpius breviter superantia, filamentis basin versus plus minus membranaceo-dilatatis, sæpiusque ima basi annulo parum prominulo connexis; antheræ oblongæ, medio dorso affixæ, non curvæ. Ovarium 3-loculare; stylus filiformis, stigmatē parvo v. brevissime 3-fido; ovula in loculis numerosa, 2-seriata. Capsula subglobosa v. 3-dyma, loculicida 3-valvis. Semina oblonga, angulato-compressa, testa nigra.—Bulbus tunicatus. Scapus 'fistulosus.' Folia petiolata, angusta v. latiuscule oblonga. Flores in umbella ∞, speciosi, reflexi. Bractæe involucentes 2 v. rarius 3, anguste lanceolatae, interiores lineares v. 1-2 lineari-lanceolatae. Perianthium rubro-virens v. bicolor.

Species ad 4, Andium Americæ australis incolæ. Kunth, Enum. Pl. v. 500, species 3 descripsit quas Baker in Trim. Journ. Bot. 1878, 167, ad unius varietates reduxit, et in Saund. Ref. Bot. t. 46 duas novas addidit. Ad *Phædranassam* etiam referenda videtur *Leperiza eucrosioides*, Baker in Gard. Chron. 1878, ii. 170.

46. *Stenomesson*, Herb. App. 40; *Amaryll.* 198.—Perianthii tubus elongatus, subcylindræus, supra basin v. medium versus sæpe parum contractus, superne longe v. breviter ampliatus; lobi subæquales, erecti v. plus minus patentes. Stamina fauci æqualiter affixa, erecta, filamentis basi membranaceo-dilatatis, membranæ in cyathum petaloideum connexis, cyatho inter filamenta acuto sinuato v. truncato v. in dentes 1-2 producto; antheræ oblongæ, medio dorso v. prope basin affixæ, non curvæ. Ovarium 3-loculare; stylus filiformis, stigmatibus obtuso capitato v. vix brevissime 3-lobis; ovula in loculis  $\infty$ , 2-seriata. Capsula subglobosa v. 3-dyma, loculicide 3-valvis. Semina ubi nota compresso-plana, testa nigra.—Bulbus tunicatus. Scapus ex Kunthio solidus, ex Bakero in *S. incarnato* fistulosus. Folia coætanea, linearia v. latiuscule loriformia. Flores in umbella plures, rarissime ad unum reducti, sæpius pedicellis recurvis penduli. Bractææ involucentes 2, latæ v. angustæ, interiores lineares v. interdum una alterave latior. Perianthia rubra aurea v. fulva, speciosa.

Species 19 enumerat Baker, in Ref. Bot. sub t. 308, Americæ tropicæ incolas, in sectiones 2 sequentes distribuendas, quæ tamen inter se parum distinctæ etsi sæpius pro generibus propriis habentur:—

1. *Stenomesson*. Perianthium fere tubulosum, medio angustius, fauce longa latiuscule cylindræa. Ruiz et Pav. Fl. Per. et Chil. t. 284, f. a, t. 285 (*Pancratium*). Red. Lil. t. 187 (*Pancratium*). Bot. Mag. t. 2640, 2641, 3803. Bot. Reg. 1843, t. 2; 1844, t. 42. Baker in Saund. Ref. Bot. t. 22, 308. *CHRYSIPHIALA*, Ker in Bot. Reg. t. 778; Hook. Exot. Fl. t. 132. *SPHÆROTHELE*, Presl, Rel. Hænk. 119, t. 16, f. 2. NEERA, Salisb. Gen. Fl. Fragm. 109.

2. *Coburgia*. Perianthium quam in speciebus typicis longius, superne gradatim ampliatum, interdum fere anguste infundibuliforme. COBURGIA, Sweet, Brit. Fl. Gard. ser. 2, t. 17. Bot. Mag. t. 3221, 3865, 3867. Bot. Reg. t. 1497; 1842, Misc. 52; Saund. Ref. Bot. t. 309. CARPODETES, Herb. App. 41; *Amaryll.* 195.

CLINANTHUS, Herb. App. 40; *Amaryll.* 192, nomen ab auctore in Bot. Reg. 1839, Misc. 87 in CLINANTHUS mutatum, est *Coburgia humilis*, Herb. in Bot. Reg. 1842, t. 46, species scapo unifloro insignis.

CALLITHAUMA, Herb. *Amaryll.* 225, et in Bot. Mag. t. 3866, est *S. viridiflorum* (*Pancratium viridiflorum*, Ruiz et Pav. Fl. Per. et Chil. iii. 55), species a sectione *Coburgia* parum distincta, cyatho stamineo inter filamenta more *Hymenocallidis* (*Ismene*) in lobos petaloideos producto, hisque lobis interdum basi pone filamenta breviter connatis, staminibus specie intra cyathum affixis.

Genus *Chrysiphiala*, Ker, quale ab auctore propositum, includit *Stenomesson*, *Carpodetem* et *Leperizam*, Herb.

47. *Pancratium*, Linn. Gen. n. 404.—Perianthium infundibuliforme, tubo mediocri v. sæpius elongato superne in faucem ampliato; lobi angusti, erecto-patentes, subæquales. Stamina fauci æqualiter affixa, perianthio breviora, filamentis filiformibus basi membrana petaloidea cyathiformi v. patente connexis, cyatho (falso corona dicto) margine inter filamenta sæpius in dentes v. lobos 2 producto; antheræ oblongæ v. breviter lineares, medio dorso affixæ, curvæ. Ovarium 3-loculare; stylus elongatus, filiformis, stigmatibus parvo capitato; ovula in loculis numerosa, oblonga, 2-seriata. Capsula sæpe magna, subgloboso-3-quetra, loculicide 3-valvis. Semina  $\infty$ , mutua pressione angulata, testa crassiuscula laxa atra.—Bulbus tunicatus. Folia linearia v. loriformia. Scapus 'solidus' v. 'superne cavus.' Flores in umbella  $\infty$ , rarius ad 1 v. 2 reducti, magni, albi, sessiles v. distincte pedicellati. Bractææ involucentes 2, membranaceo-scariosæ, interiores lineares paucæ breves.

Species ad 12, regionis Mediterraneæ, ins. Canariensium et Indiæ orientalis incolæ. Kunth, Enum. Pl. v. 657. Baker in Trim. Journ. Bot. 1878, 168. Cav. Ic. t. 56. Salisb. in Trans. Linn. Soc. ii. t. 9; Parad. Lond. t. 86. Reichb. Ic. Fl. Germ. t. 371. Nees, Gen. Fl. Germ. Monocot. iii. n. 3. Sibth. Fl. Græc. t. 309. Wight, Ic. t. 2023. Red. Lil. t. 8, 153, 156. Bot. Mag. t. 718, 2538. Bot. Reg. t. 161, 174, 413, 479, 927.

*P. carolinianum*, Linn., quoad plantam Catesbæi, Nat. Hist. Carol. i. App. t. 5, est *P. maritimum*, ex Catesbæo et ex Chapmannio, Fl. S. U. S. 467, in uliginosis Carolinæ et Floridæ crescens. Specimina Americana tamen in herbariis nostris desunt, et quæ sub *P. caroliniano* missa sæpeque citata et a Kerio ad specimen in herb. Banks. delineata, semper ad *Hymenocallidem rotatam*, Herb., pertinent.

ALMYRA, *Salisb. in Trans. Hort. Soc. i.* 336 (HALMYRA, *Parlat. Nuov. Gen. Monocot.* 28; *Fl. Ital.* iii. 102), est *P. illyricum*, Linn. BOLLÆA, *Parlat. in Bull. Soc. Bot. Fr.* v. 509, est *P. canariense*, Ker. TIARANTHUS, genus a Herb. Amaryll. 202, 206 dubie propositum, includit *P. malabathricum*, Herb., *P. zeylanicum*, Linn., speciesque alias Asiaticas paucas. Hæ omnes characteribus potius specificis quam genericis a *Pancratii* typicis separantur.

48. *Hymenocallis*, *Salisb. in Trans. Hort. Soc. i.* 338.—Perianthium subhypocraterimorphum tubo longo apice vix v. non ampliato; lobi lineares, sæpe longi, demum patentes. Stamina apice tubi æqualiter affixa, filamentis filiformibus basi v. alte membrana petaloidea late cupulata cyathiformi v. expansa connexis; antheræ lineares, dorsifixæ, sæpius curvulæ. Ovarium 3-loculare, loculis tamen 1-2 sæpe jam sub anthesi abortu vacuis; stylus filiformis, stigmate parvo; ovula in loculis (an semper?) 1-2, a basi ascendentia. Capsula ovoidea v. globosa, carnosula, demum a latere fissa. Semen sæpe unicum perfectum, magnum, viride, testa crassissima spongiosa.—Bulbus tunicatus. Scapus 'solidus.' Folia loriformia v. latiuscula et in petiolum contracta. Flores in umbella ∞ v. rarius 1-2, sessiles v. brevissime pedicellati. Bractæ involucrantæ 2, membranaceæ, fere scariosæ, interiores plures lineares. Cyathus stamineus inter filamenta truncatus denticulatus v. undulatus, interdum petaloideo-productus, rarius more *Pancratii* 1-2 lobus.

Species descriptæ fere 30, sed ad dimidium saltem reducendæ, omnes Americanæ, tropicæ v. boreales. *Kunth, Enum. Pl.* v. 664. *Salisb. in Trans. Linn. Soc. ii. t.* 10 ad 13. *Ker in Journ. Sc. and Art, R. Inst.* iii. t. 3. *Willd. Hort. Berol.* t. 73. *Jacq. Hort. Vind.* iii. t. 11, 75. *Red. Lil. t.* 164, 155, 358, 412 ad 414. *Andr. Bot. Rep. t.* 536. *Bot. Mag. t.* 825 ad 827, 1082, 1453, 1467, 1879, 1941, 2621, 6562. *Bot. Reg. t.* 43, 221, 265, 940, 1641. *Lodd. Bot. Cab. t.* 19, 274, 286, 510, 558, 809, 834. *Knowles et Westc. Fl. Cab. ii.* 51 cum ic. (*Ismene*). *Saund. Ref. Bot. t.* 357 (icones veteres plurimæ nonnullaque recentiores sub *Pancratio*).

ISMENE, *Salisb. in Trans. Hort. Soc. i.* 342, *Kunth, Enum. Pl.* v. 681, a *Hymenocallide* nequaquam differt nisi cyatho stamineo petaloideo sæpius multo majore, filamentorum parte libera breviora interdum intra cyathum recurvo. Huc referimus icones sequentes, quarum plura sub *Pancratio*; *Jacq. Fragm. t.* 138. *Red. Lil. t.* 353. *Ruiz et Pav. Fl. Per. et Chil. t.* 283, f. a. *Bot. Mag. t.* 1224, 1561, 2685, 3675. *Bot. Reg. t.* 215, 600, 1665; 1841, t. 12. *Lodd. Bot. Cab. t.* 1266. *H. macrostephana*, Baker in *Bot. Mag. t.* 6436, omnino medium tenet inter *Hymenocallides* typicas et *Ismenem*.

CHORETIS, *Herb. Amar.* 219, f. 35, f. 1, t. 41, f. 32 ad 36; *Kunth, Enum. Pl.* v. 680; *Knowles et Westc. Fl. Cab. ii.* 101, cum ic., est *H. glauca*, Baker, species Mexicano-Texana, ab auctoribus distincta imprimis antheris altius nec medio dorso affixis, character tamen vix constans videtur. Semina omnino *Hymenocallidis*, cyathus stamineus inter formas typicas et *Ismenem* intermedius.

De seminis structura confer *Baill. in Bull. Soc. Bot. Fr.* iv. 1020. *A. Braun in Ann. Sc. Nat. ser.* 4, xiv. 10.

49. *Elisena*, *Herb. Amaryll.* 201, et in *Bot. Reg.* 1838, *Misc.* 45. (*Liriope*, *Herb. App.* 41, non *Lour.* *Liriope*, *Reichb. Cons.* 62).—Perianthii tubus brevissimus, lobi longi, lineares, patentes. Stamina fauci æqualiter affixa, lobi æquilonga v. longiora, filamentis basi in membranas petaloideas in cyathum connexas dilatatis, cyatho late tubuloso v. campanulato cum filamentis declinato v. recurvo, margine inter filamenta sæpius in lobos 2 recurvos interdum fere obsoletos producto; antheræ lineares, medio dorso affixæ, curvæ. Ovarium 3-loculare; stylus filiformis, stigmate parvo; ovula in quoque loculo 2, a basi ascendentia. Fructus immaturus *Hymenocallidis*, maturus ignotus.—Bulbus magnus, tunicatus. Scapus 'anceps, solidus.' Folia erecta, arcuato-lorata. Flores in umbella pauci, magni, brevissime pedicellati. Bractæ involucrantæ sæpius 3, lanceolatae, scariosæ, interiores paucæ angustiores.

Species editæ 3, inter se evidenter parum distinctæ, Andium Peruviz incolæ, et frequenter in hortis ad Limam cultæ ex Ruizio et Pav., qui specimina sylvestria non viderunt. *Kunth, Enum. Pl. v. 656. Ruiz et Pav. Fl. Per. et Chil. iii. t. 283, f. b (Pancratium). Bot. Mag. t. 3873. Saund. Ref. Bot. t. 264.*

50. *Vagaria*, Herb. Amaryll. 226. (Vaginaria, Kunth, Enum. v. 693.)—Perianthium anguste infundibuliforme, tubo tenui superne in faucem ampliato; lobi angusti, erecto-patentes. Stamina fauci æqualiter affixa, perianthio paullo breviora, filamentis basi leviter membranaceo-dilatatis et utrinque dente acuto v. setaceo-acuminato instructis in tubum decurrentibus; antheræ oblongæ, medio dorso affixæ. Ovarium ovoideo-globosum, 3-loculare; stylus filiformis, stigmatate parvo; ovula in quoque loculo 2-3, in medio loculo conferta, obovoidea, distincta. Capsula membranacea, subvalvatim dehiscens. Semina pauca, angulata, testa nigra.—Bulbus magnus, tunicatus. Folia loriformia, subserotina. Flores in umbella plures, breviter pedicellati, albi, quam in *Pancratii* multo minores. Bractæe involucrantes sæpius 2, lanceolatæ, interiores lineares, paucæ.

Species 1, Syriaca. *Red. Lil. t. 471 (Pancratium).*

51. *Euryclis*, Salisb. in Trans. Hort. Soc. i. 337. (Proiphys, Herb. Append. 42.)—Perianthium infundibuliforme, tubo erecto tenui haud longo; lobi subæquales, latiusculi, erecto-patentes. Stamina fauci æqualiter affixa, perianthio breviora, filamentis basi membrana petaloidea cyathiformi connatis, cyatho lato margine ad latera filamentorum utrinque dente v. lobo brevi aucto, interdumque inter filamenta fere ad basin fissio; antheræ oblongæ, sagittatæ, dorso juxta basin loborum affixæ. Ovarium 3-loculare; stylus filiformis, stigmatate parvo; ovula in loculis 2, in medio loculo subcollateralia. Capsula globosa, leviter succulenta. Semina sæpe abortu solitaria.—Bulbus tunicatus. Folia petiolata, orbiculato-cordata v. late ovali-oblonga, venis subdistantibus venulis transversis connexis. Flores in umbella plures, interdum numerosi, albi, speciosi, etsi quam in *Pancratii* minores, plus minus pedicellati. Bractæe involucrantes sæpius 2 v. 3, lanceolatæ, interiores lineares, paucæ v. numerosæ.

Species 2, Australiæ borealis, quarum una etiam per Archipelagum Malayanum dispersa. *Herb. Amaryll. 227. Kunth, Enum. Pl. v. 689. Benth. Fl. Austral. vi. 455. Salisb. Parad. Lond. t. 84. Red. Lil. t. 384. Bot. Mag. t. 1419, 3399. Bot. Reg. t. 715, 1506 (ic. veter. sub Pancratio).*

52. *Calostemma*, R. Br. Prod. 297.—Perianthium infundibuliforme, tubo erecto tenui haud longo; lobi subæquales, latiusculi, suberecti v. stellato-patentes. Stamina fauci æqualiter affixa, perianthium interdum excedentia; filamentis infra medium membrana tubuloso-cyathiformi connexis, cyatho margine inter filamenta truncato denticulato breviter diviso v. 1-2-lobo; antheræ oblongæ, medio dorso affixæ. Ovarium jam sub anthesi abortu 1-loculare; stylus filiformis, stigmatate parvo; ovula 2 v. 3, in medio loculo parieti affixa (axi ob loculos abortientes parieti adnato). Fructus oblique globosus, succulentus. Semen sæpius unicum, subglobosum, testa carnosula.—Bulbus tunicatus. Folia nunc angusta v. loriformia venis approximatis, nunc more *Euryclis* lata petiolata venis dissitis venulis transversis connexis. Flores in umbella plures, plus minus pedicellati, purpurascens albi v. flavi, quam in *Eurycle* paullo minores. Bractæe involucrantes 2-3, lanceolatæ, interiores lineares, paucæ.

Species 3, Australiæ, quarum 2 genuinæ extratropicæ, tertia (*C. album*, Br.) foliis *Euryclis*, in regione tropica obvia. *Benth. Fl. Austral. vi. 456. Bot. Mag. t. 2100, 2101. Bot. Reg. t. 421, 422; 1840, t. 19, 26.*

### TRIBUS III. ALSTŒMERIÆÆ.

53. ? *Exolirion*, Herb. App. 37; Amaryll. 125, t. 19, 20. (Kolpakowskia, Regel, Gartenfl. xxvii. 294, t. 953.)—Perianthium subinfundibuliforme, tubo 0; segmenta angusta, superne parum latiora, erecto-patentia, basi sæpe coherentia, demum fere semper solvenda. Stamina basi segmentorum affixa iisque paullo breviora, filamentis filiformibus;

antheræ oblongæ, erectæ, basifixæ, rectæ v. apice recurvæ. Ovarium oblongum, 3-loculare; stylus filiformis, elongatus, apice 3-fidus, ramis linearibus recurvis apice introrsum stigmatosis; ovula in loculis  $\infty$ , sæpius numerosa, 2-seriata. Capsula oblonga, apice truncata, pericarpio membranaceo, loculicide 3-valvis. Semina oblonga, angulato-compressa, testa nigra; embryo interdum albumine vix brevior.—Bulbus tunicatus. Caulis erectus, simplex v. rarius subramosus. Folia linearia, radicalia et secus caulem sparsa. Umbella terminalis, irregularis, sæpe prolifera, nunc ad florem unicum reducta, additis interdum umbellis 2-3-floris v. pedunculis 1-floris ad axillas foliorum. Bracteæ variae, sæpe basi scariosæ, longe acuminatæ.

Species v. potius varietates insignes 2, Asiæ mediæ et occidentalis incolæ. *Kunth, Enum. Pl. v. 816. Labill. Pl. Syr. Dec. ii. t. 1 (Amaryllis). Red. Lil. t. 241 (Amaryllis). Bot. Reg. 1844, t. 66. Regel, Gartenfl. xxix. 193 et t. 775, 910, 1014. Fl. des Serres, t. 2270.*

Genus anomalum, perianthio et bulbo potius *Euamaryllicarum*, caulis foliatus et inflorescentia laxa *Alstroemericarum*, a quibus patria longe distat.

54. *Alstroemeria*, Linn. Gen. n. 432 pro parte.—Perianthium infundibuliforme, plus minus irregulare, deciduum, tubo 0; segmenta angusta v. basi longe contracta, uno cujusve seriei duobus cæteris dissimile, annulo epigyno parum prominulo sublobato affixa. Stamina ad basin segmentorum annulo glanduloso affixa, filamentis filiformibus; antheræ ovoideæ v. oblongæ, basi intrusa affixæ, apertæ subteretes fere undique polliniferæ. Ovarium 3-loculare; stylus filiformis, basi interdum incrassato-3-queter, apice in ramos 3 breviter filiformes introrsum stigmatosos divisus; ovula in loculis numerosa. Capsula obovoidea v. subglobosa, annulo perianthii persistente coronata, truncata, styli basi parum accreta pyramidato-acuminata (falso operculata dicta), a basi ad apicem loculicide 3-valvis. Semina  $\infty$ , globosa, testa sæpius rugulosa albumini arcte adnata.—Rhizoma fasciculato-fibriferum (nunquam tuberosum?). Caulis erectus v. ascendens, elatiusculus v. nanus, simplex, foliatus. Folia alterna, conferta v. sparsa, angusta v. latiuscula, sessilia v. petiolata, rigidula v. membranacea, sæpe torsione petioli resupinata. Umbella terminalis, nunc densiflora, nunc laxa irregulariter composita v. ad racemum irregularem reducta. Flores pedicellati, speciosi. Bracteæ sub quoque pedicello foliaceæ, foliis caulinis tamen sæpius multo minores.

Species descriptæ ultra 50, verisimiliter tamen fere ad 30 reducendæ, Americæ australis tropicæ et extratropicæ incolæ. *Kunth, Enum. Pl. v. 758. Herb. Amaryll. 88. Schenk in Mart. Fl. Bras. iii. i. 171, t. 21, 22. Philippi in Linnaea, xxix. 67; xxxiii. 260; Descr. Nuev. Pl. ii. (1873) 70; Sert. Mendoc. 43. Baker in Trim. Journ. Bot. 1877, 259. Ruiz et Pav. Fl. Per. et Chil. t. 288, 289. Presl, Rel. Hænk. t. 22. Jacq. Hort. Schænbr. t. 465; Hort. Vind. t. 50. Red. Lil. t. 46. Hook. Exot. Fl. t. 64, 65, 181. Bot. Gard. t. 267, et ser. 2, t. 15, 159, 205, 277.*

55. *Bomarea*, Mirb. in Nouv. Dict. Hist. Nat. ed. 1 (1803-4)? ed. 2, iv. 118. (*Vandesia*, Salisb. in Trans. Hort. Soc. i. 332, absque char. *Vandesia* et *Danbya*, Salisb. Gen. Pl. Fragm. 57.)—Perianthium tubuloso-clavatum v. infundibuliforme, regulare v. vix irregulare, tubo 0; segmenta cujusque seriei æqualia, erecta conniventia v. apice patula, seriei interioris exterioribus majora minora v. forma diversa. Stamina ima basi segmentorum affixa iisque breviora, filamentis filiformibus; antheræ oblongæ, erectæ, basi intrusa affixæ. Ovarium 3-loculare; stylus a basi filiformis, apice in ramos 3 filiformes introrsum stigmatosos divisus; ovula in loculis  $\infty$ . Capsula (in speciebus perpaucis nota) turbinata v. subglobosa, 3-quetra v. obtuse 6-costata, vertice truncata. Semina subglobosa, testa (an semper?) pulposa.—Rhizoma v. radices plus minus (an semper?) tuberiferæ. Caules in speciebus normalibus scandentes v. volubiles, in paucis suberecti, simplices, foliati. Folia conferta v. sparsa et inflorescentia umbellata v. laxa omnino *Alstroemerie*. Perianthii segmenta variant omnia oblonga, v. interiora spathulata obovato-oblonga v. in stipitem contracta, quam exteriora sæpe teneriora et haud raro maculata.

Species ultra 50, Americæ australis imprimis Andinæ et Mexici incolæ. *Kunth, Enum. Pl. v. 787. Herb. Amaryll. 109. Schenk in Mart. Fl. Bras. iii. i. 167. Baker in Trim. Journ. Bot. 1882, 201. Ruiz et Pav. Fl. Per. et Chil. t. 287, f. a, t. 290, 291, f. a, t. 292 ad 296. Cav. Ic. t. 76. Poepp. et Endl. Nov. Gen. et Sp. t. 160. Hook. Bot. Misc. ii. t. 95. Link et Otto, Ic. Pl. Rar. t. 29. *COLLANIA*, *Herb. Amaryll. 103, t. 8 ad 11. Bot. Mag. t. 4247. Bot. Reg. 1847, t. 34, non Schult. (WICHURÆA, Röm. Syn. Amaryll. 277; Kunth, Enum. Pl. v. 781) et SPHÆRINE, Herb. Amaryll. 106, t. 12, 13, 16, 18; Kunth, Enum. Pl. v. 784, a Bomarea non differre videntur nisi caule breviorē erectiorē fere *Alstræmeria*. Capsulæ dehiscentia in genere variare videtur sed sæpissime ignota.*

56. **Leontochir**, *Philippi, Descr. Nuev. Pl. ii. (1873) 68.*—Perianthii tubus 0; segmenta discreta, erecta, omnia spathulata, in unguem contracta, basi cum glandula epigyna continua, interiora vix exterioribus angustiora. Stamina glandulis basalibus segmentorum affixa, perianthio breviora, filamentis subulatis; antheræ oblongæ, basi intrusa affixæ, erectæ. Ovarium turbinato-3-quetrum, 1-loculare, placentis 3 parietalibus; stylus brevis, columnaris, stigmate parvo; ovula in quaque placenta  $\infty$ , 2-seriata. Capsula 3-quetra, sub apice conico reliquiis glandulæ hypogynæ sub segmenta persistentis annulata, angulis valde prominentibus, apice 3-valvatim dehiscens, valvis medio placentiferis. Stamina subglobosa; embryo in albumine duriusculo brevis.—Herba foliosa, habitu *Alstræmeriæ*, fibris radicalibus (ex Philippo) tuberiferis. Folia crebra, lanceolata. Umbella terminalis, fere in capitulum condensata, recurva, floribus numerosissimis breviter pedicellatis Bracteæ parvæ.

Species 1, Chilensis. *Hook. Ic. Pl. t. 1389.*

#### TRIBUS IV. AGAVEÆ.

57. **Pollanthes**, *Linn. Gen. n. 426 (errore Polyanthus, Hort. Cliff. et auct. plur.).*—Perianthium infundibuliforme, tubo longiusculo sæpius incurvo superne ampliato; lobi erecto-patentes, interiores exterioribus paullo breviores. Stamina faucibus æqualiter affixa, lobis multo breviora, filamentis filiformibus liberis; antheræ lineares, medio dorso affixæ. Ovarium 3-loculare, vertice conico intra perianthium breviter protruso; stylus filiformis, stigmatibus 3 ovatis v. oblongis patentibus; ovula in loculis  $\infty$ . Fructus immaturus ovoideus, perianthio persistente coronatus, pericarpio membranaceo. Semina  $\infty$ , lata, compressiuscula, testa laxa, matura tamen non vidimus nec ab auctoribus recentioribus descripta.—Caulis e rhizomate breviter tuberoso erectus, simplex. Folia radicalia v. in parte inferiore caulibus lato-linearibus. Racemus terminalis, longus, simplex, candidus. Flores secus rhachin gemini, speciosi, odoratissimi. Bractea sub quoque pari spathacea, membranacea, perianthio brevior.

Species 1, Mexicana, jam diu in hortis Americanis Asiaticis Europæisque culta. *Salisb. in Trans. Hort. Soc. i. 41, t. 2. Red. Lil. t. 147. Bot. Mag. t. 1817. Bot. Reg. t. 63. Link et Otto, Ic. Pl. Sel. t. 24.*

Nomen Linnæanum (semel tantum lapsu *Polyanthus* scripsit) evidenter a πολὺς, candidus, et ἄνθος, flos, derivatur, nec a πόλις urbs, nec a πολλός, numerosus, ut velint nonnulli.

58. **Bravoa**, *Llav. et Lex. Descr. Pl. Nov. 1, 6. (Cætocapnia, Link et Otto, Ic. Pl. Rar. 35, t. 18.)*—Perianthium tubuloso-cylindraceum, persistens, infra medium incurvum, apice non ampliatum; lobi breves, ovati, subæquales. Stamina prope basin perianthii æqualiter affixa, eique subæquilonga, filamentis filiformibus; antheræ lineares, medio dorso affixæ. Ovarium ovoideum, vertice intra perianthium convexum; stylus filiformis, stigmate parvo; ovula in loculis  $\infty$ , 2-seriata. Capsula globoso-3-quetra, demum loculicide dehiscens (maturam non vidimus). Semina oblonga, compressa; ‘testa membranacea nigra albumini adhærens.’—Fibræ radicales tuberiferæ. Caulis basi bulbosus, tunicatus,

erectus, simplex. Folia radicalia pauca, ligulata, longe lanceolata v. linearia, caulina rara, multo minora. Flores secus rhachin racemi longi, gemini, paribus valde dissitis bractea scariosa stipatis.

Species 2 v. 3, Mexicanæ. *Kunth, Enum. Pl.* v. 848. *Hemsl. Diagn. Pl. Mex.* 54. *Bot. Mag.* t. 4741. *Fl. des Serres*, t. 520.

59. *Seeschneria*, *Kunth, Enum. Pl.* v. 844.—Perianthium angustum, tubo vix ullo; segmenta fere ad basin soluta, angusta, erecta, conniventia. Stamina basi segmentorum affixa, iisque subæquilonga, filamentis a basi subulatis; antheræ lineari-oblongæ, dorsifixæ. Ovarium oblongum, 3-loculare, sæpius in rostrum breve sub stylo parum ampliatum productum; stylus subulatus, vix basi crassior, stigmatē parvo ciliolato; ovula in loculis  $\infty$ , 2-seriata. Capsula ovoidea, obtuse 3-quetra, loculicide dehiscens. Semina numerosa, plano-compressa.—Rhizoma v. caudex brevissimus, crassum. Folia subradicalia, conferta, linearia v. lanceolata, spinuloso-denticulata v. integerrima. Scapus elatus, simplex v. superne laxè paniculatus. Flores secus rhachin v. ramos breves paucifloros penduli, breviter pedicellati, speciosi, virides v. rubescentes. Bractææ sub florum fasciculis membranaceo-scariosæ, latæ, sæpe coloratæ; bracteolæ sub pedicellis parvæ.

Species 3, Mexicanæ. *Bot. Mag.* t. 4642, 5203, 6091. *Regel, Gartenfl.* t. 851.

60. *Agave*, *Linn. Gen. n.* 431.—Perianthium subinfundibuliforme, tubo brevi nunc brevissimo rarius longiusculo cum ovarii rostro continuo, in faucem brevem v. oblongam ampliato; lobi lineares, erecti v. sub anthesi patentes. Stamina fauci ad basin loborum affixa iisque longiora, filamentis filiformibus v. basi membranaceo-complanatis; antheræ lineares, majusculæ, medio dorso affixæ. Ovarium globosum ovoideum v. oblongum, sæpe carnosum, plus minus in rostrum contractum, infra rostrum 3-loculare; stylus ad apicem rostri (specie in medio tubo perianthii) a basi brevissime conica filiformis, stigmatē parum incrassato capitato 3-dymo v. breviter 3-lobo; ovula in loculis numerosissima, 2-seriata. Capsula globosa ovoidea v. oblongo-cylindracea, sæpe 3-sulcata, coriacea, perianthio persistente diu coronata demum denudata, ab apice loculicide dehiscens. Semina numerosa, plano-compressa, oblique cuneata, dense superposita, testa nigra appressa.—Rhizoma breve v. in caudicem erectum lignosum productum. Folia radicalia v. ad apicem caudicis conferta, nunc crassa rigida fibroso-carnosa v. coriacea margine spinoso-serrata v. filamentosa, nunc tenuiora angustiora integerrima. Scapus terminalis, elatus, interdum giganteus. Flores nunc in spica laxa v. densa sparsi, ad quamquam bracteam solitarii v. gemini, nunc ad bracteas fasciculati v. in cymulas  $\infty$ -floras ad bracteas pedunculatas conferti, thyrsus magnum speciosum formantes. Capsulæ erectæ.

Species imprimis a hortulanis editæ ultra 120, per plurimæ tamen ad folia sola descriptæ et verisimiliter vix 50 bene distinctæ, per Americam australem, Mexico et Americæ borealis civitates australes dispersæ, quarum una in variis regionibus orbis veteris inquilina. *Kunth, Enum. Pl.* v. 818. *Baker in Gard. Chron.* 1877. *Jacobi, Vers. Syst. Ordn. Agav. in Hamb. Gart. Zeit.* 1864 ad 1866, et *Nachtr. in Abhandl. Schles. Gesellsch.* 1868-69.

Genus ad inflorescentiam in sectiones sequentes bene dividitur:—

1. *Enagave*. Florum cymæ pedunculatæ, thyrsus pyramidatum formantes. *Zucc. in Nov. Act. Nat. Cur.* xvi. 662, t. 49 ad 51. *Andr. Bot. Rep.* t. 433. *Reichb. Ic. Fl. Germ.* t. 374. *Wight, Ic.* t. 2024. *Bot. Mag.* t. 1522, 5097, 5493, 5893, 6589. *Saund. Ref. Bot.* t. 306, 307, 328. *Todaro, Hort. Bot. Panorm.* t. 15.

2. *Littæa*. Flores in fasciculis per 2- $\infty$  sessiles v. subsessiles, spicam longam densam formantes. *Red. Lil.* t. 328, 329. *Bot. Mag.* t. 4934, 4950, 5006, 5333, 5641, 5660, 5716, 6248, 6292. *Bot. Reg.* t. 1145. *Saund. Ref. Bot.* t. 163, 164, 215, 327. *Todaro, Hort. Bot. Panorm.* t. 8, 19, 24. *BONAPARTEA*, *Willd. Enum. Hort. Berol. Suppl.* 18, non *Ruiz et Pav.* *LITTÆA*, *Brignoli in Biblioteca Ital.* i. 100, ex *Henck. Donnersem. in Flora*, 1820, 45.

3. *Manfreda*. Flores sub quaque bractea solitarii, secus rhachin spicæ elongatæ dissiti. *Jacq. Ic. Rar.* t. 378. *Red. Lil.* t. 485. *Mart. Ausw. Merkw. Pfl.* t. 13 (*Polianthes*). *Bot. Mag.* t. 1157, 5122, 5940. *Bot. Reg.* 1839, t. 55. *Saund. Ref. Bot.* t. 326. *MANFREDA*, *Salisb. Gen. Pl. Fragm.* 78.

61. *Furcraea*, Vent. in Bull. Soc. Philom. Par. i. 65. (Fourcroya, Schult. Syst. vii. 42, 730. Funium, Willem. Herb. Maurît. 26.)—Perianthium tubo vix ullo fere ad basin partitum, segmentis æqualibus ovali-oblongis patentibus. Stamina basi segmentorum affixa iisque breviora, erecta, filamentis infra medium strumoso-dilatatis incrassatis superne breviter subulatis; antheræ lineari-oblongæ, dorsifixæ, basi breviter 2-lobæ. Ovarium oblongum, 3-loculare, superne sæpe in rostrum breve contractum; stylus columnaris, infra medium strumoso-incrassatus, angulis 3 valde prominentibus, stigmatē parvo vix 3-lobo ciliolato; ovula in loculis  $\infty$ , 2-seriata. Capsula oblonga v. ovoidea, 3-quetra, loculicide 3-valvis. Semina numerosa, plano-compressa.—Caudex erectus, simplex, interdum altissimus, foliis delapsis cicatrisatus. Folia ad apicem caudicis dense conferta, longa, sæpius deflexa, margine spinoso-dentata v. integerrima. Panicula terminalis, maxima, pyramidata, ramis primariis patentibus. Flores secus ramos ad axillas bracteæ breviter pedicellati, solitarii v. 2-3-nati fasciculati, bracteolis parvis stipati, et haud raro flos cum bracteolis in bulbillam irregulariter tunicatam mutatus.

Species a hortulanis enumerantur ad 15, plures tamen folis solis adhuc notis valde dubiæ remanent, omnes verisimiliter ex America calidiorē oriundæ, etsi hodie per regiones tropicas orbis veteris inquilinæ. Kunth, Enum. Pl. v. 839. Jacobi in Hamb. Bot. Zeit. 1866, 1867. Baker in Gard. Chron. 1879, i. 623, 656. Jacq. Ic. Rar. t. 379 (Agave). DC. Pl. Grass. t. 126. Zucc. in Nov. Act. Nat. Cur. xvi. 664, t. 48. Wight, Ic. t. 2025. Bot. Mag. t. 2250, 5163, 5519, 6148, 6160, 6543. Todaro, Hort. Bot. Panorm. t. 4.

62. *Doryanthes*, Corr. in Trans. Linn. Soc. vi. 211, t. 23, 24.—Perianthii tubus brevis, lobi subæquales, fere a basi patentēs. Stamina basi loborum affixa iisque breviora, filamentis lineari-subulatis basi leviter incrassatis; antheræ oblongo-lineares v. elongatæ, erectæ, basi intrusa affixæ. Ovarium 3-loculare; stylus elongatus, 3-sulcus, stigmatē vix incrassato 3-quetro; ovula in loculis  $\infty$ , 2-seriata. Capsula oblonga v. clavata, pericarpio coriaceo v. sublignoso, loculicide dehiscens. Semina in loculis numerosa, plano-compressa, crassiuscula, subreniformia.—Fibræ radicales fasciculatæ. Caulis elatus (8-25-pedalis). Folia inferiora numerosa, longissima, ensiformia, caulina minora sparsa. Flores speciosi, punicei, in spicas breves conferti, singuli bractea magna concava colorata fere involuti, spicis nunc in capitulum magnum terminale confertis, nunc secus pedunculum in thyrsium longum dispositis. Inflorescentia tota pulcherrime colorata.

Species 2, Australianæ. Benth. Fl. Austral. vi. 452. Bauer, Ill. Pl. Nov. Holl. t. 12 ad 14. Bot. Mag. t. 1685. Gard. Chron. 1874, i. 181, t. 44, 45, ic. in Fl. des Serres, t. 2097-8, iteratæ coloratæque.

#### TRIBUS V. VELLOZIEÆ.

63. *Vellozia*, Vand. Fl. Lusit. et Bras. Specim. 32, t. 2, f. 12. (Xerophyta, Juss. Gen. 50.)—Perianthium campanulatum v. infundibuliforme, tubo subnullo; segmenta æqualia, erecto-patentia, ovata oblonga v. basi longe angustata, sed inter se distincta. Stamina 6, v. interdum  $\infty$  in phalanges 6 2-6-andras basi connata, filamentis cæterum filiformibus, basi sæpe squamula lacera stipatis; antheræ lineares, basifixæ, loculis a latere dehiscentibus. Ovarium 3-loculare; stylus filiformis, stigmatē terminali capitato 3-dymo v. in lobos 3 crassiusculos patentes diviso; ovula in loculis numerosissima, placentis axillibus affixa. Capsula coriacea v. dura, globosa oblonga v. 3-quetra, vertice plana v. concava et cicatrice perianthii annulari v. 6-dentata coronata, lævis tuberculata v. echinata, vertice irregulariter v. plus minus in valvas 3 loculicide dehiscens. Semina in speciebus perpaucis nota, numerosa, angulata v. plano-compressa, testa nigra; embryo parvus nunc minimus, albumine carnosio duriusculo inclusus, ab hilo parum distans.—Caulis fibroso-lignosus, erectus, plerumque dichotome ramosus, interdum arborescens, foliorum delapsorum vaginis imbricatis v. squarrosis dense obtectus. Folia ad apices ramorum conferta, nunc brevina angusta strictaque, nunc elongata, anguste v. late linearia, rigida, sæpe pungentia. Pedunculi terminales, 1-flori, intra foliorum fasciculum solitarii v. 2-3-ni. Flores albi sulphurei violacei v. cærulei, sæpe speciosi.

Species ad 50, Africæ tropicæ et australis, Madagascaris et Brasilis incolæ. *Mart. Nov. Gen. et Sp.* i. 13, t. 6 ad 9. *Seub. in Mart. Fl. Bras.* iii. i. 73. *Walp. Ann.* i. 845.

Genus in sectiones 2 dividitur numero staminum nec habitu distinctas.

1. *Xerophyta*. Antheræ 6. Huc pertinent species Africanæ omnes cum nonnullis e Brasilianis. Inter Africanas aliæ habitum frutescentem v. arborescentem specierum Brasilianarum præbent, aliæ humiles sunt pedunculis floribusque tenuioribus. *Baker in Trans. Linn. Soc. Bot.* i. 264, t. 36. *Mart. Nov. Gen. et Sp.* t. 6, 9. *Pohl, Ic. et Descr. Pl. Bras.* t. 94. *Bot. Mag.* t. 5803. Huc etiam pertinet *Barbacenia squamata*, *Paxt. Mag.* xi. 75, cum ic., *Bot. Mag.* t. 4136.

2. *Euvellisia*. Phalanges 6, antheris in quaque phalange 2 ad 6. Species omnes Brasilianæ. *Mart. Nov. Gen. et Sp.* t. 7, 8. *Pohl, Ic. et Descr. Pl. Bras.* t. 93, 95 ad 100. *Seub. in Mart. Fl. Bras.* iii. i. t. 8 ad 10. *Mikan, Del. Fl. et Faun. Bras.* t. 7. *Bot. Mag.* t. 5514.

64. *Barbacenia*, *Vand. Fl. Lusit. et Bras. Specim.* 21, t. 1, f. 9.—Perianthium infundibuliforme, tubo supra ovarium plus minus evoluto; lobi subæquales, erecto-patentes. Stamina 6 v. 18, filamentis brevibus in speciebus 6-andris utrinque basi v. interdum ultra antheras appendiculatis v. auriculatis, in 18-andris plus minus distincte in phalanges 6 dispositis; antheræ lineares, basifixæ v. adnatæ, loculis introrsum v. a latere dehiscentibus. Ovarium 3-loculare; stylus filiformis, stigmate nunc oblongo v. subgloboso 3-dymo, nunc in lobos 3 breves obtusos diviso; ovula in loculis  $\infty$ , placentæ stipitatæ peltatæ affixæ, placenta in *B. purpurea* cum stipite 2-partita, in *B. flava* aliisque indivisa. Capsula oblonga obovoidea v. rarius globosa, glanduloso-verrucosa v. rarius lævis, vertice v. rimis lateralibus dehiscens. Semina (in *B. purpurea* sola nota) numerosa, parva, angulata, angulis interdum marginatis v. anguste alatis; embryonem in albumine fere granuloso prope hilum omnino inclusum vidimus (nec externum ut a Le Maoutio et Decaisne delineatur).—Caulis lignosi, ramosi, et folia omnino Velloziæ. Pedunculi intra folia longi, solitarii v. plures (usque ad 6), 1-flori, flore sæpe elongato.

Species descriptæ 18, Brasilis, Guianæ et Venezuelæ incolæ. *Mart. Nov. Gen. et Sp.* i. 17. t. 10 ad 14. *Seub. in Mart. Fl. Bras.* iii. i. 67, t. 8. *Walp. Ann.* i. 845, vi. 97. *Bot. Mag.* t. 2777. *Lemaire, Jard. Fleur.* t. 82, 198, 390. *Fl. des Serres*, t. 348.

RADIA, *A. Rich. in Kunth, Syn. Pl. Equin.* i. 300, prius ab auctore in Bull. Soc. Philom. Par. 1822, 79, sub nomine CAMPDEBILÆ edita, est *Vellozia tubiflora*, H. B. et K. Nov. Gen. et Sp. vii. 155, quam ob tubum perianthii longissimum ad *Barbaceniam* referrimus, etsi stamina ut in *Euvelloziis*  $\infty$ , in speciminibus nostris 18. Hæc species a Spruceo lecta fuit sub n. 3606 in iisdem rupibus grani- ticis Orinoci a Humboldtio indicatis. *Barbacenia Alexandrina*, Schomb. Tract. Braunsch. 1845 cum ic., e monte Roraima eadem videtur species et nomen Schomburgkii retinendum.

## ORDO CLXXV. TACCACEÆ.

Endl. Gen. 159. Lindl. Veg. Kingd. 149.

Flores regulares, hermaphroditi. Perianthium corollinum v. subherbaceum, supra ovarium late urceolatum v. globoso-campanulatum, tubo brevi, lato, ad os sæpe constricto; lobi 6, 2-seriati, subæquales v. interiores exterioribus latiores, omnes in globum conniventes v. exteriores v. omnes patentissimi. Stamina 6, tubo v. basi loborum affixæ, perianthio inclusa; filamenta brevissima, basi dilatata v. utrinque processu carnosulo aucta, superne in cucullam inflexam introrsum 2-costatam v. 2-cornutam dilatata. Antheræ intra cucullam sessiles, ovatæ v. oblongæ, loculis 2 parallelis longitudinaliter dehiscentibus. Ovarium inferum, globosum turbinatum v. 3-quetrum, 1-loculare, placentis 3 parietalibus. Stylus brevis, columnaris, sæpius 3-queter, perianthio inclusus; stigmata 3, lata, sæpe petaloidea, 2-fida, supra stylum reflexa, umbraculum simulantia. Ovula in quaque placenta  $\infty$ , anatropa v. fere amphitropa. Fructus globosus ovoideus turbinatus v. elongatus, sæpe 3-queter v. 6-costatus, baccatus indehiscensque v. rarius demum

3-valvis. *Semina*  $\infty$ , ovoidea, compressiuscula, longitudinaliter costis  $\infty$  striata, testa appressa. *Albumen* solidum cartilagineum v. demum fere granulosum. *Embryo* minutus, albumine inclusus, subbasalis v. lateralis, hilo propinquus v. plus minus distans.

Herbæ perennes, rhizomate tuberoso v. repente. Folia radicalia magna, petiolata, nunc indivisa integerrimaque, nunc varie lobata v. dissecta. Flores ad apicem scapi aphylli erecti, dense umbellati. Bracteæ exteriores nonnullæ (sæpius 4) latiusculæ, herbaceæ v. coloratæ, involucrium formantes, interiores sub pedicellis plures, longe filiformes, umbellam superantes pendulique (falso interdum pedicelli steriles dictæ). Perianthia sæpe brunnea lurida v. superne viridia, siccitate semper nigricantia.

Ordo parvus v. genus anomalum *Amaryllideis* arcte affine. Inflorescentia *Euamaryllearum* umbellatarum, semina et characteres plerique essentialia eadem, differunt foliis, perianthii forma, staminibus iis *Burmanniacearum* subsimilibus; ovarium etiam 1-loculare placentis parietalibus in *Amaryllideis* rarissimum est (in *Leontochiro* solo observatum).

Species ad 10, regionum tropicarum utriusque orbis incolæ.

#### CONSPECTUS GENERUM.

1. TACCA. Bacca indehiscens.—*Utriusque orbis reg. trop.*
2. SCHIZOCAPSA. Capsula 3-valvis.—*China.*

1. **Tacca**, Forst. Char. Gen. 69, t. 35 (*Ataccia*, Presl, Rel. Hænk. 149, in adnot. char. imperfecto).—Character ordinis. Bacca (an semper?) indehiscens.

Species ad 9, quarum 3 Americæ tropicæ, cæteræ regionum tropicarum orbis veteris incolæ. Kunth, Enum. Pl. v. 458 et 464 (*Tacca* et *Ataccia*). Seem. Fl. Vit. 101. Gärtn. Fruct. i. 43, t. 14.

Characteres quibus Presl genera duo distinxit variant de specie in speciem. In *T. pinnatifida*, Forst.; Lodd. Bot. Cab. t. 692, Regel, Gartenfl. t. 582, et in *T. artocarpifolia*, Seem.; Bot. Mag. t. 6124, folia, petiolo communi v. rhachi haud raro 3-fido v. varie diviso, semel v. bis pinnatisecta, segmentis valde inæqualibus, perianthii segmenta parum inæqualia in globum conniventia, bacca globosa apice contracta. In *T. palmata*, Bl. (*T. montana*, Rumph, Herb. Amb. v. 329, t. 115), folia simpliciter palmatifida v. fere pedatifida, perianthii segmenta parum inæqualia conniventia, bacca globosa. In *T. Parkeri*, Seem., et *T. lanceolata*, Spruce, ex America tropica, folia indivisa, perianthii segmenta parum inæqualia, ut videtur conniventia, bacca globosa. In *T. Sprucei*, Benth., e Barra do Rio Negro Americæ tropicæ, folium in specimine unico simpliciter pinnatifidum lobis 5 semipedalibus; perianthii segmenta exteriora acuminata, interiora breviora latiora; bacca immatura globosa. In speciebus integrifoliis Asiaticis, Roxb. Corom. Pl. t. 257, Bot. Mag. t. 1488 et 4589 (*Ataccia*) perianthii segmenta patentia, interiora exterioribus plus minus dissimilia, fructus (bene maturus nobis deest) sæpius insigniter 3-6-costatus, nunc breviter lateque turbinatus et in uno specimine subsiccus videtur, nunc longe turbinatus  $1\frac{1}{2}$ -pollicaris, in specie unica Burmanica oblongus et vix costatus.

2. **Schizocapsa**, Hance in Trim. Journ. Bot. 1881, 292.—Characteres omnes *Taccæ* specierum foliis indivisis, excepto fructu, qui (ex Hanceo) capsula 3-gona, vertice complanata, secus angulos in valvas 3 spongiosas mox recurvas medio seminiferas usque ad basin dehiscens.

Species unica, Chinensis, a nobis non visa.

### ORDO CLXXVI. DIOSCOREACEÆ.

Endl. Gen. 157. Lindl. Veg. Kingd. 213.

Flores in generibus normalibus unisexuales, dioici v. in racemis diversis monoici, in abnormibus hermaphroditi, in omnibus regulares, perianthio supero 2-seriatim 6-mero. Fl. ♂: *Perianthium* sæpius campanulatum v. explanatum, alte 6-fidum, lobis 2-seriatis, parum inæqualibus, variat angustum lobis longis erectis, v. oblongo-tubulosum v. fere urceolatum, ore constricto introrsum sæpe denticulis 6 reflexis instructo, lobis brevibus

patentibus. *Stamina* fundo perianthii affixa, nunc 6 omnia perfecta, v. alterna (lobis interioribus opposita) ad staminodia varie reducta, nunc 3, alternis omnino deficientibus; filamenta nunc brevissima nunc perianthio vix breviora, libera v. in centro floris in columnam brevissimam connata, apice recurva v. incurva. *Antherae* parvæ, nunc subglobosæ loculis distinctis at contiguis parallelis, nunc didymæ loculis ad connectivi apices filiformes (ramos filamenti) separatis. *Ovarii* rudimentum nunc crassum columnare apice 3-fidum, nunc parvum depressum pulvinatum, v. sæpe omnino deficiens. Fl. ♀ : *Perianthium* 6-fidum v. 6-partitum, quam in mare sæpius minus, persistens. *Staminodia* parva, 3-6 sæpius adsunt. *Ovarium* inferum, lineare v. oblongum, 3-quetrum, 3-loculare. *Styli* 3, brevissimi, distincti v. in columnam brevem coaliti, stigmatibus 3 terminalibus integris v. 2-fidis supra stylum recurvis. *Ovula* in quoque loculo 2, superposita, angulo centrali sub apice lateraliter affixa, pendula, anatropa v. fere amphitropa. *Fructus* capsularis, 3-valvis, v. baccatus indehiscens. *Semina* plano-compressa v. globosa, testa appressa. *Albumen* carnosum fere cartilagineum. *Embryo* albumine inclusus, parvus, ab hilo parum remotus. Flores ♂ generum abnormium in diversis generibus diversi.

Rhizoma in generibus normalibus tuberosum, carnosum crassum nunc maximum, hypogæum v. demum epigæum et fere lignosum. Caules tenues, volubiles, alte scandentes, v. rarius abbreviati flexuoso-procumbentes. Folia alterna v. interdum fere omnia opposita, petiolata, sæpe cordata digitato-3-∞-nervia et reticulato-venulosa, integra basi lobata v. in segmenta 3-∞ petiolulata digitatim divisa, petiolo ima basi sæpissime torto interdumque articulado, nunquam cirriferò. Flores parvi, spicati v. racemosi, sessiles v. varie pedicellati, bracteis parvis sæpe minutis v. 0. Racemi ♂ nunc simplices abbreviati v. longissimi, nunc paniculato-ramosi, ♀ simplices, elongati v. abbreviati, rarius ad flores 1-2 reducti. Habitus et inflorescentia generum abnormium valde varia.

Species ultra 160, per regiones calidiores utriusque orbis late dispersæ, plures etiam in America boreali et australi extratropica et in Africa australi, 2 solæ in Europa obviæ.

Ordo quoad genera normalia facile distinctus, *Smilacis* pluribus notis accedens, sed ovario infero ovulis anatropis embryo etc. bene separatus. Genera abnormia huc addantur ob characteres potius *Dioscoreaceis* quam ullum alium ordinem referentes.

#### CONSPECTUS GENERUM.

\* *Genera normalia, floribus unisexualibus dioicis v. rarius monoicis. Fl. ♂ in omnibus consimiles, 3-6-andri.*

1. *DIOSCOREA*. Capsula a latere 3-loba, lobis complanatis fere alæformibus. Semina complanata, deorsum v. circumcirca alata, rarius exalata.—*Area tota ordinis.*

2. *TESTUDINARIA*. Capsula *Dioscorea*. Semina sursum alata, samaroidea. Rhizoma epigæum maximum, lignosum.—*Afr. austr.*

3. *RAJANIA*. Capsula abortu monocarpica, complanata, sursum alata, samaroidea.—*Ind. occid.*

4. *TAMUS*. Bacca globosa, indehiscens. Semen globosum, exalatum, embryo minimo.—*Eur., Asia temp., Afr. bor., ins. Canar.*

\*\* *Genera abnormia, floribus hermaphroditis 6-meris 6-andris.*

5. *STENOMERIS*. Caulis volubilis. Paniculae axillares, brevès, laxæ. Perianthii lobi setaceo-acuminati. Ovarium 3-loculare, loculis multiovulatis.—*Ins. Philippin.*

6. *TRICHOPUS*. Caulis brevis, simplex, apice folium unicum et pedicellorum fasciculum ferens. Ovarium 3-loculare, loculis 2-ovulatis. Capsula indehiscens.—*Ind. or.*

7. *ONCUS*. Caulis alte scandens. Spica longa, laxa, subterminalis. Bacca oblonga, 3-locularis, polysperma.—*Cochinchina.*

8. *PETERMANNIA*. Caulis alte scandens. Racemi v. cymulae axillares, pauciflori. Ovarium 1-loculare, placentis 3 parietalibus ∞-ovulatis.—*Australia.*

1. *Dioscorea*, Linn. Gen. n. 1122.—Flores unisexuales, dioici v. in distinctis racemis ejusdem rami monoici. Fl. ♂ : Perianthium formas omnes in characterè ordinis enumeratas præbet, Stamina nunc 6 in centro floris conferta v. in columnam brevem

connata v. circa ovarii rudimentum distincta omniaque perfecta, nunc 3 perfecta cum staminodiis 3 alternantia, v. 3 absque staminodiis; antheræ parvæ, loculis contiguis v. ad apices connectivi filiformis separatæ. Ovarii rudimentum crassum carnosum v. 0. Fl. ♀: Perianthii segmenta 6, parva, distincta. Staminodia 3-6, minima, v. 0. Ovarium 3-quetrum, 3-loculare; styli 3, brevissimi, stigmatibus terminalibus integris v. 2-fidis supra stylum reflexis; ovula in loculis 2, superposita, sub apice lateraliter affixa. Capsula 3-quetra, angulis v. lobis valde prominentibus a latere complanatis fere alæformibus, loculicide dehiscens, costa marginali loborum a valvis sæpius dehiscencia solvenda. Semina valde compressa, nunc deorsum alata samaroidea, nunc circumcirca ala membranacea cincta, v. omnino exalata, nucleo irregulariter suborbiculato v. fere reniformi; albumen valde compressum, carnosum v. fere cartilagineum, in laminas 2 margine solo connatas divisum; embryo inter laminas brevis, ab hilo parum distans, oblongus, cotyledone suborbiculata terminatus.—Caules e tubere interdum magno hypogæo v. epigæo tenuiter volubiles, alte scandentes v. rarius humiles flexuoso-procumbentes. Folia alterna v. interdum opposita sicut inflorescentia variationes in characteribus ordinali descriptas præbent.

Species ex speciminibus in herbariis servatis ad 150, per totam aream ordinis dispersæ, plures tamen masculis solis notis adhuc incertæ. *Kunth, Enum. Pl. v. 325 ad 440. Walp. Ann. iii. 647; vi. 147. Philippi in Linnaea, xxix. 64; xxxiii. 254. Linn. Hort. Cliff. t. 28. Jacq. Ic. Rar. t. 626, 627. Salisb. Parad. Lond. t. 17. Wight, Ic. t. 810 ad 815, 878, 2060. Griseb. in Mart. Fl. Bras. iii. i. 25, t. 6. Wawra in Pr. Maxim. Reise, t. 88. Bot. Mag. t. 2825, 6409. De embryone cfr. Beccari in Nuov. Giorn. Bot. Ital. ii. 149, t. 4, et Solms Laub. in Bot. Zeit. 1878, 81, t. 4.*

Genus quoad specierum ordinationem adhuc valde confusum, speciminibus masculis cum fæmineis male comparatis, et monographo perito sedulo commendatur. Kunth aliique ad seminum indolem, genera sequentia proposuerunt, quæ tamen ad specimina mascula sola nequaquam distinguenda, et sectiones parum naturales formant:—

1. *BORDEREA*, *Miègev. in Bull. Soc. Bot. Fr. xiii. 374*, est *D. pyrenaica*, Bub.; *Gren. in Bull. Soc. Bot. Fr. xiii. 380, t. 1*, species nana, patria ab omnibus longe distans, 6-andra, filamentis brevissimis, capsula normali sed seminibus omnino exalatis.

2. *EPIPETRUM*, *Philippi in Linnaea xxxiii. 253*, est *D. humilis*, Bert. ex Colla, Pl. Chil. Rar. in Mem. Acad. Torin. xxxix. 12, t. 51, f. 2 (*D. pusilla*, Hook. Ic. Pl. t. 678) species Chilensis, nana, *D. pyrenaica* subsimilis, et flores ♂ pariter 6-andri, ♀ tamen sæpius ad axillas solitarii, pedunculo tenui spiraliter torto post anthesin intra terram penetrante, capsula matura sepulta; capsulæ lobi minus compressæ et vix alæformes. Semina ut in *D. pyrenaica* exalata, sed minus compressa. In uno specimine capsulæ adsunt fere maturæ ad axillas foliorum breviter tantum pedicellatæ, nec hypogææ.

3. *HELMIA*, *Kunth, Enum. Pl. v. 414* (*HAMATRIS*, *Salisb. Gen. Pl. Fragm. 11*) ab auctore distinguitur seminibus samaroideis deorsum in alam productis, character constans quoad species Asiaticas, etsi nec cum habitu nec floribus masculis consociatus. In *D. triphylla*, Linn., et *D. pentaphylla*, Linn., stamina alterna ad staminodia sterilia reducta, in plerisque speciebus stamina perfecta 6; in *D. daemonia*, Roxb., a qua *D. (Helmia) Dregana*, Kunth, ex Africa, non differre videtur, stamina 6 perfecta dicuntur, in speciminibus tamen pluribus 3 alterna ad staminodia reducta invenimus. Species Americane hæud numerosæ, nonnullæ 6-andræ, pleræque tamen 3-andræ absque staminodiis, in *D. convolvulacea*, Cham. et Schlecht, semina interdum non perfecte samaroidea ala etiam in margine superiore anguste prominente. *BORRHOSEIOS*, *Hochst. in Flora, 1844, Beil. 3*, species Abyssinica olim perperam ad *Passifloraceas* relata, a *D. (Helmia) pentaphylla*, Linn., non differre videtur.

4. *DIOSCOREA*, *Kunth, Enum. Pl. v. 325* (*MERIONE*, *DIOSCOREA* ET *POLYNOME*, *Salisb. Gen. Pl. Fragm. 12*) ad species quarum semina ala membranacea undique cincta limitatur, character tamen cum nullo alio constanter comitato, species plures (e.g. *D. triphylla* et *D. pentaphylla*) quarum auctor semina non vidit et ad *Dioscoream* retulit, semina præbent omnino *Helmiæ*.

*Grisebach, in Mart. Fl. Bras. iii. i. 27*, genus in sectiones dividit ad formas varias florum ♂, quæ tamen minime cum variationibus seminum conveniunt. Perianthium ♂ fere ad basin 6-partitum, campanulatum v. explanatum in speciebus omnibus gerontogæis et in plerisque Americanis, in nonnullis Americanis perianthium præsertim floris ♀, majus, late cupulatum semi-6-fidum. Huc pertinere videtur *SISMONDIA*, *Delpon in Mem. Acad. Torin. ser. 2, xiv. 394, t. 1*, species evidenter eadem ac *D. (Helmia) subhastata*, Vell. Pl. Flum. Ic. x. t. 121, a Kunthio ad *D. furcatam*, Griseb.,

relata. Racami ♂ et ♀ sæpe in eodem ramo evolvuntur, quod occurrit etiam in nonnullis aliis speciebus Brasilianis.

STROPHIS et ELEPHANTODON, *Salisb. Gen. Pl. Fragm.* 12, genera ad descriptiones Loureirianas *D. cirrosæ* et *D. eburnæ*, Lour., proposita, a botanicis recentioribus adhuc non recognita, valde dubia remanent.

SIEBERA, *Presl in Oken, Isis*, 1838, 275 (ex Pfeiff.), nomen a Steudelio in *BERIESAM* mutatum, genus propositum ad plantam a Siebero sub nomine falso *Dioscoreæ sativæ* distributam, est *Anredera*, Juss., supra p. 78, ubi synonymon casu omissum.

2. **Testudinaria**, *Salisb. in Burch. Trav.* ii. 147.—Flores dioici. Fl. ♂: Perianthium late campanulatum, 6-fidum, lobis subæqualibus v. interioribus paullo majoribus. Stamina 6, infra medium perianthii affixa, filamentis brevibus; antheræ parvæ, ovoideo-globosæ. Styli rudimentum parum prominens. Fl. ♀: Perianthii segmenta parva, distincta. Staminodia parva. Ovarium ovoideum v. oblongum, 3-loculare; styli brevissimi, stigmatibus recurvis 2-lobis; ovulâ in quoque loculo 2, superposita, pendula. Capsula 3-quetra, angulis seu lobis valde prominentibus a latere complanatis, cuneatis alæformibus. Semina valde compressa, sursum alata, samaroidea; albumen et embryo omnino *Dioscoreæ*.—Rhizoma seu caudex epigæum maximum, hemisphæricum, solido-carnosum v. lignosum, tessellato-lobatum. Caulis tenuiter volubilis, alte scandens. Folia alterna, caudata v. subdeltoidea. Flores parvi, ad axillas racemosi, omnino *Dioscoreæ*.

Species 2, Africæ australis incolæ. *Kunth, Enum. Pl.* v. 440. *Bot. Mag. t.* 1347 (*Tamus*). *Bot. Reg. t.* 921.

Genus vix non pro sectione *Dioscoreæ* habendum, nec differt nisi seminibus sursum nec deorsum nec circumcirca alatis, et tubere maximo tessellato. Tuber tamen non longe diversum a Wawrao in *Pr. Maxim. Reise, Bot. t.* 88 delineatur in *D. filiformi*, Griseb., e Brasilia.

3. **Rajania**, *Linn. Gen. n.* 1121.—Flores dioici. Fl. ♂: Perianthium late campanulatum v. explanatum, ad medium v. fere ad basin 6-fidum, lobis subæqualibus. Stamina 6, infra medium v. in fundo perianthii affixa, filamentis brevibus; antheræ parvæ, ovoideo-globosæ. Styli rudimentum pulvinatum v. vix prominens. Fl. ♀: Perianthii segmenta 6, parva, distincta. Staminodia minima v. 0. Ovarium ovoideum v. oblongum, 3-loculare; styli brevissimi, stigmatibus recurvis sæpius 2-lobis; ovula in quoque loculo 2 superposita, in uno solo loculo perfecta. Fructus abortu ad carpellum unicum reductus, plano-compressus, samaroideus, superne in alam membranaceam productus, indehiscens, 1-spermus, perianthii reliquiis ad unum latum infra alam persistentibus, et loculis 2 abortivis interdum ad latus fructus leviter prominentibus. Semen plano-compressum, exalatum, albumine more *Dioscoreæ* in laminas 2 diviso, embryonem brevem includente.—Radix 'tuberosa.' Caulis volubilis, et habitus omnino *Dioscoreæ*. Folia alterna, indivisa, hastata cordato-oblonga v. linearia. Flores parvi, racemosi, ♂ secus rhachin sæpe fasciculati v. in racemulos brevissimos dispositi; racemi ♀ et interdum utriusque sexus simplices, pedicellis sparsis brevibus tenuibus.

Species nobis adsunt 6, omnes Indiæ occidentalis incolæ. *Kunth, Enum. Pl.* v. 445, excl. *R. brasiliensis*, Griseb., quæ certe *Dioscoreæ* species (*D. cinnamomea*, Hook.). *Plum. Descr. Pl. Amer. t.* 98; *Pl. Amer. ed. Burm. t.* 155. *Gertn. Fruct. i. t.* 14. *Hook. Ic. Pl. t.* 1392.

Folia in *R. angustifolia*, Sw., haud raro hinc inde in ramulo brevissimo conferta folium digitatum 3-5-foliolatum simulant, et huc forte pertinet *R. quinquefolia*, Linn. Specimina ♂ Brasiliæ a Grisebachio ad *R. lobatam*, Poir., relata, verisimiliter ad *Dioscoreæ* speciem pertinent.

4. **Tamus**, *Linn. Gen. n.* 1119. (*Tamnus*, *Juss. Gen.* 43.)—Flores dioici. Fl. ♂: Perianthium urceolato-campanulatum, demum subrotatum, alte 6-fidum, lobis subæqualibus. Stamina 6, in fundo perianthii circa rudimentum styli depressum v. breviter 3-fidum affixa, perianthio parum v. multo breviora, filamentis filiformibus; antheræ parvæ, ovoideæ. Fl. ♀: Perianthii segmenta 6, parva, angusta, distincta. Staminodia minuta v. 0. Ovarium 3-loculare; stylus brevis columnaris, stigmatibus 3 recurvis emarginatis; ovula in loculis 2, superposita. Bacca subglobosa, succulenta, indehiscens. Semina pauca,

ovoidea v. subglobosa, exalata, testa appressa; albumen solidum, durum, nec 2-partibile; embryo juxta hilum inclusus, obovodeo-oblongus, cotyledone crassiuscula parum dilatata. —Radix tuberosa. Caulis volubilis et habitus omnino *Dioscoreæ*. Folia alterna, cordata, integra v. 3-loba. Racemi axillares, ♂ sæpe elongati, laxi, floribus secus rhachin solitarii pedicellati v. in racemulos seu cymulas laxè paucifloras dispositi; ♀ brevissimi, pauciflori, interdum ad fasciculum sessilem reducti.

Species 2, altera Canariensis, altera per Europam Africam borealem et Asiam temperatam late dispersa. *Kunth, Enum. Pl.* v. 453. *Reichb. Ic. Fl. Germ.* t. 439. *Nees, Gen. Fl. Germ. Monocot.* iii. n. 1. *Sibth. Fl. Græc.* t. 958. *Webb, Phytogr. Canar.* t. 223.

5. *Stenomeris*, *Planch. in Ann. Sc. Nat. ser. 3, xviii.* 319.—Flores hermaphroditi. Perianthii tubus supra ovarium urceolatus, ad os parum constrictus, lobi 6, e basi parum latiore setaceo-acuminati fere cirriformes. Stamina 6, sub apice tubi 1-seriatim affixa, deflexa, filamentis brevissimis; antherarum connectivum oblongum, crassiusculum, ultra loculos in appendicem elongatam filiformem apice cochleatam v. stylo adherentem productum. Ovarium 3-loculare; stylus brevis, crassus, obverse pyramidatus, 3-pterus, lobis lateralibus longitudinaliter sulcatis (intra sulcum stigmatosis?); ovula in loculis numerosa, 2-seriatim superposita, anatropa. Fructus (in specimine unico immaturus) elongatus, lobis 3 longitudinalibus more *Dioscoreæ* a latere compressis quasi 3-alatus. Semina . . .—Caulis alte volubilis, uti tota planta glaber, siccitate nigricans. Folia alterna, petiolo basi torto, cordata, acuminata, dissite ∞-nervia, nervis venis transversis dissitis connexis, inter venas reticulato-venulosa. Paniculæ axillares, angustæ, laxæ, folia rarius superantes. Flores pedicellati, secus rhachin laxè breviterque cymulosi. Fructus unicus a nobis visus, jam 10 poll. longus,  $\frac{1}{2}$  poll. latus.

Species 2, ins. Philippinarum incolæ, una sola a nobis visa, *Walp. Ann.* vi. 41, altera a *Beccario, Nuov. Giorn. Bot. Ital.* ii. 8, t. 2 descripta et delineata, ad specimen Cumingianum in Herb. Webb. n. 1739, sed hic verisimiliter error in scheda latet, nam planta a Cumingio distributa sub n. 1739 est *Leptaspis urceolata*. Genus *Stenomeris* ab ordine longe differt antheris, ovulis numerosis aliisque notis, sed nulli alio affinius videtur.

6. *Trichopus*, *Gærtn. Fruct.* i. 44, t. 14. (*Trichopodium*, *Lindl. Bot. Reg. sub t.* 1543. *Podianthus*, *Schnitzl. in Bot. Zeit.* 1843, 739.)—Flores hermaphroditi. Perianthium supra ovarium campanulatum, alte 6-fidum, lobis subæqualibus. Stamina 6, ad basin loborum affixa, filamentis brevissimis; antheræ breves, latæ, connectivo in appendicem rectam producto. Ovarium 3-loculare; stylus brevissimus, stigmatibus 3 crassis brevibus reflexis 2-fidis; ovula in quoque loculo 2, superposita, sub apice laterali affixa, anatropa. Capsula ovoidea, 3-quetra, perianthio emarcido coronata, indehiscens. Semina oblonga, crassa, transverse rugosa, extrorsum in longitudinem profunde involuto-sulcata, medio ad hilum introrsum fissura transversa notata, testa tenuissima; embryo prope hilum in albumine cartilagineo inclusus.—Rhizoma breve, horizontale. Caules breves, simplices, erecti, apice folium unicum cum fasciculo pedicellorum ferentes. Folium petiolatum, variat a lineari-lanceolato ad cordato-ovatum v. 3-angulare, 3-7-nerve et reticulato-venosum. Pedicelli filiformes, 1-flori.

Species 1, Zeylanæ et Peninsulæ Indiæ Orientalis incola. *Beccari, Nuov. Giorn. Bot. Ital.* ii. 13, t. 3. *Bedd. Ic. Pl. Ind. Or.* t. 290.

Genus a *Lindley* *Aristolochiaceis* relatum, ab auctoribus recentioribus ad *Dioscoreaceas* translatum, a quibus differt habitu, antheris et seminibus. *Beccari* bene cum utroque ordine comparat.

7. ? *Oncus*, *Lour. Fl. Cochinch.* 194. (*Oncorhiza*, *Pers. Syn.* i. 374.)—Flores hermaphroditi. Perianthium subcampanulatum, pilosum, tubo oblongo 6-gono sursum ampliato; limbus 6-fidus, reflexus, parvus, laciniis subulatis. Stamina 6, basi laciniarum perianthii affixa, filamentis brevissimis; antheræ subrotundæ, minimæ. Ovarium oblongum, 6-sulcatum, 'superum' sed 'media sua parte tubo perianthii coalitum'; stylus brevis,

3-partitus, stigmatibus 3 oblongis reflexis apice 2-fidis. Bacca 'corollina' (corollina?), oblonga, 6-gona, 3-locularis, polysperma. Semina subrotunda.—Frutex scandens, teres, ramosus, inermis, absque cirris. Tuber maximum, ovatum, inæquale, farinosum, edule. Folia alterna, cordata, subrotunda, acuminata. Spicæ longæ, laxæ, tenues, subterminales. Bractæ 2, parvæ, erectæ, basin perianthii amplexantes. (*Char. ex Lour.*)

Species 1, Cochinchinensis, a nobis non visa, nec a botanicis recentioribus recognita, et genus adhuc dubium remanet.

8. *Petermannia*, F. Muell. in Benth. *Fl. Austral.* vi. 462.—Flores hermaphroditi. Perianthium supra ovarium fere ad basin 6-partitum; segmenta oblonga, patentia v. demum reflexa, subæqualia v. interiora paullo angustiora. Stamina 6, basi perianthii affixa, segmentis vix breviora, filamentis erectis brevibus; antheræ oblongæ, erectæ, loculis contiguis extrorsum dehiscentibus. Ovarium inferum, ovoideum, apice contractum, 1-loculare, placentis 3 parietalibus; stylus tenuiter columnaris, perianthio brevior, stigmatibus terminali capitato; ovula in quaque placenta  $\infty$ , horizontalia v. pendula (anatropa?). 'Bacca 1-locularis, polysperma.'—Frutex alte scandens, ramosus, caule sæpe aculeolato. Folia alterna, breviter petiolata, oblonga v. lanceolata, acuminata, rigidula, subparallela  $\infty$ -nervia, nervis tamen interioribus cum costa confluentibus, venulis reticulatis. Cymulæ v. racemuli laxi, ad axillas laterales v. oppositifolii, pauciflori, rhachi flexuosa; inflorescentia interdum in cirrum ramosum mutata.

Species 1, Australiana. Hook.  *Ic. Pl. t.* 1391. Genus habitu perianthio et staminibus potius *Liliaceis* (*Smilacis*) quam *Dioscoreaceis* accedit, sed ovarium distincte inferum, et in utroque ordine insigne est placentis parietalibus multiovulatis. Baccam unicam olim vidimus in herb. F. Mueller. Specimina serius a C. Mooreo accepta bene florida fructum non ostendunt.

## ORDO CLXXVII. ROXBURGHACEÆ.

Wall. *Pl. As. Rar.* iii. 50. Endl. *Gen.* 157 (sub *Smilacis*). Lindl. *Veg. Kingd.* 219.

Flores hermaphroditi, regulares. Perianthium corollinum; lobi v. segmenta 4, 2-æriata, subæqualia. Stamina 4, basi loborum v. segmentorum affixa v. fere hypogyna; filamenta crassiuscula, libera v. basi in annulum connata. Antheræ erectæ v. dorsifixæ, loculis 2 parallelis v. divergentibus rima longitudinali introrsum dehiscentibus. Ovarium liberum v. semi-inferum, 1-loculare; stigma terminale, sessile, parvum, pulvinatum v. didymum. Ovula 2- $\infty$ , in fundo loculi erecta v. ab apice pendula, anatropa. Capsula demum in valvas 2 dehiscens. Semina oblonga, funiculo plus minus squamuloso-crinifero quasi stupposo affixa, testa coriacea. Albumen carnosum-corneum. Embryo axillis, minimus v. longiusculus, radícula ab hilo parum remota.

Caules e rhizomate perenni alte volubiles, v. erecti simplicesque, v. parce ramosi. Folia alterna v. sparsa, petiolata, 3- $\infty$ -nervia, venulis transversis crebris parallelis. Pedunculi axillares, filiformes, 1-flori v. laxè pauciflori, v. densè minuteque  $\infty$ -flori.

Species ad 8, Asiæ et Australiæ tropicæ, Japoniæ et Floridæ incolæ.

Ordo *Liliaceis* affinis, differt imprimis floribus in quaque serie constanter 2-meris, et ovarii indole. Foliorum venatio etiam peculiaris.

### CONSPECTUS GENERUM.

1. *STEMONA*. Caulis alte volubilis. Flores majusculi. Antherarum connectivum ultra loculos in appendicem linearem productum. Ovula et semina e fundo loculi erecta.—*Asia et Australia trop.*

2. *CROOMIA*. Caulis erectus, simplex, apice paucifolius. Pedunculi 1-2-flori. Antheræ inappendiculatæ. Ovula et semina ex apice loculi pendula.—*Florida, Japonia.*

3. *TRICHONEURON*. Caulis erectus, parce ramosus, paucifolius. Pedunculi apice flores  $\infty$  minuti confertos ferentes. Antheræ inappendiculatæ, loculis apice divergentibus. Ovula ex apice loculi pendula.—*Ind. or.*

1. *Stemona*, *Lour. Fl. Cochinch.* 404. (*Roxburghia*, *Banks in Roxb. Corom. Pl.* i. 29, t. 32.)—Perianthii segmenta 4, a basi distincta, 2-seriata, erecta, acuminata,  $\infty$ -nervia. Stamina fere hypogyna, filamentis brevibus plus minus in annulum connatis; antheræ lineares, erectæ, connectivo incrassato ultra loculos in appendicem linearem erectam producto. Ovarium liberum, 1-loculare, stigmatibus parvis sessilibus coronatum; ovula in fundo loculi 2- $\infty$ , erecta, funiculis brevibus v. longiusculis. Capsula ovoidea v. oblonga, 2-valvatis dehiscens. Semina erecta, oblonga, teretia, sulcato-striata, apice breviter rostrata, testa crassiuscula, funiculo plus minus squamuloso-crinifero quasi stipposo; embryo longiusculus, radícula juxta hilum.—Radix tuberosa, fusiformis. Caulis volubilis, alte scandens, uti tota planta glaberrimus. Folia alterna, petiolo inarticulato, lanceolata ovata v. cordata, nitidula, 3- $\infty$ -nervia, venulis transversis creberrimis. Pedunculi axillares, nunc breves 1-flori solitarii v. 2-3-ni, nunc racemoso-pauciflori v. in ramulum foliatum florentemque abeuntes. Flores majusculi.

Species 4 v. 5, Indiæ orientalis, Archipelagi Malayani et Australiæ tropicæ incolæ. *Kunth, Enum. Pl.* v. 286. *Benth. Fl. Austral.* vii. 1. *Sm. Exot. Bot.* t. 57. *Wall. Pl. As. Rar.* t. 282. *Wight, Ic.* t. 2061. *Bot. Mag.* t. 1500; (omnes sub *Roxburghia*). *Kurz in Journ. Asiat. Soc. Beng.* xlii. 109, t. 10.

2. *Croomia*, *Torr. et Gr. Fl. N. Amer.* i. 663.—Perianthii segmenta 4, a basi distincta, 2-seriata, patentissima. Stamina fundo perianthii affixa, segmentis opposita iisque subbreviora, filamentis crassiusculis liberis; antheræ ovali-oblongæ, dorsifixæ, loculis contiguis, connectivo inconspicuo. Ovarium lata basi sessile v. toro leviter immersum, depressoglobose, 1-loculare, stigmatibus pulvinatis parvis prominente coronatum; ovula 4-6, ab apice loculi pendula. Capsula oblique ovoidea, rostrata, pericarpio subherbaceo demum 2-valvi. Semina pauca, ab apice loculi suspensa, funiculo dense crinifero quasi stipposo, testa coriacea; embryo minimus, hilo proximus.—Rhizoma repens. Caules erecti, simplices, basi vaginis 1-2 parvis stipati, apice breviter foliati. Folia pauca, irregulariter conferta v. parum dissita, petiolata, oblongo-cordata, 5- $\infty$ -nervia, transversim venulosa. Pedunculi axillares, filiformes, folio multo breviores, 1-2-flori. Flores parvi. Bracteæ minimæ.

Species 2, altera Floridana, altera Japonica. *A. Gray in Mem. Amer. Acad. ser.* 2, vi. 453, t. 31, et *Gen. Pl. U. S. Illustr.* t. 37. *Miq. in Ann. Mus. Lugd. Bat.* ii. 138.

3. *Stichoneuron*, *Hook. f. gen. nov.*—Perianthium ima basi ovario adnatum, campanulatum, 4-fidum; lobi ovati, 2-seriati, subæquales. Stamina 4, basi loborum affixa iisque breviora, filamentis crassis; antherarum loculi discreti, ad apicem filamentum divergentes, connectivo inappendiculato. Ovarium semi-inferum, 1-loculare, vertice intra perianthium convexum, stigmatibus 3 brevissimis latis obtusissimisque coronatum; ovula  $\infty$ , ab apice loculi pendula, anatropa. Fructus . . .—Rhizoma breve. Caules erecti, superne in ramos 2-3 paucifolios divisi. Folia alterna, brevissime petiolata, membranacea, pinnatim 3-5-nervia, venulis transversis crebris tenuibus. Pedunculi axillares, rigidule filiformes. Flores ad apicem pedunculi plures, minuti, confertim breviterque racemulosi, pedicellis brevibus filiformibus, bracteis setaceis parvis imbricatis.

Species 1, Indiæ orientalis incolæ. *Wall. Cat. Herb. Ind.* n. 9110 (absque nomine). Genus evidenter *Croomiæ* affine, etsi fructus et semina adhuc ignota.

ORDO CLXXVIII. **LILIACEÆ.**

Endl. Gen. 139. Lindl. Veg. Kingd. 200. SMILACEÆ, Endl. Gen. 152. Lindl. Veg. Kingd. 215. Alph. DC. Monogr. Phaner. i. 1. PHILESIACEÆ et TRILLIACEÆ, Lindl. Veg. Kingd. 217, 218. GILLIESIACEÆ, Lindl. Veg. Kingd. 196. MELANTHACEÆ, Endl. Gen. 133. Lindl. Veg. Kingd. 198.

*Flores* hermaphroditi v. rarius abortu unisexuales, regulares v. rarius irregulares. *Perianthium* inferum, ab ovario liberum v. rarissime basi brevissime adnatum, marcescens persistensque v. mox deciduum, corollinum, tubo 0 v. plus minus evoluto; segmenta v. lobi 6, rarissime 4, 8, v.  $\infty$ , plus minus distincte 2-seriata, utriusque seriei similia v. parum diversa, in quaque serie sæpissime similia, leviter imbricata v. exteriora valvata. *Stamina* sæpissime 6, hypogyna v. perianthio affixa, segmentis v. lobis opposita; filamenta libera v. varie connata. *Antheræ* longæ v. breves, basi v. dorso v. introrsum varie affixæ, loculis 2 sæpius parallelis, rima longitudinali v. rarius poro terminali dehiscentibus. In paucis generibus stamina seriei interioris desunt, v. plus quam 6 adsunt, v. androecium valde obliquum v. uno latere tantum antheriferum, v. antheræ loculi in unum confluentes. *Ovarium* superum, rarissime basi tubo brevi perianthii adnatum, sæpissime 3-loculare placentis axilibus, v. interdum 1-loculare placentis 3 parietalibus, rarissime cum perianthio 2-merum v. 4- $\infty$ -merum. *Stylus* nunc filiformis v. columnaris, indivisus, stigmate terminali parvo capitato dilatato v. 3-dymo, nunc apice v. fere a basi 3-fidus v. in stylos 3 distinctos solutus, ramis stylisve filiformibus v. brevibus, apice v. superne introrsum stigmatosis, v. rarius stigmata ad apicem ovarii sessilia. *Omula* in quoque loculo 2 collateralia, v.  $\infty$  2-seriatim superposita, rarius in loculis solitaria, v. numerosissima irregulariter conferta, anatropa hemianatropa v. in paucis generibus orthotropa, basi medio v. apice lateraliter affixa v. rarius horizontalia. *Fructus* nunc baccatus v. carnosus, indehiscens, nunc siccus, capsularis, loculicide v. septicide dehiscens v. partibilis, v. rarius irregulariter ruptus, in paucis generibus 3-lobus v. fere ad basin in carpella 3 stellato-divaricata v. in nuculas distinctas divisus. *Semina* numerosa pauca v. in toto fructu ad 1-2 reducta, sessilia v. funiculo brevi interdum strophiole instructo fulta, v. strophiole a rhaphe dilatato instructa; testa nunc laxa membranacea crassiuscula v. crustacea, nunc tenuis albumini arte appressa, rarius apice basi v. utrinque in appendicem v. circumcirca in alam producta. *Albumen* copiosum, carnosum cartilagineum v. corneum, nec farina-ceum. *Embryo* nunc minutus globosus, nunc plus minus elongatus, interdum albumine vix brevior, rectus v. curvulus, extremitate radiculari hilo proxima v. ab eo plus minus remota.

*Herbæ* sæpissime perennes v. frutices, rarius arborescentes. *Rhizoma* nunc brevissimum v. a basi bulbi non distinctum, fibris radicalibus fasciculatis haud raro carnosus v. tuberoso-incrassatis, nunc hypogæum tuberosum v. lignosum, descendens v. horizontale v. longe reptans, nunc in caudicem erectum lignosum simplicem v. ramosum productum. *Caulis* herbaceus v. lignosus, erectus v. alte scandens, varie foliatus v. ad scapum aphyllum reductus, v. inter folia radicalia non v. vix evolutus. *Folia* polymorpha, caulina v. radicalia. *Inflorescentia* axillaris v. in scapo v. pedunculo terminalis, nunc 1-2-flora, nunc umbellata spicata racemosa v. paniculata, v. ad fasciculum intra folia sessilem reducta. *Bracteæ* variæ, sæpius scariosæ v. parvæ, rarius sub umbella spathiformes. *Habitus* cæterum in diversis tribubus valde diversus.

*Species* bene notæ ad 2100, per varias regiones utriusque orbis latissime dispersæ, in temperatis subtropicisque tamen copiosiores quam inter tropicos, in terris siccis petrosis apricisque numerosæ, in frigidis alpinisque v. in uliginosis paucae, aquaticæ fluitantes deesse videntur.

Ordo vastus et polymorphus, a diversis botanicis varie extensus v. in ordines plures divisus, a nonnullis finitimis limitibus quodammodo incertis separatus, et difficillime in tribus distinctas dividendus. *Seminum* structura cum *Irideis*, *Amaryllideis* et *Juncaceis* convenit, quarum 2 priores ovario constanter infero facile dignoscendæ. *Juncaceæ* tamen vix nisi perianthio minore calycino v. glumaceo differunt, et genera nonnulla hic in *Juncaceis* inclusa, fere æquo jure ad *Liliaceas* referenda.

*Hemodoracearum* genera ovario libero (semper generibus ovario infero v. seminifero arcte connexa) distinguimus præsertim embryone intra albumen intruso nec incluso, caractere in nonnullis ulterius probando. *Ophiopogoneæ* et *Conanthereæ*, quas in *Hemodoraceis* includimus, a botanicis plurimis ad *Liliaceas* anomalas referuntur. His tamen exclusis, ovarium in *Liliaceis* nunquam inferum nec semi-inferum, nec, speciebus perpaucis exceptis, ima basi tubo turbinato perianthii adnatum.

## FORMÆ ABNORMES.

Flores in quaque serie 2-meri in *Maianthemo*, 4-meri in *Aspidistro* et interdum in *Tupistra*, 4-∞-meri in *Paride*.

Perianthium parum irregulare, lobis segmentisve 1-3 minoribus v. obsoletis in *Gilliesia* et in *Chionographide*; segmenta exteriora subherbacea in *Trillio* interdumque in *Calochorto*.

Stamina perfecta 3 tantum in *Heterosmilace*, *Rusco*, *Anemarrhena*, *Hodgsoniola*, *Leucocoryne*, *Stawellia*, *Sowerbea*, *Johnsonia*, *Hewardia*, et in speciebus paucis generum nonnullorum aliorum; plus quam 6 in *Pleea*, et rarius in *Smilace*.

Androcium valde obliquum v. uno latere tantum antheriferum in *Gilliesia* affinibusque.

Ovarium 1-loculare placentis parietalibus in *Lapageria*, *Philesia*, *Astelie* speciebus, et *Scoliopode*; 1-loculare 2-ovulatum in *Rusco*; 1-loculare 3-ovulatum in *Dasyliro*.

Ovula orthotropa in *Smilace*, *Rusco*, nonnullisque affinibus.

Fructus parvus nuculiformis 1-spermus indehiscens in *Agrostocrino*, e nuculis 1-3 1-spermis in *Tricoryne*, membranaceus indehiscens v. irregulariter ruptus in *Nolina*, *Dasyliro* et *Scoliopode*.

Semina aculeis brevibus exasperata in *Xeronemate*, pilis longis dense vestita in *Eriospermo*, papillis subpiliformibus dense oblecta in *Blandfordia*.

## CONSPECTUS TRIBUUM (exceptis neglectis).

**SERIES A.** Caulis ebubosus, ima basi sæpius squamatus superne foliatus, v. scapus squamatus. Anthere introrsum dehiscentes. Fructus sæpissime baccatus.

**Tribus I. Smilaceæ.** Caulis sarmentosus v. scandens. Folia 3-5-nervia, reticulato-venulosa. Anthere specie 1-loculares. Ovula orthotropa v. hemianatropa.

**Tribus II. Asparagææ.** Caulis ramosus v. scandens. Cladodia foliiformia v. acicularia. Ovula orthotropa v. hemianatropa.

**Tribus III. Luzuriagææ.** Caulis fruticoso-ramosus v. scandens. Folia varia. Anthere normales. Ovula anatropa, rarius hemianatropa.

**Tribus IV. Polygonatææ.** Caulis herbaceus, simplex v. parce ramosus, superne foliatus. Ovula anatropa.

**Tribus V. Convallariææ.** Folia in rhizomate fasciculata, cum scapo laterali aphylo basi sæpe squamis vaginantibus inclusa. Racemus v. spica interrupta simplex. Ovula anatropa.

**Tribus VI. Aspidistreeæ.** Folia in rhizomate pauca, ampla, petiolata v. basi contracta. Scapus inter folia simplex, brevissimus 1-florusque, v. apice dense spicifer. Stigma sæpius latissime peltatum.

**SERIES B.** Folia in rhizomate v. ad apicem caudicis dense conferta v. ad basin scapi bulbum formantia, in caule v. scapo radicalibus minora v. 0. Anthere introrsum dehiscentes. Fructus localitide dehiscent, rarius indehiscens v. baccatus.

**Tribus VII. Hemerocallææ.** Folia in rhizomate brevi conferta, linearia v. membranacea. Scapus elatus. Perianthium cylindraceum infundibuliforme v. campanulatum. Filamenta in foveolam dorsalem antherarum intrusa. Fructus capsularis.

**Tribus VIII. Aloineæ.** Rhizoma durum, sæpe in caudicem lignosum productum. Folia sæpius coriaceo-carnosa v. rigida, interdum spinoso-dentata. Perianthii segmenta in tubum conniventia v. connata v. apice breviter patentia. Filamenta in foveolam dorsalem antherarum intrusa. Fructus capsularis, rarius carnosus.

**Tribus IX. Draceneæ.** Rhizoma breve v. in caudicem lignosum productum. Folia varia nec carnea. Perianthium campanulatum cylindraceum v. rarius infundibuliforme, segmentis sæpius distinctis. Antheræ dorsifixæ non foveolatæ. Fructus capsularis v. carnosus, rarius baccatus. Inflorescentia sæpe paniculata.

**Tribus X. Asphodeleæ.** Rhizoma breve sæpius brevissimum. Caulis rarius bulbosus. Folia non carnea. Perianthii segmenta sæpius distincta, patentia. Antheræ variæ. Fructus capsularis, rarissime baccatus. Inflorescentia simplex v. parce ramosa.

Subtribus 1. Euasphodeleæ. *Folia ad basin caulis ebulbosi conferta, caulina dum adsint minora. Antheræ dorsifixæ, versatiles, sæpius leviter foveolatæ.*

Subtribus 2. Chlorogaleæ. *Folia e bulbo pauca. Antheræ dorsifixæ, versatiles, non foveolatæ.*

Subtribus 3. Bowieæ. *Folia e tubere crasso v. bulbo carnosio pauca, cito evanida v. coetanea. Caulis seu scapus aphyllus v. rarius basi 1-foliatus, interdum ramosissimus. Antheræ erectæ, basi v. prope basin affixæ.*

Subtribus 4. Anthericæ. *Rhizoma breve sæpe brevissimum. Folia ad basin caulis conferta. Antheræ erectæ, basi v. prope basin affixæ.*

Subtribus 5. Dianelleæ. *Folia rigidula disticha, nunc ad basin caulis conferta, nunc secus caulem numerosa. Antheræ erectæ.*

**Tribus XI. Johnsoniæ.** Rhizoma breve v. reptans. Caulis ebulbosus, sæpius humilis ramosus v. junceus. Flores in fasciculum seu capitulum terminale conferti, bracteis imbricatis.

**Tribus XII. Allieæ.** Bulbus seu cormus tunicatus v. rarius folia in rhizomate brevissimo conferta. Umbella in scapo aphylo terminalis, bracteis 2-∞ involucrata.

Subtribus 1. Agnpanthæ. *Bulbus 0. Folia radicalia conferta.*

Subtribus 2. Euallieæ. *Bulbus seu cormus tunicatus. Scapus evolutus. Bractee involucrantes 2 rarius ∞. Andracium regulare.*

Subtribus 3. Gilliesieæ. *Bulbus tunicatus. Scapus evolutus. Bractee involucrantes 2. Andracium valde obliquum v. uno latere tantum antheriferum.*

Subtribus 4. Massoniæ. *Bulbus tunicatus. Scapus brevissimus, umbella densa inter folia subsessili. Bractee involucrantes 3-∞.*

**Tribus XIII. Scilleæ.** Bulbus tunicatus. Racemus, rarius spica, in scapo aphylo terminalis, simplex.

**Tribus XIV. Tulipeæ.** Bulbus tunicatus v. squamosus. Caulis 1-∞-foliatus. Flores pauci v. laxè racemosi.

**SERIES C.** Bulbus tunicatus v. caulis ebulbosus herbaceus, rarius alto scandens, basi v. superne foliatus. Antheræ sæpius (nec semper) introrsum affixæ extrorsum dehiscentes. Capsula sæpius septicida, interdum loculicide dehiscens v. bacca indehiscens. Embryo parvus, sæpius minutus.

**Tribus XV. Colchiceæ.** Cormus tunicatus. Scapus intra vaginas hypogæas brevissimus, 1-3-florus. Perianthii tubus longus. Antheræ introrsum dehiscentes. Capsula septicida.

**Tribus XVI. Anguillariceæ.** Bulbus sæpissime tunicatus. Folia in caule pauca, angusta, basi cum vagina continua. Antheræ extrorsum dehiscentes. Capsula septicida v. loculicida.

**Tribus XVII. Narthecieæ.** Caulis ebulbosus. Folia radicalia conferta v. petiolata, caulina minora sæpe minima v. 0. Antheræ extrorsum rarius introrsum dehiscentes. Capsula septicida v. loculicida.

**Tribus XVIII. Uvularieæ.** Caulis ebulbosus, foliatus, herbaceus v. alte scandens. Folia alterna, sessilia v. amplexicaulia, absque vaginis. Antheræ extrorsum dehiscentes. Capsula loculicida v. septicida, rarius bacca indehiscens.

**Tribus XIX. Medecoleæ.** Caulis ebulbosus, foliatus. Folia pauca subradicalia v. in caule verticillata. Flores terminales, solitarii v. umbellati. Antheræ extrorsum dehiscentes. Bacca indehiscens.

**Tribus XX. Veratreæ.** Caulis elatus, basi bulbosus v. ebulbosus, foliatus v. præter folia radicalia subaphyllus. Flores paniculati v. racemosi. Antheræ extrorsum dehiscentes, loculis confluentibus, polline emisso orbiculato-peltatæ. Capsula septicida.

## CONSPECTUS GENERUM.

**SERIES A.** Caulis florifer nec bulbosus nec foliis radicalibus stipatus, ima basi sæpius squamatus, superne sæpius foliatus, herbaceus fruticosus v. alte scandens, v. interdum scapus aphyllus, squamatus, e rhizomate a foliis separatim evolutus. Antheræ extrorsum v. basi affixæ, loculis introrsum dehiscentibus. Fructus (*Herreria* excepta) baccatus, indehiscens. Semina varia, nunc nigra, embryone longo seriei B, nunc pallida, embryone parvo rarius tamen minuto seriei C.

**Tribus I. Smilacæ.** Caulis sæpius lignosus, sarmentosus v. alte scandens. Folia sæpius coriacea, 3-5-nervia, inter nervos reticulato-venulosa. Flores parvuli, umbellis racemisque axillaribus v. in panícula terminali dispositis. Antherarum loculi ad normam paralleli, sed valva interiore cujusque loculi angustissima, anthera aperta 1-locularis videtur. Ovula in ovarii loculis solitaria v. gemina, orthotropa v. hemianatropa. Embryo in albumine duro ab hilo remotus.

1. *HETEROSMILAX*. Flores dioici, umbellulati. Perianthium indivisum, ore minute dentato. Petioli cirriferi.—*Ind. or., Archip. Malay., China, Japonia.*

2. *SMILAX*. Flores dioici, umbellulati. Perianthium 6-partitum. Petioli cirriferi.—*Utriusque orbis reg. trop. et temp.*

3. *RHIZOGONUM*. Flores hermaphroditi, spicati v. racemosi. Perianthium 6-partitum. Cirri 0.—*Australia, Nov. Zel.*

**Tribus II. Asparagæ.** Caulis sæpe lignosus, erectus ramosus v. alte scandens. Cladodia foliiformia  $\infty$ -nervia, v. acicularia. Flores parvi, fasciculati solitarii v. breviter racemosi. Antherarum loculi distincti v. apice confluentes. Ovula in loculis 2 v. pauca, orthotropa v. hemianatropa. Embryo in albumine duro ab hilo remotus.

\* *Filamenta in urceolum connata, antheris ad os urceoli sessilibus.*

4. *RUSCUS*. Flores dioici. Perianthii segmenta distincta. Antheræ 3. Florum fasciculi in media facie cladodiorum.—*Eur., Reg. Mediterr., Madera, Caucasus.*

5. *SEMELLE*. Perianthii lobi patentes, tubo longiores. Antheræ 6. Florum fasciculi ad margines cladodiorum v. rarius in media facie.—*Ins. Canar.*

6. *DANÆ*. Perianthium subglobosum, lobis brevibus erectis, fauce corona carnea instructa. Antheræ 6. Florum racemi breves, terminales, a cladodiis foliiformibus distincti.—*Oriens.*

\*\* *Filamenta libera.*

7. *ASPARAGUS*. Perianthii segmenta distincta. Flores solitarii fasciculati v. racemosi, a cladodiis acicularibus v. foliiformibus distincti.—*Orbis veteris reg. trop. et temp.*

**Tribus III. Luzziæ.** Caulis erectus, ramosus, fruticosus v. alte scandens. Folia varia. Flores ad axillas foliorum v. apices ramorum solitarii fasciculati cymosi v. rarius racemosi. Antherarum loculi distincti. Ovula in loculis v. placentis pauca v. numerosa, anatropa v. hemianatropa.

\* *Capsula a latere 3-loba, in carpella 3 septicide partibilis.*

8. *HERRERIA*. Folia fasciculata, cladodiis *Danais* simillima. Flores parvi, racemosi. Perianthii segmenta distincta. Ovarium 3-loculare.—*Amer. austr. extratrop.*

\*\* *Bacca indehiscens.*

9. *BEHNIA*. Folia sparsa, cladodiis *Rusci* similia. Flores parvuli, racemosi. Perianthii lobi tubo lato breviores. Ovarium 3-loculare.—*Afr. austr.*

10. *LAPAGERIA*. Folia 3-5-nervia. Flores magni, solitarii v. pauci. Perianthii segmenta distincta, erecta, subæquilonga. Ovarium 1-loculare, placentis 3 parietalibus.—*Chile.*

11. *PHILESSIA*. Folia 1-nervia. Flores majusculi, solitarii v. pauci. Perianthii segmenta distincta, erecta, exteriora interioribus multo breviora. Ovarium 1-loculare, placentis 3 parietalibus.—*Chile austr., Terra Magell.*

12. *LU URIAGA*. Folia tenuiter  $\infty$ -nervia. Flores mediocres, ad axillas solitarii v. pauci. Perianthii segmenta distincta, patentia. Ovarium 3-loculare. Semina pallida.—*Chile, Nov. Zel.*

13. *EUSTREPHUS*. Folia tenuiter  $\infty$ -nervia. Flores parvuli, ad axillas fasciculati. Perianthii segmenta distincta, patentia. Ovarium 3-loculare. Semina nigra, opaca.—*Australia.*

14. *GEITONOPLESIMUM*. Folia tenuiter  $\infty$ -nervia. Flores parvuli, ad apices ramorum v. rarius simul ad axillas foliorum cymosi. Perianthii segmenta distincta, patentia. Ovarium 3-loculare. Semina nigra, nitida.—*Australia, N. Caledonia, ins. Pacif.*

**Tribus IV. Polygonatess.** Caulis herbaceus, simplex v. parce ramosus, superne foliatus. Flores axillares, v. racemus rarius panicula terminalis.

\* Flores in axillis 1-2, rarius plures, sæpius nutantes.

15. **POLYGONATUM.** Perianthii tubus cylindraceus, lobi breves. Stylus indivisus, stigmatе parvo.—*Hemisp. bor. reg. temp.*

16. **STREPTOPUS.** Perianthii tubus 0; segmenta superne v. fere a basi patentia. Stylus breviter v. longiuscule 3-fidus.—*Hemisp. bor. reg. temp.*

17. **DETMOPHILA.** Perianthii tubus 0; segmenta patentia. Stylus fere a basi 3-partitus.—*Australia.*

(Confer etiam 177 **DISPORUM**, antheris tamen extrorsum dehiscentibus.)

\*\* Racemus v. panicula terminalis. Perianthii tubus 0, segmenta patentia.

18. **SMILACINA.** Flores in quaque serie 3-meri.—*Amer. bor., Asia temp. et mont.*

19. **MAIANthemum.** Flores in quaque serie 2-meri.—*Hemisp. bor. reg. temp.*

**Tribus V. Convallariess.** Folia in rhizomate fasciculata. Scapus ad basin foliorum lateralis, aphyllus, basi sæpe cum foliorum fasciculo squamis vaginantibus scariosis inclusus v. ex axilla folii oriundus. Flores in scapo simpliciter racemosi v. interrupte spicati.

20. **CONVALLARIA.** Perianthium subglobosum, lobis tubo brevioribus. Flores racemosi, nutantes.—*Eur., Asia temp., Amer. bor.*

21. **THEROPOGON.** Perianthium subglobosum, segmentis distinctis. Flores racemosi, subnutantes.—*Himalaya.*

22. ? **SPEIRANTHA.** Perianthii segmenta distincta, patentissima. Flores racemosi, patentes nec nutantes. (Fructus ignotus.)—*China.*

23. **REINCKEA.** Perianthii tubus cylindraceus, lobi recurvo-patentes. Flores in spica sessiles, dissiti.—*China, Japonia.*

**Tribus VI. Aspidistress.** Folia in rhizomate pauca, ampla, petiolata v. basi contracta. Scapus inter folia simplex, aphyllus, brevissimus, 1-florus, v. erectus spica simplici densa terminatus. Perianthium campanulatum, lobis tubo non longioribus. Stigma sæpius maximum, late peltatum, orbiculatum v. 3-6-lobum.

24. **ASPIDISTRA.** Scapi brevissimi, 1-flori. Flores 4-meri. Stigma maximum, orbiculato-peltatum, indivisum.—*Ind. or., China, Japonia.*

25. **TUPISTRA.** Spica densa, cylindracea. Flores sæpius 3-meri. Perianthii lobi patentes. Stigma crassum, orbiculato-peltatum v. 3-6-lobum.—*Ind. or.*

26. **ROEDEA.** Spica densa, cylindracea. Flores 3-meri. Perianthii lobi inflexi. Stigma late peltatum, 3-lobum. Folia vix petiolata.—*Japonia.*

27. **GONTIOSCYPHA.** Spica densa, cylindracea, apice bracteis vacuis linearibus comosa. Flores 3-meri. Perianthii lobi patentes. Stylus quam in præcedentibus tenuior, stigmatе 3-lobo.—*Himalaya.*

**SERIES B.** Folia nunc in rhizomate v. ad apicem caudicis interdum arborei conferta, nunc pauca radicalia v. ad basin scapi bulbum formantia, in caule v. scapo radicalibus sæpiissime minora v. 0. Antheræ extrorsum v. basi affixæ, loculis introrsum v. a latere subintrorsum dehiscentibus. Ovula anatropa v. hemianatropa. Fructus sæpius capsularis, loculicide dehiscens, in paucis generibus indehiscens carnosus v. siccus, in perpaucis bacca indehiscens v. capsula septicida. Semina sæpius nigra; embryo albumine carnosio parum v. dimidio rarius subtriplo brevior.

Excepta: Folia caulina radicalibus longiora in speciebus perpaucis *Dianellæarum*.

Capsula septicida in *Calochorto*. Fructus plus minus carnosus v. baccatus in *Dracænis* nonnullis, et in *Dianella*.

**Tribus VII. Hemerocallees.** Folia in rhizomate v. ad basin caulis numerosa, conferta, linearia v. membranacea nec carnosia. Scapus seu pedunculus elatus, aphyllus v. rarius foliis paucis parvis instructus. Flores sæpius magni, paniculati racemosi v. spicati. Perianthium cylindraceum v. infundibuliforme, segmentis basi in tubum connatis v. conniventibus. Antheræ filamentum in foveola dorsali recipientes. Ovula numerosa. Fructus capsularis.

Excepta: Flores minores late campanulati in *Notosceptro*.

28. *HEMBROCALLIS*. Flores erecti, in panicula pauci. Perianthii infundibuliformis tubus cylindraceus, lobis brevior. Stamina ad apicem tubi affixa. Folia longa, angusta.—*Eur., Asia temp., Japonia*.

29. *PHORMIUM*. Flores erecti, in panicula ramosa. Perianthii subincurvi segmenta supra tubum turbatum laxè conniventia. Stamina ad apicem tubi affixa. Folia longa, angusta.—*Nov. Zel.*

30. *BLANDFORDIA*. Flores penduli. Perianthii tubus superne amplius, lobis brevibus. Stamina medio tubo affixa. Capsula *septicide dehiscens*. Folia longa, angusta.—*Australia*.

31. *FUNKIA*. Flores penduli, racemosi. Perianthii infundibuliformis tubus brevis v. longus. Stamina sæpe hypogyna. Folia petiolata, sæpius lata.—*China, Japonia*.

32. *KNIPHOFIA*. Flores spicati, reflexi. Perianthium anguste tubulosum, lobis brevibus. Stamina hypogyna. Folia longa, angusta.—*Afr. austr. et trop., Madagasc.*

33. *NOTOSCEPTRUM*. Flores dense spicati, non reflexi. Perianthium breve, late campanulatum, alte lobatum. Stamina hypogyna. Folia longa, angusta.—*Afr. austr.*

**Tribus VIII. Aloineæ.** Folia in rhizomate v. ad apicem caudicis lignosi conferta, coriaceo-carnosa, crassa v. rigida, margine sæpe spinuloso-serrata v. cartilaginea. Scapi seu pedunculi simplices v. ramosi, in axillis superioribus v. pseudoterminales. Perianthii segmenta in tubum conniventia v. connata. Antheræ dorsifixæ, filamentum in foveolam intruso. Ovula in loculis numerosa. Fructus siccus rarius carnosus, demum loculicide dehiscens.

34. *GASTERIA*. Perianthii segmenta alte in tubum basi ventricosum arcte connata, apice breviter libera. Stamina tubo inclusa.—*Afr. austr.*

35. *ALOE*. Perianthii segmenta usque ad apicem in tubum cohærentia v. conniventia, v. apice brevissime subpatentia. Stamina sæpius exserta.—*Afr. austr. et trop., Asia occid., Reg. Mediterr., ins. Canar.*

36. *APICRA*. Perianthii segmenta alte cohærentia v. connata, apice breviter stellato-patentia. Stamina perianthio paullo breviora.—*Afr. austr.*

37. *HAWORTHIA*. Perianthii sæpius incurvi segmenta alte cohærentia v. conniventia, apice recurvo sub-2-labiatis patentia. Stamina perianthium non excedentia.—*Afr. austr. et trop.*

38. *LOMATOPHYLLUM*. Perianthium *Alois*. Stamina perianthio subbreviora. Fructus coriaceo-carnosus, vix tardius loculicide dehiscens (v. interdum indehiscens?).—*Ins. Mascar.*

**Tribus IX. Dracænæ.** Folia in rhizomate v. ad apicem caudicis lignosi numerosa, conferta. Scapus seu pedunculus erectus, sæpe elatus, simplex v. paniculatus, præter bracteas foliaceas aphyllus. Perianthium cylindraceum campanulatum v. infundibuliforme. Antheræ basi v. dorso affixæ, non foveolatae. Fructus siccus carnosus v. baccatus, loculicide dehiscens irregulariter ruptus v. indehiscens.

39. *HESPEROCALLIS*. Caudex brevis, lignosus, fere cormiformis. Flores in racemo indiviso magni. Perianthium infundibuliforme, tubo cylindraceo. Ovula in loculis  $\infty$ . Capsula loculicida.—*California*.

40. *HESPERALOE*. Caudex brevissimus. Racemus indivisus v. parum ramosus. Perianthium cylindraceum, segmentis vix cohærentibus. Ovula in loculis  $\infty$ . Capsula loculicida, valvis sæpe 2-fidis.—*Texas*.

41. *YUCCA*. Caudex lignosus, humilis v. elatus. Panicula floribunda. Perianthium subglobosum v. campanulatum, segmentis vix basi connatis. Antheræ parvæ in filamentum clavato sessiles. Ovula in loculis  $\infty$ . Fructus carnosus v. baccatus indehiscens, v. capsula varie dehiscens.—*Amer. bor., Mexico, Amer. centr.*

42. *DRACÆNA*. Caudex lignosus, humilis v. arborescens. Panicula nunc ampla floribunda, nunc ad racemum indivisum v. capitulum sessile reducta. Perianthium infundibuliforme v. anguste campanulatum. Ovula in loculis solitaria, erecta. Bacca indehiscens.—*Orb. veteris reg. calid.*

43. *CORDYLINE*. Caudex lignosus, sæpe arborescens. Panicula ampla, floribus parvulis. Perianthium cylindraceum v. anguste campanulatum, tubo brevi. Ovula in loculis  $\infty$ . Fructus parvus, subglobosus, carnosus, indehiscens v. vix demum breviter loculicide fissus.—*Ind. or., Archip. Malay., ins. Pacif., N. Zel., Australia, Brasilia.*

44. *NOLINA*. Rhizoma breve v. caudex lignosus. Flores polygamo-dioici, parvuli. Pani-

cula laxa. Perianthium campanulatum, segmentis distinctis. Ovula in loculis 2. Fructus siccus, sæpe 3-alatus, maturitate irregulariter ruptus.—*Reg. Mex.-Tex.*

45. *DASTILIRION*. Caudex lignosus. Flores dioici, parvuli. Panicula densa. Perianthium campanulatum, segmentis distinctis. Ovula in ovario 1-loculari 3. Fructus siccus, indehiscens v. tardius septicide fissus.—*Reg. Mex.-Tex.*

46. *ASTELIA*. Rhizoma breve. Indumentum sericeum v. lanosum. Racemi in ramis paniculae densi. Flores polygamo-dioici, parvuli. Perianthium campanulatum, segmentis basi connatis. Ovula in loculis v. placentis  $\infty$ . Fructus parvus, carnosus, indehiscens.—*Ins. Pacif., N. Zel., Australia, Amer. antarct.*

47. *MILLIGANIA*. Rhizoma breve. Indumentum laxe pilosum. Panicula ampla. Flores hermaphroditi, parvuli. Perianthii tubus campanulatus, lobi patentes. Ovula in loculis  $\infty$ . Capsula superne loculicida.—*Tasmania.*

**Tribus X. Asphodeleæ.** Rhizoma breve, sæpius brevissimum, bulbo rarius formato. Inflorescentia racemosa, simplex v. ramosa. Folia non crasso-carnosa. Perianthii segmenta sæpius distincta, patentia, nec (nisi in speciminibus siccis) conniventia. Antheræ variae. Capsula (excepta *Dianella*) loculicida.

Excepta: Perianthium infundibuliforme in *Paradisea*, tubo longo hypocraterimorphum in *Leucocrino*, segmentis linearibus erectis in *Xeromate*.

Subtribus 1. *Euasphodeleæ*. Rhizoma brevissimum v. tuberosum descendensque. Bulbus 0. Folia radicalia sæpius longa, conferta, caulina 0 v. sparsa, radicalibus minora. Racemus simplex v. panicula parum ramosa. Antheræ dorsifixæ, versatiles, filamento in foveolam sæpius intruso. Capsula loculicida.

Excepta: Antheræ erectæ *Anthericearum* in *Bulbinis* Australiensibus.

48. *XERONEMA*. Racemus densus, simplex, secundus, scapo abrupte inflexo horizontalis. Perianthii segmenta linearia, cum staminibus longioribus erecta. Ovula in loculis  $\infty$ .—*Nov. Caled.*

49. *ANEMAREHENA*. Scapus aphyllus. Racemus longus, erectus. Stamina 3, in mediis segmentis interioribus affixa. Ovula in loculis 2.—*China borealis.*

50. *ASPHODELUS*. Scapus aphyllus, indivisus v. parce ramosus. Flores albi. Stamina hypogyna, filamentis ima basi concavis ovarium includentibus. Ovula in loculis 2.—*Reg. Mediterr., Ind. or., ins. Mascar.*

51. *ASPHODELINE*. Caulis plus minus foliatus. Flores sæpius flavi. Cætera *Asphodeli*.—*Reg. Mediterr., Oriens.*

52. *PARADISEA*. Scapus aphyllus v. 1-foliatus. Flores pauci, majusculi, in racemo laxo secundi. Perianthium infundibuliforme. Stamina hypogyna. Ovula in loculis  $\infty$ .—*Alp. Eur., Pyren.*

53. *SIMETHIS*. Caulis aphyllus, laxè paniculatus. Stamina basi segmentorum affixa, filamentis superne villosa-barbatis. Ovula in loculis 2.—*Eur. occid., Afr. bor.-occid.*

54. *BULBINELLA*. Caulis aphyllus. Flores parvuli, in racemo numerosi. Filamenta glabra. Antheræ non foveolatæ. Ovula in loculis 2.—*Afr. austr., Nov. Zel., Terr. Antarct.*

55. *BULBINE*. Caulis aphyllus. Flores parvuli v. mediocres, in racemo numerosi. Filamenta longe barbata. Antheræ non foveolatæ. Ovula in loculis 4- $\infty$ .—*Afr. austr. et trop., Australia.*

Subtribus 2. *Chlorogaleæ*. Bulbus fere Scillearum, sed inflorescentia sæpe ramosa cæteraque *Asphodelearum*. Antheræ versatiles, non foveolatæ. Capsula loculicida.

Genera boreali-Americana inter se parum distincta.

56. *CHLOROGALUM*. Panicula laxè ramosa. Perianthii segmenta 3-nervia, post anthesin supra capsulam sæpe torta. Stylus longus.—*California.*

57. *SCHENOLIRION*. Inflorescentia parce ramosa, interdum indivisa. Perianthii segmenta 3-nervia, post anthesin sub capsula laxè marcescentia. Stylus brevis.—*Amer. bor. civit. austral.*

58. *HASTINGSIA*. Perianthii segmenta 1-nervia. Cætera *Schenolirii*.—*California.*

Subtribus 3. *Bowieæ*. Folia e tubere crasso v. bulbo carnosio pauca, cito evanida v. coætanea. Caulis seu scapus aphyllus, interdum ramosissimus, rarius basi 1-phyllus. Antheræ parvæ, prope basin dorsifixæ. Ovula in loculis  $\infty$ , sæpius pauca. Capsula loculicida.

59. *BOWIERIA*. Bulbus tuberiformis. Folia perpauca v. solitaria, linearia, ante anthesin evanida. Caulis seu scapus intricato-ramosissimus, subscandens. Semina glabra.—*Afr. austr.*

60. *SCHIZOBASIS*. Bulbus tunicatus. Folia perpauca v. solitaria, linearia, ante anthesin evanida. Caulis seu scapus tenuis, sæpe filiformis, erectus, laxè ramosus v. intricato-ramosissimus. Semina glabra.—*Afr. austr. et trop.*

61. *ERIOSPERMUM*. Tuber interdum cormiforme. Folia lanceolata v. lata, solitaria v. pauca, ante anthesin evanida v. coetanea. Caulis rarius ramosus, pedicellis sæpe longis. Semina pilis longis dense lanata.—*Afr. austr. et trop.*

Subtribus 4. Anthericæ. *Rhizoma breve, sæpius brevissimum, rarius repens, fibris radicalibus fasciculatis sæpe carnosis v. tuberiferis. Bulbus 0. Folia radicalia sæpius conferta, caulina perpauca v. sæpissime 0. Racemus simplex v. panicula ramosa. Antheræ erectæ, basifixæ v. juxta basin dorsifixæ, filamento ibidem sæpius in foveolam intruso, apice sæpius recurvæ v. revolutæ.*

\* *Inflorescentia in scapo simplici v. ramis paucis racemosa v. spicata. Perianthium post anthesin non v. parum tortum. Stylus filiformis, stigmate parvo (excepta Bottinæa). Ovula in loculis 4-∞.*

62. *EREMURUS*. Racemus simplex, longus, densus. Stamina demum perianthio æquilonga v. longiora, filamentis filiformibus.—*Oriens, Asia Rossica, Ind. or.*

63. *ACROSPIRA*. Inflorescentia *Antherici*. Stamina perianthio breviora, filamentis brevibus latis, antheris magnis.—*Angola.*

64. *ANTHERICUM*. Inflorescentia simplex v. parce ramosa, racemis sæpius tenuibus. Stamina perianthio breviora, filamentis filiformibus v. parum incrassatis. Capsulæ anguli parum prominuli.—*Europa, Afr. trop. et extratrop., Amer. bor. et austr.*

65. *CHLOROPHYTUM*. Inflorescentia quam in *Antherico* sæpius densior, haud raro ramosa. Stamina perianthio breviora, filamentis sæpe nec semper medio incrassatis. Capsula acute 3-quetra v. fere 3-alata.—*Asia, Afr. trop. et austr., Amer. bor. et austr.*

66. *DASYSTACHYS*. Spica in scapo simplici v. ramis paucis longa, dense cylindracea, floribus parvulis subsessilibus. Stamina perianthio sublongiora, filamentis leviter complanatis. Capsula *Chlorophyti*.—*Afr. trop.*

67. *ECHREANDIA*. Antheræ filamentis longiores, circa stylum in cylindrum coherentes; cætera *Antherici*.—*Amer. trop. a Guiana usque ad Mexicum.*

68. *BOTTINÆA*. Inflorescentia *Antherici*. Perianthii segmenta interiora ciliato-fimbriata *Thysanoti*. Stylus crassiusculus, stigmate 3-loba.—*Chile.*

(Vide etiam 55, *BULBINIS* species *Australianas*.)

\*\* *Panicula laxa, interdum ad umbellum v. fasciculum reducta, rarius racemus laxè pauciflorus. Perianthium post anthesin non v. parum tortum.*

69. *THYSANOTUS*. Perianthii segmenta interiora fimbriato-ciliata. Filamenta glabra. Ovula in loculis 2.—*Australia, Archip. Malay., China.*

70. *ARTHROPODIUM*. Perianthii segmenta interiora integerrima v. margine crispula. Filamenta piloso-barbata. Ovula in loculis 4-∞.—*Australia, Nov. Zel., Nov. Caled.*

71. *DICHOPOGON*. Perianthium *Arthropodii*. Filamenta glabra, apice utrinque appendicula ab anthera descendente auriculata. Ovula in loculis ∞.—*Australia.*

\*\*\* *Inflorescentia varia Perianthium emarcidum distincte spiraliter tortum.*

72. *PASITHEA*. Panicula laxa. Ovarium toro carnoso lata basi impositum. Stigma breviter 3-lobum. Ovula in loculis 4.—*Chile.*

73. *CHAMÆSCILLA*. Panicula v. cyma laxa. Stigma parvum. Ovula in loculis ∞.—*Australia.*

74. *HODGSONIOLA*. Racemus simplex. Antheræ 3 in cylindrum circa stylum coherentes; staminodia 3, libera. Ovula in loculis 2.—*Australia.*

75. *CÆSIA*. Flores secus ramos paniculæ dissite fasciculati. Stamina normalia. Ovula in loculis 2.—*Australia, Afr. austr.*

76. *AGROSTOCRINUM*. Panicula parum ramosa. Perianthium post anthesin supra basin persistentem circumscissum. Antheræ poro terminali dehiscentes. Ovula in loculis 2.—*Australia.*

77. *CORYNOTHECA*. Caules aphylli, sæpius intricato-ramosissimi. Flores minuti, secus ramos sparsi. Ovula in loculis 2. Fructus abortu 1-spermus, indehiscens, nuculiformis.—*Australia.*

\*\*\*\* *Genera anomala, caule brevissimo, floribus inter folia radicalia solitariis v. fasciculatis, sæpius subsessilibus.*

78. *HEEPOLIRION*. Folia disticha. Perianthium 6-partitum, non tortum. Filamenta filiformia. Ovula in loculis  $\infty$ .—*Nov. Zel., Tasmania, Victoria.*

79. *NANOLIRION*. Folia quaquaversa. Perianthium 6-partitum, post anthesin tortum. Filamenta complanata. Ovula in loculis 2.—*Afr. austr.*

80. *LEUCOCRINUM*. Folia quaquaversa. Perianthium hypocraterimorphum, tubo longo tenui. Ovula in loculis  $\infty$ .—*Amer. bor.*

(Vide etiam 64, *Antherici* sect. *Holopodium*.)

Subtribus 5. *Dianelleæ*. *Rhizoma lignosum, breve horizontale v. stoloniferum. Caulis rigidus, ima basi v. undique distiche foliatus. Paniculae rami laxè cymosi. Filamenta varie incrassata v. dense tomentoso-lanata. Ovula in loculis  $\infty$ .*

81. *DIANELLA*. Filamenta apice v. medio carnosio-incrassata. Bacca indehiscens.—*Amer. trop., ins. Pacif., Nov. Zel., Australia, ins. Mascar.*

82. *BOCCRENMIS*. Filamenta supra medium carnosio-incrassata. Capsulae exocarpium loculicide 3-valve, endocarpium septicide dehiscens.—*Andes Amer. austr.*

83. *STYPANDREA*. Filamenta dense tomentoso-lanata. Capsula loculicide 3-valvis.—*Australia.*

**I. Johnsoniæ.** *Rhizoma breve v. reptans, bulbo 0. Caulis nunc juncus nunc humilis, interdum ramosus, aphyllus v. dense foliatus. Flores in capitulis terminalibus sessiles v. in fasciculis umbelliformibus pedicellati, bracteis semper dense imbricatis.*

\* *Bractes paleaceæ.*

84. *APHYLLANTHES*. Caules junciformes, basi paucivaginati. Capitulum oblongum, 1-2-florum. Perianthium infundibuliforme. Stamina 6. Ovula in loculis solitaria.—*Reg. Medieterr.*

85. *JOHNSONIA*. Caules caespitosi, subjuncei, aphylli, foliis radicalibus. Capitulum spiciforme,  $\infty$ -florum. Perianthii tubus turbinatus, lobi longiores patentes. Stamina 3. Ovula in loculis 2.—*Australia.*

\*\* *Bractes scariosæ.*

86. *ARNOCRINUM*. Caules juncei, aphylli, ima basi dense lanati, foliis radicalibus. Capitula parva, floribus sessilibus. Perianthium hypocraterimorphum, post anthesin tortum. Stamina 3. Ovula in loculis 2.—*Australia.*

87. *TRICORYNE*. Caules virgati, ramosi, foliis paucis v. parvis. Flores in fasciculis parvis pedicellati. Perianthium 6-partitum, post anthesin tortum. Stamina 6. Ovula in loculis 2. Fructus e nuculis 1-3 1-spermis.—*Australia.*

88. *LAXMANNIA*. Caules dense caespitosi v. elongati, ramosi, foliis linearibus subulatisve confertis. Flores in capitulo sessiles v. pedicellati. Perianthium 6-partitum. Stamina 6. Ovula in loculis 2-4.—*Australia.*

89. *STAWELLIA*. Herba humilis, dense caespitosa, foliis radicalibus lineari-filiformibus. Flores in capitulo sessiles. Perianthium 6-partitum, in eodem capitulo dimorphum. Stamina 3. Ovula in loculis 2.—*Australia.*

90. *BORTA*. Caules brevissimi caespitosi v. longiores ramosi, foliis linearibus subulatisve confertis. Flores e capitulo pedicellati. Perianthium hypocraterimorphum. Stamina 6. Ovula in loculis  $\infty$ .—*Australia.*

91. *ALANIA*. Caules diffuse ramosi, foliis lineari-subulatis confertis. Flores e capitulo pedicellati. Perianthium 6-partitum. Stamina 6. Ovula in loculis pauca.—*Australia.*

92. *SOWERBEA*. Caules juncei, foliis radicalibus. Flores e capitulo pedicellati. Perianthium 6-partitum. Stamina 3. Ovula in loculis pauca.—*Australia.*

**Tribus XII. Althes.** *Bulbus seu cormus tunicatus, v. rarius folia in rhizomate brevissimo non bulbifero conferta. Umbella in scapo simplici aphylo terminalis, laxa v. rarius fere in capitulum condensata. Bractes membranaceæ sub umbella 2- $\infty$ , libere v. basi connatæ, involucentes, interiores sub pedicellis minores, sæpius paucae v. omnino desunt. Capsula loculicide dehiscens, valvis rarius septicide fissis.*

Subtribus 1. *Agapantheæ*. *Rhizoma breve, fibris radicalibus fasciculatis. Bulbus 0.*

93. AGAPANTHUS. Perianthium infundibuliforme, ecoronatum, lobis tubo longioribus. Stamina fauci affixa.—*Afr. austr.*

94. TULBAGHIA. Perianthium urceolatum v. fere hypocraterimorphum; corona in fauce e squamis 3 integris 2-partitisve liberis v. in annulum connatis. Stamina tubo 2-seriatim inclusa.—*Afr. austr. et trop.*

Subtribus 2. Eualliæ. *Bulbus seu cormus tunicatus. Scapus evolutus. Bractæ involucentes 2, rarius ∞. Andræcium regulare.*

\* *Perianthium hypocraterimorphum v. urceolatum.*

95. TRISTAGMA. Perianthii tubus cylindraceus, ad faucem sæpe squamis 3-6 coronatus. Stamina 6, intra tubum 2-seriatim inclusa.—*Chile.*

96. LEUCOCORYNE. Perianthii tubus cylindraceus, ad faucem staminodiis 3 squamiformibus coronatus. Stamina 3, intra tubum inclusa.—*Chile.*

97. MILLA. Perianthii tubus cylindraceus, ad os annulo parum prominulo constrictus. Stamina 6, ad os tubi filamentis brevissimis exserta.—*Mexico.*

98. ?DIPHALANGIUM. Perianthii tubus medio ventricosus, lobi tubo longiores. Stamina 6, tubo 2-seriatim inclusa. Capsula usque ad medium cum perianthii tubo connata.—*Mexico.*

99. STROPHOLIRION. Perianthii tubus subglobosus, ad os constrictus, costis 6 subvesiculosoinflatis percursus. Stamina 3, fauci affixa, cum staminodiis totidem alterna. Scapus sæpius longe volubilis.—*California.*

100. BREVOORTIA. Perianthii tubus late cylindraceus, basi breviter 6-saccatus, lobi multoties breviores. Stamina 3, fauci affixa, staminodiis totidem pone antheras in coronam spuriam connatis.—*California.*

\*\* *Perianthium infundibuliforme v. campanulatum, lobis tubo æqualibus v. longioribus.*

101. BRODLÆA. Stamina perfecta 6 v. 3, fauci v. tubo affixa, filamentis liberis brevissimis v. filiformibus.

102. ANDROSTEPHIUM. Stamina 6, fauci affixa, filamentis in tubum alte connatis. Perianthii tubus superne ampliatus, lobis subæqualis.—*Amer. bor.*

103. BESSERA. Stamina 6, fauci affixa, filamentis in tubum alte connatis. Perianthii tubus turbinatus, lobis multo brevior.—*Mexico.*

\*\*\* *Perianthium rotatum v. campanulatum, segmentis distinctis v. basi in annulum seu cyathum connatis.*

104. BLOOMERIA. Cormus fibroso-tunicatus. Filamenta basi in squamas truncatas ovarium cingentes dilatata.—*California.*

105. MULLA. Cormus fibroso-tunicatus. Filamenta infra medium leviter dilatata.—*California.*

106. NOTHOSCORDERUM. Bulbus tunicatus. Perianthii segmenta basi v. ad medium connata (odor alliaceus deest).—*Amer. extratrop. v. andin., China, in aliis reg. inquilina.*

107. ALLIUM. Bulbus tunicatus. Perianthii segmenta distincta, v. basi in annulum brevissime connata (odor alliaceus constans?).—*Hemisph. bor. extratrop., Abyssinia, Mexico.*

Subtribus 3. Gilliesiæ. *Bulbus tunicatus. Scapus evolutus. Bractæ involucentes 2. Andræcium valde obliquum v. uno latere tantum antheriferum.*

108. GILLIESIA. Perianthii segmenta 6 rarius 5, distincta, inæqualia; coronæ squamellæ 3-12, lineares. Staminum filamenta in urceolum carnosum valde obliquum apice latere inferiore 3-antheriferum connata.—*Chile.*

109. MIRRSIA. Perianthii segmenta 6, distincta, subæqualia; coronæ squamellæ 6, integræ v. 2-8dæ. Staminum filamenta in urceolum valde obliquum ventricosum ore 6-antheriferum connata.—*Chile.*

110. TRICHLORA. Perianthii segmenta 3, distincta, subæqualia; corona 0. Staminum filamenta in urceolum latum 5-6-lobum connata, lobis 3 antheriferis, 3 v. 2 anantheris.—*Peruvia.*

111. ERINNA. Perianthium infundibuliforme, tubo brevi, lobis 6 angustis subæqualibus. Filamenta 3 brevissima, antheris longis, 3 filiformia ananthera.—*Chile.*

112. **SOLARIA.** Perianthii tubus brevis, campanulatus; lobi patentes, interiores breviores, corona 0. Filamenta basi dilatata in annulum connata, 3 inferiora antherifera, antheris ovatis, 3 superiora ananthera.—*Chile.*

113. **GETHYUM.** Perianthii segmenta 6, distincta, perangusta, subæqualia; corona e squamellis 6. Filamenta basi in membranam latam connata, 3 inferiora antherifera, 3 superiora ananthera.—*Chile.*

114. **ANCRUMIA.** Perianthii tubus breviter campanulatus; lobi longi, 3 exteriores lanceolati, 3 interiores breviores lineares; corona e squamellis 6. Filamenta 3, basi dilatata, breviterque connata, 2 antherifera, tertium anantherum.—*Chile.*

Subtribus 4. **Massoniæ.** *Bulbus tunicatus. Scapus brevissimus, umbella densa inter folia sessili. Bractee involucentes 3-∞, imbricatæ. Andræcium regulare.*

115. **MASSONIA.** Perianthii tubus cylindraceus, æqualis; lobi æquales, patentes v. reflexi. Stamina 6, perianthio longiora, filamentis basi in annulum connatis.—*Afr. austr.*

116. **DAUBENYA.** Perianthii tubus cylindraceus, apice sæpe oblique ampliat; limbus valde obliquus, latere exteriori elongatus quasi ligulatus, lobi inæquales, postico minimo. Stamina 6, perianthio breviora.—*Afr. austr.*

**Tribus XIII. Scilleæ.** *Bulbus tunicatus. Racemus, rarius spica, in scapo aphyllæ simplici terminalis. Bractee sub floribus singulis herbaceæ scariosæ v. parvæ, nunquam involucentes.*

\* *Perianthii tubus cylindraceus v. campanulatus rarius brevissimus. Ovula in loculis ∞. Semina obovacea v. globosa.*

117. **WHITEHEADIA.** Perianthii tubus abbreviatus. Filamenta basi in annulum prominentem more *Massoniæ* connata. Spica brevis, bracteis herbaceis concavo-cucullatis flores superantibus.—*Afr. austr.*

118. **POLYXENA.** Perianthii tubus cylindraceus, lobi multo breviores. Filamenta filiformia, a basi distincta. Folia radicalia 2, *Massoniæ*. Bractee parvæ, scariosæ.—*Afr. austr.*

119. **LACHEMALIA.** Perianthium tubulosum v. subcampanulatum; segmenta conniventia v. plus minus connata, exteriora interioribus breviora. Bractee parvæ, scariosæ.—*Afr. austr.*

\*\* *Perianthii tubus cylindraceus v. campanulatus. Ovula in loculis ∞, sæpius numerosa. Semina valde compressa v. angulata.*

120. **DEIMIA.** Perianthii tubus campanulatus, lobi patentissimi. Stamina e fauce exserta, erecta, conniventia.—*Afr. austr. et trop.*

121. **RHADAMANTHUS.** Perianthii tubus campanulatus, lobi erecti, subconniventes. Antheræ erectæ, circa stylum conniventes. Flores in racemo tenui parvi, penduli.—*Afr. austr.*

122. **LITANTHUS.** Perianthium cylindraceum, lobis brevissimis. Planta pusilla, tenerrima, flore parvo in scapo filiformi unico nutante.—*Afr. austr.*

123. **DIPCADIA.** Perianthii tubus cylindraceus, lobi exteriores patentes, interiores erectiores brevioresque. Racemus laxus, bracteis subscariosis angustis.—*Eur. austr., Ind. or., Afr. trop. et austr.*

124. **GALTONIA.** Perianthii tubus latiusculus, lobi patentes, subæquales v. interiores paulo latiores. Flores in racemo longo laxo speciosi, candidi, penduli, bracteis membranaceo-scariosis.—*Afr. austr.*

\*\*\* *Perianthii segmenta a basi distincta. Ovula in loculis numerosa. Semina valde compressa.*

125. **ALBUCA.** Perianthii persistentis segmenta exteriora patentia, interiora paulo breviora, erecta, apice conniventia, varie cristata.—*Afr. austr. et trop.*

126. **URGINIA.** Perianthii decidui segmenta subæqualia, campanulato-conniventia v. patentia. Habitus *Scille*.—*Europa, Reg. Mediterr., Ind. or., Afr. trop. et austr.*

\*\*\*\* *Perianthii tubus varius, lobi breviores v. longiores. Ovula in loculis 2-6, rarius plura. Semina obovacea v. globosa, nec complanata nec angulata.*

127. **VELTHEIMIA.** Perianthium cylindraceum, lobis brevissimis. Capsula membranaceo-scariosa, 3-alata. Flores in spica v. racemo conferti, penduli.—*Afr. austr.*

128. **RHODOCODON.** Perianthium campanulatum, lobis tubo multo brevioribus. Flores in racemo laxo penduli.—*Madagasc.*

129. **MUSCARI.** Perianthium urceolato-globosum, ad faucem constrictum, lobis brevissimis dentiformibus. Stamina inclusa.—*Europa, Afr. bor., Asia occid.*

130. **HYACINTHUS.** Perianthium infundibuliformi-campanulatum, ad faucem non constrictum, lobis tubo brevioribus æqualibus rarius paullo longioribus. Stamina tubo v. fauci affixa, filamentis filiformibus v. basi dilatatis.—*Reg. Mediterr., Oriens, Afr. trop. et austr.*

131. **PUSCHKINIA.** Perianthii lobi tubo campanulato longiores. Stamina filamenta in cyathum ultra antheras in conum productum connata. Flores pauci, laxè racemosi.—*Asia occid.*

132. **CHIONODOXA.** Perianthii lobi tubo campanulato longiores. Stamina filamenta omnia v. alterna petaloideo-dilatata, erecta nec connata. Flores pauci, laxè racemosi.—*Oriens.*

\*\*\*\* *Perianthii segmenta distincta v. ima basi brevissime connata. Ovula in loculis 2-∞.*  
*Semina obovoidea v. globosa, nec complanata nec angulata.*

133. **DEIMIOPSIS.** Perianthii segmenta concava v. cucullata, conniventia. Stamina filamenta alte complanato-dilatata. Flores parvi, in spica v. racemo denso subsessiles.—*Afr. austr. et trop.*

134. **EUCOMIS.** Perianthii segmenta patentia. Stamina filamenta infra medium dilatata. Racemus longus, densus, apice bracteis vacuis herbaceis v. coloratis comosus.—*Afr. austr.*

135. **SCILLA.** Perianthii segmenta patentia v. rarius campanulato-conniventia, 1-nervia. Stamina filamenta filiformia v. basi complanata. Flores cærulei rosei v. purpurascens rarius albi.—*Europa, Asia temp. et mont., Afr. extratrop. v. mont. (Chile?)*

136. **CAMASSIA.** Perianthii segmenta patentia, 3-∞-nervia. Stamina filamenta filiformia. Flores cærulei purpurascens v. albi.—*Amer. bor.*

137. **ORNITHOGALUM.** Perianthii segmenta patentia, unicoloria v. dorso late vittata, nervis obscuris. Stamina filamenta basi v. alte complanata. Flores undique v. margine albi flavi v. miniati, nec cærulei nec roseo-purpurascens.—*Europa, Oriens, Afr. extratrop. et trop., in Amer. inquilina.*

**Tribus XIV. Tulipeæ.** Bulbus tunicatus v. carnosus-squamatus. Caulis erectus, 1-∞-foliatus. Flores pauci, sæpius magni, laxè racemosi. Perianthii segmenta distincta. Capsula, excepto *Calochorto*, loculicide dehiscens.

138. **LILIUM.** Perianthium infundibuliforme v. subcampanulatum, unguibus segmentorum sæpius sulco nectarifero præditis. Flores nutantes penduli v. rarius erecti. Antheræ lineares, dorsifixæ, versatiles.—*Hemisph. bor. reg. temp.*

139. **FRITILLARIA.** Perianthium campanulatum, segmentis supra basin sæpius foveola v. macula nectarifera instructis. Flores nutantes v. penduli. Antheræ lineares v. oblongæ, erectæ, basifixæ, filamento sæpius intruso.—*Hemisph. bor. reg. temp.*

140. **TULIPA.** Perianthium campanulatum v. subinfundibuliforme, segmentis prope basin sæpe maculatis nec foveolatis. Antheræ oblongo-lineares, erectæ, basifixæ, filamento intruso. Flores sæpissime erecti.—*Europa, Afr. bor., Asia occid. et centr., Japonia.*

141. **ERYTHRONIUM.** Perianthii segmenta angusta, a medio v. fere a basi recurva v. reflexa. Antheræ oblongo-lineares, erectæ, basifixæ, filamento intruso. Caulis infra medium 2-foliatus. Flores nutantes.—*Europa, Asia Rossica, Japonia, Amer. bor.*

142. **GAGEA.** Perianthii segmenta patentia, non foveolata. Antheræ ovatae v. oblongæ, erectæ, basifixæ. Racemus pedicellis longis suberectis sæpe fere umbelliformis. Flores quam in præcedentibus minores, sæpe flavi.—*Europa, Afr. bor., Asia temp. et mont.*

143. **LLOYDIA.** Perianthii segmenta demum patentia, basi plica transversali v. foveola instructa. Antheræ ovato-oblongæ, erectæ, basifixæ. Caulis humilis, gracilis, apice 1-2-florus.—*Europa, Asia med. et bor., Amer. bor.*

144. **CALOCHORTUS.** Perianthii segmenta subgloboso-conniventia v. patentia, exteriora interioribus foveolatis sæpius angustiora v. minora, subcalycina et non v. vix foveolata. Antheræ oblongæ v. lineares, erectæ, basifixæ, filamento longe intruso. Capsula *septicide dehiscens* v. 3-partita. Flores erecti v. penduli.—*Amer. bor., Mexico.*

**SERIES C.** Bulbus seu cormus tunicatus, v. caulis ebulbosus, herbaceus, basi v. superne foliatus. Antheræ nunc sæpius introrsum affixæ, loculis extrorsum v. a latere dehiscentibus, nunc extrorsum prope basin affixæ, loculis introrsum dehiscentibus. Ovula anatropa. Capsula sæpius septicide

dehiscens v. partibilis, interdum loculicida v. bacca indehiscens. Embryo prope hilum parvus, sæpe minutus, rarissime tertiam partem albuminis excedens.

Series a botanicis plerisque recognita, sæpequæ pro ordine proprio *Melanthacearum* v. *Colchicacearum* distincta, caractere tamen nullo constante strictè definita. Genera nunc antheris plus minus in extera versis, nunc capsula, sæpissime embryone parvo, recognoscenda.

**Tribus XV. Colchicææ.** Cormus hypogæus, tunicatus, foliis radicalibus. Scapus intra vaginas hypogæus, brevissimus, 1-3-florus. Perianthii segmentorum unguis in tubum longum tenuem conniventes v. connati. Antheræ angustæ, dorsifixæ, loculis introrsum dehiscens. Capsula septicide dehiscens.

145. COLCHICUM. Perianthii tubus integer. Styli 3, a basi distincti.—*Europa, Asia occid. et centr., Afr. bor.*

146. SYNIPHON. Perianthii tubus integer. Stylus intra tubum integer, extra faucem 3-fidus.—*Asia centr.*

147. BULBOCODIUM. Perianthii segmentorum unguis distincti, in tubum conniventes. Stylus intra tubum integer, apice 3-fidus.—*Europa, Asia Ross. austr.*

148. MERENDERA. Perianthii segmentorum unguis distincti, in tubum conniventes. Styli 3, a basi distincti.—*Reg. Mediterr., Affghan., Abyssinia.*

**Tribus XVI. Anguillariææ.** Bulbus seu cormus tunicatus, rarius 0. Caulis sæpe humilis, 1-∞-foliatus, foliis angustis basi cum vagina continuis. Antherarum loculi distincti, extrorsum dehiscens. Styli 3, distincti v. rarius basi in stylum connati. Capsula septicide v. loculicide dehiscens.—Perianthii segmenta sæpe basi glandulis v. maculis nectariferis notata.

\* *Capsula septicide dehiscens.*

149. BURCHARDIA. Caulis *ebulbosus*. Perianthii segmenta distincta, laminis patentibus. Flores in umbella terminali pedicellati.—*Australia.*

150. ANDROCYMBIUM. Perianthii segmenta distincta, unguibus erectis, laminis erecto-patentibus. Folia in caule brevi basi dilatata, inflorescentiam capituliformem involucrentia.—*Afr. austr., Reg. Mediterr.*

151. WURMBIA. Perianthii tubus brevis, lobi longiores patentes. Flores in spica terminali subsessiles.—*Afr. austr., Australia.*

152. BÆOMETRA. Perianthii segmenta distincta, unguibus erectis, laminis patentibus. Flores in racemo terminali pauci, breviter pedicellati. Capsula longa, erecta.—*Afr. austr.*

153. DIPIDAX. Perianthii segmenta distincta, unguibus brevibus suberectis, laminis patentibus. Flores in spica terminali subsessiles. Capsula turbinata truncata v. 3-loba.—*Afr. austr.*

\*\* *Capsula loculicide dehiscens.*

154. ANGUILLARIA. Perianthium persistens, segmentis oblongis patentibus. Flores in spica terminali subsessiles.—*Australia.*

155. ORNITHOGLOSSUM. Perianthium sub fructu persistens, segmentis angustis patentibus. Flores longe pedicellati, laxissime racemosi.—*Afr. austr.*

156. IPIGENIA. Perianthium post anthesin caducissimum, segmentis linearibus patentibus. Flores ad axillas bractearum foliacearum longe pedicellati, vix racemosi, interdum in caule solitarii.—*Ind. Or., Nov. Zel., Australia, Madagasc., Afr. trop.*

**Tribus XVII. Nartheceææ.** Rhizoma breve v. reptans, bulbus 0. Folia radicalia conferta disticha, v. petiolata patentia, caulina minora, nunc minima v. 0. Perianthium (an semper?) persistens. Antheræ basi v. juxta basin affixæ, loculis a latere subintrorsum v. subextrorsum dehiscens.

\* *Capsula loculicide dehiscens.*

† *Antherarum loculi subintrorsum dehiscens. Stylus indivisus.*

157. NEITNERIA. Folia radicalia linearia, rigida, disticha, caulina perpauca. Inflorescentia ramosa, fere corymboso-cymosa, pedicellis erectis rigidis. Perianthium rigidum, segmentis basi in tubum ovario adnatum connatis.—*Mont. Roraima Guianæ.*

158. NARTHECUM. Folia radicalia linearia, rigida, disticha, caulina perpauca v. 0. Racemus simplex v. parce ramosus. Perianthii segmenta rigida, distincta, patentia.—*Hemisph. bor. reg. temp.*

159. *Metanarthecium*. Folia membranacea, radicalia oblonga, petiolata, caulina perpaucissima v. 0. Racemus spiciformis, simplex v. parce ramosus. Perianthii segmenta distincta, linearia.—*Japonia*.

†† *Antherarum loculi subextrorsum dehiscentes. Styli 3.*

160. *Chamelirion*. Folia membranacea, radicalia obovalia petiolata, caulina minora angustiora. Racemus spiciformis, simplex. Flores dioici. Perianthii segmenta linearia, subaequalia, Antheræ parvæ, subglobosæ.—*Amer. bor.*

161. *Chionographis*. Habitus et inflorescentia *Chamelirii*. Flores hermaphroditi. Perianthii segmenta 2-4 superiora linearia, 4-2 inferiora minima v. obsoleta. Antheræ parvæ, 2-globosæ.—*Japonia*.

162. *Xerophyllum*. Folia radicalia conferta, longe linearia, rigida, caulina subulata, sparsa. Racemus terminalis, simplex, floribundus, primum dense pyramidatus, demum valde elongatus.—*Amer. bor.*

163. *Hewardia*. Folia radicalia rigida, linearia, disticha, caulina pauca spathiformia. Flos unicus, terminalis, majusculus. Stamina 3, antheris longis. Styli basi breviter connati.—*Tasmania*.

\*\* *Capsula septicide dehiscent v. partita.*

† *Antherarum loculi subextrorsum dehiscentes.*

164. *Heloniopsis*. Folia membranacea, radicalia petiolata, oblonga, caulina pauca, minima v. 0. Flores ad apicem scapi pauci, majusculi. Stamina perianthio sublongiora. Stylus indivisus.—*Japonia*.

165. *Helonias*. Folia membranacea, radicalia petiolata, caulina pauca minima. Flores parvuli, dense racemosi. Stamina perianthio paulo longiora. Styli 3, brevissimi.—*Amer. bor.*

†† *Antherarum loculi introrsum dehiscentes.*

166. *Tofieldia*. Folia radicalia linearia, caulina pauca parva v. 0. Flores parvuli, in racemo spiciformi v. spica subsessiles. Styli 3, brevissimi.—*Hemisph. bor. reg. temp. et mont., Andes Amer. austr.*

167. ? *Petrosavia*. Caulis aphyllus, squamatus, tenuis. Flores parvi, in racemo simpliciter laxo. Stigmata 3, in carpellis sessilia.—*Borneo*.

168. *Plere*. Stamina 6-12. Cætera *Tofieldiæ*.—*Carolina*.

**Tribus XVIII. Uvulariæ.** Rhizoma tuberosum v. repens. Caulis simplex v. ramosus, brevis v. alte scandens, foliatus, foliis sessilibus v. amplexicaulibus nec vaginatis. Flores axillares v. terminales, solitarii v. rarius gemini v. pauci. Antheræ extrorsum dehiscentes. Stylus filiformis, (excepta *Walleria*) 3-fidus. Capsula loculicida, rarius septicida.

\* *Capsula (ubi nota) loculicida.*

169. *Schellhammera*. Caulis humilis, sæpe ramosus. Flores terminales. Perianthii segmenta patentia.—*Australia*.

170. *Kreysigia*. Caulis simplex. Flores axillares. Perianthii segmenta a basi patentia.—*Australia*.

171. *Uvularia*. Caulis parum ramosus. Flores terminales, penduli. Perianthii segmenta erecta, conniventia v. superne patentia.—*Amer. bor.*

172. *Gloriosa*. Caulis alte scandens. Flores speciosi, in axillis longe pedicellati. Perianthii segmenta patentia, sepiissime undulato-crispa.—*Asia et Afr. trop.*

173. *Sandersonia*. Caulis (an semper?) simplex, suberectus. Flores aurantiaci, axillares. Perianthium urceolato-globosum, lobis brevissimis.—*Natal*.

174. *Littonia*. Caulis scandens. Flores aurantiaci, axillares. Perianthii segmenta distincta, suberecta, campanulato-conniventia.—*Afr. austr. et trop.*

175. ? *Walleria*. Caulis simplex, elatus. Flores axillares. Perianthii tubus brevissimus, lobi patentes. Antherarum loculi poro terminali dehiscentes. Stylus indivisus.—*Afr. trop.*

\*\* *Capsula septicida.*

176. *Tricyetis*. Perianthii segmenta erecta, conniventia, superne patentia, exteriora basi saccata. Flores axillares v. in cyma terminali laxè dichotoma.—*Himalaya, Japonia, China*.

\*\*\* *Bacca indehiscens.*

177. *DISPORUM*. Perianthii segmenta erecta, conniventia, superne patentia, basi sæpe (nec semper) foveolata v. saccata. Flores ad apices ramulorum solitarii gemini v. rarius umbellati. — *Asia mont. et centr., Japonia, Amer. bor.*

**Tribus XIX. Medecoleæ.** Caulis ebullbosus, simplex. Folia membranacea, lata, pauca, ad basin caulis subradicalia v. in medio caule v. apice opposita v. verticillata. Flores terminales, solitarii v. umbellati. Antherarum loculi extrorsum dehiscentes. Fructus indehiscens, baccatus v. membranaceus.

178. *CLINTONIA*. Folia ad basin caulis pauca, petiolata v. in vaginam contracta. Umbella longe pedunculata (rarius flos unicus). Perianthii segmenta subæqualia. — *Asia mont. et temp., Japonia, Amer. bor.*

179. *SCOLIOPUS*. Folia ad apicem caulis 2. Umbella inter folia sessilis, pedicellis longis. Perianthii segmenta exteriora patentia, interiora linearia, erecta. Ovarium 1-loculare, placentis parietalibus. Fructus membranaceus, demum ruptus nec valvatim dehiscens. — *Amer. bor.*

180. *MEDBOLEA*. Folia in medio caule verticillata. Umbella terminalis, foliis 3 involucrata. Perianthii segmenta subæqualia. — *Amer. bor.*

181. *TRILLIUM*. Folia 3, ad apicem caulis verticillata. Flos inter folia unicus, 3-merus. Perianthii segmenta exteriora subherbacea, interiora petaloidea. — *Asia mont. et temp., Japonia, Amer. bor.*

182. *PARIS.* Folia 4-∞, ad apicem caulis verticillata. Flos inter folia unicus, 4-∞-merus. Perianthii segmenta exteriora herbacea, interiora linearia subulata v. 0. — *Europa, Asia temp. et mont.*

**Tribus XX. Veratresæ.** Caules erecti, sæpius elati, basi ebullbosi v. bulbosi, foliati v. præter folia subradicalia aphylli. Racemi simplices v. paniculati. Flores sæpius polygami. Antheræ breves, introrsum affixæ, extrorsum dehiscentes, loculis confluentibus, demum explanatæ orbiculato-peltatæ. Styli breves, lobos ovarii terminantes. Capsula septicide dehiscens v. partita.

\* *Semina circumcirca membranaceo-alata. Caules foliati.*

183. *MELANTHIUM*. Folia angusta v. longe petiolata. Perianthii segmenta distincte unguiculata. — *Amer. bor.*

184. *VERATRUM*. Folia sæpius lata, plicato-venosa, in vaginam contracta nec distincte petiolata. Perianthii segmenta basi parum contracta. — *Europa, Asia Ross., Amer. bor.*

\*\* *Semina angusta, angulata, vix alata. Folia radicalia v. ad basin caulis conferta, linearia v. rarius sublanceolata.*

185. *STENANTHIUM*. Flores in racemo v. panicula pedicellati. Perianthium anguste v. late campanulatum, tubo brevissimo turbinato. Stamina perianthio multo breviora. Ovarium basi perianthio brevissime adnatum. — *Amer. bor., Asia bor. or.*

186. *ZYGADENUS*. Flores in racemo v. panicula pedicellati. Perianthium explanatum, basi interdum brevissime turbinatum. Stamina perianthio paullo breviora. Ovarium sæpe basi perianthio breviter adnatum. — *Amer. bor.*

187. *SCHENOCAULON*. Flores in spica subsessiles. Perianthii segmenta angusta. Stamina perianthio longiora. Ovarium a basi liberum. — *Amer. bor.*

## GENERA EXCLUSA V. DUBIA.

*Ophiopogoneæ* et *Conanthereæ*, a pluribus botanicis in *Liliaceis* inclusæ, supra ad *Hæmodoraceas* referuntur.

*WACHENDORFIA*, Linn., affinesque a Lindleyo inter *Liliaceas* enumeratæ, pariter ad *Hæmodoraceas* pertinent.

*XANTHOPHREA*, Sm., inter *Juncaceas* quærenda est.

*DUCHEKIA*, Kostel., est *Palisota*, genus *Commelinacearum*.

*ANDROSYNKE*, Salisb. *Gen. Pl. Fragm.* 61, genus ad ramulum in insula Nicobar lectum descriptum, nulli nobis noto convenit. Caulis volubilis, aculeatus. Folia alterna, dorso aculeata, nervis paral-

lelis isthmis paucis transversis. Perianthii segmenta 6, lanceolata. Stamina 6, hypogyna; antheræ filamento longiores in conum coherentes, foraminibus terminalibus dehiscentes. Ovarium superum, 3-loculare; stylus gracilis, stigmatibus parvis. Fructus capsularis. Semina plurima.

*BIDWILLIA*, *Herb. in Lindl. Veg. Kingd.* 205, genus nomine tantum signatum, delendum est.

### TRIBUS I. SMILACEÆ.

1. *Heterosmilax*, *Kunth, Enum. Pl.* v. 270. (*Oligosmilax*, *Seem. Journ. Bot.* 1868, 258, t. 83.)—Flores dioici. Perianthium ovoideum v. tubulosum, ore parvo minute 2-5-dentato. Fl. ♂: Stamina 3, fundo perianthii affixa eoque inclusa, filamentis in columnam connatis; antheræ ad apicem columnæ sessiles v. brevissime stipitatae, erectæ, loculis introrsum dehiscentibus septo angustissimo separatis, apertæ 1-loculares videntur. Ovarii rudimentum 0. Fl. ♀: Perianthium post anthesin deciduum. Staminodia ad basin ovarii 1-3, minima, filiformia. Ovarium perianthio inclusum, sessile, ovoideum, 3-loculare; stigmata 3, brevissima, ad apicem ovarii sessilia; ovula in loculis 2, pendula, orthotropa. Bacca globosa, abortu 1-3-sperma. Semina *Smilacis*.—Frutices glabri, scandentes, inermes, habitu *Smilacis*. Folia membranacea v. rarius subcoriacea, 3-5-nervia, reticulato-venulosa, petiolo cirriferi. Flores parvi v. minimi, in umbellis ad axillas solitariis pedunculatis numerosi.

Species 5, Indiæ orientalis, Archipelagi Malayani, Chinæ et Japoniæ incolæ.—*A. DC. Monogr. Phanerog.* i. 41.

2. *Smilax*, *Linn. Gen.* n. 1120.—Flores dioici. Perianthii segmenta distincta, subæqualia, sub anthesi patentia incurva v. recurva. Fl. ♂: Stamina 6, rarius  $\infty$ , fundo perianthii affixa, segmentis vix breviora, filamentis erectis liberis brevissimis v. longiusculis; antheræ filamento multo breviores v. longiores, ovatae, erectæ, loculis introrsum dehiscentibus septo angustissimo separatis, apertæ 1-loculares videntur. Ovarii rudimentum 0. Fl. ♀: Staminodia filiformia, 6 v. pauciora. Ovarium sessile, ovoideum, 3-loculare; stigmata 3, ad apicem ovarii v. in stylo brevissimo sessilia, lata, recurva; ovula in loculis solitaria v. gemina, pendula, orthotropa. Bacca globosa, abortu sæpius 1-2-sperma. Semina si solitaria globosa, si 2 hemisphærica testa tenui appressa; embryo in albumine duro parvus, oblongus, ab hilo plus minus remotus.—Frutices sarmentosi, raro humiles subherbacei, rhizomate sæpe valido, folio secundo cujusque rami sæpe squamiformi. Folia cætera alterna, disticha, v. rarius opposita, sæpius perennantia, 3-rarius 5- $\infty$ -nervia, inter nervos reticulata, petiolo supra basin persistentem sæpius cirris 2 instructo, infra v. juxta limbum tardius rumpendo. Flores parvuli, in umbellis (v. cymulis umbelliformibus) subæqualiter pedicellati, sæpius numerosi, rarius subsolitarii, bracteis ad basin pedicellorum minimis. Umbellæ ad axillas foliorum solitariae, pedunculatae v. subsessiles, v. ad apices ramorum plures, secus rhachin subsessiles, racemum formant subaphyllum, foliis floralibus plerisque minimis bracteiformibus.

Species satis notæ ex *A. DC.* 187, per regiones tropicas temperatasque utriusque orbis late dispersæ.—*A. DC. Monogr. Phanerog.* i. 45.

Genus in sectiones 4, fatente *A. DC.* parum naturales dividitur:—

1. *Coprosmanthus*, *Torr.* Stamina 6. Ovarii loculi 2-ovulati. *Hook. Fl. Bor. Amer.* t. 187. *Wats. Dendrol.* t. 110. *Seem. Bot. Her.* t. 99. *Bot. Mag.* t. 1920. *COPROSANTHUS*, *Kunth, Enum. Pl.* v. 263. *NEMEXIA*, *Rafin. Med. Fl. U.S.* ii. 264, *absque char.*

2. *Coilanthus*. Stamina 6. Ovarii loculi 1-ovulati. Perianthii segmenta, præsertim interiora, incurva, concava, sæpe crassiuscula. Species paucæ, Asiaticæ v. Australasiæ. *Labill. Sert. Austr. Caled.* t. 22. *Endl. Iconogr.* t. 39. *Seem. Bot. Her.* t. 100.

3. *Eusmilax*. Stamina 6. Ovarii loculi 1-ovulati. Perianthii segmenta patentia v. recurva. *Wats. Dendrol.* t. 108, 109, 111. *Reichb. Ic. Fl. Germ.* t. 438. *Nees, Gen. Fl. Germ. Monocot.* ii. n. 63. *Sibth. Fl. Græc.* t. 959. *Webb. Phytogr. Canar.* t. 225. *Grant in Trans. Linn. Soc.* xxix. t. 106. *Wight, Ic.* t. 809, 2057 ad 2059. *Royle, Illustr. Bot. Himal.* t. 94. *Dene. in Jacquem. Voy. Bot.* t. 169. *Klotzsch in Pr. Waldem. Reise, Bot.* t. 91. *Griseb. in Mart. Fl. Bras.* iii. i. t. 1 ad 3. *Vell. Fl.*

*Flum. Ic. x. t. 10b ad 111. Bertol. Misc. xvi. t. 2, 3. Bot. Mag. t. 1846. Fl. des Serres. t. 1049. PASILLAX, Rafin. Fl. Med. U.S. ii. 264 absque char.*

4. *Pleiosmilax*. Stamina plusquam 6, cætera *Eusmilacis*. Species paucæ, insularum maris Pacifici. *Labill. Serit. Austr. Caled. t. 23. PLEIOSMILAX, Seem. Journ. Bot. 1868, 193, t. 81; Fl. Vit. t. 93.*

3. *Thypogonum*, Forst. *Char. Gen. 49, t. 25* (Ripogonum).—Flores hermaphroditi. Perianthii segmenta distincta, æqualia v. exteriora breviora. Stamina 6, hypogyna, filamentis brevissimis leviter complanatis; antheræ erectæ, ovatæ, perianthio paullo breviores v. longiores, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare, in stylum brevissimum attenuatum, stigmatibus 3 crassis recurvis; ovula in loculis solitaria v. rarius gemina, a latere sub apice affixa, orthotropa v. hemianatropa. Bacca globosa, abortu 1-sperma v. interdum 2-3-sperma. Semina globosa, testa appressa; embryo parvus, in albumine duro ab hilo plus minus remotus.—Frutices alte scandentes, glabri v. pubescentes. Folia pleraque sæpius opposita v. subopposita, interdum omnia alterna, 3-5-nervia, venulis reticulatis, petiolo non cirriferi. Flores parvuli, racemosi v. spicati, secus rhachin breviter pedicellati v. subsessiles, spicis racemisve ad axillas solitariis sessilibus v. ad apices ramorum in paniculam dispositis. Bracteæ parvæ, additis sæpe sub quoque flore bracteolis 2-3.

Species 5, quarum una Novo-Zelandica perianthio antheris brevior, ovarii loculis sæpissime 2-ovulatis, 4 Australianæ, perianthio antheras superante, ovarii loculis sæpissime 1-ovulatis.—*A.D.C. Monogr. Phanerog. i. 213. Benth. Fl. Austral. vii. 8, et in Hook. Ic. Pl. t. 1395, 1396.*

## TRIBUS II. ASPARAGEÆ.

4. *Ruscus*, Linn. *Gen. n. 1139*.—Flores dioici. Perianthium parvum, marcescens; segmenta distincta, 3 exteriora ovata subvalvata demum patentia, 3 interiora in alabastro inclusa, multo minora. Staminum filamenta in urceolum globosum v. ovoideum carnosulum coalita; antheræ 3, ad os urceoli subextrorsum sessiles, loculis leviter divergentibus apice confluentibus; in fl. ♀ urceolus tenuior anantherus, ovarium imperfecte cingens. Ovarium in fl. ♂ 0 v. rudimentum minimum; in fl. ♀ ovoideo-globosum v. oblongum, jam sub anthesi (abortu?) 1-loculare; stylus breviter columnaris v. supra ovarium oblongum vix ullus, stigmate crasso capitato; ovula in loculo 2, collateralia, orthotropa. Bacca globosa, pulposa, indehiscens. Semina solitaria globosa, v. 2 uno latere plana, pallida, testa tenuissima arte adnata, hilo cum chalaza late orbiculari; embryo cylindraceus, albumine duro 2-3-plo brevior, ab hilo plus minus remotus.—Caulis erectus, ramosus, sublignosus. Cladodia foliiformia alterna v. sparsa, ad axillas squamellarum scariosarum solitaria, ovata v. ovato-lanceolata, acuta v. pungenti-acuminata, rigide coriacea, venis crebris parallelis distinctis v. plus minus reticulato-anastomosantibus. Flores parvi, in media facie superiore v. rarius inferiore cladodii fasciculati, fasciculo costam prominulam terminante. Pedicelli breves, apice articulati. Bracteæ minimæ, scariosæ, sub quoque pedicello sæpius 2, adest etiam sæpe sub fasciculo bractea foliacea lanceolata acuta, brevis v. flores superans.

Species 2 v. 3, Europæ et totius regionis Mediterraneæ incolæ, a Madera usque ad Caucasum extensæ. *Kunth, Enum. Pl. v. 273. Baker in Journ. Linn. Soc. xiv. 629. Reichb. Ic. Fl. Germ. t. 437. Nees, Gen. Fl. Germ. Monocot. ii. n. 64. Sibth. Fl. Græc. t. 955. Bot. Mag. t. 2049.*

*R. Hypophyllum* et *R. Hypoglossum*, Linn., a variis botanicis qui plantas in loco natali observarunt characteribus variis distinguuntur v. in speciem unicam junguntur. Florum fasciculus in una semper in pagina inferiore oriundus, in altera sæpius nec semper in pagina superiore; bractea foliacea sub fasciculo quam maxime variabilis est; ovarium interdum oblongum stigmate sessili, interdum subglobosum stylo breviter columnari observavimus, sed differentia vix cum aliis characteribus convenit. Flores minimos perpaucos examinare potuimus, semper tamen ovarii loculum unicum tantum paullo excentricum invenimus.

5. *Semele*, Kunth in *Abhandl. K. Akad. Wiss. Berlin*, 1842, 49; *Enum. Pl.* v. 277. (Amphion, *Salisb. Gen. Pl. Fragm.* 66.)—Perianthium persistens, tubo brevissimo turbinate fere hemisphærico; lobi ovati, subæquales v. interiores paullo minores, patentissimi v. reflexi; corona 0. Stamina fauci affixa, filamentis in urceolum brevem latum membranaceum coalitis; antheræ ad os urceoli extrorsum sessiles, loculis leviter divergentibus apice confluentibus. Ovarium intra tubum perianthii sessile, brevissimum, 3-loculare; stylus ovario longior, columnaris, medio incrassatus, stigmatibus 3 crassiusculis ex urceolo prominentibus patentibus; ovula in loculis 2, collateralia, hemianatropa. Bacca globosa, pulposa, indehiscens. Semina solitaria v. rarius 2, globosa v. uno latere plana, pallida, testa tenuissima adnata; embryo cylindraceus, albumine duro 2-3-plo brevior, ab hilo remotus.—Caulis fruticosus, ramosus, super arbores alte scandens. Cladodia foliiformia alterna v. sparsa, ad axillas squamellarum fusco-membranacearum solitaria, ovata v. ovato-lanceolata, acuminata, coriacea, tenuiter multinervia. Flores parvi, fasciculati, fasciculis ad margines cladodiorum sæpe in eodem cladodio pluribus, rarius in facie cladodii solitarii, pedicellis brevibus apice articulatis. Bractæ sub pedicellis minute squamiformes.

Species 1, ins. Canariensium incola. *Webb, Phytogr. Canar. t.* 224 (*Danae*). *Baker in Journ. Linn. Soc.* xiv. 630. *Bot. Mag. t.* 1898, 3029 (*Ruscus*).

6. *Danae*, *Medicus, Malv. Fam.* 71. (*Danaidia*, *Link, Handb.* i. 276.)—Perianthium subglobosum, tubo hemisphærico subcarnoso; lobi breves, erecti, subæquales, ovati, membranacei; corona ad faucem sub lobis crasse carnea. Stamina ad faucem sub corona affixa, filamentis in urceolum membranaceum coalitis; antheræ 6, ad os urceoli subextrorsum sessiles, loculis parum divergentibus apice confluentibus. Ovarium tubo perianthii urceoloque inclusum, liberum, sessile, subglobosum, 3-loculare; stylus brevis, stigmatibus capitato ex urceolo exserto; ovula in loculis 2, collateralia, hemianatropa (v. orthotropa?). Bacca globosa, pulposa, indehiscens. Semina abortu solitaria v. rarius 2, subglobosa, pallida, testa tenui adnata; embryo oblongus, albumine cartilagineo 3-4-plo brevior, ab hilo remotus.—Caulis fruticosus, erectus, ramosissimus. Cladodia foliiformia alterna v. sparsa, lanceolata v. ovato-lanceolata, acuta, coriacea, multinervia, ad axillas squamellarum minimarum solitaria. Flores parvi, in racemos breves terminales a cladodiis liberos dispositi, pedicellis apice articulatis. Bractæ minutæ v. 0.

Species 1, Orientalis. *Kunth, Enum. Pl.* v. 276. *Baker in Journ. Linn. Soc.* xiv. 631. *Gaertn. Fruct. t.* 16 (*Ruscus*). *Wats. Dendrol. Brit. t.* 145 (*Ruscus*).

7. *Asparagus*, *Linn. Gen. n.* 424.—Perianthium parvum, marcescens, persistens; segmenta distincta v. vix ima basi connata, subæqualia, conniventia v. apice v. a basi patentia. Stamina 6, ima basi segmentorum affixa v. hypogyna, perianthio sæpius parum breviora, filamentis distinctis filiformibus v. leviter complanatis; antheræ ovatae v. oblongæ, basi 2-lobæ, dorsifixæ, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare; stylus columnaris, brevis crassusque v. longior tenuisque, stigmatibus 3 brevibus recurvis, v. rarius styli breves fere a basi distincti; ovula in loculis 2-∞ (usque ad 8), obovoidea, hemianatropa v. fere orthotropa. Bacca globosa, pulposa, indehiscens. Semina abortu solitaria v. pauca, subglobosa, sæpius nigra, opaca v. foveolato-rugulosa, testa tenui appressa; embryo cylindraceus, albumine duro parum v. 2-3-plo brevior, sæpius obliquus v. transversus, ab hilo plus minus remotus.—Caulis e rhizomate brevi v. repente herbaceus v. lignosus, sæpius ramosissimus, erectus v. alte scandens. Cladodia nunc acicularia teretia v. angulata, nunc foliiformia linearia falcata lanceolata v. rarius ovata, ad axillas squamellarum scariorum sæpe minutarum fasciculata v. solitaria, rarius subverticillata. Flores parvi, ad basin fasciculorum v. cladodiorum solitarii fasciculati subumbellati v. breviter racemosi, pedicellis brevibus v. gracilibus, apice articulatis. Bractæ squamiformes, sub pedicellis sæpius minutæ v. 0.

Species fere 160, per regiones calidiores temperatasque orbis veteris latissime dispersæ, in America prorsus deesse videntur. *Kunth, Enum. Pl.* v. 57. *Baker in Journ. Linn. Soc.* xvi. 594

*et in Trans. Linn. Soc. Bot.* i. 253. *Red. Lil. t.* 288, 407, 434, 446, 451, 460. *Jacq. Hort. Schænbr. t.* 97, 266. *Jacq. f. Ecl. t.* 40. *Wendl. Hort. Herrenh. t.* 22. *Hayne, Arzneigew. viii. t.* 29. *Reichb. Ic. Fl. Germ. t.* 518 ad 520. *Nees, Gen. Fl. Germ. Monocot. ii. n.* 57. *Waldst. et Kit. Pl. Rar. Hung. t.* 201. *Cav. Ic. t.* 136. *Webb, Phytogr. Canar. t.* 226 ad 229. *Tornabene in Atti Acad. Gioen. xii. cum tabb. (opus a nobis non visum).* *Sibth. Fl. Græc. t.* 337 ad 339. *Regel, Fl. Turkest. t.* 22. *Wight, Ic. t.* 2055, 2056. *Schweinf. Pl. Nilot. t.* 13 (*Asparagopsis*). *Grant in Trans. Linn. Soc. xxix. t.* 105. *Saund. Ref. Bot. t.* 21, 214, 261.

Genus a Kunthio restrictum fuit ad species floribus ex Kunthio dioicis ex Bakero polygamis, et species floribus omnibus hermaphroditis pro genere proprio separavit: *ASPARAGOPSIS*, Kunth in *Abhandl. K. Akad. Wiss. Berlin*, 1842, 35; *Enum. Pl. v.* 76; character tamen sæpe valde ambiguus, et genera duo bene in sectionem unicam jungeres iconibus supra citatis illustrandam. Cladodia in *Asparago*, Kunth, sæpissime fasciculata acicularia teretia v. angulata, nunc rigide pungentia, nunc tenuiora fere filiformia, in *Asparagopside*, Kunth, interdum iis *Asparagi* similia, sæpe tamen plana haud raro ad squamellas solitaria, anguste linearia recta v. falcata, v. lineari-lanceolata rarius latiuscula.

*MYRSPHYLLUM*, Willd. in *Gesellsch. Naturf. Fr. Berl. Mag.* ii. 25. *Kunth, Enum. Pl. v.* 105 (*Hæcatris*, *Salisb. Gen. Pl. Fragm.* 66), species continet 4 austro-Africanas, a plerisque botanicis bene ad sectionem *Asparagi* relatas, cladodiis foliiformibus ad squamellas solitariis ovatis v. ovato-lanceolatis vix coriaceis. *Red. Lil. t.* 442 (*Medeola*). *Bot. Mag. t.* 5584. *Saund. Ref. Bot. t.* 47.

### TRIBUS III. LUZURIAGÆ.

8. *Herreria*, Ruiz et Pav. *Prod.* 48, t. 35; *Syst. Veg.* 83; *Fl. Per. et Chil.* iii. 69, t. 303. —Perianthium deciduum; segmenta distincta, subæqualia, patentia. Stamina 6, ima basi segmentorum affixa iisque parum breviora, filamentis filiformibus; antheræ ovoideo-oblongæ, medio dorso affixæ, loculis introrsum dehiscentibus. Ovarium sessile, 3-quetrum, 3-loculare; stylus brevis, columnaris, stigmatibus 3 ad apicem subclavatum adnatis; ovula in loculis pauca (3-6), lateraliter affixa, latiuscula. Capsula coriacea, fere suberosa, 3-quetra, angulis valde prominentibus a latere 3-loba, demum septicide in carpella introrsum v. interdum 2-valvatim dehiscentia secedens. Semina in loculis sæpius abortu solitaria v. gemina, a latere complanata, nigra, testa laxa crassiuscule membranacea circumcirca fere in alam dilatata; embryo cylindraceus, albumine carnosio 2-3-plo brevior. —Caulis e rhizomate sæpe tuberoso elatus, ramosus, tortuosus-volubilis v. rarius flexuosus-erectus rigidulus. Folia cladodiis *Danais* et *Semelis* simillima, ad basin caulis v. ad nodos fasciculata, linearia v. lanceolata, rigidula, tenuiter multinervia, interdum angustissima subpungentia; squamellæ parvæ ad basin fasciculorum v. etiam foliis intermixtæ sæpissime adsunt paucae v. plurimæ. Racemi ad basin fasciculorum solitarii v. 2 suboppositi, v. ad apices ramorum laxè paniculati. Flores parvi, secus rhachin sparsi v. fasciculati, breviter pedicellati, pedicellis sub apice articulatis. Bractæ ad basin pedicellorum parvæ, squamiformes.

Species 3 v. 4, Americæ australis extratropicæ incolæ. *Kunth, Enum. Pl. v.* 201. *Baker in Journ. Linn. Soc.* xviii. 231. *Grisb. in Mart. Fl. Bras.* iii. i. 23, t. 4, 5. *Bot. Reg. t.* 1042.

*CLARA*, Kunth in *Abhandl. K. Akad. Wiss. Berlin*, 1848, 44; *Enum. Pl. v.* 295; *Grisb., Symb. Fl. Argent.* 321, ex speciminibus Balansanis e Paraguay, n. 629, omnino cum descriptione Kunthii et *Grisbachii* convenientibus, a cæteris *Herreriis* non differt nisi caule elato quidem flexuosoque sed non volubili parumque ramoso, fasciculos foliorum paucos ferente. Flores et fructus omnino *Herreria*.

9. *Behnia*, *Didrichs. in Vidensk. Meddel. Kjöbenh.* 1854, 182. (*Dictyopsis*, *Harv. in Bot. Mag. t.* 5638. *Hylonome*, *Baker in Journ. Linn. Soc.* xiv. 561, viz *Webb*). —Perianthium deciduum, oblongo-urceolatum, tubo lato cylindraceo apice contracto; lobi breves subæquales, patentes. Stamina 6, medio tubo affixa, perianthio breviora, filamentis crassiuscule filiformibus; antheræ breviter oblongæ, medio dorso affixæ, loculis introrsum dehiscentibus. Ovarium basi in stipitem crassum contractum, 3-loculare; stylus crassiuscule filiformis, stigmatibus 3 brevibus obtusis crassis patentibus; ovula in loculis pauca (2-4?). Bacca subglobosa, indehiscens, pericarpio carnosio. Semina pauca v. solitaria, subglobosa, testa nigra crassiuscula appressa; embryo subcentralis, albumine corneo

dimidio brevior.—Caulis basi tenuis, ramosus, scandens. Folia sessilia, ovata, acuminata, coriacea, insigniter parallele venosa et venulis transversis inter venas reticulata, cladodia *Rusci* quodammodo referentia. Flores viridi-flavescentes, in axillis superioribus laxè subcymoso-racemosi, pedicellis gracilibus secus pedunculum ad axillas bractearum minimarum 2-3-nis v. solitariis.

Species 1, Africæ australis incola (*Ruscus reticulatus*, Thunb.).

Webb, Phytogr. Canar. iii. 320, genus *HYLONOME* proposuit cum synonymo Thunbergiano supra citato, character tamen nequaquam convenit. Flores dioici, 5-meri, perianthio 10-partito etc. potius plantam quamdam e Dicotyledoneis indicant.

10. *Lapageria*, Ruiz et Pav. *Fl. Per. et Chil.* iii. 64, t. 297. (Copia, *Domb. in Poir. Dict. Suppl.* v. 596. *Phænocodon*, Salisb. *Gen. Pl. Fragm.* 58.)—Perianthii segmenta erecta, distincta, conniventia, subæquilonga, seriei exterioris paullo angustiora, basi sæpius extus gibba intus foveolata nectarifera. Stamina 6, hypogyna v. ima basi segmentis interioribus breviter adnata, erecta, perianthio breviora, filamentis filiformibus v. basi dilatatis breviterque coherentibus; antheræ oblongo-lineares, prope basin dorsifixæ, loculis introrsum dehiscentibus. Ovarium sessile, 1-loculare, placentis 3 parietalibus; stylus elongatus, stigmatè parvo obsolete 3-lobo; ovula in quaque placenta numerosa, funiculis (v. placenta) gelatinosis fulta, amphitropa. Bacca ovoideo-oblonga, sub-3-quetra, indehiscens. Semina ovoidea v. subglobosa, in pulpa nidulantia, testa tenui appressa; embryo in albumine fere cartilagineo inclusus, oblongo-linearis.—Frutex alte scandens, ramosus. Folia alterna, lanceolata ovata v. subcordata, acuminata, coriacea, 3-5-nervia et reticulato-venulosa, petiolo brevi infra limbum sæpius articulado, parte inferiore persistente torta. Flores speciosi, in axillis superioribus v. ad apices ramorum solitarii v. pauci, penduli, breviter pedunculati. Bracteæ in pedunculo plures, parvæ, imbricatæ.

Species 1, Chilensis. *Kunth, Enum. Pl.* v. 283. *Baill. Adans.* i. 44. *Bot. Mag.* t. 4447, 4892.

Baillon arillum carnosum sub ovulis descripsit quem tamen in speciminibus vivis frustra quæsimus, nisi pro arillis funiculi gelatinosi habendi.

11. *Philostea*, Comm. in Juss. *Gen.* 41.—Perianthii segmenta distincta, conniventia, exteriora acutiuscula erecta, interiora 2-3-plo longiora, obovato-oblonga, superne subpatentia. Stamina 6, hypogyna, erecta, perianthio breviora, filamentis basi v. ultra medium dilatatis et plus minus in tubum connatis v. rarius fere a basi filiformibus liberisque; antheræ oblongo-lineares, prope basin dorsifixæ v. lobis basalibus concretis intra basin intrusam affixæ. Ovarium sessile, 1-loculare, placentis 3 parietalibus; stylus elongatus, stigmatè capitato obscure 3-lobo; ovula in quaque placenta numerosa, anatropa. Bacca subglobosa, indehiscens. Semina ovoidea v. subglobosa, in pulpa nidulantia, testa tenui appressa; embryo albumine fere cartilagineo inclusus, oblongo-linearis.—Frutex glaber, ramosissimus. Folia alterna, brevissime petiolata, oblonga, coriacea, margine revoluta, 1-nervia, tenuissime reticulato-venulosa. Flores speciosi, quam in *Lapageria* tamen minores, ad apices ramorum solitarii v. perpauca, brevissime pedicellati. Bracteæ paucæ, parvæ, imbricatæ.

Species 1, Chile australis et terræ Magellanicæ incola. *Kunth, Enum. Pl.* v. 284. *Hook. f. Fl. Antarct.* ii. 355. *Bot. Mag.* t. 4738.

12. *Luzuriaga*, Ruiz et Pav. *Fl. Per. et Chil.* iii. 65, t. 298. (*Callixene*, Juss. *Gen.* 41. *Enargea*, Banks ex Gærtn. *Fruct.* i. 283, t. 59, ic. quoad embryonem erronea.)—Perianthium deciduum; segmenta distincta, subæqualia, patentia, enervia, tenuia, maculata. Stamina 6, hypogyna, filamentis erectis; antheræ oblongo-lineares, basifixæ, loculis a latere subintrorsum dehiscentibus. Ovarium sessile v. subsessile, ovoideum, 3-loculare; stylus crasse filiformis, stigmatè in lobos 3 breves rotundatos diviso; ovula in loculis  $\infty$  (8-10). Bacca subglobosa, indehiscens. Semina pauca, ovoidea v. subglobosa, interdum obtuse angulata, pallida, testa tenui appressa; embryo albumine corneo inclusus, brevis, rectus.—Caulis fruticosi, glabri, ramosi, ramulis tenuibus patentibus basi squama fusco-

membranacea stipatis. Folia fere sessilia, alterna, parvula, oblonga v. elliptica, prominenter 3- $\infty$ -nervia. Flores albi, ad axillas foliorum solitarii v. pauci; pedicelli graciles, basi bracteis brevibus fusco-membranaceis stipati.

Species 3, quarum 2 Chilenses, tertia in terra Magellanica et Nova Zelandia obvia, sæpe pro genere distincto habita. In specie typica, *L. radicante*, R. et Pav., filamenta brevissima, lata, crassa. antheris erectis. *Kunth, Enum. Pl.* v. 278. *Baker in Journ. Linn. Soc.* xiv. 573. *Lam. Illustr. t.* 248. *Bot. Mag. t.* 6465. In *L. erecta*, Kunth, et in *L. marginata* (CALLIXENE, Kunth, *Enum. Pl.* v. 281. *Baker in Journ. Linn. Soc.* xiv. 592. *Hook. f. Handb. N. Zeal. Fl.* 281. *Hook. Ic. Pl.* t. 632, 674. *Bot. Mag. t.* 5192), filamenta filiformia, antheris sublongiora, summo apice abrupte reflexa, anthera extrorsum reversa. Perianthium, ovarium, fructus et semina omnino eadem in omnibus; antherarum loculi in omnibus ad normam ordinis rima longitudinali 2-valvatum dehiscent, nec poris terminalibus tantum ut a Bakero descripti.

13. *Eustrephus*, R. Br. *Prod.* 281.—Perianthium marcescens, demum deciduum; segmenta distincta, subæqualia, patentia, 5-nervia, margine attenuata, exteriora integerrima, interiora fimbriato-ciliata. Stamina 6, hypogyna, perianthio breviora, filamentis brevibus complanatis in tubum conniventibus v. sæpius connatis; antheræ oblongo-lineares, erectæ, basifixæ, loculis a latere subintrorsum dehiscentibus. Ovarium sessile, breve, 3-loculare; stylus filiformis, stigmatē parvo; ovula in loculis  $\infty$ . Bacca subglobosa, indehiscens, pulpa parca, pericarpio demum tenui. Semina  $\infty$ , ovoidea v. subglobosa, sæpe obtusangula, nigra, rugosula, opaca, testa appressa; embryo in albumine corneo excentricus, sæpe curvulus, eoque parum v. triente brevior.—Caulis basi lignosi, tenuis, ramosissimi, flexuosi, alte scandentes. Folia alterna, subsessilia v. breviter petiolata, linearia lanceolata v. ovata, venosa. Flores ad axillas 2- $\infty$  fasciculati, pedicellis gracilibus folio tamen multo brevioribus. Bractee minutæ v. 0.

Species 1 (v. 2?), Australiana. *Baker in Journ. Linn. Soc.* xiv. 572. *Benth. Fl. Austral.* vii. 17. *Endl. Iconogr. t.* 4. *Bot. Mag. t.* 1245.

14. *Geitonoplesium*, A. Cunn. in *Bot. Mag. t.* 3131. (*Luzuriaga*, R. Br. *Prod.* 281, non R. et Pav. *Calcoa, Salisb. Gen. Pl. Fragm.* 67.)—Perianthium marcescens, demum sæpius deciduum; segmenta distincta, patentia, subæqualia, tenuiter 5-nervia, exteriora paullo rigidiora, interiora margine integerrimo attenuata. Stamina 6, hypogyna, perianthio breviora, filamentis filiformibus distinctis v. basi in anulum connatis; antheræ oblongo-lineares, erectæ, basifixæ, loculis a latere subintrorsum dehiscentibus. Ovarium sessile, breve, 3-loculare; stylus filiformis, stigmatē parvo; ovula in loculis  $\infty$ . Bacca globosa v. ovoidea, indehiscens, pulpa parca, pericarpio succulento. Semina  $\infty$ , ovoidea v. compressiuscula, nigra, nitida, testa crustacea laxa; embryo crassiusculus, rectus v. leviter curvus, albumini carnosio fere æquilongus.—Caulis basi lignosus, tenuis, ramosissimus volubilis v. flexuosus, super arborescens scandens, squamula parva ad basin ramulorum. Folia alterna, brevissime petiolata, linearia oblonga lanceolata v. rarius ovata, tenuiter venosa. Flores parvuli, laxè cymosi, cymis nunc omnibus terminalibus supra folium ultimum breviter pedunculatis, nunc pluribus simul ad axillas superiores pedunculatis. Bractee minutæ v. 0.

Species v. varietates insignes 2, Australiæ Novæ Caledoniæ et insularum maris Pacifici incolæ. *Baker in Journ. Linn. Soc.* xiv. 571. *Benth. Fl. Austral.* vii. 18. *Red. Lil. t.* 393 (*Medeola*).

In forma typica Australiana cymæ omnes terminales v. rarissime 1 v. 2 in axillis superioribus; in speciminibus Novo-Caledonicis et insularum Fiji (an speciei alterius?) folia rigidiora, sæpius latiora et cymæ plures axillares.

#### TRIBUS IV. POLYGONATÆE.

15. *Polygonatum*, Adans. *Fam.* ii. 54. (*Evallaria*, Neck. *Elem.* iii. 189. *Axillaria*, Raf. in *Journ. Phys.* lxxxix. 261. *Campydorum*, *Salisb. Gen. Pl. Fragm.* 64.)—Perianthium marcescens, demum deciduum, tubo cylindraceo basi interdum latiore; lobi breves, erecto-patentes, subæquales. Stamina 6, tubo affixa eoque inclusa, filamentis filiformibus rarius complanatis; antheræ oblongo-lineares, erectæ, basi 2-lobæ, dorsifixæ, loculis

introrsum dehiscentibus. Ovarium sessile v. subsessile, oblongum v. globosum, 3-loculare; stylus filiformis v. breviter columnaris, stigmatē parvo v. parum incrassato; ovula in loculis  $\infty$  (4-6). Bacca globosa, indehiscens, pulposa. Semina sæpius pauca, ovoidea globosa v. varie compressiuscula, pallida v. brunnea, testa appressa; embryo juxta hilum cylindræus, albumine corneo 2-3-plo brevior.—Caulis e rhizomate horizontali v. repente erectus, simplex, superne foliatus. Folia alterna opposita v. verticillata, ovata lanceolata v. linearia, in *P. sibirico* apice breviter cirroso-acuminata. Flores nutantes v. penduli, ad axillas solitarii, v. sæpius in pedunculo brevi 2- $\infty$  breviter laxè racemosi v. subumbellati, pedicellis sub apice articulatis. Bractee 0.

Species enumeratæ 23, per regiones temperatas hemisphærii borealis late dispersæ. *Kunth, Enum. Pl.* v. 131. *Baker in Journ. Linn. Soc.* xiv. 552. *Desf. in Ann. Mus. Par.* ix. t. 7. *Red. Lib. t.* 229, 243, 244, 258, 315. *Willd. Hort. Berol.* t. 45. *Hayne, Arzneigew.* iii. t. 19, 20. *Reichb. Ic. Fl. Germ. t.* 433 ad 435. *Nees, Gen. Fl. Germ. Monocot.* ii. n. 60. *Jacq. Fl. Austr.* t. 232. *Jaub. et Spach. Ill. Pl. Or.* t. 441. *Ledeb. Ic. Fl. Ross.* t. 1. *Hook. Exot. Fl.* t. 125; *ic. Pl.* t. 833. *Bot. Mag. t.* 3529, 5049, 5061, 6133. *Lodd. Bot. Cab. t.* 640 (*ic. plures sub Convallaria*).

*PERIBALLANTHUS*, *Franch. et Sav., Enum. Pl. Jap.* ii. 524, planta japonica a nobis non visa, cujusque specimen unicum habuit Savatier, ex caractere dato a *Polygonato* differt bracteis in pedunculo sub floribus 3 foliaceis, quod etiam observatur in varietate *P. multiflora*, All. in Helvetia haud rara, et filamentis complanatis, caractere vix ad genus condendum sufficiente.

16. **Streptopus**, *Mich. Fl. Bor. Amer.* i. 200, t. 18. (Hexorima, *Raf. in Journ. Phys.* lxxxix. 262. Hekorima, *Kunth, Enum.* iv. 203.)—Perianthium campanulatum v. expansum, deciduum; segmenta distincta v. vix basi connata, erecta et superne recurvopotentia, v. a basi rotato-potentia, subæqualia. Stamina 6, hypogyna v. interiora ima basi segmentis adnata, filamentis basi late membranaceis apice acutis; antheræ oblongo-lineares v. abbreviatæ, erectæ, inter lobos basales breves affixæ, loculis a latere subintrorsum dehiscentibus, connectivo interdum ultra loculos breviter producto. Ovarium sessile, ovoideum, 3-loculare; stylus filiformis v. columnaris, apice brevissime v. longiuscule 3-fidus, ramis linearibus recurvis superne introrsum stigmatosis; ovula in loculis  $\infty$  (6-18). Bacca subglobosa, indehiscens, pulpa tenui. Semina  $\infty$ , oblonga, sæpius curvula, in longitudinem striata, pallida, testa tenui adnata; embryo juxta hilum cylindræus, albumine solido 3-4-plo brevior.—Caulis e rhizomate brevi dense fibrifero v. longiore repente erectus, simplex v. parce ramosus, foliatus, basi præter vaginas 1-2 nudus. Folia alterna, ovata v. lanceolata, membranacea, sessilia v. amplexicaulia. Flores mediocres, ad axillas solitarii v. gemini, nutantes, rosei v. albi, pedunculis filiformibus recurvis v. abrupte reflexis, nunc 1-floris medio articulatis, nunc ad articulationem in pedicellos 2 1-floros divisus. Bractee minutæ v. 0.

Species 4, Europæ, Asiæ temperatæ et montanæ v. Americæ borealis incolæ. *Kunth, Enum. Pl.* iv. 204. *Baker in Journ. Linn. Soc.* xiv. 590. *S. Wats. in Proc. Amer. Acad.* xiv. 269. *Red. Lib. t.* 259. *Reichb. Ic. Fl. Germ. t.* 431. *Nees, Gen. Fl. Germ. Monocot.* ii. n. 59. *Waldst. et Kit. Pl. Rar. Hung. t.* 167 (*Uvularia*). *Hook. Fl. Bor. Amer.* t. 188. *Bot. Mag. t.* 1489 (*Uvularia*). *Lodd. Bot. Cab. t.* 1603.

*KRUHSEA*, *Regel, Fl. Ajan.* 281 ex *Maxim. Prim. Fl. Amur.* 278; *Baker l. c.* 593 est *S. ajamensis*, Tiling, species floribus parvis, perianthii segmentis a basi rotato-potentibus insignis, et antheris parvis, styloque breviori columnare a cæteris parum distincta, rite tamen a *S. Wats.* ad *Streptopum* revocatur.

17. **Drymophila**, *R. Br. Prod.* 292.—Perianthium deciduum; segmenta distincta, subæqualia, patentia, 3-5-nervia. Stamina 6, hypogyna, perianthio breviora, filamentis filiformibus; antheræ breviter oblongæ, erectæ, inter lobos basales affixæ, loculis a latere subintrorsum dehiscentibus. Ovarium sessile, ovoideum, 3-loculare; stylus fere a basi in ramos 3 lineares recurvos apice introrsum stigmatosos divisus; ovula in loculis  $\infty$ . Bacca subglobosa, indehiscens. Semina  $\infty$ , ovoideo-globosa v. obtusangula, pallida, testa crustacea nitida; embryo in albumine corneo parvus, hilo proximus.—Caulis e rhizomate

crasso erectus, tenuis, parce ramosus, superne foliatus. Folia alterna, subsessilia, lanceolata v. elliptica. Flores in axillis solitarii v. gemini, nutantes, pedicellis folio brevioribus recurvis supra medium articulatis. Bracteæ minimæ.

Species 2, Australianæ. *Benth. Fl. Austral.* vii. 12.

18. *Smilacina*, Desf. in *Ann. Mus. Par.* ix. 51, t. 9. (*Tovaria*, Neck. *Elem.* iii. 190, non aliorum. *Polygonastrum*, Mœnch. *Meth.* 637. *Sigillaria*, Raf. in *Journ. De nomine Neckeriano rejecto confer A. Gray in *Amer. Journ. Sc.* ser. 3, xvii. 337.

19. *Maianthemum*, Wiggers, *Prim. Fl. Holsat.* 15. (*Sciophylla*, Wibel, *Prim. Fl. Werthem.* 147, ex Kunthio. *Bifolium*, G. Gærtn. *Fl. Wett.* i. 209. *Styrandra*, Raf. in *Journ. Phys.* lxxxix. 102. *Maia*, Salisb. *Gen. Pl. Fragm.* 64.)—Flores 2-meri. Perianthium explanatum, demum deciduum; segmenta 4, distincta, subæqualia, patentia. Stamina 4, hypogyna, perianthio breviora, filamentis leviter complanatis; antheræ ovatæ, dorsifixæ, versatiles, loculis introrsum dehiscentibus. Ovarium subsessile, breve, 2-loculare; stylus filiformis, stigmatē parvo; ovula in loculis 2, collateralia. Bacca subglobosa, pulposa, indehiscens. Semina pauca v. solitaria, ovoidea v. globosa, pallide brunnea, testa arcute appressa; embryo juxta hilum albumine corneo dimidio brevior.—Caulis e rhizomate tenui repente erecti, simplices, florentes supra medium 2- rarius 3-foliati, steriles 1-foliati. Folia petiolata v. rarius subsessilia, ovato-cordata, membranacea, summum si adsit sub inflorescentia 2 inferioribus minus sessiliusque. Racemus terminalis, simplex, gracilis. Flores parvi, pedicellis patentibus filiformibus ad bracteas minutas v. obsoletas solitariis v. sæpius 2-3-natis fasciculatis.

Species 1, per regiones temperatas hemisphærii borealis latissime dispersa. *Kunth, Enum. Pl.* v. 147. *Baker in Journ. Linn. Soc.* xiv. 563. *Red. Lil.* t. 216. *Reichb. Ic. Fl. Germ.* t. 436. *Nees, Gen. Fl. Germ. Monocot.* ii. n. 62. *Barton, Fl. N. Amer.* ii. t. 70 (*Smilacina*). *Bot. Mag.* t. 510.

#### TRIBUS V. CONVALLARIÆ.

20. *Convallaria*, Linn. *Gen. n.* 425, pro parte.—Perianthium subgloboso-campanulatum, deciduum; lobi breves, recurvo-patentes, subæquales. Stamina 6, prope basin tubi affixa, eoque breviora, filamentis brevibus crassiusculis superne attenuatis; antheræ

oblongæ, erectæ, basifixæ, loculis a latere subintrorsum dehiscentibus. Ovarium sessile, ovoideo-globosum, 3-loculare; stylus columnaris, 3-sulcus, stigmatibus parum dilatato; ovula in loculis  $\infty$  (4-8). Bacca globosa, indehiscens, pulposa. Semina  $\infty$ , sæpius pauca, ovoidea v. subglobosa, pallida, testa appressa; embryo albumine corneo dimidio v. subtriplo brevior.—Caules e rhizomate dense fibrifero horizontali v. stolonifero brevissimi. Folia 2, ovato-lanceolata, vaginis longis semet involventibus caulem simulantibus. Scapus lateralis, aphyllus, cum foliorum vaginis basi squamis plurimis membranaceis imbricatis inclusus. Racemus in scapo terminalis, simplex, pedicellis ad bracteas solitariis recurvis. Flores nutantes, albi rarius rosei. Bracteæ lineares, scariosæ, caducæ.

Species 1, per Europam et Asiam temperatam late dispersa, etiam in Virginia et Carolina obvia. *Kunth, Enum. Pl.* v. 130. *Baker in Journ. Linn. Soc.* xiv. 552. *Red. Lil. t.* 227. *Reichb. Ic. Fl. Germ. t.* 432. *Nees, Gen. Fl. Germ. Monocot.* ii. n. 61. *Hayne, Arzneigew.* iii. t. 18.

21. *Theropogon*, Maxim. in *Bull. Acad. Imp. Sc. Petersb.* xv. 89; *Mel. Biol.* vii. 330.—Perianthium subgloboso-campanulatum, marcescens, demum deciduum; segmenta distincta v. vix basi brevissime coherentia, subæqualia. Stamina 6, ima basi perianthio affixa eoque breviora, filamentis brevibus late v. anguste membranaceis basi subconnatis; antheræ ovatæ, acutiusculæ, erectæ, basifixæ, loculis basi divergentibus introrsum dehiscentibus. Ovarium sessile, subglobosum, 3-loculare; stylus columnaris, stigmatibus parvo; ovula in loculis  $\infty$  (6-10). Bacca subglobosa, indehiscens, pulposa. Semina  $\infty$  v. ad 1-2 reducta, ovoidea v. subglobosa, pallide brunnea, testa arcte appressa; embryo rectus v. curvulus, albumine corneo triente v. fere dimidio brevior.—Rhizoma obliquum, crassiusculum, breve, fibris radicalibus tuberiferis. Folia in rhizomate plura, linearia, graminea, basi cum scapo squamis paucis inclusa. Scapus inter folia infima lateralis, aphyllus, erectus. Racemus terminalis, simplex. Flores ad bracteas parvas lineares solitarii v. rarius gemini, rosei, patentes v. nutantes, pedicellis sæpius recurvis.

Species 1, in Himalaya frequens. *Baker in Journ. Linn. Soc.* xiv. 562. *Hook. f. Bot. Mag.* t. 6154.

22. ? *Speirantha*, Baker in *Journ. Linn. Soc.* xiv. 562.—Perianthium expansum, marcescens (demum deciduum?); segmenta distincta, subæqualia, patentissima. Stamina 6, ima basi segmentorum affixa iisque breviora, filamentis leviter complanatis; antheræ oblongæ, inter lobos basales longiusculos affixæ, loculis introrsum dehiscentibus. Ovarium sessile, subglobosum, 3-loculare; stylus columnaris, stigmatibus parvo; ovula in loculis pauca (2-4), anatropa. Fructus (baccatus?) . . .—Rhizoma obliquum, crassum, stoloniferum. Folia in rhizomate plura, vaginis basi dilatatis squamisque exterioribus fere in bulbum incrassatis, laminis lanceolatis v. latioribus. Scapus lateralis, cum foliorum vaginis intra squamas exteriores inclusus, vaginis seu squamis nonnullis erectis dissitis instructus, cæterum aphyllus. Racemus in scapo terminalis, simplex, pedicellis patentibus nec recurvis ad bracteas solitariis. Flores albi v. viriduli. Bracteæ lineares, subscariosæ.

Species 1, Chinensis. *Bot. Mag. t.* 4842 (*Albuca*, patria falsa et antheris imperfecte delineatis).

Genus, fructu ignoto, quoad affinitates adhuc incertum; habitu nulli nisi *Convallariis* accedit.

23. *Reineckea*, Kunth in *Abhandl. Akad. Wiss. Berlin*, 1842, 29. (*Sanseviella*, *Reichb. Cons. 44*. *Liriope*, *Salisb. Gen. Pl. Fragm.* 74, non *Lour.*)—Perianthium marcescens, tubo cylindræo subæquali; lobi inter se et tubo subæquales, sub anthesi recurvo-patentes. Stamina 6, tubo sub lobis affixa iisque subæquilonga, filamentis filiformibus; antheræ oblongæ, dorsifixæ, loculis basi apiceque liberis introrsum dehiscentibus. Ovarium sessile, 3-loculare; stylus filiformis, stigmatibus parvo brevissime 3-lobis, ovula in loculis 2, erecta, v. ex Kunthio 4, 2-seriatim superposita. Bacca globosa, indehiscens. Semina pauca, interdum in bacca solitaria, crassa, testa fere pulposa; embryo in albumine corneo duro parvus.—Rhizoma reptans, foliorum cicatricibus annulatum, caule cæterum nullo. Folia in rhizomate subdistiche fasciculata v. sparsa, linearia v. latiuscula

graminea subplicata. Scapus aphyllus, e rhizomate ad latus fasciculi foliorum erectus, simplex, jam infra medium v. fere a basi florens. Flores in spica simplici sub bractea membranacea solitarii, sessiles, dissiti.

Species 1, Chinæ et Japoniæ incola. *Kunth, Enum. Pl. v. 21. Baker in Journ. Linn. Soc. xiv. 551. Jacq. Fragm. t. 102. Red. Lil. t. 323. Andr. Bot. Rep. t. 361. Bot. Mag. t. 739 (ic. omnes sub *Sansevieria*).*

Genus quoad perianthium et semina *Dracænæ* subaffine, habitu et inflorescentia longe diversum.

#### TRIBUS VI. ASPIDISTRÆÆ.

24. *Aspidistra*, *Ker in Bot. Reg. t. 628. (Macrogynæ, Link et Otto, Ic. Pl. Sel. t. 31. Porpax, Salisb. Gen. Pl. Fragm. 9.)*—Perianthium campanulatum, tubo lato ad faucem vix contracto; lobi 8, patentes, subæquales v. alterni paullo minores. Stamina 8, infra medium tubi affixa eoque inclusa, filamentis brevissimis; antheræ ovato-oblongæ, dorsifixæ, recurvæ, loculis introrsum dehiscentibus. Ovarium intra perianthium liberum, sessile, breve, crassum nec sulcatum, cum stylo crasso continuum, 4-loculare; stigma maximum, orbiculato-peltatum, faucem perianthii claudens, sæpius integrum, supra plus minus 4-sulcatum sulcis 2-fidis, demum interdum 8-fidum; ovula in loculis 2-6, lateraliter affixa. Bacca (a nobis non visa) globosa, indehiscens, 1-sperma. Semen . . .—Rhizoma crassum, breve v. repens. Folia radicalia longa, ampla, elevato-venosa, in petiolum erectum basi breviter dilatatum contracta. Scapi radicales brevissimi, 1-flori, squamis membranaceo-scariosis nunc paucis nunc dense imbricatis stipati. Perianthium luridum v. flavo-virens, intus sæpe punctatum.

Species 3, Himalayæ, Chinæ et Japoniæ incolæ. *Kunth, Enum. Pl. v. 311. Baker in Journ. Linn. Soc. xiv. 579. Bot. Mag. t. 2499. Bot. Reg. t. 977.*

PLECTOGYNÆ, *Link in Allgem. Gartenz. 1834, 266; Kunth, Enum. Pl. v. 313; Baker in Journ. Linn. Soc. xiv. 579, t. 18, est *A. elatior*, Blume in Høv. et Vr. Tidschr. i. 76, t. 4 et 3 D; Bot. Mag. t. 5386, stigmate supra evidentius sulcato demum in lobos 8 reflexos fisso; ovula ex Blumeo in uno loculo 4, in cæteris 2, ex J. Gayo in loculis omnibus 4, ex Kunthio in loculis 6.*

25. *Tupistra*, *Ker in Bot. Mag. t. 1655. (Platymetra, Salisb. Gen. Pl. Fragm. 9.)*—Perianthium campanulatum, tubo lato ad faucem vix contracto; lobi 6, rarius 8, breves, patentes, subæquales. Stamina tot quot lobi, tubo infra faucem affixa eoque inclusa, filamentis brevissimis crassis inflexis; antheræ dorsifixæ, ovato-oblongæ, recurvæ, loculis introrsum dehiscentibus. Ovarium intra perianthium liberum, sessile, breve, crassum nec sulcatum, 3- rarius 4-loculare, cum stylo crasso columnari continuum; stigma sub-orbiculari-peltatum, crassum, nunc maximum subintegrum faucem perianthii claudens, nunc profunde 3- v. 6-lobum; ovula in loculis 2, collateralia, lateraliter affixa. Bacca globosa, sæpius 1-sperma, indehiscens. Semen globosum, testa appressa, albumine carnoso; embryo . . .—Rhizoma crassum, nunc breve tuberosum, nunc elongatum cicatricibus foliorum vetustorum annulatum. Folia radicalia longa, ampla, in petiolum erectum basi dilatatum contracta. Scapus inter folia radicalis, brevis v. elongatus, erectus v. apice recurvus, simplex, basi squamis membranaceis scariosis stipatus, cæterum aphyllus. Spica terminalis, densa, cylindracea. Flores sessiles, conferti, violacei v. luridi. Bracteæ herbacæ v. scariosæ, ovatæ v. lanceolatæ, primum imbricatæ, jam sub anthesi sub floribus occultæ.

Species 3 v. 4, Himalayæ v. Burmæ incolæ. *Kunth, Enum. Pl. v. 315. Baker in Journ. Linn. Soc. xiv. 580. Bot. Mag. t. 3054. Bot. Reg. t. 704, 1223. Lodd. Bot. Cab. t. 515.*

MACROSTIGMA, *Kunth, Enum. Pl. v. 319; Regel, Gartenfl. 1857, 130, t. 192, est *T. macrostigma*, Baker in Bot. Mag. t. 6280, stigmate fere *Aspidistræ elatioris*, sed 6-lobum nec 8-lobum, et inflorescentiæ *Tupistræ*.*

CAMPYLANDRA, *Baker in Journ. Linn. Soc. xiv. 582, t. 20, est *T. aurantiaca*, Wall, a cæteris speciebus parum diversa, filamentis paullo magis evolutis et stylo tenuiore.*

26. *Rondeletia*, *Roth, Nov. Pl. Sp. 196. (Titragynæ, Salisb. Gen. Pl. Fragm. 9.)*—Perianthium subgloboso-campanulatum, tubo lato; lobi 6, breves, lati, supra antheras

inflexi. Stamina 6, fauci affixa, filamentis brevissimis vix ullis; antheræ ovatæ, loculis introrsum dehiscentibus. Ovarium intra perianthium liberum, subglobosum, 3-loculare, apice in stylum brevissimum contractum, stigmatē amplo peltato 3-lobō, lobis recurvis; ovula in loculis 2, collateralia, lateraliter affixa. Bacca globosa, indehiscens, sæpius 1-sperma. Semen maturum non visum.—Rhizoma breve, crassum. Folia radicalia ampla, longa, elevato-venosa, basi contracta, vix petiolata, vaginis imbricatis. Scapus inter folia iis multo brevior, simplex, erectus. Spica terminalis, dense cylindracea. Flores arcte sessiles, dense conferti. Bractææ ovatæ, membranaceæ, breves, summæ sæpe vacuæ imbricatæ.

Species 1, Japonica. *Kunth, Enum. Pl.* v. 320. *Baker in Journ. Linn. Soc.* xiv. 582. *Bot. Mag.* t. 898 (*Orontium*). *Blume in Hæv. et Vr. Tijdschr.* i. 73, 83, t. 3, A, B.

27. **Gonioscypha**, *Baker in Journ. Linn. Soc.* xiv. 581, t. 19.—Perianthium campanulatum, tubo late cylindraceo; lobi 6, suborbiculati, obtusissimi, crenulati, patentes, parum inæquales. Stamina 6, sub fauce affixa, filamentis brevissimis; antheræ breviter oblongæ, dorsifixæ, e tubo subprominentes, loculis introrsum dehiscentibus. Ovarium sessile, breve, 3-sulcum, 3-loculare; stylus columnaris, fere filiformis, stigmatē 3-lobō, lobis brevibus latis patentibus; ovula in loculis 2, collateralia. Fructus . . .—Rhizoma . . . Folium adest unicum, petiolatum, amplum, ovali-oblongum, acuminatum, elevato-venosum. Scapus simplex, aphyllus, basi vaginis scariosis stipatus. Spica terminalis, cylindracea, densa etsi quam in *Rohdea* paullo laxior, floribus confertis sessilibus. Bractææ lineari-setaceæ, summæ vacuæ ad apicem spicæ carnosæ.

Species 1, in Bhotan Himalayæ a Boothio lecta, specimine descripto in herb. Kew. ex herb. Nuttallii.

#### TRIBUS VII. HEMEROCALLÆÆ.

28. **Hemerocallis**, *Linn. Gen.* n. 433, *pro parte*.—Perianthium infundibuliforme, tubo cylindraceo brevi v. longiusculo; lobi tubo multo longiores, oblongo-spathulati, erecto-patentes, multinerves. Stamina 6, ad apicem tubi affixa, perianthio breviora, declinata, filamentis filiformibus; antheræ oblongo-lineares, dorsifixæ, filamentō in foveolam intruso, loculis introrsum dehiscentibus. Ovarium subsessile, oblongum, obtuse 3-gonum, 3-loculare; stylus filiformis, declinatus, stigmatē parvo capitato; ovula in loculis numerosa. Capsula coriacea, oblonga v. subglobosa, 3-quetra, transverse rugosa, breviter loculicide 3-valvis. Semina sæpius pauca, ovoidea, angulata, nigra, nitida, testa laxa crassiuscule membranacea; embryo cylindraceus, albumine carnosio parum brevior.—Rhizoma brevissimum, fibris radicalibus numerosis fasciculatis plus minus carnosio-incrassatis. Folia radicalia elongata, angusta, sæpe fere graminea. Flores magni, erecti, ad apicem scapi terminalis elati aphylli pauci, in paniculam brevem irregularem dispositi, v. perpauci fere in capitulum conferti. Bractææ scariosæ, deciduæ.

Species 5, Europæ centralis et Asiæ temperatæ præsertim Japoniæ incolæ. *Kunth, Enum. Pl.* iv. 587. *Baker in Journ. Linn. Soc.* xi. 357. *Jacq. Hort. Vind.* t. 139. *Red. Lil.* t. 15, 16. *Andr. Bot. Rep.* t. 244. *Reichb. Ic. Fl. Germ.* t. 510. *Nees, Gen. Fl. Germ. Monocot.* ii. n. 56. *Bot. Mag.* t. 19, 64, 873. *Sweet, Brit. Fl. Gard.* t. 28. *Saund. Ref. Bot.* t. 213. *Regel, Gartenfl.* t. 522.

29. **Phormium**, *Forst. Char. Gen.* 47, t. 24. (*Chlamydia*, *Banks in Gertn. Fruct.* i. 71, t. 18.)—Perianthium incurvum; segmenta basi in tubum brevem turbinatum connata, cæterum libera, laxè conniventia, 3 exteriora lanceolata firmiora usque ad apicem erecta, 3 interiora interdum paullo longiora tenuiora apice breviter patentia. Stamina 6, tubo ad basin segmentorum affixa iisque sublongiora, filamentis filiformibus; antheræ oblongæ v. oblongo-lineares, erectæ, juxta basin dorsifixæ, filamentō in foveolam intruso, loculis introrsum dehiscentibus. Ovarium sessile, oblongum, 3-quetrum, perfecte v. imperfecte 3-loculare; stylus crassiuscule filiformis, stigmatē parvo capitato; ovula in loculis

numerosa. Capsula subcoriacea, breviter v. longe cylindraco-3-quetra, interdum valde torta, loculicide dehiscens. Semina oblonga, valde compressa, testa nigra membranacea, circa nucleum margine acuto dilatata nec vere alata; embryo in albumine carnosio longiusculus.—Rhizoma breve, incrassatum, fibris radicalibus fasciculatis crassis. Folia radicalia longa, lineari-ensiformia, disticha, coriacea, tenacissima. Scapus aphyllus, elatus, apice ramosus, bracteis sub ramis membranaceo-scariosis sæpius caducis. Flores in panicula terminali secus ramos irregulariter pedicellati, intra bracteos scariosas fasciculati, versicolores, sæpius luridi v. flavicantes interdum abortu masculi. Pedicelli sub flore articulati.

Species 2, Novæ Zelandiæ incolæ. *Faujas in Ann. Mus. Par. xix. 401, t. 20. Hook. f. Handb. N. Zeal. Fl. 286. Baker in Journ. Linn. Soc. xi. 357. Red. Lil. t. 448, 449. Bot. Mag. t. 3199.*

30. **Blandfordia**, Sm. *Erot. Bot. i. 5, t. 4.*—Perianthium persistens, tubo superne v. fere a basi valde ampliata, fere infundibuliforme v. campanulatum; lobi 6, breves, lati, erectiusculi, subæquales. Stamina 6, medio tubo v. paullo altius affixa, perianthio breviora v. vix longiora, filamentis filiformibus; antheræ oblongæ, dorsifixæ, filamento in foveolam sæpe longe tubulosam intruso, loculis introrsum dehiscensibus. Ovarium longe stipitatum, 3-loculare, in stylum brevem attenuatum, stigmatē parum dilatato capitato v. 3-dymo; ovula in loculis numerosa. Capsula stipitata, elongata, anguste 3-quetra, acuminata, chartacea, septicide 3-valvis. Semina numerosa, oblongo-falcata, angulata, testa laxa crassiuscula papillis subfiliformibus dense oblecta; embryo linearis, vix albumine carnosio brevior.—Rhizoma brevissimum, fibris radicalibus fasciculatis crassiusculis. Caulis simplex, foliis paucis parvis sparsis. Folia ad basin caulis subradicalia, conferta, longa, angusta, rigidula, prominenter venosa. Racemus terminalis, simplex, brevis, floribus speciosis pedicellatis pendulis. Bracteæ sub pedicellis angustæ, additis sæpe bracteolis 2 parvis ad basin pedicelli.

Species 4, Australianæ. *Benth. Fl. Austral. vii. 22. Endl. Iconogr. t. 27. Bot. Mag. t. 2003, 4819, 5734, 5809, 6209. Bot. Reg. t. 286, 924; 1845, t. 18. Fl. des Serres, t. 585, 1829.*

31. **Funkia**, Spreng. *Syst. Veg. ii. 40.* (*Hosta*, *Trattin. Arch. Gewächsk. i. 55, cum tabb. 2; Thes. Bot. t. 51, 52. Libertia*, *Dumort. Comm. Bot. 9. Saussurea*, *Salish. in Trans. Linn. Soc. viii. 11, absque char.*)—Perianthium infundibuliforme, tubo brevi v. longiusculo in faucem ampliato; lobi 6, tubo paullo breviores v. longiores. Stamina 6, tubo affixa v. hypogyna, declinata, perianthio parum breviora, filamentis filiformibus; antheræ oblongæ, dorsifixæ, filamento in foveolam intruso, versatiles, loculis introrsum dehiscensibus. Ovarium sessile, oblongum, 3-loculare; stylus filiformis, stigmatē parum incrassato; ovula in loculis numerosa. Capsula anguste oblonga v. fere linearis, loculicide 3-valvis. Semina angulato-compressa v. fere plana, testa membranacea nigra deorsum quasi in alam producta; embryo albumine carnosio parum brevior.—Rhizoma breve, crassum, lignosum, fibris radicalibus fasciculatis crassiusculis. Folia radicalia petiolata, ampla, oblongo-lanceolata ovata v. cordata, venis primariis basi cum costa confluentibus inter se dissitis, venulis transversis connexis. Scapus simplex, elatus, aphyllus. Flores speciosi, albi v. cerulei, in racemo terminali subsecundi, declinati v. penduli, brevissime v. longiuscule pedicellati. Bracteæ scariosæ v. fere herbaceæ.

Species 4 v. 5, Japoniæ et Chinæ incolæ. *Baker in Journ. Linn. Soc. xi. 366. Miq. Archiv. Neerl. iv. 219.*

Genus a Salisburio in 2 dividitur, quæ sectiones sequentes formant:—

1. **NIOBE**, *Salish. in Trans. Hort. Soc. i. 335, absque char.; Gen. Pl. Fragm. 82, est F. subcordata*, Spr., perianthio maximo, fauce minus ampliata, staminibus medio tubo infra faucem affixis. Bracteola ad basin pedicelli intra bracteam parva. *Red. Lil. t. 3. Andr. Bot. Rep. t. 194. Bot. Mag. t. 1433. Fl. des Serres, t. 158-9.*

2. **BRYOCLES**, *Salish. in Trans. Hort. Soc. i. 335, absque char.; Gen. Pl. Fragm. 81, species cæteras continet, perianthii fauce sæpe fere campanulata, staminibus hypogynis. Bracteola deest. Red. Lil. t. 106. Vent. Jard. Malm. t. 18. Andr. Bot. Rep. t. 6. Bot. Mag. t. 894, 3657, 3663. Bot. Reg. 1839, t. 50. Lodd. Bot. Cub. t. 1869. (Ic. veteres pleræque sub *Heimerocallide*.)*

32. *Kniphofia*, *Monch*, *Meth.* 631. (*Tritoma*, *Ker in Bot. Mag.* t. 744. *Tritomanthe*, *Link*, *Enum. Hort. Berol.* i. 333. *Tritomium*, *Link*, *Handb.* i. 170. *Rudolphorœmeria*, *Steud. in Schimp. Pl. Abyss.* n. 752. *Triclissa*, *Salisb. Gen. Pl. Fragm.* 75.)—Perianthium tubulosum, æqualiter cylindraceum v. in speciebus tropicis superne ampliatum; segmenta 1-nervia, alte connata, apice breviter libera, ovata v. deltoidea, æqualia v. seriei interioris paullo latiora. Stamina 6, hypogyna, perianthio paullo breviora v. sæpius exserta, filamentis filiformibus; antheræ oblongæ v. fere lineares, dorsifixæ, filamento in foveolam intruso, loculis introrsum dehiscens. Ovarium sessile, 3-loculare; stylus filiformis, sæpe exsertus, stigmatē parvo; ovula in loculis numerosa. Capsula globosa v. breviter ovoidea, coriacea, loculicide dehiscens. Semina angulata, testa nigra appressa; embryo oblongus, albumine bene brevior.—*Rhizoma* breve, fibris radicalibus fasciculatis numerosis crassiusculis. Folia radicalia longa, angusta, firma. Scapus aphyllus, elatus, simplex. Flores speciosi, dense racemosi v. spicati, e flavo coccinei, subsessiles v. breviter pedicellati, arcu deflexi. Bractææ sub pedicellis breves, scariosæ.

Species ad 16, Africæ australis et tropicæ et Madagascariæ incolæ. *Baker in Journ. Linn. Soc.* xi. 360. *Kunth, Enum. Pl.* iv. 550. *Red. Lil.* t. 161, 186 (*Feltheimia*). 291. *Andr. Bot. Rep.* t. 54 (*Aletris*). *Bot. Mag.* t. 758, 764, 4816, 5946, 6116, 6167, 6553, 6569. *Bot. Reg.* t. 1745. *Lodd. Bot. Cab.* t. 444. *Sauv. Ref. Bot.* t. 169. *Regel, Gartenfl.* t. 907. *Fl. des Serres*, t. 1393. *Lemaire, Jard. Fleur.* t. 362. (*L. nemullæ* sub *Tritomate*.)

33. *Notosceptrum*, *Benth. gen. nov.*—Perianthium late campanulatum, alte 5-fidum, persistens; lobi obovati, 1-nerves, interioribus latioribus. Stamina 6, hypogyna, perianthio longiora, filamentis filiformibus; antheræ breviter oblongæ, infra medium dorsifixæ, filamentis in foveolam intrusis, loculis introrsum dehiscens. Ovarium sessile, globosum, 3-loculare; stylus crassiuscule filiformis, stigmatē parvo; ovula in loculis ∞ (4-6). Capsula subglobosa, loculicide dehiscens. Semina pauca, angulata, testa nigra, appressa; embryo cylindraceus, leviter incurvus, albumine carnosio vix brevior. *Rhizoma* verticale, breve, crassum, lignosum, fibris radicalibus copiosis carnosius. Folia radicalia conferta, linearia, pluripedalia. Scapus terminalis erectus, elatus, simplex. Flores parvuli, in spica longa densa cylindracea subsessiles, quaquaversi, nec deflexi, flavi v. rubentes, singuli bractæa parva scariosa stipati.

Species typicæ 2, Angolenses: *N. benquellense* et *angolense*, *Benth.*; *Baker in Trans. Linn. Soc. Bot.* i. 246, sub *Kniphofia*, a quo genere habitu, inflorescentia, perianthio etc. nobis longe differre videntur. His valde affinis nisi striete congener est *Virginia alooides*, *Bolus in Journ. Linn. Soc.* xviii. 395, species austro-Africana, perianthii segmentis fere ad basin solutis 3-nerviis v. exterioribus 5-nerviis; perianthii forma, stamina, ovarium, stylus et capsula junior omnino *Notosceptri*, cui addimus sub nomine *N. alooidis*.

#### TRIBUS VIII. ALOINEÆ.

34. *Gasteria*, *Dunal, Pl. Succ. Hort. Alenç.* 6, ex *Hart. Syn. Pl. Succ.* 85.—Perianthium tubulosum, basi sæpius ventricosum, supra ovarium contractum, superne incurvum; segmenta arcu connata, apice breviter libera, erecta. Stamina hypogyna, perianthio parum breviora v. breviter exserta, filamentis subulatis; antheræ oblongæ v. lineares, erectæ, juxta basin dorsifixæ, filamento in foveolam intruso. Ovarium sessile, oblongum, sub-3-quetrum, 3-loculare; stylus columnaris v. filiformis, e perianthio sæpe exsertus, stigmatē parvo v. parum dilatato; ovula in loculis numerosa. Capsula coriacea, loculicide dehiscens. Semina (in sp. 2 observata) numerosa, valde compressa, fere plana, irregulariter suborbiculata, testa nigra exalata.—Caudex brevissimus. Folia rosulata, crassa, carnosus, breviter ligulata v. oblonga, sæpe maculata, integerrima. Scapus elongatus, simplex v. parce ramosus. Flores breviter pedicellati, laxè racemosi, secus rhachin sparsi, sub bracteis parvis solitarii.

Species infra 30, Africæ australis incolæ. *Kunth, Enum. Pl.* iv. 534 (*Abies* sect.). *Baker in Journ. Linn. Soc.* xviii. 182, qui species 45 enumerat, plurimas tamen includit hybridas v. varietates

hortenses. *Salm-Dyck, Monogr. Aloe*, § 29, f. 1 ad 38. *Jacq. Hort. Schænbr. t.* 418, 419. *DC. Pl. Grasses, t.* 63, 68, 91. *Bot. Mag. t.* 765, 837, 838, 979, 1322, 1331, 2304, 2369, 5812. *Saund. Ref. Bot. t.* 162. (*lc. plur. sub Aloe*.)

35. *Aloe*, *Linn. Gen. n.* 430.—Perianthium æqualiter cylindraceum v. supra ovarium contractum, rectum v. leviter incurvum; segmenta conniventia v. sæpius plus minus coheræntia v. connata, erecta v. summo apice vix brevissime patentia. Stamina 6, hypogyna, perianthio subæquilonga v. longiora, filamentis subulatis; antheræ oblongæ v. oblongo-lineares, prope basin dorsifixæ, filamentum in foveolam intruso, loculis introrsum dehiscentibus. Ovarium sessile, oblongum v. ovoideum, 3-quetrum, 3-loculare; stylus filiformis, stigmatibus parvo v. vix incrassato; ovula in loculis numerosa. Capsula coriacea, ovoidea v. oblonga, loculicide dehiscens. Semina ∞, 3-quæta v. compressa, nuda v. plus minus 3-alata, testa crassiuscule membranacea nigra; embryo in albumine carnoso longiusculus, rectus.—Caudex, nunc brevissimus, nunc elatus frutescens v. arborescens, interdum ramosus. Folia crassa, carnosa, rosulata v. rarius disticha v. sparsa, margine sæpius spinoso-dentata. Scapus seu pedunculus axillaris v. pseudo-terminalis, sæpius elongatus, simplex v. rarius ramosus. Flores secus pedunculum v. ramos breviter denseque v. longe et laxè racemosi, breviter v. longe pedicellati, sæpius nutantes, ad bractæas solitarii. Bractææ scariosæ, sæpius parvæ, nonnullæ haud raro secus pedunculum infra flores sparsæ vacuæ.

Species enumeratæ ultra 80, pleræque Africæ australis v. ins. Mascarensium incolæ, nonnullæ Africanæ tropicæ, una in regione Mediterranea et ins. Canariensibus late dispersa, in aliis terris diu culta et forte inquilina. *Kunth, Enum. Pl. iv.* 516, *pro parte*. *Baker in Journ. Linn. Soc. xviii.* 152, et in *Trans. Linn. Soc. Bot. i.* 263. *Salm-Dyck, Monogr. Aloe*, § 15 ad 26. *Sibth. Fl. Gr. t.* 341. *Jacq. Fragm. t.* 61, 62; *Hort. Schænbr. t.* 420. *DC. Pl. Grass. t.* 15, 21, 27, 38, 39, 44, 80, 81, 85, 97 ad 99. *Andr. Bot. Rep. t.* 468. *Link et Otto, lc. Pl. Sch. t.* 40. *Todaro, Hort. Panorm. t.* 9, 16, 18, 21, 23. *Bot. Mag. t.* 472, 757, 1270, 1278, 1306, 1323, 1332, 1346, 1355, 1362, 1415, 1460, 1474, 2272, 6377, 6520, 6580, 6596. *Bot. Reg. t.* 996. *Regel, Gartenfl. t.* 970.

Præter species typicas iconibus supra citatis illustratas, genera sequentia a variis auctoribus proposita rite a Bakero aliisque ad *Aloem* reducuntur.

*PACHIDENDRON*, *Haw. Revis. Pl. Succ.* 35 (*BUSIPHRO*, *Salisb. Gen. Pl. Fragm.* 76), includit species paucas, caudice elato frutescente v. arborescente etsi simplici, perianthio recto, staminibus longe exsertis. *Salm-Dyck, Monogr. Aloe*, § 27. *DC. Pl. Grass. t.* 32. *Bot. Mag. t.* 1975, 2517.

*BOWIERA*, *Haw. in Philos. Mag.* 1824, 299; *A. DC. Pl. Rar. Hort. Gen. vi.* 21, t. 2; *Salm-Dyck Monogr. Aloe*, § 14, f. 1, est *A. Bowieæ*, *Schult.*, species floribus minoribus, perianthii segmentis a basi liberis apice brevissime recurvo-patentibus, staminibus exsertis. In *A. myriacantha*, *Schult.* (*Bowiea myriacantha*, *Haw. in Philos. Mag.* 1827) perianthii segmenta pariter libera apiceque brevissime recurva, sed stamina inclusa fere *Haworthiæ*. Perianthii segmenta a basi libera etsi usque ad apicem arcte conniventia observantur in speciebus nonnullis aliis inter typicas inclusis.

*KUMARA*, *Medik. Theodora*, 69, t. 4 (*RHIFIDENDRON*, *Willd. in Gesellsch. Naturf. Fr. Mag. Berlin*, v. 164; *PTYAS*, *Salisb. Gen. Pl. Fragm.* 76) est *A. plicatilis*, *Mill.*, cum *A. dichotoma*, *Linn.*, caule arborescente dichotome ramoso, foliis distichis subintegerrimis, perianthii segmentis exterioribus margine membranaceo in tubum connatis, interioribus intra tubum a basi discretis. *Salm-Dyck, Monogr. Aloe*, § 28, f. 1. *Jacq. Hort. Schænbr. t.* 423. *DC. Pl. Grass. t.* 75. *Bot. Mag. t.* 457.

*CATEVALA*, *Medik. Theodora*, 67, includit *A. arborescentem*, *Mill.*, speciesque nonnullas *Haworthiæ*, quas auctor distinxit perianthii segmentis vix coheræntibus facillime solvendis.

36. *Apicra*, *Willd. in Gesellsch. Naturf. Fr. Mag. Berlin* v. 167.—Perianthium cylindraceum, rectum; segmenta 3-nervia, alte coheræntia v. connata, apice breviter stellato-patentia, subæqualia. Stamina 6, hypogyna, perianthio paullo breviora, filamentis filiformibus; antheræ erectæ, prope basin dorsifixæ, filamentum in foveolam intruso, loculis introrsum dehiscentibus. Ovarium oblongum, 3-loculare; stylus filiformis, stigmatibus parvo capitato; ovula in loculis numerosa. Capsula oblonga, apice (in *A. deltoidea*) obtuse conica nec truncata. Semina . . . —Caulis v. caudex foliatus brevis, longius tamen evolutus quam in *Haworthia*. Folia breviter, crassa, carnosa, pluriseriatim imbricato-

patentia. Pedunculus simplex v. ramosus. Flores secus rhachin breviter pedicellati, sparsi, quam in *Haworthia* adhuc paullo minores, sub bracteis solitarii. Bracteæ scariosæ, parvæ.

Species ad 7, Africæ australis incolæ. *Kunth, Enum. Pl. iv. 492 (Alois sect.). Baker in Journ. Linn. Soc. xviii. 216. Salm-Dyck, Monogr. Aloe, § 1, 2. Jacq. Fragm. t. 109 ad 111. DC. Pl. Grass. t. 56. Bot. Mag. t. 1338, 1352, 1455, 6071. (Ic. plur. sub Aloe.)*

37. *Haworthia*, Duval, *Pl. Succul. Hort. Alenç. 7, ex Haw. Syn. Pl. Succul. 90.*—Perianthium cylindraceum, superne incurvum; segmenta conniventia v. leviter cohærentia, apice recurva, sub-2-labiata, 3 nempe superiora erectiuscula 3 inferiora deflexa. Stamina 6, hypogyna, perianthio subæquilonga v. paullo breviora, filamentis subulatis; antheræ ovatæ v. oblongæ, prope basin dorsifixæ, filamento in foveolam intruso, quam in *Aloe* sæpius minores, loculis introrsum dehiscentibus. Ovarium oblongum v. ovoideum, 3-loculare; stylus filiformis, stigmate parvo capitato v. obscure 3-lobo; ovula in loculis numerosa. Capsula oblonga, obtusa v. truncata, 3-quetra, loculicide dehiscens. Semina (in perpaucis speciebus nota) valde compressa v. obovoideo-3-quetra, angulis acutis exalatis.—Caulis v. caudex foliatus brevis nunc brevissimus. Folia rosulata v. imbricato-patentia, brevina, 3-∞-faria, crassa, carnosa. Pedunculus simplex v. parce ramosus. Flores quam in *Aloe* minores, in racemo longo sparsi, sæpe dissiti, erecti v. subpatentes, breviter pedicellati. Bracteæ scariosæ, minimæ v. pedicellum requantæ.

Species enumeratæ 59, quarum una Angolensis cæteræ omnes Africæ australis incolæ, nisi nonnullæ forte varietates hortenses. *Kunth, Enum. Pl. iv. 496 (Alois sect.). Baker in Journ. Linn. Soc. xviii. 197; et in Trans. Linn. Soc. Bot. i. 263. Salm-Dyck, Monogr. Aloe, § 3 ad 13. Jacq. Fragm. t. 108, 112; Hort. Schænbr. t. 421, 422. DC. Pl. Grass. t. 16, 45, 50, 51, 57, 62. Bot. Mag. t. 455, 756, 802, 814, 815, 1314, 1337, 1345, 1353, 1354, 1360, 1361, 1417, 1452. Lodd. Bot. Cab. t. 1354, 1430. Saund. Ref. Bot. t. 232 ad 234, 263. (Ic. plur. sub Aloe.)*

38. *Lomatophyllum*, Willd. in *Gesellsch. Naturf. Fr. Mag. Berlin, v. 166. (Phylloma, Ker in Bot. Mag. t. 1585.)*—Perianthium subinfundibuliforme; segmenta angusta, subæquilonga, in tubum cylindraceum conniventia, superne præsertim exteriora subpatentia. Stamina 6, ima basi segmentorum affixa iisque paullo breviora, filamentis filiformibus; antheræ oblongæ, dorsifixæ, basi 2-fidæ, filamento in foveolam intruso, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare; stylus filiformis, stigmate parvo; ovula in loculis ∞. Fructus subglobosus, coriaceo-carnosus, 3-sulcus, demum (an semper ?) loculicide dehiscens. Semina pauca, sæpe uno solo cujusque loculi perfecto, testa nigra splendente (bene maturam non vidimus).—Caudex lignosus, simplex interdum elatus. Folia ad apicem caudicis conferta, loriformi-elongata, coriaceo-carnosa, margine cartilagineo sæpe colorata, calloso- v. spinuloso-serrulata. Paniculæ ad axillas superiores pedunculatæ, floribus secus ramulos racemosis breviter pedicellatis. Bracteæ parvæ, scariosæ.

Species 2 v. 3, insularum Mascarensium incolæ. *Baker in Journ. Linn. Soc. xiv. 550. DC. Pl. Grass. t. 31 (Aloe).*

Genus certe *Aloi* affine, etsi a cæteris *Aloineis* differat paniculis pluribus axillaribus et fructu carnoso, a nonnullis bacca, ab aliis (*Willd., DC., etc.*) capsula dicto; maturitate certè interdum in valvas dehiscit.

#### TRIBUS IX. DRACÆNÆ.

39. *Hesperocallis*, A. Gray in *Proc. Amer. Acad. vii. 390.*—Perianthium infundibuliforme, tubo cylindraceo; lobi tubo longiores, oblongo-spathulati, erecto-patentes, subæquales, medio 5-7-nervi. Stamina 6, fauci affixa, perianthio breviora, filamentis filiformibus; antheræ lineares, infra medium dorsifixæ nec foveolatæ, versatiles, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare; stylus filiformis, stigmate capitato sub-3-lobo; ovula in loculis numerosa. Capsula subglobosa, loculicide 3-valvis. Semina in loculis ∞, nigra, plano-compressa, matura non vidimus.—Caudex brevis, lignosus, foliorum vetustiorum basibus persistentibus obtectus, vix tamen revera bulbosus. Folia

radicalia linearia, elongata, crassiuscula. Scapus erectus, simplex. Flores in racemo simplici breviter pedicellati, magni, sub bracteis solitarii. Bractee sub pedicellis scariosæ, infra inflorescentiam interdum paucæ vacuæ subfoliaceæ. Pedicelli infra florem articulati.

Species 1, Californica.

40. *Hesperaloe*, Engelm. in *S. Wats. Bot.* 40 Parall. 497.—Perianthium cylindraceum, rectum; segmenta angusta, subæqualia, tenuiter  $\infty$ -nervia, usque ad apicem erecta, conniventia, non v. vix coherentia. Stamina 6, ima basi segmentorum affixa iisque paullo breviora, filamentis tenuibus; antheræ oblongæ, basi 2-fidæ, infra medium dorsifixæ, versatiles, nec foveolatæ, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare; stylus filiformis, stigmatate parvo; ovula in loculis numerosa. Capsula subglobosa, coriacea, duriuscula, loculicide dehiscens, valvis demum septicide 2-partitis 6-valvis. Semina numerosa, angulato-compressa v. fere plana, exalata, testa nigra crassiuscula; embryo in albumine carnosio longiusculus, rectus.—Caulis foliatus seu caudex brevissimus. Folia conferta, linearia, canaliculata, rigida, margine filamentosa. Pedunculus seu scapus aphyllus, elatus, simplex v. ramis nonnullis strictis instructus. Flores secus rhachin v. ramos fasciculati, rubescentes ( $\frac{1}{2}$ –1-pollicares), pedicellis apice articulatis. Bractea sub quoque fasciculo membranaceo-scariosa, sub pedicellis minime.

Species 1, Texana. Genus quoad perianthii formam *Aloi* affine, sed folia inflorescentiaque potius *Yuccæ*. Antheræ *Hesperocallidis*, filamento cum connectivo continuo nec in foveolam distinctam inserto.

41. *Yucca*, Linn. *Gen. n.* 429.—Perianthium diu persistens; segmenta distincta v. vix ima basi connata, lanceolato-ovata, crassiuscula, plus minus in globum conniventia. Stamina 6, hypogyna, erecta, perianthio multo breviora, filamentis crassiusculis apice elevatis sæpiusque subrecurvis; antheræ parvæ ad apicem filamenti sessiles v. adnatæ, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare, loculis imperfecte 2-locellatis; stylus columnaris, brevis, superne in lobos 3 erectos introrsum stigmatosos plus minus divisus; ovula in loculis  $\infty$ . Fructus nunc carnosus pulposus v. fere spongiosus indehiscens, nunc siccus loculicide dehiscens. Semina obovoidea v. angulato-compressa, testa nigra; embryo albumine corneo vix brevior, diagonalis.—Caudex lignosus, nunc humilis, nunc demum elatus v. arborescens ramosus. Folia ad apicem caudicis conferta, lineari-lanceolata, crassa rigidaque v. rarius flaccida, apice plerumque spinescentia, margine integra v. filamentosa. Panícula terminalis, speciosa, multiflora, inter folia subsessilis v. pedunculo bracteato fulta. Flores majusculi, secus ramos breviter pedicellati, penduli.

Species admisit Engelmann 12, Americæ borealis civitatum australiorum Mexici et Americæ centralis incolæ; Baker species 21 distinxit imprimis ad specimina hortensia, quorum plurima floribus adhuc ignotis valde dubia remanent. *Kunth, Enum. Pl.* iv. 268. *Engelmann in Trans. Acad. Sc. St. Louis*, iii. 17. *Baker in Journ. Linn. Soc.* xviii. 219.

Engelmann in monographia supra citata genus, ad specimina sylvestria plerumque in vivo examinata, in sectiones 4 sequentes imprimis ad fructum divisit:—

1. *Sarcocoyucca*. Bacca indehiscens, pendula. Semina crassa, albumine ruminato. Hue *Y. aloifolia*, Linn., speciesque aliæ sæpius arborescentes. *Red. Lil. t.* 326, 327, 401, 402. *DC. Pl. Grass. t.* 20. *Andr. Bot. Rep. t.* 473. *Salisb. Parad. Lond. t.* 31. *Bot. Mag. t.* 1260, 1700, 5201, 6316. *Bot. Reg. t.* 1690, 1894. *Sweet, Brit. Fl. Gard. t.* 195. *Saund. Ref. Bot. t.* 313, 316 ad 321.

2. *Chistoyucca*. Fructus indehiscens, demum siccatus spongiosus. Semina crassiuscula, albumine integro. Species unica, *Y. brevifolia*, Engelm., arborescens.

3. *Chenoyucca*. Fructus capsularis, erectus, septicide dehiscens, demum 6-valvis. Semina tenuia, plana, albumine integro. Hue *Y. filamentosa*, Linn., speciesque affines acaules v. vix caulescentes. *Red. Lil. t.* 277, 278. *Bot. Mag. t.* 900, 2222, 2236, 2662. *Bot. Reg. t.* 1895. *Sweet, Brit. Fl. Gard. t.* 53, 251. *Saund. Ref. Bot. t.* 314?, 315, 322 ad 325.

4. *Hesperoyucca*. Capsula loculicide 3-valvis. Semina *Chenoyuccæ*. Filamenta quam in cæteris speciebus minus incrassata, summo apice attenuata, antheris solito multo majoribus, loculis discretis per anthesin late apertis. Species unica, acaulis, scapo elato, *Y. Whipplei*, Torr. In icone in Gard. Chron. 1876, ii. 197 ad vivum a W. G. Smith delineata, filamenta apparent ut in sectionibus præcedentibus clavata.

42. *Dracæna*, Linn. Mant. n. 1256. (Terminalis, Medik. Theodora, 83. Pleomele, Salisb. Gen. Pl. Fragm. 74.)—Perianthium infundibuliforme v. anguste campanulatum, tubo brevi v. longiusculo; lobi subæquales, angusti, recurvo-patentes, tubo longiores v. breviores. Stamina 6, tubo ad basin loborum affixæ, quibus sæpius paullo breviora, filamentis filiformibus v. leviter complanatis v. incrassatis; antheræ oblongæ, rarius linearis alteque 2-lobæ, medio dorso affixæ, versatiles, loculis introrsum dehiscentibus. Ovarium sessile v. subsessile, 3-loculare; stylus filiformis, stigmatē capitato integro v. vix diviso: ovula in loculis solitaria (v. rarius 2?) a basi erecta. Bacca globosa, lævis v. 2-3-sulca, indehiscens. Semina in bacca abortu solitaria globosa, v. 2-3 pressione obtusangula, testa crassiuscula interdum pulposa; embryo albumine corneo sæpius durissimo prope hilum inclusus, parvus.—Caudex lignosus, cicatricibus foliorum delapsorum annulatus v. varie tessellatus, nunc elatus arborescens v. brevis crassusque, nunc tenuis ramosus v. surculosus, nunc abbreviatus vix lignosus foliis obtectus. Folia coriacea v. membranacea; crebre parallele venosa sæpeque venulis transversis parvis instructa, nunc longa subsessilia ad apicem caudicis conferta, nunc brevissima secus caudicem numerosa approximata v. in caudice brevi longe petiolata ovata. Flores sæpius dense fasciculati, fasciculis secus ramos paniculæ v. rhachin simplicem dissitis v. confertis, in paucis speciebus inflorescentia tota in capitulum densum v. spicam oblongam inter folia sessilem conferta. Bractee scariosæ, sæpius parvæ.

Species ad 35, per regiones calidiores orbis veteris late dispersæ. Kunth, Enum. Pl. v. 2. Regel in Act. Hort. Petrop. i. 133. Baker in Journ. Linn. Soc. xiv. 523, et in Trans. Linn. Soc. Bot. i. 252. Jacq. Hort. Schænbr. t. 95, 96. Red. Lil. t. 92, 117. Andr. Bot. Rep. t. 306 (Alettris). Gaudich. Voy. Bonite, Bot. t. 1. Wight, Ic. t. 2054. Bot. Mag. t. 1081, 1180, 4571, 4787, 5248, 5352, 5662, 5846, 6169, 6234, 6327, 6447, 6630, et (sub *Cordylina*) 4279. Bot. Reg. t. 1169. Lodd. Bot. Cab. t. 289. Fl. des Serres, t. 1169.

Genus foliis et habitu varium, ovario et seminibus facillime distinctum, a Regelio in sectiones 2 dividitur, ad folia sessilia v. petiolata, a Bakero in stirpes 7 limitibus quodammodo incertis distinctas. Typi tamen adsunt plurimi forte melius definiendi, floribus fructibusque cum habitu ulterius comparatis. In *D. Dracone*, Linn., affinisque caudex sæpius arborescens, folia longa conferta sessilia, inflorescentia semper paniculata; in *D. spicata*, Roxb., affinisque folia distincte petiolata, ovata v. ovato-lanceolata, inflorescentia elongata, simplex v. vix ramosa; in *D. surculosa*, Lindl., et *D. camerooniana*, Baker, caudex tenuis, divaricato-ramosus v. surculosus, florum fasciculi pauci dissiti; in *D. ovata*, *D. cylindrica*, alisque caudex sæpius humilis, folia ovata, pauca, longe petiolata, v. numerosa approximata, breviter petiolata, inflorescentia pariter in capitulum sessile v. spicam oblongam densissimam conferta; in *D. phrynoide*, inflorescentia pariter capitata, folia longissime petiolata, late ovata, venis dissitis nonnullis cæteris multo validioribus, venulis transversis insigniter connexis. Perianthium in plerisque speciebus anguste infundibuliforme, tubo tenui cylindraceo; in *D. Dracone* et in *D. schizantha*, Baker, perianthium vix 3 lin. excedens, potius urceolato-campanulatum quam infundibuliforme; in *D. aurea*, Mann, ex ins. Sandwicensibus, perianthium fere  $1\frac{1}{2}$ -pollicare, tubo amplo leviter incurvo, lobis brevibus.

STRÆKER et CÆDERA, Crantz, De duabus Draconis Arboribus, Viennæ 1768, 25, 30, cum tab., a Kunthio ut videtur rite ad varietates *Dracæne Draconis*, Linn., referuntur.

43. *Cordylina*, Comm. ex Juss. Gen. Pl. 41. (Tritsia, Medik. Theodora, 82.)—Perianthium cylindraceum v. anguste campanulatum, tubo brevi; lobi oblongi, erecti v. subpatentes, æquales v. interiores paullo longiores. Stamina 6, tubo ad basin loborum affixæ, iisque paullo breviora v. vix longiora, filamentis filiformibus v. complanatis; antheræ anguste oblongæ, dorsifixæ, loculis introrsum dehiscentibus. Ovarium sessile, breve, 3-loculare; stylus filiformis, stigmatē capitato v. breviter 3-lobato; ovula in loculis  $\infty$  (4-16). Fructus globosus v. 3-dymus, carnosus, epulposus, 3-locularis, indehiscens v. demum exsiccatus interdumque loculicide subdehiscens. Semina in loculis  $\infty$  v. abortu solitaria, obovoidea v. compressiuscula, sæpe curvula, testa nigra nitida; embryo curvulus, albumine carnosus vix brevior.—Caudex lignosus, basi sæpe stolonifer, interdum arborescens, cicatricibus foliorum annulatus. Folia ad apicem caudicis conferta, subsessilia v. longiuscule petiolata, elongata v. lanceolata, subcoriacea. Flores quam in *Dracæna* sæpius minores; interdum parvi, ample paniculati, ad quamque

bracteæ solitarii v. pauci, breviter pedicellati. Bracteæ parvæ, subscariosæ, bracteolæ sæpius 2, minimæ.

Species ad 10, Indiæ orientalis. Archipelagi Malayani, Australiæ, Novæ Zelandiæ et insularum maris Pacifici incolæ, cum una Brasiliæ. *Kunth, Enum. Pl.* v. 22. *Baker in Journ. Linn. Soc.* xiv. 538. *Benth. Fl. Austral.* vii. 20. *Hook. f. Handb. N. Zeal. Fl.* 281; *Fl. N. Zel.* t. 58. *Jacq. Ic. Rar.* t. 448. *Red. Lil.* t. 91. *Seem. Fl. Vit.* t. 94. *Bot. Mag.* t. 2053, 2835, 5636. *Bot. Reg.* t. 1749. *Lodd. Bot. Cab.* t. 136, 1224. *Lemaire, Jard. Fleur.* t. 399. *Regel, Gartenfl.* t. 444, 450.

Genus habitu et perianthio *Dracænæ* prope accedit, fructu tamen et præsertim seminibus longius distat et in genera plura vix pro sectionibus habenda a variis auctoribus dividitur:—

*CHARLWOODIA*, *Sweet, Fl. Austral.* t. 18, genus propositum fuit ad *C. strictam*, Endl., perianthii segmentis interioribus exteriora paulo excedentibus.

*COHNIA*, *Kunth, Enum.* v. 35; *Baker in Journ. Linn. Soc.* xiv. 545, species continet 3 Mascarenenses v. Novo-Caledonicas, a *Cordylina* distinguitur floribus minoribus, perianthii segmentis fere ad basin solutis (nec prorsus distinctis) et stylo brevioris crassioris. Habitus omnino *Cordylinis* et perianthii segmenta non altius soluta in *Cohnia neocaledonica*, Baker, quam in *Cordylina indivisa*, Kunth. Hæc *C. indivisa* insignis est floribus secus ramos paniculæ in spicas longas cylindraceas densissime confertis.

Planchon in *Fl. des Serres*, vi. 110, nomen *Cordylina* ad sectionem *Dracænæ* transfert, et *Cordylines* veras in genera 4 distribuit: *DRACÆNOPSIS*, *Planch. l. c.* 110, *CALODRACON*, *Planch. l. c.* 137, *CHARLWOODIA*, *Sweet*, et *COHNIA*, *Kunth*, characteribus levioris momenti separata.

44. *Nolina*, *Mich. Fl. Bor. Amer.* i. 207. (*Roulinia*, *Brongn. in Ann. Sc. Nat.* ser. 2, xiv. 320. *Beaucarnea*, *Lemaire, Illustr. Hort.* viii. Misc. 59, cum ic.)—Flores polygamo-dioici. Perianthium campanulatum; segmenta distincta, subæqualia, sub anthesi patentia. Stamina 6, basi segmentorum affixa, eaque non v. vix superantia, filamentis crassiuscule filiformibus; antheræ ovatæ v. oblongæ, dorsifixæ; in floribus ♀ staminodia ananthera. Ovarium lata basi sessile, 3-loculare; stigmata 3, sessilia, v. stylo brevissimo fulta; ovula in loculis 2, a basi erecta; in floribus ♂ ovarium sæpius adest imperfectum, ovulis omnibus abortientibus. Fructus siccus, 3-queter, angulis valde prominentibus acutis v. sæpius in alas scariosas productis (rarius obtusis), nec loculicide nec septicide dehiscens, sed sæpius maturitate irregulariter ruptus, abortu 1-2-locularis 1-2-spermus. Semina perfecta obovoidea v. globosa, testa tenui; embryo teres, albumine carnosio duriusculo vix brevior.—Rhizoma nunc brevissimum, foliorum vaginis obtectum cormiforme, nunc a basi crassa in caudicem erectum productum. Folia in rhizomate v. ad apicem caudicis conferta, longe linearia, rigidula, integerrima v. minute scabro-serrulata. Panicula terminalis, ampla, præsertim in planta ♂ laxiuscule divaricatoramosa. Flores parvuli, ad bracteas breves fasciculati, breviter pedicellati.

Species ad 12, regionis Mexicano-Texanæ Americæ borealis incolæ. *S. Wats. Proc. Amer. Acad.* xiv. 246. *Baker in Journ. Linn. Soc.* xviii. 233 (*Beaucarnea*).

45. *Dasyllirion*, *Zucc. in Abhandl. Akad. Münch.* iii. 221, t. 1.—Flores dioici. Perianthium campanulatum; segmenta distincta, subæqualia, sub anthesi patentia. Stamina 6, basi segmentorum affixa eaque non v. vix superantia, filamentis crassiuscule filiformibus; antheræ ovatæ v. oblongæ, dorsifixæ; in floribus ♀ staminodia ananthera. Ovarium in floribus ♀ lata basi sessile, jam sub anthesi 1-loculare; stylus brevissimus, stigmatibus 3; ovula sæpius 3, a basi erecta, 2 tamen mox abortientia. Fructus siccus, 3-queter, angulis in alas scariosas productis v. rarius obtusis, indehiscens v. pericarpio tardius in valvas 3 septicide deciduus. Semen unicum, subglobosum v. ovoideum, testa tenui; embryo albumine carnosio duriusculo vix brevior.—Caudex erectus, lignosus. Folia conferta, longa, rigida, plana v. concava, margine spinuloso-serrata. Panicula quam in *Nolina* densior, floribus præsertim fœmineis in spicas cylindraceas secus rhachin sessiles densissime confertis. Bracteæ seu folia floralia sub spicis membranaceæ caducæ, sub florum fasciculis parvæ. Flores parvi *Nolinæ*, sed sæpius brevius nunc brevissime pedicellati.

Species ad 8, regionis Mexicano-Texanæ Americæ borealis incolæ. *S. Wats. Proc. Amer. Acad.* xiv. 249. *Baker in Journ. Linn. Soc.* xviii. 237. *Bot. Mag.* t. 5030 (planta ♀), 5041 (planta ♂).

Genus *Noline* valde affine, quacum connectitur speciebus nonnullis adhuc non satis notis. In *D. Hookeri*, Baker; *Bot. Mag. t. 5099*, caudex magnus subglobosus fere *Testudinariæ*, folia linearia integerrima *Noline*, fructus (adhuc non perfecte maturus) indehiscens, 1-spermus, angulis tamen obtusissimis exalatis. In speciminibus Andrieuxianis *D. serratifolii*, a Zuccarinio, l. c. 225, et a Bakero sub nomine *D. laxiflori* descriptis, panicula ♂ laxa omnino *Noline*, sed folia cum panicula missa spinoso-serrata basi dilatata *Dasyliirii*; planta ♀ ignota.

46. *Astelia*, Banks et Sol.; *R. Br. Prod.* 291. (Hamelinia, A. Rich. *Fl. Nouv. Zel.* 158, t. 24.)—Flores polygamo-dioici. Perianthium marcescens, persistens; segmenta subæqualia, basi in tubum campanulatum connata v. fere a basi distincta, patentia. Stamina in fl. ♂ 6, basi segmentorum affixa iisque breviora v. sublongiora, filamentis filiformibus; antheræ ovatæ v. oblongæ, erectæ, basi v. inter lobos basales affixæ, loculis a latere introrsum dehiscentibus; staminodia in fl. ♀ parva, acuta v. clavata. Ovarium in fl. ♀ sessile, breve, 1-loculare, placentis 3 parietalibus, v. 3-loculare placentis axilibus; stylus brevissimus indivisus, v. styli 3 breves introrsum stigmatosi, v. stigmata 3 sessilia; ovula in quaque placenta ∞; in fl. ♂ ovarii rudimentum parvum v. 0. Fructus parvus, subglobosus v. oblongus, sæpius 3-sulcus, carnosus indehiscensque at epulposus. Semina ∞, ovoidea v. angulosa, nigra, testa crustacea nitida; embryo cylindraceus, albumine carnoso 2-3-plo brevior.—Rhizoma breve, crassum. Folia radicalia v. ad basin caulis conferta, vaginis breviter dilatatis imbricatis, floralia sub ramis paniculæ lanceolata v. longa. Caulis nunc elatus, superne paniculatus, nunc brevissimus foliorum vaginis obtectus, sæpius cum inflorescentia foliisque plus minus pilis sericeis lanosis v. subpaleaceis vestitus. Flores parvi, secus ramos paniculæ dense racemosi, v. in speciebus paucis intra foliorum vaginas conferti. Bracteæ parvæ, nunc minimæ v. 0.

Species ad 9, Novæ Zelandiæ, insularum maris Pacifici, montium Australiæ meridionalis et Tasmaniæ v. Americæ antarcticæ incolæ. *Hook. f. Handb. N. Zeal. Fl.* 283; *Fl. Antarct.* i. 76, ii. 357, t. 127. *Kirk in Trans. N. Zeal. Inst.* iv. 244. *Benth. Fl. Austral.* vii. 11. *Hook. Bot. Misc.* t. 3. *Gaudich. in Freyc. Voy. Bot.* t. 31. *Seem. Fl. Vit.* t. 95. *Bot. Mag.* t. 5175, 5503.

Ovula sub anthesi sæpe pulpa viscidula e placenta oriunda immersa, in fractu maturo semina semper sicca nudaque viduina.

FUNKIA, Willd. in *Gesellsch. Naturf. Fr. Mag. Berlin*, ii. 19, non *Spr.* est *Astelia linearis*, Hook. f., species Magellanica, a ceteris habitu nano distincta. HANGUANA, Blume, *Enum. Pl. Jav.* 15, species Javensis e solo caractere manco Blumei nota, a Lindleyo *Asteliæ* refertur, species tamen nulla hujus generis adhuc in Archipelago Malayano reperta, et ovarii loculi 1-ovulati affinitatem potius cum *Dracena* indicant. Genus valde dubium remanet.

47. *Milligania*, Hook. f. in *Hook. Kew Journ.* v. 296, t. 9.—Perianthium persistens, tubo campanulato; lobi tubo longiores, patentes, subæquales, ovati v. oblongi, irregulariter 3-nerves. Stamina 6, fauci affixa, lobis breviora, filamentis inferne leviter complanatis, apice subulatis; antheræ ovatæ, infra medium dorsifixæ, caducissimæ, loculis introrsum dehiscentibus. Ovarium sessile, obovoideum, 3-sulcum, 3-loculare; stylus columnaris v. breviter filiformis, plus minus 3-fidus, ramis recurvis superne introrsum stigmatosis; ovula in loculis ∞. Capsula subglobosa, 3-angulata v. fere 3-loba, membranacea, superne loculicide dehiscent. Semina in loculis pauca, sæpe angusta, angulata, leviter incurva sæpeque acuminata, testa crassiuscula nigra nitida; embryo in albumine carnoso longiusculus.—Rhizoma breve, crassum. Folia radicalia conferta, linearia v. lanceolata, basi in vaginas breves crassas imbricatas prominenter venosas dilatata; caulina pauca, minora, gradatim in bracteas abeuntia. Caulis infra inflorescentiam simplex, cum panicula laxè piloso-lanatus. Panicula ampla, floribunda, bracteis inferioribus foliaceis superioribus parvulis. Flores parvuli, sub quaque bractea breviter pedicellati.

Species 4, Tasmanicæ. *Benth. Fl. Austral.* vii. 25.

#### TRIBUS X. ASPHODELEÆ.

48. *Xeronema*, Brongn. et Gris. in *Bull. Soc. Bot. Fr.* xi. 316, et in *Nouv. Arch. Mus. Par.* iv. 2, t. 1. (*Scleronema*, Brongn. et Gris. in *Ann. Sc. Nat. ser.* 5, ii. 166.)—Perian-

thium persistens; segmenta distincta, linearia, erecta, subæqualia, 1-nervia. Stamina 6, hypogyna, erecta, perianthio longiora, filamentis leviter compianatis; antheræ oblongæ, versatiles, medio dorso affixæ, filamento in foveolam intruso, loculis introrsum dehiscentibus. Ovarium sessile (v. brevissime stipitatum?), obtusum, 3-loculare; stylus filiformis, stigmatē parvo; ovula in loculis 6 (ad 8), anatropa. Capsula (a nobis non visa) brevissime stipitata, perianthio staminibusque persistentibus stipata, 3-gona, chartacea, loculicide dehiscens. Semina perfecta pauca, ellipsoidea, testa crustacea nigra aculeis brevibus exasperata; embryo albumine carnosio subdimidio brevior.—Rhizoma brevissimum, fibris radicalibus fasciculatis. Caulis erectus, simplex. Folia ad basin caulis conferta, elongata, secus caulem pauca, multo breviora, disticha, vaginis longis complicatis, omnia erecta, rigidule venosa. Racemus terminalis, simplex, secundus, rhachi basi abrupte inflexa sæpius horizontalis, floribus confertis erectis breviter pedicellatis. Bracteæ ovatæ, scariosæ. Perianthia rubra, speciosa (semipollicaria).

Species 1, Novo-Caledonica. *Illustr. Hort. xxiv. t. 297. Gard. Chron. 1878, ii. 17, cum ic.*

49. *Anemarrhena*, Bunge, *Enum. Pl. Chin. Bor.* 66.—Perianthium persistens; segmenta ima basi in cyathum brevem connata, cæterum libera, angusta, 3-nervia, patentia, subæqualia, interioribus tamen basi angustioribus canaliculatis. Stamina 3, mediis segmentis interioribus affixa iisque breviora, filamentis breviter filiformibus; antheræ oblongæ, medio dorso affixæ, vix foveolatæ, versatiles, loculis apice basique distinctis medio tantum ad filamentum insertionem breviter connexis introrsum dehiscentibus. Ovarium sessile, angulatum, 3-loculare; stylus breviter filiformis, stigmatē parvo; ovula in loculis 2, prope basin collateraliter affixa, ascendente, anatropa. Capsula subgloboso-3-quetra, loculicide dehiscens, in specimenibus nostris immatura. Semina ex Bungeo in loculis 1, rarius 2, oblonga, subulato-3-quetra, magna, nigra.—Rhizoma breve, crassum, horizontale. Folia radicalia, conferta, linearia, graminea. Caulis inter folia elatus, simplex, squamellis paucis minutis sparsis instructus, cæterum aphyllus. Flores parvi, in racemo longo interrupte spiciformi brevissime pedicellati, ad bracteas fasciculati. Bracteæ parvæ, scariosæ.

Species 1, Chinæ borealis incolæ. *Kunth, Enum. Pl. iv. 600. Baker in Journ. Linn. Soc. xv. 268. In Japoniæ hortis raro colitur nec indigena (Maximowicz).*

50. *Asphodelus*, *Linn. Gen. n. 421.*—Perianthium marcescens, diu persistens v. demum deciduum; segmenta a basi distincta v. brevissime connata, in alabastro basi circa ovarium in tubum conniventia, sub anthesi patentia, subæqualia, medio 1-nervia v. vittata. Stamina 6, hypogyna, segmentis breviora, erecta v. leviter declinata, filamentis ima basi dilatatis concavis ovarium includentibus, supra basin filiformibus v. complanatis; antheræ oblongæ v. fere lineares, dorso infra medium affixæ, versatiles, filamento in foveolam intruso, loculis a latere subintrorsum dehiscentibus. Ovarium sessile, 3-loculare; stylus filiformis stigmatē subcapitato 3-dymo; ovula in loculis 2, collateralia, lateraliter affixa, amphitropa. Capsula globoso-3-quetra, coriacea, loculicide dehiscens, septis interdum intus insigniter rugosis. Semina in loculis sæpe solitaria, 3-quetra, sæpius rugosa, testa nigra appressa; embryo albumine cartilagineo vix brevior.—Rhizoma parvum v. radix annua, fibris radicalibus fasciculatis tuberoso-incrassatis v. filiformibus. Folia radicalia, linearia, loriformia, sub-3-quetra v. fistuloso-teretia. Scapus aphyllus, nunc altissimus simplex v. parum ramosus, nunc humilis foliorum vaginis subinclusus. Flores secus rhachin v. ramos inflorescentiæ racemosi, ad bracteas scariosas solitarii, pedicellis sub flore articulatis. Perianthii segmenta alba, medio fusco-nervata.

Species 6 v. 7, a Bakero ad 5 reductæ, regionis Mediterraneæ incolæ, quarum una usque ad Indiam orientalem et insulas Mascarienses extensa. *Kunth, Enum. Pl. iv. 554. Baker in Journ. Linn. Soc. xv. 268. Nees, Gen. Fl. Germ. Monocot. ii. n. 52. Reichb. Ic. Fl. Germ. t. 513 ad 515. Moggr. Fl. Ment. t. 69. Jord. et Fourr. Ic. Fl. Eur. t. 11 ad 15 et 116 ad 125.*

Genus a nonnullis reducitur ad *A. ramosus*, Linn., sub quo includunt *A. album*, Mill., et *A. microcarpum*, Viv., fibris radicalibus crassis fusiformibus v. napiformibus, caule elato haud raro ramoso, foliis triquetris v. subplanis. *Sibth. Fl. Gr. t. 334. Moggr. Fl. Ment. t. 69, C, D.*

*CLAUSONIA*, *Pomel, Mater. Fl. Atl.* 1 (*GYTHOSYNE*, *Salisb. Gen. Pl. Fragm.* 72) est *A. acaulis*, *Desf. Fl. Atl.* t. 89, species nana, fibris radicalibus in rhizomate brevi fasciculatis crassiusculis, caule cum inflorescentia fere tota intra vaginas foliorum subincluso.

*VERINEA*, *Pomel, l. c.* 1 (*ASPHODELOIDES*, *Manch. Meth.* 634. *OPHIOPRASON*, *Salisb. Gen. Pl. Fragm.* 72), est *A. fistulosus*, *Linn.*, cum affinibus, radice annua, fibris radicalibus fasciculatis non incrassatis; scapis cum foliorum fasciculis ex eodem rhizomate sæpe pluribus tenuibus at rigidulis, foliis teretibus fistulosis. *Red. Lil.* t. 178. *Cav. Ic.* t. 202, 587. *Reichb. Ic. Fl. Germ.* t. 513. *Sibth. Fl. Græc.* t. 335. *Wight, Ic.* t. 2062. *Bot. Mag.* t. 984. *Lodd. Bot. Cab.* t. 1124.

51. *Asphodeline*, *Reichb. Fl. Germ. Exc.* 116. (*Dorydium*, *Salisb. Gen. Pl. Fragm.* 72).—Perianthium marcescens, diu persistens v. demum deciduum; segmenta ima basi circa ovarium breviter connata, sub anthesi supra basin rotato-patentia, subæqualia, 1-nervia. Stamina 6, hypogyna v. vix basi perianthio brevissime adnata quo breviora, inæqualia, declinata, omnia perfecta v. 3 castrata, filamentis ima basi dilatatis concavis ovarium includentibus, supra basin filiformibus; antheræ oblongæ v. lineares, dorso infra medium affixæ, versatiles, filamento in foveolam intruso, loculis introrsum dehiscen- tibus. Ovarium sessile, subglobosum, 3-loculare; stylus filiformis, stigmatē parvo interdum 3-lobo; ovula in loculis 2, collateralia, lateraliter affixa, longiuscule adnata, amphitropa. Capsula sub- globosa, loculicide dehiscens, valvis coriaceis transverse rugosis. Semina in loculis sæpius abortu solitaria, acute 3-gona, testa crassiuscula sæpe rugosa; embryo albumine cartilagineo vix brevior.—Rhizoma parvum v. demum longiusculum, fibris radicalibus fasciculatis sæpe carnosus. Caulis erectus, ima basi v. usque ad inflorescentiam foliatus, in speciebus normalibus simplex. Folia conferta, linearia. Racemus longus, densus, floribus flavis v. albis, breviter nunc brevissime pedicellatis ad quamque bracteam solitariis v. ad basin racemi fasciculatis. Bracteæ scariosæ, fere hyalinæ, in racemo juniore sæpe imbricatæ, interdum minimæ.

Species ad 14, regionis Mediterraneæ incolæ, in Oriente usque ad Persiam et Caucasum extensæ. *Baker in Journ. Linn. Soc.* xv. 273. *Red. Lil.* t. 223, 380, 470. *Desf. in Ann. Mus. Par.* x. t. 11. *Jacq. Hort. Vind.* t. 77. *Jacq. f. Ecl.* t. 77. *Reichb. Ic. Fl. Germ.* t. 516, 517. *Nees, Gen. Fl. Germ. Monocot.* ii. n. 53. *Bot. Mag.* t. 773, 2626. *Bot. Reg.* t. 1507. *Lodd. Bot. Cab.* t. 915. 1102 (*ic. plures sub Asphodelo*).

Sectio *Dendrasphodeline*, *Baker*, est *A. prolifera*, *Kunth*, species Orientalis, ab omnibus diversa caulis parte foliata sæpe, nec semper, ramosa, floribus multo minoribus et staminibus 3 tantum ad normam perfectis, 3 castratis, filamentis sub apice subgloboso-inflatis, antheridio parvo 2-globoso, ut bene observavit *J. Gay*.

52. *Paradisia*, *Mazzuc. Viag. Alp. Giul.* 27, ex *Bertol. Fl. Ital.* iv. 132. (*Czackia*, *Andrz. Diss.* 1818, cum *ic.* *Liliastrum*, *Link, Handb.* i. 173. *Allobrogia*, *Tratt. Fl. Austr.* ii. 71. *Hyperogyne*, *Salisb. Gen. Pl. Fragm.* 81.)—Perianthium infundibuliforme, marcescens, diu persistens; segmenta distincta, a basi angusta erecta, superne oblongo-spathulata, erecto-patentia, 3-nervia. Stamina 6, hypogyna, declinata, perianthio paullo breviora, filamentis filiformibus; antheræ oblongo-lineares, basi alte bifidæ, dorsifixæ, versatiles, filamento in foveolam intruso, loculis introrsum dehiscen- tibus. Ovarium sessile, ovoideum, acuminatum, 3-loculare; stylus filiformis, stigmatē parum incrassato 3-dymo; ovula in loculis , 2-seriata. Capsula perianthio emarcido stipata, ovoidea, coriacea, loculicide dehiscens. Semina ∞, angulata, testa crassiuscula nigra; embryo albumine cartilagineo triente brevior.—Rhizoma brevissimum, fibris radicalibus fasciculatis crassi- usculis. Folia radicalia linearia, longiuscula. Scapus simplex, aphyllus, v. folio unico brevi instructus. Flores pauci, speciosi, albi, in racemo subsecundi, patentes v. sub- nutantes, pedicello brevi. Bracteæ breves, angustæ.

Species 1, montium Pyrenæorum v. Alpium Europæ incolæ. *Kunth, Enum. Pl.* iv. 592 (*Czackia*). *Baker in Journ. Linn. Soc.* xv. 286. *Red. Lil.* t. 255 (*Phalangium*). *Reichb. Ic. Fl. Germ.* t. 509 (*Czackia*). *Nees, Gen. Fl. Germ. Monocot.* ii. n. 55. *Bot. Mag.* t. 318 (*Anthericum*). *Fl. des Serres.* t. 2182.

De itinere *Mazzucati* (1811 nec 1814) confer *Moretti, Difesa Op. Mathioli* iv. 17, in *Giorn. Istit. Lomb.* xiv., germanice reddita in *Bot. Zeit.* 1851, 268.

53. *Simethis*, Kunth, *Enum. Pl.* iv. 618. (Morgagnia, Bubani in *Nuov. Ann. Sc. Nat. Bologna*, ix. (1843), 92, *absque char.* Pogonella, Salisb. *Gen. Pl. Fragm.* 70.)—Perianthium marcescens, diu persistens, demum deciduum; segmenta subæqualia, patentia, 5-nervia. Stamina 6, ima basi segmentorum affixa iisque breviora, filamentis filiformibus superne leviter incrassatis villosa-barbatis apice attenuatis glabris; antheræ oblongæ, dorsifixæ, versatiles, filamento in foveolam intruso, loculis introrsum dehiscentibus. Ovarium sessile, 3-dymum, 3-loculare; stylus filiformis, stigmate parvo; ovula in loculis 2, superposita. Capsula subglobosa, fere 3-loba, tardius loculicide dehiscens. Semina in loculis 1-2, ovoideo-subglobosa, stropholata, testa nigra crustacea nitente; embryo in seminibus examinatis albumine carnosio multo brevior, sed forte demum longior.—Rhizoma parvum, fibris radicalibus fasciculatis carnosius. Folia radicalia, linearia, graminea. Caulis præter squamas paucas parvas aphyllus, superne laxè paniculatus, ramulis dichotomis v. hinc inde subumbellatis. Flores pedicellati, ad bracteas solitarii v. pauci, irregulariter fasciculati v. subumbellati.

Species 1, Europæ occidentalis et Africæ boreali-occidentalis incola. Baker in *Journ. Linn. Soc.* xv. 354 (*Morgagnia*). Red. Lili. t. 215 (*Phalangium*). Brot. *Phytogr. Lusit.* t. 44 (*Anthericum*). Desf. *Fl. Atl.* t. 90 (*Anthericum*).

Bubani l. c. genus *Morgagniam* indicavit nec characteribus definivit. Nomen, quamvis a Parlatoreo Fl. Ital. receptum, a Caruelo in Prod. Fl. Tosc. rejicitur ob consonantiam cum *Morgania*, R. Br., a cæteris botanicis ignotum est v. rejectum.

54. *Bulbinella*, Kunth, *Enum. Pl.* iv. 569. (*Chrysobactron*, Hook. f. *Fl. Antarct.* i. 72, t. 44.)—Perianthium marcescens, diu persistens; segmenta subæqualia, distincta v. vix basi connata, ovata v. oblonga, 1-nervia. Stamina 6, hypogyna v. vix basi segmentis adnata, iis paullo breviora v. sublongiora, filamentis filiformibus v. angustè complanatis; antheræ oblongæ, parvulæ, dorsifixæ, versatiles, loculis introrsum dehiscentibus. Ovarium sessile v. subsessile, subglobosum, 3-loculare; stylus filiformis, stigmate parvo capitato v. 3-dymo, ovula in loculis 2, collateralia v. uno paullo altius affixa, anatropa v. plus minus amphitropa. Capsula brevis, globoso-3-quetra, membranacea v. chartacea, loculicide dehiscens. Semina pauca, interdum ad unum reducta, testa nigra laxiuscula; embryo albumine carnosio triente v. subdimidio brevior.—Rhizoma brevissimum, fibris radicalibus fasciculatis sæpe carnosio-incrassatis. Folia radicalia, nunc angustissima basi vaginis fibrosis foliorum emarcidorum cincta, nunc loriformia v. latiora, vaginis vetustis vix v. non fibrosis. Scapus aphyllus, simplex v. rarius ramosus. Flores parvuli, flavi v. albi, interdum abortu polygami, dense v. laxè racemosi, pedicellis ad bracteas solitariis.

Species ad 14, Africæ australis, Novæ Zelandiæ et insularum australiorum incolæ. Baker in *Journ. Linn. Soc.* xv. 293 (*Antherici* sect. 1 et 2). Hook. Ic. Pl. t. 817 (*Chrysobactron*). His addenda videtur *B. Burkei*, a Bakero l. c. sub sectione sua *Streptanthera* generis *Antherici* edita; perianthium tamen post anthesin non tortum, et characteres cæteri omnino *Bulbinellæ*, excepta inflorescentia in ramos paucos longos divisa, racemis laxis.

55. *Bulbine*, Linn. *Gen. ed.* 1, 95, *pro parte*.—Perianthium marcescens, persistens; segmenta distincta, subæqualia, patentia, 1-nervia. Stamina 6, hypogyna v. ima basi segmentis coherentia iisque breviora, filamentis filiformibus medio v. supra medium pilis longis barbatis, apice tenuibus glabris; antheræ in speciebus normalibus oblongæ, dorsifixæ, versatiles, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare; stylus filiformis, stigmate parvo; ovula in loculis 4-∞. Capsula globosa v. ovoidea, leviter 3-sulca, loculicide dehiscens. Semina pauca, angulato-3-quetra, testa nigra tuberculoso-rugosula v. lævi opacæque nec nitida; embryo albumine carnosio vix brevior, sæpius valde curvus.—Rhizoma nunc brevissimum (v. non persistens?), fibris radicalibus fasciculatis, nunc crassum, descendens v. tuberiforme, fibris variis interdum basi incrassatis. Caulis foliatus, interdum brevissimus ramosus. Folia radicalia v. ad basin caulis conferta, lanceolata v. linearia, sæpe carnosæ. Scapus seu pedunculus terminalis simplex, aphyllus.

Racemus sæpius dense floribundus, pedicellis ad bracteas solitarius apice articulatis. Flores parvuli v. mediocres, flavi v. rarius albi.

Species genuinæ ad 20, Africæ australis incolæ, quarum una in Africa tropica usque ad Abyssiniam extensa. *Baker in Journ. Linn. Soc. xv. 341. Red. Lil. t. 283, 284, 397, 423. DC. Pl. Grass. t. 8, 14, 26. Jacq. Ic. Rar. t. 403 ad 408; Hort. Vind. t. 181. Andr. Bot. Rep. t. 386. A. Rich. Fl. Abyss. t. 97. Bot. Mag. t. 816, 1317, 1339, 1451, 1454, 3129. Lodd. Bot. Cab. t. 996. (Ic. plures sub *Antherico*.)*

Species 2 Australianæ sectionem distinctam *Orthantheram* formant vix non pro genere proprio habendam. Habitus et perianthium omnino *Bulbinis* sed antheræ, in *B. bulbosa* omnes, in *B. semibarbata* interiores, erectæ, oblongæ v. oblongo-lineares, inter pilos filamenti sessiles basifixæ; in *B. semibarbata*, Haw., stamina seriei exterioris interioribus minora, filamentis brevibus imberbibus. *Benth. Fl. Austral. vii. 34. Bot. Mag. t. 3017* (anthera errore barbata delineata). *Anthericum semibarbatum*, Bot. Mag. t. 3129, non R. Br., est evidenter species quædam Capensis *Bulbinis* genuinæ.

56. *Chlorogalum*, Kunth, *Enum. Pl. iv. 681*.—Perianthium marcescens, persistens, post anthesin supra capsulam sæpius tortum; segmenta angusta, distincta v. vix ima basi connexa, sub anthesi recurvo-patentia, medio 3-nervia. Stamina 6, ima basi segmentorum affixa iisque parum breviora, filamentis filiformibus; antheræ oblongæ, dorsifixæ, versatiles, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare; stylus elongatus, filiformis, stigmatе parvo breviter 3-fido; ovula in loculis 2 collateralia, sub apice v. medium versus lateraliter affixa, amphitropa. Capsula subgloboso-turbinata, 3-quetra. Semina in loculis 1-2, obovato-oblonga, compressiuscula, testa nigra laxa; embryo vix albumine carnosio brevior.—Bulbus angustus, tunicatus, foliorum emarcidorum vaginis sæpe supra bulbum elongatis demum in fibras longas solvendis. Folia radicalia, loriformia. Scapus elatus, laxе ramosus. Flores secus ramos sparsi, dissiti, ad bracteas solitarii, pedicello infra apicem articulo. Bracteæ sub ramis inferioribus inflorescentiæ interdum foliaceæ, ceteræ parvæ scariosæ. Perianthii segmenta alba, medio viridi-vittata.

Species 3, Californicæ. *S. Wats. in Proc. Amer. Acad. xiv. 242; Bot. Calif. ii. 159. Torr. Bot. Emory Exped. t. 60. Kell. Proc. Calif. Acad. ii. 104, fig. 30. Red. Lil. t. 421 (Scilla). Bot. Reg. t. 564 (Anthericum) et 1842, t. 28 (Ornithogalum). Don in Sweet, Brit. Fl. Gard. ser. 2, t. 381 (Phalangium, ovarii loculis errore  $\infty$ -ovulatis dictis).*

57. *Schoenolirion*, Torr. in Bot. Emory Exped. 220.—Perianthium persistens, post anthesin laxе marcescens non tortum; segmenta distincta, ovata v. oblonga, patentia, 3-nervia. Stamina 6, ima basi segmentorum affixa iisque breviora, filamentis filiformibus, antheræ oblongæ, dorsifixæ, versatiles, loculis introrsum dehiscentibus. Ovarium subsessile, 3-loculare; stylus filiformis, stigmatе parvo; ovula in loculis 2, collateralia, lateraliter affixa. Capsula brevis, 3-quetra, truncata, loculicide dehiscent. Semina (a nobis non visa) obovoideo-globosa, testa nigra nitida; embryo in albumine carnosio rectus.—Rhizoma breve, bulbum seu potius cormum vaginis foliorum obtectum ferens. Folia radicalia, longe linearia. Scapus elatus, aphyllus, simplex v. parce ramosus. Flores in scapo v. ramis racemosi, parvuli, flavidi v. albidii, ad bracteas solitarii, longiuscule pedicellati.

Species 3, Americæ borealis civitatum australiorum incolæ. *S. Wats. in Proc. Amer. Acad. xiv. 242.*

58. *Hastingsia*, S. Wats. in Proc. Amer. Acad. xiv. 217, 242.—Perianthium persistens, post anthesin laxе marcescens, non tortum; segmenta distincta, ovata v. oblonga, patentia, tenuia, 1-nervia v. confertim 3-nervia. Stamina 6, ima basi segmentorum affixa iisque subæquilonga, filamentis filiformibus; antheræ oblongæ, dorsifixæ, versatiles, loculis introrsum dehiscentibus. Ovarium sessile, ovoideum, 3-loculare; stylus breviter filiformis, stigmatе parvo; ovula in loculis 2, juxta basin lateraliter affixa, ascendencia, fere anatropa. Capsula ovoidea, 3-sulca, loculicide dehiscent. Semina in loculis sæpius solitaria, erecta, oblique oblonga, subtriquetra, testa nigra opaca appressa; embryo albumine carnosio

parum brevior, curvulus.—Rhizoma breve, crassum. Caulis basi incrassatus, vaginis foliorum fere tunicatus. Folia radicalia longe linearia. Scapus aphyllus, simplex v. parce ramosus. Flores parvi, albi, in scapi ramis racemosi, ad bracteas solitarii, breviter pedicellati.

Species 1, Californica. Genus vix ac ne vix a *Schanolirio* differre videtur.

59. *Bowiea*, Harv. ; Hook. f. in *Bot. Mag.* t. 5619.—Flores polygami. Perianthium marcescens, persistens ; segmenta distincta, æqualia, patentia. Stamina 6, basi segmentorum affixa iisque breviora, filamentis filiformibus basi leviter dilatatis ; antheræ parvæ, oblongo-lineares, erectæ, prope basin dorsifixæ, loculis valvis latis subintrorsum dehiscentibus, in floribus ♀ minimæ loculis vacuis. Ovarium lata basi sessile, 3-loculare ; stylus breviter columnaris, apice leviter clavato-capitatus, stigmatibus adnatis recurvis ; ovula in loculis ∞. Capsula perianthio marcescente stipata, ovoideo-3-quetra fere pyramidalis, loculicide dehiscens. Semina plurima, oblonga, compressa, testa nigra laxa ; embryo albumine carnosio triente v. subdimidio brevior.—Bulbus tuberiformis (v. tuber) magnus, globosus, carnosus, e vaginis (v. tunicis) paucis crasso-carnosis sibimet arcte appressis compositus, apice squamis nonnullis parvis ad basin caulis coronatus. Folia præcocia, cito decidua, pauca v. solitaria, breviter linearia, erecta. Caulis v. scapus aphyllus, alte volubilis, ramis inferioribus intricato-ramosissimis flexuosis sterilibus ramulis corniculatis, superioribus floridis minus ramulosis elongatis flexuoso-volubilibus. Flores longe pedicellati, virescentes, segmentis interdum margine albidis.

Species 1, Africæ australis incola. Baker in *Journ. Linn. Soc.* xiii. 290. *Irmisch in Abhandl. Nat. Ver. Bremen*, vi. 433, t. 5.

60. *Schizobasis*, Baker in *Trim. Journ. Bot.* 1873, 105.—Perianthium marcescens, persistens ; segmenta distincta, æqualia, patentia. Stamina 6, basi segmentorum affixa iisque breviora, filamentis filiformibus basi leviter dilatatis ; antheræ prope basin dorsifixæ, loculis valvis latis subintrorsum dehiscentibus. Ovarium lata basi sessile, 3-loculare ; stylus columnaris v. breviter filiformis, stigmate parvo sæpe 3-fido ; ovula in loculis ∞ (4-7). Capsula subgloboso-3-quetra, loculicide dehiscens. Semina in loculis 1-2 rarius 3, ovoideo-globosa v. angulata, testa nigra laxa ; embryo albumine carnosio paullo brevior.—Bulbus globosus v. ovoideus, e squamis ∞ crasse carnosis, vaginis emarcidis sæpe coronatus. Folia radicalia præcocia, pauca, linearia, crassiuscula, in speciminibus floridis desunt. Caulis aphyllus, tenuis, ramosus, ramis nunc elongatis virgatis, nunc breviter divaricatis flexuosis v. intricato-ramosissimis. Bracteæ minutæ, squamiformes v. obsoletæ. Flores parvi nunc minimi, secus ramos racemosi v. dissiti, pedicellis sub apice articulatis.

Species 5, Africæ tropicæ et australis incolæ. Baker in *Journ. Linn. Soc.* xv. 260, et in *Trans. Linn. Soc. Bot.* i. 255. Huc includenda *S. cuscutoides* (*Asparagus cuscutoides*, Baker in *Journ. Linn. Soc.* xiv. 606) cui fructus certe capsularis 3-valvis omnino *Schizobaseos*.

61. *Eriospermum*, Jacq. *Collect. v. (Suppl.)* 72.—Perianthium marcescens, persistens ; segmenta distincta, ovata oblonga v. linearia, subæqualia, patentia, medio 1-nervia v. vittata. Stamina 6, prope basin segmentorum affixa iisque breviora, filamentis complanatis v. crassiusculis rarius filiformibus ; antheræ ovatæ, basi inter lobos affixæ, loculis valvis latis subintrorsum dehiscentibus. Ovarium sessile v. subsessile, 3-loculare ; stylus filiformis, stigmate parvo ; ovula in loculis 2-6. Capsula perianthii segmentis emarcidis stipata, subglobosa v. ovoidea, 3-quetra, loculicide dehiscens. Semina pauca, oblonga, testa membranacea laxa pilis longis dense lanata ; embryo cylindraceus, albumini carnosio æquilongus, sæpe elongandus ex albumine exsertus.—Tuber interdum majusculum, foliorum vetustiorum vaginis fibrosis coronatum, nunc cormum formans. Folia radicalia nunc 1-3 ad basin scapi, nunc solitaria, a scapo distincta, petiolata, linearia lanceolata ovata cordata v. rotundata, crassiuscula. Scapus simplex, sæpius aphyllus, inter folia radicalia v. e gemma distincta evolutus, basi vaginis nonnullis stipatus, vagina interdum una alterave laminam parvam patentem ferente. Racemus simplex, nunc longus dense

floribundus pedicellis brevibus, nunc laxis pedicellis longissimis. Bracteae minimae squamiformes. Flores albi v. flavescentes.

Species ad 25, Africae tropicae et australis incolae. *Kunth, Enum. Pl.* iv. 649. *Baker in Journ. Linn. Soc.* xv. 262, et in *Trans. Linn. Soc. Bot.* i. 261. *Jacq. Ic. Rar.* t. 420 ad 422; *Hort. Schanbr.* t. 264, 265. *Red. Lil.* t. 394. *Bot. Mag.* t. 1382. *Bot. Reg.* t. 578, 795.

*Bulbine Mackenii*, Hook. f. *Bot. Mag.* t. 5956, a Bakero ad *Eriosperrum* translata, a cæteris speciebus differt habitu, floribus flavis, filamentis filiformibus, et forte non revera congener. Fructus et semina nobis desunt.

PHYLLOGLOTTIS, *Salisb. Gen. Pl. Fragm.* 15 (*E. folioliferum*, Andr. *Bot. Rep.* t. 521) et TRAUMAZA, *Salisb. l. c.* (*E. paradoxum*, Ker, *Ornithogalum paradoxum*, Jacq. *Coll. Suppl.* 81, t. 1), cum *E. Bowieano* et *E. prolifero*, Baker (*E. folioliferum*, *Bot. Reg.* t. 795) species sunt insignes, folio solitario a scapo aphylo distincto, supra ad basin laminae processibus linearibus integris v. varie nunc longe ramosis instructo. De horum processuum (an inflorescentia abortiva?) natura ulterius inquirendum est. Specimina nobis desunt, et species ad icones plantarum culturarum definitae sunt forte varietates v. formae proliferae specierum sub aliis nominibus descriptorum.

62. *Eremurus*, *Bieb. Cent. Pl. Ross.* t. 61, ex eod. *Fl. Taur. Cauc.* iii. 269. (*Ammolirion*, Kar. et Kir. in *Bull. Soc. Imp. Nat. Mosc.* 1842, 515. *Henningia*, Kar. et Kir. *l. c.* 516.)—Perianthium campanulatum v. explanatum, marcescens, persistens v. demum deciduum; segmenta distincta v. vix basi brevissime connata, a basi patentia, 1-nervia v. basi 3-5-nervia. Stamina 6, hypogyna, perianthio demum saepius longiora, filamentis filiformibus; antherae oblongae, suberectae, juxta basin dorsifixae, filamento in foveolam intruso, demum saepe recurvae v. revolutae, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare; stylus filiformis, stigmate parvo; ovula in loculis 4-6, rarius 2 collateralialia, lateraliter affixa, amphitropa. Capsula subglobosa, membranacea, transverse rugosa v. laevis, loculicida dehiscens. Semina in quoque loculo 1-4, acute 3-quetra, testa crassiuscula interdum ad angulos in alas angustas producta; embryo albumine cartilagineo parum brevior.—Rhizoma breve, vaginis foliorum vetustorum membranaceis v. fibrosis saepe coronatum, fibris radicalibus fasciculatis tenuibus v. carnosis. Folia radicalia, saepe numerosa, longe linearia. Scapus elatus, nunc altissimus, simplex, aphyllus. Racemus saepius longe floribundus. Flores albi v. flavi, ad axillas bractearum solitarii, pedicellis apice v. sub apice articulatis. Bracteae saepius scariosae.

Species ad 18, Orientis Asiae Rossicae et Indiae orientalis incolae. *Baker in Journ. Linn. Soc.* xv. 278; xix. t. 27. *Regel in Act. Hort. Petrop.* ii. 422; *Fl. Turkest.* t. 1 ad 3; *Gartenfl.* t. 769, 997, 1048. *Stev. in Nouv. Mem. Soc. Imp. Nat. Mosc.* ix. t. 6 ad 8. *Jaub. et Spach. Ill. Pl. Or.* t. 102 (*Asphodelus*). *Bot. Mag.* t. 4870. *Sweet, Brit. Fl. Gard.* t. 188.

Genus a Bakero in sectiones 3 dividitur ad staminum longitudinem, character tamen ut demonstrat Regel valde incertus est et in eadem specie variat, et alii characteres quibus Karelin et Kirilov genera sua distinxerunt ex observatione Regelii non confirmantur. Hic auctor sectionem tamen *Henningiam* admisit ab *Eremuris* typicis parum distinctam, segmentis exterioribus perianthii basi 3-5 nerviis.

SELONIA, *Regel, Enum. Pl. Semenov.* 134, t. 6, est *E. soogdiana*, Reg., quam ab *Eremuro* (*Henningia*) distinguere nequimus nisi segmentis exterioribus perianthii quam interiora firmiter nec vere calycinis, et in var.  $\beta$ . *Reg.* differentia vix distinctior est quam in nonnullis aliis *Henningiis*.

63. *Acrospira*, *Welw.*; *Baker in Trans. Linn. Soc. Bot.* i. 255, t. 34.—Perianthium marcescens, non tortum; segmenta distincta, angusta, subaequalia, medio 3-nervia (sub anthesi patentia?). Stamina 6, hypogyna, filamentis brevibus latis apice acutis; antherae magnae, lineares, erectae, inter lobos basales breves affixae, apice demum saepius tortae v. recurvae, loculis introrsum dehiscentibus. Ovarium sessile, subglobosum, 3-loculare; stylus filiformis, stigmate parvo; ovula in loculis  $\infty$  (ultra 12). Fructus . . .—Rhizoma (a nobis non visum) obliquum, crassum, fibris multis gracilibus praeditum. Caulis simplex,  $\infty$ -pedalis. Folia (radicalia? v. ad basin caulis?) praelonga, angusta, rigidule  $\infty$ -nervia, in vaginam longam contracta, superiora breviora, dissita, erecta, subdisticha. Racemus

simplex v. basi breviter ramosus, floribus sub quaque bractea pluribus fasciculatis. Bracteæ parvæ, hyalinæ.

Species 1, *Angolensis*, ad Pungo Andongo frequens, *Welwitsch*.

64. *Anthericum*, Linn. Gen. n. 422, pro parte. (Phalangium, Juss. Gen. Pl. 52.)—Perianthium marcescens, non v. leviter tortum, persistens v. demum a fructu deciduum; segmenta distincta, rotato-potentia, subæqualia, 3–5-nervia. Stamina 6, hypogyna v. vix ima basi segmentis brevissime adnata, perianthio breviora, filamentis filiformibus; antheræ lineares, erectæ, inter lobos basales dorsifixæ, filamento sæpius in foveolam plus minus distinctam intruso, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare; stylus filiformis, stigmate parvo; ovula in loculis  $\infty$  (4–8), lateraliter affixa. Capsula obtusa, globosa v. 3-dyma, vix 3-loba, loculicide dehiscens. Semina interdum in loculis abortu 1–2, angulata v. angulato-compressa, testa nigra opaca crassiuscula; embryo albumine carnoso fere cartilagineo paullo brevior, curvulus.—Rhizoma breve nunc brevissimum, fibris radicalibus fasciculatis sæpe carnosus, vaginis foliorum emarcidorum interdum fibrosis coronatum. Folia radicalia, linearia, quaquaversa. Scapus aphyllus, sæpius elatus, simplex v. ramosus (excepto *Holopodio*). Flores tenuiter pedicellati, secus ramos v. scapum laxè racemosi, sub quaque bractea solitarii v. fasciculati. Bracteæ lineares, scariosæ.

Species ad 50, Europæ, Africæ tropicæ et extratropicæ et Americæ tam borealis quam australis incolæ. Baker in Journ. Linn. Soc. xv. 290, excl. sect. 1 ad 4, et in Trans. Linn. Soc. Bot. i. 256.

Genus in sectiones 3 dividitur, a nonnullis pro generibus propriis habitas, etsi 2 priores characteres nimis artificiali separantur; tertia facile pro genere proprio ad *Anthericeas* anomalas amandanda.

1. *Phalangium*. Inflorescentia normalis. Filamenta glabra. Red. Lül. t. 287. Jacq. Fl. Austr. t. 161; Hort. Vind. t. 83; Ic. Rar. t. 411. Reichb. Ic. Fl. Germ. t. 511, 512. Nees, Gen. Fl. Germ. Monocot. ii. n. 54. Boiss. Voy. Hesp. t. 172. Grant in Trans. Linn. Soc. xxix. t. 103 B. Ruiz et Pav. Fl. Per. et Chil. t. 301. H. B. et K. Nov. Gen. et Sp. t. 676. Bot. Mag. t. 914, 1055, 1635, 3610. Lodd. Bot. Cab. t. 1680. *ANTHERICI* sect. 5 et 6, Baker. *PHALANGIUM*, Kunth, Enum. Pl. iv. 593. *PRESTULARIA* et *LILIAGO*, Salisb. Gen. Pl. Fragm. 70.

2. *Trachyandra*. Inflorescentia normalis. Filamenta scabra. Jacq. Ic. Rar. t. 409, 410, 412, 413; Hort. Schænbr. t. 85, 413, 414. Bot. Mag. t. 1040, 1044, 1124. Bot. Reg. t. 877. *ANTHERICI* sect. 7, 8, 9, Baker. *TRACHYANDRA*, Kunth, Enum. Pl. iv. 573. *HESPERANTHES*, S. Wats. in Proc. Amer. Acad. xiv. 241. *DILANTHES*, Salisb. Gen. Pl. Fragm. 70.

Sectiones Bakerianæ *Trachyandra* et *Dilanthès* ex Africa, et *Hesperanthès* ex America, characteribus valde incertis separantur. Articulatio pedicelli in Africanis variabilis est, et nervi segmentorum perianthii plus minus distantes v. approximati. *Dilanthès*, Salisb., est *A. revolutum*, Linn., a Bakero in sect. *Trachyandra* nec in *Dilanthè* collocatum.

3. ? *Holopodium*, Baker. Plantæ humiles, cæspitosæ, scapo cum rhachi racemi brevissimo inter foliorum vaginas recondito, pedicellis longis exsertis. Species 2 v. 3 Abyssinicæ, quibus etiam referimus *Chlorophytum tetraphyllum*, Baker.

65. *Chlorophytum*, Ker in Bot. Mag. t. 1071. (Hartwegia, Nees in Nov. Act. Nat. Cur. xv. ii. 372. Schidospermum, Griseb. in Pl. Lechl. Exs. n. 2382. Asphodelopsis, Steud. in Hohen. Pl. Ind. Or. Exs. n. 1311.)—Perianthium marcescens, non tortum, persistens v. demum a fructu deciduum; segmenta distincta, rotato-potentia, 3–7-nervia. Stamina 6, hypogyna v. seriei interioris basi segmentis brevissime adnata, perianthio breviora, filamentis filiformibus supra medium sæpius parum dilatatis; antheræ oblongæ v. lineares, erectæ, basi v. inter lobos basales dorso affixæ, filamento in foveolam dorsalem breviter intruso, loculis introrsum dehiscentibus. Ovarium sessile, 3-quetrum, 3-loculare; stylus filiformis, stigmate parvo; ovula in loculis 4– $\infty$ . Capsula coriacea, truncata, acutangula, sæpius 3-loba, loculicide dehiscens. Semina lata, sæpius compressa, rugosa nec angulata, testa nigra; embryo albumine duriusculo paullo brevior, sæpius incurvus.—Rhizoma breve, durum, fibris radicalibus fasciculatis sæpe carnosio-incrassatis v. tuberiferis. Folia radicalia, conferta, sæpe lata, interdum longe petiolata, rarius loriformia v. linearia. Scapus aphyllus, brevis v. elatus, simplex v. ramosus. Flores pedicellati, secus ramos

dense v. laxe racemosi, sub quaque bractea sæpius fasciculati. Bracteæ nunc parvæ scariosæ, nunc conspicuæ membranaceæ.

Species ad 40, Asiæ, Africæ tropicæ et australis et Americæ incolæ. *Kunth, Enum. Pl. iv. 602. Baker in Journ. Linn. Soc. xv. 321; et in Trans. Linn. Soc. Bot. i. 259. Red. Lil. t. 191 (Phalangium). Roxb. Corom. Pl. t. 138 (Anthericum). Wight, Ic. t. 2037 ad 2039 (Phalangium). Kotschy et Peyr. Pl. Tinn. t. 23 B. Grant in Trans. Linn. Soc. xxix. t. 104. Bot. Reg. t. 813, 998. Saund. Ref. Bot. t. 216, 333, 352.*

Genus vix ac ne vix ab *Antherico* differt capsulis acutangulis et sæpius filamentis plus minus medium versus dilatatis.

66. *Dasystachys*, *Baker in Trans. Linn. Soc. Bot. i. 255, t. 35.*—Perianthium persistens, non tortum; segmenta distincta, angusta, subæqualia, obscure 1-nervia. Stamina 6, hypogyna, perianthio subæqualia v. longiora, filamentis leviter complanatis; antheræ oblongo-lineares, erectæ, dorso inter lobos basales affixæ, filamento in foveolam parvam intruso, demum recurvæ, loculis introrsum dehiscentibus. Ovarium sessile, breve, late 3-lobum, 3-loculare; stylus filiformis, elongatus, stigmatē parvo capitato; ovula in loculis  $\infty$  (4–8), conferta. Capsula late 3-loba, loculicide dehiscens. Semina (ubi nota) in loculis abortu solitaria, orbiculata, valde compressa, lateraliter affixa, testa nigra laxiuscula; embryo in albumine carnosio brevis, sed forte in semine examinato imperfecte maturus.—Rhizoma breve, fere corniforme, fibris radicalibus crassiusculis, v. longius horizontale fibris paucioribus. Folia radicalia, longe linearia loriformia, v. paullo latiora rigida falcataque. Scapus aphyllus, elatus, simplex v. parce ramosus. Flores parvuli, in spica longa subsessiles, quaquaversi, sub quaque bractea fasciculati. Bracteæ scariosæ v. membranaceæ, interdum aciculari-acuminatæ.

Species 7 v. 8, Africæ tropicæ incolæ. Præter species 4 Welwitschianas a Bakero l. c. descriptas, huc pertinent: *D. Grantii*, Benth. (*Cesia africana*, Baker in Trans. Linn. Soc. xxix. 160, t. 103, quoad specimen Grantianum); *D. drimiopsis*, Baker in herb. Kew. (*Anthericum drimiopsis*, Baker in Journ. Linn. Soc. xv. 301, et *Cesia africana*, Baker l. c. 361, quoad specimen Kirkianum), et species ut videtur nova, iis affinis, *Schweinfurth*, n. 1504, et 3752.

Genus *Chlorophyto* valde affine.

67. *Meheandia*, *Ortega, Nov. Pl. Dec. 90, 135, t. 18.*—Perianthium marcescens, non tortum; segmenta a basi distincta, rotato-patentia, æqualia v. seriei interioris latiora, 3–5-nervia. Stamina 6, hypogyna, perianthio breviora, filamentis breviter filiformibus erectis; antheræ lineares, basifixæ, filamento sublongiores, circa stylum in cylindrum coherentes, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare; stylus filiformis, ex antherarum cylindro breviter exsertus, stigmatē parvo capitato; ovula in loculis numerosa, lateraliter affixa. Capsula ovoidea v. longiuscule oblonga, 3-quetra, loculicide dehiscens. Semina numerosa, angulato-compressa, testa nigra appressa; embryo albumine laxo carnosio triente v. subdimidio brevior.—Rhizoma breve, fibris radicalibus fasciculatis crassiusculis interdum fusiformibus. Folia radicalia, longa, anguste v. late linearia, disticha, membranacea, basi in vaginam longam angustata. Scapus tenuis, elatus, parce ramosus, aphyllus. Flores secus ramos dissite fasciculati, tenuiter pedicellati, albi v. flavescentes. Bracteæ sub fasciculis parvæ, scariosæ.

Species editæ 3, a Bakero in unam junctæ, Americæ tropicæ a Guiana usque ad Mexicum incolæ. *Kunth, Enum. Pl. iv. 627. Baker in Journ. Linn. Soc. xv. 288. Red. Lil. t. 313. Cav. Ic. t. 241 (Anthericum). Link et Otto, Ic. Pl. Rar. t. 3 (Conanthera).*

68. *Bottionea*, *Colla in Mem. Acad. Torin. xxxvii. 43, t. 1. (Trichopetalum, Lindl. Bot. Reg. t. 1535).*—Perianthium marcescens, persistens, non tortum; segmenta distincta, rotato-patentia,  $\infty$ -nervia, exteriora integra, interiora paullo angustiora, marginibus dense ciliato-fimbriatis. Stamina 6, hypogyna, perianthio breviora, filamentis filiformibus; antheræ oblongæ, basi alte 2-fidæ, inter lobos dorsifixæ, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare; stylus crassiuscule filiformis, stigmatē breviter expanso late

3-lobo ; ovula in loculis numerosa. Capsula oblonga v. fere linearis, 3-quetra, obtusa, loculicide dehiscens. Semina  $\infty$ , orbiculata, valde compressa, testa nigra appressa ; embryo in albumine carnosio longus, valde incurvus.—Rhizoma breve, fibris radicalibus fasciculatis carnosio v. tuberoso. Caulis basi foliatus, erectus, simplex v. parce ramosus. Folia linearia, inferiora conferta, superiora pauca breviter distantia, floralia sub ramis inflorescentiæ multo minora, in bracteas scariosas sub florum fasciculis abeuntia. Racemi laxi, floribus sæpius fasciculatis, pedicellis tenuibus.

Species 1, Chilensis. *Baker in Journ. Linn. Soc.* xv. 333. *Kunth, Enum. Pl.* iv. 601 (*Trichopetalum*). *Bot. Mag.* t. 3084 (*Anthericum*). *Ruiz et Pav. Fl. Per. et Chil.* t. 300 b (*Anthericum*).

69. **Thysanotus**, *B. Br. Prod.* 282. (*Chlamysporum*, *Salisb. Parad. Lond.* t. 103.)—Perianthium marcescens, persistens, non tortum ; segmenta distincta, patentia, medio opaca, 3-nervia, exteriora anguste marginata integra, interiora margine lato colorata pulchre fimbriato-ciliata. Stamina 6, hypogyna, perianthio breviora, v. 3 seriei interioris ima basi segmentis affixa v. interdum abortiva, filamentis filiformibus ; antheræ lineares, æquales v. seriei interioris exterioribus longiores, basifixæ, loculis introrsum dehiscentibus apice in unum confluentibus. Ovarium sessile v. breviter stipitatum, 3-loculare ; stylus filiformis, stigmate parvo v. fimbriato-dilatato ; ovula in loculis 2, superposita. Capsula globosa v. ovoidea, obtusa, perianthio emarcido inclusa v. stipata, loculicide dehiscens. Semina in loculis 1 v. 2, subglobosa, strophiolata, testa nigra crassiuscula ; embryo (ubi notus) albumine carnosio dimidio brevior, incurvus.—Rhizoma nunc brevissimum, fibris radicalibus fasciculatis haud raro in tubera incrassatis, nunc crassum, horizontale, durum, fibris radicalibus tenuibus. Folia radicalia, graminea, plana v. teretia. Scapi aphylli, nunc erecti simplices v. apice paniculati, nunc ramosissimi v. in una specie volubiles. Flores nunc dense fasciculati, fasciculo unico terminali v. pauci ad apicem scapi, nunc varie paniculati fasciculati v. fere solitarii, pedicellati. Bracteæ sub fasciculis parvæ, scariosæ, sub pedicellis minutæ.

Species 19, omnes Australianæ, quarum una etiam in insulis Philippinis et China australi obvia. *Benth. Fl. Austral.* vii. 36 (perianthio errore torto dicto). *Labill. Pl. Nov. Holl.* t. 109, 110 (*Ornithogalum*). *Bot. Mag.* t. 2351. *Bot. Reg.* t. 655, 656 ; 1838, t. 8, 50 ; 1840, t. 4. *Lodd. Bot. Cab.* t. 1986. *Maund, Botanist.* t. 187. *Fl. des Serres*, t. 1911.

ISANDRA, *Salisb. Gen. Pl. Fragm.* 67, includit species antheris inter se subæqualibus. THYSANELLA, *Salisb. l. c.*, includit species 3-andras.

70. **Arthropodium**, *R. Br. Prod.* 276.—Perianthium marcescens, persistens, non tortum ; segmenta distincta, 3-nervia, patentia, subæqualia v. interiora sæpius latiora, interdum margine crispula, rarius brevissime fimbriata. Stamina 6, hypogyna v. interiora ima basi segmentorum affixa, perianthio breviora, filamentis apice v. fere a basi dense piloso-barbatis v. papilloso-appendiculatis ; antheræ lineares, erectæ, basifixæ, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare ; stylus filiformis, stigmate parvo ; ovula in loculis  $\infty$  (4–8). Capsula subglobosa, loculicide dehiscens. Semina sæpius pauca, 3-quetra, v. plura angulato-compressa, testa nigra lævi v. minute granulata nec nitente ; embryo in albumine carnosio v. fere cartilagineo longus, valde curvus.—Rhizoma breve, fibris radicalibus fasciculatis haud raro carnosio-incrassatis v. tuberiferis. Folia radicalia v. ad basin caulis conferta, anguste v. late linearia, sub ramis inferioribus paniculæ parva. Scapus v. pedunculus terminalis, simplex v. ramosus. Flores sæcis ramos dissite fasciculati, v. ad bracteas solitarii, albi v. purpurascens, pedicellis tenuibus supra medium articulatis, per anthesin sæpius recurvis. Bracteæ parvæ, nunc minutæ, inferiores rarius majores foliaceæ. Capsulæ ut in affinis erectæ.

Species notæ 8, quarum 1 Novo-Caledonica, 2 Novo-Zelandicæ, cæteræ Australianæ. *Baker in Journ. Linn. Soc.* xv. 351. *Hook. f. Handb. N. Zæl. Fl.* 285. *Raoul, Choix Pl. Nouv. Zel.* t. 6. *Benth. Fl. Austral.* vii. 65. *Endl. Iconogr.* t. 28. *Red. Lal.* t. 58, 360. *Andr. Bot. Rep.* t. 395 *Bot. Mag.* t. 1421, 2350, 6326. *Bot. Reg.* t. 709, 866.

71. *Dichopogon*, Kunth, *Enum. Pl.* iv. 622.—Perianthium marcescens, persistens, non tortum; segmenta distincta, 5–7-nervia, patentia, æquilonga, interiora latiora, marginibus sæpe scariosis crispulis. Stamina 6, hypogyna, perianthio breviora, filamentis brevibus leviter complanatis glabris; antheræ lineares, erectæ, basifixæ, basi utrinque in appendicem brevem papillosam in filamentum deflexum auctæ, loculis introrsum dehiscentibus. Ovarium sessile, obtusum, 3-loculare; stylus filiformis, stigmatē parvo capitato; ovula in loculis  $\infty$  (6–12). Capsula ovoidea v. globosa, obtusa, leviter 3-sulca, loculicide dehiscens.—Semina  $\infty$ , ovoidea v. angulata, testa nigra granulosa v. lævi nec nitente; embryo in albumine duriusculo longus, valde curvatus.—Rhizoma breve, fibris radicalibus fasciculatis sæpe tuberiferis. Folia radicalia, anguste linearia, basi rarius vaginis vetustis fibrosis stipata. Scapus sæpius ramosus, aphyllus v. bractea foliacea infra inflorescentiam instructus. Flores secus ramos laxè racemosi, ad bracteas scariosas solitarii v. fasciculati, pedicellis gracilibus supra medium sæpius articulatis.

Species 2, Australianæ. *Benth. Fl. Austral.* vii. 58. *Hook. f. Fl. Tasm.* t. 131 (*Arthropodium*).

STONE, *Salish. Gen. Pl. Fragm.* 67, genus propositum fuit ad characterem Brownianum *Arthropodii fimbriati*. Specimina olim in herb. Br. frustra quæсивimus. Quæ auper ex eodem herbario sub hoc nomine distributa ad *Dichopogonem Sieberianum*, Kunth, pertinere videntur, sed vix cum characterē Browniano *A. fimbriati* conveniunt.

72. *Pastithea*, Don in *Edinb. N. Phil. Journ.* xiii. 236.—Perianthium marcescens, diu persistens, spiraliter tortum, demum a fructu deciduum; segmenta ima basi cum toro incrassato continua, cæterum libera, anguste oblonga, subæqualia, 3–5-nervia, patentia. Stamina 6, toro incrassato ad basin segmentorum affixa, perianthio paullo breviora, filamentis breviter filiformibus; antheræ oblongo-lineares, inter lobos basales affixæ, erectæ, demum recurvæ v. revolutæ, loculis introrsum dehiscentibus. Ovarium toro crasso leviter concavo lata basi impositum, 3-loculare; stylus filiformis, elongatus, superne leviter incrassatus, stigmatē (an semper ?) in lobos 3 breviter subulatos diviso; ovula in loculis 4. Capsula perianthio demum delapso denudata, in toro cupulato sessilis, brevis, 3-dyma, loculicide dehiscens. Semina (adhuc non perfecte matura) compressiuscula, testa nigra laxa; albumen carnosum; embryo. . . —Caulis e rhizomate brevi erectus, basi foliatus, superne paniculatus. Folia inferiora graminea, vaginis distiche imbricatis, superiora perpauca breviter erecta. Panicula laxè pyramidata v. thyrsioidea, ramis primariis apice laxè cymiferis, pedicellis longiusculis tenuibus. Flores cærulei. Bracteæ minimæ v. 0.

Species 1, Chilensis. *Kunth, Enum. Pl.* iv. 634. *Baker in Journ. Linn. Soc.* xv. 320. *Ruiz et Pav. Fl. Per. et Chil.* t. 299, f. b (*Anthericum*).

73. *Chamaescilla*, F. Muell. *Fragm. Phyt. Austral.* vii. 68.—Perianthium marcescens, post anthesin spiraliter tortum, demum a fructu deciduum; segmenta subæqualia, oblonga, stellato-patentia, 3-nervia. Stamina 6, hypogyna, segmentis breviora, filamentis filiformibus; antheræ parvæ, juxta basin dorsifixæ, primum erectæ, mox recurvæ, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare; stylus filiformis, stigmatē parvo capitato; ovula in loculis  $\infty$ . Capsula 3-loba, lobis a latere plano-compressis margine acutis, loculicide dehiscens. Semina in loculis pauca, compressa, margine acuto, stropholiolo parvo v. 0, testa crustacea nigra nitida; embryo albumine carnosus 2–4-plo brevior.—Rhizoma breve, fibris radicalibus sæpe tuberoso-incrassatis. Folia radicalia, linearia v. latiuscule graminea, membranacea, basi vaginis vetustis fibrosis stipata. Scapus aphyllus, infra inflorescentiam simplex. Panicula v. cyma laxa, corymbiformis, bracteis parvis membranaceis. Flores cærulei, ad bracteas solitarii, pedicellati.

Species 2, Australianæ. *Benth. Fl. Austral.* vii. 48. *Hook. f. Fl. Tasm.* t. 132 (*Cesia*).

74. *Hodgsoniella*, F. Muell. *Fragm. Phyt. Austral.* ii. 176. (*Hodgsonia*, F. Muell. *ibid.* ii. 95, non *Hook. f.*)—Perianthium marcescens, diu persistens, spiraliter tortum, demum a fructu deciduum; segmenta linearia, basi brevissime connata, 3–5-nervia, æqualia v. serie

interioris paullo minora. Stamina perfecta 3, basi segmentorum interiorum affixa iisque breviora, filamentis filiformibus; antheræ lineares, basifixæ, erectæ, circa stylum in cylindrum coherentes, connectivis ultra loculos in tubum productis, loculis introrsum dehiscentibus; staminodia 3, filamentis brevibus, antheris lanceolatis castratis. Ovarium sessile, breve, 3-loculare; stylus tenuiter filiformis, e tubo antherarum breviter exsertus, stigmate parvo; ovula in loculis 2, superposita, anatropa. Capsula parva, subgloboso-3-quetra, pericarpio crassiusculo, loculicide dehiscens. Semina in loculis 1 v. 2, ovoidea, strophiolata, testa nigra lævi; albumen carnosum, embryo in speciminibus nostris nondum perfecto.—Rhizoma brevissimum, fibris radicalibus tenuibus, vaginis nonnullis foliorum detritorum fibrosis coronatum. Folia radicalia perpauca, linearia, acuminata. Scapus aphyllus, simplex, junciformis, squamis paucis distantibus instructus. Racemus simplex, floribundus, pedicellis breviusculis filiformibus. Flores parvuli, cærulei. Bractææ angustæ, scariosæ.

Species 1, Australiæ austro-occidentalis incola. *Benth. Fl. Austral.* vii. 45.

75. *Cæsia*, R. Br. *Prod.* 277.—Perianthium marcescens, diu persistens, spiraliter tortum, demum a fructu deciduum; segmenta basi brevissime connata, 3-nervia, æqualia v. seriei interioris latius marginata, patentia. Stamina 6, basi segmentorum affixa iisque breviora, filamentis filiformibus; antheræ parvæ, oblongæ, juxta basin dorsifixæ, primum erectæ, mox recurvæ v. revolutæ, loculis introrsum dehiscentibus. Ovarium sessile, breve, 3-loculare; stylus filiformis v. superne leviter clavatus, stigmate parvo; ovula in loculis 2, lateraliter affixa, plus minus superposita, anatropa. Capsula parva, depressoglobosa 3-dyma v. fere 3-loba, loculicide dehiscens. Semina in loculis sæpius solitaria, globosa, strophiolata, testa nigra crustacea tuberculoso-granulata; embryo albumine carnosio brevior.—Rhizoma breve, fibris radicalibus fasciculatis haud raro tuberoso-incras-satis. Caulis erectus, sæpius ramosus. Folia ad basin caulis sæpeque sub ramis inferioribus conferta, subdisticha, linearia, sub ramis paniculæ solitaria, minora, in bractæas abeuntia. Inflorescentia laxè paniculato-ramosa, rarius simplex. Flores cærulei v. albi, secus ramos paniculæ dissite fasciculati, pedicellis filiformibus. Bractææ minimæ, squamiformes.

Species ad 9, Australiæ et Africæ australis incolæ. *Kunth, Enum. Pl.* iv. 608. *Benth. Fl. Austral.* vii. 46. *Baker in Journ. Linn. Soc.* xv. 357, quoad sect. *Euceciam*. Huc etiam pertinent *Anthericum contortum*, Linn., affinesque nonnullæ Capenses, a Kunthio bene sub *Cæsia* recensitæ, a Bakero cum *Bulbinella Burkei* ad subgenus *Streptantheram Antherici* relatæ. *Cæsia africana*, Baker, ex Africa tropica, est *Dasytachys Grantii*, Benth.

76. *Agrostocrinum*, F. Muell. *Fragm. Phyt. Austral.* ii. 94.—Perianthium ima basi breviter turbinato-campanulatum persistensque; lobi tubo multo longiores, æquales, stellato-patentes, 5-nerves, post anthesin spiraliter torti, demum a fructu decidui. Stamina 6, hypogyna, perianthio breviora, filamentis glabris vix complanatis; antheræ lineares, erectæ, basifixæ, loculis poro terminali dehiscentibus. Ovarium intra tubum perianthii sessile, 3-loculare; stylus filiformis, stigmate parvo; ovula in loculis 2, collateralia. Capsula brevis, depressa, 3-dyma, perianthii tubo stipata, loculicide dehiscens. Semina in loculis sæpius solitaria, obovoidea v. globosa, strophiole parvo, testa crustacea nitida; embryo albumine carnosio dimidio saltem brevior.—Caulis e rhizomate brevi lignoso erecti, infra inflorescentiam simplices v. parce ramosi. Folia pauca, longa, rigide graminea, vaginis longis subancipitibus. Panicula v. cyma laxissima, parce ramosa. Flores longe pedicellati, ad apices ramorum solitarii v. laxè subfasciculati, cærulei.

Species 1, Australiæ austro-occidentalis incola. *Benth. Fl. Austral.* vii. 36.

77. *Corynotheca*, F. Muell. *Fragm. Phyt. Austral.* vii. 68.—Perianthium marcescens, post anthesin spiraliter tortum, demum a fructu deciduum; segmenta subæqualia v. interiora latiora, stellato-patentia. Stamina 6, ima basi segmentorum affixa iisque breviora, seriei interioris cæteris paullo longiora, filamentis filiformibus; antheræ parvæ, juxta

basin dorsifixæ, primum erectæ, mox recurvæ, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare; stylus filiformis, stigmate parvo; ovula in loculis 2 v. rarius solitaria. Fructus abortu 1-spermus, indehiscens, nuculiformis. Semen obovoideum, strophiolatum, testa crustacea nigra nitida minute granulata v. lævi; embryo albuminis carnosius dimidium æquans v. superans.—Folia radicalia, angusta, pauca, mox evanida. Caules aphylli, tenues at rigidi, sæpius intricato- v. divaricato-ramosissimi, paniculam formans nunc latam nunc anguste thyrsoidæam, ramulis interdum spinescentibus. Flores minuti, secus ramulos sparsi remoti, ad axillas bractearum minimarum solitarii v. rarius gemini.

Species 3, Australianæ. *Benth. Fl. Austral.* vii. 49.

78. *Herpolirion*, *Hook. f. Fl. Nov. Zel.* i. 258; *Fl. Tasm.* ii. 54, t. 132 B.—Perianthium marcescens, persistens; segmenta distincta, subæqualia, linearia, basi erecta, dein stellato-patentia, 5-nervia. Stamina basi segmentorum affixa iisque breviora, filamentis filiformibus; antheræ lineares, erectæ, basifixæ, post anthesin tortæ, loculis introrsum dehiscentibus. Ovarium lata basi sessile, subglobosum, 3-loculare; stylus filiformis, stigmate parvo; ovula in loculis  $\infty$  (ad 6), medio v. infra medium lateraliter affixa, fere anatropa. Fructus capsularis videtur, pericarpio crassiusculo loculicide dehiscente, maturus tamen nobis deest. Semina immatura ovoideo-oblonga, nec angulata.—Herba nana, cæspitosa, rhizomate tenui repente ramoso. Folia in caule brevissimo conferta, disticha, carinata, basi equantia. Flos unicus, terminalis, intra folia 2 summa 5–7-nervia brevissime pedicellatus, cærulescens v. albidus.

Species 1, montium Novæ Zelandiæ, Tasmaniæ et Victoriæ incola. *Benth. Fl. Austral.* vii. 60.

79. *Manolirion*, *Benth. gen. nov.*—Perianthium marcescens, diu persistens, post anthesin spiraliter tortum; segmenta distincta, lanceolato-linearia, subæqualia, tenuiter 3-nervia. Stamina 6, hypogyna v. seriei interioris ima basi segmentis adnata iisque breviora, filamentis complanatis; antheræ breviter oblongo-ovoideæ, dorsifixæ, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare; stylus filiformis, stigmate parvo; ovula in loculis 2, collateralia, fere anatropa. Capsula (a nobis non visa) subglobosa, leviter 3-loba, loculicide dehiscens.—Herba nana, cæspitosa, rhizomate tenui repente ramoso. Folia in caule brevissimo conferta, anguste linearia, quaquaversa. Scapus intra folia brevissimus, 1–3-florus. Pedicelli breves. Perianthium pallide cærulescens.

Species 1, *N. capense*, in summo monte Winterhok Africæ australis a H. Boluso detecta, et in Journ. Linn. Soc. xviii. 395 sub *Herpolirio* edita. Genus habitu quidem *Herpolirio* subsimile, sed foliis minime distichis, perianthio, staminibus, et ovulorum numero bene distinctum videtur.

80. *Leucoocrinum*, *Nutt.*; *A. Gray in Ann. Lyc. N. York*, iv. 110.—Perianthium hypocrateriforme, marcescens, persistens, tubo longissimo tenui vix apice ampliato; lobi subæquales, angusti, patentes. Stamina 6, sub fauce affixa, lobis breviora, filamentis filiformibus; antheræ lineares, erectæ, basifixæ, mox recurvæ v. tortæ, loculis introrsum dehiscentibus. Ovarium ovoideo-globosum, 3-loculare; stylus filiformis, apice leviter incrassatus, stigmate parvo; ovula in loculis  $\infty$  (ad 12), 2-seriata. Capsula ovoideo-globosa, obtusa, 3-sulca, loculicide dehiscens. Semina  $\infty$ , nigra, angulato-compressa, testa crassiuscule membranacea, laxa; embryo linearis, incurvus, albumine carnosius vix brevior.—Rhizoma breviter descendens, fibris radicalibus fasciculatis carnosulis. Folia radicalia, linearia, breviter descendens, exteriora pauca basi late vaginata, interiora gradatim minora, in bractæas lineares basi scariosas abeuntia. Flores ad axillas bractearum radicalium breviter et inæqualiter pedicellati. Capsulæ erectæ, coriaces, inter folia breviter epigææ.

Species 1, boreali-Americana. *S. Wats. Bot.* 40 *Parall.* 349, t. 36.

Genus ob flores fere hypogæos perianthique tubum longissimum *Colchicis* approximatum, nostro sensu *Anthericis* propinquius rhizomate antheris seminibusque.

81. *Dianella*, *Lam. Dict.* ii. 276. (*Rhuacophila*, *Blume, Enum. Pl. Jan.* 13.)—Perianthium marcescens, non tortum, demum sæpius deciduum; segmenta distincta,

subæqualia, sub anthesi patentia, oblonga, 3-7-nervia. Stamina 6, perianthio breviora, hypogyna v. sæpius 3 interiora ima basi segmentorum affixa, filamentis apice v. medio v. fere a basi carnosio-incrassatis; antheræ oblongo-lineares, erectæ v. demum recurvæ v. replicatæ, basi inter lobos basales affixæ, loculis poris terminalibus sæpe in rimas introrsum continuas dehiscentibus. Ovarium sessile v. brevissime stipitatum, obtusum; stylus filiformis, stigmatē parvo; ovula in loculis  $\infty$  (4-8.) Fructus succulentus, globoso-3-dymus v. ovoideo-oblongus, indehiscens (v. rarius demum breviter dehiscens?). Semina in loculis solitaria v. pauca, ovoidea v. compressiuscula, testa nigra crustaceo-nitida; embryo linearis, rectus v. curvulus, albumine carnosio parum v. dimidio brevior.—Rhizoma sæpe ramosum v. stoloniferum, caule erecto rigido cum pedunculo sæpe pluripedali. Folia prope basin caulis conferta v. secus partem inferiorem approximata, disticha, vaginis equitantibus, lamina longe lineari, in parte superiore caulis pauca, vaginis brevibus, laminis parvis, radicalia pauca v. ad vaginas reducta. Flores cærulei, pedicellati, nutantes, laxè cymosi, cymis in panicula terminali ampla laxa dispositis, pedicellis sub flore articulatis. Bracteæ parvæ scariosæ v. 0.

Species 7 v. 8, a nonnullis usque ad 12 estimatæ, ins Mascarensium, Australiæ, Novæ Zelandiæ et ins. maris Pacifici incolæ, quarum una etiam in Asia tropica late dispersa. *Baker in Journ. Linn. Soc.* xiv. 574. *Benth. Fl. Austral.* vii. 13. *Hook. f. Handb. N. Zeal. Fl.* 283; *Fl. Tasm.* t. 133. *Jacq. Hort. Schænbr.* t. 94. *Red. Lil.* t. 1, 79. *Lindb. in Act. Soc. Sc. Fenn.* x. t. 6. *Bot. Mag. t.* 505, 1404, 5551. *Bot. Reg. t.* 734, 751, 1120. *Lodd. Bot. Cab. t.* 1136.

Genus ob fructum baccatum sæpius ad *Asparageas* relatum, sed habitus cæterique characteres affinitatem arctam cum *Excremide* et *Stypandra* indicant.

82. *Excremis*, Willd. *MS. ex Schult. Syst.* vii. 354 (*Excremis*).—Perianthium persistens, non tortum; segmenta distincta, subæqualia, latiuscule oblonga, 5-nervia, patentia. Stamina 6, hypogyna, perianthio breviora, filamentis ima basi in annulum carnosulum connatis supra medium incrassatis cæterum filiformibus; antheræ oblongo-lineares, erectæ, basifixæ, loculis subintrorsum dehiscentibus. Ovarium subsessile, oblongum, obtusum, 3-loculare; stylus crassiuscule filiformis, stigmatē parvo; ovula in loculis sat numerosa. Capsula immatura carnosula, demum oblonga, obtusa, 3-sulca, exocarpio loculicide 3-valvi, endocarpio septicide dehiscente, valvis 3 complicatis exterioribus alternis. Semina  $\infty$ , ovoidea, testa crustacea nitida; embryo (adhuc vix maturus) in albumine carnosio parvus.—Rhizoma breve, lignosum, caule elato basi foliato superne paniculato. Folia disticha, inferiora plurima basi complicata vaginis equitantibus, superne explanata elongata rigidula, superiora pauca minora erecta, floralia sub ramis inflorescentiæ in bracteas abeuntia. Paniculæ rami laxè subcymosi, vix minute bracteati, pedicellis fasciculatis recurvis. Flores fructusque nutantes.

Species 1, Andium Americæ australis incolæ. *Baker in Journ. Linn. Soc.* xv. 319. *Ruiz et Pav. Fl. Per. et Chil.* t. 299, f. a. (*Anthericum*). *H. B. et K. Nov. Gen. et Sp.* t. 675 (*Dianella*). Habitus *Dianellæ*, differt imprimis fructu capsulari.

83. *Stypandra*, R. Br. *Prod.* 278.—Perianthium marcescens, demum deciduum, non tortum; segmenta distincta, subæqualia v. interiora latiora, patentia, 5-7-nervia. Stamina 6, hypogyna, perianthio breviora, filamentis superne v. fere a basi densè tomentoso-lanatis; antheræ oblongo-lineares, erectæ, basifixæ, mox revolutæ, loculis introrsum dehiscentibus. Ovarium sessile, oblongum, 3-loculare; stylus filiformis, stigmatē parvo; ovula in loculis  $\infty$  (4-8). Capsula oblonga, pericarpio crassiusculo, loculicide dehiscens. Semina ovoidea, compressiuscula, testa nigra crustacea lævi nitida v. opaca; embryo albumine carnosio triente v. parum brevior.—Rhizoma breve v. horizontale, caule ascendente ima basi v. undique foliato ramoso. Folia basi disticha, linearia, rigidula. Panicula v. cyma laxissima, terminalis. Flores longiuscule pedicellati, ad apices ramulorum solitarii fasciculati v. subumbellati, cærulei albo-flavidi v. rarius albi. Bracteæ parvæ, nunc minutæ, v. sub ramis inflorescentiæ foliaceæ.

Species 3, Australianæ. *Baker in Journ. Linn. Soc.* xv. 355. *Benth. Fl. Austral.* vii. 53.

In *S. glauca*, Br. (sect. *Eustypandra*, Baker; *STYPONEMA*, Salisb. *Gen. Pl. Fragm.* 67) caulis ramosus undique foliatus; flores nutantes; filamenta superne lanata, et semina lævia at sæpius vix lucida. *Bot. Mag. t.* 3417. *Kn. et Westc. Fl. Cal. t.* 63.

In *S. cæspitosa*, Br., et *S. umbellata*, Br. (sect. *Styponema*, Baker, non Salisb.), caulis simplex v. ima basi ramosus, basi sola foliatus; flores suberecti; filamenta fere a basi tomentoso-lanata; semina nitida.

#### TRIBUS XI. JOHNSONIÆ.

84. *Aphyllanthes*, Linn. *Gen. n.* 408.—Perianthium infundibuliforme, marcescens, non tortum, demum a fructu deciduum; segmenta unguiculata, basi in tubum conniventia v. subcohærentia, superne recurvo-patentia, oblongo-ovata, subæqualia, 1-nervia. Stamina 6, unguibus segmentorum affixa, perianthio breviora, filamentis filiformibus; antheræ parvæ, ovatæ, dorso supra lobos basales affixæ, loculis introrsum dehiscentibus. Ovarium sessile v. subsessile, 3-loculare; stylus filiformis, stigmatе breviter 3-fido; ovula in loculis solitaria, lateraliter affixa, amphitropa. Capsula membranacea, subgloboso-3-quetra, loculicide dehiscens. Semina in loculis solitaria, late ovoidea, compressiuscula, testa nigra laxa; embryo rectus, in semine examinato albumini carnoso æquolongus.—Rhizoma breve, subramosum. Caules cæspitosi, junciformes, basi vaginis paucis rigidis interdum in folium breve productis stipati, cæterum aphylli. Capitulum terminale, oblongum, 1-2- rarius 3-florum. Bracteæ paleaceæ, imbricatæ, 1-2 exteriores vacuæ, sub flore solitario v. sub quoque flore unica, cum bracteola lata 2-fida. Flos intra bracteas sessilis, pulchre cærulea.

Species 1, regionis Mediterraneæ occidentalis incola. *Kunth, Enum. Pl.* iv. 646. *Parlat. Fl. Ital.* ii. 366. *Salisb. Parad. Lond. t.* 9. *Red. Lil. t.* 483. *Reichb. Ic. Fl. Germ. t.* 418. *Moggr Fl. Ment. t.* 89. *Bot. Mag. t.* 1132.

Genus pluribus notis *Johnsoniis* Australianis affine, ut bene notavit Parlatore, capitalis tamen sæpius 1-floris aliisque notis sat diversum, nec bene pro typo tribus, minime pro ordine distincto habendum.

85. *Johnsonia*, R. Br. *Prod.* 287.—Perianthium marcescens, non tortum, demum a fructu deciduum, ima basi breviter turbinato-campanulatum; lobi 6, multo longiores, subæquales, 3-5-nerves, patentes. Stamina 3, basi loborum interiorum affixa iisque breviora, filamentis basi breviter dilatatis connatisque superne angustatis; antheræ lineares, erectæ, basifixæ, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare; stylus filiformis, stigmatе parvo; ovula in loculis 2, altero ascendente altero reflexo. Capsula bracteis inclusa, subglobosa, loculicide dehiscens. Semina in loculis sæpe solitaria, ovoidea, strophiole magno, testa crustacea nitida; embryo albumine carnoso subdimidio brevior.—Herbæ cæspitosæ. Folia radicalia, fasciculata v. basi disticha, linearia. Scapus simplex, aphyllus. Spica terminalis, breviter oblonga, densa, bracteis paleaceis imbricatis flores omnino obtegentibus, inferioribus 1-2 vacuis interdum foliaceo-acuminatis erectisque. Flores sessiles, sub bracteis solitarii iisque breviores.

Species 3, Australiæ austro-occidentalis incolæ. *Benth. Fl. Austral.* vii. 68. *Bauer, Ill. Pl. Nov. Holl. t.* 1. *Lindl. Swan Riv. App. t.* 7.

86. *Arnocrinum*, Endl. in *Pl. Preiss.* ii. 41.—Perianthium hypocraterimorphum, marcescens, diu persistens, post anthesin spiraliter tortum; lobi 6, subæquales, latiusculi, 1-nerves, patentes. Stamina perfecta 3, fauci affixa, lobis subbreviora, filamentis brevibus filiformibus; antheræ 3, lineares, juxta basin dorsifixæ, in cylindrum circa stylum cohærentes, loculis introrsum dehiscentibus; staminodia 3, staminibus alterna, minute filiformia, interdum desunt. Ovarium sessile, obovoideum, 3-loculare; stylus filiformis, stigmatе leviter incrassato; ovula in loculis 2, alterum ascendens alterum pendulum. Capsula parva, loculicide dehiscens, bracteis inclusa. Semina in loculis sæpius solitaria, ovoidea v. globosa, estrophiolata, testa crustacea nigra nitida.—Rhizoma cum basi caulis

lana densa involutum. Caulis junceus, simplex v. ramosus, aphyllus. Folia radicalia v. e rhizomate pauca, breviter linearia, graminea. Squamellæ sub ramis rarissime foliaceo-acuminatæ, sæpius parvæ. Flores ad apicem caulis v. ramorum dense capitati v. brevissime spicati, intra bracteas imbricatas glabras v. dense pilosas sessiles, singuli, præter bracteam latiusculam 1-nervem, bracteola latiore 2-nervi stipati.

Species 2, Australiæ austro-occidentalis incolæ. *Benth. Fl. Austral.* vii. 69.

87. *Tricoryne*, *R. Br. Prod.* 278.—Perianthium marcescens, post anthesin spiraliter contortum, demum a fructu deciduum; segmenta angusta, 3-5-nervia, subæqualia v. interiora angustiora, stellato-patentia. Stamina 6, hypogyna, segmentis breviora, filamentis filiformibus sub anthera dense penicillato-lanatis; antheræ oblongo-lineares, erectæ, basifixæ, loculis introrsum dehiscentibus. Ovarium sessile, profunde 3-lobum, 3-loculare; stylus filiformis, stigmatе parvo; ovula in loculis 2, collateralia, ascendentia, anatropa. Fructus ad basin divisus in nuculas 3 (interdum abortu 2 v. 1) indehiscentes, carnosas v. siccas, reticulatas v. costatas. Semina in nuculis abortu solitaria, nigra, testa coriacea nitida; embryo albumine carnoso triente brevior.—Rhizoma breve, fibris radicalibus fasciculatis. Caules ramosi, virgati, ramis sæpe fasciculatis. Folia pauca, graminea v. ad squamellas scarioras reducta, rarius plura parvaque. Panicula laxa. Flores ad apices ramulorum fasciculati, pedicellati. Bracteæ ad basin pedicellorum imbricato-capitatae, parvæ, exteriorum 1-2 sæpe vacuæ, interdum elongatæ v. foliaceæ.

Species 6, Australianæ. *Benth. Fl. Austral.* vii. 50. *Bauer, Ill. Pl. Nov. Holl.* t. 11. *Endl. Iconogr.* t. 61.

88. *Laxmannia*, *R. Br. Prod.* 285.—Perianthium persistens, non tortum, segmenta omnia distincta, enervia v. late 1-nervia, demum subscariosa, subæqualia v. interiora basi leviter connata exterioribus paulo minor v. demum majora. Stamina 6, perianthio breviora, hypogyna v. seriei interioris segmentis breviter adnata, filamentis filiformibus; antheræ ovatae, medio dorso v. ad basin segmentorum affixæ, versatiles, loculis introrsum dehiscentibus. Ovarium basi contractum, 3-loculare; stylus breviter filiformis, stigmatе parvo v. leviter incrassato; ovula in loculis 2 v. 4. Capsula perianthio inclusa, loculicide dehiscent. Semina pauca, (in *L. gracili*) angulato-compressa, nigra, testa crassiuscula nec crustacea; embryo rectus v. leviter curvus, albumine carnoso vix brevior.—Rhizoma breve, fibris radicalibus fasciculatis. Caules breves, dense caespitosi, v. elongati diffusi ramosique. Folia anguste linearia v. subulata, ad basin v. apices ramorum conferta, vaginis scariosis imbricatis apice sæpe setosis v. lanato-ciliatis. Flores ad apices ramorum in capitula sessilia v. pedunculata conferti, intra bracteas subsessiles. Bracteæ scariosæ, imbricatæ, exteriores sæpius vacuæ integræ involucrantæ, interiores breves, tenues, sæpe hyalinae, margine lacerae v. fimbriatæ v. haud raro fere ad basin in setas v. lanam divisæ.

Species 8, omnes Australianæ. *Benth. Fl. Austral.* vii. 63. *Endl. Iconogr.* t. 97. *Douc. Herb. Tim.* Descr. t. 16. *Lindl. Swan Riv. App.* t. 7.

89. *Stawellia*, *F. Muell. Fragm. Phyt. Austral.* vii. 85.—Perianthium diu persistens, non tortum, demum a fructu deciduum; segmenta basi brevissime connata, subæqualia, 3-nervia, patentia. Stamina 3, basi segmentorum interiorum affixa itaque breviora, filamentis filiformibus v. complanatis; antheræ lineares, erectæ, basifixæ, loculis introrsum dehiscentibus. Ovarium 3-loculare; stylus filiformis, stigmatе parvo; ovula in loculis 2. Capsula (ex *F. Muell.*) loculicide dehiscent. Semina in loculis 1 v. 2, testa nigra crustacea nitida.—Herba humilis, dense caespitosa. Folia radicalia, lineari-filiformia, rigidula, basibus dilatatis imbricatis. Scapi simplices, aphylli. Flores in capitulo terminali intra bracteas imbricatas scarioras sessiles, exteriores nonnulli segmentis perianthii filamentisque

angustissimis elongatisque, interiores segmentis filamentisque brevioribus latioribus. Capsula minima.

Species 1 Australiæ austro-occidentalis incola. *Benth. Fl. Austral.* vii. 67. Specimina nostra haud perfecta.

90. *Borya*, Labill. *Pl. Nov. Holl.* i. 81, t. 107. (*Baumgartenia*, Spr. *Syst.* ii. 91.)—Perianthium hypocraterimorphum, marcescens, persistens, tubo tenui cylindraceo; lobi 6, subæquales, lineares, stellato-patentes, post anthesin non torti. Stamina 6, basi loborum affixa, iisque subæquilonga, filamentis filiformibus; antheræ parvæ, ovatæ, basifixæ, loculis introrsum dehiscentibus. Ovarium sessile, ovoideum, 3-loculare; stylus filiformis, stigmate parvo capitato; ovula in loculis  $\infty$  (ad 20). Capsula bracteis perianthioque persistente inclusa, loculicide dehiscens. Semina pauca, estrophiolata, testa nigra crustacea. —Rhizoma perenne. Caules brevissimi cæspitosi v. longiores ramosique, basibus persistentibus foliorum imbricatis obtecti. Folia in rhizomate v. apices versus ramorum dense conferta, brevina, anguste linearia v. fere filiformia. Flores ad apices ramorum in capitula globosa v. ovoidea longe pedunculata conferti, intra bracteas sessiles. Bracteæ arcte imbricatæ, exteriores paucæ vacuæ, subulatæ, involucrum erectum v. patens formantes, interiores latæ, bracteolam latiore cum flore singulo foventes.

Species 2, Australianæ. *Benth. Fl. Austral.* vii. 70. *Lindl. Swan Riv. App.* t. 9.

91. *Alania*, Endl. *Gen. Pl.* 151.—Perianthium persistens, non tortum; segmenta 6, a basi distincta, oblonga, subæqualia. Stamina 6, hypogyna, perianthio parum breviora, filamentis filiformibus; antheræ minimæ, ovatæ, dorsifixæ, loculis introrsum dehiscentibus. Ovarium sessile, ovoideum, 3-loculare; stylus brevis, recurvus, stigmate parvo subcapitato; ovula in loculis pauca. Capsula subglobosa, loculicide dehiscens. Semina pauca, in loculis sæpe solitaria, oblonga, estrophiolata, testa nigra crustacea nitida; albumem carnosum.—Caulis perennis, humilis, diffusus, ramosus. Folia conferta, lineari-filiformia, acuta, basi in vaginas imbricatas caulem obtegentes dilatata. Flores in umbellam terminalem subglobosam conferti, pedicellati. Bracteæ numerosæ, fuscae, scariosæ, imbricatæ, 1-2 exteriores vacuæ interdum subfoliaceo-acuminatæ. Flores parvuli, primum pedicellis brevibus subcapitati, pedicellis tamen accrescentibus mox umbellati.

Species 1, Australiana, *Kunth, Enum. Pl.* iv. 644. *Benth. Fl. Austral.* vii. 62.

92. *Sowerbæa*, Sm. in *Trans. Linn. Soc.* iv. 218; v. 160, t. 6.—Perianthium persistens, non tortum; segmenta 6, a basi distincta v. seriei interioris basi breviter connata, ovata v. oblonga, subæqualia, demum fere scariosa. Stamina perfecta 3, segmentis interioribus opposita iisque breviora, filamentis brevissimis; antheræ oblongæ, basifixæ, loculis fere ad basin discretis erectis introrsum dehiscentibus; staminodia 3, staminibus alterna, breviter filiformia, v. interdum desunt. Ovarium breve, 3-loculare; stylus filiformis, stigmate parvo; ovula in loculis 2-6. Capsula perianthio persistente inclusa, loculicide dehiscens. Semina pauca, angulata, testa crassiuscule membranacea nigra minute granulata; embryo in albumine carnosio brevis.—Rhizoma lignosum, horizontale, nodosum. Folia radicalia, lineari-filiformia. Caules seu scapi aphylli simplices v. rarius ima basi ramosi, juncei. Flores in umbellam terminalem subglobosam conferti, pedicellati. Bracteæ parvæ, scariosæ, ad basin pedicellorum dense imbricatæ, 2 v. 3 exteriores sæpe paullo majores rigidioresque vacuæ.

Species 3, Australianæ. *Benth. Fl. Austral.* vii. 61. *Red. Lil.* t. 341. *Andr. Bot. Rep.* t. 81. *Bot. Mag.* t. 1104. *Lodd. Bot. Cab.* t. 787.

## TRIBUS XII. ALLIÆÆ.

93. *Agapanthus*, *Lhér. Sert. Angl.* 17. (*Abumon*, *Adans. Fam.* ii. 54. *Mauhlia*, *Dahl, Obs. Syst. Linn.* 25.)—Perianthium infundibuliforme, tubo cylindræo sæpius brevi; lobi 6, subæquales, tubo longiores, erecto-patentes. Stamina 6, fauci affixa, perianthio breviora, filamentis filiformibus inferne leviter complanatis; antheræ oblongæ v. oblongo-lineares, dorsifixæ, basi 2-lobæ, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare; stylus filiformis, stigmate parvo; ovula in loculis  $\infty$ . Capsula oblonga, obtusa, angulis valde elevatis fere 3-loba, loculicide dehiscens. Semina  $\infty$ , ascendencia, compressa, testa laxiuscula nigra sursum in alam oblongam producta; albumen carnosum.—Rhizoma breve, fibris radicalibus crassiusculis, ebullbosum. Folia radicalia, lato-linearia v. loriformia. Scapus simplex, aphyllus. Flores in umbella terminali numerosi, pedicellati, speciosi, cærulei rarius albi. Bractææ involucrantæ 2, latiusculæ, caducissimæ, interiores  $\infty$ , lineari-setaceæ.

Species v. varietates insignes 3, Africæ australis incolæ, in hortis diu cultæ. *Kunth, Enum. Pl.* iv. 478. *Baker in Journ. Linn. Soc.* xi. 368. *Gartn. Fruct.* ii. 15, t. 83 (*Crinum*). *Red. Lil.* t. 6, 403. *Bot. Mag.* t. 500. *Bot. Reg.* t. 699; 1843, t. 7. *Lodd. Bot. Cab.* t. 42.

94. *Tulbaghia*, *Linn. Mant. n.* 1300. (*Omentaria*, *Salisb. Gen. Pl. Fragm.* 87.)—Perianthium urceolatum v. fere hypocraterimorphum, tubo superne contracto v. undique cylindræo; lobi 6, subæquales, patentes; corona ad faucem carnosula, lobis brevior, e squamis 3 lobis interioribus oppositis nunc in unam fere globosam sinuato-3-lobam connatis, nunc liberis integris emarginatis v. 2-partitis. Stamina 6, tubo 2-seriatim affixa et omnino inclusa, filamentis brevissimis; antheræ oblongæ, dorsifixæ, interdum brevissime apiculatæ, loculis introrsum dehiscentibus. Ovarium sessile, ovoideum v. subglobosum, 3-loculare; stylus brevis, columnaris, stigmate crasso pulvinato v. discoideo obscure 3-loba; ovula in loculis  $\infty$ . Capsula ovoidea v. oblonga, obtusa v. truncata, loculicide dehiscens. Semina oblonga, compressa, testa nigra laxiuscula; embryo albumine carnosio parum brevior.—Rhizoma breve, crassum, lignosum. Folia radicalia, ligulata, vaginis emarcidis interdum cum rhizomate cormum imperfectum formantibus. Scapus simplex, aphyllus. Flores in umbella terminali  $\infty$ , pedicellati. Bractææ involucrantæ 2, scariosæ, latæ, interiores angustiores, nunc perpaucæ v. 0. Odor plantæ alliaceus.

Species editæ ad 12, a Bakero ad 9 reductæ, Africæ australis et tropicæ incolæ. *Kunth, Enum. Pl.* iv. 480. *Baker in Journ. Linn. Soc.* xi. 369, et in *Trans. Linn. Soc. Bot.* i. 246. *Jacq. Hort. Vind.* t. 115. *Harv. Thes. Cap.* t. 180. *Bot. Mag.* t. 806, 3547, 3555.

95. *Tristagma*, *Pæpp. et Endl. Nov. Gen. et Sp.* ii. 28, t. 140. (*Stemmatium*, *Philippi, Descr. Nuev. Pl.* ii. (1873), 75. *Stephanolirion*, *Baker in Gard. Chron.* 1875, i. 234.)—Perianthium hypocraterimorphum, tubo cylindræo, lobi 6, subæquales, patentes; corona ad faucem carnosula e squamis 3-6 subconnatis v. liberis v. omnino deficientibus. Stamina 6, tubo 2-seriatim affixa et omnino inclusa, filamentis brevissimis; antheræ oblongæ, prope basin dorsifixæ, loculis introrsum dehiscentibus. Ovarium sessile, ovoideum, 3-loculare; stylus brevis, columnaris, stigmate crasso pulvinato; ovula in loculis  $\infty$ . Capsula (a nobis non visa) loculicide dehiscens. Semina . . .—Cormus subglobosus, tunicatus. Folia radicalia pauca, anguste linearia. Scapus simplex, aphyllus. Flores in umbella terminali haud numerosi, pedicellati. Bractææ involucrantæ 2, scariosæ, latæ, acuminatæ, interiores angustæ, paucæ.

Species 3, Chilenses. Genus vix ac ne vix a *Tulbaghia* differt cormo perfectione et patria. Corona in utroque genere variat de specie in speciem; in *T. nivali*, *Pæpp.* et *Endl.* l.c. omnino deest; in *T. dimorphopetalæ*, *C. Gay*, *Fl. Chil.* vi. 126, t. 69 bis (*Leucoooryne Gayi*, *Baker in Journ. Linn. Soc.* xi. 375) constat e squamis 3 oblongis lobis interioribus perianthii affixis; in his 2 speciebus

perianthium, antheræ et habitus omnino *Tulbaghiæ*. In *T. narcissoides* (*Stemmatio narcissoides*, Phil.) perianthium majus *Leucocorynis*, stamina omnino *Tulbaghiæ*, corona e squamis 3-6 latis inæqualibus plus minus connatis.

96. *Leucocoryne*, Lindl. Bot. Reg. t. 1293.—Perianthium hypocaterimorphum, tubo cylindræo æquali v. supra ovarium parum contracto; lobi 6, subæquales, patentes, ovali-oblongi v. angusti. Stamina perfecta 3, tubo inclusa, filamentis brevissimis; antheræ lineari-oblongæ, infra medium dorsifixæ, loculis introrsum dehiscentibus; staminodia 3, ad faucem lobis interioribus opposita iisque breviora, linearia v. basi dilatata, ananthera. Ovarium subsessile, oblongum, obtusum, 3-sulcum, 3-loculare; stylus brevis, columnaris, stigmate parvo 3-dymo; ovula in loculis numerosa. Capsula membranacea, ovoidea v. oblonga, 3-sulca, loculicide dehiscens. Semina  $\infty$ , parva, subglobosa, nigra.—Bulbus seu cornus tunicatus. Folia radicalia, anguste linearia, canaliculata. Scapus simplex, aphyllus. Flores in umbella terminali pauci, pedicellati. Bractæe involucentes 2, lineari-lanceolatæ, acuminatæ, demum scariosæ, interiores perpaucæ minutæ v. 0.

Species 3 v. 4, Chilenses. Baker in Journ. Linn. Soc. xi. 374 (excl. *L. Gayi* quæ *Tristagma*). C. Gay, Fl. Chil. t. 69. Bot. Mag. t. 2382 (*Brodiaea*).

97. *Millia*, Cav. Ic. ii. 76, t. 196.—Perianthium hypocaterimorphum, tubo cylindræo æquali ad os annulo parum prominulo constricto; lobi rotato-patentes, parum inæquales. Stamina 6, ad os tubi affixa, exserta, filamentis brevissimis; antheræ oblongæ, erectæ, circa stylum conniventes, loculis introrsum dehiscentibus. Ovarium sessile, elongatum, 3-loculare; stylus antheras paullo superans, stigmate parum dilatato 3-dymo; ovula in loculis numerosa. Capsula oblonga, obtusa, membranacea, loculicide dehiscens, valvis facillime septicide partitis sub-6-valvis. Semina compressa, angulata, nigra.—Cornus parvulus, fibris radicalibus fasciculatis nonnullis valde incrassatis carnosus. Folia radicalia pauca, angustissime linearia. Scapus simplex, aphyllus. Flores in umbella terminali 2-4, rarius ad unum reducti, albi, speciosi, longe pedicellati. Bractæe involucentes 2-3, parvæ, angustæ, nunc minimæ.

Species 1, Mexicana. Kunth, Enum. Pl. iv. 478. Bot. Reg. t. 1555. Fl. des Serres, t. 1459.

Species a Bakero in Journ. Linn. Soc. xi. 378 sub *Millia* enumeratas pro maxima parte cum *S. Watsonio* ad *Brodiaeam* referimus; paucæ a Kunthio sub *Nothoscordo* editæ ad hoc genus restituendæ videntur.

98. ? *Diphalangium*, S. Schau. in Linnaea, xix. 702.—Perianthium hypocaterimorphum, marcescens, tubo cylindræo medio ventricoso 6-costato; lobi patentes, tubo longiores, 1-nerves, apice calloso-incrassati. Stamina 6, tubo 2-seriatim affixa, filamentis brevissimis; antheræ lineari-oblongæ, dorso basifixæ, loculis introrsum dehiscentibus. Ovarium 3-gastrum, 3-loculare; stylus longus, apice incrassatus, stigmate 3-gono dilatato. Capsula usque ad medium cum perianthii tubo connata, 3-quetra,  $\infty$ -sperma.—Bulbus subrotundus, tunicarum fuscaram fibris linearibus. Folia linearia, incurvo-patula, scapum subæquantia. Scapus simplex, vix semipollicaris (an errore pro semipedalis?), circa basin foliis 2 parvis membranaceis præditus, cæterum nudus. Perianthium album!, lobis pollicaribus, tubo semipollicari cum pedunculo continuo. Antheræ ad sinus perianthii exsertæ. (Char. ex S. Schauero.)

Species 1, Mexicana, Aschenborn, n. 30, a nobis non visa, pluribus notis *Millæ* convenire videtur, sed si rite descripta caule nano, staminum insertione, capsula basi adnata discrepat.

99. *Stropholirion*, Torr. Bot. Whipple Exped. 93 (149), t. 23. (Rupalleya, Morièrè in Bull. Soc. Linn. Norm. viii. 313, t. 15).—Perianthium urceolatum, tubo subgloboso ad os constricto, costis 6 subvesiculoso-inflatis percurso; lobi 6, subæquales, patentes. Stamina perfecta 3, cum staminodiis totidem alterna, fauci affixa, erecta, filamentis seu connectivis petaloideis alte 2-fidis; antheræ ad basin filamenti subsessiles, loculis introrsum dehiscentibus; staminodia filamentis æquilonga, angustiora, crassiora, apice emarginata.

Ovarium sessile, ovoideum, 3-loculare, in stylum antheris æquilongum attenuatum, stigmate parum dilatato 3-dymo; ovula in loculis 4, in medio loculo conferta. Capsula perianthio persistente inclusa, globosa, loculicide dehiscens. Semina . . .—Cormus tunicatus. Folia radicalia pauca, demum elongata. Scapus simplex, aphyllus, sæpius volubilis,  $\infty$ -pedalis. Flores in umbella terminali numerosi, rosei, pedicellis articulatis. Bractee involucrantæ 2-5, latiusculæ, interdum coloratæ; interiores parvæ, scariosæ.

Species 1, Californica. *S. Wats. Proc. Amer. Acad.* xiv. 239. *Bot. Mag. t.* 6123 (*Brodiaea*). Genus quoad stamina *Brodiaea* accedit, cui refert Baker, sed perianthium longe diversum et habitus peculiaris.

100. *Breveortia*, *Wood in Proc. Acad. Philad.* 1868, 173.—Perianthium tubulosum, late cylindraceum, basi breviter 6-saccatum, ad os leviter constrictum; lobi multoties breviores, ovati, patentes. Stamina perfecta 3, fauci affixa, antheris anguste oblongis subsessilibus erectis, loculis introrsum dehiscentibus; staminodia 3, antheris alterna, petaloidea, latissime truncata, pone antheras in coronam spuriam connata, iisque paullo breviora. Ovarium breviter stipitatum, ovoideum, in stylum attenuatum, stigmate capitato 3-dymo; ovula in loculis  $\infty$ , haud numerosa. Capsula stipitata, ovoideo-3-quetra, acuminata, perianthio persistente inclusa, membranacea, loculicide dehiscens. Semina pauca (immatura) nigra, compressa.—Cormus tunicatus. Folia radicalia pauca, longa. Scapus simplex, aphyllus. Flores in umbella terminali plures, breviter pedicellati, nutantes v. penduli, speciosi, coccinei apice flavo-virentes. Bractee involucrantæ 3-4, latiusculæ, scariosæ, coloratæ; interiores angustissimæ v. minimæ.

Species 1, Californica. *S. Wats. in Proc. Amer. Acad.* xiv. 239. *Bot. Mag. t.* 5857 (*Brodiaea*). Genus quoad staminum situm *Brodiaea* accedit cui refert Baker, sed perianthium longe diversum.

101. *Brodiaea*, *Sm. in Trans. Linn. Soc. x. 2, t. 1.* (*Hookera*, *Salisb. Parad. Lond. t.* 98.)—Perianthium infundibuliformi-campanulatum, tubo basi attenuato v. rotundato nec saccato, superne ampliato; lobi tubo longiores v. subæquales, erecti v. subpatentes, inter se subæquales. Stamina 6 omnia perfecta, v. 3 staminodiis totidem alterna, fauci v. tubo affixa, filamentis brevissimis v. intra tubum filiformibus; antheræ oblongæ v. angustæ, dorsifixæ, loculis introrsum dehiscentibus. Ovarium sessile v. stipitatum, 3-loculare; stylus filiformis, brevis v. longiusculus, stigmate parum dilatato 3-sulco v. breviter 3-fido; ovula in loculis  $\infty$ . Capsula subglobosa ovoidea v. oblonga, perianthio marcescente inclusa, membranacea v. vix coriacea, loculicide dehiscens, valvis interdum demum septicide fissis. Semina  $\infty$ , nigra, sæpius compressa.—Cormus (rarius bulbosus?) plus minus tunicatus. Folia radicalia, angusta. Scapus simplex, aphyllus. Flores in umbella terminali plures v. rarius ad unum reducti, pedicellati. Bractee involucrantæ 2 v. 3, interiores rarius adsunt nisi minutæ.

Species ad 30, Americæ borealis occidentalis v. australis extratropicæ incolæ. *Baker in Journ. Linn. Soc.* xi. 376, quoad sp. 1 ad 3 et 378 (*Millæ sp.* 1, 3, 6 ad 9, 11 ad 23). *S. Wats. in Proc. Amer. Acad.* xiv. 236.

Generis delimitatio imprimis ad perianthii formam a Watsonio proposita, nobis magis naturæ congrua videtur quam Bakeriana, ad numerum staminum perfectorum; sectiones tamen sequentes facile pro generibus distinctis habendæ etsi habitu simillimæ:—

1. *Eubrodiaea*. Stamina ad faucem æqualiter affixa, filamentis seu connectivis dilatatis v. petaloideis integris v. 2-fidis, alternis (staminodiis) anantheris v. omnibus antheriferis. *Sm. l. c. Salisb. l. c. Bot. Mag. t.* 2877, 5912, 5989. *Lindl. in Journ. Hort. Soc.* iv. 84, cum ic. xyl. *Bot. Reg. t.* 1183.

*B. capitata*, Benth. Pl. Hartw. 339, a specie typica *B. congesta*, Sm., nequaquam differre videtur, nisi staminibus omnibus nec 3 solis antheriferis. *Hookera pulchella*, Salisb. Parad. Lond. t. 117, dubie ad unam alteramve refertur, et verisimiliter utramque includit. Antheræ ex Salisburio alternæ minores caducæ interdum deesse videntur, sed sæpissime in alabastro inveniuntur. In floribus a nobis examinatis antheras alternas sæpe multo minores vidimus. *B. Douglassii*, S. Wats. (*Triteleia grandiflora*, Hook. Pl. Bor. Amer. t. 198) est species 6-andra, *B. capitata* valde affinis staminibus ad faucem sub-2-seriatis. Huc pertinet *Dichelostemma*, Kunth, Enum. Pl. iv. 469.

2. *Triteleia*. Stamina tubo v. faucis 2-seriatim affixa, filamentis filiformibus, omnibus antheriferis. *Pæpp. et Endl. Nov. Gen. et Sp. t. 139. Bot. Mag. t. 3327, 5977, 6236. Bot. Reg. t. 1921. Saund. Ref. Bot. t. 42, 43, 258 (ic. plures sub Milla). TRITELEIA, Lindl. Bot. Reg. sub t. 1293 et t. 1685. Benth. in Trans. Hort. Soc. ser. 2, i. t. 15. SEUBERTIA, Kunth, Enum. Pl. iv. 475. THEMIS, Salisb. Gen. Pl. Fragm. 85.*

*B. crocea* et *B. gracilis*, S. Wats., a *Triteleis* borealibus differunt perianthio luteo, sed perianthii forma et stamina potius *Triteleia* quam *Calliprora*.

3. *Calliprora*. Perianthium campanulatum, flavum v. album, quam in precedentibus magis apertum. Stamina 6, ad faucem 1-seriata, filamentis brevibus basi petaloideo-dilatatis integris v. 2-fidis, omnibus antheriferis. Species 2, Californicæ. *CALLIPRORA, Lindl. Bot. Reg. t. 1590. Bot. Mag. t. 3588. HESPEROSCORDUM, Lindl. Bot. Reg. sub t. 1293 et t. 1639. Hook. Fl. Bor. Amer. t. 198. VEATCHIA, Kell. in Proc. Calif. Acad. ii. 11.*

102. *Androstephium*, Torr. in *Bot. Emory Exped.* 218.—Perianthium infundibuliforme, tubo superne in faucem ampliato; lobi 6, oblongo-lanceolati, erecto-patentes, 1-nerves, tubo sublongiores. Stamina 6, faucis affixa, filamentis membranaceo-dilatatis in tubum ad medium v. altius coalitis, tubo inter antheras in lobos producto; antheræ lineari-oblongæ, dorsifixæ, loculis introrsum dehiscentibus. Ovarium sessile, oblongo-3-quetrum, apice in stylum attenuatum, 3-loculare; stylus filiformis, stigmatē parvo capitato 3-sulco; ovula in loculis ∞. Capsula obovoidea, 3-quetra, membranacea, loculicide dehiscens. Semina (a nobis non visa) pauca, suborbiculata, compressa, anguste alata; embryo cylindraceus. —Cormus tunicatus. Folia radicalia, anguste linearia. Scapus simplex, aphyllus, foliis brevior. Flores in umbella terminali haud numerosi, breviter pedicellati, cærulei. Bractæ involucrantēs 2-3, scariosæ, interiores angustiores paucae.

Species 2, Americæ borealis a Texas usque ad Californiam incolæ. *S. Wats. in Proc. Amer. Acad. xiv. 239.*

103. *Bessera*, Schult. in *Linnæa*, iv. 121. (Pharium, *Herb. in Bot. Reg. t. 1546*).—Perianthium campanulatum; segmenta ima basi in tubum brevem turbinatum connata, cæterum libera, erecto-patentia. Stamina 6, faucis affixa, perianthio longiora, filamentis ultra medium membranaceo-dilatatis in tubum connatis, tubo inter filamenta truncato v. plus minus in lobos producto; antheræ oblongæ, medio dorso affixæ, loculis introrsum dehiscentibus. Ovarium sessile, oblongum, basi apiceque contractum, 3-loculare; stylus filiformis, apice leviter incrassatus, stigmatē dilatato obscure 3-lobo; ovula in loculis numerosa. Capsula erecta, ovoideo-3-quetra, loculicide dehiscens, valvis facillime septicide partitis mox 6-valvis. Semina sat numerosa, oblonga, compressa, bene matura non vidimus.—Cormus tunicatus. Folia radicalia pauca, anguste linearia. Scapus simplex, aphyllus. Flores in umbella terminali longiuscule pedicellati, speciosi, coccinei. Bractæ involucrantēs 2-3, parvulæ, interiores adhuc minores, paucae.

Species 1, Mexicana, a hortulanis in 3 divisa, quæ tamen potius unius varietates habendæ.—*Kunth, Enum. Pl. iv. 476, 699. Baker in Journ. Linn. Soc. xi. 373. Bot. Reg. 1839, t. 34. Fl. des Serres, t. 424.*

104. *Bloomeria*, Kell. in *Proc. Calif. Acad.* ii. 11, *cum ic.*—Perianthium subrotatum; segmenta 6, distincta, subæqualia, patentia. Stamina 6, hypogyna v. vix basi segmentis brevissime adhaerentia, filamentis filiformibus erectis basi in squamam truncatam dilatatis, squamis in annulum seu cyathum ovarium cingentem subconnatis; antheræ oblongæ, dorsifixæ, loculis introrsum dehiscentibus. Ovarium ovoideo-globosum, 3-sulcum, 3-loculare; stylus filiformis, stigmatē vix dilatato; ovula in loculis ∞. Capsula . . . —Cormus fibroso-tunicatus. Folia radicalia pauca v. solitaria, longe linearia. Scapus simplex, aphyllus. Flores in umbella terminali numerosi, longe pedicellati, flavi, in pedicello articulati. Bractæ involucrantēs 2, setaceo-acuminatæ, interiores minimæ scariosæ.

Species 1, Californica. *S. Wats. in Proc. Amer. Acad. xiv. 235. Bot. Mag. t. 5896 (Nothoscordum).*

105. *Milla*, S. Wats. in *Proc. Amer. Acad.* xiv. 235.—Perianthium explanato-campanulatum; segmenta 6, distincta v. vix basi connata, subæqualia, patentia. Stamina 6,

basi segmentorum brevissime adhærentia iisque paullo breviora, filamentis infra medium leviter dilatatis; antheræ ovoideo-oblongæ, dorsifixæ, loculis introrsum dehiscentibus. Ovarium sessile, obtusum, 3-loculare; stylus brevis, columnaris, deciduus, stigmatē crassiusculo 3-dymo; ovula in loculis  $\infty$ . Capsula subgloboso-3-quetra, obtusissima v. leviter depressa, loculicide dehiscens. Semina  $\infty$ , parva, angulata, nigra.—Cormus tenuiter fibroso-tunicatus. Folia radicalia plura, anguste linearia, scapo multo breviora. Scapus simplex, aphyllus. Flores in umbella terminali plures, parvi, pedicellis filiformibus inarticulatis. Bracteæ involucentes 3-6, scariosæ, breviter acuminatæ, basi plus minus connatæ, interiores minores. Planta inodora.

Species 1, Californica. *Regel, Monogr. All.* 219 (*Allium maritimum*, Torr.).

Genus *Allio* et præsertim *Nothoscordum* valde affine, ab auctore e tribu *Alliearum* ad *Milleas* transfertur, imprimis ob cormum fibroso-tunicatum.

106. *Nothoscordum*, Kunth, *Enum. Pl.* iv. 457. (*Pseudoscordum*, *Herb. Amaryll.* 11, *absque char.* *Hesperocles* et *Oligosma*, *Salisb. Gen. Pl. Fragm.* 85.)—Perianthium marcescens, persistens; segmenta 6, basi v. ad medium connata, cæterum patentia v. campanulato-conniventia, subæqualia, 1-nervia. Stamina 6, basi segmentorum affixa iisque breviora, filamentis majus minusve membranaceo-dilatatis apice subulatis integris; antheræ oblongæ, dorsifixæ, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare; stylus filiformis, sæpius persistens, stigmatē parvo; ovula in loculis  $\infty$  (sæpius 6-12). Capsula membranacea, 3-dyma v. 3-loba, loculicide dehiscens. Semina angulato-compressa v. subplana, testa nigra membranacea v. subcrustacea; embryo albumine carnosio sæpius brevior.—Bulbus tunicatus. Folia radicalia, linearia, plana. Scapus simplex, aphyllus. Flores in umbella terminali plures, cum pedicello non articulati. Bracteæ involucentes 2, basi connatæ, interiores parvæ nunc minimæ v. 0. Odor alliaceus omnino deest.

Species vix 10, quarum una Chinensis, cæteræ omnes Americanæ extratropicæ v. andinæ, quarum 2 (imprimis *N. fragrans*) in variis regionibus orbis veteris inquilinæ, omnes a Regelii *All. Monogr.* ad *Allium* restitutæ, a Bakero inter *Millam* et *Allium* distributæ. *Jacq. Ic. Rar.* t. 366. *Red. Lil.* t. 50, 68. *Vent. Jard. Cels.* t. 26. *Andr. Bot. Rep.* t. 107. *Colla in Mem. Acad. Torino.* xxxix. t. 52. *Link et Otto, Ic. Pl. Rar.* t. 8. *Bot. Mag.* t. 1035, 1129, 1524, et t. 2419 (*Ornithogalum*). *Bot. Reg.* t. 898. *Savand. Ref. Bot.* t. 304 (icones fere omnes sub *Allio*).

*N. borbonicum*, Kunth (*Milla*, Baker) est ipsissimum *N. fragrans*, Kunth, in insulis Mascarensibus (teste Bojero) inquilina, et hodie in locis cultis frequentissimum.

*CALOSCORDUM*, *Herb. in Bot. Reg.* 1844, *Misc.* 66, 1847, t. 5, est species Chinensis, quæ nobis omnino *Nothoscordum* refert (*N. neriniflorum*), a Regelio, qui verisimiliter plantam non vidit, perperam ad *Allium chinensem* v. *A. Thunbergii*, Don, relata. In China boreali sat rara videtur nec adhuc in Japonia nec in Cochinchina reperta.

107. *Allium*, Linn. *Gen. n.* 409.—Perianthii persistentis segmenta 6, a basi libera v. vix ima basi in anulum cohærentia, æqualia v. interiora paullo majora, patentia v. campanulato-conniventia. Stamina 6, basi segmentorum affixa v. seriei interioris paullo altius adnata, segmentis longiora v. sæpius paullo breviora, filamentis nunc liberis filiformibus, nunc basi dilatatis interdumque breviter connatis, staminum interiorum interdum magis dilatatis integris v. apice 3-cuspidatis cuspidē medio antherifero, v. basin versus utrinque 1-dentatis; antheræ oblongæ, medio dorso affixæ, loculis introrsum dehiscentibus. Ovarium sessile v. breviter stipitatum, perfecte v. interdum septis vix ad medium attingentibus imperfecte 3-loculare, vertice obtusum v. sæpius ad styli insertionem plus minus depressum; stylus filiformis, brevis v. elongatus, sæpius deciduus, stigmatē parvo v. anguste breviterque 3-fido; ovula in loculis sæpiissime 2, in speciebus perpaucis 3-6, a basi anguli interioris ascendentia. Capsula membranacea, segmentis persistentibus inclusa v. cincta, loculicide dehiscens. Semina angulato-compressa v. interdum fere plana, testa membranacea atra; embryo cylindraceus, sæpe incurvus v. apice recurvus, albumine carnosio vix v. rarius dimidio brevior.—Bulbus tunicatus, solitarius v. interdum plures

rhizomati brevi v. breviter repenti adnati. Folia radicalia, sæpius angusta, variant linearia plana carinata teretia v. fistulosa, v. latiora oblonga rarissime ovata, vaginis nunc brevissimis hypogæis, nunc elongatis scapum alte involventibus. Scapus simplex, aphyllus. Flores in umbella terminali plures, sæpius numerosi, breviter v. longe pedicellati, erecti v. rarissime penduli, parvuli v. mediocres, cum pedicello non articulati, in speciebus nonnullis plures v. interdum omnes in bulbillas sessiles mutati. Bractee involucentes 2, rarissime 3, basi sæpiissime et haud raro usque ad apicem in unam latam membranaceo-scariosam spathaceo-fissam per anthesin deciduam connatæ. Odor peculiaris, *alliaceus* dictus, in genere universalis dicitur, inter alia hujus ordinis genera in solis *Tulbaghia* et *Brodiaea* specie hucusque observatus.

Species ad 250, pro maxima parte Europæ Africæ borealis et Abyssinicæ et Asiæ extratropicæ incolæ, plures in America boreali et Mexico obviæ, paucae in aliis regionibus inquilinæ. *G. Don, Monogr. in Mem. Wern. Soc. vi. 1* (1826). *Kunth, Enum. Pl. iv. 379.* *Regel, Alliorum Monogr. 8vo, Petrop. 1875 (cæcl. sp. paucis).* *Boiss. Fl. Or. v. 229.*

*G. Don* species imprimis gerontogæas in sectiones 5 distribuit a *Kunthio* et *Regelio* acceptas parumque mutatas, quibus *Regel* characteres sequentes tribuit, addita sexta (*Nectaroscordo*).

1. *Porrum*. Bulbi rhizomate carentes. Stamina seriei interioris filamenta dilatata, 3-cuspidata, cuspidè intermedio antherifero. Folia plana v. carinata, sæpe alte vaginantia. Bractee involucentes breviter v. alte connatæ, floribus breviores v. rarissime ut in *Macrospatha* longe acuminatæ. *Red. Lil. t. 379, 385, 391. Reichb. Ic. Fl. Germ. t. 488 ad 493. W. et Kit. Pl. Rar. Hung. t. 82. Guss. Pl. Inarim. t. 16, 17. Sibth. Fl. Græc. t. 312, 315, 316, 322. Regel, Fl. Turkest. t. 6, t. 7, f. 1 ad 3. Bot. Mag. t. 1385, 1560, 1764.*

2. *Schanoprasum*. Bulbi rhizomate carentes. Filamenta omnia simplicia v. staminum seriei interioris basi utrinque 1-dentata. Folia linearia, semiteretia v. fistulosa, basi v. alte vaginantia. Bractee involucentes erostres v. breviter rostratæ, flores non superantes. *Red. Lil. t. 100, 118, 214, 240. Cav. Ic. t. 206. Reichb. Ic. Fl. Germ. t. 494 ad 496, 498. Waldst. et Kit. Pl. Rar. Hung. t. 68. Desf. Fl. Atl. t. 83. Durieu, Explor. Alg. t. 46. Sibth. Fl. Gr. t. 326. Ledeb. Ic. Fl. Ross. t. 136, 355, 360, 378. Regel, Fl. Turkest. t. 7, f. 4 ad 11, t. 8 ad 10, t. 11, f. 1 ad 13. Link et Otto, Ic. Pl. Rar. t. 29. Bot. Mag. t. 1141, 1230, 1469. Bot. Reg. 1840, t. 51. Hayne, Arzneigew. vi. t. 6. SCHENOPRASUM, H. B. et K. Nov. Gen. et Sp. i. 277.*

3. *Rhiziridium*. Bulbi rhizomati perpendiculari v. obliquo v. repenti adnati, solitarii v. plures caespitosi. Cætera *Schanoprasii*. Sectio rarius in speciminibus siccis recognoscenda. *Jacq. Ic. Rar. t. 62, 364. Red. Lil. t. 98, 101, 233, 265, 271, 281, 286, 345, 357, 363. Reichb. Ic. Fl. Germ. t. 499, 500, 504, 508. Waldst. et Kit. Pl. Rar. Hung. t. 186. Jacq. Fl. Austr. t. 216, 423. Ledeb. Salisb. Gen. Pl. Fragm. 88 ad 94, genus *Allium* ad *A. nutantem*, Linn., limitavit, et species cæteras in genera 17 distribuit: HEXONYCHIA, CALLIPRENA, RAPHIONE, XYLORHIZA, BERENICE, PORRUM, CEPHA, PHYLLODOLON, CAMARILLA, SCHENISSA, BUTOMISSA, HYLOGETON, MOLYZA, CANIDIA, IULUS, SATURNIA et BRISEIS.

108. *Gilliesia*, *Lindl. Bot. Reg. t. 992*.—Perianthium marcescens, persistens; segmenta distincta, patentia,  $\infty$ -nervia, plus minus inæqualia, summo (ex interioribus) haud raro deficiente; corona (falso staminodia dicta) ad basin perianthii sub urceolo stamineo, e squamellis 3-12 linearibus integris v. varie dentatis incisive. Staminum filamenta in urceolum carnosum valde obliquum v. postice fissum alte connata, 3 inferiora ad apicem urceoli breviter et inæqualiter libera antherifera, 3 superiora parva dentiformia ananthera v. obsoleta, antheræ ovatæ, juxta basin dorsifixæ, loculis introrsum dehiscentibus. Ovarium sessile, ovoideo-subglobosum, urceolo inclusum, 3-loculare; stylus brevis, crassus, stigmate parum dilatato; ovula in loculis  $\infty$  (8-12). Capsula membranacea, ovoidea, loculicide dehiscens. Semina  $\infty$ , obovoideo-globosa, nigra, lævia, opaca, testa crassiuscule membranacea; embryo albumine carnosio parum brevior, rectus v. curvulus.—Bulbus tunicatus. Folia radicalia pauca, linearia. Scapus simplex, aphyllus. Flores in umbella terminali plures, longe pedicellati, virides v. sordide albescentes, pedicellis recurvis nutantes. Bracteæ involucentes 2, scariosæ, altera spathacea, altera minore lineari.

Species editæ 3, Chilenses, inter se evidenter parum distinctæ, sed specimina exsiccata pleraque imperfecta rite examinare nequimus. *Kunth, Enum. Pl. iv. 487. Baker in Journ. Linn. Soc. xvii. 507. Pæpp. et Endl. Nov. Gen. et Sp. t. 137, 138. Bot. Mag. t. 2716.*

Ordinem *Gilliesiarum* olim proposuit Lindley ex notis Miersianis definivitque ad interpretationem partium floris a botanicis recentioribus rejectam. Structuram veram optime illustravit descripsitque W. J. Hooker in Bot. Mag. l.c. Genera 7 a variis auctoribus distincta haud male in unum conjungeres, a cæteris *Allieis* distinctum andræcio irregulari filamentis plus minus connatis 3-4 antheriferis 3-2 parvis anantheris v. rarius omnibus in urceolo obliquo antheriferis. Corona ad basin segmentorum v. lorum perianthii adest etiam in *Tulbaghia*, *Tristagmate* et *Leucocorync*.

109. *Miersia*, *Lindl. in Miers, Trav. ii. 529, ex eod. Bot. Reg. sub t. 992*.—Perianthium marcescens, persistens; segmenta distincta v. vix ima basi brevissime connata, subæqualia, lineari-lanceolata, patentia; corona ad basin perianthii e squamis 6 brevibus apice sæpius 2-fidis. Staminum filamenta in urceolum valde obliquum ventricosum ore contractum alte connata, apice brevissime libera, ad os urceoli dentiformia, omnia antherifera; antheræ 6, parvæ, ovatæ, loculis introrsum dehiscentibus. Ovarium sessile, ovoideum, obtusum, 3-sulcum, 3-loculare; stylus breviter filiformis, stigmate parvo; ovula in loculis  $\infty$ . Capsula membranacea, ovoidea v. subglobosa, loculicide dehiscens. Semina  $\infty$ , obovoideo-globosa, nigra, lævia, opaca, testa crassiuscule membranacea; embryo cylindraceus, rectus v. curvulus, albumine carnosio subdimidio brevior.—Bulbus tunicatus. Folia radicalia, linearia. Scapus simplex, aphyllus. Flores in umbella terminali plures, longiuscule

pedicellati, virides v. pallide flavescentes, pedicellis tenuibus erectis v. vix apice recurvis. Bracteæ involucrantes 2, scariosæ, inter se parum inæquales.

Species 2, Chilenses. *Kunth, Enum. Pl. iv. 486. Baker in Journ. Linn. Soc. xvii. 506. C. Gay, Fl. Chil. t. 68.*

110. *Trichlora*, *Baker in Hook. Ic. Pl. t. 1237.*—Perianthium marcescens, diu persistens; segmenta 3, ima basi brevissime connata, a basi lanceolata acuminata, tenuiter sub-5-nervia, æqualia, patentia; 3 interiorum rudimenta nulla deteximus; corona 0. Stamina basi perianthii affixa eoque multo breviora, filamentis in urceolum latum tenuiter membranaceum 5-6-lobum connatis; lobi 2 v. 3 anantheri, late membranacei, integri v. undulato-lobati, 3 antheriferi quorum 2 late deltoidei, tertius linearis, leviter complanatus; antheræ ovatæ, dorsifixæ, loculis introrsum dehiscentibus. Ovarium sessile, breve, 3-sulcum, 3-loculare; stylus brevis, crassus, subinfundibuliformis, in ramos 3 rigidulos divaricatos introrsum stigmatosos divisus; ovula in loculis  $\infty$ . Capsula (immatura) subglobosa. Semina . . .—Bulbus tunicatus. Folia radicalia, linearia. Scapus simplex, aphyllus. Flores in umbella terminali plures, longiuscule pedicellati, colore incerto, pedicellis erectis. Bracteæ involucrantes 2, scariosæ, altera spathacea, altera minor linearis.

Species 1, prope Limam Peruviae lecta. *Herb. Hook.*

Floris structuram ab illa a Bakero descripta pluribus notis diversam invenimus, forte in specie variabilis est.

111. *Erinna*, *Philippi in Linnæa*, xxxiii. 266.—Perianthium infundibuliforme, tubo brevi; lobi anguste lineares, 1-nerves, subæquales, patentes. Stamina fauci affixa, 3 perfecta filamentis brevissimis, 3 altera ad filamenta filiformia ananthera perianthii segmentis æquilonga reducta; antheræ oblongo-lineares, loculis introrsum dehiscentibus. Ovarium minutum, tubo perianthii inclusum, 3-loculare; stylus brevis, cylindraceus, apice 3-lobus; ovula in loculis  $\infty$ . Capsula . . .—Bulbus tunicatus. Folia radicalia, linearia. Scapus simplex, aphyllus. Flores in umbella terminali plures, e luteo virentes, pedicellis  $\frac{1}{2}$ – $\frac{3}{4}$  poll. longis. Bracteæ involucrantes 2, scarioso-virescentes, interior exteriore minor. (*Char. ex Philippi.*)

Species 1, Chilensis, a nobis non visa, ab auctore ad specimen unicum descripta.

Genus inter affinia antheris longis distinctum videtur.

112. *Solaria*, *Philippi in Linnæa*, xxix. 72. (*Symea*, *Baker in Saund. Ref. Bot. t. 260.*)—Perianthium persistens; segmenta basi in tubum breviter campanulatum connata, cæterum distincta, lanceolata, patentia, interiora exterioribus paullo breviora; corona 0. Stamina 3 inferiora perfecta, 3 superiora ananthera, filamentis omnibus inferne dilatatis in membranam annularem basi perianthii adnatam connatis, superne breviter liberis; antheræ ovatæ, prope basin dorsifixæ, loculis introrsum dehiscentibus. Ovarium subglobosum, 3-sulcum, 3-loculare; stylus breviter columnaris, stigmatem parvo; ovula in loculis  $\infty$ . Capsula 'subglobosa.' Semina . . .—Bulbus tunicatus. Folium radicale (an semper?) unicum, lato-lineare. Scapus simplex, aphyllus. Flores in umbella terminali plures, mediocres, viriduli, longiuscule pedicellati, erecti. Bracteæ involucrantes 2, scariosæ.

Species 1, Chilensis. Ovula in loculis ovarii ex Philippo numerosa, ex Bakero 2 tantum, nos in flore uno examinato 5-6 vidimus, nonnullis jam sub anthesi abortivis, in aliis floribus ovarium nullum deteximus.

113. *Gethyum*, *Philippi, Descr. Nuev. Pl. ii. 73.*—Perianthium persistens, apertum; segmenta distincta (v. basi brevissime connata?), subæqualia, perangusta, patentia; coronæ squamellæ v. glandulæ 6, violaceæ, ad basin segmentorum sitæ. Stamina 3 inferiora perfecta, 3 superiora ananthera, filamentis in membranam latam ad basin perianthii connatis; antheræ cordatæ, loculis introrsum dehiscentibus. Ovarium minutum, ovato-

cylindraceum, 3-loculare; stylus brevis, crassiusculus, stigmatē parvo; ovula in loculis  $\infty$ . Capsula globosa, apice loculicide dehiscens. Semina globosa, nigra, lævia.—Bulbus tunicatus. Folia radicalia, elongata (5-pedalia,  $1\frac{1}{4}$  poll. lata). Scapus elatus, simplex, aphyllus. Flores in umbella terminali plures, majusculi (pollicares), longe pedicellati, basi virescentes, superne atro-purpurei. (*Char. ex Philippi.*)

Species 1, Chilensis, a nobis non visa, ab auctore ad specimen unicum descripta, ut videtur *Ancrumia* valde affinis nisi congener.

114. *Ancrumia*, Harv.; Baker in Hook.  *Ic. Pl. t. 1227*.—Perianthium marcescens; segmenta basi in tubum breviter campanulatum connata, cæterum distincta, 3 exteriora lanceolata acuminata, patentia, 3 interiora breviora, linearia, inter exteriora recurvo-patentia (in icone errore exteriora delineata); coronæ squamellæ 6, breves, latæ, truncatæ, violacæ, per paria prope basin segmentorum interiorum affixæ, additis interdum (fide Buchananii) alteris minimis, quas tamen in flore exsiccato haud deteximus. Stamina perfecta 2, cum filamento tertio ananthera ad basin segmentorum interiorum sub coronæ squamellas affixa, segmentis breviora, filamentis basi dilatatis breviterque connatis; antheræ oblongæ, prope basin dorsifixæ, versatiles, loculis introrsum dehiscentibus. Ovarium tubo perianthii subinclusum, ab eo tamen distinctum, ex Buchananio 3-loculare. Ovula . . . Fructus . . .—Bulbus tunicatus. Folia radicalia, linearia. Scapus simplex, aphyllus. Flores in umbella terminali plures, majusculi, longe pedicellati, pedicellis apice recurvis nutantes. Bractæe involucentes 2, scariosæ, parum inæquales.

Species 1, Chilensis. Ovarium in flore examinato imperfectum videbatur. Character fusior a Buchananio scriptus adest in Herb. Hook.

115. *Massonia*, Thunb.  *Nov. Gen. 39*. (Podocallis, Salisb.  *Gen. Pl. Fragm. 17*.)—Perianthii tubus cylindraceus, erectus, æqualis; lobi 6, subæquales, rotato-patentes v. reflexi. Stamina 6, fauci affixa, erecta, perianthio longiora, filamentis filiformibus basi in anulum prominentem connatis; antheræ ovoideæ, dorsifixæ, loculis introrsum dehiscentibus. Ovarium sessile, tubo inclusum, 3-loculare; stylus filiformis, stigmatē parvo; ovula in loculis  $\infty$ . Capsula oblongo-3-quetra v. 3-loba, membranacea, interdum fere scariosa, loculicide dehiscens. Semina  $\infty$ , parva, globosa, nigra.—Bulbus tunicatus. Folia radicalia 2, subopposita, patentia, ovata v. rarius oblonga. Umbella in capitulum condensata, inter folia subsessilis v. scapo brevissimo fulta. Flores numerosi, subsessiles. Bractæe involucentes 3– $\infty$ , membranacæ v. herbacæe, floribus sæpius breviores, interiores minores.

Species vix 20, Africæ australis incolæ.  *Kunth, Enum. Pl. iv. 295. Baker in Journ. Linn. Soc. xi. 387, quoad sp. n. 1 ad 18. Jacq. Hort. Schænbr. t. 454 ad 461. Red. Lil. t. 183, 392. Ait. Hort. Kew. ed. 1, t. 3, 4. Andr. Bot. Rep. t. 220. Link et Otto, Ic. Pl. Rar. t. 1. Bot. Mag. t. 559, 642, 736, 848. Bot. Reg. t. 694, 958.*

Genus ad species involucentas limitatum naturalissimum est, et inflorescentia perianthio et andræcio bene limitatum. Species exinvolucratæ, inflorescentia spicato-racemosa, genus formant *Polyxena*, Kunth, ad *Scilleas* juxta *Lachenaliam* referendum.

116. *Daubenya*, Lindl.  *Bot. Reg. t. 1813; 1839, t. 53*.—Perianthii tubus cylindraceus, æqualis, v. apice oblique ampliatus, limbus valde obliquus, latere exteriori præsertim florum exteriorum elongatus quasi ligulatus; lobi 6, posticus in fissura limbi brevis, angustus, erectus, 2 laterales parum distantes, subopposite patentes, breves, 3 inferiores ad apicem ligulæ obovali-oblongi, subæquales. Stamina 6, basi loborum affixa iisque breviora v. posticum lobo suo longius, filamentis breviter filiformibus; antheræ breviter oblongæ, dorsifixæ, loculis introrsum dehiscentibus. Ovarium sessile, perfecte (v. imperfecte?) 3-loculare, apice in stylum longe attenuatum, stigmatē capitato; ovula in loculis  $\infty$ . Capsula . . .—Bulbus tunicatus. Folia radicalia 2, subopposite patentia, ovalia. Umbella in capitulum depressum-condensata, inter folia subsessilis v. scapo

brevissimo fulta, perianthiorum exteriorum lobis exterioribus quasi radiata. Flores numerosi, subsessiles, flavi fulvi v. coccinei. Bracteæ involucrantēs ∞, subherbaceæ, floribus breviores. (*Char. ex ic. et descr. Lindleyi.*)

Species 3, Africæ australis incolæ, a nobis non visæ. *Baker in Journ. Linn. Soc. xi. 394.* Genus *Massoniæ* valde affine, floribus valde irregularibus in ordine insignē.

### TRIBUS XIII. SCILLEÆ.

117. **Whiteheadia**, *Harv. Gen. S. Afr. Pl. ed. 2, 396.*—Perianthii persistentis segmenta 6, subæqualia, patentia, basi in tubum brevem latum seu annulum connata. Stamina 6, basi perianthii affixa eoque breviora, filamentis filiformibus erectis basi in annulum prominentem more *Massoniæ* connatis; antheræ breviter oblongæ, dorsifixæ, loculis introrsum dehiscentibus. Ovarium sessile, 3-gonum, 3-loculare; stylus subulatus, persistens, stigmatē parvo; ovula in loculis ∞. Capsula obovoidea, acutangula sub-3-alata, membranacea, loculicide dehiscens. Semina in loculis ∞, parva, lageniformia, testa nigra membranacea.—Bulbus tunicatus. Folia 2, lata, suborbiculata, more *Massoniæ* patentia. Scapus brevis, simplex, aphyllus. Flores subsessiles, in spica brevi conferti, rhachi crassiuscula. Bracteæ herbaceæ, latæ, concavo-cucullatæ, acuminatæ, floribus longiores. (*Char. ex Jacq. Harv. et Baker.*)

Species 1, austro-Africana, a nobis non visa. *Baker in Journ. Linn. Soc. xiii. 226. Jacq. Ic. Rar. t. 449 (Eucomis).* *Andr. Bot. Rep. t. 368 (Melanthium).* *Bot. Mag. t. 840 (Eucomis).*

Genus evidenter *Massoniæ* affine, differt perianthii tubo brevissimo et inflorescentia *Scillearum*.

118. **Polyxena**, *Kunth, Enum. Pl. iv. 294. (Polyanthes, Jacq. Ic. Rar. t. 380. Massoniæ sect. Astemma, Endl. Gen. 145. Manlilia, Salisb. Gen. Pl. Fragm. 17.)*—Perianthii tubus cylindraceus, interdum longus tenuisque v. superne parum ampliatus; lobi 6, subæquales, tubo multo breviores, superne recurvi v. fere a basi recurvo-patentes. Stamina 6, fauci 2-seriatim affixa, perianthio parum breviora v. longiora, filamentis a basi distinctis filiformibus; antheræ parvæ, dorsifixæ, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare; stylus filiformis, stigmatē parvo; ovula in loculis ∞. Capsula 3-dyma, membranacea, loculicide 3-valvis. Semina pauca, globosa, nigra, nitidula.—Bulbus tunicatus. Folia radicalia 2, nunc more *Massoniæ* lata subsessilia opposita patentia, nunc angustiora erecta petiolata. Scapus infra inflorescentiam simplex, brevis, nunc inter folia brevissimus. Flores nunc brevissime nunc longius laxiusque spicati v. racemosi, racemo sæpius foliis breviorē. Bracteæ ad basin pedicellorum parvæ, scariosæ, nunquam involucrantēs.

Species ad 7, Africæ australis incolæ. *Baker in Journ. Linn. Soc. xi. 388 (Massoniæ sp. n. 19 ad 25).* *Red. Lil. t. 386. Andr. Bot. Rep. t. 46. Bot. Mag. t. 554, 5891 (ic. omn. suæ Massonia).*

119. **Lachenalia**, *Jacq. in Act. Helvet. ix. ex Murr. Syst. Veg. 314.*—Perianthium tubulosum v. fere campanulatum; segmenta basi breviter v. alte connata, erecta, conniventia v. superne patentia, exteriora interdum fere libera, dorso sub apice sæpe tuberculo instructa, interiora longiora, sæpius altius connata, superne magis patentia. Stamina 6, ad faucem v. basi loborum affixa v. seriei exterioris fere hypogyna, filamentis filiformibus; antheræ parvæ, ovoideæ v. oblongæ, dorsifixæ, loculis introrsum dehiscentibus. Ovarium sessile v. breviter stipitatum, 3-loculare; stylus filiformis, stigmatē parvo v. pulvinato; ovula in loculis ∞, 2-seriata. Capsula membranacea v. subcoriacea, perianthio persistente inclusa, loculicide dehiscens. Semina obovoidea v. globosa, testa nigra crassiuscula, funiculo interdum longiusculo.—Bulbus tunicatus. Folia radicalia 2 v. in paucis speciebus 3-5, crassiuscula, oblonga loriformia linearia v. subteretia, haud raro maculata v. pustulata. Scapus simplex, aphyllus. Flores secus rhachin simplicem sessiles, spicati, v. in racemo pedicellati, erecti patentes v. penduli. Bracteæ parvæ, scariosæ.

Species ad 30, Africæ australis incolæ. *Kunth, Enum. Pl. iv. 283. Baker in Journ. Linn. Soc. xi. 401.*

Genus lobis interioribus perianthii exteriora superantibus facile distinctum, in sectiones sequentes sat naturales dividitur:—

1. *Eulachenalia*. Flores penduli. Perianthium longe v. longiuscule tubulosum, lobis apice breviter patentibus v. suberectis. *Jacq. Ic. Rar. t. 61, 394 ad 400. Red. Lil. t. 2, 52, 297. Andr. Bot. Rep. t. 41, 148. Bot. Mag. t. 82, 590, 993.*

2. *Orchiops*. Flores erecti v. patentes, subspicati v. pedicellis brevibus racemosi. Perianthium tubo brevi interdum fere campanulatum, lobis omnibus v. interioribus solis apice patentibus. *Jacq. Ic. Rar. t. 381, 382, 384, 386 ad 393, 401; Hort. Schanbr. t. 82, 83. Red. Lil. t. 22, 162. Andr. Bot. Rep. t. 251, 296, 302, 350, 460. Bot. Mag. t. 735, 745, 766, 817, 854, 1269, 1372, 1373, 1401, 1497, 1517, 1611, 3552. Bot. Reg. t. 287, 1350, 1945. Lodd. Bot. Cab. t. 1076, 1129. Sweet, Brit. Fl. Gard. t. 179, ser. 2, t. 129. Saund. Ref. Bot. t. 170, 171. HEMAS, PLATTESTES, MONOESTES, CHLORIZA, et ORCHIOPS, *Salisb. Gen. Pl. Fragm. 21.**

3. *Brachyscypha*. Flores erecti, subspicati. Perianthium angustum, lobis omnibus erectis angustis. Huc pertinent *L. orthopetala*, *Jacq. Ic. Rar. t. 383*, et *L. pusilla*, *Jacq. l. c. t. 385* (*BRACHYSCYPHA*, *Baker in Journ. Linn. Soc. xi. 393*).

4. *Cælanthus*. Flores erecti, subspicati. Perianthium oblongo-ventricosum, basi valde oblique pedicello brevissimo adnata, lobi breves, erecti, parum inæquales. Species unica: *CÆLANTHUS*, *Willd. in Schult. Syst. vii. Gen. 46 in adnot.*

Lemaire in *Illustr. Hort. ii. Misc. 99, 100*, et *iii. Misc. 33*, genus *Lachenalia* ad alios characteres in genera 3 dividit: *LACHENALIA*, *ORCHIASTRUM* et *SCILLOPSIS*.

120. *Drimia*, *Jacq. Ic. Rar. absque char. gen. ; Coll. v. (Suppl.) 38. (Idothea, Kunth, Enum. Pl. iv. 341. Idothearia, Presl, Bot. Bemerk. 114.)*—Perianthii segmenta basi in tubum campanulatum plus minus connata, superne libera tuboque sæpius longiora, sub anthesi patentissima v. reflexa. Stamina 6, fauci affixa, perianthio vix breviora, erecta conniventia v. demum patula, filamentis filiformibus; antheræ oblongæ, dorsifixæ, loculis introrsum dehiscentibus. Ovarium sessile, ovoideum, acuminatum, 3-loculare; stylus filiformis, stigmatē parum incrassato 3-dymo; ovula in loculis ∞ (6–12). Capsula ovoideo-3-quetra, membranacea, loculicide dehiscens. Semina oblonga, compressa, testa nigra laxiuscula interdum ad margines acuta fere alata; albumen carnosum; embryo cylindraceus, albuminis dimidium superans.—Bulbus laxē tunicatus. Folia radicalia, lanceolata loriformia v. anguste linearia. Scapus simplex, aphyllus. Flores in racemo simplici sæpius elongato breviter v. longiuscule pedicellati, patentes. Bracteæ parvæ.

Species ad 15, Africæ australis et tropicæ. *Baker in Journ. Linn. Soc. xi. 419, et in Trim. Journ. Bot. 1874, 6. Jacq. Ic. Rar. t. 373 ad 375, 377. Jacq. f. Ed. t. 30. Red. Lil. t. 430. Bot. Mag. t. 822, 1444, 5522. Bot. Reg. t. 1346. Saund. Ref. Bot. t. 190.*

Genus quoad species typicas austro-Africanas facile distinctum, staminibus e fauce longe exsertis erectis conniventibus; in *D. hyacinthoides*, *Baker*, et in speciebus 2 tropicis, stamina breviora, minus erecta, et flores fere *Hyacinthi* (*Bellevallia*), sed semina ∞ videntur et valde compressa *Drimia*. Huc etiam pertinere videntur *Ornithogalum? anomalum*, *Baker in Saund. Ref. Bot. t. 178*, et *O. ? Cooperi*, *Baker in Journ. Linn. Soc. xiii. 284*, quorum tamen semina adhuc ignota.

121. *Rhadamanthus*, *Salisb. Gen. Pl. Fragm. 37.*—Perianthium campanulatum, lobi tubo æquales v. longiores, erecti, subconniventes. Stamina 6, fauci affixa, perianthio breviora, filamentis brevibus; antheræ oblongæ, longiusculæ, circa stylum conniventes, loculis introrsum dehiscentibus. Ovarium sessile, ovoideum, 3-loculare, in stylum breve columnare 3-sulcum attenuatum, stigmatē parvo; ovula in loculis ∞. Capsula membranacea, loculicide 3-valvis. Semina in loculis 6–8, plano-compressa, nigra.—Bulbus tunicatus. Folia serotina, brevia, angusta, subteretia. Scapus tenellus, simplex, aphyllus. Flores in racemo laxo plures, parvuli, penduli.

Species 1, Austro-Africana, a nobis non visa. *Baker in Journ. Linn. Soc. xi. 434. Jacq. Hort. Schanbr. t. 81 (Hyacinthus).* Char. floris ex *Jacq.* et *Salisb.*, fructus ex *Bakero* qui specimen *Masseonianum* vidit in herb. Mus. Brit.

122. *Massoniana*, *Harv. in Hook. Lond. Journ. iii. 314, t. 9.*—Perianthium tubulosum, cylindraceum; lobi 6, brevissimi, ovati, erecto-patentes, subæquales. Stamina 6, fauci

affixa, filamentis brevissimis; antheræ ovatæ, lobis breviores, loculis introrsum dehiscentibus. Ovarium sessile, 3-quetrum, 3-loculare; stylus filiformis, stigmatē brevissime 3-fido; ovula in loculis 6. Capsula erecta, subglobosa. Semina . . .—Bulbus parvus, tunicatus. Folia radicalia, serotina, brevia, lineari-filiformia. Scapus simplex, filiformis, aphyllus. Flos parvus, ad apicem scapi solitarius, breviter pedicellatus, nutans. Bracteæ 2, minimæ, reflexæ.

Species 1, Africæ australis incolæ. Specimina nostra plantæ hujus pusillæ tenerrimæque flores perpaucos minimos præbent, ejus structuram interiorem ex Harveyi descr. et ic. sumpsimus.

123. *Dipcadi*, Medicus in *Act. Palat.* vi. 431, ex eod. in *Ust. Ann.* ii. 13. (Zuccagnia, Thunb. in *Rœm. Archiv.* ii. 2. Polemannia, Berg. ex Schlecht. in *Linnaea*, i. 250. Uropetalum, Ker in *Bot. Reg.* t. 156. Tricharis, Salisb. *Gen. Pl. Fragm.* 24.)—Perianthii tubus cylindraceus, æqualis v. supra ovarium leviter contractus; lobi tubo sæpius æquilongi v. longiores, rarius breviores, 3 exteriores distincte patentes v. erecto-patentes obtusi v. acumine v. tuberculo subdorsali instructi; interiores sæpius breviores, erecti, obtusi, in tubum conniventes v. subconnati. Stamina 6, fauci æqualiter affixa, perianthio inclusa, filamentis brevibus nunc brevissimis liberis (nisi infra insertionem decurrentibus); antheræ lineares, dorsifixæ, loculis introrsum dehiscentibus. Ovarium sessile, ovoideum v. oblongum, 3-loculare; stylus brevis, columnaris, 3-sulcus, stigmatē 3-dymo parum incrassato; ovula in loculis numerosa. Capsula globosa 3-quetra v. 3-dyma, coriacea, loculicide dehiscens. Semina numerosa, compressa, testa crassiuscule membranacea nigra ad margines acutata v. in alam expansa.—Bulbus tunicatus. Folia radicalia, anguste linearia v. rarius latiora, crassiuscula. Scapus simplex, aphyllus. Racemus terminalis, lusus, simplex. Flores dissiti, breviter rarius longiuscule pedicellati, erecti v. patentes. Bracteæ subsariosæ, angustæ.

Species ad 20, Europæ australis, Africæ tropicæ et australis et Indiæ orientalis incolæ. Kunth, *Enum. Pl.* iv. 377 (*Uropetalum*). Baker in *Journ. Linn. Soc.* xi. 395. Cav.  *Ic. t. 30. Jacq. Ic. Rar. t. 66. Red. Lil. t. 202, 203. Reichb. Ic. Fl. Germ. t. 459. Nees, Gen. Fl. Germ. Monocot. ii. n. 44. Harv. Thes. Cap. t. 170. Bot. Mag. t. 859, 1185 (Scilla). Bot. Reg. t. 156, 974. Saund. Ref. Bot. t. 16, 17 (ic. veteriores sub *Hyacintho*, recentiores plur. sub *Uropetalo*).*

Genus a Bakero in sectiones 2 dividitur: 1. *Tricharis*, perianthii lobis exterioribus interiora vix superantibus obtusis, et 2. *Uropetalum*, lobis exterioribus longioribus plus minus acumine v. tuberculo instructis, characteres tamen fere de specie in speciem variant. In *D. comosa*, Baker in *Trans. Linn. Soc. Bot. i. t. 34*, ex Africa tropica, flores inferiores racemi sectioni priori conveniunt intermedii sectioni secundæ, summi steriles comam terminalem formant. In icone *D. ciliaris*, Harv. Thes. Cap. t. 170, stamina infra medium tubi nec fauci affixa delineantur antheris basifixis, quod in speciminibus nostris siccis non confirmatur.

124. *Galtonia*, Dcne. in *Fl. des Serres*, xxiii. (1880) 32.—Perianthii tubus latiusculus, basi rotundatus; lobi tubo subæquilongi, patentes, subæquales v. interiores paullo latiores. Stamina 6, fauci v. tubo affixa, lobis breviora, filamentis subulatis erectis; antheræ ovoideæ v. oblongæ, medio dorso affixæ, loculis introrsum dehiscentibus. Ovarium sessile, oblongum, 3-loculare; stylus stamina subæquans, stigmatē crassiusculo 3-dymo; ovula in loculis numerosa. Capsula oblonga, perianthio marcescente inclusa, membranacea, loculicide dehiscens. Semina numerosa, ovata, angulato-compressa v. fere plana, testa nigra membranacea; embryo albumine carnosio vix brevior, cylindraceus.—Bulbus tunicatus. Folia pauca, radicalia, longa, latiuscula. Scapus simplex, aphyllus. Flores in racemo longo laxo speciosi, candidi, penduli, in pedicello longiuscule articulati. Bracteæ lanceolatae, membranaceo-sariosæ.

Species 2, Africæ australis incolæ. Baker in *Saund. Ref. Bot. t. 174, 175 (Hyacinthus)*.

125. *Albua*, Linn. *Gen. n.* 416.—Perianthii persistentis segmenta distincta, 3 exteriora per anthesin a basi plus minus patentia, oblonga, flavida v. albidia, dorso late viridi vittata, 3 interiora paullo breviora, erecta, parallela, apice calyptratim conniventia, varie

cristata v. cucullata. Stamina 6, hypogyna, erecta, seriei exterioris interdum castrata, filamentis subulatis v. infra medium parum dilatatis, seriei interioris semper perfecta, filamentis supra basin dilatatum margine sæpius utrinque inflexis quasi 2-auriculatis, apice contractis v. subulatis; antheræ oblongæ, dorsifixæ, loculis introrsum dehiscentibus. Ovarium oblongum, 3-sulcum, 3-loculare; stylus columnaris, sæpius crassiusculus 3-sulcatusque, v. interdum 3-partibilis, apice clavatus, in stigmata breviter divisus, nunc brevissimus v. ovario æquilongus, nunc rarius elongatus tenuisque; ovula in loculis numerosa. Capsula perianthio emarcido stipata, ovoidea v. oblonga, 3-quetra, loculicide dehiscens. Semina numerosa, oblonga, valde compressa, marginibus acutis, testa nigra latiuscula utrinque fere in alam expansa; embryo albumine carnosio parum brevior.—*Bulbus tunicatus*. Folia radicalia, linearia. Scapus simplex, aphyllus. Flores in racemo laxo, erecti v. cernui, mediocres v. speciosi, albo-virides v. flavi. Bracteæ membranaceo-scariosæ.

Species fere 30, Africæ australis et tropicæ incolæ. *Kunth, Enum. Pl. iv. 372. Baker in Journ. Linn. Soc. xiii. 285; in Trans. Linn. Soc. Bot. i. 250. N. E. Br. in Gard. Chron. 1880, i. 198, f. 41.*

Genus potius *Galtoniæ* et *Dipadi* quam *Ornithogalo* affine, a Bakero in sectiones 3 potius artificiales quam naturales dividitur:—

1. *Eualbuca*. Stamina seriei exterioris antheræ castratæ v. abortivæ. Stylus brevis nunc brevissimus. *Jacq. Ic. Rar. t. 63, 443, 444, 446. Red. Lil. t. 21, 69, 70. Bot. Mag. t. 720, 804, 1656, 6395. Lodd. Bot. Cab. t. 1191. Saund. Ref. Bot. t. 239, 334.*

2. *Falconera*. Stamina omnia perfecta. Stylus brevis nunc brevissimus. *Jacq. Ic. Rar. t. 439 ad 442, 445; Hort. Schænbr. t. 84. Red. Lil. t. 474. Andr. Bot. Rep. t. 450. Bot. Mag. t. 1481, 6649. Bot. Reg. t. 277. Saund. Ref. Bot. t. 44, 45, 335. BRANCIONA et FALCONERA, Salisb. Gen. Pl. Fragm. 36.*

3. *Pallastema*. Stamina omnia perfecta. Stylus quam in *Falconera* longior, interdum longo filiformis. *Jacq. Ic. Rar. t. 64. Red. Lil. t. 195. Bot. Mag. t. 6429. Saund. Ref. Bot. t. 336. PALLASTEMA, Salisb. Gen. Pl. Fragm. 36.*

126. *Urginea*, *Steinh. in Ann. Sc. Nat. ser. 2, i. 321, t. 14.*—Perianthium demum deciduum; segmenta 6, distincta, subæqualia, campanulato-conniventia v. sub anthesi patentia. Stamina 6, ima basi segmentorum affixa iisque breviora, filamentis filiformibus v. rarius basi v. medio dilatatis v. incrassatis; antheræ oblongæ v. oblongo-lineares, dorsifixæ, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare, sæpius 3-quetrum; stylus filiformis, brevis v. ovario sublongior, stigmatate parum incrassato; ovula in loculis ∞. Capsula 3-quetra, inter angulos sulcata v. intrusa, nunc lata obtusissima v. truncata, nunc rarius fere oblonga, obtusa v. acutiuscula, membranacea, loculicide dehiscens. Semina in loculis ∞, rarius abortu 1-2, valde compressa, testa nigra membranacea margine utrinque plus minus in alam expansa; embryo albumine carnosio sæpius paullo v. vix brevior.—*Bulbus tunicatus*. Folia radicalia, nunc angustissime linearia, nunc late loriformia v. fere oblonga. Scapus simplex, aphyllus. Flores in racemo terminali sæpius numerosi, parvuli v. mediocres, in pedicello brevi v. longiusculo articulati, albi v. rarius pallide flavi v. rosei, segmentis medio colore intensiore vittatis 1-nerviis v. tenuiter 2-3-nerviis. Bracteæ parvæ, scariosæ, inferiores in pluribus speciebus basi infra insertionem in calcar productæ, superiores sæpeque omnes minimæ basi nudæ.

Species ad 24, Europæ, regionis totæ Mediterraneæ, Indiæ orientalis, et Africæ tropicæ et australis incolæ. *Kunth, Enum. Pl. iv. 331. Baker in Journ. Linn. Soc. xiii. 215, et in Trans. Linn. Soc. Bot. i. 247. Jacq. Ic. Rar. t. 414, 415, 417, 418 (Anthericum); Hort. Schænbr. t. 87 (Ornithogalum) et t. 86 (Anthericum). Red. Lil. t. 116 (Scilla). Reichb. Ic. Fl. Germ. t. 466 (Scilla). Nees, Gen. Fl. Germ. Monocot. ii. n. 47. Jord. et Fourr. Ic. Fl. Eur. t. 201 ad 205 (Squilla). Desf. Fl. Atl. t. 88 (Scilla). Durieu, Expl. Alg. t. 45. Wight, Ic. t. 2063, 2064. Bot. Mag. t. 871 et 1046 (Albuca), t. 918 (Ornithogalum), et t. 1074 (Drimia). Bot. Reg. t. 311 et 557 (Albuca).*

Genera plura a Salisbury aliiq. proposita a Bakero bene in unum junguntur, hinc *Drimi* hinc *Scille* affine, a priori perianthii segmentis distinctis, ab hac imprimis perianthio deciduo capsula et seminibus separandum. Sectiones adhuc propositæ vix characteribus certis limitatæ.

*Physodia*, *Salisb. Gen. Pl. Fragm. 37*, est *U. physodes*, *Baker*, filamentis medio incrassatis papilloso-villosis, a Bakero pro sectione admittitur, species includens 7, vix nisi floribus solito minoribus distinguendas.

*SYMPHRISIA*, *Salisb. Gen. Pl. Fragm.* 37, genus ad *U. exuviatam* et *U. filifoliam*, Steinh. confectum. Species sunt Austro-Africanæ, bulborum tunicis nonnullis in vaginam scariosam vittis transversis elevatis notatam productis insignes. Baker sectionem extendit ad species omnes typicas Steinhilii, inclusis pluribus quarum vaginæ vittis carent.

*SQUILLA*, *Steinh. in Ann. Sc. Nat. ser. 2, vi. 276*, a Bakero pro sectione admissa, includit *U. maritima*, Bak., speciesque paucas affines, ab *Urgineis* typicis non nisi bulbo majore et foliis latioribus distinctas.

*Albucoopsis*, Baker, pro sectione proposita, includit *U. indicam*, Kunth, speciesque nonnullas affines ex Africa tropica, quibus nervus centralis segmentorum perianthii plus minus distincte duplex est, v. in una specie nervi 3 discreti.

*U. secunda*, Baker (*Ornithogalum*, Jacq.), ad hujus generis sect. *Osmynem* restituenda videtur, ob perianthium explanatum, filamentis hypogynis.

*U. aloides*, Bolus in Journ. Linn. Soc. xviii. 395, a genere pluribus notis longe recedens, supra ad *Notosceptrum* relata est.

127. *Veltheimia*, *Gled. in Act. Acad. Berol.* 1769, 66.—Perianthium tubulosum, cylindraceum, æquale v. superne leviter ampliatum, persistens; lobi 6, æquales, brevissime dentiformes. Stamina 6, supra medium tubi æqualiter affixa, inclusa, filamentis brevibus filiformibus; antheræ oblongæ, dorsifixæ, loculis introrsum dehiscentibus. Ovarium sessile v. subsessile, oblongum, 3-loculare; stylus filiformis, stigmate parvo; ovula in quoque loculo 2, collateralia (rarius 3?). Capsula membranaceo-scariosa, angulis 3 valde dilatatis akeliformibus, alis demum fissis loculicide dehiscens, valvis tamen in axi persistentibus. Semina in quoque loculo 1-2, obovoidea v. pyriformia, testa nigra appressa.—Bulbus tunicatus. Folia radicalia, plura, oblonga v. loriformia, crassiuscule herbacea, inferiora breviter superiora longe vaginata scapi basin obtegentia. Scapus simplex, aphyllus. Flores speciosi, in racemo v. spica terminali densa conferti, breviter pedicellati v. subsessiles, penduli v. nutantes. Bracteæ scariosæ, breves, summæ sæpe vacuæ ad apicem spicæ comosæ.

Species 3, Africæ australis incolæ. *Kunth, Enum. Pl.* iv. 281. *Baker in Journ. Linn. Soc.* xi. 410. *Jacq. Hort. Schanbr. t.* 77, 78. *Red. Lil. t.* 440. *Bot. Mag. t.* 501 (*Aletris*), 1091, 3456. *Lodd. Bot. Cab. t.* 1245.

128. *Rhodocodon*, *Baker in Journ. Linn. Soc.* xviii. 280, t. 8.—Perianthium campanulatum; lobi tubo pluries breviores, æquales, 1-nerves, subpatentes. Stamina 6, infra medium tubi affixa eoque breviora, filamentis filiformibus; antheræ oblongæ, infra medium dorsifixæ, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare; stylus filiformis, stigmate parvo; ovula in loculis  $\infty$  (5-6), ascendunt. Capsula . . .—Bulbus tunicatus. Folia radicalia, pauca, linearia. Scapus simplex, aphyllus. Flores in racemo terminali simplici laxo pedicellati, nutantes, ad bracteas minimas solitarii.

Species 1, Madagascariensis.

129. *Muscari*, *Mill. Dict.*—Perianthium urceolato-globosum v. oblongum, ad faucem constrictum, marcescens, demum a fructu deciduum; lobi 6, brevissime dentiformes, erecti v. demum recurvo-patentes, parum inæquales. Stamina 6, tubo 2-seriatim affixa, inclusa, filamentis breviter filiformibus v. basi complanatis; antheræ ovatæ, dorsifixæ, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare; stylus brevis, columnaris, 3-suleus v. plus minus 3-partibilis, stigmatibus 3 parvis; ovula in quoque loculo 2, arcte superposita v. collateralia. Capsula brevis, lata, membranacea, 3-quetra, fere 3-alata, loculicide dehiscens. Semina in loculis 1-2, obovoidea v. subglobosa, testa nigra sæpe leviter rugulosa; embryo in albumine duro oblongus.—Bulbus tunicatus. Folia radicalia, pauca, linearia, carnosula. Scapus simplex, aphyllus. Flores in racemo terminali simplici denso v. elongato breviter v. longiuscule pedicellati, penduli v. nutantes, summi interdum steriles, longius pedicellati, comosi. Bracteæ parvæ, scariosæ.

Species præsertim a hortulanis inordinate multiplicatæ, sed fere 40 satis distinctæ videntur, Europæ, Africæ borealis et Asiæ occidentalis incolæ. *Kunth, Enum. Pl.* iv. 310 et 313 (*Muscari* et *Botryanthus*). *Baker in Journ. Linn. Soc.* xi. 411, et in *Gard. Chron.* 1878. *Reichb. Ic. Fl. Germ.* t. 456, 457. *Boiss. Fl. Or.* v. 287.

Genus ab auctoribus in sectiones 3 dividitur, inter se vix distinctas etsi a nonnullis pro generibus propriis habeantur:—

1. *Moschardia*. Perianthii lobi dentiformes, minimi, dorso incrassati. *Red. Lil. t. 132. Jamb. et Spach, Ill. Pl. Or. t. 329. Bot. Mag. t. 734, 1565, 6269. Sweet, Brit. Fl. Gard. t. 210. MOSCHARDIA, Salisb. Gen. Pl. Fragm. 25.*

2. *Botryanthus*. Perianthii lobi etsi brevissimi quam in *Moschardia* evidentiores, sub anthesi stellato-patentes, nec dorso incrassati. *Jacq. Fl. Austr. t. 187. Red. Lil. t. 232, 361 (364 in textu), Jord. et Fourr. Ic. Fl. Eur. t. 271 ad 280. Bot. Mag. t. 122, 157. Sweet, Brit. Fl. Gard. t. 15. 259, et ser. 2, t. 369. Saund. Ref. Bot. t. 172, 173. Reg. Gartenfl. t. 377. BOTRYANTHUS, Kunth, Enum. Pl. iv. 310. BOTRYPHILE, Salisb. Gen. Pl. Fragm. 25.*

3. *Leopoldia*. Flores perfecti *Botryanthi*, summi cujusve racemi imperfecti, steriles, longius pedicellati, comam formantes. *Jacq. Fl. Austr. t. 126. Red. Lil. t. 231. Bot. Mag. t. 133. LEOPOLDIA, Parlat. Fl. Palerm. i. 435, Fl. Ital. ii. 493. COMUS, Salisb. Gen. Pl. Fragm. 24.*

Icones veteriores nonnullae sub *Hyacintho*. *M. bootanense, Griff. Ic. t. 280, in Afghanistan lecta fuit, nec in Bhotan.*

130. *Hyacinthus*, Linn. Gen. n. 427.—Perianthium infundibuliformi-campanulatum, marcescens, demum a fructu deciduum, tubo aequali v. supra ovarium contracto nec ad faucem constricto; lobi 6, subæquales, tubo breviores v. longiores, erecto-patentes v. recurvi. Stamina 6, tubo v. faucis aequaliter affixa, perianthio breviora, filamentis breviter filiformibus v. basi complanatis; antheræ ovatae v. oblongae, dorsifixae, loculis introrsum dehiscentibus. Ovarium sessile, ovoideum, sæpe 3-quetrum, 3-loculare; stylus columnaris, brevis v. rarius elongatus, stigmatē parum incrassato; ovula in loculis pauca (sæpius 2-6). Capsula subglobosa, 3-sulca 3-didyma v. 3-loba, loculicide dehiscens. Semina pauca, obovoidea v. globosa, testa nigra; embryo cylindraceus, albumine fere corneo sæpius dimidio brevior.—Bulbus tunicatus. Folia radicalia linearia v. loriformia. Scapus simplex, aphyllus. Flores in racemo simplici laxo v. denso pedicellati, erecti patentes v. penduli. Bractee scariosae, angustae, sæpius parvae.

Species ad 30, quarum 3 (sect. *Peribaea*) Africanæ australes v. tropicæ, cæteræ omnes regionis Mediterraneæ v. Orientis incolæ. *Kunth, Enum. Pl. iv. 303, 306, 292 (Hyacinthus, Bellevalia et Peribaea). Baker in Journ. Linn. Soc. xi. 423 (excl. sp. n. 1 et 2); in Trim. Journ. Bot. 1874, 7.*

Genus in sectiones sequentes dividitur, ab auctoribus nonnullis pro generibus propriis habitas:—

1. *Euhyacinthus*. Perianthium infundibuliforme, tubo infra ovarium contracto, lobi recurvo-patentes tubo breviores. Stamina tubo inclusa, filamentis filiformibus. Species unica, *H. orientalis*, Linn., in hortis jamdiu culta. *Red. Lil. t. 465. Reichb. Ic. Fl. Germ. t. 460, f. 1005. Nees, Gen. Fl. Germ. Monocot. ii. n. 43. Jord. et Fourr. Ic. Fl. Eur. t. 216 ad 220. Bot. Mag. t. 937. Bot. Reg. t. 995.*

2. *Hyacinthella*. Perianthium campanulatum, lobis tubo multo brevioribus erecto-patentibus. Stamina tubo inclusa, 1-2-seriata. *Red. Lil. t. 14. Reichb. Iconogr. Eur. t. 331. Bot. Mag. t. 2425. Bot. Reg. t. 398. Sweet, Brit. Fl. Gard. t. 135. Jord. et Fourr. Ic. Fl. Eur. t. 164, 166. HYACINTHELLA, Schur in Oest. Bot. Wochenbl. 1856, 227. BRIMEURA, Salisb. Gen. Pl. Fragm. 26.*

3. *Strangweya*. Perianthii lobi tubo æquilongi. Stamina ad faucem 1-seriata, filamentis brevibus late membranaceis 3-dentatis, dente medio antherifero. Ovula ad 4. Flores in spica subsessiles, bracteis semisagittatis. Species unica, *H. spicata*, Sm.; Lindl. Bot. Reg. t. 1869. STRANGWEYA, Bertol. in Mem. Soc. Ital. Moden. xxi. 2, t. 1. Boiss. Fl. Or. v. 309. FOXIA, Parlat. Nuov. Gen. Monocot. 17.

4. *Bellevalia*. Perianthii lobi tubo subæquales v. breviores, quam in præcedentibus minus patentes. Stamina ad faucem aequaliter affixa, filamentis plus minus complanatis integris. *Ten. Fl. Nap. t. 135, 136. Sibth. Fl. Græc. t. 340. Viv. Fl. Lib. t. 7, f. 5. Red. Lil. t. 334. Bot. Mag. t. 939 (Scilla). Bot. Reg. t. 394, 1085 (Muscari). BELLEVALIA, Lapeyr. in Journ. Phys. lxvii. 425, t. 1. Reichb. Ic. Fl. Germ. t. 458. Kunth, Enum. Pl. iv. 306. Boiss. Fl. Or. v. 300. BUSEBQUIA, Salisb. Gen. Pl. Fragm. 25.*

5. *Peribaea*. Perianthii erecti lobi angusti, tubo æquilongi v. longiores. Stamina basi loborum affixa. Species 3, quarum 2 Africæ australis. *Jacq. Collect. iii. t. 19, f. 2. Andr. Bot. Rep. t. 345. Bot. Mag. t. 991 (Massonia postea sub t. 1468 ad Scillam translata). PERIBAEA, Kunth, Enum. Pl. iv. 292. ВЪОТЪРЪ, Salisb. Gen. Pl. Fragm. 17. Huc etiam referimus *H. ledebourioidem*, Baker in Journ. Linn. Soc. xi. 427, e regione Zambesiana.*

131. *Puschkinia*, *Adams in Nov. Act. Acad. Petrop.* xiv.; *Hist. Acad.* 164. (*Adamsia*, *Willd. in Gesellsch. Naturf. Fr. Berlin Mag.* ii. 16.)—Perianthii tubus brevis, campanulatus; lobi 6, subæquales, tubo longiores, subrotato-patentes. Stamina 6, fauci affixa, filamentis alte complanatis dilatatis in cyathum lobatum connatis lobis ultra antheras in conum conniventibus v. connatis; antheræ intra cyathum omnino inclusæ, brevissime stipitatæ, dorsifixæ, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare; stylus brevis, columnaris, stigmate parvo capitato; ovula in loculis pauca (ad 6). Capsula membranacea, loculicide dehiscens. Semina obovoidea v. globosa, demum nigra, albumine duro.—Bulbus tunicatus. Folia radicalia, pauca, primum sæpe oblongum, cætera linearia. Scapus simplex, aphyllus. Flores pauci, cærulei, laxè racemosi, interdum in scapo solitarii. Bractæe parvæ.

Species 2, Asiæ minoris, Caucasi et Afghanistaniæ incolæ. *Kunth, Enum. Pl.* iv. 337 (excl. *P. dubia* quæ *Hyacinthus spicatus*). *Baker in Journ. Linn. Soc.* xi. 434. *Lindl. Collect. t.* 24. *Bot. Mag. t.* 2244. *Regel, Gartenfl. t.* 310.

132. *Chionodoxa*, *Boiss. Diagn.* v. 61.—Perianthium deciduum, tubo breviter campanulato; lobi 6, subæquales, tubo longiores, subrecurvo-patentes. Stamina 6, fauci affixa, erecta, filamentis alternis v. omnibus petaloideo-dilatatis oblongis; antheræ longæ, ad apicem filamenti dorsifixæ, basi 2-fidæ, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare; stylus breviter columnaris nunc brevissimus, stigmate parvo v. capitato; ovula in loculis pauca (4-6). Capsula subglobosa, membranacea, loculicide dehiscens. Semina pauca, obovoidea v. globosa, bene matura non vidimus.—Bulbus tunicatus. Folia radicalia, pauca, linearia, longe vaginata. Scapus simplex, aphyllus. Flores pauci, cærulei, laxè racemosi, sæpe in scapo solitarii. Bractæe parvæ.

Species 4, Orientales. *Baker in Journ. Linn. Soc.* xi. 435. *Boiss. Fl. Or.* v. 311. *Jaub. et Spach, Illustr. Pl. Or. t.* 443. *Bot. Mag. t.* 6433, 6453.

133. *Drimiopsis*, *Lindl. in Paxt. Fl. Gard.* ii. 73, f. 172.—Perianthium persistens; segmenta subæqualia, ima basi brevissime connata, concava v. fere cucullata, conniventia. Stamina 6, supra basin segmentorum affixa iisque breviora, filamentis complanato-dilatatis inter se distinctis triangularibus v. apice breviter nunc brevissime subulatis; antheræ ovatæ v. breviter oblongæ, dorsifixæ, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare; stylus breviter filiformis, stigmate parvo capitato; ovula in loculis 2, a basi ascendentia. Capsula brevis, obtusissime 3-dyma v. fere 3-loba (carnosula?), loculicide dehiscens. Semina in loculis 1-2, obovoidea v. globosa, bene matura non vidimus.—Bulbus tunicatus, sæpe parvulus. Folia radicalia 2 rarius 3-4, oblonga, nunc basi in vaginam longe contracta, nunc distincte petiolata, sæpe maculata. Scapus simplex, aphyllus. Flores parvuli, in spica v. racemo denso rarius elongato subsessiles v. brevissime pedicellati. Bractæe parvæ.

Species ad 6, Africæ australis et tropicæ incolæ. *Baker in Journ. Linn. Soc.* xiii. 226, et in *Saund. Ref. Bot. t.* 191, 192. *Bot. Mag. t.* 6276.

Genus *Scilla* (*Ledebouria*) valde affine.

134. *Mucomis*, *Lhér. Sert. Angl.* 17, t. 18. (*Basilæa*, *Juss. Gen.* 52.)—Perianthium persistens; segmenta 6, subæqualia, patentia, ima basi brevissime connata. Stamina 6, prope basin segmentorum affixa iisque vix breviora, filamentis subulatis infra medium plus minus dilatatis inter se liberis; antheræ oblongæ v. oblongo-lineares, dorsifixæ, loculis introrsum dehiscentibus. Ovarium lata basi sessile, obtusè 3-gonum; stylus columnaris, integer v. 3-partibilis, stigmatibus parvis; ovula in loculis  $\infty$ , 2-seriata. Capsula depressoglobosa, 3-sulca 3-dyma v. 3-loba, membranacea, loculicide dehiscens. Semina haud numerosa, obovoidea, interdum compressiuscula nec angulata, testa appressa nigra v. castanea; embryo (in *E. punctata*) rectus, albumine duro vix brevior.—Bulbus tunicatus, sæpe majusculus. Folia radicalia, oblonga v. elongata. Scapus simplex, aphyllus,

crassiusculus, brevis v. elongatus. Flores in racemo denso v. elongato brevissime v. longiuscule pedicellati. Bracteæ sub pedicellis scariosæ v. subherbaceæ, breves; summæ vacuæ, auctæ, herbaceæ v. coloratæ, cômam terminalem formantes.

Species 4 v. 5, Africæ australis incolæ. *Kunth, Enum. Pl. iv. 301 (excl. E. bifolia). Baker in Journ. Linn. Soc. xiii. 224. Jacq. Hort. Schœnbr. t. 92. Red. Lil. t. 175, 208. Andr. Bot. Rep. t. 369. Bot. Mag. t. 913, 1083, 1495, 1539. Saund. Ref. Bot. t. 238.*

135. *Scilla*, *Linn. Gen. n. 419* — Perianthium diu persistens; segmenta subæqualia, distincta v. vix ima basi brevissime connata, patentia v. basi rarius altius campanulato-conniventia, 1-nervia. Stamina 6, basi v. infra medium segmentorum affixa iisque breviora v. rarius subæquilonga, filamentis filiformibus v. basi rarius alte complanatis integris; antheræ ovatæ v. oblongæ, dorsifixæ, loculis introrsum dehiscentibus. Ovarium sessile v. breviter stipitatum, 3-loculare; stylus filiformis, brevis v. longiusculus, stigmatē parvo capitato; ovula in loculis 2 v. pauca, rarius 8–10, ascendentia. Capsula globosa 3-dyma v. 3-loba, perianthio marcescente cincta v. demum deliquescente denudata, membranacea, loculicide dehiscens. Semina in loculis 1–2 v. rarius plura, obovoidea v. subglobosa, interdum obscure angulata, non v. vix compressa, testa nigra appressa; embryo albumine duriusculo dimidio v. parum brevior. — Bulbus tunicatus. Folia radicalia, linearia loriformia oblonga v. fere ovata. Scapus simplex, aphyllus. Flores parvi v. mediocres, racemosi, in pedicello articulati, cærulei rosei v. purpurascetes, racemo nunc elongato floribundo, nunc ad flores 2–3 reducto, interdum pedicellis confertis defloratis elongatis fere corymbiformi. Bracteæ parvæ.

Species fere 80, Europæ, Asiæ temperatæ et montanæ et Africæ extratropicæ v. tropicæ montanæ incolæ, cum specie una Chilensi. *Kunth, Enum. Pl. iv. 314. Baker in Journ. Linn. Soc. xiii. 228, et in Trans. Linn. Soc. Bot. i. 248.*

Genus a Bakero in sectiones tres quoad species plerasque bene distinctas divisum, quæ a pluribus botanicis pro generibus propriis habentur, sed intermediis nonnullis junctæ melius uti sectiones retinendæ videntur:—

1. *Euscilla*. Perianthii segmenta a basi patentia. Ovarium sessile v. vix brevissime stipitatum. Species (omnes?) extratropicæ, in Africa australi paucae, in regione Mediterranea numerosæ. *Red. Lil. t. 130, 166, 167, 190, 205, 254, 298, 304, 317, 321. Cav. Ic. t. 274. Andr. Bot. Rep. t. 365. Reichb. Ic. Fl. Germ. t. 463 ad 465. Nees, Gen. Fl. Germ. Monocot. ii. n. 46. Jacq. Fl. Austr. t. 117, 218. Waldst. et Kit. Pl. Rar. Hung. t. 189. Webb, Phytogr. Canar. t. 230 ad 233. Desf. Fl. Atl. t. 85 ad 87. Vis. Fl. Dalm. t. 4. Bot. Mag. t. 341, 663, 746, 749, 919, 1025, 1140, 2408, 3023, 3211, 5308, 5379. Bot. Reg. t. 1355, 1878; 1839, t. 63. Lodd. Bot. Cab. t. 151, 1015, 1483. Sweet, Brit. Fl. Gard. ser. 2, t. 141. Regel, Gartenfl. t. 307. Saund. Ref. Bot. t. 179, 305.*

Genera sequentia monotypica a variis auctoribus proposita omnia pro speciebus *Euscilla* habenda sunt. *BARNARDIA*, *Linl. Bot. Reg. t. 1029. Bot. Mag. t. 3788* est *S. chinensis*, Benth., species Asiæ orientalis ovarii loculis 1-ovulatis. *SOMERA*, *Salisb. Gen. Pl. Fragm. 26*, est *S. italica*, Linn.; *PROSPERO*, *Salisb. l. c. 28*, est *S. autumnalis*, Linn., utraque ovarii loculis 2-ovulatis. *PETRANTHE*, *Salisb. l. c. 27*, est *S. verna*, Linn., ovarii loculis 4-ovulatis. *MONOCALLIS*, *Salisb. l. c. 27*, est *S. monophylla*, Link, folio sæpius unico. *NECTAROSCILLA*, *Purlat. Nuov. Gen. Monocot. 27*, est *S. hyacinthoides*, Linn., ovario brevissime (sæpe inconspicue) stipitato, externe foris 3 nectarifluis instructo, quod etiam in aliis speciebus plus minus distincte observatur. *CALOSCILLA*, *Jord. et Fourr. Ic. Fl. Eur. iii. 14, t. 245 ad 255* (*BASALTOGETON*, *Salisb. Gen. Pl. Fragm. 26*), est *S. peruviana*, Linn., cum varietatibus præcipue hortensibus, species Mediterranea nec Peruviana, ovarii loculis  $\infty$ -ovulatis. *ADENOSCILLA*, *Gren. et Godr. Fl. Fr. iii. 187* (*RINOPodium*, *Salisb. Gen. Pl. Fragm. 28*), est *S. bifolia*, Linn., seminum funiculo in stropholium insigne incrassato. *OTHOCALLIS*, *Salisb. Gen. Pl. Fragm. 28*, includit *S. amanan*, Linn., et *S. sibiricam*, Andr., species perianthio majore subcampanulato sect. *Endymio* accedentes. *STELLARIS*, *Steinh. in Ann. Sc. Nat. ser. 2, vi. 286*, est *S. numidica*, Poir. (*S. parviflora*, Desf.), species ab *Euscillis* caractere nullo distincta. *STELLARIS*, *Manch. Meth. 303*, est genus spurium e speciebus ad genera plura *Scillearum* pertinentibus compositum.

2. *Ledebouria*. Perianthii segmenta basi in cupulam conniventia, cæterum patentia v. recurva. Ovarium distincto (interdum brevissime) stipitatum, supra stipitem basi rotundatum v. fere in discum dilatatum. Species Indiæ orientalis, Africæ tropicæ et australis incolæ. *Jacq. Ic. Rar.*

t. 376 (*Drimia*), 402 (*Lachenalia*). *Red. Lil. t.* 59, et *Andr. Bot. Rep. t.* 299 (*Lachenalia*). *Wight, Ic. t.* 2041 (*Barnardia*). *Bot. Mag. t.* 643 (*Lachenalia*), 1380 (*Drimia*) et 5580. *Saund. Ref. Bot. t.* 18 et 19 (*Drimia*) et t. 181 ad 189. *Lodd. Bot. Cab. t.* 278 et 1041 (*Drimia*). *LEDEBOURIA*, *Roth, Nov. Pl. Sp.* 194. *Wight, Ic. t.* 2040. *Dene. in Jacquem. Voy. Bot. t.* 171. *Bot. Mag. t.* 3226. *ERATOBOTRYS*, *Fenzl in Endl. Gen. Pl. Suppl. ii.* 13. *XEODOLON* et *SUGILLARIA*, *Salisb. Gen. Pl. Fragm.* 18. Huc etiam pertinere videtur *Ornithogalum? capitatum*, *Hook. Bot. Mag. t.* 5388, *Bak. in Journ. Linn. Soc. xiii.* 284.

3. *Endymion*. Perianthii segmenta alte in tubum v. campanulam conniventia, superne patentia. Species 2 Europæ occidentalis, ob formam perianthii olim *Hyacintho* ascriptæ, sed segmenta a basi libera *Scilla*, et cum *Euscillis* arcte junguntur mediantibus *S. amena* et *S. sibirica*. *Jacq. Ic. Rar. t.* 65. *Red. Lil. t.* 224, 435. *Bot. Mag. t.* 127 (128 in textu), 1102. *ENDYMION*, *Dumort. Fl. Belg. t.* 140. *AGRAPEIS*, *Link. Handb. i.* 166. *Reichb. Ic. Fl. Germ. t.* 461, 462. *Nees, Gen. Fl. Germ. Monocot. ii. n.* 45. *HYLOMENES*, *Salisb. Gen. Pl. Fragm.* 26. *USTERIA*, *Medic. in Ust. Ann. ii.* 11.

4. ? *Hesperoscilla*. Huc referenda *Scilla biflora*, *Ruiz et Pav. Fl. Per. et Chil. iii.* 69, t. 302 (*Ornithogalum biflorum*, *Don in Sweet, Brit. Fl. Gard. ser. 2,* 246; *O. ochroleucum*, *Lindl. Bot. Reg. t.* 1853), species *Chilensis*, inter *Scillam* et *Ornithogalum* quodammodo ambigua, ab utroque genere differt *Antherico* accedens floribus sub quaque bractea sæpe geminis. Perianthii segmenta patentia, albidia, medio 1-nervia et basi virescentia. Filamenta complanata, seriei exterioris hypogyna, seriei interioris segmentis basi adnata. Ovula in quoque loculo (in floribus examinatis) 3, superposita.

136. *Camassia*, *Lindl. Bot. Reg. t.* 1486. (*Cyanotris*, *Raf. in Amer. Monthl. Mag.* 1819, ex *Endl. Gen. Pl.* 145. *Sitocodium*, *Salisb. Gen. Pl. Fragm.* 27.)—Perianthium persistens; segmenta subæqualia, distincta, a basi patentia, tenuiter 3-∞-nervia. Stamina 6, ima basi v. prope basin segmentorum affixa iisque breviora, sæpe facile solubilia (v. interdum revera hypogyna?), filamentis filiformibus; antheræ oblongæ v. oblongo-lineares, dorsifixæ, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare; stylus filiformis, stigmatē breviter 3-fido; ovula in loculis ∞. Capsula ovato-oblonga, obtusa, membranacea v. chartacea, loculicide dehiscens. Semina ∞, obovoidea, vix angulata, testa nigra appressa; embryo (in seminibus examinatis) albumine carnoso triente brevior. —Bulbus tunicatus, esculentus. Folia radicalia, linearia v. loriformia. Scapus simplex, aphyllus. Flores in racemo laxo in pedicello articulati, cærulei purpurascens v. albidii. Bracteæ lineares, scariosæ.

Species 2, Americæ borealis incolæ. *Kunth, Enum. Pl. iv.* 346. *Baker in Journ. Linn. Soc. xiii.* 256. *S. Wats. in Proc. Amer. Acad. xiv.* 240. *Bot. Mag. t.* 1574 et 2774 (*Scilla*), 6287. *Fl. des Serres, t.* 275.

Genus a *Scilla* caractere nullo certo nisi perianthii nervis distinguendum. Stamina a *Lindley*, *Torreya* et *Bakero* hypogyna dicuntur (sæpius in speciminibus siccis observata?) a *Lemaire* in *Fl. des Serres*, segmentis affixa dicuntur, qualia etiam in *Bot. Mag. t.* 6287 delineata, et a nobis in speciminibus variis observata, in nonnullis pallidifloris *Douglasianis* a basi distantia, etsi sæpius ima basi affixa facillimeque solubilia. Perianthii segmenta variant in *C. Fraseri* 3-nervia,  $\frac{1}{4}$ – $\frac{1}{3}$ -pollicaria, in *C. esculenta* 5–9-nervia,  $\frac{1}{4}$ – $1\frac{1}{4}$ -pollicaria.

137. *Ornithogalum*, *Linn. Gen. n.* 418.—Perianthium persistens; segmenta subæqualia, distincta, per anthesin patentia, unicoloria v. dorso late viridi-vittata, obscure ∞-nervia. Stamina 6, sæpiissime hypogyna, filamentis basi v. alte complanatis rarissime a basi filiformibus; antheræ oblongæ, dorsifixæ, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare; stylus nunc brevissimus v. breviter columnaris, nunc longius filiformis, stigmatē capitato 3-sulco v. obscure 3-lobo; ovula in loculis ∞. Capsula globosa, 3-dyma v. 3-loba, nunc prominenter 6-costata, loculicide dehiscens. Semina ovoidea v. subglobosa, compressiuscula, nigra, testa appressa; embryo in albumine duriusculo brevis v. rarius dimidium albuminis superans.—Bulbus tunicatus. Folia radicalia, linearia v. loriformia. Scapus simplex, aphyllus. Racemus terminalis, nunc elongatus cylindraceus floribundus, nunc abbreviatus pedicellis inferioribus elongatis quasi corymbiformis. Bracteæ sub pedicellis scariosæ, angustæ, sæpius parvæ. Flores mediocres v. speciosi, segmentis margine v. undique albis flavidis v. miniatis nec cæruleis nec roseo-purpurascens.

Species ad 70, Europæ, Orientis, Africæ extratropicæ tam australis quam borealis incolæ, et in Africa tropica paucæ, una specie etiam in America extratropica inquilina. *Kunth, Enum. Pl. iv. 349. Baker in Journ. Linn. Soc. xiii. 267, et in Trans. Linn. Soc. Bot. i. 248. Nees, Gen. Fl. Germ. Monocot. ii. n. 48. Reichb. Ic. Fl. Germ. t. 467 ad 472. Boiss. Fl. Or. v. 211.*

Genus a *Scilla* evidenter bene distinctum etsi characteribus certis difficillime limitandum, nec semper nisi florum colore distinguendum, a Bakero in sectiones sequentes vix semper bene definitas dividitur:—

1. *Heliocharmos* (*O. umbellatum*, Linn. et aff.). Racemi laxi, pedicellis inferioribus elongatis sæpe fere corymbiformes. Perianthii segmenta vittata, marginibus albis angustis. Filamenta sub-lanceolato-dilatata, subæqualia. Stylus filiformis. *Jacq. Ic. Rar. t. 426; Fl. Austr. t. 343. Red. Lil. t. 143. Jord. et Fourn. Ic. Fl. Eur. t. 72 ad 79. Moggr. Fl. Ment. t. 67, 68. Ten. Fl. Nap. t. 33, 34, 220, 225, 226. Sibth. Fl. Gr. t. 333. Labill. Ic. Pl. Syr. Dec. v. t. 8. Bot. Mag. t. 3077. Bot. Reg. t. 556; 1838, t. 28; 1845, t. 21. Sweet, Brit. Fl. Gard. ser. 2, t. 42, 58, 111.*

2. *Caruelia* (*O. arabicum*, Linn. et aff.). Inflorescentia fere *Heliocharmi*. Perianthii segmenta non vittata, alba flavida v. miniata. Filamenta seriei interioris v. interdum omnia basi breviter et latiuscule dilatata, interdum ibidem 2-cuspidata (in specie typica omnia angustius dilatata). Stylus brevissimus v. columnaris. *Jacq. Ic. Rar. t. 435 ad 438; Hort. Vind. iii. t. 28; Hort. Schænbr. t. 89. Red. Lil. t. 333, 439. Brot. Phytogr. Lusit. t. 48. Ruiz et Pav. Fl. Per. et Chil. t. 300. Andr. Bot. Rep. t. 505. Bot. Mag. t. 190, 653, 728, 1164, 3179. Bot. Reg. t. 305, 315, 906. Saund. Ref. Bot. t. 20. CARUELIA, Parlat. Nov. Gen. et Sp. Monocot. 21. MYANTHE, ASPASIA, et PLEUCOLMA, Salisb. Gen. Pl. Fragm. 34, 35.*

3. *Myogalum* (*O. nutans*, Linn.). Racemus quam in præcedentibus longior floribus majoribus. Perianthii segmenta vittata, margine alba. Filamenta alte dilatata, petaloidea, apice 3-cuspidata, cuspidate medio antherifero. Stylus filiformis. *Jacq. Fl. Austr. t. 301. Moggr. Fl. Ment. t. 38. Bot. Mag. t. 269. HONORIUS, S. F. Gray, Brit. Fl. Pl. ii. 177. MYOGALUM, Link, Handb. i. 163. ALBUCA, Reichb. Fl. Germ. Exc. 109; Ic. Fl. Germ. t. 473; Nees, Gen. Fl. Germ. Monocot. ii. n. 49. BRIZOPHILE, Salisb. Gen. Pl. Fragm. 34.*

4. *Beryllis* (*O. pyrenaicum*, Linn. et aff.). Racemus elongatus v. cylindraceus, floribus mediocribus v. parvulis. Perianthii segmenta vittata, margine alba rarius pallide fuscescentia. Filamenta integra, complanata v. filiformia. Stylus brevis. *Jacq. Ic. Rar. t. 423, 425, 429; Hort. Schænbr. t. 88, 90; Hort. Vind. iii. t. 29; Fl. Austr. t. 103. Jacq. f. Ecl. t. 20. Red. Lil. t. 120, 234, 312, 417, 422. Waldest. et Kit. Pl. Rar. Hung. t. 95 (Anthericum). Bot. Mag. t. 805, 972, 2510. Bot. Reg. t. 235, 316. Saund. Ref. Bot. t. 262. BERYLLIS et ARDERNIA, Salisb. Gen. Pl. Fragm. 33, 35.*

5. *Osmyne* (*O. odoratum*, Ker). Perianthii segmenta margine flava v. virescentia. Cætera *Beryllidis*. *Jacq. Ic. Rar. t. 430 ad 433; Hort. Schænbr. t. 91. Andr. Bot. Rep. t. 260. Bot. Mag. t. 1329 (Albuca). Bot. Reg. t. 158. TENIOLA et OSMYNE, Salisb. Gen. Pl. Fragm. 35.*

MONOTASSA, Salisb. Gen. Pl. Fragm. 36, est *O. secundum*, Jacq., a Bakero ad *Urgineam* translatum. Stamina tamen nobis hypogyna videntur et characteres omnes *Ornithogali* (*Osmynis*), nisi racemus pauciflorus secundus.

6. *Cathissa*. Racemus elongatus. Perianthii segmenta alba v. albida, non vittata, enervia v. tenuiter co-nervia. *Jacq. Ic. Rar. t. 416 (Anthericum), 424, 427, 428, 434. Red. Lil. t. 418. Andr. Bot. Rep. t. 274. Brot. Phytogr. Lusit. t. 48. Bot. Mag. t. 876, 935, 953, 1134, 3538. Bot. Reg. t. 1978. Lodd. Bot. Cab. t. 1159. EUSTACHYS et CATHISSA, Salisb. Gen. Pl. Fragm. 33, 34.*

*O. biflorum*, Don (*Scilla biflora*, R. et Pav.) melius ad *Scillam* restituendum videtur, etsi neutri generi bene convenit.

#### TRIBUS XIV. TULIPÆÆ.

138. *Lilium*, Linn. Gen. n. 410.—Perianthium deciduum, infundibuliforme v. sub-campanulatum; segmenta distincta, plus minus in unguem contracta, basi v. alte in tubum laxum conniventia v. erecto-patentia, a medio v. apice solo recurvo-patentia v. revoluta, unguibus basi sulco plus minus nectarifero sæpius præditis. Stamina 6, hypogyna, segmentis breviora, filamentis filiformibus v. leviter complanatis; antheræ lineares v. oblongo-lineares, dorsifixæ, versatiles, demum sæpe curvæ, localis introrsum dehiscens. Ovarium sessile, angustum, 3-loculare; stylus elongatus, apice sæpius clavatus, stigmate crasso capitato 3-dymo v. rarius distincte 3-lobo; ovula in loculis numerosa. Capsula

oblonga, chartacea v. coriacea, loculicide dehiscens. Semina numerosa, plano-compressa, late obovata v. irregulariter orbiculata, brunnea v. pallida, testa membranacea appressa sæpe anguste marginata; embryo albumine carnosio parum v. multum brevior.—Bulbus varius, sæpius e squamis crassiuscule carnosis imbricatis v. confertis. Caules erecti, foliati, simplices v. rarius apice ramosi. Folia in sect. *Cardiocrino* petiolata, late cordato-ovata, in cæteris speciebus angusta v. rarius ovata, sessilia v. vix in petiolum contracta, sparsa v. subverticillata. Flores magni, speciosi, ad apicem caulis solitarii v. plures (pauci) laxe racemosi, racemo rarius subramoso, sæpius patentes v. penduli, rarius erecti.

Species ad 45, regionum temperatarum hemisphærii borealis incolæ. *Kunth, Enum. Pl. iv. 256. Baker in Journ. Linn. Soc. xiv. 225. Elwes, Monogr. Lil., folio, Londini 1880, cum tabb. 48. Red. Fl. Nep. t. 29. Wight, Ic. t. 2031 ad 2035. Kl. in Pr. Waldem. Reise, Bot. t. 93. Sieb. et Zucc. Fl. Jap. t. 12, 13, 42. Bot. Mag. t. 36, 259, 278, 519, 800, 858, 872, 893, 936, 971, 1018, 1237, 1405, 1591, 1634, 2280, 3785, 4561, 4731 (*Fritillaria*), 5338, 5673, 6005, 6058, 6126, 6146, 6250, 6332, 6630. Bot. Reg. t. 560, 580, 594, 2000; 1839, t. 38; 1843, t. 11; 1846, t. 50. Sweet, Brit. Fl. Gard. ser. 2, t. 185, 367. MARTAGON, Salisb. Gen. Pl. Fragm. 56.*

Genus ad Endlichero et Kunthio in sectiones 4, a Bakero in subgenera 5 divisum, imprimis ad perianthii formas, certe in speciebus diversis valde diversas sed vix in catervas distinctas ordinandas. Elwes in monographia sua eximia *Cardiocrinum* solum pro sectione retinuit, speciem elatam, foliis petiolatis ample cordato-ovatis, *L. cordifolium*, Thunb., et *L. giganteum*, Wall., includentem. *Elw. Monogr. t. 1, 2. Wall. Tent. Fl. Nep. t. 12, 13. Sieb. et Zucc. Fl. Jap. t. 13, 14. Bot. Mag. t. 4673, 6337.* Species cæteræ iconibus supra citatis illustratæ ad *Eulirium* pertinent, foliis angustis v. basi contractis.

*L. Thomsonianum*, Lindl. Bot. Reg. 1845, t. 1; Royle, Ill. Pl. Himal. t. 92 (*L. roseum*, Wall.; Bot. Mag. t. 4725, *L. longifolium*, Griff. Ic. Pl. As. t. 277), et *L. Hookeri*, Baker, species Himalaicæ, sectionem *Notholirion*, Wall. (genus *NOTHOLIRION*, Boiss Fl. Or. v. 190) formant, a Bakero serius ad *Fritillariam* translata et ab Elwesio a *Lilio* exclusum ob bulbum angustum esquamatum tunicis paucis laxis obtectum. Characteres florales tamen omnino *Lilii* nec *Fritillariæ*, et melius sectionem tertiam generis prioris formare videntur, cum *Fritillaria Gardneriana*, Baker, et *Lilio polyphylo*, Don, Elwes Monogr. t. 48, quæ omnes Himalayæ incolæ.

139. **Fritillaria**, Linn. Gen. n. 411.—Perianthium deciduum, campanulatum; segmenta subæqualia, oblonga v. fere ovata, erecta, superne conniventia v. breviter patentia, facie supra basin fovea v. macula sæpius nectarifera instructa. Stamina 6, hypogyna v. vix basi segmentis adhærentia, filamentis filiformibus v. leviter complanatis; antheræ lineares v. oblongæ, erectæ, in speciebus normalibus basi (interdum intrusa) v. inter lobos basales affixæ, loculis a latere dehiscentibus. Ovarium sessile v. subsessile, 3-locularis; stylus filiformis v. columnaris, lobis 3 introrsum stigmatosis nunc longiusculis patentibus nunc erectis conniventibus v. omnino connatis; ovula in loculis numerosa. Capsula obovoidea v. subglobosa, obtusangula v. angulis 6 prominentibus acutis interdum fere in alas productis, loculicide dehiscens. Semina numerosa, plano-compressa, late obovata v. irregulariter orbiculata, brunnea v. pallida, testa membranacea appressa circumcirca in marginem v. alam angustam producta; embryo in speciebus normalibus prope hilum minimus obovoideus, albumine cartilagineo inclusus.—Bulbus varius, sæpius parvulus, squamis carnosis paucis, tunicis haud raro mox deliquescentibus. Caulis simplex, foliatus. Folia nunc pauca, sparsa, nunc subverticillata; floralia sub quoque pedicello 1-2. Flores speciosi, quam in *Lilio* tamen sæpius minores, nutantes v. penduli, nunc solitarii v. 2 parum distantes, nunc plures laxe racemosi v. ad apicem caulis cum foliis floralibus comosis conferti, sub foliis penduli quasi verticillati.

Species enumeratæ ultra 50, regionum temperatarum hemisphærii borealis incolæ, nonnullæ tamen reducendæ et vix 40 rite distinguendæ. *Kunth, Enum. Pl. iv. 246. Baker in Journ. Linn. Soc. xiv. 251. Gertn. Fruct. t. 17. Nees, Gen. Fl. Germ. Monocot. ii. n. 39. Boiss. Fl. Or. v. 176.*

Genus pro maxima parte naturale, a *Lilio* facillime distinguendum perianthii forma, antheris erectis nec versatilibus, et (tanquam nectum) embryo minimo; species tamen nonnullæ infra sul-

*Liliorhiza* netatæ inter hæc genera ambiguae. Baker subgenera 10 distinxit, characteres tamen nonnullæ e forma foveolorum sumpti valde incerti sunt; et sectiones 5 tantum sequentes melius definitæ videntur :—

1. *Eufritillaria*. Caulis 1-florus, rarius laxè 2–3-florus. Antheræ lineares, rectæ, basifixæ. Styli rami stigmatosi plus minus patentes. Species omnes gerontogæ, a Bakero in subgeneribus *Eufritillaria*, *Monocodon*, et *Gonicocarpa* inclusæ. *Planch. in Bull. Soc. Bot. Fr.* xx. 96. *Jacq. Fl. Austr. App.* t. 32. *Red. Lil. t.* 222. *Reichb. Ic. Fl. Germ. t.* 442 ad 445. *Moggr. Fl. Ment. t.* 25, 36, 66. *Sibth. Fl. Gr. t.* 328. *Ledeb. Ic. Fl. Ross. t.* 2, 130. *Jaub. et Spach, Ill. Pl. Or. t.* 500. *Royle, Ill. Bot. Himal. t.* 92, f. 2. *Kl. in Pr. Waldem. Reise, Bot. t.* 92. *Hook. Ic. Pl. t.* 860. *Bot. Mag. t.* 664, 853, 952, 1207, 1216, 1538, 3083, 3280, 5052. *Sweet, Brit. Fl. Gard. ser. 2, t.* 343. *Regel, Gartenfl. t.* 209.

*MONOCODON*, *Salisb. Gen. Pl. Fragm.* 56, genus propositum fuit ad *F. pyrenaicam*, Linn., foveola nectarifera quam in *F. meleagri* multo latiore.

2. *Petilium*. Folia floralia plurima, in comam terminalem conferta, floribus sub coma pendulis quasi verticillatis. Species unica, regionis Mediterraneæ, characteribus floralibus omnino *Eufritillariæ*, nec longe a *F. pallidiflora*, Schrenck, distat; flores in hac interdum 3–4 cum foliis floralibus ad apicem caulis hand distantes. Capsulæ anguli acuti in *F. dagana*, Turcz., aliisque observantur. *Red. Lil. t.* 131. *Bot. Mag. t.* 124, 1215. *PETILIUM*, *Linn. Hort. Cliff.* 119. *Kunth, Enum. Pl. iv.* 245. *IMPERIALIS*, *Juss. Gen.* 49.

3. *Theresia*. Flores sæpius plures, racemosi, quam in *Eufritillaria* vulgo minores. Antheræ erectæ *Eufritillariæ*, sæpius tamen multo breviores. Stylus apice subinteger v. lobis brevissimis erectis. Species paucae, Orientales; *Red. Lil. t.* 67. *Jaub. et Spach, Ill. Pl. Or. t.* 499. *Bot. Mag. t.* 857, 962, 1537. *THERESIA*, *C. Koch in Linnaea*, xxii. 232. *TOZZETTIA*, *Parlat. Nuov. Gen. e Sp. Monocot.* 11. *LYPERIA*, *Salisb. Gen. Pl. Fragm.* 56. Genus prius ad *F. persicam*, Linn., propositum, serius a Klattio in Hamb. Gart. Zeit. xvi. 438 ad species omnes *Fritillariæ* extensum quibus stigma indivisum v. vix brevissime 3-lobum.

*RHINOPETALUM*, *Fisch. ex Alexand. in Edinb. N. Phil. Journ.* viii. 19; *Don in Sweet, Brit. Fl. Gard. ser. 2, t.* 283. *Regel, Fl. Turkest. t.* 22, est *F. Kærelini*, Baker, species humilis, *F. persica* affinis, foveolis perianthii præsertim segmentorum exteriorum profundis extus gibbum valde prominentem formantibus.

4. *Amblyrion*. Caulis sæpius 1-florus *Eufritillariæ*, stigma indivisum *Theresiæ*. Antheræ juxta basin inter lobos dorsifixæ, sed erectæ, mox revolutæ, nec versatiles. Species unica, boreali-Americana, *F. pudica*, Spr.; *Pursh. Fl. Amer. Sept. i. t.* 8 (*Lilium*). *AMBLYRION*, *Raf. in Journ. Phys.* lxxxix. 102. Species gerontogæ a Bakero sub sect. *Amblyrion* enumeratæ ad *Theresiam* pertinent.

5. ? *Liliorhiza*. Species boreali-Americane v. Asiaticæ, *Lilium* inter et *Fritillariam* ambiguae. Bulbus sæpe multisquamosus et antheræ dorsifixæ versatiles *Lilii*, stylus apice sæpius breviter 3-fidus *Eufritillariæ*, habitus et perianthium intermedia, et species ab aliis *Lilio* ab aliis *Fritillariæ* relatæ. Semina perfecta in sola *F. camtschatscense*, Ker (*Lilio camtschatscense* Linn.) observavimus, ubi embryonem vidimus quam in *Fritillariis* typicis longiorem vix tamen quartam partem albuminis excedentem. *Lamb. in Trans. Linn. Soc. x. t.* 11. *Hook. Fl. Bor. Amer. t.* 193. *Torr. Bot. Emory Exped. t.* 61. *LILIORHIZA*, *Kell. Proc. Calif. Acad. ii.* 46, fig. 1. Huc etiam referendæ *KOROLKOWIA*, *Reg. Gartenfl.* 1873, 161, t. 760 (prius *Fritillaria Sewerzowii*, Reg.), perianthii segmentis a medio ut in pluribus *Liliis* revolutis, et antheris versatilibus, sed flores quam in *Lilio* minores virescentes.

De sectione *Notholirio*, Baker, cfr. supra sub *Lilio*.

140. *Tulipa*, *Linn. Gen. n.* 415.—Perianthium deciduum, campanulatum v. subinfundibuliforme; segmenta distincta, erecta v. erecto-patentia, subæqualia, prope basin intus sæpe maculata nec foveolata. Stamina 6, hypogyna, perianthio breviora, filamentis plus minus complanatis apice attenuatis v. breviter filiformibus; antheræ oblongo-lineares, erectæ, basi intrusa affixæ, loculis a latere dehiscentibus. Ovarium sessile v. subsessile, oblongum, sæpe angustum, apice in stylum brevissimum v. vix ullum rarius longiusculum contractum; stigmatibus terminalibus adnatis parvis v. magnis recurvisque; ovula in loculis numerosa. Capsula oblonga v. rarius subglobosa, loculicide dehiscens. Semina numerosa, plano-compressa, late obovata v. irregulariter orbiculata, brunnea v. pallida, testæ membranacea appressa circumcirca marginata v. angustissime alata; embryo in

albumine carnosio parvus v. albumine vix brevior.—Bulbus tunicatus, tunicis interdum introrsum lanatis. Caulis simplex, paucifolius, 1-florus v. rarius 2-3-florus. Folia linearia v. latiuscula. Flores erecti v. rarissime nutantes, speciosi.

Species enumeratæ fere 50, Europæ, Africæ borealis, Asiæ occidentalis et centralis incolæ, usque ad Japoniam extensæ. *Kunth, Enum. Pl. iv. 219. Regel in Act. Hort. Petrop. ii. 437. Baker in Journ. Linn. Soc. xiv. 275. Boiss. Fl. Or. v. 191. Red. Lil. t. 37, 38, 111, 165, 219, 445, 477, 478. Nees, Gen. Fl. Germ. Monocot. ii. n. 36. Reichb. Ic. Fl. Germ. t. 446 ad 450. Jord. et Fourr. Ic. Fl. Eur. t. 16 ad 20. Moggr. Fl. Ment. t. 24. Ten. Fl. Nap. t. 32. Sibth. Fl. Græc. t. 329, 330. Ledeb. Ic. Fl. Ross. t. 85, 134, 135. Reg. Fl. Turkest. t. 21, 22. Bot. Mag. t. 717, 839, 1135, 1202, 1390, 2388, 2762, 3887, 6177, 6191, 6242, 6304, 6308, 6310, 6374, 6439, 6459, 6518, 6635, 6639. Bot. Reg. t. 127, 204, 380, 535, 1106, 1143, 1419, 1990; 1838, t. 46; 1839, t. 66. Sweet, Brit. Fl. Gard. t. 78, 157, 186; ser. 2, t. 97, 102, 116, 153.*

ORITHYIA, *Don in Sweet, Brit. Fl. Gard. ser. 2, t. 336, Kunth, Enum. Pl. iv. 226*, genus propositum fuit ad *Ornithogalum uniflorum*, Linn., speciesque paucas affines, scapo sæpe 2-3-floro et ovario distinctius in stylum brevem attenuato, sed character male definitus, et genus rite a Bakero aliisque ad *Tulipam* reducitur. *T. biflora*, Linn., a Kunthio in *Orithya* inclusa, cujus habitum præbet, ovario non producto *Tulipis* veris accedit.

141. **Erythronium**, *Linn. Gen. n. 414.*—Perianthium deciduum; segmenta distincta, angusta, basi in tubum conniventia, a medio v. fere a basi recurva v. reflexa, juxta basin sæpe 2-callosa v. 2-auriculata. Stamina 6, hypogyna v. vix basi segmentis adnata, erecta, perianthio breviora, filamentis leviter complanatis apice breviter subulatis; antheræ oblongo-lineares, erectæ, basi intrusa affixæ, loculis a latere dehiscentibus. Ovarium sessile, 3-loculare; stylus filiformis v. superne clavatus, stigmatibus brevibus, rarius in lobos longiores introrsum stigmatosos divisus; ovula in loculis numerosa. Capsula subgloboso-3-quetra v. longe oblonga, membranacea v. chartacea, loculicide dehiscens. Semina in *E. Dens-canis* numerosa, oblonga, leviter compressa, brunnea v. pallida, apice in appendicem recurvam longe caudatam producta; in *E. purpurascens*, *S. Wats.*, multo latoria, magis compressa, vix v. non appendiculata, in cæteris speciebus ignota; embryo, ubi notus, prope hilum minimus v. quartam partem albuminis carnosius attingens.—Cormus tunicatus. Caulis simplex, infra medium 2-folius, foliis petiolatis ovatis v. angustis. Flores nutantes, solitarii v. 2-∞ laxissime racemosi, longe pedicellati, ebracteati.

Species 7, quarum una per Europam et Asiam Rossicam usque ad Japoniam dispersa, cæteræ Americæ borealis incolæ. *Kunth, Enum. Pl. iv. 216. Baker in Journ. Linn. Soc. xiv. 296. S. Wats. in Proc. Amer. Acad. xiv. 260. Red. Lil. t. 194. Jacq. Fl. Austr. App. t. 9. Nees, Gen. Fl. Germ. Monocot. ii. n. 35. Reichb. Ic. Fl. Germ. t. 441. Bot. Mag. t. 5, 1113, 5714. Bot. Reg. t. 1786. Sweet, Brit. Fl. Gard. ser. 2, t. 71, 76.*

142. **Gagea**, *Salisb. in Kæn. et Sims, Ann. Bot. ii. 555. (Ornithoxanthum, Link, Handb. i. 161.)*—Perianthium persistens; segmenta distincta, subæqualia, patentia, 3-5-nervia, non foveolata. Stamina 6, ima basi segmentorum affixa v. fere hypogyna, perianthio breviora, filamentis filiformibus v. inferne leviter complanatis, antheræ ovatæ v. oblongæ, erectæ, basi intrusa affixæ, loculis a latere dehiscentibus. Ovarium sessile v. rarius breviter stipitatum, obovoideum v. oblongum, 3-quetrum v. sub-3-lobum, 3-loculare; stylus columnaris v. fere subulatus, stigmatibus vix latiore; ovula in loculis ∞, interdum numerosa. Capsula membranacea, perianthii segmentis stipata, 3-quetra v. 3-loba, loculicide dehiscens. Semina nunc abortu pauca obovoideo-oblonga vix compressa, nunc numerosa angulato-compressa v. fere plana, testa fusca v. pallida appressa; embryo albumine carnosio sæpius dimidio saltem brevior.—Bulbus parvulus. Caulis sæpius humilis, apice laxè pauciflorus. Folium radicale sæpius unicum, rarius 2-3, additis interdum 1-3 caulinis infra inflorescentiam. Pedicelli longiusculi, ad apicem caulibus sparsi dissiti v. fere in umbellam irregularem conferti. Bractææ sub pedicellis foliaceæ, infima sæpe lanceolata, cæteræ minores lineares, nunc omnes parvæ v. inferior longiuscula. Perianthii segmenta margine sæpiissime flava, interdum albida, rarissime pallide rosea, medio sæpius intensius colorata, extus haud raro viridi-fusca.

Species ad 20, Europæ, Africæ borealis, et Asiæ temperatæ v. montanæ incolæ. *Kunth, Enum. Pl. iv.* 233. *Regel in Act. Hort. Petr. iii.* 289; *Fl. Turkest. t.* 17 ad 20. *Red. Lil. t.* 221, 242, 302. *Nees, Gen. Fl. Germ. Monocot. ii. n.* 37. *Reichb. Ic. Fl. Germ. t.* 474 ad 481. *Coss. et Dur. Expl. Alg. t.* 45 bis. *Sibth. Fl. Græc. t.* 331, 332, et t. 336 (*Anthericum*). *Labill. Pl. Syr. Dec. v. t.* 8, 9 (*Anthericum*). *Ledeb. Ic. Fl. Ross. t.* 379, 392. *Royle, Ill. Bot. Himal. t.* 95 et t. 93, f. 3 (*Lloydia*). *Bot. Mag. t.* 1200. *Lodd. Bot. Cab. t.* 1209. *Sweet, Brit. Fl. Gard. t.* 158, 177; ser. 2, t. 29. (*l.c. plur. sub Ornithogalo*.)

Genus *Lloydia* valde affine et *G. triflora*, Schult., et *G. rubro-viridis*, Ledeb., a Bakero in Journ. Linn. Soc. xiv. 300 ad *Lloydiam* transferuntur ob perianthii segmenta margine albida v. ex icone Ledebourii pallide rosea nec flava, sed foveolis *Lloydia* carent et melius in *Gagea* retinendæ. Eadem ratione ad *Gageam* referimus *Anthericum græcum*, Linn., cui rite refert Baker *Lloydiam creticam*, Boiss., speciem cæterum insignem stylo abbreviato. In pluribus speciebus *Gagea* segmenta vix flavicant.

HORNUNGIA, Bernh. in Flora, 1840, 392, est *G. reticulata*, Rœm. et Schult., cui capsula elongata, seminibus numerosissimis pressione fere planis.

BULBILLARIA, Zucc. in Abhandl. Akad. Wiss. Münch. iii. 229, t. 2, est *G. amblyopetala*, var. *bulbifera*, Boiss. (*G. thesioides*, C. A. Mey.) species vix a *G. persica*, Boiss., distincta.

143. *Lloydia*, Salisb. in Trans. Hort. Soc. Lond. i. 328, absque char.; *Reichb. Fl. Germ. Exc. 102.* (Nectarobothrium, *Ledeb. Fl. Alt. ii.* 36. Rhabdocrinum, *Reichb. Consp. Reg. Veg. 65.*)—Perianthium persistens; segmenta distincta, subæqualia, demum patentia, 3-5-nervia, basi intus plica transversali et foveola (nectarifera?) plus minus distincta instructa. Stamina 6, ima basi segmentorum affixa v. fere hypogyna, perianthio breviora, filamentis filiformibus v. inferne leviter complanatis; antheræ ovatæ v. oblongæ, erectæ, basi intrusa affixæ, loculis a latere dehiscentibus. Ovarium sessile, 3-quetrum, 3-loculare; stylus columnaris, stigmatem parum incrassato vix 3-dymo; ovula in loculis ∞. Capsula subgloboso-3-quetra, membranacea, perianthii segmentis stipata, loculicide dehiscens. Semina angulato-compressa, testa appressa brunnea v. pallida, angulo interiore interdum anguste alata; embryo albumine carnosio 3-4-plo brevior.—Bulbus angustus. Caulis humilis, gracilis, apice 1-2-florus. Folia radicalia 1-3, linearia, caulina pauca, minora. Flores albi v. flavi, pedicellati. Bracteæ parvæ, lineares.

Species 2, quarum una montium Europæ, Asiæ mediæ et borealis et Americæ borealis incolæ, altera ad Himalayam limitata. *Kunth, Enum. Pl. iv.* 243. *Baker in Journ. Linn. Soc. xiv.* 299 (quoad subgenus *Eulloydiam*). *Red. Lil. t.* 270 (*Phalangium*, segmentorum foveolis non delineatis). *Nees, Gen. Fl. Germ. Monocot. ii. n.* 38. *Reichb. Ic. Fl. Germ. t.* 440. *Royle, Ill. Bot. Himal. t.* 93, f. 2. *Hook. Ic. Pl. t.* 834.

Subgenus *Gageopsis*, Baker in Journ. Linn. Soc. xiv. 300, nobis ad *Gageam* ipsam referendum videtur.

144. *Calochortus*, Pursh, Fl. Bor. Amer. i. 240. (Cyclobothra, *Don in Sweet, Brit. Fl. Gard. t.* 273, et ser. 2, t. 20.)—Perianthium deciduum; segmenta distincta, subgloboso-conniventia v. patentia, exteriora sæpius angusta, subcalycina, plus minus virentia, rarius interioribus similia nisi minora minus distincte v. non foveolata; interiora petaloidea, facie sæpe barbata et prope basin foveola nectarifera v. macula vix concava instructa. Stamina 6, hypogyna v. ima basi segmentis leviter adherentia, erecta, filamentis brevibus subulatis; antheræ oblongæ v. lineares, erectæ, basi longe intrusa affixæ, loculis a latere dehiscentibus. Ovarium sessile, 3-loculare, apice vix in stylum brevissimum contractum, stigmatibus terminalibus adnatis; ovula in loculis numerosa. Capsula oblonga, nunc elongata, 3-quetra, angulis acutis obtusis v. subcalloso-marginatis, septicide dehiscens v. fere in carpella 3 secedens, valvis transverse lineatis interdum apice demum 2-fidis. Semina numerosa, plano-compressa, sæpe margine crassiusculo v. angustissime alæformi cincta, v. apice in appendicem cellulosa producta, testa pallida nunc membranacea appressa, nunc laxè cellulosa; embryo albumine carnosio parum v. multum brevior.—Bulbus tunicatus. Caulis paucifolius, sæpe ramosus pauciflorus. Folia angusta. Flores longe pedicellati, speciosi, erecti v. penduli, flavi cærulescentes purpurascentes v. albi.

Species enumerat Baker 21, S. Watson 32, Americæ borealis imprimis occidentalis usque ad Mexicum incolas. *Baker in Journ. Linn. Soc.* xiv. 302. *S. Wats. in Proc. Amer. Acad.* xiv. 262. *H. B. et K. Nov. Gen. et Sp.* t. 677 (*Fritillaria*). *Hook. et Arn. Bot. Beech. Voy.* t. 94. *Dougl. in Trans. Hort. Soc. Lond.* vii. t. 9. *Benth. in Trans. Hort. Soc. Lond. ser. 2, i. t. 14* (*Cyclobothra*). *Bot. Mag.* t. 5804, 5862, 5976, 6200, 6475, 6527. *Bot. Reg.* t. 1152, 1567, 1669, 1676, et sub *Cyclobothra*, t. 1661, 1662, 1663. *Maund, Botanist*, t. 30, 98, 170.

Genus a Donio et a Lindley olim in duo divisum, a Bakero in subgenera 4, a S. Watsonio in sectiones 3, imprimis ad perianthium magis minusve apertum, segmentis interioribus exterioribusque magis minusve dissimilibus foveolatis maculatisve, fructu erecto v. nutante, aliisque characteribus in speciebus nonnullis distinctissimis, in aliis male definitis v. varie collatis.

#### TRIBUS XV. COLCHICÆ.

145. **Colchicum**, *Linn. Gen.* n. 457.—Perianthium infundibuliforme, tubo longo tenui; lobi subæquales, oblongi, erecto-patentes. Stamina 6, ad basin loborum affixa iisque breviora, filamentis filiformibus; antheræ lineares v. oblongæ, dorsifixæ, versatiles, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare; styli longi, filiformes, a basi distincti, medio interdum leviter cohærentes, apice parum incrassati, breviter recurvo-patentes introrsumque stigmatosi; ovula in loculis numerosa. Capsula ovoidea, 3-sulca, chartacea, superne septicide dehiscens. Semina numerosa, subglobosa, opaca, brunnea v. fusca, testa appressa crassiuscula; embryo in albumine duro parvus, ab hilo plus minus distans.—Cormus hypogæus, tunicatus. Folia radicalia, coætanea v. sæpius serotina, oblonga loriformia v. linearia. Scapus intra vaginas hypogæas brevissimus, 1–3-rarius  $\infty$ -florus. Flores speciosi, lilacini v. rarius flavi.

Species ad 30, Europæ, Asiæ occidentalis et centralis et Africæ borealis incolæ. *Kunth, Enum. Pl.* iv. 138. *Baker in Journ. Linn. Soc.* xvii. 423. *Boiss. Fl. Or.* v. 155. *Red. Lil.* t. 228, 238. *Reichb. Ic. Fl. Germ.* t. 424 ad 427. *Nees, Gen. Fl. Germ. Monocot.* 11, n. 34. *Waldst. et Kit. Pl. Rar. Hung.* t. 179. *Graells, Ramill. Pl. Esp.* t. 9. *All. Fl. Pedem.* t. 74. *Ten. Fl. Nap.* t. 221. *Vis. Stirp. Dalm.* t. 6. *Sibth. Fl. Græc.* t. 350. *Stev. in Mem. Soc. Imp. Nat. Mosc.* vii. t. 13 ad 16. *Bot. Mag.* t. 1028, 1122, 2673, 6078, 6090, 6153. *Bot. Reg.* t. 541.

Antheræ dorso affixæ introrsum dehiscentes rite a Neesio, Decaisneo et Le Maoutio aliisque descriptæ, a Kunthio tamen auctoribusque pluribus introrsum affixæ extrorsum dehiscentes dicuntur.

FOUHA, *Pomel, Mat. Fl. Atl.* 2, est *C. montanum*, Linn., cui perianthii limbus quam in plerisque speciebus brevior est. MONOCARYUM, *Br. in App. Voy. Denh. et Clapp.* 243, sectio pro genere admissa in *Schult. Syst.* vii. 1135, ad specimen Russellianum *Hypoxidis fascicularis*, Linn., proposita, a Bakero ut videtur rite ad *C. montani*, Linn., formam reducit, pistillo casu ad carpellum unicum reducto. PALUDARIA, *Salisb. Gen. Pl. Fragm.* 53, ad plantam Africanam descripta, cum synonymo eodem *Hypoxidis fascicularis*, est *C. montanum* normale, ovario 3-loculari, male descriptum.

Genera tria sequentia, *Synsiphon*, *Bulbocodium* et *Merendera*, forte melius ad sectiones *Colchici* reducenda.

146. **Synsiphon**, *Regel in Act. Hort. Petrop.* vi. 490.—Perianthium infundibuliforme, tubo longo tenui; lobi subæquales, erecto-patentes. Stamina 6, fauci affixa, filamentis brevibus linearibus planis; antheræ lineares, erectæ, basi sagittatæ. Ovarium supra basin in perianthii tubo nidulans, 3-loculare; stylus longissimus, exsertus, ad faucem 3-partitus, ramis filiformibus stigmatibus capitato terminatis; ovula in loculis  $\infty$ . Capsula . . .—Bulbus seu cormus tunicatus. Folia radicalia subcoætanea, linearia. Flos breviter pedunculatus, basi e bulbo paullo exsertus. (*Char. ex Regelio.*)

Species 1, Asiæ centralis incola, a nobis non visa, a *Colchico* differre dicitur stylis alte connatis, a *Bulbocodio* perianthii tubo indiviso.

147. **Bulbocodium**, *Linn. Gen.* n. 407.—Perianthium infundibuliforme; segmenta a basi distincta, unguibus longis erectis in tubum tenuem conniventibus, laminis anguste

oblongis subæqualibus erecto-patentibus. Stamina 6, ad basin laminarum affixa iisque breviora, filamentis filiformibus; antheræ lineares, basi alte 2-lobæ, dorsifixæ, versatiles, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare; stylus longus, filiformis, apice 3-fidus, ramis filiformibus superne parum incrassatis erectis apice introrsum stigmatosis; ovula in loculis numerosa. Capsula anguste ovoidea, 3-quetra, chartacea, septicide dehiscens. Semina numerosa, subglobosa, opaca, brunnea, testa appressa crassiuscula; embryo in albumine duro parvus, ab hilo plus minus distans.—Cormus hypogæus, tunicatus. Folia radicalia, coætanea, linearia. Scapus intra vaginas hypogæas brevissimus, 1-3-florus. Flores speciosi, iis *Colchici* similes.

Species 1, montium Europæ et Rossicæ Asiaticæ meridionalis incolæ. *Baker in Journ. Linn. Soc.* xvii. 456. *Red. Lil. t.* 197. *Reichb. Ic. Fl. Germ. t.* 428. *Nees, Gen. Fl. Germ. Monocot. ii. n.* 33. *Bot. Mag. t.* 153. *Bot. Reg. t.* 571 (*Colchicum*).

Genus cum sequente a *Colchico* parum distinctum.

148. *Merendera*, *Ram. in Bull. Soc. Philom. Par.* 1798. (*Geophila*, *Bergeret, Fl. B. Pyr.* ii. 184, ex *Endl.*)—Perianthium infundibuliforme; segmenta a basi distincta, unguibus longis erectis in tubum tenuem conniventibus, laminis anguste oblongis subæqualibus erecto-patentibus. Stamina 6, ad basin laminarum affixa iisque breviora, filamentis filiformibus; antheræ oblongæ v. lineares, basi breviter v. alte 2-lobæ, loculis introrsum dehiscentibus, valvis demum recurvis. Ovarium sessile, 3-loculare; styli 3, filiformes, longi, apice minute stigmatosi; ovula in loculis numerosa. Capsula obovoidea, 3-sulca, fere 3-loba, chartacea, septicide dehiscens. Semina numerosa, subglobosa, opaca, brunnea, testa appressa crassiuscula; embryo in albumine duro parvus, ab hilo plus minus distans.—Cormus hypogæus, tunicatus. Folia radicalia, coætanea, linearia. Scapus intra vaginas inclusus v. post anthesin breviter exsertus, 1-3-florus. Flores speciosi, iis *Colchici* similes.

Species 10, regionis Mediterraneæ incolæ, usque ad Abyssiniam et Affghanistan extensæ. *Kunth, Enum. Pl.* iv. 148. *Boiss. Fl. Or. v.* 167. *Baker in Journ. Linn. Soc.* xvii. 437, ubi in series 2 facile pro sectionibus habendas distribuuntur: 1. Antheræ oblongæ, medio dorso affixæ, versatiles. *Bieb. Cent. Pl. Ross. t.* 50. *Bot. Mag. t.* 3690. *Regel, Gartenfl. t.* 952 (*Bulbocodium*), 1057. 2. Antheræ longe lineares, juxta basin affixæ, suberectæ, demum leviter recurvæ. *Red. Lil. t.* 25. *Brot. Phytogr. Lusit. t.* 50 (*Colchicum*). *Bot. Mag. t.* 6012.

#### TRIBUS XVI. ANGUILLARIÆ.

149. *Burchardia*, *R. Br. Prod.* 272.—Perianthium explanatum, deciduum; segmenta distincta, subæqualia, primum basi circa filamentum conduplicata, sub anthesi plana, patentia. Stamina 6, ima basi segmentorum affixa iisque breviora, filamentis basi complanatis superne filiformibus; antheræ oblongæ, prope basin introrsum affixæ, versatiles, loculis a latere subextrorsum dehiscentibus. Ovarium sessile, prominenter 3-quetrum, 3-loculare, in stylum brevem 3-quetrum desinens; styli rami 3, breviter lineares, recurvi, introrsum stigmatosi; ovula in loculis numerosa. Capsula ovoideo-3-quetra, apice pyramidata, breviter septicide dehiscens. Semina  $\infty$ , angulata, brunnea, testa tenui appressa; embryo in albumine cartilagineo juxta hilum parvus.—Rhizoma brevissimum, fibris radicalibus more generum bulbosorum fasciculatis carnosulis. Caulis ebulbosus, erectus, simplex v. parce ramosus. Folia pauca, 1-2 infra medium caulis longe linearia cum vaginis continua, 1-2 superiora parva breviter. Flores ad apicem caulis v. ramorum  $\infty$ , pedicellati, in umbellam bracteis brevibus linearibus involucretam dispositi.

Species 1, Australiana. *Benth. Fl. Austral.* vii. 33.

150. *Androcymbium*, *Willd. in Gesellsch. Naturf. Fr. Berlin Mag.* ii. 21, t. 2.—Perianthium marcescens, persistens; segmenta subæqualia, distincta, unguibus erectis linearibus canaliculatis v. fere convolutis, lamina erecto-patente lanceolata plana v. basi concava 2-auriculataque, intus ad insertionem staminis varie glandulifera v. nectarifera.

Stamina 6, ad basin laminarum affixa iisque breviora v. longiora, filamentis filiformibus ima basi sæpe incrassatis; antheræ oblongæ, inter lobos basales subintrorsum affixæ, demum versatiles, loculis a latere dehiscentibus. Ovarium sessile, 3-loculare; styli 3, distincti, filiformes, stigmatibus parvis; ovula in loculis numerosa. Capsula subglobosa ovoidea v. oblonga, 3-sulca, chartacea v. membranacea, septicide dehiscens. Semina globosa, opaca, testa brunnea appressa; embryo in albumine duro juxta hilum parvus.—Cormus hypogæus, tunicatus, tunicis sæpius in vaginas caulem stipantes productis. Folia ad apicem caulis brevis pro maxima parte hypogæi conferta v. parum dissita, basi plus minus dilatata, sæpe colorata, inflorescentiam capituliformem involucrancia et fere includentia, 1-2 exteriora interdum longissime linearia. Flores intra folia floralia sæpius plures, sessiles v. breviter pedicellati, singuli bractea membranacea sæpe colorata stipati.

Species enumeratæ 13, Africæ australis et regionis Mediterraneæ incolæ. *Baker in Journ. Linn. Soc. xvii. 441.*

Genus in sectiones 2 sequentes commode dividitur:—

1. *Cymbanthes*. Perianthii segmentorum lamina basi concava, sæpe 2-auriculata. Stamina segmentis æquilonga v. longiora. Species 11, quarum una Abyssinica, cæteræ Austro-Africanæ. *Jacq. Ic. Rar. t. 452. Cav. Ic. t. 587, f. 1; 588, f. 1. Bot. Mag. t. 641. Sweet, Brit. Fl. Gard. t. 165 (ic. plures sub Melanthio).* CYMBANTHES, *Salisb. in Trans. Hort. Soc. i. 329, absque char.*

2. *Erythrostictus*. Perianthii segmentorum lamina plana. Stamina segmentis multo breviora. Species 2, regionis Mediterraneæ incolæ. ERYTHROSTICTUS, *Schlecht. in Linnæa, i. 90. Lange, Pl. Nov. Hesp. t. 34.*

151. *Wurmbea*, *Thunb. Nov. Gen. 18, t. 1.*—Perianthium subcampanulatum v. fere a basi expansum, persistens, tubo breviter cylindraceo v. late cyathiformi; lobi tubo longiores, subæquales, patentes, basi sæpius plicis transversis instructi. Stamina 6, basi loborum affixa iisque breviora, filamentis filiformibus v. basi dilatatis; antheræ ovatæ, introrsum affixæ, loculis a latere subextrorsum dehiscentibus. Ovarium sessile, 3-loculare, apice 3-lobum, lobis in stylos distinctos breviter v. longe filiformes desinentibus; ovula in loculis ∞. Capsula apice 3-loba, breviter septicide dehiscens. Semina ∞, subglobosa, brunnea, testa appressa; embryo in albumine cartilagineo juxta hilum parvus.—Bulbus seu cormus tunicatus. Caulis simplex, sæpius brevis. Folia pauca, lineari-lanceolata v. rarius ovato-lanceolata, cum vagina laxa continua. Flores in spica terminali breviter pedunculata subsessiles, ebracteati.

Species 7, Africæ australis et Australiæ incolæ. *Kunth, Enum. Pl. iv. 159. Baker in Journ. Linn. Soc. xvii. 435. Benth. Fl. Austral. vii. 27. Andr. Bot. Rep. t. 221. Bot. Mag. t. 694, 1291 (Melanthium).*

Genera duo sequentia vix a *Wurmbea* distincta.

152. *Bæometra*, *Salisb. in Trans. Hort. Soc. i. 330, absque char.* (Kolbea, *Schlecht. in Linnæa, i. 80. Jania, Schult. Syst. vii. 98, 1528.*)—Perianthium persistens v. demum sub fructu deciduum, toro dilatato insertum; segmenta distincta, basi erecta unguibus circa filamentum convolutis, superne anguste oblonga, patentia, subæqualia. Stamina 6, prope basin segmentorum affixa iisque breviora, filamentis filiformibus; antheræ oblongo-lineares, introrsum affixæ, loculis a latere extrorsum dehiscentibus. Ovarium sessile, oblongum, prominenter 3-quetrum, 3-loculare; styli 3, brevissimi, recurvi, introrsum stigmatosi; ovula in loculis numerosa. Capsula angusta, prominenter 3-quetra, septicide dehiscens. Semina ∞, subglobosa, plus minus angulata, testa appressa; embryo in albumine cartilagineo juxta hilum parvus.—Bulbus seu cormus tunicatus. Caulis erectus, simplex. Folia lanceolata v. angusta, approximata, cum vagina continua, superiora ad vaginas reducta pauca dissitaque. Flores ad apicem caulis v. pedunculi terminalis pauci, subsessiles, in spica brevi dispositi v. interdum solitarii, erecti, ebracteati. Capsulæ erectæ, in speciminibus nostris pollicares v. longiores.

Species 1, austro-Africana. *Kunth, Enum. Pl. iv. 162. Baker in Journ. Linn. Soc. xvii. 446. Jacq. Ic. Rar. t. 450. Bot. Mag. t. 767 (Melanthium).*

153. *Dipidax*, *Salisb. in Trans. Hort. Soc.* i. 330, *absque char.* (*Melanthium*, *Kunth, Enum. Pl.* iv. 155.)—Perianthium demum deciduum; segmenta distincta, oblonga, patentia, prope basin ad marginem utrinque glandula nectarifera instructa, unguibus circa filamentum convolutis. Stamina 6, ima basi segmentorum affixa, iisque breviora; antheræ parvæ, oblongæ, introrsum affixæ, loculis a latere extrorsum dehiscentibus. Ovarium sessile, 3-sulcum, fere 3-lobum, 3-loculare; styli 3, basi contigui at distincti, breviter filiformes, superne introrsum stigmatosi; ovula in loculis numerosa. Capsula turbinata truncataque v. ovoideo-oblonga, 3-loba, lobis seu carpellis marginibus interioribus connexis maturitate septicide solvendis introrsum dehiscentibus. Semina ∞, ovoidea v. subglobosa, rugulosa v. læviuscula, brunnea, testa appressa; embryo juxta hilum oblongus, albumine cartilagineo 3-4-plo brevior.—Bulbus seu cormus tunicatus. Caulis erectus, simplex. Folia prope basin caulis pauca, conferta, late v. anguste lanceolata, cum vagina brevi continua, addito sæpe uno alterove sub inflorescentia. Flores in spica terminali plures, subsessiles, rarius ad unum reducti, ebracteati.

Species 2, Africæ australis incolæ. *Baker in Journ. Linn. Soc.* xvii. 446. *Jacq. Ic. Rar. t.* 451. *Bot. Mag. t.* 558. *Lodd. Bot. Cab. t.* 978; (*ic. omnes sub Melanthio*).

154. *Anguillaria*, *R. Br. Prod.* 273.—Flores sæpe polygamo-dioici. Perianthium explanatum, persistens; segmenta distincta, subæqualia, patentia, supra basin transverse glandulosa v. nuda. Stamina 6, hypogyna v. ima basi segmentis adnata iisque multo breviora, filamentis basin versus dilatatis cæterum filiformibus; antheræ infra medium v. juxta basin introrsum affixæ, ovatæ v. oblongæ, loculis a latere subextrorsum dehiscentibus. Ovarium sessile, 3-quetrum, 3-loculare; styli 3, a basi distincti v. brevissime connati, breviter filiformes, superne introrsum stigmatosi; ovula in loculis ∞ (6-12). Capsula 3-quetra, obtusa v. vertice depressa, loculicide deiniscens. Semina ∞, globosa, brunnea, testa tenui appressa; embryo in albumine carnosio solido juxta hilum brevis, obovoideus v. oblongus.—Bulbus seu cormus parvus, tunicatus. Caulis humilis, simplex. Folia pauca, secus caulem dissita, linearia, vaginis brevibus latis fere inflatis. Flores plures, in spica terminali subsessiles, v. interdum ad unum terminalem reducti, ebracteati.

Species 2, Australianæ. *Benth. Fl. Austral.* vii. 29. *Endl. Iconogr. t.* 3.

155. *Ornithoglossum*, *Salisb. Parad. Lond. t.* 54. (*Lichtensteinia*, *Willd. in Gesellsch. Naturf. Fr. Berlin Mag.* ii. 19, t. 1. *Cymation*, *Spreng. Syst.* ii. 142.)—Perianthium persistens; segmenta distincta, linearia v. lineari-lanceolata, sub anthesi patentissima v. reflexa, supra basin glandula v. macula nectarifera instructa. Stamina 6, basi segmentorum affixa iisque breviora, filamentis crassiuscule filiformibus; antheræ oblongæ, introrsum mediofixæ, loculis a latere subextrorsum dehiscentibus. Ovarium sessile, oblongum v. ovoideum, 3-sulcum, 3-loculare; styli 3, a basi distincti; ovula in loculis ∞ (10-20). Capsula ovoidea v. oblonga, obtusa, subinflata, tardius loculicide dehiscentis. Semina ∞, subglobosa v. compressiuscula, testa crassiuscula adnata; embryo in albumine cartilagineo juxta hilum parvus.—Cormus in rhizomate tuberoso parvus, tunicatus. Caulis simplex, erectus. Folia caulina lanceolata v. angusta, cum vagina continua, superiora floralia in bracteas lineares abeuntia. Flores longe pedicellati, nutantes, ad axillas foliorum floralium v. bractearum solitarii, in racemo laxo terminali sæpius pauci.

Species v. varietates insigniores 2, Africæ australis incolæ. *Kunth, Enum. Pl.* iv. 162. *Baker in Journ. Linn. Soc.* xvii. 448. *Andr. Bot. Rep.* 233 (*Melanthium*). *Bot. Mag. t.* 994 (*Melanthium*). *Sweet, Brit. Fl. Gard. t.* 131.

156. *Iphigenia*, *Kunth, Enum. Pl.* iv. 212. (*Notocles*, *Salisb. Gen. Pl. Fragm.* 54.)—Perianthium explanatum, post anthesin caducissimum; segmenta distincta, linearia v. anguste oblonga, æqualia, patentia, plana. Stamina 6, hypogyna, perianthio pluries breviora, filamentis complanatis sæpius latis; antheræ breviter oblongæ, introrsum supra basin affixæ, versatiles, loculis a latere subextrorsum dehiscentibus. Ovarium sessile,

3-loculare ; styli 3, basi brevissime cuneati, lineares, recurvi, superne introrsum stigmatosi ; ovula in loculis numerosa. Capsula ovoidea v. oblonga, obtusa v. truncata, 3- v. 6-sulca, loculicide dehiscens. Semina subglobosa, brunnea, strophiole parvo (v. 0 ?), testa tenui appressa ; embryo in albumine carnoso juxta hilum parvus, obovoideus v. oblongus.— Bulbus seu cornus parvus, tunicatus. Caulis simplex, erectus. Folia pauca, secus caulem dissita, sessilia, linearia v. anguste lanceolata, floralia minora, in bracteis parvas lineares abundia. Flores longe pedicellati, erecti, ad apicem caulis v. in axillis superioribus solitarii.

Species 4, Indiæ orientalis, Australiae, Novæ Zelandiæ, Madagascaræ et Africae tropicæ incolæ. *Baker in Journ. Linn. Soc.* xvii. 450. *Wall. Pl. As. Rar.* t. 259 (*Anguillaria*).

TRIBUS XVII. NARTHECIÆ.

157. ? *Nietneria*, Klotzsch in *Rich. Schomb. Reise Brit. Gu.* 1066, *absque char.*—Perianthium persistens, tubo campanulato ovario adnato ; lobi erecti, oblongi, subæquales, demum rigidi, interiores paullo tenuiores latioresque. Stamina 6, basi loborum affixa iisque parum breviora, filamentis crassiuscule filiformibus ; antheræ ovatæ, erectæ, basifixæ, loculis a latere subintrorsum dehiscentibus. Ovarium basi tubo perianthii adnatum, superne liberum pyramidatum, apice in stylum brevem attenuatum, 3-loculare ; stigma terminale, parvum, subcapitatum ; ovula ad basin partis liberæ loculorum numerosa, fasciculata. Capsulæ pars libera loculicide dehiscens, valvis erectis persistentibus. Semina numerosa, parva, inappendiculata, oblonga, testa tenui appressa striata ; embryo in albumine carnoso minutus ? (in seminibus examinatis non deteximus).—Rhizoma breve. Folia ad basin caulis disticha, linearia, sæpe falcata, rigidula, vaginis equitantibus, caulina interdum 1-2, inferioribus minora. Flores ad apicem caulis in cymam laxè trichotomam nunc fere corymbosam nunc angustam dispositi, flavi ?, pedicellis erectis rigidulis. Bractee minutæ v. 0.

Species 1, in monte Roraima Guianæ obvia, *Rob. Schomburgk, coll.* 2, n. 667 ; *Rich. Schomburgk, n.* 1009 ; *Appun n.* 1107, nuperque a Rio Janeiro a *Glaziou* recepta sub n. 12212.

Planta foliis et colore omnino *Nartheci* ; semina *Metanartheci*, ab utroque genere differt inflorescentia ramosiore et ovario semiinfero. Klotzsch *Hæmodoraceis* refert, sed semina nequaquam conveniunt.

158. *Narthecium*, Mœhr. in *Act. Acad. Nat. Cur.* vi. (1742), 384, t. 5. (Abama, *Adans. Fam.* ii. 47.)—Perianthium marcescens, persistens ; segmenta distincta, rotato-potentia, subæqualia, rigidula, linearia, tenuiter 5-nervia. Stamina 6, hypogyna, perianthio subbreviora, filamentis dense lanatis ; antheræ erectæ, lineares, basifixæ, demum tortæ, loculis a latere subintrorsum dehiscentibus. Ovarium lata basi sessile, 3-sulcum, 3-loculare, apice in stylum breviter columnarem attenuatum, stigmatibus parvo ; ovula in parte inferiore loculorum numerosa. Capsula anguste oblonga, breviter acuminata, loculicide dehiscens. Semina numerosa, ascendencia, oblonga, testa tenui pallida striata apice basique in appendiculam linearem hyalinam producta ; embryo albumine carnoso 3-4-plo brevior.—Rhizoma reptans, caule a basi cæspitosa v. ramosa breviter incurvo-ascendente dein erecto. Folia ad basin caulis disticha, equitancia, linearia, sæpe falcata, rigidula, striata. Racemus terminalis, simplex v. rarissime ramulo uno alterove brevi instructus, strictus. Flores flavi, pedicellis brevibus erectis ad bracteis solitariis, haud raro bracteola lineari instructis.

Species 4, inter se valde affines, regionum temperatarum hemisphærii borealis incolæ. *Kunth, Enum. Pl.* iii. 362. *Baker in Journ. Linn. Soc.* xv. 350. *Red. Lil.* t. 218 (Abama). *Reichb. Ic. Fl. Germ.* t. 421. *Nees, Gen. Fl. Germ. Monocot.* ii. n. 30. *Buchenau in Bot. Zeit.* 1859, 161, t. 7. *Bot. Mag.* t. 1505.

159. *Metanarthecium*, Maxim. in *Bull. Acad. Imp. Sc. Petersb.* xi. 438 ; *Mel. Biol.* vi. 213.—Perianthium persistens ; segmenta a basi libera, linearia, superne patula,

æqualia v. exteriora paullo angustiora, obscure 1-nervia. Stamina 6, infra medium segmentorum affixa iisque paullo breviora, filamentis glabris filiformibus v. basi leviter dilatatis; antheræ breviter oblongæ, dorsifixæ, loculis a latere subintrorsum dehiscentibus. Ovarium lata basi sessile, ovoideum, 3-loculare; stylus columnaris, stigmatibus parum incrassato 3-dymo; ovula in loculis numerosa. Capsula 6-sulcata, loculicide dehiscens. Semina numerosa, parva, ovoidea, inappendiculata, pallida, testa tenui appressa striata; embryo in albumine carnosio prope hilum minutus, ovoideus.—Rhizoma breve, horizontale, fibris tenuibus numerosis instructum. Folia radicalia, oblonga v. oblanceolata, acuta, luteo-viridia. Scapus aphyllus, simplex v. sub inflorescentia ramulo unico instructus. Racemus spiciformis, densiflorus, bracteis parvis linearibus. Flores flavo-virescentes, suberecti, pedicellis brevibus ad bracteas solitariis prope basin 1-bracteolatis.

Species 1, Japonica. *Baker in Journ. Linn. Soc.* xv. 285.

160. *Chamaelirium*, Willd. in *Gesellsch. Naturf. Fr. Berlin Mag.* ii. 18. (Ophiostachys, *Red. Lil. t.* 464. *Dasurus*, *Salisb. Gen. Pl. Fragm.* 51. *Diclinotrys*, *Raf. Neogen.* 3.)—Flores dioici. Perianthium marcescens, persistens; segmenta distincta linearia, subæqualia. Stamina in fl. ♂ 6, libera, perianthio subæqualia v. paullo longiora, filamentis filiformibus, in fl. ♀ ad staminodia parva ananthera reducta; antheræ parvæ, ovoideoglobosæ, loculis distinctis a latere subextrorsum dehiscentibus. Ovarium in fl. ♀ sessile, ovoideum, costatum, integrum, 3-loculare; styli 3, distincti v. vix basi connati, lineares, recurvi, introrsum stigmatosi; ovula in loculis ∞ (6–12). Capsula obovoidea, membranacea, apice breviter loculicide dehiscens. Semina ∞, oblonga, compressiuscula, pallida, testa tenui nucleo appressa apice basique v. interdum circumcirca in alam hyalinam producta; embryo cylindraceus, albumine carnosio 2–3-plo brevior.—Rhizoma horizontale, crassum, subnodosum, fibris radicalibus tenuibus, caule erecto simplici. Folia radicalia petiolata, obovalia v. oblonga, membranacea, caulina angustiora, gradatim minor, inferiora petiolata, superiora sessilia, summa parva distantia. Racemus terminalis, simplex, cylindraceus, spiciformis, ebracteatus, ♂ densus, ♀ laxior. Flores parvi, flavi, breviter pedicellati v. subsessiles.

Species 1, boreali-Americana. *Kunth, Enum. Pl.* iv. 176. *Baker in Journ. Linn. Soc.* xvii. 468. *Linn. Amer. Acad.* iii. t. 1, f. 2 (*Veratrum*). *Jacq. Ic. Rar. t.* 453 (*Helonias, male*). *Bot. Mag. t.* 1062 (*Helonias*).

Ovarium interdum abnorme 4-merum evadit sed rarissime, semel tantum observavimus.

161. *Chtenographis*, Maxim. in *Bull. Acad. Imp. Sc. Petersb.* xi. 435; *Mel. Biol.* vi. 209.—Perianthium (persistens?); segmenta distincta v. vix basi in annulum connata, superiora 2, 3 v. 4 linearia, petaloidea, erecta v. patentia, subæqualia, 4, 3 v. 2 inferiora minima, lineari-filiformia v. obsoleta. Stamina 6, ima basi segmentorum affixa iisque pluries breviora, filamentis brevibus crassis; antheræ fere 2-globosæ, loculis distinctis a latere (subextrorsum?) dehiscentibus. Ovarium sessile, subglobosum, obtuse 3-lobum, 3-loculare; styli 3, inter lobos contigui, breves, recurvi, introrsum stigmatosi; ovula in loculis 2. Capsula . . .—Rhizoma breve, crassum, fibris radicalibus tenuibus, caule erecto tenui simplici. Folia radicalia sessilia v. petiolata, lata v. oblonga, caulina minora, anguste lanceolata, sessilia. Spica terminalis, dense cylindracea v. laxa. Flores numerosi, parvi, albi, sessiles, ebracteati.

Species v. varietates insignes 2, Japonicæ. *Baker in Journ. Linn. Soc.* xvii. 469. *Bot. Mag. t.* 6310.

162. *Xerophyllum*, Mich. *Fl. Bor. Amer.* i. 210.—Perianthium marcescens, persistens; segmenta distincta, oblonga v. lanceolata, subæqualia, patentia. Stamina 6, hypogyna, perianthio longiora, filamentis plus minus complanatis apice subulatis; antheræ ovatæ v. oblongæ, introrsum juxta basin affixæ, loculis subextrorsum dehiscentibus. Ovarium sessile, 3-sulcum, obtusum, 3-loculare; styli 3, breviter filiformes, recurvi, superne introrsum stigmatosi; ovula in loculis 2–4 (nos semper 4 invenimus), a basi erecta. Capsula subglobosa v. breviter oblonga, 3-sulca, loculicide dehiscens. Semina in loculis

sæpius 2, erecta, oblonga, introrsum angulata, pallide brunnea, testa tenui appressa rarius apice brevissime producta; embryo in albumine carnosio prope hilum parvus, oblongus, nunc minimus.—Rhizoma breve, crassum, lignosum. Caulis erectus, elatus, simplex. Folia radicalia v. ad basin caulis conferta, longe linearia, rigidula, margine scabra, caulina sparsa, sæpe numerosa et multo minora tenuioraque, quaquaversa, basi sæpe breviter membranaceo-dilatata nec vaginata, summa in bracteas setaceas gradatim abeuntia. Flores albi, in racemo terminali numerosi, longiuscule pedicellati, racemo primum dense pyramidato v. oblongo, demum valde elongato.

Species distinguit S. Watson 3, a Bakoero omnes in unam junctas, per Americam borealem late dispersas. *S. Wats. in Proc. Amer. Acad.* xiv. 284. *Baker in Journ. Linn. Soc.* xvii. 467. *Pursh, Fl. Amer. Sept. t. 9 (Helonias). Bot. Mag. t. 748 (Helonias). Bot. Reg. t. 1613.*

163. *Howardia*, Hook.  *Ic. Pl. t. 858*.—Perianthium explanatum, diu persistens; segmenta ima basi in tubum breviter turbinatum connata, cæterum libera, lanceolata, subæqualia, patentia. Stamina 3, basi segmentorum interiorum affixa iisque multo breviora, filamentis brevibus basi complanatis; antheræ longe oblongæ, sagittatæ, introrsum prope basin affixæ, loculis extrorsum dehiscentibus. Ovarium intra tubum perianthii sessile, ima basi subcontractum, perianthio vix brevissime adnatum, apice in stylum attenuatum, 3-loculare; stylus abbreviatus, ramis 3 brevibus recurvis introrsum stigmatosis; ovula in loculis numerosa. Capsula (immatura) oblonga, 3-sulca, loculicide dehiscentis? Semina . . .—Rhizoma breve. Folia radicalia, angusta, rigida, disticha, ad basin caulis equitantia. Caulis erectus, simplex, vaginis paucis complicatis spathiformibus instructus, cæterum aphyllus. Spathæ 2 summæ approximatae, pedicellum floris unici terminalis includentes. Perianthium majusculum, fusco-purpureum.

Species 1, Tasmanica. *Benth. Fl. Austral.* vii. 25.

Genus pluribus notis *Irideas* in mentem revocat, sed stamina segmentis interioribus nec exterioribus opposita et ovarium superum. Capsulae dehiscentia adhuc incerta.

164. *Meleniopsis*, A. Gray in *Mem. Amer. Acad. ser. 2, vi. 416*. (Sugerokia, *Miq. in Ann. Mus. Lugd. Bat.* iii. 144).—Perianthium explanatum, persistens; segmenta distincta v. vix basi connata, oblonga v. angusta, subæqualia, patentia, tenuiter 3-nervia. Stamina 6, prope basin segmentorum affixa iisque paullo longiora, filamentis filiformibus; antheræ lineares, introrsum inter lobos basales affixa, loculis extrorsum dehiscentibus. Ovarium sessile, basi leviter contractum, obtuse sub-3-lobum, 3-sulcum, 3-loculare; stylus inter lobos ovarii elongatus, indivisus, stigmatibus capitato dilatato; ovula in loculis numerosissima, conferta. Capsula profunde 3-loba, lobis seu carpidiis stellato-divergentibus, introrsum rima longitudinali dehiscentibus. Semina numerosa, linearia, pallida, testa tenui adnata apice basique (v. ex A. Gr. in *H. pauciflora* basi tantum) in appendicem linearem hyalinam producta; embryo in albumine carnosio prope hilum parvus, oblongus v. cylindraceus.—Rhizoma breve, horizontale, fibris radicalibus tenuibus. Folia radicalia, petiolata, oblonga v. lanceolata, vaginis basi scariosis latiusculis imbricatis. Scapus e fasciculo foliorum erectus, simplex, vaginis pluribus scariosis instructus, cæterum aphyllus. Flores ad apicem scapi solitarii v. pauci, majusculi, subnutantes, pedicellis brevibus approximatis nec umbellatis. Bracteæ minimæ.

Species editæ 4, Japonicæ v. Formosianæ, non tamen omnes bene distinctæ. *Baker in Journ. Linn. Soc.* xvii. 459. *Thunb. Ic. Pl. Jap.* iv. t. 4 (Scilla).

165. *Melonias*, Linn.  *Gen. n. 458*.—Perianthium explanatum, persistens; segmenta distincta v. vix ima basi connata, subæqualia, patentia, tenuiter 3-nervia. Stamina 6, hypogyna v. ima basi segmentorum affixa iisque paullo longiora, filamentis filiformibus; antheræ ovatae, inter lobos basales subintrorsum affixæ, loculis a latere subextrorsum dehiscentibus. Ovarium lata basi affixum, ovoideum, 3-sulcum, apice breviter obtusæque 3-lobum; styli 3, inter lobos ovarii breves v. brevissimi, distincti v. breviter connati, recurvi, introrsum stigmatosi; ovula in loculis numerosa. Capsula profunde 3-loba, lobis seu carpellis divaricatis rotundis introrsum rima dehiscentibus.

Semina saepius numerosa, pallida, testa tenuiter membranacea adnata apice basique in appendicem hyalinam producta; embryo in albumine carnosio prope hilum parvus, oblongo-cylindraceus.—Rhizoma breve, tuberosum. Folia radicalis, oblonga, in petiolum brevem contracta. Scapus e fasciculo foliorum sublateralis, squamis pluribus ad basin imbricatis, secus scapum paucis dissitis. Racemus terminalis, densus, cylindraceus v. oblongus. Flores parvuli, numerosi, breviter pedicellati, ebracteati.

Species 1, boreali-Americana. *Kunth, Enum. Pl.* iv. 174. *Baker in Journ. Linn. Soc.* xvii. 467. *Red. Lil. t.* 13. *Andr. Bot. Rep. t.* 352. *Bot. Mag. t.* 747. *Lodd. Bot. Cab. t.* 961.

166. *Tofieldia*, *Huds. Fl. Angl.* 157 (ed. 2). (Heriteria, *Schrank, Baier. Fl.* i. 133, 629. *Hebelia*, *Gmel. Fl. Bad.* ii. 117.)—Perianthium persistens; segmenta distincta v. ima basi brevissime connata, oblonga v. angusta, subaequalia, sub anthesi patentia. Stamina 6, hypogyna v. seriei interioris ima basi segmentis adhaerentia, perianthio parum breviora v. longiora, filamentis filiformibus v. vix complanatis; antherae ovatae, inter lobos basales subextrorsum affixae, versatiles, loculis introrsum dehiscentibus. Ovarium sessile, ovoideum, apice 3-lobum, lobis in stylos brevissimos recurvos apice introrsum stigmatosos desinentibus; ovula in loculis  $\infty$ . Capsula 3-loba, septicide 3-partibilis, carpellis introrsum dehiscentibus. Semina  $\infty$ , breviter v. longe oblonga, subangulata, pallida, testa tenui appressa; embryo in albumine carnosio juxta hilum minimus.—Caulis e rhizomate brevi v. repente erectus. Folia radicalia v. ad basin caulis conferta, breviter linearia, subdisticha, in caule caeterum perpauca parva v. 0. Flores parvi, in spica terminali subsessiles v. breviter pedicellati, ad axillas bractearum minimarum solitarii v. terni, interdum basi intra bracteam bracteola lata hyalina truncata v. 3-loba stipati v. fere involuti.

Species ad 14, quarum 1 v. 2 Andinae, caeterae per regiones temperatas montanas et boreales hemisphaerii borealis late dispersae. *Kunth, Enum. Pl.* iv. 165. *Baker in Journ. Linn. Soc.* xvii. 485. *Sm. in Trans. Linn. Soc.* xii. 235, t. 8. *Reichb. Ic. Fl. Germ. t.* 420. *Nees, Gen. Fl. Germ. Monocot.* ii. n. 31. *Red. Lil. t.* 256, 324. *Hook. Fl. Bor. Amer. t.* 191. *Bot. Mag. t.* 3859.

Genus a nonnullis in tria dividitur, speciebus typicis ad illas limitatis quibus flores ad bracteas solitarii, et *TRIANTHA*, *Nutt. Gen. N. Amer. Pl.* i. 235; *Baker in Journ. Linn. Soc.* xvii. 490, distinguitur floribus ad bracteas ternis, character tamen non constans videtur. Inter species huc relatas, *T. glabra*, *Nutt.*, insignis est filamentis crassis perianthium aequantibus apice brevissime acutis diu persistentibus, antheris caducissimis. In *T. pubente*, *Ait.*, semina apice appendice lineari hyalina terminata et funiculus arillo lineari-subulato hyalino a semine libero instructus. In *T. glutinosa*, *Pers.* et in *T. occidentali*, *S. Wats.* quae vix a *T. glutinosa* distincta, semina apice breviter appendiculata et funiculus arillo maximo membranaceo-hyalino semen laxè involvente instructus. *T. japonica*, *Miq.*, ex icone a Bakero citato forte a *T. glutinosa* non diversa.

*ISIDROGALVIA*, *Ruiz et Pav. Fl. Per. et Chil.* iii. 69, t. 302, est *T. falcata*, *Willd.*, e Colombia et Guiana, cui associanda *T. sessiliflora*, *Hook. Ic. Pl.* t. 691, species habitu rigido insignes. Flores ad bracteas solitarii, perianthii segmentis quam in caeteris speciebus longioribus rigidis; styli sub anthesi brevissimi, alte coaliti. Semina immatura tamen vidimus apice appendiculata, funiculo (an semper?) arillo filiformi ei *T. pubentis* simili instructo.

167. ? *Petrosavia*, *Beccari in Nuov. Giorn. Bot. Ital.* iii. 7, t. 1.—Perianthium persistens; segmenta ima basi connata, patentia, 3 exteriora interioribus minora angustioraque. Stamina 6, basi segmentorum affixa iisque breviora, filamentis filiformibus; antherae ovatae, dorsifixae, loculis introrsum dehiscentibus. Ovarium sessile, e carpellis 3 basi tantum connatis apice contractis, stigmatibus sessilibus terminalibus subcapitatis introrsum obliquis; ovula in carpellis  $\infty$ . Fructus e carpellis distinctis (ex icone basi breviter connatis) stellato-divaricatis folliculiformibus, rima longitudinali introrsum dehiscentibus. Semina numerosa, ovato-elliptica, 7-9-costata, integumento celluloso-membranaceo hyalino cincta, testa crustacea brunnea; albumine? cartilagineo-oleoso; embryo ab auctore non detectus.—Planta in radicibus parasitica, ebulbosa, aphylla. Caulis tenuis, simplex, erectus, squamis numerosis parvis plus minus setaceo-acuminatis instructus, superioribus in bracteas setaceas abeuntibus. Racemus terminalis, simplex, brevis, sub

anthesi fere corymbiformis. Flores parvi, longe pedicellati, ad bracteas solitarii. (*Char. ex ic. et descr. Beccarii.*)

Species 1, Borneensis, a nobis non visa. Genus ut videtur *Tofieldiæ* affine.

168. *Pleea*, Mich. *Fl. Bor. Amer.* i. 247, t. 25.—Perianthium persistens; segmenta distincta, lineari-lanceolata, subæqualia, rigidula, patentia. Stamina 6–12, hypogyna v. vix ima basi segmentis adhærentia, iis vix breviora, filamentis filiformibus apice tenuissimis; antheræ nunc breviter oblongæ nunc fere lineares, infra medium dorsifixæ, loculis introrsum dehiscentibus. Ovarium sessile, apice sub-3-fidum, 3-loculare; styli 3, in lobos ovarii distincti, breves, mox recurvi, stigmatibus parvis; ovula in loculis  $\infty$ . Capsula septicide 3-partibilis, carpellis introrsum dehiscentibus. Semina parva, anguste oblonga, subteretia, recta v. curvula, testa tenui appressa, apice vix brevissime appendiculata v. nuda, funiculo arillo filiformi a semine libero instructo; embryo in albumine carnosio juxta hilum minimus.—Caules e rhizomate nodoso erecti, junciei. Folia radicalia pauca, longiuscule linearia, rigidula, caulina 1–2, longe vaginata, radicalibus minorâ. Spica simplex. Flores intra bracteas solitarii, pedicellati, erecti. Bracteæ rigide spathacæ, inferiores acuminatæ, superiores muticæ, omnes rhachin pedicellosque arcte amplectentes.

Species 1, Carolinæ incola. *Kunth, Enum. Pl.* iv. 173. *Red. Lil.* t. 248. *Bot. Mag.* t. 1956.

#### TRIBUS XVIII. UVULARIÆ.

169. *Schelhammra*, R. Br. *Prod.* 273. (*Parduyna*, *Salisb. Gen. Pl. Fragm.* 58.)—Perianthium explanatum, deciduum; segmenta distincta, subæqualia, basi in alabastro conduplicata, demum patentia, plana, 5-nervia. Stamina 6, basi segmentorum affixa iisque breviora, filamentis basi incrassatis v. applanatis apice filiformibus; antheræ breviter oblongæ, erectæ, introrsum juxta basin affixæ, loculis a latere subextrorsum dehiscentibus. Ovarium sessile, 3-quetrum, 3-loculare; stylus filiformis, 3-fidus, ramis recurvis superne introrsum stigmatosis; ovula in loculis  $\infty$  (4–6). Capsula subglobosa, 3-sulca, vertice depressa, carnosula, loculicide dehiscens. Semina irregulariter ovoideo-globosa, late strophiolata, pallide brunnea, testa tenui appressa; embryo in albumine solido juxta hilum minutus.—Caules e rhizomate repente humiles, sæpius basi ramosi, foliati, ascendentes, basi 1-vaginati. Folia sessilia, ovata v. lanceolata, membranacea. Flores ad apices ramorum solitarii v. plures in umbellam sessilem dispositi, pedicellis filiformibus. Bracteæ parvæ v. 0.

Species 2, Australiæ orientalis incolæ. *Benth. Fl. Austral.* vii. 31. *Bot. Mag.* t. 2712.

170. *Xreysigia*, Reichb. *Iconogr. Exot.* iii. 11, t. 229. (*Tripladenia*, *Don in Proc. Linn. Soc.* 1839, 46.)—Perianthium explanatum, deciduum; segmenta distincta, subæqualia, in alabastro conduplicata, sub anthesi patentissima, plana, prope basin glanduloso-appendiculata. Stamina 6, ima basi segmentorum affixa iisque breviora, filamentis filiformibus v. leviter complanatis; antheræ oblongo-lineares, prope basin dorsifixæ, loculis introrsum affixis a latere extrorsum dehiscentibus. Ovarium sessile, 3-quetrum, 3-loculare; stylus a basi brevissima 3-fidus, ramis linearibus recurvis superne introrsum stigmatosis; ovula in loculis  $\infty$  (2–4). Capsula subglobosa, carnosula, 3-sulca, loculicide dehiscens. Semina strophiolata (*Don*).—Caulis e rhizomate brevi nodoso erectus, simplex, foliatus, basi præter vaginas 1–2 nudus. Folia alterna, ovato-lanceolata, cordato-amplexicaulia. Flores mediocres, rosei, axillares, vix nutantes, pedunculo tenui medio sæpius 1–2-bracteolato ibidemque in pedicellos 2 1-floros divisio, rarius simplici 1-floro v.  $\infty$ -floro.

Species 1, Australiæ orientalis incola. *Benth. Fl. Austr.* vii. 32. *Bot. Mag.* t. 3905. *Lodd. Bot. Cab.* t. 1511 (*Schelhammra*).

Genus habitu *Streptopodi* accedit, sed antheræ extrorsum dehiscentes et fructus capsularis. Embryonem extra albumen locatum descripsit Don, quod tamen ulterius probandum; semina jam a capsula delapsa in omnibus speciminibus a nobis visis.

171. *Uvularia*, Linn. Gen. n. 412, pro parte.—Perianthium campanulatum, deciduum; segmenta distincta, erecta v. superne patentia, exteriora intus basi foveolata. Stamina 6, hypogyna v. basi leviter segmentis adhærentia iisque breviora, filamentis filiformibus v. leviter complanatis; antheræ lineares, erectæ, prope basin introrsum affixæ, loculis a latere extrorsum dehiscentibus, connectivo ultra loculos in acumen breve producto. Ovarium breviter stipitatum v. rarius subsessile, 3-quetrum, 3-loculare; stylus filiformis, superne in ramos 3 lineares introrsum stigmatosos divisus; ovula in loculis  $\infty$  (ad 4), lateraliter affixa. Capsula ovoidea v. obovoideo-truncata, 3-angulata v. fere 3-alata, loculicide dehiscens. Semina (immatura) subglobosa, nigra, strophiole magno squamiformi; embryo (ex Kunthio) albumine carnosio-corneo inclusus, cylindraceo-oblongus.—Caulis e rhizomate repente v. horizontali crassoque erectus, basi nudus junior vaginis paucis scariosis mox evanidis stipatus, superne foliatus parum ramosus. Folia alterna, sessilia v. perfoliata, ovata v. lanceolata. Flores ad apices ramulorum solitarii v. gemini, pedicellis longiusculis recurvis penduli. Ramuli floriferi 1-foliati, sæpe ramo excurrente oppositi-folii apparent.

Species ex Bakero 5, a S. Watsonio ad 4 reducuntur, Americæ borealis incolæ. Kunth, Enum. Pl. iv. 200. Baker in Journ. Linn. Soc. xvii. 461. Red. Lil. t. 184. Sm. Exot. Bot. t. 49 ad 52. Bot. Mag. t. 955, 1112, 1402. Lodd. Bot. Cab. t. 1260, 1262. Sweet, Brit. Fl. Gard. ser. 2, t. 21.

S. Wats. in Proc. Amer. Acad. xiv. 268, 269, genus in 2 dividit: *UVULARIA*, foliis perfoliatis, capsula sessili apice lata obtusissima v. truncata, angulis parum prominentibus, et *OAKESIA*, foliis sessilibus, capsula plus minus stipitata apice rotundata, angulis valde prominentibus fere 3-alata.

172. *Gloriosa*, Linn. Gen. n. 413. (Methonica, Juss. Gen. 48. Clinostylis, Hochst. in Flora, 1844, 26.)—Perianthium marcescens, persistens; segmenta a basi distincta, angusta, subæqualia, patentissima v. reflexa, superne v. fere a basi undulata v. crispa, rarius subplana. Stamina 6, hypogyna, segmentis parum breviora, filamentis filiformibus; antheræ lineares, introrsum mediofixæ, versatiles, loculis a latere subextrorsum dehiscentibus. Ovarium sessile, oblongum, 3-loculare; stylus elongatus, filiformis, ramis 3 brevibus v. longiusculis superne introrsum stigmatosis; ovula in loculis numerosa. Capsula obovoidea v. oblonga, coriacea, subcarnosa, loculicide dehiscens. Semina subglobosa, in speciminibus nostris immatura, ex Gärtnero et Redouteo testa laxa intus spongiosa, embryo in albumine duro cylindraceus.—Rhizoma tuberosum. Caulis elatus, scandens, foliosus, superne sæpe ramosus. Folia sparsa, interdum opposita v. 3-natim verticillata, sessilia, oblongo-lanceolata, acumine in cirrum spiralem producto. Pedicelli in axillis superioribus longi, 1-flori, apice sub anthesi reflexi. Flores speciosi, plus minus rubri.

Species 3, per Africam et Asiam inter tropicos late dispersæ. Kunth, Enum. Pl. iv. 275. Baker in Journ. Linn. Soc. xvii. 457. Gärtn. Fruct. t. 18. Red. Lil. t. 26. Andr. Bot. Rep. t. 129. Wight, Ic. t. 2047. Klotzsch in Peters, Reise Mosamb. Bot. t. 54, 55. Bot. Reg. t. 77. Fl. des Serres, t. 865.

Gärtner embryonem reduplicatum describit, quod in nulla specie *Liliacearum* observavimus.

173. *Sandersonia*, Hook. Bot. Mag. t. 4716.—Perianthium persistens, urceolato-globosum, subinflatum, basi foveolis 6 extus in gibbos v. calcaria brevissima prominentibus instructum, ore leviter contracto brevissime sinuato-6-lobo. Stamina 6, hypogyna, perianthio multo breviora, filamentis filiformibus; antheræ oblongæ, introrsum mediofixæ, versatiles, loculis extrorsum dehiscentibus. Ovarium sessile, ovoideo-oblongum, 3-loculare; stylus breviter filiformis, 3-fidus, ramis recurvis apice introrsum stigmatosis; ovula in loculis sat numerosa. Fructus . . .—Rhizoma tuberosum. Caulis suberectus, simplex, foliatus. Folia lanceolata, acumine interdum in cirrum brevem desinente

*superiora floralia caulinis similia v. summa minora. Flores speciosi, aurantiaci, nutantes, pedicellis axillaribus solitariis ebracteatis.*

Species 1, Natalensis. *S. littonioides*, Welw., characteres omnino *Littonia* nec *Sandersonie* præbet.

174. *Littonia*, Hook. Bot. Mag. t. 4723.—Perianthium campanulatum; segmenta fere a basi distincta, suberecta, æqualia, oblongo-lanceolata, carinata, basi intus ad latera foveolæ 2-callosa. Stamina 6, hypogyna, perianthio breviora, filamentis filiformibus; antheræ oblongæ, prope basin introrsum affixæ, loculis a latere extrorsum dehiscentibus. Ovarium sessile, obtusissimum, 3-sulcum, facile 3-partibile, 3-loculare; stylus breviter filiformis, 3-fidus, ramis recurvis, stigmatibus parvis terminalibus; ovula in loculis numerosa. Fructus . . .—Rhizoma tuberosum. Caulis flexuosus, scandens, simplex, foliatus. Folia inferiora 3-5-natim subverticillata, superiora subopposita v. sparsa, lanceolata, acuminata, in cirrum brevem sæpe producta. Flores speciosi, aurantiaci, nutantes, pedicellis brevibus ad axillas solitariis ebracteatis.

Species 2, altera Natalensis, altera Angolensis, *L. Welwitschii*, nob. (*Sandersonia littonioides*, Welw.; Baker in Trans. Linn. Soc. Bot. i. 262).

175. ? *Walleria*, Kirk in Trans. Linn. Soc. xxiv. 497, t. 52.—Perianthii tubus brevissimus, campanulatus; lobi multo longiores, oblongi, patentes, subæquales, 5-nerves. Stamina 6, ad faucem affixa, lobis breviora, filamentis brevissimis; antheræ lineares, erectæ, basi v. juxta basin affixæ, loculis apice poro v. rima brevi dehiscentibus. Ovarium tubo perianthii subinclusum at liberum, lata basi affixum, 3-loculare; stylus filiformis, stigmatē parvo; ovula in loculis ∞. Fructus junior subglobosus, obtusissimus, carnosulus, maturus ignotus.—Rhizoma tuberosum v. horizontale. Caulis erectus, simplex, foliatus. Folia sessilia, lanceolata v. linearia, infima minima, floralia caulinis superioribus similia. Flores cærulei, erecti v. cernui, pedicellis axillaribus solitariis infra medium bracteolatis 1-floris v. rarij 2-floris.

Species editæ v. varietates insignes 3, Africæ tropicæ incolæ. Baker in Journ. Linn. Soc. xvii. 498, et in Trans. Linn. Soc. Bot. i. 262.

Genus ab auctoribus *Conanthereis* relatum, longe tamen differt habitu, inflorescentia, ovario et verisimiliter fructu, hoc tamen seminibusque ignotis, affinitates dubiæ remanent.

176. *Tricyrtis*, Wall. Tent. Fl. Nep. 61, t. 46. (Compsa, Don, Prod. Fl. Nep. 50. Compsanthus, Spreng. Syst. Cur. Post. 137.)—Perianthium campanulatum; segmenta a basi distincta, lanceolata, exteriora basi saccata, interiora plana, omnia cæterum æqualia, basi erecta, superne patentia. Stamina 6, hypogyna, filamentis complanatis in tubum longe conniventibus v. cohærentibus superne patentibus; antheræ oblongæ, introrsum affixæ, loculis extrorsum dehiscentibus. Ovarium oblongum, 3-quetrum, 3-loculare; stylus columnaris, sub-3-queter, ramis 3 recurvo-patentibus apice 2-fidis introrsum elevato-papillois; ovula in loculis numerosa, obovoidea. Capsula anguste oblonga, prominenter 3-quetra, septicide dehiscens. Semina numerosa, ovata v. orbiculata, plana, testa laxiuscula ∞-nervi venulisque transversis reticulata; embryo in albumine carnosio juxta hilum minimus, obovoideus.—Rhizoma breviter repens. Caulis erectus, sub inflorescentia simplex, foliatus. Folia alterna, ovata v. oblonga, basi contracta subsessilia v. cordato-amplexicaulia. Inflorescentia terminalis v. in axillis superioribus laxè dichotoma, erecta. Flores pauci, majusculi, longiuscule pedicellati, perianthio intus sæpe eleganter maculato. Bracteæ parvæ, herbacæ, v. 0. Capsulæ erectæ, sæpe ultrapulcres.

Species 5, Himalayæ, Japoniæ et Chinæ incolæ. Baker in Journ. Linn. Soc. xvii. 463. Bot. Mag. t. 4955, 5355, 6544. Regel, Gartenfl. t. 613.

177. *Disporum*, Salisb. in Trans. Hort. Soc. i. 331, absque char.; Don, Prod. Fl. Nep. 50. (Drapieza, Blume, Enum. Pl. Jav. 8.)—Perianthium deciduum, anguste campanulatum; segmenta distincta, erecta v. superne patentia, subæqualia, basi nunc angusta

tenuia, nunc plus minus foveolata saccata v. breviter calcarata. Stamina 6, hypogyna v. ima basi segmentis adhærentia, iis subæqualia v. breviora, filamentis nunc filiformibus v. leviter complanatis, nunc infra medium late membranaceo-dilatatis; antheræ lineares, infra medium introrsum affixæ, loculis a latere subextrorsum dehiscentibus. Ovarium sessile v. basi contractum, subglobosum v. obovoideum, 3-loculare; stylus filiformis v. columnaris, in ramos 3 brevissimos v. longiores recurvos introrsum stigmatosos divisus; ovula in loculis 2 rarius 4-6, basi medio v. fere apice lateraliter affixa. Bacca subglobosa, indehiscens. Semina (excepto *D. trachycarpo*) pauca, ovoideo-globosa, testa brunnea appressa; embryo in albumine corneo juxta hilum parvus, oblongus.—Caulis e rhizomate repente v. horizontali erecti, parce ramosi, foliati, basi nudi nisi vaginis paucis scariosis mox evanidis stipati. Folia alterna, sessilia v. brevissime petiolata, ovata v. lanceolata, membranacea, dense multinervia, v. inter nervos dissitos reticulato-venulosa. Flores ad apices ramulorum solitarii v. gemini, rarius  $\infty$  umbellati, pedicellis recurvis penduli.

Species ad 12, Americæ borealis et Asiæ tropicæ montanæ v. centralis necnon Japoniæ incolæ. *Baker in Journ. Linn. Soc.* xiv. 538. *Wall. Pl. As. Rar.* t. 269. *Wight, Ic.* t. 2048, 2049. *Royle, Ill. Bot. Himal.* t. 96. *Hook. Fl. Bor. Amer.* t. 189. *Bot. Mag.* t. 916, 1490. (*Ic. plur. sub Uvularia.*)

PROSARTES, *Don in Trans. Linn. Soc.* xviii. 531; *Baker in Journ. Linn. Soc.* xiv. 586; *S. Wats. in Proc. Amer. Acad.* xiv. 270, species continet Americanas ab Asiaticis typicis fide auctoris distinctas ovulis ab apice pendulis nec a basi ascendentibus. In *D. (Prosarte) trachycarpo* tamen, medio lateraliter affixa sunt, quod etiam observavimus in specie una Himalayense. Habitus et characteres cæteri omnes in utraque serie conformes.

#### TRIBUS XIX. MEDEOLÆ.

178. *Clintonia*, *Rafin. in Journ. Phys.* lxxxix. 102, non *Lindl.* (*Xeniatrum*, *Salisb. Gen. Pl. Fragm.* 58).—Perianthium deciduum; segmenta distincta, oblonga lanceolata v. basi angustata, subæqualia, erecto-patentia. Stamina 6, segmentis prope basin affixa iisque breviora v. longiora, filamentis filiformibus; antheræ oblongæ, introrsum medio v. infra medium affixæ, loculis a latere subextrorsum dehiscentibus. Ovarium sessile, 3-loculare; stylus columnaris v. crassiuscule filiformis, apice sæpe incrassatus, stigmate terminali plus minus dilatato v. obscure 3-lobo; ovula in loculis 2 in *C. umbellata*, in aliis speciebus usque ad 12. Bacca globosa v. ovoideo-oblonga, indehiscens. Semina 2- $\infty$ , ovoidea v. obtusangula, testa appressa brunnea v. pallida; embryo in albumine solido juxta hilum minutus.—Caulis e rhizomate repente erecti v. ascendentes, simplices, sæpe tenuiter pilosi. Folia ad basin v. prope basin caulis pauca, conferta, obovato-oblonga v. late lanceolata, basi plus minus in petiolum v. in vaginam contracta, membranacea, addito rarius altero in medio caule sessili. Flores parvuli v. majores, ad apicem caulis umbellati, exinvolucrati, umbella in *C. uniflora*, *Kunth*, ad flores 1-2 reducta, additis interdum in aliis speciebus paucis infra umbellam sparsis. Bractee parvæ, lineares, caducæ v. 0.

Species 6, quarum 2 Asiaticæ, Himalayæ, Sibiricæ v. Japonicæ incolæ, cæteræ boreali-Americanae. *Kunth, Enum. Pl.* v. 156. *Baker in Journ. Linn. Soc.* xiv. 583. *Ait. Hort. Kew.* ed. 1, t. 6 (*Dracena*). *Andr. Bot. Rep.* t. 206 (*Dracena*). *Desf. in Ann. Mus. Par.* ix. t. 8 (*Smilacina*). *Bot. Mag.* t. 1155, 1403 (*Smilacina*). *Middlend. Reise, Bot.* t. 30. *Hook. Fl. Bor. Amer.* t. 190 (*Smilacina*).

179. *Scelliopus*, *Torr. Bot. Whipple Exped.* 89 (145), t. 22.—Perianthium deciduum; segmenta distincta, 3 exteriora lato-lanceolata, patentia, 3 interiora linearia, erecta. Stamina 6, hypogyna, perianthio breviora, filamentis filiformibus; antheræ oblongæ, prope basin affixæ, loculis a latere (subextrorsum?) dehiscentibus. Ovarium sessile, oblongum, angulis 3 prominentibus, apice in stylum attenuatum, 1-loculare, placentis 3 parietalibus non prominentibus; stylus breviter filiformis, ramis 3 filiformibus recurvis introrsum stigmatosis; ovula in quaque placenta  $\infty$ . Fructus (ex *S. Wats.*) tenuiter membranaceus, 3-queter, irregulariter ruptus. Semina  $\infty$ , oblonga, pallida, teretia v. leviter angulata, inappendiculata, testa appressa, rhaphe anguste alata; embryo in albumine

*carnoso juxta hilum minimus, subglobosus.*—Rhizoma breve, fibris radicalibus dense fasciculatis carnosulis. Caulis brevis, erectus, basi vaginis vetustis stipatus nec bulbosus. Folia ad apicem caulis 2, opposita, ovata v. late oblonga, venis nonnullis cæteris majoribus percursa, sessilia v. in petiolum brevem contracta. Pedicelli  $\infty$ , rarius ad 1 v. 2 reducti, inter folia conferti, longi, recurvi, 1-flori.

Species 2, Americæ borealis incolæ. *S. Wats. in Proc. Amer. Acad.* xiv. 272. *Regel, Gartenfl.* t. 834 (male).

180. *Medeola*, Linn. Gen. n. 455. (Gyromia, Nutt. Gen. N. Amer. Pl. i. 238).—Perianthium marcescens, demum deciduum; segmenta distincta, subæqualia, per anthesin reflexo-patentia. Stamina 6, hypogyna, perianthio vix breviora, filamentis leviter complanatis; antheræ oblongæ, prope basin affixæ, loculis a latere mox extrorsum dehiscen- tibus. Ovarium sessile, ovoideo-globosum, 3-loculare; styli 3, distincti, filiformes, superne crassiores, recurvi, introrsum stigmatosi, demum divaricati; ovula in loculis  $\infty$  (ad 6). Bacca globosa, indehiscens, pulposa. Semina  $\infty$ , ovoidea, pallide brunnea, testa crassius- cule membranacea; embryo in albumine carnosio fere cartilagineo minutus.—Rhizoma crassum, horizontale. Caulis erectus, basi vaginis nonnullis hyalinis mox evanidis stipatus. Folia in medio caule in verticillo unico 6–9, subsessilia, ovali-oblonga, acuminata, mem- branacea, venis paucis subramosis, venulis reticulatis. Flores in umbella terminali  $\infty$ , sæpius pauci, foliis floralibus 3 quam caulina brevioribus latioribusque involu- crati. Pedicelli filiformes, recurvi, foliis breviores.

Species 1, boreali-Americana. *Kunth, Enum. Pl.* iv. 277. *Baker in Journ. Linn. Soc.* xiv. 583. *Barton, Medic. Bot.* t. 38. *Bot. Mag.* t. 1316.

181. *Trillium*, Linn. Gen. n. 456.—Perianthium persistens; segmenta distincta, patentia, 3 exteriora tenuiter herbacea, viridia v. rarius colorata, 3 interiora petaloidea sæpius majora minus patentia v. interdum recurva. Stamina 6, ima basi segmentorum affixa, iisque breviora, filamentis brevibus leviter complanatis; antheræ lineares, erectæ, basi- fixæ, obtusæ v. apice recurvæ, loculis ad latera connectivi subdissitis a latere dehiscen- tibus. Ovarium lata basi sessile, ovoideum v. subglobosum, 3-loculare; stylus alte 3-fidus v. a basi 3-partitus, ramis a basi incrassata linearibus superne recurvis introrsum stigmatosis; ovula in loculis numerosa. Bacca globosa v. ovoidea, sæpe 3-costata, indehiscens. Semina ovoidea, a latere strophio- pulposo adnata; embryo in albumine carnosio minimus, globosus, ab hilo parum distans.—Rhizoma breve, crassum, descendens v. horizontale, cicatricibusque vaginalium vetustarum annulatum. Caulis simplex, erectus, basi vaginis paucis brevibus scariosis stipatus. Folia 3, ad apicem caulis verticillata, lata, subsessilia v. longiuscule petiolata, 3–5-nervia et reticulato-pennivenia. Flos unicus, inter folia sessilis v. pedicellatus, erectus cernuus v. reflexus, violaceus luridus albus v. virescens.

Species ad 12, Americæ borealis et Asiæ extratropicæ ab Himalaya usque ad Japoniam incolæ. *Kunth, Enum. Pl.* v. 121. *S. Wats. in Proc. Amer. Acad.* xiv. 273. *Red. Lil.* t. 133, 134. *Royle, Ill. Bot. Himal.* t. 93. *Hook. Fl. Bor. Amer.* t. 192. *Kell. in Proc. Calif. Acad.* ii. 50, t. 2. *Smith, Spicil.* t. 4. *Salish. Parad. Lond.* t. 1, 35. *Willd. Hort. Berol.* t. 35. *Reichb. Iconogr. Exot.* t. 29. *Bot. Mag.* t. 40, 470, 855, 954, 1027, 3002, 3097, 3250, 6449. *Sweet, Brit. Fl. Gard.* t. 212. *Lodd. Bot. Cab.* t. 875, 1232, 1349. *Maund, Botanist.* t. 138.

TRILLIDIUM, *Kunth, Enum. Pl.* v. 120, est *T. Govanianum*, Wall., perianthii segmentis omnibus angustis coloratis, quod etiam observatur in *T. viridescente*, Nutt., ab A. Grayio ad varietatem *T. sessilis*, Linn., reducto. *ESDRA, Salish. Gen. Pl. Fragm.* 60, est ipsum *T. sessile*. *DELOSTYLIS, Raf. in Journ. Phys.* lxxxix. 102, est *T. cernuum*, Linn.

182. *Paris*, Linn. Gen. n. 500.—Perianthium persistens; segmenta distincta, in quaque serie 4–6, exteriora patentissima, herbacea, ovata v. cuneata, interiora linearia v. subulata, interdum valde elongata, v. rarius obsoleta. Stamina tot quot segmenta (8–12), ima basi segmentorum affixa v. subhypogyna, filamentis brevibus leviter complanatis; antheræ lineares, erectæ, basifixæ, connectivo ultra loculos interdum longe producto,

loculis a latere dehiscentibus. Ovarium lata basi sessile, subglobosum, vertice depressum, 4-5-loculare v. placentis vix centrum attingentibus sub-1-loculare; styli v. styli rami 4-5, lineari-filiformes, erecti, apice recurvi, superne v. fere a basi introrsum stigmatosi; ovula in loculis  $\infty$ . Bacca indehiscens, v. capsula carnosula demum loculicide dehiscent. Semina subglobosa, testa nunc tenui appressa leviter rugulosa nec striata, nunc crassa pulposa; embryo in albumine duro prope hilum minutus.—Rhizoma repens. Caulis simplex, basi vagina scariosa mox emarcescens stipatus. Folia 4- $\infty$ , ad apicem caulis verticillata, sessilia v. petiolata, lanceolata v. ovata, tenuiter 3-nervia et reticulato-venulosa. Flos unicus, inter folia pedicellatus, erectus, virescens.

Species editæ 6, forte ad 3 v. 4 reducendæ, Europæ et Asiæ temperatæ v. montanæ incolæ. *Kunth, Enum. Pl.* v. 115. *Gärtn. Fruct. t.* 83. *Red. Lil. t.* 226. *Hayne, Arzneigew.* iii. t. 7. *Reichb. Ic. Fl. Germ. t.* 430. *Nees, Gen. Fl. Germ. Monocot.* ii. n. 58. *Ledeb. Ic. Fl. Ross. t.* 16. *Wall. Pl. As. Rar. t.* 126. *Hook. f. Ill. Himal. Pl. t.* 24.

DEMDIOVIA, *Hoffm. Hort. Mosq.* 1808, ex *Ledeb. Fl. Ross.* iv. 121, est *P. incompleta*, Bieb., perianthii segmentis interioribus parvis v. obsoletis.

EUTHYRA, *Salisb. Gen. Pl. Fragm.* 61, est *P. polyphylla*, Sm.; species Himalayana, capsula carnosula demum in valvas 4-5 coriaceas dehiscente, seminibus bacciformibus rubris, testa crassa pulposa.

#### TRIBUS XX. VERATRÆÆ.

183. *Melanthium*, *Linn. Gen. n.* 454. (*Leimanthium*, *Willd. in Gesellsch. Naturf. Fr. Berlin, Mag.* ii. 24.)—Flores polygami. Perianthium persistens, explanatum; segmenta distincta, obovata v. oblonga, subæqualia,  $\infty$ -nervia, basi præsertim in fl. ♂ distincte unguiculata, rotato-patentia. Stamina 6, unguibus segmentorum affixa, perianthio breviora, filamentis breviter filiformibus; antheræ parvæ, subglobosæ, introrsum affixæ, loculis confluentibus, polline emisso extrorsum explanatæ, orbiculato-peltatæ. Ovarium sessile, basi contractum, a perianthio liberum v. vix adhærens, 3-loculare, apice brevissime 3-lobum, lobis in stylos breves apice introrsum stigmatosos desinentibus; ovula in loculis  $\infty$ . Capsula membranacea, septicide in carpella 3 introrsum aperta secedens. Semina  $\infty$ , oblonga, testa tenui appressa circumcirca in alam amplam membranaceam expansa; embryo . . .—Rhizoma brevissimum, fibris radicalibus fasciculatis carnosulis. Caulis erectus, foliatus, basi sæpe leviter incrassatus et reliquiis fibrosis vaginarum stipatus, vix tamen vere bulbosus. Folia nunc longa, basi longe angustata, nunc ovata longeque petiolata. Panícula terminalis, laxè pyramidata, floribunda, bracteis parvis. Flores ochroleuci v. virescentes, quam in *Veratro* longius pedicellati. Perianthii segmenta sæpius nec semper supra unguem glandulis seu foveolis 2 nectariferis instructa.

Species 3, boreali-Americanæ. *Baker in Journ. Linn. Soc.* xvii. 474. *S. Wats. in Proc. Amer. Acad.* xiv. 276. *Torr. Fl. New York, t.* 134 (*Leimanthium*). *Bot. Mag. t.* 985 (*Helonias*).

Linnæus species 3 heterogenas in *Melanthio* inclusit, inter quas planta Gronoviana, *M. virginicum*, Linn., bene a Bakero et S. Watsonio pro typica habetur, cum *M. latifolio*, Desv. Kunth has species ad *Zygadenum* refert, et nomen Linnæanum pro *M. ciliato*, Linn., retinuit, quod *Dipidax*, Salisb. *M. sibiricum*, Linn., ad *Zygadenum* pertinet.

184. *Veratrum*, *Linn. Gen. n.* 1144.—Flores polygami. Perianthium persistens, late campanulatum v. explanatum; segmenta ima basi præsertim in fl. ♀ in tubum brevissime turbinate connata, cæterum oblonga, patentia, subæqualia, basi parum contracta,  $\infty$ -nervia. Stamina 6, basi segmentorum affixa iisque parum v. multo breviora, filamentis filiformibus; antheræ parvæ, subglobosæ, introrsum affixæ, loculis confluentibus, polline emisso extrorsum explanatæ, orbiculato-peltatæ. Ovarium ovoideum, ima basi leviter contractum et perianthii tubo brevissime adhærens, apice brevissime 3-lobum, lobis in stylos breves apice introrsum stigmatosos desinentibus; ovula in loculis sæpius numerosa. Capsula septicide in carpella 3 introrsum aperta secedens. Semina oblonga, testa tenui appressa circumcirca in alam amplam oblique oblongam expansa; embryo juxta hilum cylindraceus, albumine 3-plo saltem brevior.—Rhizoma crassum, fibris

radicalibus fasciculatis carnosulis. Caulis erectus, validus, foliatus, basi sæpe leviter incrassatus et reliquiis fibrosis vaginarum stipatus, vix tamen vere bulbosus. Folia sæpius lata, plicato-venosa, in vaginam amplam contracta nec distincte petiolata, summa rarius fere omnia angusta. Flores purpurascens viriduli v. albi, in panicula terminali numerosi, breviter pedicellati. Folia floralia sub ramis superioribus herbacea, mox in bracteas parvas abeuntia, bracteis sub pedicellis parvis v. minutis. Capsulæ nunc erectæ, nunc reflexæ.

Species 8 v. 9, Europæ, Asiæ Rossicæ et Americæ borealis incolæ. *Kunth, Enum. Pl. iv. 185. Baker in Journ. Linn. Soc. xvii. 469 (excl. V. parviflora). Jacq. Fl. Austr. t. 335, 336. Reichb. Ic. Fl. Germ. t. 422, 423. Nees, Gen. Fl. Germ. Monocot. ii. n. 32. Red. Lil. t. 416, 447. Hayne, Arzneigew. xiii. t. 26. Bot. Mag. t. 963 et t. 1096 (Helonias).*

*ACEDILANTHUS, Trautv. in Middend. Reise, Fl. Ochot. 94, t. 28, est V. Maackii, Regel, Fl. Ussur. 169, t. 11, f. 8 ad 14, species foliis angustis insignis, sed ex Maximowiczio in litt. vix a V. nigro, Linn., bene distincta; habitu Melanthio accedit sed perianthium certe Veratri. V. Hofmeisteri, Klotzsch in Waldem. Reise, est Smilacina pallida, Royle.*

185. **Stenanthium**, A. Gray in Ann. Lyc. N. York, iv. 119.—Flores polygami. Perianthium anguste v. late campanulatum, persistens; segmenta basi in tubum brevissimum turbinatum connata, dein erectiuscula, superne patentia, angusta v. lanceolata, acuminata, 3-7-nervia, eglandulosa. Stamina 6, basi segmentorum affixa iisque 2-4-plo breviora, filamentis filiformibus; antheræ parvæ, subglobosæ, introrsum affixæ, loculis confluentibus, polline emisso extrorsum explanatæ, orbiculato-peltatæ. Ovarium ovoideum, ima basi leviter contractum et tubo perianthii adnatum, 3-loculare, apice in stylum contractum v. brevissime 3-lobum; styli subulati v. breves, lobos ovarii terminantes v. breviter connati, superne recurvi, apice introrsum stigmatosi; ovula in loculis  $\infty$  (6-16). Capsula ovoideo-oblonga, apice conica, septicide in carpella 3 introrsum dehiscentia partibilis. Semina sæpius pauca, oblonga, angulata, angulis interdum angustissime subalatis; embryo in albumine carnosio prope hilum nunc minutus subglobosus, nunc cylindraceus albumine 2-3-plo brevior.—Bulbus tunicatus. Caulis erectus, elatus, inflorescentia excepta simplex. Folia radicalia v. ad basin caulis longa, linearia v. lineari-lanceolata, secus caulem perpauca minora v. 0. Flores albi virescentes v. atropurpurei, nunc in racemum laxum parum ramosum dispositi, nunc in panicula pyramidata numerosissimi minoresque, pedicellati, sæpius nutantes. Bractæ parvæ lineares v. minutæ.

Species 5, quarum una Asiæ boreali-orientalis (ins. Sachalin), cæteræ Americæ borealis incolæ. *Kunth, Enum. Pl. iv. 189. Baker in Journ. Linn. Soc. xvii. 483. S. Wats. in Proc. Amer. Acad. xiv. 277. F. Schmidt, Reise, Amurl. Bot. t. 4. Bot. Mag. t. 1599 (Helonias). Regel, Gartenfl. t. 1035.*

Genus vix a *Zygadeno* distinctum.

186. **Zygadenus**, Mich. Fl. Bor. Amer. i. 213, t. 22 (errore Zygadenus).—Flores hermaphroditi v. polygami. Perianthium expansum, persistens; segmenta interdum (nec semper) basi in tubum brevissimum turbinatum connata, cæterum distincta, subæqualia, plana, rotato-patentia, basi sæpe glandulis foveolisve nectariferis 2 distinctis v. in unam confluentibus instructa. Stamina 6, basi segmentorum affixa iisque paullo breviora, filamentis filiformibus v. rigidulis circa stylum conniventibus apice recurvis; antheræ parvæ, subglobosæ, introrsum affixæ, loculis confluentibus, polline emisso extrorsum explanatæ, orbiculato-peltatæ. Ovarium ovoideum, basi sæpius leviter contractum et perianthii tubo dum adsit breviter adhærens, apice v. alte 3-lobum, lobis in stylos rigidulos v. filiformes apice recurvos introrsum stigmatosos desinentibus; ovula in loculis  $\infty$ , sæpius numerosa. Capsula ovoidea v. oblonga, acuminata, septicide in carpella 3 introrsum dehiscentia plus minus secedens. Semina oblonga v. fere linearia, sæpe curvula, brunnea v. nigricantia, testa laxiuscula angulata; embryo in albumine carnosio prope hilum parvus, nunc minimus.—Rhizoma horizontale absque bulbo, v. bulbus tunicatus. Caulis erectus,

infra inflorescentiam simplex. Folia radicalia v. ad basin caulis conferta, longe linearia, secus caulem perpauca minora v. 0. Racemus terminalis, simplex v. paniculato-ramosus.

Species ad 12, quarum una Sibirica, cæteræ Americæ borealis incolæ, usque ad Mexicum extensæ. *Kunth, Enum. Pl.* iv. 194. *S. Wats. in Proc. Amer. Acad.* xiv. 278. *Baker in Journ. Linn. Soc.* xvii. 479. Icones citatæ sæpe sub *Heloniade*.

Genus a diversis botanicis varie extensum v. in genera 3 v. 4 divisum, in integrum servatum bene limitatur et sectiones 3 satis distinctas præbet:—

1. *Euzygadenus*. Rhizoma crassum, horizontale, bulbo 0. Folia rigidula. Panicula ramosa. Perianthii segmenta basi glandulis v. foveolis 2 distinctis instructa. Species unica, typica, boreali-Americana. *Red. Lil. t.* 461. *Bot. Mag. t.* 1703. *Lodd. Bot. Cab. t.* 1330.

2. *Anticlea*. Bulbus tunicatus. Panicula ramosa v. rarius racemus simplex, laxissimus, floribus longe pedicellatis. Perianthii segmenta basi glandulis plus minus in unam confluentibus instructa. Huc species Sibirica, cum 8 ex America boreali. *Linn. Amæn. Acad.* ii. t. 4. *Bot. Mag. t.* 1680. *ot. Reg.* 1838, t. 67. *Saund. Ref. Bot. t.* 354. *ANTICLEA, Kunth, Enum. Pl.* iv. 191. *Baker in Journ. Linn. Soc.* xvii. 481. *MONADENUS, Salisb. Gen. Pl. Fragm.* 51.

3. *Amianthium*. Bulbus tunicatus. Racemus simplex, dense floribundus. Perianthii segmenta obscure 1-glandulosa v. eglandulosa. Species 2 v. 3, boreali-Americana. *Jacq. Ic. Rar. t.* 419 (*Anthericum*). *Bot. Mag. t.* 803, 1540. *Lodd. Bot. Cab. t.* 998. *AMIANTHIUM, A. Gray in Ann. Lyc. N. York*, iv. 121, nomen in *AMIANANTHIUM* mutatum, *Kunth, Enum. Pl.* iv. 179. *CHITONIA, Salisb. Gen. Pl. Fragm.* 51, genus verisimiliter ad *Z. Nuttallii, A. Gray, conditum*.

*Baker in Journ. Linn. Soc.* xvii. 478, *Amianthium* restrixit ad species orientales, occidentalem ad *Zygadenum* refert. *S. Watson* nuper *Amianthium* ad *Z. muscatolicum* solum reduxit.

187. *Schoenocaulon, A. Gray in Ann. Lyc. N. York*, iv. 127. (*Asagræa, Lindl. Bot. Reg.* 1839, t. 33. *Sabadilla, Brandt in Hayne, Arzneig.* xiii. t. 27.)—Perianthium persistens; segmenta distincta, subæqualia, anguste lanceolata v. linearia, erecto-patentia, basi foveola seu macula nectarifera unica instructa. Stamina 6, hypogyna, segmentis longiora, filamentis crassiuscule filiformibus erectis; antheræ parvæ, subglobosæ, basi introrsum affixæ, loculis confluentibus, polline emissio extrorsum explanatæ orbiculato-peltatæ. Ovarium ovoideum, basi leviter contractum, a perianthio liberum, apice breviter 3-lobum, 3-loculare, lobis in stylos breves apice introrsum stigmatosos desinentibus; ovula in loculis  $\infty$  (4–8). Capsula ovoidea v. oblonga, acuminata, septicide in carpella 3 introrsum dehiscentia partibilis. Semina oblonga, sæpe curvula, angulata, interdum acuminata, nigra v. fusca, testa crassiuscula laxa; embryo prope hilum oblongus, albumine carnosio 3–4-plo brevior.—Bulbus sæpius angustus, fibroso-tunicatus. Folia radicalia, longe linearia. Scapus simplex, elatus, aphyllus. Flores parvuli, in spica terminali longa densa subsessiles, filamentis cum perianthii segmentis diu persistentibus. Bractearum parvæ.

Species enumeratæ 5, regionis Mexicano-Texanæ incolæ. *Baker in Journ. Linn. Soc.* xvii. 476. *S. Wats. in Proc. Amer. Acad.* xiv. 280. *Benth. et Trim. Med. Pl. t.* 287.

Genus *Zygadenon* (*Amianthio*) valde affine.

## ORDO CLXXIX. PONTEDERIACEÆ.

Endl. Gen. 137. Lindl. Veg. Kingd. 206.

*Flores* hermaphroditi, parum irregulares v. interdum regulares. *Perianthium* inferum, ab ovario liberum, corollinum, marcescens diuque persistens, tubo evoluto v. rarius 0; lobis (rarius segmentis) 6, plus minus distincte 2-seriatis, inter se similes v. seriei interioris parum majores. *Stamina* 6 v. 3, tubo v. basi segmentorum inæqualiter affixa, sæpius

declinata, superioribus brevioribus magisque inclusis, inferioribus rarius perianthio sublongioribus, interdum omnia subæqualia erecta, v. unum maximum; filamenta libera, filiformia v. basi dilatata v. medio incrassata. *Antheræ* oblongæ v. rarius ovatæ, dorso v. basi affixæ, loculis 2 parallelis distinctis rima longitudinali v. rarius poro brevi introrsum dehiscentibus. *Ovarium* superum, 3-loculare placentis axilibus, v. 1-loculare placentis 3 parietalibus. *Stylus* filiformis v. columnaris, stigmate terminali parvo integro v. brevissime 3-fido, v. varie dilatato. *Ovula* nunc in loculis placentisve  $\infty$ , 2-seriatim superposita, nunc in loculo solo fertili unicum, pendula v. descendencia, anatropa. *Fructus* siccus, pericarpio membranaceo in valvas 3 medio placentiferas dehiscente, v. interdum indehiscente v. deliquescente. *Semina* ovoidea v. oblonga, testa appressa in longitudinem  $\infty$ -costata. *Albumen* plus minus farinaceum, copiosum. *Embryo* centralis, cylindraceus, albumine vix v. non brevior, extremitate radiculari hilo proxima.

Herbæ aquaticæ, erectæ v. fluitantes. Rhizoma nunc in limo horizontale fibris radicalibus tenuibus ramosis densissime confertis, nunc in caules foliatis fluitantes ad nodos radicanates plus minus productum. Caules floridi in rhizomate, v. rami floridi in caule fluitante, semper 1-foliati. Folia perfecta in rhizomate v. in caule fluitante longe petiolata, lamina natante v. emersa varie dilatata rarius angusta; folium rami floridi radicalibus simile nisi brevius petiolatum; folia submersa nunc in basi tantum caulis fluitantis v. junioris pauca v. vix ulla, nunc secus caulem fluitantem numerosa, ad petiolos lineares absque lamina reducta. Inflorescentia in caules v. ramos unifoliatis terminalis, racemiformis spiciformis rarius fasciculiformis v. subpaniculata, in vagina folii sessilis v. pedunculata; flores secus rhachin simplicem v. rarius ramosam fasciculati v. dissiti, sessiles v. breviter rarius longiuscule pedicellati. Spatha ad basin inflorescentiæ sæpius complicata erecta v. apice patens, rarius a floribus distans concava patensque; bractee sub floribus minutæ v. 0.

Species vix 35, in aquis dulcibus regionum calidiorum utriusque orbis imprimis Americæ vigentes, usque ad Americam borealem, Chinam et Japoniam extensæ, in Europa desunt, et in hemisphærio australi vix extra tropicos inveniuntur.

Ordo quoad flores *Liliaceis* valde affinis, habitu tamen peculiari, inflorescentia, et præsertim seminibus bene distinctus, nec formis intermediis connexus.

#### CONSPECTUS GENERUM.

1. **PONTEDERIA.** Perianthium infundibuliforme. Stamina 6, antheris versatilibus. Ovarium abortu 1-loculare, 1-ovulatum.—*Amer. bor. et austr.*

2. **EICHEORNIA.** Perianthium infundibuliforme. Stamina 6, antheris versatilibus. Ovarium 3-loculare, multiovulatum.—*Amer. austr., Afr. trop.*

3. **HETERANTHERA.** Perianthium hypocraterimorphum. Stamina 3, antheris erectis. Ovarium 1-loculare v. imperfecte 3-loculare, multiovulatum.—*Amer. bor. et austr., Afr. trop.*

4. **MONOCHORIA.** Perianthium tubo 0, campanulatum. Stamina 6, antheris erectis. Ovarium 3-loculare, multiovulatum.—*Asia, Australia, Afr. trop.*

1. **Pontederia**, *Lin. Gen. n. 399.* (Unisema, *Raf. in Journ. Phys.* lxxxix. 261.)—Perianthium infundibuliforme, tubo incurvo tenui v. rarius abbreviato; limbus erecto-patens, obliquus, lobis latiusculis parum inæqualibus, summo (e serie interiore) basi sæpius maculato. Stamina 6, tubo inæqualiter affixa, declinata, superiora sæpe tubo inclusa, inferiora e tubo exserta interdum perianthio longiora, filamentis filiformibus; antheræ ovatæ, dorsifixæ. Ovarium sessile, oblongum, revera 3-loculare, sed loculis 2 minimis vacuis 1-loculare apparet; stylus filiformis, brevis v. elongatus, stigmate terminali indiviso v. minute 3-fido; ovulum unicum, ab apice loculi pendulum. Fructus tubo perianthii basi incrassato sulcato-costato v. muricato inclusus, oblongus, membranaceus, indehiscens. Semen pendulum, testa tenui appressa; embryo in centro albuminis farinacei cui æquilongus, cylindraceus.—Rhizoma nunc in limo reptans, breve, nunc elongatum, fluitans, cauliforme, vaginis longis foliorum obtectum. Caules (v. rami) erecti, simplices, 1-foliati. Folia radicalia longe petiolata, caulinum brevius petiolatum,

omnia cordato-ovata rotundata v. rarius lanceolata, vagina infra petiolum longa laxa. Inflorescentia terminalis composita denseque cylindræa, rarius subsimplex racemiformis, supra folium caulinum sessilis v. e vagina pedunculata, basi spatha complicata inclusa. Flores sæpius secus rhachin fasciculato-congesti, numerosi, rarius pauci subdissiti, sessiles v. vix brevissime pedicellati. Bracteæ minutæ v. 0.

Species 7 v. 8, omnes Americæ, boreales v. australes. *Kunth, Enum. Pl.* iv. 123. *Seub. in Mart. Fl. Bras.* iii. i. 93. *Schlecht. Ponted.* 26. *Red. Lib. t.* 72. *Torr. Fl. N. York, t.* 131. *Bot. Mag. t.* 1156. *Lodd. Bot. Cab. t.* 613.

*RUSSIA, Endl. Gen.* 139 (icone citata nunquam edita), characteres omnino *Pontederiæ* præbet, exceptis floribus majoribus in inflorescentia paucioribus iis *Eichhorniæ* accedentibus, et staminibus brevioribus, superioribus tubo inclusis. Huc pertinent *Pontederia lagoensis*, Warm. in *Vidensk. Meddel. Kjobenh.* 1871, 323, t. 6, f. 1 ad 8, quæ verisimiliter eadem ac *Reussia triflora*, Endl., et *P. Schomburgkiana*, Klotzsch in *Schomb. Reise Guiana*, iii. 1118 (*Eichhornia subovata*, Seub.), jam a Solms-Laubachio in herb. Kew. ad *Reussiam* relata.

2. *Eichhornia, Kunth, Enum. Pl.* iv. 129.—Perianthium infundibuliforme, tubo breviusculo v. elongato tenuique; limbus erecto-patens, plus minus obliquus, lobis parum inæqualibus latiusculis v. latis, summo (e serie interiore) basi sæpe maculato. Stamina 6, tubo inæqualiter affixa, declinata, superiora omnino inclusa, inferiora magis exserta, perianthio tamen breviora, filamentis filiformibus v. basi leviter complanatis; antheræ oblongæ, prope basin dorsifixæ. Ovarium sessile, 3-loculare; stylus filiformis, stigmate terminali parum dilatato v. brevissime 3- v. 6-fido; ovula in loculis numerosa. Capsula tubo marcescenti perianthii inclusa, ovoidea oblonga v. linearis, pericarpio membranaceo loculicide dehiscente (v. deliquescente?). Semina numerosa, ovoidea,  $\infty$ -costata, utrinque obtusa; embryo in centro albuminis farinacei eo vix brevior, cylindræus.—Herbæ aquaticæ, caule v. rhizomate fluitante ad nodos radicante, vaginis foliorum laxis oblecto; rami (v. caules) floriferi 1-foliati. Folia in caule juniore infima immersa linearia absque lamina, pleraque tamen longe petiolata, lamina natante v. emersa obovata rotundata cordata v. rarius lanceolata. Inflorescentia intra vaginam folii sessilis v. pedunculata, simpliciter sub-spicato-racemosa v. rarius paniculata. Spatha nunc sub inflorescentia complicata ei *Pontederiæ* similis, nunc minor, in medio pedunculo v. intra vaginam folii floralis recondita.

Species enumeratæ 11 v. 12, in aquis dulcibus Americæ australis et Africæ tropicæ vigentes, nonnullæ tamen ad varietates *E. azureæ* reducendæ. *Mart. Nov. Gen. et Sp.* i. 9, t. 4 (*Pontederia*). *Seub. in Mart. Fl. Bras.* iii. i. 89, t. 11. *Schlecht. Ponted. in Abhandl. Naturf. Gesellsch. Halle*, vi. 28, cum ic. *Bot. Mag. t.* 2932 (*Pontederia*), 5020, 6487.

Genus quodammodo polymorphum, non tamen in plura bene dividendum. In speciebus typicis, *E. azurea* affinisque, folia obovata v. rotundata, petiolo interdum vesiculoso-inflato, inflorescentia densa vix in vagina pedunculata, floribus pluribus speciosis, perianthii tubo haud longo. In *E. tricolore*, Seub., folia longe petiolata cordata, inflorescentia pedunculata laxè paniculata, perianthii tubo longo tenui. In *E. natante*, Solms-Laub. in herb. Kew. (*Pontederia natante*, Beauv. *Fl. Ow. et Ben.* ii. 18, t. 68), ex Africa tropica, habitus potius *Heterantheræ*; caules fluitantes tenues, foliis submersis linearibus sæpe numerosis, emersis cordato-ovatis v. reniformibus interdum sub-peltatis; flores solitarii v. in spica 2-3 parvuli, tubo perianthii longo tenui, quare Schlechtendahl, *Ponted.* 26, pro genere *LEPROSOMUS* proposuit. In *E. caracasana* (CABANISIA, Klotzsch in *Herb. Berol.*; *Schlecht. Ponted.* 28), cujus rami soli 1-foliati floridi adsunt, folii lamina elongata angusta, flores in vagina plures, fasciculati, parvuli, tubo perianthii ut in *E. natante* longo tenui. Huc etiam refert Schlechtendahl *Eichhorniam Schultesianam*, Seub. (*Pontederiam paradoxam*, Mart.), quæ ex caractere dato evidenter *E. caracasanae* affinis, vix tamen eadem species, nam spatha v. folii vagina ovata dicitur, dum in *E. caracasana* elongata est, et vix petiolo terminali latior.

3. *Heteranthera, Ruiz et Pav. Prod.* 9, t. 2; *Fl. Per. et Chil.* i. 43, t. 71. (*Leptanthus, Mich. Fl. Bor. Amer.* i. 24, t. 5. *Buchosia, Vell. Fl. Flum.* 33; *Id.* i. t. 80.)—Perianthium hypocraterimorphum, tubo tenui cylindræo; lobi angusti, patentes, sub-æquales v. 2-3 parum majores. Stamina 3, fauci affixa, filamentis filiformibus v. medio

incrassatis, uno sæpius cæteris longiore minusque incrassato, rarius omnibus subæqualibus; antheræ ovatæ v. oblongæ, una sæpius majore v. heteromorpha, erectæ, basifixæ, loculis introrsum dehiscentibus. Ovarium 1-loculare, placentis 3 parietalibus parum prominulis v. plus minus intrusis, ovarium imperfecte vix perfecte in loculos 3 dividendis; stylus filiformis, stigmate parvo v. oblique incrassato dentatoque; ovula in quaque placenta  $\infty$ , 2-seriata. Capsula oblonga v. linearis, perianthio emarcido tenui inclusa, membranacea, in valvas 3 medio placentiferas dehiscens. Semina parva, ovoidea,  $\infty$ -costata.—Rhizoma nunc in limo breve, nunc sæpius in caulem foliatum submersum brevem v. elongatum fluitantemque productum. Folia nunc omnia submersa linearia absque lamina, nunc omnia v. pleraque longe petiolata, lamina ovata cordata v. reniformi natante v. emersa. Caules v. rami floriferi more ordinis 1-foliati, in speciebus linearifoliis tamen brevissimi, folio ad axillam folii caulinis sessili eique simili. Spatha angusta, nunc flores 1–3 includens, nunc spicam interrupte  $\infty$ -florem exserens. Flores cærulei albi v. pallide flavescentes, quam in cæteris generibus sæpius minores tenuioresque.

Species nobis adsunt 8, quarum una Africæ tropicæ incola, cæteræ omnes Americanæ, boreales v. australes. *Kunth, Enum. Pl. iv. 119. Seub. in Mart. Fl. Bras. iii. i. 87. Torr. Fl. N. York, t. 132. Bot. Mag. t. 6192.*

Species pleræque, foliis lamina natante v. emersa præditis, habitu *Eichhorniæ natanti* accedunt, inter illas tamen *H. spicata*, Presl, *Symb. t. 10*, a qua *H. peduncularis*, Benth., vix differt, insignis est floribus in spica elongata secus rhachin dissitis; stamina minus inæqualia quam in speciebus typicis. Species 3, foliis omnibus submersis linearibus absque lamina, inter se pluribus notis differunt. In *H. graminea*, Vahl (Torr. Fl. N. York, t. 133, Hook. Exot. Fl. t. 94. SCHOLLERA, Schreb. Gen. Pl. 785, caractere valde manco, genus ad hanc speciem limitatum a Willd. in Gesellsch. Nat. Fr. Berl. N. Schrift. iii. 438, et serius ab A. Grayio acceptum), spatha tenuis sæpius 1-flora, perianthii tubus valde elongatus, et stamina omnia æqualia, v. unum vix cæteris majus. In *H. zosterifolia*, Mart. Nov. Gen. et Sp. i. t. 3, habitus, folia et inflorescentia omnino *H. gramineæ*, spatha 1- rarius 2–3-flora, sed perianthii tubus minus elongatus, et stamen unum cæteris multo majus. In *H. Seubertiana*, Solms-Laub, in herb. Kew. (*Eichhornia graminea*, Seub.), caulis foliatus brevior, foliis tan en omnibus linearibus submersis, spica elongata floribus dissitis *H. spicatæ*, et stamen unum cæteris conspicue majus.

4. **Monochoria**, Presl, *Rel. Hænk. i. 127*.—Perianthium campanulatum, tubo 0; segmenta distincta, subæqualia. Stamina 6, basi segmentorum affixa v. fere hypogyna, perianthio breviora, filamentis basi hyalino-dilatatis, omnia æqualia v. sæpius unum majus, filamento margine uno latere dente aucto; antheræ oblongæ, erectæ, basifixæ, loculis poro terminali mox in rimam longitudinalem continuato dehiscentibus. Ovarium sessile, ovoideum, 3-loculare; stylus filiformis, stigmate parum dilatato minute 3-lobato; ovula in loculis numerosa. Capsula oblonga, membranacea, loculicide dehiscens. Semina numerosa, ovoidea, utrinque obtusa,  $\infty$ -costata; embryo in centro albuminis farinacei eo vix brevior, cylindraceus.—Rhizoma in limo breve, rarius in caulem submersum breviter productum. Caules seu rami florescentes 1-foliati, cum foliis radicalibus in rhizomate caespitosi. Folia radicalia longa, caulinum brevius, petiolata, lamina sagittata cordato-ovata v. lanceolata. Racemus nunc intra vaginam folii caulini sessilis, brevissimus, floribus numerosis longiuscule pedicellatis fasciculiformis, nunc longior, laxiusculus v. fere spiciformis, pedicellis brevissimis. Spatha complicata, ad basin racemi v. intra vaginam ad basin pedunculi.

Species ad 6, Indiæ orientalis, Chinæ, Japoniæ, Archipelagi Malayani, Australiæ et Africæ tropicæ incolæ. *Kunth, Enum. Pl. iv. 132. Benth. Fl. Austral. vii. 72. Reg. Fl. Ussur. t. 12. Roxb. Corom. Pl. t. 110, 111. Symes, Emb. Ava, t. 23. Andr. Bot. Rep. t. 490 (ic. plures sub Pontederia).*

LIMNOSTACHYS, F. Muell. *Fragm. Phytogr. Austral. i. 24*, est *M. cyanca*, F. Muell., species Australiana, staminibus æqualibus v. uno parum tantum majore.

ORDO CLXXX. **PHILYDRACEÆ.**

Endl. Gen. 132. Lindl. Veg. Kingd. 186.

*Flores* hermaphroditi, irregulares. *Perianthium* inferum, ab ovario liberum, corollinum, marcescens diuque persistens, tubo 0; segmenta 4, 2-seriata, exteriorum posticum æstivatione anticum includens, interiora exterioribus alterna multo minora (staminodia petaloidea, Lindl.). *Stamen* 1, ima basi segmenti antici affixum v. fere hypogynum; filamentum complanatum, basi sæpe cum segmentis interioribus breviter connatum. *Anthera* 2-locularis, loculis adnatis distinctis rectis parallelisque v. curvis contortisque, rima longitudinali dehiscentibus. *Ovarium* superum, 3-loculare placentis axilibus, v. 1-loculare placentis parietalibus. *Stylus* filiformis, stigmatе terminali parvo v. dilatato indiviso. *Ovula* in quaque placenta v. loculo numerosa, anatropa. *Capsula* ovoidea v. oblonga, loculicide dehiscens, valvis 3 medio placentiferis. *Semina* numerosa, minima, ovoidea v. oblonga, testa appressa, indumento exteriori tenui in nucleo mox evanido basi sæpe in appendicem parvam persistente. *Albumen* laxè carnosum, subfarinaceum. *Embryo* albumine inclusus, eo parum v. rarius subdimidio brevior, cylindraceus, rectus, radícula hilo proxima.

*Herbæ* erectæ, terrestres. *Folia* linearia v. ensiformia, radicalia v. ad basin caulis conferta, sæpe disticha, caulina pauca, minora. *Flores* intra bracteas breviter spathaceas solitarii, sessiles, secus rhachin simplicem inflorescentiæ v. ramos paniculæ plus minus dissiti.

Species 4, Australiæ, Archipelagi Malayani, Asiæ orientalis v. insularum maris Pacifici incolæ.

Ordo parvus, nulli arcte affinis; cum *Commelinæis* comparatur, sed semina longe distant.

## CONSPECTUS GENERUM.

1. **PHILYDRUM**. Folia ensiformia. Spica longa, indivisa. Antherarum loculi subglobosi, primum fere reniformes, mox valde contorti. Ovarium imperfecte 3-loculare.—*Australia, Archip. Malay., Asia or.*

2. **PRITZELIA**. Folia pauca, linearia. Spica tenuis, indivisa. Antherarum loculi a basi reflexa recurvo-erecti. Ovarium perfecte 3-loculare.—*Australia austro-occid.*

3. **HELMHOLTZIA**. Folia ensiformia. Panicula longa floribunda. Antherarum loculi oblongi, recti.—*Australia (ins. Pacif. ?).*

1. **Philydram**, Banks ex Gærtn. *Fruct.* i. 62, t. 16. (Garciana, Lour. *Fl. Cochinch.* 14.) —Perianthii segmenta exteriora lata, ∞-nervia, interiora multo minora, libera v. vix basi cum filamentis connata. Stamen perianthio parum brevius; anthera terminalis, connectivo leviter incrassato, loculis 2, primum globoso-subreniformibus, mox valde flexuoso-contortis. Ovarium 1-loculare, placentis 3 parietalibus longe intrusis sed inter se liberis divaricato-2-lobis, lobis introrsum ovulis numerosissimis obtectis. Capsula 3-valvis. Semina numerosissima, minima, oblonga, subspiraliter striata, sæpius minute papilloso-tuberculata, chalaza pulvinata fusca, basi circa funiculum pallide appendiculata.—Caulis erectus, subramosus, lana albida præsertim in inflorescentia plus minus vestitus. Folia infra medium caulis ensiformia, disticha, vaginis equitantibus, superiora gradatim in bracteas abeuntia. Spica longa, interrupta, simplex, bracteis brevibus vaginantibus dissitis. Flores flavi, intra bracteas sessiles, solitarii v. rarius gemini.

Species 1, Australiæ orientalis, Archipelagi Malayani et Asiæ orientalis usque ad Chinam incolæ. *Benth. Fl. Austral.* vii. 73. *Caruel in DC. Monogr. Phanerog.* iii. 2. *Guillem. Ic. Pl. Austral.* t. 6. *Bot. Mag.* t. 783. De seminum structura cfr. *Schleid. et Vog. in Nov. Act. Nat. Cur.* xix. t. 40, f. 1 ad 6; *Griff. Ic. Pl. Asiat.* t. 269, 270.

2. **Pritzelia**, F. Muell. *Descr. Pap. Pl.* i. 13. (Hetseria, *Endl. Gen. Pl.* 133, non Blume. *Philydrella*, *Caruel in Nuov. Giorn. Bot. Ital.* x. 91; in *DC. Monogr. Phanerog.*

iii. 4.)—Perianthii segmenta exteriora lata,  $\infty$ -nervia, interiora multo minora, ad medium cum filamento connata. Stamen perianthio multo brevius, filamento lato plano; antheræ loculi contigui, paralleli, basi reflexi, dein abrupte recurvo-erecti, nec torti. Ovarium perfecte 3-loculare, placentis axilibus, ovulis numerosissimis. Capsula 3-valvis. Semina numerosissima, minima, ovoidea, inappendiculata, testa lævi v. tenuissime recteque striata, chalaza non incrassata.—Caulis e rhizomate parvo lanato, simplex, tenuis, glaber. Folia pauca, anguste linearia. Spica simplex, bracteis breviter vaginantibus, junioribus distiche imbricatis, sub anthesi dissitis. Flores intra bracteas solitarii, sessiles.

Species 1, Australiæ austro-occidentalis incolæ. *Benth. Fl. Austral.* vii. 74.

Caruel nomen Muellerianum rejecit ob genera tria homonyma prius edita, nulla tamen a botanicis accepta sunt; *Pritzelia*, Walp., est *Trachynema*; *Pritzelia*, Klotzsch, ad *Begoniam* reducitur; et *Pritzelia*, Schauer, nomine tantum in Flora 1842 signata, ab ipso auctore sub nomine *Scholtzie* in Linnæa, xvii. edita fuit.

3. *Helmholtzia*, *F. Muell. Fragm. Phyt. Austral.* v. 202.—Perianthii segmenta exteriora ovato-lanceolata, tenuissime  $\infty$ -nervia, posticum nervis 2 prope margines validioribus percursum, interiora multo minora, vix brevissime cum filamento connata. Stamen perianthio brevius, filamento brevissimo plano; anthera longior, oblonga, erecta, loculis parallelis rectis. Ovarium perfecte 3-loculare, placentis axilibus, ovulis numerosissimis. Capsula subglobosa, 3-sulca, pericarpio crassiusculo demum loculicide dehiscente. Semina numerosissima, parva, oblonga, quam in *Philydro* paullo longiora angustioraque, sæpe leviter curva, striis tenuibus rectis, rhaphe sæpius prominente.—Caulis erectus, infra inflorescentiam simplex. Folia subradicalia, longa, ensiformia, vaginis brevibus equitantibus. Flores albi, quam in *Philydro* minores, secus ramos paniculæ terminalis pyramidatae sessiles, numerosi. Bracteæ lanceolatae, acuminate, sub floribus patentes eosque vix excedentes. Capsula villosa.

Species 2, altera Australiana, altera o seminibus verisimiliter in insulis maris Pacifici lectis in hortis educta. *Benth. Fl. Austral.* vii. 75. *Caruel in DC. Monogr. Phanerog.* iii. 5. *Bot. Mag.* t. 6056 (*Philydrum*).

## ORDO CLXXXI. XYRIDEÆ.

Endl. Gen. 123. Lindl. Veg. Kingd. 187.

*Flores* hermaphroditi, parum irregulares. *Perianthium* inferum, corollinum, simplex v. duplex. *Sepalum* unicum, maximum, petaloideum, corollam involvens, caducissimum, v. 0 (nisi pro sepalis exterioribus bracteolas haberes). *Corollæ* tubus tenuis, brevis v. elongatus; lobi 3, æquales, patentes, lati, tenerrimi. *Stamina* perfecta 3, prope basin loborum affixa iisque breviora; filamenta brevina, filiformia. *Antheræ* oblongæ, dorsifixæ, loculis 2 parallelis v. basi divergentibus rima longitudinali dehiscens; staminodia 3, lobis corollæ alterna v. 0. *Ovarium* sessile, 1-loculare v. imperfecte 3-loculare, placentis 3 a basi ovarii erectis v. sæpius plus minus parietibus adnatis. *Stylus* terminalis, indivisus v. in ramos 3 apice stigmatiferos plus minus divisus. *Ovula* in quaque placenta  $\infty$ , pauca v. numerosa, 2-seriata, orthotropa. *Capsula* corollæ tubo marcescente inclusa, inter placentas in valvas 3 dehiscens. *Semina*  $\infty$ , ovoidea, hilo basilari, apice tuberculo parvo coronata, testa appressa, in longitudinem striata. *Albumen* farinaceum (v. laxè carnosum?). *Embryo* ad apicem albuminis sub tuberculo terminale parvus, lenticularis v. late turbinatus.

Herbæ perennes v. rarius annuæ cespitosæ. Folia radicalia, rosulata v. conferta, quaversa v. disticha, linearia v. rarius lineari-lanceolata. Scapi erecti, sæpius juncei, simplices, aphylli, rarius vaginis paucis v. basi folio unico instructi. Flores in capitulo terminali globoso ovoideo v. rarius cylindræo conferti, sub bracteis coriaceis v. rigidis

imbricatis solitarii subsessiles, basi bracteolis 2 lateralibus oppositis rigidis v. scariosis complicato-carinatis (a plerisque botanicis pro sepalis exterioribus habendis) stipati, corollæ limbo solo v. etiam tubo partim exserto. Capsula semper sub bracteis imbricatis occulta.

Species infra 50, per regiones calidiores utriusque orbis late dispersæ.

Ordo parvus sed bene distinctus, nulli arcte accedens. Seminum structura fere *Restiacearum*, sed perianthie corollino, ovulis plurimis sæpe numerosis, aliisque notis longius distat. *Commelinaceis* convenit ovulis orthotropis, sed perianthium semina et habitus longe diversa.

#### CONSPECTUS GENERUM.

1. *XYRIS*. Sepalum petaloideum latum, caducissimum. Stylus basi inappendiculatus, superne 3-fidus, ramis apice stigmatiferis.—*Utriusque orbis reg. calid.*

2. *ABOLBODA*. Sepalum petaloideum deest. Stylus prope basin appendicibus 3 linearibus reflexis instructus, apice stigmatoso sæpius fimbriato erecto sub-3-fido. Bracteæ quam in *Xyride* sæpius pallidiores, laxius imbricatæ.—*Amer. trop.*

1. *Xyris*, *Linn. Gen. n. 64*.—Sepalum petaloideum latissimum, plus minus distincte 3-nerve, in alabastro compresso sæpe 2-carinatum, facie postica medio 1-nervi, antice marginibus semet late obtegentibus corollam arcte involvens. Corollæ tubus brevis v. longiusculus, lobi ovati. Staminodia sæpius 3, inter lobos affixa, breviter filiformia, penicillo pilorum moniliformium v. antheridia difformi coronata, v. rarius deficientia. Stylus filiformis, inappendiculatus, superne 3-fidus, ramis apice stigmatiferis. Cætera ordinis.—Folia radicalia linearia, rigida v. graminea, cuspitosa v. disticha. Scapi inter folia juncei, nudi v. basi folio unico vagina longa lamina brevi instructi. Capitulum globosum ovoideum v. rarius hemisphæricum v. breviter cylindraceum, bracteis sæpius obtusis rigidis arcte imbricatis.

Species descriptæ ad 40, per regiones calidiores utriusque orbis late dispersæ, nonnullæ tamen ad varietates reducendæ. *Kunth, Enum. Pl. iv. 2. Benth. Fl. Austral. vii. 76. Seub. in Mart. Fl. Bras. iii. i. 211, t. 22 ad 29. Rudge in Trans. Linn. Soc. x. t. 15. Willd. Phytogr. t. 1. Labill. Pl. Nov. Holl. t. 10. Endl. Iconogr. t. 13. Ruiz et Pav. Fl. Per. et Chil. t. 71. Bot. Mag. t. 1158. Lodd. Bot. Cab. t. 205.*

Endlicher, *Gen. Pl. 124*, sectionem *Pomatoxyris* proposuit ad *X. operculatam*, Br., affinesque, capsula apice indurato circumscissæ deciduo basi tantum 3-valvi, et Seubert species cæteras in sectiones 2 distribuit ad placentas alte v. vix parietibus adnatas, characteres tamen valde incerti et nequaquam habitu diverso comitati. *X. involucrata*, Nees (*X. asteroccephala*, Seub.), tamen et verisimiliter *X. Hystrix*, Seub., species Americanæ tropicæ, magis differunt capitulo hemisphærico v. demum vix globoso, bracteis numerosissimis acutis, exterioribus foliaceo-productis vacuis involucrium formantibus.

CHRISMAKON, *Stend. Pl. Lechl. in Bot. Zeit. 1856, 391*, est *X. subulata*, R. et Pav., v. species ei valde affinis.

2. *Abolboda*, *Humb. et Bonpl. Pl. Æquin. ii. 109, t. 114. (Chloerum, Willd. ex Link in Spr. Jahrb. iii. 74, absque char.)*.—Sepalum petaloideum *Xyridis* (an semper?) deest. Corollæ tubus tenuis, lobi ovati. Staminodia (in *A. grandi*, Griseb.) 3, inter lobos affixa, tenuissime filiformia, fere capillaria, nuda, in aliis speciebus deesse videntur. Ovarium oblongo-3-quetrum, apice obtusum acutum v. breviter cupulatum 6-dentatumque, 1-loculare, placentis 3 a basi erectis liberis v. plus minus parietibus adnatis v. inter se breviter connatis; stylus longiusculus, prope basin v. infra medium appendicibus 3 linearibus recurvis v. reflexis instructus, apice in stigmata 3 brevia erecta sæpe fimbriata divisus. Ovula, fructus et semina ordinis.—Folia radicalia, linearia v. interdum lineari-lanceolata. Scapi nunc omnino *Xyridis*, rigidi nudi v. basi 1-foliati, nunc medium versus vaginis 2 suboppositis, inferiore superiore amplectente, v. vaginalium paribus 2-3 inter se distantibus instructi. Capitula sæpius pallidiora quam in *Xyride*; bracteæ variant in capitulo latiusculo laxè imbricatæ v. in capitulo angusto appressæ.

Species in herbariis adsunt 7 v. 8, non omnes tamen accurate examinatae, omnes ex America tropica. *Kunth, Enum. Pl. iv. 25. Seub. in Mart. Fl. Bras. iii. i. 222, t. 30.*

*A. Aubletii*, Kunth, Enum. Pl. iv. 28, descriptione ex verbis Aubletii (*Xyris americana*, Aubl. Pl. Gui. i. 40, t. 14) excerpta, est verisimiliter species vera *Xyridis*, bractea bracteolisque pro calyce descriptis; stylus 3-fidus *Xyridis* nec *Abalobode*. Specimina Purdieana, a Grisebachio Fl. Brit. W. Ind. 526 descripta, folia setaceo-filiformia ab Aubletio depicta ostendunt; sepalum, staminodia et stylus omnino *Xyridis*. Specimina Spruceana et Schomburgkiana dubie ad *A. Aubletii* relata, videntur potius ad *X. subulata*, Ruiz et Pav., pertinere.

## ORDO CLXXXII. MAYACEÆ.

Lindl. Veg. Kingd. 189.

*Flores* hermaphroditi, regulares. *Perianthium* inferum, duplici serie 3-merum; exterius calycinum e sepalis 3 distinctis lanceolatis, æstivatione subvalvatis v. angustissime imbricatis uno subexteriore; interius corollinum, e petalis 3 distinctis obovatis rotundatisve subæqualibus patentibus, æstivatione late imbricatis in alabastro semet late involventibus. *Stamina* 3, hypogyna; filamenta breviter filiformia, erecta. *Antheræ* erectæ, basifixæ, oblongæ, sub-4-gonæ, loculis 2 parallelis intus in locellos 2 subdivisis, vertice demum breviter dehiscentibus v. in tubum breviter cylindraceum (deciduum?) conniventibus. *Ovarium* lata basi sessile, superum, 1-loculare, placentis 3 parietalibus. *Stylus* filiformis, indivisus, stigmate parvo terminali integro (v. brevissime 3-fido?). *Ovula* in quaque placenta ∞, 2-seriata, orthotropa. *Capsula* calyce staminibusque diu persistentibus cincta, ovoidea, pericarpio membranaceo, in valvas 3 medio placentiferas plus minus distincte dehiscens. *Semina* ovoidea v. globosa, hilo basilari, apice tuberculo parvo terminata, testa in longitudinem striata sæpiusque tuberculoso-rugosula. *Albumen* farinaceum (v. laxe carnosulum?). *Embryo* ad apicem albuminis ab hilo remotus, sub tuberculo leviter prominens, lenticularis v. subturbinatus.

Herbæ tenuēs, in uliginosis humidisve prostratæ v. reptantes v. in aquis dulcibus fluitantes, caulibus undique foliatis ramosis. Folia breviter lineari-filiformia, crebra, quaquaversa. Pedicelli 1-flori, in axillis solitarii, basi bractea tenuiter membranacea sæpeque bracteolis 2 parvis hyalinis stipati, v. ad apices ramorum plures conferti, bracteis membranaceis subhyalinis in capitulum ovoideum imbricatis.

Species enumeratæ ad 7, plures inter se valde affines, omnes Americanæ, boreales v. australes.

Ordo genere unico constans, a variis auctoribus cum *Xyrideis* et cum *Commelinaceis* ob ovula orthotropa et albumen farinaceum comparatur, a prioribus differt calyce perfecto et staminibus, a *Commelinaceis* ovario et seminibus, ab utroque ordine habitu peculiari. Antheræ fere *Rapateacearum*, sed ovula, semina et habitus longe diversa.

1. *Mayaca*, Aubl. Pl. Gui. i. 42, t. 15. (Syena, Schreb. Gen. Pl. 39. Biaslia, Vandelli, Fl. Lusit. et Bras. Specim. 4, t. 1, f. 2. Coletia, Vell. Fl. Flum. 32, Ic. i. t. 79.)—Genus unicum. Character ordinis.

Species uti supra ad 7, omnes Americanæ. *Kunth, Enum. Pl. iv. 31. Schott et Endl. Meletem. 23, t. 3. Seub. in Mart. Fl. Bras. iii. i. 227, t. 31.*

ORDO CLXXXIII. **COMMELINACEÆ.**

Endl. Gen. 124. Lindl. Veg. Kingd. 188. C. B. Clarke, Monogr. in DC. Monogr. Phanerog. iii. 115.

*Flores regulares* v. parum irregulares, hermaphroditi v. hinc inde abortu masculi. *Perianthium* inferum, duplici serie 3-merum rarissime 2-merum; exterius calycinum, e sepalis 3 distinctis v. rarius basi connatis, æstivatione imbricatis, uno exteriori sæpe paullo latiore; interius corollinum, e petalis 3 distinctis v. rarius unguibus in tubum tenuem connatis, æstivatione valde imbricatis. *Stamina* 6 v. abortu pauciora, hypogyna v. ad faucem corollæ affixa, nunc omnia perfecta, nunc 3 perfecta, 3 v. pauciora ad staminodia varie reducta v. deficientia; filamenta filiformia v. basi complanata, in pluribus generibus pilis moniliformibus barbata. *Antheræ* basifixæ, nunc oblongæ v. ovatæ, loculis 2 parallelis contiguis introrsum rima longitudinali v. apice poro dehiscentibus, nunc connectivo varie dilatato heteromorphæ, loculis sejunctis. *Ovarium* superum, sessile v. rarius breviter stipitatum, 3- v. interdum 2-loculare. *Stylus* terminalis, filiformis v. columnaris, indivisus; stigma terminale, sæpius parvum, capitatum pulvinatum v. penicillatum, integrum v. 3-dymum, rarius brevissime 3-fidum. *Ovula* in quoque loculo solitaria v. pauca, specie 1-seriatim v. rarius distincte 2-seriatim superposita, axi lateraliter affixa, orthotropa. *Fructus* capsularis, pericarpio crustaceo membranaceo v. rarius carnosulo, in valvas medio septiferas loculicide dehiscens, v. pericarpio fragili v. succulento indehiscens. *Semina* in loculis solitaria v. pauca, arcte contigua, 1-seriatim superposita, rarius plura 2-seriata, loculum sæpius arcte implentia, faciebus contiguis truncata, latere interiore hilo parvo v. lineari affixa, latere exteriori squamella parva intra foveolam adnata embryostega dicta instructa, testa cæterum varie rugosa. *Albumen* copiosum, farinaceum. *Embryo* sub embryostega marginalis v. parum intrusus, parvus v. breviter horizontalis, ab hilo semper remotus sæpiusque fere oppositus.

Herbæ sæpiissime perennes, basi sæpius repentes radicales v. rhizomate brevi instructæ. Caules procumbentes ascendentes v. erecti. Folia in vaginas cylindræas v. breves sessilia v. breviter petiolata, sæpius membranæa, venis a costa centrali parum prominente divergentibus v. fere a basi subparallelis; floralia polymorpha sæpe spathacea v. ad bractæas reducta. Inflorescentia primaria centripeta, flores tamen sæpius in cymas simplices v. 2-fidas dispositi, unilateraliter sessiles v. pedicellati, centrifuge evolvuntur. Cymæ variæ, nunc elongatæ scorpioideæ v. sub anthesi rectæ, nunc rhachi brevissima in receptaculum contracta fasciculiformes, nunc spatha complicata inclusæ solitariæ v. geminæ, nunc numerosæ varie paniculatæ, in paucis generibus ad florem unicum reductæ v. irregulares. Bractææ intra cymam floribus singulis oppositæ, sæpius parvæ minimæ v. obsoletæ, rarius herbacæe distiche imbricatæ. Seminum forma sæpius e numero in loculo v. in serie evenit, si solitaria hemisphærica sunt v. semi-elliptica, si plura superius semipyramidatum, inferius obpyramidatum, intermedia plus minus quadrata, faciebus contiguis semper planis.

Species vix ultra 300, per regiones calidiores utriusque orbis late dispersæ, fere omnes tropicæ v. subtropicæ, perpaucæ usque ad Chinam et Japoniam extensæ, cæterum in Asia temperata uti in Europa desunt; in Australia extratropica una sola in regione austro-occidentali reperitur, in Africa australi paucæ, in America boreali nonnullæ, inter tropicos undique frequentes.

In hoc ordine Monographiam accuratam Clarkei fere in omnibus secuti sumus, characteribus essentialibus tamen semper in speciminibus probatis. Genera pleraque naturalia sunt et bene definita; tribus forte nimis artificiales, meliores tamen non occurrunt. Ordo totus optime limitatus, nec cum ullo alio generibus intermediis junctus.

## CONSPECTUS GENERUM.

**Tribus I. Polliæ.** Fructus indehiscens, pericarpio nunc crustaceo fragili nunc succulento v. carnos. Cætera *Commelinearum*, excepta *Pollia* sectione *Lamprocarpo*, cui stamina perfecta 6.

1. **POLLIA.** Panicula terminalis, simplex, laxe thyrsoidæ v. brevis densaque, cymis secus rhachin primum scorpioideis mox rectis. Pericarpium crustaceum, nitidum, fragile.—*Asia trop. et or., Australia.*

2. **PALISOTA.** Paniculæ 1-2, anguste thyrsoidæ, dense cylindraceæ v. elongatæ laxioresque, cymis secus rhachin simplicem numerosis scorpioideis. Pericarpium succulentum v. carnosum.—*Afr. trop.*

3. **ATHYRCARFUS.** Habitus *Commelinæ*. Cymæ 2-fidæ in spatha complicata inclusæ. Pericarpium crustaceum, nitidum, fragile.—*Amer. trop.*

**Tribus II. Commelinæ.** Capsula loculicide dehiscens. Stamina 3 perfecta, staminodia 3 v. pauciora.

4. **COMMELINA.** Spathæ in quoque pedunculo solitariae, latæ, complicatæ v. turbinato-cucullatæ. Cyma sæpius 2-fida, intra spatham inclusa. Antherarum loculi paralleli, contigui. Ovarium 3-loculare, loculis 2 anticis 1-2-ovulatis, postico 1-ovulato v. vacuo v. deficiente.—*Utriusque orbis reg. calid.*

5. **POLYSPATHA.** Spathæ secus pedunculum seu ramos plures, dissitæ, reflexæ, complicatæ. Cyma fasciculiformis, spatha inclusa. Antherarum loculi paralleli, contigui. Ovarium 2-loculare, loculis 1-ovulatis.—*Afr. trop.*

6. **ANILEMA.** Cymæ parvæ, laxè paniculatæ. Antherarum loculi paralleli, contigui. Ovarium 2-3-loculare, loculis sæpius 2-∞-ovulatis. Rarius cymæ more *Commelinæ* spatha inclusæ, ovarii loculis ∞-ovulatis.—*Utriusque orbis reg. calid.*

7. **COCHLIOSTEMA.** Folia maxima. Paniculæ magnæ, coloratæ, bracteis amplis cymisque scorpioideis secus rhachin simplicem oppositis v. 3-4-natis verticillatis. Antherarum connectivum varie petaloideum, loculi gyris numerosis spiraliter torti.—*Andes Ecuadorenses.*

**Tribus III. Tradescantiæ.** Capsula loculicide dehiscens. Stamina (excepta *Callisia*) 6, rarius 5, omnia perfecta; staminodia 0.

8. **BUFORBESTIA.** Pedunculi axillares, irregulariter pauciflori, floribus ad bracteas parvas solitariis v. 2-3-nis. Antherarum loculi paralleli, contigui. Ovarium 3-loculare, loculis 4-∞-ovulatis.—*Afr. trop.*

9. **FORRESTIA.** Cymæ in capitula globosa sessilia e basi vaginarum erumpentia confertæ. Petala distincta. Antherarum loculi paralleli, contigui. Ovarium 3-loculare, loculis 2-ovulatis v. loculo postico 1-ovulato.—*Asia et Afr. trop.*

10. **COLEOTRYPE.** Cymæ in capitula globosa sessilia e basi vaginarum erumpentia confertæ. Petalorum unguis in tubum tenuem connati. Antheræ et ovarium *Forrestiæ*.—*Afr. austr.-or., Madagasc.*

11. **CYANOTIS.** Cymæ scorpioideæ, bracteis sæpius falcatis 2-seriatim imbricatis, rarius cymæ fasciculiformes intra vaginas foliorum sessiles, v. pedunculi tenues 1-pauci-flori. Corolla sæpissime basi tubulosa. Capsulæ loculi 2-spermi, semine altero erecto basifixo, altero pendulo apice affixo.—*Asia et Africa reg. calid.*

12. **STREPTOLIBION.** Caulis volubilis, alte scandens, foliis cordatis. Inflorescentia terminalis, laxè breviterque thyrsoidæ, cymis scorpioideis secus rhachin simplicem paucis. Antherarum loculi connectivum latum transversum marginantes. Ovarium 3-loculare, loculis 2-ovulatis.—*Himalaya.*

13. **CARTONEMA.** Inflorescentia terminalis, longe centripetum spiciformis, floribus singulis secus rhachin subsessilibus, bractea bracteolæque angustis stipatis. Antherarum loculi paralleli, contigui. Ovarium 3-loculare, loculis 2-ovulatis.—*Australia.*

14. **FLOSCOPA.** Panicula terminalis, brevis, densa, sessilis, ramis seu cymis a basi secundifloris nec scorpioideis. Antherarum loculi sæpissime paralleli, contigui. Ovarium 2-loculare, loculis 1-ovulatis.—*Utriusque orbis reg. calid.*

15. **DICHORISANDRA.** Inflorescentia terminalis v. rarius in scapo laterali subradicali, laxè breviterque thyrsoidæ. Antherarum loculi paralleli, contigui, *poro terminali dehiscentes*. Ovarium 3-loculare, loculis 2-5-ovulatis. Capsulæ pericarpium succulentum.—*Amer. trop.*

16. **TINANTIA.** Cyma terminalis, pedunculata, ramis 2-3 longiusculis a basi secundifloris.

Antherarum loculi connectivum latiusculum marginantes. Ovarium 3-loculare, loculis 2-5-ovulatis.—*Amer. trop.*

17. *TRADESCANTIA*. Cymæ, rhachi brevissima in receptaculum contracta, fasciculiformes, intra basin foliorum floralium complicatorum sessiles v. varie paniculatæ. Antherarum loculi sæpiissime connectivum latiusculum marginantes. Ovarium 3-loculare, loculis 2-ovulatis.—*Amer. bor. et austr.*

18. *CALLISIA*. Stamina 3 v. 1. Herbæ teneræ. Cymæ fasciculiformes, nunc intra spathas complicatas sessiles, antherarum loculis connectivo latiusculo disjunctis, nunc parvæ laxè paniculatæ, antherarum loculis parallelis contiguis. Ovarium 2-3-loculare, loculis 2-ovulatis.—*Amer. trop.*

19. *SPIRONEMA*. Cymæ dense capituliformes, globosæ, secus ramos longos paniculæ rigidæ sessiles, distantes. Stamina exserta; antherarum connectivum latum planum, fere hyalinum, cordatum, auriculis loculiferis. Ovarium 3-loculare, loculis 2-ovulatis.—*Mexico.*

20. *CAMPFELIA*. Pedunculi laterales, simplices v. 2-3-fidæ; spathæ in pedunculo geminæ, complicatæ; cymæ fasciculiformes intra spathas sessiles. Antherarum connectivum 2-fidum, lobis linearibus reflexis extremitate loculiferis. Ovarium 2-3-loculare, loculis 2-ovulatis.—*Amer. trop.*

21. *SAUVALLERA*. Herba tenera. Spathæ terminales, complicatæ, 1-floræ. Antherarum loculi oblongi, connectivo parvo sejuncti, primum paralleli penduli, demum divaricati. Ovarium 2-loculare, loculis 2-ovulatis.—*Cuba.*

22. *RHOMO*. Caulis brevis, robustus, foliis longis confertis. Pedunculi laterales, simplices v. 2-3-fidæ. Spathæ geminæ, complicatæ, cymbiformes, cymas sessiles densissime multifloras includentes. Antherarum loculi connectivum latum marginantes. Ovarium 3-loculare, loculis 1-ovulatis.—*Amer. centr.*

23. *LEPTORHOMO*. Herba tenera, ramosa. Cymæ minimæ, fasciculiformes, in pedunculis filiformibus solitariæ. Antherarum loculi connectivum latiusculum marginantes. Ovarium 3-loculare, loculis 1-ovulatis.—*Amer. trop.*

24. *ZEBRINA*. Caulis procumbens v. scandens, ramosus. Spathæ terminales, geminæ, latæ, complicatæ, cymas sessiles fasciculiformes includentes. Calyx laxè tubulosus, 2-3-fidus. Corollæ tubus longus, tenuis; lobi patentes. Antherarum loculi connectivo lato transversò v. divaricato-2-lobo sejuncti. Ovarium 3-loculare, loculis 1-2-ovulatis.—*Mexico, Texas.*

25. *WELDENIA*. Folia caulem brevem terminantia, conferta, cymam sessilem dense fasciculiformem involucentia. Calyx longè tubulosus, spathaceo-fissus, apice 2-3-fidus. Corollæ tubus longissimus; lobi patentes. Antheræ lanceolatæ, loculis connectivo angustò separatis. Ovarium 3-loculare, loculis ∞-ovulatis.—*Mexico, Amer. centr.*

#### TRIBUS I. POLLIÆ.

1. *Pollia*, *Thunb. Gen. Nov.* i. 11.—Sepala distincta, persistentia, tenuia, lata. Petala minora, distincta, obovata, subæqualia. Stamina perfecta 3 v. 6, declinata, filamentis filiformibus nudis; antheræ ovatæ, loculis parallelis; staminodia interdum 3 loco staminum superiorum, brevía, antheridiis parvis. Ovarium 3-loculare, loculis 2-∞-ovulatis. Fructus globosus v. ovoideus, indehiscens at siccus, pericarpio nitido sæpius cymæo fragili. Semina angulata, dorso plana, testa firma brunnea lævi; embryo hilo fere oppositus.—Herbæ perennes, caulibus a basi repente ascendentibus v. sæpius erectis interdum robustis. Folia majuscula. Panicula terminalis, laxè thyrsoides v. brevis densaque. Cymæ secus rhachin simplicem sparssæ, simplices, pedunculatæ v. fere a basi florentes, primum scorpioides, demum rectæ, floribus breviter pedicellatis. Bractesæ sub cymis interdum subfoliaceæ, intra cymam parvæ v. 0.

Species 14, Australiæ, Archipelagi Malayani, Indiæ orientalis et Asiæ orientalis usque ad Chinam et Japoniam incolæ. *C. B. Clarke in DC. Monogr. Phanerog.* iii. 121; *Commel. et Cyrt. Beng.* t. 29, 30 (*Actisia*), 32, 33. *Bauer, Ill. Pl. Nov. Holl.* t. 6 (*Ancilema*). *Wight, Ic.* t. 2088 (*Actisia*).

Genus naturale, inflorescentia et fructu facile distinctum etsi characteribus artificialibus sæpe generici valoris nuncupatis in sectiones 3 dividitur:—

1. *Lamprocarpus*, staminibus omnibus perfectis, ovarii loculis ∞- (5-∞-) ovulatis. *LAMPROCARPUS*, *Blume in Schult. Syst.* vii. 1615, 1726.

2. *Aclisia*, staminibus perfectis 3, ovarii loculis  $\infty$ -ovulatis. *ACLISIA*, E. Mey.; Presl, Rel. Hænk. i. 137, t. 25.

3. *Phæocarpa*, C. B. Clarke, staminibus perfectis 3, ovarii loculis 2-ovulatis. Species una, Assamica.

2. *Palisota*, Reichb. Consép. 59, nomen tantum; Endl. Gen. 125. (*Duchekia*, Kostel. Med. Pharm. Fl. i. 213.)—Sepala petalaeque distincta, subæqualia, concoloria, patentia, sepalo extimo paullo majore magisque concavo. Stamina perfecta 3, filamentis linearibus nudis; antheræ oblongæ, una sæpius paullo diversa filamento longiore, loculis parallelis; staminodia 2 v. 3, breviter filiformia, pilis longis moniliformibus penicillata. Ovarium sessile, 3-loculare, loculis 2-8-ovulatis, postico sæpe minore interdum vacuo. Fructus ovoideus, carnosulus v. baccatus, nec nitidus, indehiscens. Semina in loculis pauca, 1-2-seriatim superposita, quadrata v. pyramidata, testa lævi v. parum rugosa; embryo horizontalis.—Caulis nunc brevissimus, nunc elongatus validus. Folia ad apicem caulis conferta, vaginis imbricatis sæpe longe pilosis, lamina ampla. Pedunculi in fasciculo foliorum 1-2, paniculam anguste thyrsoidem, nunc dense oblongam v. cylindraceam, nunc elongatam laxioremque ferentes. Flores parvuli, numerosi, in cymis simplicibus scorpioides secus rhachin simplicem pedicellatis dispositi, in cyma sessilibus v. brevissime pedicellatis. Bracteæ sub cymis nunc ovatæ subimbricatæ diu persistentes, nunc caducissimæ minimæ v. 0. Baccæ nunc coccineæ, nunc cæruleæ.

Species 8, Africæ tropicæ incolæ, a Clarkeo in sectiones 2 distributæ:—1. *Monostichos*, ovarii loculis anticis 2- rarius 3-ovulatis, seminibus 1-seriatis. 2. *Distichos*, ovarii loculis anticis 6- $\infty$ -ovulatis, seminibus 2-seriatis. C. B. Clarke in DC. Monogr. Phanerog. 130, t. 5, f. 3, 4. Beauv. Fl. Ow. et Ben. t. 15 (*Commelina*). Bot. Mag. t. 5318.

3. *Athyrocarpus*, Schlecht. Linnæa, xxvi. 454. (*Phæosphæerion*, Hassk. in Flora, 1866, 212.)—Sepala distincta, ovata, viridula, patentia, extimo paullo latiore. Petala majora, distincta, obovato-rotundata, uno brevissime, 2 paullo longius, unguiculatis. Stamina perfecta 3, filamentis filiformibus; antheræ oblongæ, loculis parallelis, uno majore loculis basi divaricatis; staminodia 2-3, antheridiis hastato-triangularibus. Ovarium sessile, 3-loculare, loculis anticis 2-ovulatis, postico 1-ovulato. Capsula globosa, pericarpio sicco nitido fragili cæterum indehiscente. Semina loculos arcte implentia, testa rugosa v. foveolata; embryo transversus, ab hilo remotus.—Herbæ ramosæ, debiles, *Commelinis* simillimæ. Pedunculi in vaginis foliorum superiorum oriundi, sæpe cum ramulo ex eadem vagina excurrente laterales apparent, spatham latam complicatam ferentes. Cymæ intra spatham 2-fidæ, scorpioides. Flores in cyma brevissime pedicellati, 2-3 inferiores sæpe perfectæ, superiores v. interdum fere omnes masculi v. steriles. Capsulæ cyanæ purpurascens v. candidæ.

Species 3, Americæ tropicæ incolæ, a Guiana et Peruvia usque ad Mexicum extensæ. C. B. Clarke in DC. Monogr. Phanerog. iii. 135 (*Phæosphæerion*). Red. Lil. t. 472 (*Commelina*).

Schlechtendahl l. c. characterem generis accurate dedit et dubie tantum ei associavit *Commelinam pallidam*, Willd., cujus fructus ignotus fuit, quæque fructu excepto ab *Athyrocarpo* non differt nisi notis minoribus a Schlechtendahl bene indicatis. Hasskarl in Commel. Ind. 8, nomen Schlechtendahl ad genus spurium transtulit, e floribus *Commelini pallidi* cum fructu *Athyrocarpi*, fictum.

#### TRIBUS II. COMMELINÆÆ.

4. *Commelina*, Linn. Gen. n. 62. (Erxlebia et Hedwigia, Medic. in Rem. et Ust. Mag. x. 124. Ananthopus, Raf. Fl. Ludov. 20.)—Sepala membranacea, extimo sæpius minore, 2 interioribus distinctis v. breviter connatis. Petala majora, latiora, quorum impar lateralibus brevius nunc brevissime unguiculatum. Stamina perfecta sæpius 3, filamentis filiformibus; antheræ oblongæ, una sæpius majore, loculis parallelis contiguis; staminodia 3 v. 2, antheridiis heteromorphis. Ovarium ad normam 3-loculare, loculis 2 anticis 1-2-ovulatis rarissime vacuis, postico 1-ovulato v. interdum vacuo v. omnino deficiente. Capsula sicca, interdum æqualiter 3-locularis, loculicide dehiscens, locus

posticus tamen sæpe indehiscens remanet v. septicide secedens v. abortivus v. omnino deest; rarissime loculi antici vacui connatique ligulam formant persistentem a postico deciduo solutam. Semina loculos implentia, si solitaria ellipsoidea, si gemina arcte superposita, faciebus contiguis planis, hilo lineari, testa firma sæpius nigra v. fusca varie reticulata foveolata v. rugosa; embryo horizontalis, embryostega laterali.—Herbæ ramosæ, caule debili v. rarius valido basi sæpe repente, ascendente v. erecto. Folia ovata lanceolata v. linearia, in vaginis laxis sessilia v. brevissime petiolata. Pedunculi in axillis superioribus tenues v. brevissimi, spatham late complicatam acuminatam v. interdum turbinatam v. cucullatam ferentes, interdum pedunculi plures ad apicem rami fasciculati v. subcapitati, spatha in quoque pedunculo semper solitaria. Cyma intra spatham 2-fida, ramo utroque v. uno tantum scorpioideo  $\infty$ -floro, inferiore tamen interdum ad stipitem nudum reducto. Flores cærulei flavescentes v. rarius albi, parvuli, pedicellati, succedanei, e spatha sigillatim exserti, superiores in ramo  $\infty$ -floro masculi decidui, inferiores 1-3 fertiles, pedicello post anthesin recurvo capsulam intra spatham maturescentes.

Species enumerat C. B. Clarke 88, bene notas, per regiones calidiores utriusque orbis late dispersas, in America tam boreali quam australi in Africa tota et in Asia tropica frequentes, in Asia usque ad Chinam et Japoniam extensæ, in Australia tropica et subtropica inveniuntur, in Europa desunt. Kunth, *Enum. Pl.* iv. 35. Gertn. *Fruct. t.* 15. C. B. Clarke in *DC. Monogr. Phanerog.* iii. 138; *Commel. et Cyrtandr. Beng. t.* 1 ad 13. Webb, *Phytogr. Canar. t.* 238, 239. Wight, *lc. t.* 2065, 2066. Ruiz et Pav. *Fl. Per. et Chil. t.* 72, 73 f. a. Seub. in Mart. *Fl. Bras. iii. i. t.* 36, 37. Jacq. *lc. Rar. t.* 293, 294. Red. *Lil. t.* 206, 207, 359, 390. Willd. *Hort. Berol. t.* 87. Andr. *Bot. Rep. t.* 399. Reichb. *Iconogr. Exot. t.* 142 ad 144, 151. Schlecht. *Hort. Hal. t.* 7. Link, *Kl. et Otto, lc. Sel. t.* 30. *Bot. Mag. t.* 1431, 2644, 3047. Lodd. *Bot. Cab. t.* 1553. Sweet, *Brit. Fl. Gard. t.* 3. Saund. *Ref. Bot. t.* 166. Regel, *Gartenfl. t.* 104, 592.

Genus habitu insigniter homomorphum, difficillime in sectiones naturales dividitur. Kunth series 2 distinxit ad spatham a basi apertam complicatamque, v. marginibus basi plus minus connatis turbinatam v. cucullatam. Hasskarl genera nonnulla separavit ad fructus variationes definita. C. B. Clarke genus in integrum restoravit, *Athyrocarpo* solo excepto, et sectiones 6 sequentes proposuit, characteribus carpologicis bene limitatas, sed forte nimis artificiales:—

1. *Eucommelina*. Ovarii loculi 2 antici 2-ovulati, posticus 1-ovulatus. Capsulæ loculi antici loculicide dehiscentes, posticus indehiscens v. demum dehiscentis ab anticis sæpe septicide secedens.
2. *Heterocarpus*. Ovula loculorum anticorum sæpius imperfecta v. abortiva rarius semina perfecta maturantia, cætera *Eucommelineæ*.
3. *Disseccarpus*. Ovarii loculi 2, 2-ovulati, postico deficiente v. rarius rudimentario v. parvo sterilique.
4. *Trithyrocarpus*. Ovarii loculi 3, 1-ovulati. Capsula æqualiter 3-locularis, loculicide 3-valvis.
5. *Heteropyxis*. Ovarii loculi 3, 1-ovulati. Capsulæ loculi 2 antici loculicide dehiscentes, posticus indehiscens, septicide secedens.
6. *Spathodithyros*. Ovarii loculi 2, 1-ovulati, dorsali deficiente. Capsula æqualiter 2-locularis, loculicide 2-valvis.

*TRITHYROCARPUS*, Hassk. *Commel. Ind.* 24, capsula 3-loculari, loculis 1-spermis, includit sectiones *Trithyrocarpum* et *Heteropyxidem*, Clarke. *COMMELINA* a Hasskarlio reducta fuit ad species capsula 3-loculari loculis 2 2-spermis tertio 1-spermo, et includit *Eucommelinam* cum speciebus nonnullis *Heterocarpi*, Clarke. *SPATHODITHYROS*, Hassk. *Commel. Ind.* 10, capsula 2-loculari, loculis 1-ovulatis et *DISSECCARPUS*, Hassk. *l. c.* 9, pro sectionibus a Clarkeo accipiuntur.

*HETEROCARPUS*, Wight, *lc. vi.* 29, t. 2067, genus propositum fuit ad species 2 Peninsulæ Indiæ orientalis, altera floribus cæruleis, altera floribus flavis, quibus locus posticus solus in ovario ovulum unicum includit, et in fructu septicide secedit et indehiscens remanet; loculi 2 antici, sub anthesi minuti vacuique, post anthesin clausi, cum axi fructus ligulam formant persistentem linearem, a Wightio infeliciter *podocarpium* dictam. C. B. Clarke in sectione sua *Heterocarpo* species plures Africanas addidit, loculis anticis ut in *Eucommelina* 2-ovulatis, ovulis tamen mox abortientibus uno rarissime semen perfectum formante. Capsula in his 2-valvatim dehiscit, loculo postico fertili valvæ posticæ adnato.

Abque fructu sectiones Clarkei v. genera Hasskarlii nequaquam distinguendæ sunt, nisi 3 priores ovarii loculis anticis 2-ovulatis subgenus *Didymoon*, Clarke, formantes, a 3 posterioribus loculis

omnibus 1-ovulatis seu subgenere *Monoon*, Clarke. Hæc etiam differentia etsi (*Heterocarpo*, Wight, excepto) constans, potius artificialis quam naturalis est.

LECHEA, Lour. *Fl. Cochinch.* 60, planta chinensis botanicis recentioribus ignota, a Kunthio dubie ad *Commelinam* refertur; character auctoris minime convenit, et genus valde dubium remanet.

5. *Polyspatha*, Benth. in *Hook. Nig. Fl.* 543.—Sepala distincta, navicularia, extimo latiore. Petala distincta, sepalis majora, 2 longe tertium brevius unguiculata. Stamina perfecta 3, filamentis filiformibus; antheræ oblongæ, subæquales v. uno majore, loculis parallelis contiguis; staminodia 3, tenuissime filiformia, antheridiis minimis. Ovarium sessile, 2-loculare, loculis 1-ovulatis. Capsula ovoidea, obtusa, nitida, 2-locularis, loculicidè dehiscens. Semina loculos implentia, elliptica, hilo lineari laterali, testa crassiuscula ab embryostega laterali depressa subradiatim sulcato-rugosa.—Herba debilis, elatiuscula, caulibus a basi reptante ascendentibus v. erectis simplicibus. Folia majuscula, in vaginam brevissime petiolata. Spathæ complicatæ, quam in *Commelina* minores nec acuminatæ, secus pedunculos simplices v. paniculæ ramos paucos plures, sæpius numerosæ, dissitæ, sessiles, arcte reflexæ. Flores intra spathas plures, pedicellati, fasciculati, cymæ rhachi vix evoluta; bractæ parvæ, latæ.

Species 1, Africæ tropicæ incola. C. B. Clarke in *DC. Monogr. Phanerog.* iii. 194, t. 3.

6. *Anilema*, R. Br. *Prod.* 270. (*Anilema*, Kunth, *Enum. Pl.* iv. 64. *Aphylax*, Salisb. in *Trans. Hort. Soc.* i. 271, absque char.)—Sepala libera, membranacea, viridia v. subpetaloidea, exteriore sæpius latiore. Petala obovalia, æqualia, brevissime v. 2 paullo longius unguiculata. Stamina perfecta 3 v. interdum 2, filamentis filiformibus glabris barbatisve; antheræ ovatæ v. oblongæ, una interdum paullo majore v. minore; staminodia 2-4, antheridiis varie difformibus, rarissime perfectiora minima antheris parvis polliniferis. Ovarium sessile, 3-loculare v. interdum 2-loculare, loculis 2-∞ v. (in *Dictyospermum*) 1-ovulatis. Capsula loculicidè dehiscens. Semina in loculis solitaria v. 1-seriata, rarius 2-seriata, in quaque serie faciebus contiguis complanatis arcte superposita, testa firma interdum ossca rugosa v. foveolata; embryo horizontalis, ab hilo remotus.—Herbæ perennes, debiles v. rarius robustæ, caulibus ascendentibus v. erectis simplicibus v. ramosis. Folia sæpius sparsa, interdum omnia radicalia v. sub inflorescentia conferta. Pedunculi sæpius terminales v. in axillis superioribus, simplices v. ramosi; cymæ simplices, unilaterales, secus pedunculum v. ramos nunc breves confertæ, nunc tenues longe pedicellatæ, paniculam laxam formantes, bracteis parvis rarius herbaceis vaginantibusque; in paucis speciebus cymæ singulæ paucifloræ intra bracteas complicatas inflorescentiam fere *Commelinæ* præbent.

Species fere 60, regionum calidiorum utriusque orbis incolæ, pleræque tamen gerontogæ, in Asia usque ad Chinam et Japoniam extensæ, in Australia tropica et subtropica plures, in Africa numerosa, in America tropica paucæ. C. B. Clarke in *DC. Monogr. Phanerog.* iii. 195.

Genus a Hasskarlio in genera plura, a Clarkeo in sectiones 5 sequentes ad capsulam divisum, quæ bene limitatæ videntur, etsi non semper naturales:—

1. *Euaneilema*. Capsula 3-locularis, 3-valvis, seminibus in quoque loculo 1-seriatim superpositis. —C. B. Clarke, *Commel. et Cyrt. Beng.* t. 14 ad 22 et t. 31 (*Acisina*). Wight, *lc.* t. 2072 ad 2077. *Hook. Exot. Fl.* t. 204. *Reichb. Iconogr. Exot.* t. 126 (*Commelina*). PRIONOSTACHYS, Hassk. in *Flora*, 1866, 212.

MURDANNIA, Royle, *Illustr. Bot. Himal.* 403, t. 95, f. 3, est *A. scapiflorum*, Wight, foliis omnibus radicalibus, scapo florido aphylo basi paucivaginato ejus tamen characteres omnino *Euaneilematis*, et in specie affini *A. Lourciri*, Hance, caulis florens 1-2-foliatus, et bractæ cymas includentes herbacæ sunt, complicatæ, fere spathacæ.

In *A. paucifloro*, Wight, affinisque nonnullis, cymæ in ramo perpaucæ, foliis floralibus complicatis inclusæ inflorescentiam *Commelinæ* simulant, sed ovarii loculi ∞-ovulati *Ancilematis*.

*A. Thomsoni*, Clarke, insignis est capsula acuminata 9 lin. longa.

2. *Dichæospermum*. Capsula 3-locularis, 3-valvis, seminibus in quoque loculo 2-seriatim superpositis. C. B. Clarke, *Commel. et Cyrt. Beng.* t. 27, 28. DICHÆOSPERMUM, Wight, *lc.* vi. 31, t. 2078. Sectio formas 2 inflorescentia valde diversas includit. In *A. Hamiltoniano*, Wall. (*D. Blumei*, Hassk.), et in *A. ochraceo*, Dalz. (*D. repente*, Wight), cymæ paucæ bracteis complicatis spatheis

omnino *Commelinæ* inclusæ, floribus in priore cæruleis, in hac flavescentibus. In *A. Kænigii*, Wall. (*D. lanceolato*, Wight), et in *A. paniculato*, Wall. (*D. juncoides*, Wight), cymæ parvæ laxè paniculatæ ad normam generis.

3. *Dictyospermum*. Capsula 3-locularis, 3-valvis, ovarii loculis 1-ovulatis. *C. B. Clarke, Commel. et Cyrt. Beng. t. 23 ad 25. Seem. Fl. Vit. t. 96. Dictyospermum, Wight, Ic. vi. 29, t. 2069 ad 2071. RHOPALEPHORA, Hassk. in Bot. Zeit. 1864, 58. PILETOCARPUS, Hassk. in Flora, 1866, 212.*

4. *Amelina*. Capsula 2-locularis, 2-valvis, apice truncata, 2-cornuta. *Beauv. Fl. Ow. et Ben. t. 38 (Commelina). AMELINA, C. B. Clarke, Commel. et Cyrt. Beng. t. 26.*

5. *Lamprodidithyros*. Capsula 2-locularis, 2-valvis, apice rotundata. *Beauv. Fl. Ow. et Ben. t. 87 (Commelina), 104. BAUSCHIA, Seub. in Vid. Meddel. Nat. Foren. Kjöbenh. 1872, 123. LAMPRODITHYROS, Hassk. in Peters, Mossamb. Reise, Bot. 529. Kotschy, Pl. Tinn. t. 23.*

7. *Cochlostema*, Lemaire, *Illustr. Hort.* vi. Misc. 70 et t. 217.—Calyx subfalcato-oblongus, sepalis distinctis crassiuscule petaloideis. Petala distincta, obovato-oblonga, tenuia, fimbriato-ciliata, uno paullo angustiore longioreque. Stamina perfecta 3, filamentis brevissimis latis basi connatis cum connectivis petaloideis continuis; antheræ intermediæ loculi 2 distincti horizontaliter divaricati gyris pluribus in spiram torti, connectivo brevi dorso in appendicem planam brevem latam margine papilloso-ciliatam producto; antherarum lateralium connectivi petaloidei basi cucullati, margine interiore loculum unicum gyris numerosis in spiram tortum ferentes, ultra loculum in appendicem longam erectam angustatam producti; staminodia 2, brevissima, penicillo denso pilorum moniliformium coronata. Ovarium 3-loculare, loculis  $\infty$  (10–14-) ovulatis. Capsula anguste oblonga, breviter acuminata, 3-locularis, loculicide dehiscens. Semina oblongo-quadrata, 2-seriatim superposita, hilo parvo; embryo sub embryostega laterali minimus.—Herba robusta, subcaulis. Folia radicalia conferta, pluripedalia, oblongo-lanceolata, basi late vaginantia. Paniculæ ad axillas erectæ, magnæ, coloratæ. Bracteæ secus pedunculum simplicem oppositæ v. 3–4-natim verticillatæ, amplæ, candidæ v. purpurascens. Cymæ breviter simpliciterque scorpioideæ, ad axillas bractearum longe pedunculatæ. Flores speciosi, in cyma pedicellati, sepalis roseo-purpureis, petalis cæruleis.

Species 1, Andium Ecuadoriæ incolæ. *C. B. Clarke in DC. Monogr. Phanerog. iii. 231. Masters in Journ. Linn. Soc. xiii. 204, t. 4. Bot. Mag. t. 5705. Fl. des Serres, t. 1837–9. Genus tam habitu quam staminibus in ordine distinctissimum.*

### TRIBUS III. TRADESCANTIÆ.

8. *Euforrestia*, *C. B. Clarke in DC. Monogr. Phanerog. iii. 233, t. 6, 7.*—Sepala distincta, lanceolata, rigida, striata, persistentia. Petala distincta, obovata, subæqualia. Stamina 6, omnia perfecta, hypogyna, filamentis filiformibus nudis; antheræ ovoideæ v. subglobosæ, loculis parallelis contiguus. Ovarium sessile, oblongum, 3-loculare, loculis  $\infty$  (4–10-) ovulatis. Capsula oblonga, acuta, loculicide dehiscens. Semina in loculis  $\infty$ , quadrata, 1-seriatim superposita, testa lævi v. tuberculato-rugosa; embryo brevis, sub embryostega laterali horizontalis.—Herbæ robustæ v. tenues, basi radicales, ramosæ, caulibus erectis simplicibus. Folia mediocria. Pedunculi in axillis superioribus solitarii v. fasciculati, simplices v. parce ramosi. Flores secus pedunculum pedicellati, vix secundi, intra bracteas parvas solitarii v. (in *B. Manni*) 2–3-ni.

Species 3, Africæ tropicæ incolæ. E specibus Clarkeanis excludimus *B. tenum*, quæ ob inflorescentium capitatam sessilem et ovarii loculos 2-ovulatos ad *Forrestiam* transferenda.

9. *Forrestia*, *A. Rich. Sert. Astrolab. 1, t. 1.* (Amischotolype, *Hassk. in Flora 1863, 391.*)—Sepala distincta, colorata v. subherbacea, concavo-carinata, parum inæqualia. Petala distincta, obovalia, sepalis subæquilongæ, subæqualia. Stamina 6, omnia perfecta, filamentis filiformibus superne barbatis; antheræ ovoideæ, loculis parallelis contiguus. Ovarium sessile, ovoideum, 3-loculare, loculis 2-ovulatis v. postico 1-ovulato. Capsula subgloboso-3-quetra v. oblonga, 3-locularis, loculicide dehiscens. Semina in loculis 2 superposita, v. abortu solitaria, oblonga, testa plus minus rugosa, hilo lineari; embryo sub

embryostega laterali horizontalis.—Herbæ a basi repente sæpius robustæ, glabræ v. villosæ, caulibus erectis simplicibus vaginis foliorum sæpe obtectis. Folia sæpius ampla, vaginis tubulosis post folia delapsa persistentibus. Inflorescentiæ dense capitata, globosæ, ad axillas subsessiles, e basibus vaginarum erumpentes laterales apparent, e cymis densissime confertis constantes, floribus ipsis sessilibus. Bracteæ sæpius floribus breviores.

Species 7, quarum una Africæ tropicæ, cæteræ Indiæ orientalis v. Archipelagi Malayanici incolæ, una usque ad Formosam extensa. *C. B. Clarke in DC. Monogr. Phanerog.* iii. 235; *Commel. et Cyrt. Beng.* t. 41, 42. *Bot. Mag.* t. 5425.

Clarke genus ad species Asiaticas limitavit, quibus addimus *F. tenuem* ex Africa tropica, a Clarkeo dubie ad *Buforrestiam* relatum, sed ovarii loculi 2-ovulati et inflorescentia peculiaris omnino *Forrestia*, Clarkeo ipso assentiente.

10. **Colcotrype**, *C. B. Clarke in DC. Monogr. Phanerog.* iii. 238, t. 8.—Sepala distincta, anguste lanceolata, concavo-carinata. Corollæ tubus tenuis, cylindraceus, calycem superans; lobi obovato-orbiculati, subæquales, patentes. Stamina 6, omnia perfecta, fauci affixa, lobis breviora, filamentis filiformibus barbatis; antheræ ovoideæ, subæquales, loculis parallelis contiguis. Ovarium sessile, ovoideum, 3-loculare, loculis 1-2-ovulatis. Capsula ovoideo-3-quetra, loculicide dehiscens. Semina in loculis solitaria v. 2 superposita, oblongo-linearia, hilo subbasilari.—Herbæ basi repentes ramosæ, caulibus ascendentibus simplicibus. Foliorum vaginæ sæpius breves. Inflorescentiæ capituliformes, ad axillas foliorum sessiles, e basi vaginarum erumpentes, floribus quam in *Forrestia* paucioribus sessilibus, bracteis sæpe flores æquantibus stipatis.

Species 3, Africæ austro-orientalis et Madagascaricæ incolæ. Genus *Forrestia* valde affine, differt imprimis corollæ tubo evoluta.

11. **Cyanotis**, *Don. Prod. Fl. Nep.* 45. (*Tonningia*, *Neck. Elem.* iii. 165. *Zygomenes*, *Salisb. in Trans. Hort. Soc.* i. 271, absque char.)—Sepala lanceolata, carinata, basi sæpius connata, subæqualia. Petala subæqualia, unguibus medio in tubum connatis v. rarius a basi distincta exungiculata, laminis patentibus suborbiculatis. Stamina 6, omnia perfecta, subæqualia, hypogyna v. unguibus petalorum adnata, filamentis filiformibus superne sæpissime barbatis interdumque sub apice incrassatis; antheræ oblongæ, loculis parallelis. Ovarium sessile, 3-loculare, loculis 2-ovulatis, ovulo altero ascendente altero pendulo. Capsula 3-locularis, loculicide dehiscens. Semina in loculis sæpius 2, altero ascendente juxta basin affixo, altero pendulo juxta apicem affixo, testa firma foveolata rugosa v. rarius lævi; embryo in extremitate ab hilo remota horizontalis.—Herbæ sæpius debiles, repentes v. ascendentes, ramosæ. Folia varia, parva v. mediocria. Flores in sectione normali in cymas scorpiodeas simplices breves densasque, axillares v. terminales, sessiles v. pedunculatas dispositi, bracteis subfoliaceis falcatis secundis 2-seriatim imbricatis arcte inclusi, petalis solis cum staminibus exsertis; in sectionibus 2 et 3 inflorescentia abnormis.

Species ad 30, regionum calidiorum orbis veteris incolæ. *C. B. Clarke in DC. Monogr. Phanerog.* iii. 240; *Commel. et Cyrt. Beng.* t. 35 ad 39. *Roxb. Corom. Pl.* t. 107, 108. *Wight, Ic.* t. 2082 ad 2089. *A. Rich. Fl. Abyss.* t. 98. *Kotschy, Pl. Tinn.* t. 22 (*Zygomenes*). *Jacq. Hort. Vind.* t. 137. *Bot. Mag.* t. 1435, 5471. (*Id. veteres pleræque sub Tradescantiæ.*)

Genus a Clarkeo in sectiones 3 inflorescentia bene distinctas dividit, quarum 1, *Eucyanotis*, species plerasque continet. Inflorescentia qualis supra descripta, habitu cæterum vario.

2. **Ocreaefolia**. Caules ascendentes, foliis angustis. Flores ad axillas foliorum caulinoz fasciculati, intra vaginam sessiles, bracteis angustis calycibus capsulisque intra vaginam demum sæpe inflatam occultis, corolla sola tubo longo tenui cum staminibus e vagina exserta. Species 2.

3. **Dalzellia**. Caules florentes procumbentes v. repentes tenuesque. Folia parvula, cordato-ovata v. lanceolata. Pedunculi in axillis superioribus v. ad apices ramulorum tenues, sæpius breves, 1-flori v. laxè pauciflori, rarius flores plures confertos ferentes, nec scorpiodei. Flores parvi. Bracteæ varie. Species 4, inter quas DALZELLIA, *Hassk. in Flora*, 1866, 593, est *C. vivipara*, Dalz., rhizomate crasso, foliis radicalibus lanceolatis, caulinis parvis. BELOSYNAPSIS, *Hassk. in Flora*, 1871, 259 (*ERYTHEOTIS*, *Hook. f. Bot. Mag.* t. 6150), est *C. Kewensis*, *C. B. Clarke*, foliis in caule

prostrato confertis distichis ovato-cordatis summis sub floribus diminutis, species insignis petalis a basi distinctis nec unguiculatis. Sectio tota a genere differt habitu et inflorescentia, sed ovulis seminibusque arcte connectitur.

12. *Streptolirion*, *Edgev. in Trans. Linn. Soc. xx.* 90, t. 2.—Sepala distincta, oblonga, subæqualia. Petala distincta, angusta, fere linearia. Stamina 6, omnia perfecta, hypogyna, filamentis filiformibus superne barbatis; antheræ transversæ, loculis connectivum latum medio subconstrictum oblique marginantibus. Ovarium 3-loculare, loculis superposite 2-ovulatis. Capsula membranacea, loculicide dehiscens. Semina in loculis 2, superposita, lateraliter affixa, superius infra medium, inferius supra medium; embryo sub embryostega laterali horizontalis.—Caulis ramosus, volubilis, alte scandens. Folia longe petiolata, cordato-ovata, acuminata. Inflorescentia ad apices ramulorum breviter laxèque thyrsiformis, folio florali sub inflorescentia subsessili. Cymæ scorpioideæ, simplices, secus pedunculum simplicem parum distantes, singulæ ad axillam bracteæ ovato-lanceolatæ breviter pedunculatæ. Flores in cyma breviter pedicellati.

Species 1, Himalayana. *C. B. Clarke in DC. Monogr. Phanerog.* iii. 261; *Commel. et Cyrt. Beng.* t. 40. *Wight, Ic.* t. 2081.

13. *Cartonema*, *R. Br. Prod.* 271.—Sepala distincta, herbacea, lanceolata, subæqualia. Petala distincta, late obovata v. orbiculata, subæqualia, marcescentia, persistentia. Stamina 6, omnia perfecta, hypogyna, filamentis brevibus nudis basi interdum dilatatis; antheræ oblongæ, loculis parallelis contiguis apice rima brevi demum altius fissa v. interdum usque ad basin rima dehiscentibus. Ovarium sessile, 3-loculare, loculis 2-ovulatis. Capsula loculicide dehiscens. Semina in loculis 2, superposita, hilo parvo laterali, testa laxiuscula reticulata; embryo sub embryostega laterali minutus.—Herbæ perennes, plus minus pubescentes, rhizomate brevi crasso. Caulis erectus, simplex. Folia radicalia v. inferiora conferta, longe angustaque linearia, secus caulem breviora sparsa. Inflorescentia terminalis, longiuscule spiciformis, simplex v. parce ramosus, floribus secus pedunculum v. ramos subsessilibus approximatis v. dissitis. Bracteæ subquoque flore angustæ, acuminatæ, cum bracteola minore in pedicello brevissimo.

Species 5 v. 6, Australianæ, characteres tamen speciei ulterius probandi. *C. B. Clarke in DC. Monogr. Phanerog.* iii. 262. Species unica extratropica, *C. phyllidroides*, F. Muell., ex Australia austro-occidentali, a Clarkeo cum *C. spicato*, Br., e regione tropica jungitur, nobis tamen bene distincta videtur. Nonnullæ inter species tropicas inter se nimis affines sunt et melius notæ verisimiliter ad varietates reducendæ. Genus a toto ordine differt inflorescentia. Stamina iis *Dichorisandra* accedunt.

14. *Floscopa*, *Lour. Fl. Cochinch.* 192. (*Dithyrocarpus*, *Kunth, Enum. Pl.* iv. 76.)—Sepala distincta, obovata v. oblonga, concava, subæqualia. Petala distincta, obovata, plana, sessilia v. 2 brevissime unguiculata. Stamina 6 v. rarius uno deficiente 5, omnia perfecta, hypogyna, filamentis filiformibus nudis; antheræ ovatæ, loculis parallelis contiguis, rarius (fide Seubertii) 3 staminum breviorum loculis connectivo lato separatis. Ovarium basi contractum v. brevissime stipitatum, 2-loculare, loculis 1-ovulatis. Capsula sæpius breviter stipitata, compressiuscula v. didyma, 2-locularis, pericarpio crustaceo nitido, loculicide dehiscens. Semina in loculis solitaria, hemispherica, hilo laterali, testa ab embryostega laterali depresso radiato-striata v. lævi; embryo horizontalis.—Caulis a basi radicante ramosa ascendentes v. erecti, simplices. Folia mediocria v. rarius ampla. Flores parvuli, in paniculam terminalem brevem densam sæpius glanduloso-villosam conferti, ramis paniculæ seu cymis simplicibus v. vix ramosis a basi secundifloris nec scorpioideis, floribus singulis breviter pedicellatis. Bracteæ minutæ v. 0.

Species 11, per regiones calidiores utriusque orbis late dispersæ. *C. B. Clarke in DC. Monogr. Phanerog.* iii. 265; *Commel. et Cyrt. Beng.* t. 34. *Roxb. Corom. Pl.* t. 109 (*Tradescantia*). *Beauv. Fl. Ow. et Ben.* t. 93 (*Aneilema*). *Wight, Ic.* t. 2079, 2080 (*Dithyrocarpus*). *Seub. in Mart. Fl. Bras.* iii. i. t. 35 (*Dithyrocarpus*).

15. *Dichorisandra*, Mikan, *Del. Fl. et Faun. Bras. t. 3.* (Stickmannia, Neck. *Elem. iii.* 171.)—Sepala distincta, ovata v. oblonga, viridia v. colorata, subæqualia. Petala distincta, sepalis latiora, subæqualia. Stamina 6, v. uno deficiente 5, omnia perfecta, filamentis brevibus erectis nudis; antheræ anguste oblongæ, erectæ, filamentis sæpius longiores, loculis parallelis contiguis poro terminali dehiscentibus. Ovarium sessile, 3-loculare, loculis  $\infty$ - (4-5- rarius 2-3-) ovulatis. Capsula 3-locularis, loculicide dehiscens, pericarpio crassiusculo in vivo pulposo. Semina in loculis pauca 'arillo subpulposo laxo tecta,' subglobosa v. angulata, hilo lineari; embryo sub embryostega laterali parvus.—Herbæ perennes, caulibus erectis v. ascendentibus sæpe ramosis. Folia mediocria v. ampla, in vaginis sessilia v. petiolata, vaginis sæpe caulem obtegentibus rarius dissitis. Panicula breviter thyrsioidea, supra folia ultima sessilis v. breviter pedunculata, rarius infra folia lateralis v. in scapo radicali aphylo; ramuli secus pedunculum seu rhachin simplicem breves, floribus pedicellatis secundis vix tamen scorpioideis.

Species 28, Americæ tropicæ imprimis Brasiliæ incolæ, nonnullæ forte inter se nimis affines. *C. B. Clarke in DC. Monogr. Phanerog. iii.* 272. *Aubl. Pl. Gui. t. 12* (Commelina.) *Nees et Mart. in Nov. Act. Nat. Cur. xi. t. 1.* *Seub. in Mart. Fl. Bras. iii. i. t. 32, 33.* *Bot. Mag. t. 2721, 4733, 4760, 6165.* *Lodd. Bot. Cab. t. 1196, 1440.* *Regel, Gartenfl. t. 569, 593.* *Fl. des Serres, t. 1711.*

Genus staminibus et capsula in ordine facile distinctum.

16. *Tinantia*, Scheidw. in *Allgem. Gartenz.* 1839, 365.—Sepala distincta, viridia, membranacea, subæqualia. Petala distincta, obovata, subæqualia. Stamina 6, omnia perfecta, filamentis filiformibus plus minus barbatis; antherarum loculi connectivum latiusculum marginantes, obliqui; stamina 3 interdum cæteris minora antheris parum heteromorphis. Ovarium sessile, 3-loculare, loculis superposite 2-5-ovulatis. Capsula 3-locularis, loculicide dehiscens. Semina in loculis 1-seriatim superposita, hilo laterali, testa rugosa v. scabra; embryo sub embryostega laterali hilo oppositus.—Herbæ erectæ, foliis mediocribus v. amplis. Pedunculus terminalis, additis rarius 1-3 in axillis superioribus. Cyma in pedunculo terminalis, e ramis 1-3 fere a basi floridis secundis, primum scorpioideis sed jam sub anthesi rectis. Flores secus ramos pedicellati, bracteis parvis ovatis.

Species 3, Americæ tropicæ incolæ. *C. B. Clarke in DC. Monogr. Phanerog. iii.* 285. *Jacq. Ic. Rar. t. 354.* *Red. Lil. t. 239.* *Cav. Ic. t. 74.* *Ruiz et Pav. Fl. Per. et Chil. t. 272, f. a.* *Bot. Mag. t. 1340.* *Bot. Reg. t. 1403.* *Lodd. Bot. Cab. t. 1300.* (*Id. pleræque sub Tradescantia*).

Genus *Tradescantia* valde affine, differt imprimis inflorescentia, cymarum rhachi semper evoluta nec ut in *Tradescantia* in receptaculum contracta. Species communis, *T. fugax*, Schiedw., differt insuper ovarii loculis 3-5-ovulatis, in cæteris speciebus tamen 2-ovulati sunt more *Tradescantie*.

17. *Tradescantia*, Linn. *Gen. n.* 398. (Ephemerum, Mönch, *Meth.* 237.)—Sepala distincta, concava, subæqualia, viridia v. colorata. Petala distincta, obovata v. orbiculata, subæqualia. Stamina 6, omnia sæpius perfecta, subæqualia v. alterna breviora, filamentis barbatis v. nudis; antherarum loculi sæpius connectivo lato sejuncti, ad margines obliqui, demum interdum connectivo plicato parallele approximati (rarius connectivo angusto contigui?); antheræ staminum breviorum interdum heteromorphæ. Ovarium 3-loculare, loculis superposite 2-ovulatis. Capsula 3-locularis, loculicide dehiscens. Semina in loculis 2, superposita, hilo laterali breviter lineari, testa reticulato-rugosa sæpius ab embryostega radiatim sulcata; embryo sub embryostega laterali horizontalis, hilo oppositus.—Herbæ perennes, basi radicales, caulibus simplicibus v. ramosis diffusis ascendentibus v. erectis. Folia varia. Cymæ simplices, ob rhachin brevissimam ad receptaculum reductam fasciculiformes, falso umbellæ dictæ, nunc intra basin foliorum floralium complicatorum v. concavorum sessiles sæpe geminæ, nunc (parvifloræ) in panicula densa confertæ v. in panicula tenui laxa longe pedunculatæ. Flores in cyma plus minus pedicellati, numerosi v. pauci, more ordinis centrifuge evoluti, rarissime solitarii.

Species ad 32, omnes Americanæ, boreales v. tropicæ. *C. B. Clarke in DC. Monogr. Phanerog. iii.* 287. *Gertn. Fruct. t. 15.* *Cav. Ic. t. 75.* *Red. Lil. t. 94, 95.* *Jacq. Ic. Rar. t. 355.* *Vent. Jard. Cels. t. 24.* *Barton, Fl. N. Amer. t. 41.* *H. B. et K. Nov. Gen. et Sp. t. 672, 673.* *Ruiz et*

*Pav. Fl. Per. et Chil. t. 272, f. b. Voll. Fl. Flum. Ic. iii. t. 152 ad 154. Seub. in Mart. Fl. Bras. iii. i. t. 34. Lehm. in Nov. Act. Nat. Cur. xiv. t. 48. Mart. Ausw. Merkw. Pfl. t. 7. Schlecht. Hort. Hal. t. 11. Link et Otto, Ic. Pl. Rar. t. 7. Hook. Ic. Pl. t. 654, 665. Bot. Mag. t. 105, 1597, 1598, 2935, 3291, 3501, 3546, 5188. Bot. Reg. t. 1055; 1840, t. 34, 42. Lodd. Bot. Cab. t. 1513, 1560.*

Inflorescentia generis primo aspectu polymorpha apparet, nam cymæ densissimæ intra folia floralia sessiles *T. virginicæ* affiniumque, habitum præbent longe ab illo *T. geniculatæ* affiniumque, quibus cymæ minimæ in panicula tenui laxa pedunculatæ, revera tamen in toto genere conformis est, cymæ nempe ob rhachin in receptaculum brevissimum contractam fasciculiformes sunt simplices v. 2-fidæ, flores semper unilaterales secundique centrifuge evolvuntur, nec centripetum quaquaversi ut in umbella vera. Inflorescentia cæterum specierum plurimum inter illam *T. virginicæ* et *T. geniculatæ* plus minus intermedia sectiones ad hunc characterem definire prohibet. Clarke species plerasque in sectiones 2 melius definitas sed minime naturales distribuit: 1. *Eutradescantia*, staminibus subæqualibus antheris consimilibus; et 2. *Descantaria*, staminibus 3 brevioribus antheris plus minus dissimilibus; et sectionem tertiam *Monantham* addidit pro specie unica tenella Mexicana a nobis non vise, pedunculis 1-floris axillaribus terminalibusque.

Hasskarl aliique genera sequentia proposuerunt ad species varias a Clarkeo rite ad *Tradescantiam* restitutas.

KNOWLESIA, Hassk. *Commel. Ind.* 5, est *T. spicata*, Knowles et Westc. *Fl. Cab.* iii. 133, t. 124, a Clarkeo inter varietates *T. virginicæ* inclusa.

MANDONIA, Hassk. in *Flora*, 1871, 260, nomen ab auctore in *Æsterr. Bot. Zeitschr.* 1872, 147 in SKOFITZIAM mutatum, est *T. ambigua*, Mart., species *T. virginicæ* affinis.

DESCANTARIA, Schlecht. in *Linnea*, xxvi. 140, et DISORREGA, Hassk. *Commel. Ind.* 6, genera potius indicata quam definita, ad sectionem *Descantariam*, C. B. Clarke pertinent.

HETERÆANTHIA, Kunze in *Bot. Zeit.* 1850, 1, includit *T. pulchellam* et *T. gracilem*, H. B. et K.; species sunt teneræ, procumbentes, foliis parvis, floribus parvulis, cymis pedunculatis, antherarum connectivo transversim elongato quasi divaricato-2-lobo, lobis apice oculiferis; a Clarkeo in *Eutradescantia* includuntur.

PYRREHIMA, Hassk. in *Flora*, 1869, 366; C. B. Clarke in *DC. Monogr. Phanerog.* iii. 271, est *T. fuscata*, Lodd. *Bot. Cab.* t. 374; *Bot. Mag.* t. 2330; *Bot. Reg.* t. 482, species habitu insignis, humilis sed robusta, pilis rufis dense vestita, cymis fasciculiformibus inter folia sessilibus v. breviter pedunculatis. Generice distincta fuit ob ovula a Kunthio in quoque loculo 4-5 2-seriata dicta, sed hic latet error, nam capsulæ loculi a variis auctoribus 2-spermi dicuntur, et in speciminibus nostris florentibus ovarii loculos semper ut in *Tradescantia* 2-ovulatos invenimus.

18. *Callisia*, Linn. in *Læfl. Itin.* 305; *Gen. n.* 63.—Sepala distincta, latiuscula v. anguste oblonga, viridula v. subscariosa, subæqualia. Petala distincta, obovalia v. oblonga, subæqualia. Stamina 3, v. ad unum reducta, omnia perfecta, filamentis filiformibus nudis; antherarum loculi connectivo lato sejuncti, v. connectivo angustissimo paralleli contigui. Ovarium sessile, 2-3-loculare, loculis 2-ovulatis. Capsula globoso-3-quetra v. 2-dyma, 3- v. 2-locularis, loculicide dehiscens. Semina sub-3-gona, hilo minuto laterali, testa lævi rugosa v. ab embryostega laterali radiato-striata.—Herbæ teneræ, repentes, caulibus ascendentibus simplicibus v. superne paniculato-ramosis. Flores parvi, cymis ob rhachin brevissimam in receptaculum contractam fasciculiformibus, singuli in cyma pedicellati. Bracteæ nunc lineares scariosæ, nunc minimæ v. 0.

Species 4, Americæ tropicæ incolæ. C. B. Clarke in *DC. Monogr. Phanerog.* iii. 303.

Genus in sectiones 2 vix non pro generibus distinctis habendas dividitur:—

1. *Hapalanthus*. Cymæ intra spathas seu folia floralia complicata sessiles, bracteis linearibus. Antherarum loculi, more *Tradescantie* sejuncti, connectivum latissimum marginantes. Stylus longiuscule filiformis. Ruiz et Pav. *Fl. Per. et Chil. t. 73, f. b.* HAPALANTHUS, Jacq. *Stirp. Amer.* 11, t. 11.

2. *Leptocallisia*. Cymæ tenuiter pedunculatæ, in paniculam laxam e folioicali exsertam dispositæ, bracteis brevissimis v. 0. Antherarum loculi oblongi, paralleli, contigui, connectivo angustissimo v. vix ullo. Lam. *Illustr. t. 35. Bot. Mag. t. 4849 (Tradescantia).*

19. *Spirocnema*, Lindl. in *Bot. Reg.* 1840, *Misc.* 26, t. 47.—Sepala distincta, oblongo-lanceolata, subscariosa, subæqualia. Petala distincta, late oblonga, subæqualia. Stamina

6, omnia perfecta, filamentis filiformibus fere capillaribus in alabastro valde flexuosis demum longe exsertis; antherarum connectivum latum, cordatum, planum, fere hyalinum, loculis auriculis basalibus affixis. Ovarium sessile, 3-loculare, loculis 2-ovulatis. Fructus . . .—Herba robusta, rhizomate repente v. stolonifero, caulibus foliatis brevibus crassis. Folia oblongo-lanceolata, in vaginis subimbricatis sessilia. Panicula elata, rigida, ramis paucis longis divaricatis v. recurvis. Florum cymæ dense capituliformes, globosæ, secus ramos paniculæ sessiles, distantes, bracteis paleaceis capitulum non v. vix superantibus stipatæ. Flores in cyma numerosi, subsessiles v. brevissime pedicellati, bracteis lanceolatis scariosis intermixti.

Species 1, Mexicana. *C. B. Clarke in DC. Monogr. Phanerog.* iii. 313. *Lindb. in Act. Soc. Sc. Fenn.* x. t. 4.

20. **Campelia**, *L. C. Rich. Demonstr. Bot. ou Anal. Fr.* 46, *nomen tantum pro Zanonina substitutum.* (*Zanonina*, *Cram. Enum.* 75 ex *Schult. Syst.* vii. 1179. *Gonatandra*, *Schlecht. Linnæa*, xxiv. 659.)—Sepala distincta, in pedicellum turbinato-incrassatum decurrentia, concava, exterius carinatum. Petala distincta, late orbiculata. Stamina 6, hypogyna v. seriei interioris basi segmentis adnata, filamentis filiformibus superne barbatis; antherarum connectivum 2-fidum, lobis linearibus reflexis extremitate loculiferis. Ovarium sessile, 3-rarius 2-loculare, loculis 2-ovulatis. Capsula calyce oblique aucto crassiusculo inclusa, pedicello carnosio incrassato fulta, pericarpio membranaceo, loculicide dehiscens, sæpe tamen abortu 1-2-sperma. Semina fere hemisphærica, hilo lineari, testa rugosa v. ab embryostega obscure radiata; embryo sub embryostega laterali parvus, horizontalis.—Herba robusta. Folia majuscula, oblongo-lanceolata, acuminata. Pedunculi e vaginis foliorum inferiorum v. delapsorum erumpentes, elongati, simplices v. superne in ramulos 2-3 divisi, aphylli. Vaginæ sub ramulis scariosæ. Spathæ (v. folia floralia) ad apicem pedunculi v. ramulorum 2, herbaceæ, complicatæ, acuminatæ, divaricato-patentes v. reflexæ. Cymæ rhachi brevissima fasciculiformes, intra spatham sessiles, bracteis parvis. Flores in cyma pedicellati.

Species 1, in America tropica late dispersa. *C. B. Clarke in DC. Monogr. Phanerog.* iii. 314. *Gærtn. Fruct.* t. 15 (*Commelina Zanonina*). *Red. Lil.* t. 192 (*Commelina*). *Nees et Mart. in Nov. Act. Nat. Cur.* xi. t. 1, f. 4. *Vell. Fl. Flum. Ic.* iii. t. 151 (*Tradescantia*). *Regel, Gartenfl.* t. 833.

21. **Sauvallea**, *Wright in Sauv. Fl. Cub.* 156.—Sepala distincta, subæqualia, exterius carinatum. Petala distincta, lata, subæqualia. Stamina 6, omnia perfecta, filamentis filiformibus inferne barbatis; antherarum loculi oblongi, apice connectivo parum dilatato affixi, primum penduli paralleli, demum divaricati. Ovarium 2-loculare, loculis 2-ovulatis, ovulo altero descendente altero descendente. Fructus . . .—Caulis debiles, procumbentes v. reptantes, ramosi, ramis florentibus breviter ascendentibus. Folia parvula, late ovata, in vaginis brevibus subsessilia, interdum basi cordata. Spatha terminalis, lata, complicata, vix acuminata. Flos in spatha unicus, breviter pedicellatus, vix e spatha exsertus.

Species 1, Cubensis. *C. B. Clarke in DC. Monogr. Phanerog.* iii. 315.

Genus habitu *Callisiam repentem* referens, sed adhuc imperfecte notum. A *Callisia* certe differt floribus in spatha solitariis, staminibus perfectis 6, et (si rite observatæ) antheris.

22. **Rhoco**, *Hance in Walp. Ann.* iii. 659.—Sepala distincta, ovata, subæqualia, subpetaloidea. Petala paullo majora, distincta, subæqualia. Stamina 6, hypogyna, omnia perfecta, filamentis filiformibus barbatis; antherarum loculi connectivum latum marginantes, obliqui. Ovarium sessile, 3-loculare, loculis 1-ovulatis. Capsula perianthio persistente marcescente nec aucto stipata, loculicide dehiscens. Semina in capsula 1-3, fere hemisphærica, hilo lineari, testa valde rugosa; embryostega in fundo foveolæ latæ lateralis.—Caulis breves, robusti. Folia longa, conferta, subtus sæpe violacea. Pedunculi breves, simplices v. 2-3-fidi, in axillis inferioribus v. vaginis defoliatis solitarii, vagina lata instructi. Spathæ in pedunculo terminales, sæpius geminæ, horizontales, complicatæ, fere cymbiformes, flores numerosos densissime cymosos includentes. Pedicelli breves, perianthiis solis exsertis. Capsulæ parvæ, spatha inclusæ.

Species 1, Americæ centralis incola?, olim ex ore Mosquito in Jamaicam allata, unde in hortis variis tam Asiæ et Africæ quam Europæ et Americæ transmissa, jamdiu ornamenti gratia culta. Specimina sylvestria in herbariis nostris desunt. *C. B. Clarke in DC. Monogr. Phanerog.* iii. 316. *Lhér. Sert. Angl.* t. 12. *Sm. Ic. Piet.* t. 10. *Red. Lil.* t. 168. *Bot. Mag.* t. 1192, 5079. *Saund. Ref. Bot.* t. 48. (*Id. omnes sub Tradescantia.*)

23. *Leptorhœo*, *Hemsl.*; *C. B. Clarke in DC. Monogr. Phanerog.* iii. 317.—Sepala distincta, ovata, subæqualia, viridia. Petala paullo majora, distincta, ovata, subæqualia. Stamina 6, hypogyna, omnia perfecta, filamentis filiformibus nudis; antherarum loculi curvuli, connectivum latum marginantes. Ovarium sessile, 3-loculare, loculis 1-ovulatis. Capsula ovoidea, loculicide dehiscens. Semina in loculis solitaria, a dorso complanata, subquadrata, hilo parvo centrali, testa foveolato-rugosula, embryostega dorsali.—Herba tenera, ramosa, radicans, habitu fere *Callisicæ* sect. *Leptocallisicæ*. Folia parvula, lanceolata. Pedunculi filiformes, axillares terminalesque, cymam parvam fasciculiformem ferentes, rhachi brevissima v. rarius breviter evoluta. Bractea sub cyma interdum complicata spathiformis, sæpius tamen parva; bracteæ in cyma minimæ, membranacæ, subhyalinæ. Flores minimi, tenuiter pedicellati. Capsulæ parvæ.

Species 1, Americæ tropicæ incola, a Brasilia usque ad Mexicum extensa.

24. *Zebrina*, *Schnitzl. in Bot. Zeit.* 1849, 870.—Calyx membranaceus, tubulosus, superne 3-fidus, v. 2-fidus lobo altero latiore 2-nervi. Corollæ tubus tenuis, calyce longior; lobi ovati, patentes, subæquales. Stamina 6, fauci affixa, omnia perfecta, filamentis filiformibus nudis v. barbatis; antherarum connectivum transversum, quasi divaricato-2-lobum, lobis angustis brevibusve extremitate loculiferis. Ovarium ovoideum, 3-loculare, loculis 1-2-ovulatis. Capsula subgloboso-3-quetra, sæpe stipite recurvo e basi perianthii lateraliter exserta, loculicide dehiscens. Semina in loculis solitaria, fere hemisphærica, hilo parvo oblongo, testa rugulosa, embryostega laterali.—Herbæ laxè decumbentes scandentes v. pendulæ, ramosæ. Folia ovato-lanceolata. Spathæ in pedunculo terminali geminæ, complicatæ, sæpe inæquales, latiusculæ. Cymæ in spathis sessiles, fasciculiformes, pauci- v. multi-floræ, bracteis parvis. Flores parvuli, breviter pedicellati. Adest etiam interdum flos solitarius in axilla folii caulini.

Species 2, regionis Mexicano-Texanæ incolæ. *C. B. Clarke in DC. Monogr. Phanerog.* iii. 317. *Dene. in Rev. Hort.* 1855, 141, cum ic.

25. *Weldenia*, *Schult. in Flora*, 1829, 3, t. 1. (*Lampra, Benth. Pl. Hartw.* 95.)—Calyx membranaceus, longè laxèque tubulosus, sæpius spathaceo-fissus, apice breviter 3-fidus. Corollæ tubus tenuis, calyce multo longior; lobi lati, patentes, subæquales. Stamina 6, fauci v. sub apice tubi affixa, filamentis breviter filiformibus nudis; antheræ erectæ, oblongo-lanceolatæ, loculis linearibus connectivum parum dilatatum marginantibus. Ovarium ovoideum, loculis ∞- (ad 6-) ovulatis. Capsula . . .—Radix tuberosa, fasciculata (*Schiede*). Caulis brevis, simplex, basi vaginis 1-2 laxissimis instructus. Folia ad apicem caulis ∞, conferta, calyces duplo superantia, circa flores quasi involucri formantia. Florum cyma densissime fasciculiformis, inter folia sessilis. Calyces sessiles, 1½-pollicares v. paullo longiores. Corollæ tubus 3-3½-pollicaris.

Species 1, in summis montibus Mexici et Americæ centralis rarissime lecta. Nos specimen unicum Hartwegianum vidimus. *C. B. Clarke in DC. Monogr. Phanerog.* iii. 319. *Hook. Ic. Pl.* t. 1236 (*Lampra*).

ORDO CLXXXIV. **RAPATEACEÆ.**

Endl. Gen. 131 (*JUNCACEARUM* genus). Lindl. Veg. Kingd. 187 (*XYRIDACEARUM* genus). Kørnicke, Monogr. der Rapateaceen, in Linnæa, xxxvii, 417.

*Flores* hermaphroditi, regulares. *Perianthium* inferum, duplici serie 3-merum, exterius calycinum, interius corollinum. *Calycis* tubus hyalinus, interdum brevissimus v. vix ullus; lobi paleacei, rigiduli, lanceolati, acuti, æstivatione convoluto-imbricati. *Corollæ* tubus sæpius hyalinus, cylindraceus; lobi late ovati, patentes, petaloidei, æstivatione late convoluti. *Stamina* 6, fauci affixa, corolla breviora, erecta; filamenta brevina, sæpius brevissima. *Antheræ* lineares, basifixæ, obtuse sub-4-gonæ, introrsum sulcatæ, basi saltem 4-locellatæ, locellis superne confluentibus, apice poro unico introrsum obliquo v. rima brevi (rarissime poro duplici?) dehiscentibus. *Ovarium* superum, sessile, corollæ tubo inclusum, obtusum retusum v. 3-lobum, perfecte v. interdum imperfecte 3-loculare. *Stylus* terminalis v. inter lobos ovarii affixus, crassiuscule filiformis, indivisus, stigmate terminali parvo indiviso vix v. non incrassato. *Ovula* in quoque loculo solitaria v. pauca (interdum usque ad 8), a fundo erecta, v. axi lateraliter affixa, anatropa. *Capsula* sessilis, basi sæpe pericarpio membranaceo indivisa, superne sæpe latior v. interdum a basi lata, pericarpio (excepto *Spathantho*) rigidulo, in valvas 3 medio septiferas dehiscens. *Semina* ubi nota ovoidea oblonga v. subglobosa; testa crassiuscula lævis v. minute reticulato-striata, apice interdum in appendicem breviter conicam v. mitræformem albidam celluloso-sub-spongiosam producta. *Albumen* copiosum, farinaceum. *Embryo* lenticularis, prope hilum albumini applicitum.

Herbæ perennes, sæpe paludosæ sæpiusque robustæ, rhizomate crasso brevi. Folia radicalia, vaginis sæpius distiche imbricatis conduplicatis longis angustisque v. latissimis crassisque, lamina late lineari lanceolata v. oblonga, sæpius longa, acuminata, basi petiolata v. in vaginam sessili; costa parum prominula, venis lateralibus tenuibus subparallelis, interdum venulis transversis numerosis minimis reticulato-connexis. Scapus inter folia erectus, simplex, nudus, v. basi vagina interdum laminam brevem ferente stipatus. Flores (excepto *Spathantho*) in capitulo terminali globoso v. latiusculo sessiles, v. in una specie breviter pedicellati, singuli bracteolis numerosis imbricatis persistentibus perianthii tubum occultantibus involucrium *Compositarum* simulantibus stipati. Corolla post anthesin citissime evanescit, calycis lobi conniventes convolutique e bracteolis exserti usque ad fructus maturitatem persistunt. Bracteæ capitulum involucriantes sæpissime 2, oppositæ, parum inæquales, basi latæ, acuminatæ, interdum herbacæe, persistentes, nunc membranacæe mox evanescentes, v. rarius omnino deesse videntur. In *Spathantho* capitulum spiciforme, secundum, bractea unica spathacea erecta inclusum.

Species ad 20 Brasilianæ v. Guianenses, parum intra fines Venezuela extensa.

Ordo parvus, olim sub nomine *Rapateæ* inter genera *Juncaceis* affinia inclusus, insigniter tamen differt inflorescentia, perianthio, staminibus et seminibus. Ab ordinibus præcedentibus albumine farinaceo donatis distinguitur imprimis ovulis anatropis, embryone juxta hilum lenticulari. Semina iis *Flagellariæarum* accedunt, sed habitus perianthium etc. longe distant.

## CONSPECTUS GENERUM.

\* *Flores in capitulo globoso v. compresso plures, singuli bracteolis imbricatis arcte stipati.*

1. *Cephalostemon*. Bracteolæ basi appressæ, acumine setaceo v. pungente instructæ. Ovula in loculis solitaria, a basi erecta. Antheræ ultra loculos anticos breviter productæ, ibidem rima introrsum dehiscentes, inappendiculatæ.—*Brasilia, Guiana.*

2. *Rapatea*. Bracteolæ undique appressæ, obtusæ. Ovula in loculis solitaria, a basi erecta. Antheræ ultra loculos anticos breviter productæ, appendicula cochleata instructæ, poro intra basin appendiculæ dehiscentes. Bracteæ involucriantes herbacæe.—*Bras. bor., Guiana.*

3. *Saxofridericia*. Bracteolæ *Rapateæ*. Ovula in loculis 2-∞, lateraliter rarius fere a

basi affixa. Antheræ ultra loculos anticos breviter productæ, inappendiculatæ, poro r. rima obliqua dehiscentes. Bractes involucentes membranaceæ, latæ.—*Bras. bor.*, *Guiana*.

4. *STRIGOLEPIS*. Bracteolæ *Rapatee*. Ovula in localis 2-∞ rarius solitaria, axi lateraliter affixa. Antheræ apice nec productæ nec appendiculatæ, poro obliquo dehiscentes. Bractes involucentes tenuiter membranaceæ, mox evanescentes v. 0.—*Guiana*.

5. *SCHENOCEPHALUM*. Bracteolæ *Rapatee*. Ovula in localis 2. Antheræ apice nec productæ nec appendiculatæ, poro duplici dehiscentes. Bractes involucentes deflexæ, pro maxima parte occultæ.—*Brasilis bor.*

\**Flores unilateraliter spicati, intra spatham erectam complicatam sessiles, densissime conferti.*

6. *SPATHANTHUS*. Bracteolæ lineares, subæquales, laxæ, calyce parum breviores. Ovarium alie 3-lobum, ovulis in quoque lobo 2. Capsula 1-sperma, lobis 2 ovarii immutatis ad basin capsulæ persistentibus.—*Guiana*.

1. *Cephalostemon*, *Rob. Schomb. Rapat. und Saxofrid.* 9, *character quoad stylum falso*.—Calycis tubus hyalinus; lobi rigide paleacei, e bracteolis exserti. Corollæ tubus hyalinus, lobi lati. Antheræ apice postice ultra locellos anticos productæ, ibidem rima brevi antice dehiscentes, inappendiculatæ. Ovarium latum, apice retusum, vix perfecte 3-loculare; ovula in loculis solitaria, a basi erecta. Capsula lata, ima basi brevissime indivisa, fere ad basin in valvas 3 coriaceas loculicide dehiscens. Semina 3 v. abortu pauciora, erecta, ovoidea, apice appendice albida papilloso-subspungiosa mitræformi coronata.—Herbæ perennes. Folia radicalia, graminea v. longe linearia. Scapus elatus v. brevis, basi vagina longa interdum laminam brevem ferente stipata. Flores in capitulo terminali plures, sessiles, singuli bracteolis numerosis basi ovatis imbricatis appressis superne setaceo-acuminatis v. in acumen lanceolatum pungensque attenuatis stipati. Bractes sub capitulo involucentes 2, herbaceæ, lineari-lanceolatæ, floribus paullo longiores.

Species 4, *Brasilis et Guianæ incolæ*. *Kærn. in Linnea* xxxvii. 443, quarum 2 solæ nobis notæ, bracteolis longe setaceo-acuminatis. *C. gracilis*, *Schomb. (Rapatea gracilis*, *Poepp. et Endl. Nov. Gen. et Sp.* t. 168, *analysi ex Kærn. quoad stylum erronea*), bracteolis ut in prioribus setaceo-acuminatis, et *C. squarrosa*, *Kærn. (Rapatea squarrosa*, *Kunth*), bracteolis in acumen lanceolatum pungens attenuatis, nobis ignotæ sunt, hæc ex *Kærnickio* sectionem bene distinctam format.

2. *Rapatea*, *Aubl. Pl. Gui.* i. 305, t. 118. (*Mnasion*, *Schreb. Gen. Pl.* 214).—Calycis tubus hyalinus, lobi rigide paleacei, lanceolati, acuti, convuluto-imbricati. Corollæ tubus hyalinus; lobi lati. Antheræ postice ultra loculos anticos in collum breve, apice appendice erecta cochleata instructum productæ, poro intra basin cochleæ dehiscentes. Ovarium sessile, imperfecte 3-loculare; ovula in loculis solitaria, a basi erecta. Capsula obovoidea v. clavata, basi pericarpio tenui indivisa, supra medium v. fere ad basin in valvas 3 coriaceas loculicide dehiscens. Semina oblonga, obtusa, subteretia, inappendiculata.—Herbæ e rhizomate crasso robustæ, v. humiles. Folia radicalia, elongata v. lanceolata, longe petiolata v. in vaginam complicatam subsessilia. Scapus elatus v. brevis, nudus. Flores in capitulo sessiles, v. (in *R. paludosa*) breviter pedicellati, singuli bracteolis numerosis imbricatis appressis obtusiusculis ab infimis ovatis gradatim longioribus stipati. Bractes capitulum involucentes 2, herbaceæ, a basi lata longe acuminatæ.

Species 5 (v. 6?), *Guianæ et Brasilis borealis incolæ*. *Kærn. in Linnea*, xxxvii. 461. *Seub. in Mart. Fl. Bras.* iii. i. 127, t. 17. *Desv. in Ann. Sc. Nat. ser.* 1, xiii. t. 4.

*R. Friderici-Augusti*, *Schomb. Rapat. und Saxofr.* 11, t. 1, ex ic. et descr., nobis eadem videtur ac *R. paludosa*, *Aubl.*

3. *Saxofridericia*, *Rob. Schomb. Rapatea Friderici-Augusti und Saxofridericia regalis*, 4to, *Braunschweig*, 1845, 13, t. 2.—Calycis tubus hyalinus; lobi rigide paleacei, lanceolati, acuti, convuluto-imbricati. Corollæ tubus hyalinus; lobi lati. Antheræ ultra loculos anticos breviter productæ nec distincte appendiculatæ, apice poro v. rima obliqua unica dehiscentes. Ovarium sessile, imperfecte v. perfecte 3-loculare; ovula in loculis ∞ (2-8),

axi lateraliter affixa, 1-2-seriatim superposita, v. rarius ad basin loculi conferta. Capsula obovoidea v. clavata, basi interdum pericarpio tenui indivisa, superne v. interdum usque ad basin in valvas 3 coriaceas loculicide dehiscens. Semina . . .—Herbæ robustæ, rhizomate crasso. Folia radicalia, longa, petiolata v. in vagina sessilia. Scapus elatus, sub capitulo sæpius incrassatus. Flores in capitulo sessiles, singuli bracteolis numerosis imbricatis appressis acutis ab infimis ovatis gradatim longioribus, stipati. Bracteæ capitulum involucrantes 2, a basi lata acuminatæ, membranaceæ, facileque fissæ, v. in *S. regali* subherbaceæ, iis *Rapateæ* similiores.

Species nobis adsunt 5, Guianæ v. Brasiliæ borealis incolæ, *Kærn. in Linnæa*, xxxvii. 452, in sectiones 2 distribuendæ:—

1. *Normales*. Folia longissima, coriacea, basi angustata nec petiolata, inermia. Ovula in *S. regali* et in specie altera inedita in quoque loculo 6-∞, 2-seriata, in tertia specie 2, fere a basi erecta.

2. *Acrotheca*, *Kærn.* l. c. 456. Folia petiolo longo margine utrinque aculeato fulta, lamina chartacea inter venas longitudinales venulis transversis numerosis parallelis eleganter reticulata. Bracteolæ angustæ. Ovula in loculis 2 superposita, v. 4 2-seriata. Species 2, a *Kærnickio* l. c. fusius descriptæ.

4. *Stegolepis*, *Klotzsch ex Kærn. in Linnæa*, xxxvii. 480.—Calycis tubus brevis, hyalinus; lobi rigide paleacei, e bracteolis exserti. Corollæ tubus hyalinus, lobi lati. Antheræ apice inappendiculatæ, poro unico introrsum obliquè dehiscentes. Ovarium obovoideum, obtusum, 3-loculare; ovula in quoque loculo 2-8, 1-2-seriatim superposita, axi lateraliter affixa, rarius ad unum reducta, sæpe tamen plura mox abortiva. Capsula (ubi nota) basi pericarpio tenui indivisa, superne latior in valvas 3 coriaceas loculicide dehiscens. Semina . . .—Folia radicalia, longa, angusta, nunc basi in vaginam latam crassam complicatam abrupte dilatata, nunc cum vagina angustiore continua. Scapi nudi v. basi vagina brevi stipati. Flores in capitulo globoso plures v. numerosi, sessiles, singuli bracteolis numerosis imbricatis appressis ab infimis ovatis gradatim longioribus stipati. Bracteæ capitulum involucrantes 2, tenuissime membranaceæ, mox evanescentes v. sub floribus occultæ v. interdum ut videtur omnino desunt.

Species 3 v. 4, Guianenses. In specie typica, *S. guianensi*, Kl., flores cum bracteolis majusculi, ovula ex *Kærn.* in loculis ad 4, in floribus pluribus a nobis examinatis a vermibus destructa fuerunt. Bracteæ sub capitulo florente sæpissime nullæ apparent, in uno specimine tamen reliquias nonnullas parvas vidimus. In *S. æmulante* (genus *MONOTREMA*, *Kærn. in Linnæa*, xxxvii. 475), flores cum bracteolis multo minores, in capitulo numerosi, ovula in loculis solitaria (lateraliter nec basi affixa) v. interdum 2, et bracteæ tenuiter membranaceæ sub capitulo florente sæpius nec semper persistentes. In specie tertia inedita, quoad capitula inter *S. guianensem* et *S. æmulantem* media, ovula in loculis 2 superposita, et bracteæ sub capitulo deesse videntur. *Monotrema flavum*, *Kærn.*, e Venezuela, nobis ignotum est.

5. *Schœnocephalum*, *Seub. in Mart. Fl. Bras.* iii. i. 130, t. 18, 19.—Calycis tubus 0, sepala libera, paleacea, e bracteolis exserta. Corollæ tubus brevis, lobi lati. Antheræ apice inappendiculatæ, poro duplici dehiscentes. Ovarium obconicum, 3-loculare; ovula in quoque loculo 2, superposita (*Kærn.*), collateralia (*Seub.*). Capsula ovoidea, in valvas 3 loculicide dehiscens. Semina in quoque loculo 2, exappendiculata v. appendice obliqua pugioniformi instructa.—Folia radicalia, disticha, linearia v. lanceolata, vaginis conduplicatis. Scapi nudi? v. basi vagina stipati. Flores in capitulo globoso sessiles, bracteolis numerosis imbricatis appressis obtusis ab infimis ovatis gradatim longioribus. Bracteæ capitulum involucrantes 2, deflexæ, sub floribus pro maxima parte occultæ. (*Char. ex Seubertio et Kærnickio.*)

Species 2, Brasiliæ borealis incolæ, a nobis non visæ, et quoad characteres nonnullos in specimini-bus perfectis ulterius probundæ. *Kærn. in Linnæa*, xxxvii. 483. Genus evidenter *Stegolepidi* valde affine.

6. *Spathanthus*, *Desv. in Ann. Sc. Nat. ser. 1*, xiii. 45, t. 4.—Calycis tubus brevissimus v. 0; sepala late lanceolata, paleacea bracteolas non v. vix superantia. Corollæ

tubus cylindraceus; lobi ovati, patentes. Antheræ apice inappendiculatæ, superne sæpius incurvæ, poro unico obliquo dehiscentes. Ovarium alte 3-lobum, 3-loculare; stylus inter lobos affixus; ovula in quoque loculo 2, erecta v. ascendentia. Fructus abortu 1-locularis, 1-spermus, pericarpio membranaceo vix demum dehiscente, ovarii lobis cæteris abortientibus immutatis ad basin lobi fertilis persistentibus. Semen oblongum, obtusum, inappendiculatum, teres, testa crassiuscula tenuissime striato-rugosula; albumen et embryo normalia.—Folia radicalia, disticha, longa, coriacea, in petiolum contracta, basi in vaginam longam angustam complicatam dilatata. Scapi axillares, nudi, apice cum spatha erecta complicata acuminata continui. Flores intra spatham sessiles, densissime conferti, in spicam unilateralem dispositi, margines spathæ non v. vix superantes. Bracteolæ numerosæ, lineares, laxæ, subæquilongæ et vix sepalis breviores.

Species 1, Guianensis. *Karn. in Linnæa*, xxxvii. 488. *Seub. in Mart. Fl. Bras.* iii. i. t. 18, f. 2. *Rudge, Pl. Gui. t. 11 (Mnasionum)*.

*Mnasion sphærocephalum*, Rudge, l. c. t. 12, ex ordine excludendum, est *Thurnia*, Hook. f., infra ad calcem *Juncacearum* descripta.

## ORDO CLXXXV. FLAGELLARIÆ.

Endl. Gen. 131 (JUNCACEARUM genus).

Flores hermaphroditi v. dioici, regulares. *Perianthium* inferum, ab ovario liberum, persistens, tubo 0; segmenta 6, distincta, parva, sub-2-seriatim imbricata, parum inæqualia, sicca v. subpetaloidea. *Stamina* 6, hypogyna v. basi segmentis breviter adhærentia; filamenta libera, filiformia. *Antheræ* ovatæ v. oblongæ, basifixæ, erectæ, loculis 2 parallelis introrsum rima longitudinali dehiscentibus. *Ovarium* superum, 3-loculare. *Stylus* brevis ramis 3 stigmatosis v. stigmata 3 distincta, linearia v. depressa. *Ovula* in loculis solitaria, anatropa, axi lateraliter affixa. *Fructus* succulentus v. drupaceus, parvus, indehiscens, loculis v. pyrenis 3 v. abortu 2 v. 1. *Semina* ovoidea globosa v. hemisphærica, lateraliter affixa, testa membranacea v. crassiuscula. *Albumen* copiosum, farinaceum. *Embryo* lenticularis, prope hilum albumini appressus.

Caules elati, validi v. scandentes, foliati. Folia sæpe longa, tenuiter multivenia, v. prominenter plicato-venosa. Panicula terminalis, sæpius ampla, ramosissima, supra folia subsessilis, floribus numerosis parvis secus ramulos sessilibus sæpe fasciculatis. Bractææ ad basin ramulorum paniculæ interdum lanceolatæ, sub floribus minutæ v. 0.

Species 6 v. forte 7 v. 8, regionum calidiorum orbis veteris incolæ.

Ordo parvus, interdum *Juncaceis* relatus, v. cum *Astelia* genere *Liliacearum* comparatus, sed seminum structura ei *Rapateacearum* subsimilis, cum neutro ordine jungere sinit.

### CONSPECTUS GENERUM.

1. **FLAGELLARIA.** Flores hermaphroditi. *Perianthium* (parvum) subpetaloideum. Drupa 1-sperma rarius 2-sperma, endocarpio osseo. Caulis scandens. Folia tonuiter multivenia, acumine in cirrum spiralem desinente.—*Reg. trop. Asia, Africa, Australiæ, et in ins. maris Pacifici.*

2. **JOINVILLEA.** Flores hermaphroditi. *Perianthii* segmenta sicca, acuta. Drupa sæpius 3-pyrena. Caulis erectus. Folia plicato-venosa, acumine recto.—*Archip. Malay., ins. maris Pacifici.*

3. **SUSUM.** Flores dioici. *Perianthii* segmenta sicca, obtusa. Bacca 1-3-sperma. Caulis erectus. Folia tenuiter multivenia, sæpius transverse venulosa, acumine recto.—*Zeylania, Archip. et Penins. Malay.*

1. **Flagellaria**, *Linn. Gen. n.* 450.—Flores hermaphroditi. *Perianthii* segmenta ovata, obtusiuscula, subpetaloidea. Stylus alte v. fere ad basin divisus in ramos stigmatosos 3 subintegros v. 2-partitos. Drupa parva, subglobosa v. ovoidea, exocarpio

tenui succulento, endocarpio osseo 1-spermo, rarius didymo 2-loculari 2-spermo. Semen globosum v. ovoideum, testa membranacea appressa.—Caulis alte scandens, uti tota planta glaber, vaginis foliorum obtectus. Folia elongata, contigue tenuiterque multinervia, basi supra vaginam rotundata, apice in cirrum spiralter tortum desinentia. Flores parvi, secus ramos paniculæ terminalis dense fasciculati v. breviter spicati. Bractæ parvæ, squamiformes.

Species 2, altera per regiones calidiores orbis veteris late dispersa, altera foliis multo majoribus, floribus tamen multo minoribus, ins. Viti incola, a *F. plicata*, Hook. f., quæ *Joinvillea*, bene distincta. *Kunth, Enum. Pl. iii. 369. Red. Lil. t. 257. Schnitzl. Ic. i. t. 51 b.*

2. *Joinvillea*, *Gaud. Voy. Bonite, t. 39, 40, absque char.*—Flores hermaphroditi. Perianthii segmenta rigidula, acuta. Styli 3, distincti, lineares v. brevissimi, a basi stigmatosi, indivisi. Drupa parva, subglobosa, 2-3-sulca, exocarpio succulento, endocarpio osseo 2-3-pyreno, 2-3-spermo. Semina subglobosa v. ovoidea, testa membranacea appressa.—Caulis erectus, elatus, robustus, vaginis foliorum usque ad inflorescentiam obtectus. Folia longa, insigniter plicato-venosa, acumine longiusculo recto nec cirrifero, basi angustata. Flores parvi, secus ramos paniculæ amplæ sessiles, fasciculati v. solitarii. Bractæ minimæ v. 0.

Species 2 v. 3, Archipelagi Malayani v. insularum maris Pacifici usque ad Novam Caledoniam incolæ. *Hook. f. in Hook. Kew Journ. vii. 200, t. 6 (Flagellariæ sect. Chortodes). Seem. Fl. Vit. 315 (Flagellaria).*

3. *Susum*, *Blume; Schult. Syst. vii. 95 et 1493.*—Flores dioici. Perianthii segmenta sicca, ovato-orbiculata, obtusa, concava, subæqualia, valde imbricata. Fl. ♂: Stamina circa ovarii rudimentum clavato-3-gonum v. 6-gonum, basi perianthii segmentis adnata iisque longiora. Fl. ♀: Staminodia parva v. 0. Stigmata 3, in ovario sessilia, lata, adnata, in discum pulvinatum sub-3-dymum connata, v. parum prominula. Bacca vix drupacea, indehiscens, pericarpio succulento, endocarpio membranaceo 3-loculari. Semina in loculis v. abortu in fructu solitaria, orbiculata fere hemisphærica v. late ovalia, a dorso compressa, media facie interiore ad hilum concava, testa crassiuscula; embryo ordinis.—Caulis erectus, robustus. Folia radicalia 2-8-pedalia, petiolata, caulina minora fere sessilia, omnia lanceolata, acumine recto nec cirrifero, tenuiter multivenia, venulis minimis transversis reticulata. Flores parvi, secus ramulos paniculæ amplæ sessiles, subfasciculati. Bractæ minimæ v. 0.

Species ut videtur 2, inter se tamen parum distinctæ, altera Archipelagi et Peninsulæ Malayanae incola, altera Zeylanica. *Thw. Enum. Pl. Zeyl. 340.*

HANGUANA, *Blume, Enum. Pl. Jav. 15*, a *Lindley* ad *Asteliam* relata, et supra p. 781, sub hoc genere dubie memorata, est, ex specimine Javensi a *Kurzio* determinato, *Susi anthelmintici*, *Bl.*, planta feminea.

## ORDO CLXXXVI. JUNCACEÆ.

*Endl. Gen. 130. Lindl. Veg. Kingd. 191.*

*Flores* hermaphroditi v. dioici, regulares. *Perianthium* inferum, ab ovario liberum, persistens, tubo 0 v. plus minus evoluto, segmenta v. lobi 6, plus minus distincte 2-seriata, omnia v. præsertim seriei exterioris sicca, glumacea hyalina scariosa v. rigida, in quaque serie leviter imbricata v. exteriora subvalvata, seriei interioris rarius subpetaloidea etsi parva. *Stamina* sæpius 6, basi segmentorum v. lorum affixa v. hypogyna, 3 seriei interioris rarius deficientibus; filamenta libera, filiformia v. basi comp'ana. *Antheræ* ovatae oblongæ v. lineares, nunc dorsifixæ versatiles, nunc basifixæ rectæ, loculis 2 parallelis introrsum rima longitudinali v. rarius apice poro dehiscentibus. *Ovarium* superum, 1- v.

3-loculare, placentis variis. *Stylus* nunc subulatus v. filiformis, stigmate terminali parvo, v. superne in ramos 3 stigmatosos divisus, nunc a basi v. fere a basi in ramos v. stylos distinctos introrsum stigmatosos divisus. *Ovula* anatropa v. fere anatropa, nunc in loculis v. in placentis parietalibus  $\infty$ , 2-seriata, nunc in quoque loculo solitaria, v. in ovario uniloculari 3 erecta. *Fructus capsularis*, in valvas 3 loculicide v. inter placentas dehiscens, rarius valvis septicide fissis demum 6-valvis apparet. *Semina*  $\infty$  v. rarius solitaria, ovoidea globosa angulata v. rarissime compressa; testa tenuis v. crassiuscula, pallida v. nigra nec nitida, sæpe varie striata, integumento exteriori tenuissime membranaceo hyalino cum funiculo continuo, interdum nucleum involvente et ultra nucleum in appendicem caudiformem rarius fere lageniformem producto, sæpe tamen mox evanescente in semine maturo haud apparet, v. ab initio non evoluto; in *Thurnia* semina omnino abnormia. *Albumen* copiosum, carnosum, nunc durum, nunc sæpius laxum, vix tamen vere farinaceum. *Embryo* ab hilo parum distans, parvus sæpius minutus, rarius cylindraceus dimidiumque albuminis superans.

Rhizoma sæpius perenne, nunc brevissimum v. reptans, nunc in caudicem erectum lignosum simplicem v. rarius ramosum interdum elatum productum, rarius herba annua cæspitosa. Caules v. scapi e rhizomate v. caudice sæpius simplices erecti basi tantum foliati, rarius ramosi undique foliati vaginis obtecti. Folia sæpius in rhizomate ad basin caulis v. ad apicem caudicis conferta, linearia, graminea v. teretia, interdum omnia ad vaginas breves reducta, v. secus caulem plura breviter patentia. Flores sæpius parvi, fasciculati, rarius majores solitarii, fasciculis varie in capitula spicas v. paniculas irregulariter compositas dispositi, v. in *Dasyogone* et *Thurnia* flores in capitulo globoso v. oblongo densissime conferti. Bractee sub fasciculis parvæ scariosæ, inferiores rarius majores foliaceæ nec spathaceæ, sub floribus singulis parvæ scariosæ additis sæpissime bracteolis 1-3 in pedicello ipso, v. in *Dasyogone* et *Kingia* bractee sub floribus in capitulo globoso denso imbricatæ.

Species vix 200, generum 2 typicorum per orbem terrarum latissime dispersæ, generum cæterorum fere omnes australes, Australasiæ, Africæ australis, Americæ antarcticæ v. Andium Americæ australis incolæ, genere *Thurnia* solo Americæ tropicæ proprio.

Ordo polymorphus, inter *Liliaceas* et *Restiaceas* quasi medium tenens, semina priorum, perianthium potius *Restiacearum*.

#### CONSPECTUS GENERUM.

**Tribus I. Xeroteæ.** Perianthii segmenta glumacea v. scariosa, v. seriei interioris pctaloidea parva. Anthæræ dorsifixæ, versatiles.

\* Flores dioici. *Styli* v. rami stigmatosi a basi distincti v. vix ima basi connati.

1. **XEROTES.** Rhizoma brevissimum v. repens. Caules foliati, breves v. longiores, interdum ramosi. Inflorescentia varie paniculata capitata v. dense spiciformis. Ovarium 3-loculare, loculis 1-ovulatis.—*Australia*, *Nov. Caledonia*.

\*\* Flores hermaphroditi. *Stylus* filiformis, stigmate parvo.

2. **CHAMÆXEROS.** Folia radicalia. Flores in scapo brevi paniculati v. fasciculati. Ovarium 3-loculare, loculis 1-ovulatis.—*Australia austro-occid.*

3. **ACANTHOCARPUS.** Caules foliati, sæpe ramosi. Flores in fasciculo terminali parvi, Ovarium 3-loculare, loculis 1-ovulatis. Capsula muricata.—*Australia austro-occid.*

4. **XANTHORRHEA.** Folia in rhizomate brevi v. in caudice lignoso erecto sæpe elongato conferta, longe linearia. Inflorescentia in pedunculo terminali cylindracea spiciformis floribus densissime confertis. Perianthii segmenta distincta. Ovarium 3-loculare, loculis pauciovulatis.—*Australia*.

5. **DASYOGON.** Folia ad apicem caudicis lignosi conferta, longa. Flores in capitulo terminali dense conferti, bracteis imbricatis. Perianthii segmenta seriei exterioris connata, seriei interioris distincta. Ovarium 1-loculare; ovula in centro 3, erecta, quorum 2 sæpissime abortiva.—*Australia austro-occid.*

**Tribus II. Calectasiæ.** Flores majusculi v. magni, perianthii segmentis v. lobis rigidis interdum coloratis. Anthæræ erectæ, basifixæ. *Stylus* subulatus, stigmate parvo.

6. *KINGIA*. Folia ad apicem caudicis lignosi conferta, linearia. Flores in capitulo terminali dense conferti, bracteis squarrosis. Perianthii segmenta distincta. Ovarium 3-loculare, loculis 1-ovulatis.—*Australia austro-occid.*

7. *BAXTERIA*. Flores intra folia radicalia dense cæspitosa solitarii, sessiles. Perianthii segmenta distincta, longa, angusta, erecta. Ovarium 3-loculare, loculis 1-ovulatis.—*Australia austro-occid.*

8. *CALECTASIA*. Caules foliati, ramosi, foliis brevibus. Flores ad apices ramorum solitarii, sessiles. Perianthium hypocraterimorphum, lobis patentibus rigidis coloratis. Ovarium 1-loculare; ovula in centro 3, erecta.

**Tribus III. Majuncese.** Perianthii segmenta glumacea, distincta. Antheræ erectæ, basi fixæ. Stylus superne 3-fidus, v. styli (v. rami stigmatosi) 3 a basi distincti.

\* *Flores mediocres v. majusculi, in pedunculo v. scapo solitarii.*

9. *DISTICHIA*. Caules breves, dense foliati, cæspitosi v. pulvinati. Flores dioici. Ovarium 1-loculare v. fere 3-loculare, multiovulatum.—*Andes Americæ australis.*

10. *ROSTKOVA*. Caules in rhizomate conferti, juncsei, 1-foliati. Flores hermaphroditi. Ovarium 1-loculare, multiovulatum.—*Amer. antarct. et andin., Nov. Zel.*

\*\* *Flores parvi, fasciculati v. segregati, fasciculis floribusve varie paniculatis capitatisve.*

11. *JUNCUS*. Caules cæspitosi v. in rhizomate repente conferti, aphylli v. paucifoliati. Folia radicalia v. ad vaginas reducta, teretia v. linearia. Ovarium 1-loculare v. plus minus perfecte 3-loculare, placentis loculisve  $\infty$ -ovulatis. Stylus superne 3-fidus.—*Orbis utriusque reg. temp. frigid. v. calid.*

12. *LUZULA*. Caules cæspitosi. Folia radicalia v. in caule pauca, linearia, graminea. Ovarium 1-loculare; ovula in centro 3, erecta. Stylus superne 3-fidus.—*Orbis utriusque reg. temp. frigid. v. mont.*

13. *PRIONTUM*. Folia ad apicem caudicis erecti lignosi conferta. Ovarium 3-loculare, loculis 2- v. pauci-ovulatis. Styli 3, distincti. Embryo dimidium albuminis superans.—*Afr. austr.*

\*\*\* *Genus anomalum. Flores densissime globoso- v. oblongo-capitati.*

14. *THURNIA*. Folia radicalia longe linearia. Ovarium 3-loculare, loculis 1- $\infty$ -ovulatis. Styli v. stigmata linearia 3, distincta. Semina longe lineari-fusiformia, albumine tegmine brunneo induto ab apice nuclei cavi pendulo.—*Guiana.*

#### GENERA EXCLUSA.

*ASTELIA*, Banks, a Lindleyo *Juncaceis* relata, supra inter *Liliaceas* includitur.

*RAPATEA*, Aubl., et *SPATHANTHUS*, Desv., ad ordinem distinctum *Rapateaceas* pertinent.

*SUSUM*, Blume, et *FLAGELLARIA*, Linn., ad ordinem distinctum *Flagellarieas* pertinent.

*REILIA*, Steud. Syn. Pl. Glum. ii. 311, ab auctore inter *Xerotelem* et *Baxteriam* collocata, est verisimiliter *Eryngii* species, ad *Umbelliferas* pertinens, caractere pessimo, squamis hyalinis flores obtegentibus pro sepalis descriptis.

#### TRIBUS I. XEROTEÆ.

1. *Xerotes*, R. Br. Prodr. 259. (*Lomandra*, Labill. Pl. Nov. Holl. i. 92, t. 119, 120.) —Flores dioici. Fl. ♂: Perianthii segmenta nunc omnia subæqualia distincta v. ad medium connata, nunc sæpius exteriora distincta tenuia scariosa v. hyalina, interiora basi subconnata fere petaloidea. Stamina 6, 3 segmentis interioribus affixa, 3 alterna subhypogyna, v. tubo affixa, omnia perianthio breviora, filamentis breviter filiformibus; antheræ dorsifixæ, versatiles, basi v. utrinque usque ad filamenti insertionem 2-lobæ, loculis introrsum dehiscenibus. Ovarii rudimentum parvum v. 0. Fl. ♀: Perianthium sæpius quam in mare rigidius, segmentis distinctis æqualibus. Staminodia parva clavata v. 0. Ovarium sessile, 3-loculare; stylus brevissimus v. vix ullus, stigmatibus v. lobis stigmatosis 3 brevibus recurvis; ovula in loculis solitaria, lateraliter affixa. Capsula subglobosa, perianthio emarcido stipata v. involuta, coriacea, lævis nitensque v. transverse rugosa, rarius in longitudinem striata, loculicide dehiscens. Semina ovoidea oblonga v.

subglobosa, interdum obtusangula, testa pallida v. brunnea adnata; embryo in albumine duriusculo oblongus v. linearis, ab hilo parum remotus, nunc minimus, rarius tertiam partem albuminis superans.—Caules in rhizomate brevissimo v. repente cæspitiosi, simplices v. ramosi. Folia nunc ad basin caulis conferta longa linearia rigida, nunc breviora secus ramos sparsa vaginis ramum obtegentibus. Inflorescentiæ terminales v. ad basin foliorum radicalium. Flores parvuli, masculi sæpius fasciculati, fasciculis rarius floribus singulis secus rhachin simplicem v. ramos paniculæ sessilibus, floribus in fasciculo sessilibus v. pedicellatis; inflorescentia fœminea interdum masculæ similis, sæpius tamen ad capitulum unicum globosum densumque reducta; rarius flores utriusque sexus in capitula dense globosa v. in spicam longam cylindraceam dispositi.

Species ad 30, omnes Australianæ, quarum una etiam in Nova Caledonia reperta. *Benth. Fl. Austral.* vii. 94. *F. Muell. Fragm. Phytogr. Austral.* xi. 23. *Thunb. Diss. Drac. f.* 1, 2 (*Dracæna*). *Brongn. in Duperr. Voy. Bot.* t. 35. *Bot. Reg.* 1839, t. 3. *Lodd. Bot. Cab.* t. 798.

Genus in *Fl. Austral.* in sectiones 5 dividitur:—

1. *Euxerotes*. Florum ♂ fasciculi v. flores singuli secus rhachin simplicem v. ramosam racemosi v. paniculati, inflorescentia ♀ similis nisi simplicior. Perianthii segmenta distincta v. interiora in fl. ♂ breviter connata. Folia in rhizomate v. caule brevissimo dense conferta, inflorescentia terminali. Species 18.

2. *Cephalogyne*. Florum ♂ fasciculi secus rhachin simplicem sæpius plures sessiles, perianthio ad medium æqualiter 6-lobi. Florum ♀ capitula solitaria sessilia v. brevissime pedunculata, perianthio æqualiter 6-partito. Caules sæpe elongati foliatique præsertim in fœmineis, inflorescentia terminali v. in axillis superioribus. Species 7.

3. *Schænozeros*. Caules steriles juncei, aphylli, basi paucivaginati; floriferi brevissimi, aphylli, florum capitulis 2–3, in masculis fœmineisque subsimilibus. Species 2.

4. *Typhopsis*. Folia in caule brevi conferta, elongata. Florum capitula utriusque sexus in scapo aphylo pauca globosa v. breviter cylindracea, bracteis multifidis in massam lanosam confertis. Species 1.

5. *Macrostachya*. Folia in caule brevi conferta, elongata. Florum fasciculi utriusque sexus in spicam longam angustam dense cylindraceam conferti. Species 1.

Nomen generis Labillardieri jure prioritatis gaudet, sed Brownianum jam diu ab omnibus botanicis acceptum non hodie rejiciendum est.

2. *Chamæxeros*, *Benth. Fl. Austral.* vii. 110.—Flores hermaphroditi (v. polygami?). Perianthii segmenta distincta, subæqualia v. exteriora interioribus paulo latiora rigidioraque. Stamina 6, quorum 3 basi segmentis interioribus affixa, 3 subhypogyna, omnia perianthio breviora, filamentis filiformibus; antheræ ovatæ, dorsifixæ, versatiles, loculis introrsum dehiscentibus. Ovarium 3-loculare; stylus filiformis, stigmate parvo; ovula in loculis solitaria, lateraliter affixa. Capsula lævis?, matura ignota.—Caules cæspitiosi, habitus *Euxerotetis*. Folia in rhizomate conferta, longe linearia, rigida, plana v. subteretia, margine sæpius scarioso-lacerata. Scapi florentes breves, aphylli. Flores parvuli, secus ramos paniculæ pyramidatae fasciculati, v. in capitulum ovoideo-globosum conferti. Bracteæ latiusculæ, scariosæ.

Species 2, Australiæ austro-occidentalis incolæ. Genus tam *Xeroteti* quam *Acanthocarpo* valde affine. *F. Mueller, Fragm. Phytogr. Austral.* xi. 24 cum *Acanthocarpo* jungit, sed habitus longe differt et fructus junior minime echinatus apparet.

3. *Acanthocarpus*, *Lehm. Pl. Preiss.* ii. 274.—Flores hermaphroditi. Perianthii segmenta distincta, æqualia, tenuia, fere hyalina, centro opaca. Stamina 6, quorum 3 basi segmentis interioribus affixa, 3 subhypogyna, omnia perianthio breviora; antheræ ovatæ, dorsifixæ, versatiles, basi 2-lobæ, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare, in stylum brevem desinens, stigmate parvo; ovula in loculis solitaria, lateraliter affixa. Capsula globosa, muricata, loculicide dehiscens. Semina fere globosa, obtusangula, lateraliter affixa, testa tenui appressa; embryo in albumine duro breviter linearis, leviter curvus, obliquus.—Caules e rhizomate breviter horizontali lignoso rigidi, ramosissimi, undique foliati. Folia breviter linearia, rigidula, patentia, vaginis ramos

obtegentibus. Flores parvuli, ad apices ramulorum capitati v. fasciculati, fasciculis sessilibus demum ramulo excurrente lateralibus. Bractee scariosae, floribus breviores.

Species 1, Australiæ austro-occidentalis incolæ. *Benth. Fl. Austral.* vii. 111.

4. *Xanthorrhoea*, Sm. in *Trans. Linn. Soc.* iv. 219.—Perianthii segmenta distincta, exteriora glumacea, concava v. apice fere cucullata, 3-5-nervia, margine subscariosa, interiora tenuiora sæpius 5-nervia, basi erecta, ultra exteriora protrusa, laminis patentibus hyalinis v. petaloideis. Stamina 6, hypogyna, v. seriei interioris basi segmentis brevissime adnata, omnia perianthio longiora, filamentis basi leviter incrassatis v. complanatis; antheræ oblongæ v. rarius ovatae, integræ, medio dorso affixæ, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare, in stylum subulatum desinens, stigmatibus parvo capitato v. 3-sulco; ovula in loculis pauca. Capsula ovoidea v. acuminata, perianthio persistente stipata, coriacea, nitida, loculicide dehiscens. Semina in loculis 1-2, erecta, ovata v. oblonga, complanata, anguste marginata, testa nigra subcrustacea opaca; embryo in albumine carnosio fere cartilagineo transversus, linearis, rectus v. curvulus.—Rhizoma nunc brevissimum, sæpius tamen in caudicem lignosum erectum interdum arborescentem productum. Folia in rhizomate v. ad apicem caudicis conferta, longe linearia, rigida, fragilia, basi dilatatis imbricatis diu persistentibus. Pedunculus terminalis, elongatus. Flores parvuli, numerosi, in spica terminali longa cylindracea densa conferti, singuli intra bracteam parvam bracteolis pluribus stipati. Caudex sæpe gummi fusco v. flavo copiose scatens.

Species 11, Australianæ. *Benth. Fl. Austral.* vii. 112. *Bot. Mag. t.* 4722 (*ic. in Fl. des Serres*, t. 868 *iterata*), 6075, 6297.

5. *Dasypogon*, R. Br. in *Flind. Voy.* ii. 608, t. 8.—Perianthii segmenta sicca v. glumacea, exteriora basi in tubum connata, superne ovata, interiora a basi distincta, angusta, exteriora non superantia. Stamina 6, hypogyna v. vix basi segmentis adhærentia iisque longiora, filamentis crassiuscule filiformibus; antheræ oblongæ, integræ, medio dorso affixæ, loculis introrsum dehiscentibus. Ovarium sessile, 1-loculare v. imperfecte 3-loculare; stylus filiformis, stigmatibus parvo; ovula in centro ovarii 3, erecta, quorum 2 sæpe jam sub anthesi parva abortiva. Fructus globosus, indehiscens, tubo perianthii exterioris incrassato induratoque inclusus, et fere adnatus. Semen globosum, erectum, testa membranacea; embryo in albumine carnosio juxta hilum erectus, linearis.—Caudex lignosus, erectus, brevis v. 1-2-pedalis, simplex v. ramosus. Folia ad apicem caudicis conferta, longa, angusta, patentia, rigidula, scabro-denticulata, vaginis latis imbricatis in caudice diu persistentibus. Pedunculus terminalis, rigide setosus. Flores in capitulo globoso terminali dense conferti, intra bracteas sessiles. Bractee imbricatæ, basi latæ, exteriores sæpe longiuscule acuminatæ; bracteolæ 0.

Species 2, Australiæ austro-occidentalis incolæ. *Benth. Fl. Austral.* vii. 117.

## TRIBUS II. CALECTASIEÆ.

6. *Xingia*, R. Br. in *King, Voy.* ii. 535, t. C.—Perianthii segmenta distincta, æqualia, erecta, glumacea, sericea, extus pilosa. Stamina 6, hypogyna v. seriei interioris brevissime segmentis adhærentia, perianthio longiora, filamentis filiformibus; antheræ basifixæ, erectæ, lineares, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare; stylus filiformis, stigmatibus parvo 3-dentato; ovula in loculis solitaria, erecta. Fructus bracteis perianthioque persistentibus involutus, 3-queter, indehiscens. Semina erecta, sæpe abortu solitaria, testa membranacea; embryo 'subglobosus in ipsa basi seminis situs semiimmersus, nec albumine omnino inclusus' (R. Br.).—Caudex lignosus, erectus. Folia ad apicem caudicis conferta, linearia, rigida, elongata. Pedunculi v. scapi inter folia plures, bracteis vaginantibus brevibus latis laxè imbricatis obtecti. Flores in capitulo globoso terminali sessiles, bracteis perianthiorumque segmentis apice squarrosis.

Species 1, Australiæ austro-occidentalis incola. *Benth. Fl. Austral.* vii. 119.

Semina matura non vidimus, ex descriptione Brownii ab omnibus *Juncaceis* differunt embryonis sita. Embryo in icona citata non delineatur.

7. *Baxteria*, R. Br.; *Hook. Lond. Journ.* ii. 492, t. 13 ad 15.—Perianthii segmenta distincta, subæqualia, longa, angusta, erecta, rigida. Stamina 6, basi segmentorum affixa iisque breviora, filamentis rigidis leviter complanatis; antheræ longe lineares, erectæ, basifixæ, basi brevissime 2-lobæ, loculis introrsum dehiscentibus. Ovarium sessile, 3-loculare; stylus subulatus, rigidus, stigmate parvo; ovula in loculis solitaria, erecta. Capsula obovoidea, vertice plana, a basi sursum in valvas 6 dehiscens, septis in axi persistentibus, valvisque ipsis ad apicem axis diu adhærentibus horizontaliter patentibus. Semina (a nobis non visa) globosa.—Folia in rhizomate brevi lignoso dense cæspitosa, longe linearia, basi in vaginas latas dilatata. Flores inter folia sessiles, singuli foliis 1-2 bracteisque vaginantibus pluribus stipati, perianthio longo rigido (ultra 2-pollicari) insignes.

Species 1, Australiæ austro-occidentalis incola. *Benth. Fl. Austral.* vii. 120.

8. *Calcectasia*, R. Br. in *Flind. Voy.* ii. 609, t. 9.—Perianthium hypocaterimorphum, tubo cylindraceo v. superne leviter ampliato; lobi subæquales, patentes, lanceolati, rigidi, colorati. Stamina 6, ad basin loborum affixa iisque breviora, filamentis breviter filiformibus; antheræ lineares, erectæ, basifixæ, basi breviter 2-lobæ, loculis apice poro rarius in rimam brevem continuo dehiscentibus. Ovarium brevissime stipitatum, angustum, 1-loculare; stylus filiformis, stigmate parvo terminali; ovula 3, a basi loculi erecta. Fructus siccus, oblongus, subfusiformis, indehiscens, 1-spermus, perianthii tubo inclusus, pericarpio membranaceo  $\infty$ -costato apice lævi. Semen oblongum, testa membranacea; embryo juxta basin albuminis carnosius parvus.—Caules in rhizomate sæpius plures fasciculati, tenuiter lignosi, ramosissimi, undique foliati. Folia linearia, breviter, patentia, vaginis ramos obtegentibus. Flores ad apices ramulorum solitarii, sessiles, bracteis breviter foliaceis cincti.

Species 1, Australiæ australis et occidentalis incola, quoad foliorum florumque magnitudinem variabilis et a nonnullis in species 2 v. 3 divisa. *Benth. Fl. Austral.* vii. 120. *Endl. Iconogr.* t. 38. *Bot. Mag.* t. 3834.

### TRIBUS III. EUJUNCÆ.

9. *Distichia*, Nees et Meyen in *Pl. Meyen.* 128. (*Goudotia*, Dcne. in *Ann. Sc. Nat.* ser. 3, iv. 84, t. 4. *Agapatea*, Steud. *Pl. Lechl. Exs. et in Bot. Zeit.* 1856, 391, nomen tantum. *Oxychloe*, Philippi, *Fl. Atacam.* 52, t. 6.)—Flores dioici. Fl. ♂: Perianthii segmenta linearia, erecta, rigidula, subæqualia. Stamina 6, hypogyna, perianthio breviora, filamentis brevissimis; antheræ lineares, erectæ, basifixæ, apiculatæ v. nudæ, loculis introrsum dehiscentibus. Ovarii rudimentum parvum, stylo filiformi 3-fido. Fl. ♀: Perianthii segmenta ovata oblonga v. late linearia, scariosa v. hyalina, ovarium circumdantia. Staminodia (an semper?) 0. Ovarium sessile v. brevissime stipitatum, 1-loculare v. imperfecte 3-loculare, placentis 3 parietalibus parum v. valde prominentibus interdum basi in medio loculo connatis; stylus subulatus, parte indivisa sæpius brevi, ramis stigmatosis linearibus longiusculis interdum crassis; ovula in loculis  $\infty$ . Capsula oblonga, obtusa v. acutiuscula, coriacea, nitida, apice demum (an semper?) breviter dehiscens. Semina ovoidea v. obovoidea, integumento exteriori albo molli mox evanido, testa dura castanea; embryo in basi albuminis carnosius v. duriusculi parvus nunc minimus.—Caules breves, dense cæspitosi, pulvinati, foliis distichis v. undique imbricatis obtecti. Flores in axillis summis (v. ad apices ramorum?) solitarii, masculi pedicellati folia superantes, foeminei subsessiles v. brevissime pedicellati. Bracteæ breves, squamiformes, sub flore ♀ 1-3, sub flore ♂ deesse videntur.

Species ad 6, in uliginosis montium altiorum Andium Americæ australis vigentes, usque ad limites

nivium æternarum extensæ. Buchenau in *Abhandl. Naturw. Vereins Bremen*, iv. 124 (*Agapatea*); vi. 368 (*Oxychloe*), et 369 (*Distichia*), t. 3.

Genus habitu et floribus solitariis dioicis facillime distinctum, in sectiones 2 sequentes dividitur:—

1. *Goudotia*, foliis stricte distichis, vaginis complicatis acuminatis v. in laminas breves erectas attenuatis. Huc pertinent *D. tolimensis* (*Goudotia tolimensis*, Dcne.), *D. muscoides*, Nees et Meyen, et *D. filamentosa*, Buchen.

2. *Oxychloe*, foliorum vaginis latis concavis undique imbricatis, laminis linearibus. Huc *D. andina* (*Oxychloe andina*, Philippi), *D. clandestina*, Buchen., et species tertia adhuc inedita in Bolivia prope La Paz a Pentlandio lecta, cui pertinere videntur specimina e Cordillera Maule a Germaino recepta sub nomine falso *D. brevifolia*, Phil.

Characteres a Buchenavio indicati, e substantia perianthii ♀ et e numero bractearum, valde incerti videntur.

10. *Rostkovia*, Desv. *Journ. Bot.* i. (1808) 324, t. 12.—Perianthii segmenta distincta, linearia v. lineari-lanceolata, erecta, rigida, margine sæpe scariosa, parum v. conspicue inæqualia. Stamina 6, hypogyna, perianthio breviora, filamentis brevissimis, antheræ lineares, erectæ, basifixæ, apice breviter appendiculatæ v. nudæ, loculis introrsum dehiscentibus. Ovarium sessile, 1-loculare, placentis 3 parietalibus; stylus subulatus, superne in ramos stigmatosos 3 lineares divisus; ovula in placentis numerosa. Capsula subglobosa ovoidea v. oblonga, coriacea, nitida, superne in valvas 3 medio placentiferas divisa. Semina numerosa, parva, testa nunc crassa laxa inappendiculata, nunc apice basique in appendiculum linearem hyalinam producta; embryo parvus nunc minimus, prope basin albuminis laxè carnosus.—Caules in rhizomate breviter ramoso cæspitosi, v. secus rhizoma horizontale conferti, juncei, 1-foliati, additis sæpe vaginis nonnullis infra folium. Folia linearia v. teretia. Pedunculus terminalis, flore unico quam in cæteris *Eujuncis* majore, bracteis 1-3 squamiformibus v. una alterave foliaceo-acuminata stipato.

Species 3, Americæ antarcticæ et Andinæ et Novæ Zelandiæ incolæ. *Hook. f. Fl. Antarct.* i. 81, t. 47.

In specie typica, *R. magellanica*, capsula globosa v. breviter ovoidea, semina inappendiculata, testa crassa nitida nec tamen crustacea. MARSIPPOSPERMUM, Desv. *Journ. Bot.* i. (1808) 328, t. 12; *Hook. Ic. Pl.* t. 533, species 2 includit, capsula nunc ovoidea quam in *R. magellanica* parum longiore, nunc oblonga duplo saltem majore, et seminibus testa tenuiore apice basique appendiculata, et Buchenau in *Abhandl. Naturwiss. Vereins Bremen* vi. 373, duo genera iterum distinxit, seminum tamen eadem diversitas observatur in *Junco*, et genus in integrum servatum naturalissimum est. Differentiæ habitus a Buchenavio indicatæ minores sunt quam in *Junco*, e.g. inter *J. bufonium* et *J. acutum*.

11. *Junco*, Linn. *Gen.* n. 437, pro parte.—Perianthii segmenta distincta, glumacea, lanceolata v. oblonga, margine interdum scariosa, subæqualia v. interiora paullo latiora. Stamina 6, v. 1-3 interiorum deficientibus pauciora, hypogyna v. interiora basi segmentis affixa, perianthio breviora, filamentis filiformibus v. basi dilatatis; antheræ oblongæ v. lineares, erectæ, basifixæ, basi integræ v. breviter 2-lobæ, loculis introrsum dehiscentibus. Ovarium sessile, nunc 1-loculare placentis 3 parietalibus parum v. valde prominentibus, nunc placentis in centro contiguis v. connatis imperfecte v. perfecte 3-loculare; stylus filiformis, superne (sæpius ad medium) in ramos stigmatosos 3 filiformes sæpe spiraliter tortos divisus; ovula in quaque placenta ∞. Capsula in valvas medio placentiferas dehiscens, v. rarius placentæ a valvis solutæ erectæ, lineares, v. in columnam centram coherentes. Semina parva, ovoidea, testa minute striata reticulata v. transverse lineolata, integumento exteriori laxo membranaceo-hyalino cum funiculo continuo nunc parvo mox evanido v. obsolete, nunc semen includente et in appendicem terminalem linearem producta (seminibus tunc 2-caudatis dictis); embryo parvus, sæpius minutus, juxta basin albuminis carnosus.—Herbæ perennes v. rarius annuæ, caulibus cæspitosis v. in rhizomate repente confertis, infra inflorescentiam simplicibus. Folia radicalia v. prope basin caulibus pauca, linearia v. sæpius teretia, nunc omnia ad vaginas breves reducta. Flores parvi, in

fasciculis seu cymulis parvis 2-fidis sæpius conferti; cymulis fasciculis v. floribus singulis nunc in capitulo denso sessilibus, nunc in panicula simplici v. composita inæqualiter pedunculatis, inflorescentia tota ad apicem caulis v. scapi bracteis 1-3 foliaceis stipata; interdum vero bractea erecta teres caulem continuat et inflorescentia lateralis apparet. In speciebus nonnullis folia cum bracteis intus septis transversis instructa quasi articulata apparent.

Species enumerat Steudel 196, verisimiliter ad dimidium reducendas, per orbem terrarum latissime dispersas; in uliginosis locisque humidis regionum temperatarum frigidarumque necnon in arenosis maritimis copiose crescunt, sed etiam inter tropicos inveniuntur. *Kunth, Enum. Pl.* iii. 315. *Steud. Syn. Pl. Glum.* ii. 295. *Engelm. in Trans. Acad. Sc. St. Louis*, ii. 424. *Buchenau in Abhandl. Naturwiss. Ver. Bremen*, iv. 416, t. 5 ad 11; vi. 363, 376, t. 3, 4; *Krit. Verz. Juncaceen, Bremen*, 1880. 1. *Sm. Ic. Ined.* t. 55; *Spicil.* t. 3. *Cav. Ic.* t. 296. *Host, Gram. Austr.* iii. t. 80 ad 85, 88 ad 93; iv. t. 97. *Reichb. Ic. Fl. Germ.* t. 391 ad 416. *Nees, Gen. Fl. Germ. Monocot.* ii. n. 29. *Jacq. Fl. Austr.* t. 221. *Trim. Journ. Bot.* 1873, t. 128. *Seub. Fl. Azor.* t. 4. f. 1. *Desf. Fl. Atl.* t. 91, 92. *Dur. Expl. Alg.* t. 43. *Ten. Fl. Nap.* t. 227. *Bory et Chaub. Exped. Morée*, t. 11. *Dene. in Jacquem. Voy. Bot.* t. 172. *Klotzsch in Pr. Waldem. Reise, Bot.* t. 97, 98. *Hook. Ic. Pl.* t. 714. *Hook. f. Fl. Antarct.* t. 46; *Fl. Tasm.* t. 134.

Species plures fere cosmopolitanæ quam maxime variabiles sunt, et difficillime characteribus certis distinguendæ v. ordinandæ. Seminum variationes, ab Engelmanno l. c. optime illustratæ, cum aliis characteribus minime conveniunt, et sectiones nullæ definitæ adhuc propositæ sunt. Engelmann tamen series 3 imprimis ad habitum bene distinguit:—

1. *Junci geminisi*, caule aphylo basi vaginis aphyllis v. rarius folium ipso cauli simile gerentibus.

2. *Junci graminifolii*, caule nudo v. foliato, foliis planis v. semiteretibus canaliculatisque v. rarius subteretibus.

3. *Junci articulati*, caule foliato, foliis teretibus v. compressiusculis, intus septis transversis instructis specie articulatis.

Buchenau divisionem primariam petit a præsentia v. absentia *prophyllarum*, i. e. bractearum sub floribus hyalino-scariosarum, character tamen nobis valde incertus videtur. Bracteas in perplurimis speciebus 2 vidimus sub quoque flore, nunc immediate sub flore, nunc in medio pedicello quarum infera vacua, superior sæpe rudimentum floris fovet et haud raro adest tertia, uti bene observavit Engelmann, l. c. 426.

TENAGIA, *Reichb. Ic. Fl. Germ.* ix. 22, t. 416, pro genere frustra proponitur absque characterē.

CEPHALOXYS, *Desv. Journ. Bot.* i. 1808, 324, t. 11, est *J. repens*, Mich., capsulæ valvis demum interdum septicide fissis.

12. *Luzula*, DC. *Fl. Fr.* iii. 158. (Juncoides, *Adans. Fam.* ii. 47. *Leucophoba*, *Ehrh. Phytophyl.* n. 73; *Beitr.* iv. 148. *Luciola*, *Sm. Engl. Fl.* ii. 177.)—Perianthii segmenta distincta, glumacea, acuta, margine sæpe scariosa, subæqualia. Stamina 6, hypogyna v. interiora basi segmentis affixa, perianthio breviora, filamentis filiformibus; antheræ oblongæ v. lineares, erectæ, basifixæ, basi emarginatæ, loculis introrsum dehiscentibus. Ovarium sessile, 1-loculare; stylus filiformis, superne (sæpius ad medium) in ramos stigmatosos 3 filiformes divisus; ovula in fundo loculi 3, erecta, placentæ centrali brevissimæ v. vix prominulæ affixa. Capsula nitidula, in valvas 3 intus medio costatas nec nisi ima basi cum placentis connexas dehiscens. Semina 3, valvis alterna v. abortu pauciora, erecta, globosa v. ovoidea, testa minute reticulato-striata, integumento exteriorē tenuissime hyalino-membranaceo, maturitate nucleo arcte appresso v. omnino evanescente, interdum ultra nucleum in appendicem fere lageniformem producta; embryo juxta basin albuminis laxè carnosus v. subfarinaceus minutus.—Herbæ perennes, sæpius cæspitosæ. Folia graminea, radicalia v. in caule pauca, sæpe pilis tenuibus mollibus ciliata. Flores parvi, in fasciculis parvis conferti v. segregati, fasciculis v. floribus singulis in umbellam seu paniculam inæqualiter irregulariterque compositam interdum ad capitulum subglobosum v. spiciforme contractam dispositis, singuli ad axillam bracteæ scariosæ sessiles v. brevissime pedicellati, bracteolisque 1-2 brevibus latis scariosis stipati.

Species ad 26 (apud Steudeliū 56) per regiones temperatas frigidæque imprimis hemisphæri borealis late dispersæ, etiam in montibus inter tropicos obviæ, in hemisphærio australi paucæ.

*Kunth, Enum. Pl.* iii. 296. *Steud. Syn. Pl. Glum.* ii. 290. *Bicheno in Trans. Linn. Soc.* xii. 329, t. 9. *E. Mey. in Linnæa*, xxii. 383. *Buchenau in Abhandl. Naturw. Ver. Bremen*, vi. 413. *Host, Gram. Austr.* iii. t. 86, 87, 94 ad 100; iv. t. 98 ad 100 (*Juncus*). *Reichb. Ic. Fl. Germ.* t. 375 ad 390. *Nees, Gen. Fl. Germ. Monocot.* ii. n. 28. *Trim. Journ. Bot.* 1872, t. 122. *Webb, Phytogr. Canar.* t. 235 ad 237. *Seub. Fl. Azor.* t. 4, f. 2. *Hook. f. Fl. Antarct.* t. 48. *H. B. et K. Nov. Gen. et. Sp.* vii. t. 697.

13. *Prionium*, *E. Mey. in Linnæa*, vii. 130.—Perianthii segmenta subæqualia, rigidula, glumacea, lanceolata, margine tenuia, subscariosa. Stamina 6, hypogyna, perianthio subæquilonga, filamentis filiformibus; antheræ oblongo-lineares, erectæ, basifixæ, loculis a latere dehiscentibus. Ovarium sessile, 3-loculare; styli rami stigmatosi v. stigmata a basi distincti, lineares, recurvi; ovula in loculis pauca ( sæpius 2 ), a basi ascendentia. Capsula ovoidea, loculicide dehiscens. Semina in loculis sæpius abortu solitaria, ovoideo-oblonga, inappendiculata, testa appressa; embryo cylindraceus, albumine carnosio parum v. subdimidio brevior.—Caudex e rhizomate repente erectus, lignosus, pluripedalis, simplex v. 2-fidus, basibus foliorum vetustorum plus minus obtectus. Folia ad apicem caudicis conferta, longa, linearia, basi in vaginas imbricatas dilatata. Panicula inter folia pedunculata, ampla, composita, floribunda. Bractææ sub ramis primariis longe vaginatæ, rigidæ, lamina breviter foliacea erecta, sub ramis secundariis parvæ, sub florum fasciculis breviter squamiformes, scariosæ. Flores parvi, fere *Junci*, fasciculati, sessiles v. brevissime pedicellati, fasciculis in ramis ultimis paniculæ terminalibus lateralibusque.

Species 1, Africæ australis incolæ. *Hook. Kew Journ.* ix. 173, t. 4. *Bot. Mag. t.* 5722.

Albumen ab *E. Meyero* farinaceum dictum fuit, nos in seminibus pluribus examinatis semper carnosum invenimus.

14. *Thurnia*, *Hook. f. in Hook. Ic. Pl.* t. 1407, 1408.—Perianthii segmenta 6, distincta, sub ovario sine ordine inserta, membranacea, lineari-oblancoolata, acuta v. obtusa, inæquilonga, 1-nervia, persistentia. Stamina 6, sub ovario inserta, perianthio multo longiora, filamentis filiformibus compressis flexuosis; antheræ lineares, obtusæ, basifixæ, erectæ, loculis a latere dehiscentibus. Ovarium anguste fusiforme, 3-loculare, membranaceum, vertice coriaceo in stigmata 3 filiformia obtusa introrsum papillosa attenuato; ovula basin versus loculorum solitaria v. plura, angulo interiori funiculis brevibus v. elongatis affixa, ascendentia, anatropa. Capsula elongato-oblancoolata, 3-gona, stigmatibus coronata, 3-locularis, loculicide 3-valvis, 3-sperma, septis valvisque infra apices coriaceos tenuissime membranaceis. Semina elongata, anguste fusiformia, obtuse 3-gona, testa crasse cartilagineo-fibrosa, superne in spinam gracilem pungentem retrorsum hispidulam oblique attenuata, inferne longe rigideque producta, nucleo cavo, albumine farinaceo, integumento coriaceo brunneo induto ab apice cavitatis pendulo elongato-ellipsoideo cæterum omnino libero; embryo axilis, fusiformis, extremitate inferiore albuminis immersus radícula infera.—Herbæ robustæ, glaberrimæ, scapigeræ, cyperoidæ. Folia elongata, coriacea, a basi vaginante enervi gradatim angustata 1-nervia, marginibus lævibus v. spinuloso-serratis. Scapus erectus, robustus, obtuse 3-gonus. Flores in capitula solitaria globosa v. oblonga, longe foliaceo-bracteata, densissime conferta, in receptaculo spongioso sessilia v. crassiuscule stipitata, stipite cum basi perianthii continuo; capitula florentia antheris velata, fructifera apicibus coriaceis capsularum horrida. Bractææ sub floribus singulis perianthii segmentis similes nisi minores.

Species 2, Guianæ britannicæ incolæ, altera *T. sphærocephala*, *Hook. f. (Mnasion sphærocephalum*, *Rudge, Pl. Gui.* t. 12), marginibus foliorum spinuloso-serratis, campos savannah dictos incolita; altera *T. Jemmani*, *Hook. f.*, locis fluvio inundatis viget.

Genus singulare, foliis *Cyper*i, inflorescentia *Dasygogon*is, perianthio staminibusque *Spargani*i, seminibusque ab omnibus nobis longe diversis. Testæ fabrica et forma pericarpium potius quam testam simulat, et achenium rigidum armatum *Compositarum* quodammodo revocat.

ORDO CLXXXVII. **PALMÆ.**

Endl. Gen. 244. Lindl. Veg. Kingd. 134. Mart. Hist. Nat. Palm. 1823-1850. NIPACÆ et PHYTELAPHUSIÆ, Brongn.

*Flores* parvi v. minuti raro majusculi, regulares, hermaphroditi monoici v. dioici, interdum polygami. *Perianthium* duplex, in serie trimerum, coriaceum carnosulum v. membranaceum, rarius glumaceum, in fl. ♀ sæpissime post anthesin auctum. *Sepala* 3, distincta v. connata, in fl. ♂ sæpissime parva, æstivatione aperta v. imbricata, in fl. ♀ sæpius rotundata v. reniformia, late imbricata. *Petala* 3, distincta v. connata, æstivatione in fl. ♂ valvata, rarius imbricata; in fl. ♀ convolutivo-imbricata, rarius apice v. in toto valvata, interdum in urceolum 3-lobum v. truncatum confluentia. *Stamina* in fl. ♂ et ♀ plerumque 6, 2-seriatim sepalis petalisque opposita, rarius plura (usque ad 50) fundo perianthii v. tubo corollæ inserta, sæpissime inclusa; staminodia in fl. ♀ 0, v. squamæformia subulata v. in anulum aut cupulam connata, rarissime antheris cassis instructa; filamenta libera v. connata, subulata v. filiformia, rarissime complanata, apicibus præfloratione rectis v. infractis. *Antheræ* lineares oblongæ v. sagittatæ, rarissime biglobosæ, basi v. dorso affixæ, erectæ v. versatiles, 2-loculares, loculis introrsum rarissime lateraliter v. extrorsum dehiscens; pollen ellipsoideum v. subsphæricum v. paucissimis echinulatum. *Ovarium* liberum, ovoideum oblongum v. globosum, in fl. ♂ rudimentarium v. 0, ima basi 1-loculare v. perfecte v. imperfecte 3- rarius 4-7-loculare, integrum v. 3-lobum v. e carpellis 3 distinctis v. basi connatis. *Stylus* 0 v. brevissimus, rarius elongatus, rarissime gracilis et rectus v. flexuosus; stigmata 3, sessilia, brevia, erecta v. recurva, apice v. introrsum papillosa, subulata v. n. paucis elongata. *Ovula* in carpellis solitaria et erecta v. angulo interiori basi lata affixa, et subhorizontalia v. pendula, anatropa v. hemi-anatropa. *Fructus* perianthio plus minus (interdum insigniter) aucto stipatus, siccus baccatus v. drupaceus, stigmatum stylive reliquiis terminalibus excentricis lateralibus v. basilaribus, 1- rarius 2-plurilocularis et -spermus, rarius e carpellis 1-3 distinctis 1-spermis; exocarpium sæpius fibris percursum; endocarpium membranaceum crustaceum ligneum v. lapideum, intus læve v. rugosum et rapheos seminis ramis notatum, in *Cocoinis* foveis 3 æquidistantibus quarum 2 loculis effectis respondent perforosum. *Semina* loculis endocarpii conformia, libera v. endocarpio adhaerentia, hilo basilari v. laterali; testa albumini arctissime adhaerens; raphe brevis v. elongata, sæpe endocarpio adhaerens, interdum semen circumambiens, ramis numerosis et directione variis, simplicibus ramulosis v. reticulatis interdum supra testam diffusis. *Albumen* corneum v. cartilagineum, non raro oleosum, solidum v. cavum v. vertice v. latere insculptum, æquabile v. ruminatum, sulcis radiatis v. irregularibus simplicibus v. ramosis testæ materia farctis. *Embryo* parvus, conoideus trochlearis v. cylindraceus, in foveola propria juxta albuminis peripheriam immersus, sæpius hilo latere dorsali proximus, rarius lateralis v. apicalis.

*Plantæ* solitariae v. gregariae, habitu peculiari, arborescentes v. frutescentes, pleræque perennes et polycarpicae, paucæ monocarpicae, monocarpicarum aliæ inflorescentia terminali semel florent, aliæ inflorescentia axillari semel v. seriatim ab apice deorsum florent; radix primaria cito evanida, caudice basi radículas plurimas cylindræas simplices v. ramosas epigeas v. hypogæas emittente. *Caudex* gracilis v. robustus, elatus mediocris v. humilis, non raro soboliferus, simplex, rarissime dichotome ramosus, erectus v. ope uncarum longissime scandens, annulatus v. cicatricatus, inermis v. aculeis sæpius nigris compressis armatus. *Folia* terminalia v. apicem versus caudicis elongati gracilis remota, pro planta magna, interdum maxima, primum integra, cito palmatim v. pinnatim secta v. rarissime bipinnatisectim fissa; segmenta discreta v. plus minus confluentia, vernatione marginibus induplicatis v. reduplicatis, apicibus acuminatis 2-fidis laciniatis v. præmorsis, costa sæpius valida, nervis parallelis in apicem convergentibus v. flabellatim divaricatis; rhachis in-foliis pinnatisectis dorso convexa, facie carinata, lateribus exsculptis segmentis sulco

insertis; petiolus subcylindraceus, v. antice concavus v. canaliculatus, rarius planoconvexus, v. biconvexus, apice in foliis flabelliformibus sæpe in unguem brevem productus, basi in vaginam brevem v. elongatam clausam v. apertam dilatatus; vagina marginibus sæpe late v. anguste fibrosis v. vagina tota demum in fibras soluta, ore obliquo simplici v. in ligulam v. ocream producta. Inflorescentia (*spadix* dicta) v. interfoliacea et longe pedunculata, v. infrafoliacea et breviter pedunculata, v. sessilis, nunc hippuriformis rachi brevi ramisque elongatis æquilongis pendulis, nunc rachi elongata ramis flabellatim v. paniculatim dispositis. Spathæ variae, nunc numerosæ tubulosæ pedunculum v. pedunculum et ramos spadice vaginantes, v. sæpius 2-4 pedunculo insertæ, quarum inferiores incompletæ vaginæformes, coriaceæ v. membranaceæ; superior sæpe multo major, cymbiformis, coriacea v. lignosa, spadicem fere maturum includens, demum ventre longitudinaliter rupta, persistens, integra v. 2-partita. Flores cum spadice articulati v. continui, non raro cavis ramorum v. foveolis e bracteis connatis formati immersi, solitarii v. sæpius in speciebus monoicis 3-ni intermedio ♀, v. inferiores in spadice v. ramo spadice 3-ni, superiores solitarii v. bini ♂; bracteæ sub quovis flore v. grege florum solitariae, cum rhachi continuæ, interdum spathelliformes coriaceæ membranaceæ v. 0; bracteolæ sub quovis flore sæpius 2-næ, distinctæ et squamiformes v. in cupulam connatæ, non raro bracteæ et bracteolæ confusæ v. omnino deficientes. Fructus varius.

Species enumeratæ ad 1100, permultæ imperfecte cognitæ, pluresque in Africa et America centrali, Madagascaria, insulisque maris Pacifici adhuc latent. Palmæ fere omnes tropicæ, pleræque Americane, pauciores Asiaticæ et Australianæ, paucissimæ Africanæ. Inter genera extratropica *Chamerops* gradum borealem 44° in Europa, *Nannorhops* gradum 34° in Asia, et *Sabal* 36° in America attingunt. In regionibus temperatis hemisphærii australis *Phoenix* in Africa ad grad. 34°, invenitur; *Rhopalostylis* in Nova Zelandia ad grad. 44°; et *Jubæa* in Chili ad grad. 37°.

Ordo bene limitatus nullo arcte affinis, suadente R. Brownio *Xeroteti* et *Flagellariæ* accedit, sed a priore differt fructu nunquam capsulari, a posteriore albumine; ab ambobus habitu, foliis, inflorescentiis, indole seminibus e embryone. Limites subtribuum et generum *Arecearum* valde incertæ sunt, et omnes denuo in vivo scrutandæ. Labores Martii, H. Wendlandii et Schefferi multum attulerunt, perplura tamen adhuc dubia remanent, et in omnibus seriebus florum seminum et habitus cognatio accuratius definienda. De dispositione generum et specierum confer H. Wendland in Kerchove de Deterghem 'Les Palmiers,' Tableau indiquant la Classification, p. 128; et Index général des noms et synonymes des espèces connues, p. 230-258; et in Bull. Soc. Bot. France, viii. 429. Drude in Bot. Zeit. 1877; et in Petermann, Geograph. Mittheil. 1878. De anatomia et morphologia, confer Martius, Hist. Nat. Palm. vol. i., et Mohl, Vermischte Schriften Botanischen Inhalts, Tübingen, 1845.

## FORMÆ ABNORMES.

Folia bipinnatisecta in *Caryota*.

Perianthium reductum v. deformatum in *Thrinace*, *Hemithrinace*, et in fl. ♀ *Nipe*.

Sepala petala longe superant in fl. ♂ *Nenge*.

Petala prælonga in *Phytelephantis* flore ♀.

Antherarum loculi discreti, penduli in *Geonoma*; discreti et insigniter torti in *Orbignya*.

Stylus capillaris in *Washingtonia*; stigmata filiformia in *Phytelephante*; stigma infundibulare in *Thrinace* et *Hemithrinace*.

Fructus syncarpium globosum in *Nipa* et *Phytelephante*; pericarpium tessellato-muricatum in *Sommiera*, *Mavicaria*, *Teysmannia* et *Phytelephante*.

## TRIBUUM SUBTRIBUUMQUE CONSPECTUS (exceptis neglectis).

**Tribus I. Arecese.** Folia pinnatisecta, segmentis discretis v. in laminam apice bifidam integram v. laciniatam confluentibus, vernatione reduplicatis. Flores monoici v. dioici. Semina umbilicata, raphe ventrali, embryone dorsali.

A. Petala fl. ♀ imbricata v. apicibus tantum valvatis, rarissime in toto valvata.

\* *Spadices infrafoliacei.*

† *Stigmata in fructu terminalia. Ovarium integrum, 1-loculare.*

Subtribus 1. *Earecese.* Fl. ♂ *asymmetrici, sepalis sæpius parvis haud imbricatis.*—*Gerontogæ.*

Subtribus 2. Ptychospermeæ. *Fl. ♂ symmetrici, sepalis sæpius rotundatis late imbricatis.—Gerontogæ.*

†† *Stigmata in fructu sæpissime excentrica v. lateralia. Ovarium integrum v. 3-lobum.*

Subtribus 3. Oncospermeæ. *Spathæ 2. Fl. ♂ symmetrici v. asymmetrici. Ovarium integrum. Foliorum segmenta acuminata.—Amphigææ.*

Subtribus 4. Iriarteæ. *Spathæ numerosæ. Spadices juniores corniformes. Fl. ♂ symmetrici. Ovarium integrum. Foliorum segmenta cuneata.—Neogææ.*

Subtribus 5. Wetteneæ. *Spathæ numerosæ. Spadices clavate. Ovarium alte 3-lobum, stigmatibus magnis. Foliorum segmenta cuneata.—Neogææ.*

\*\* *Spadices sæpissime interfoliacei.*

† *Stigmata in fructu terminalia, rarius basilaria.*

Subtribus 6. Linospadiceæ. *Spadix simplex, floribus monoicis cavis immersis. Ovarium 1-loculare.—Gerontogææ.*

Subtribus 7. Ceroxyleæ. *Spadix paniculatim ramosus, floribus dioicis pedicellatis. Ovarium 3-loculare. Fructus globosus. Foliorum segmenta acuminata.—Neogææ.*

Subtribus 8. Malortieæ. *Spadix subdigitatim ramosus, floribus monoicis non immersis. Ovarium imperfecte 3-loculare. Fructus elongatus. Folia varia.—Neogææ.*

†† *Stigmata in fructu lateralia v. basilaria, rarius terminalia.*

Subtribus 9. Iguanureæ. *Spathæ 2. Flores omnes v. inferiores 3-ni, non immersi. Ovarium integrum, 1-3-loculare.—Gerontogææ.*

Subtribus 10. Chamædoreæ. *Spathæ numerosæ. Spadices inter- et infrafoliacei. Flores sæpissime dioici, non immersi, ebracteati et ebracteolati, perianthio carnosulo v. coriaceo. Ovarium integrum, 3-loculare.—Neogææ et ins. Africanæ.*

Subtribus 11. Geonomeæ. *Spathæ 1, 2, v. plures. Flores monoici v. dioici, cavis immersis, compressi, perianthio glutinaceo. Ovarium integrum, 3-loculare, stylo sæpe elongato terminali v. laterali.—Neogææ, pauca gerontogææ.*

B. *Petala fl. ♀ per totam fere longitudinem valvata.*

Subtribus 12. Caryotidæ. *Spadices interfoliacei; spathæ 2 v. plures. Ovarium integrum, 3-loculare.—Gerontogææ.*

(Arecæ dubiæ affinitatis: MANICARIA, LEOPOLDINA, NIPA, PHYTELEPHAS.)

**Tribus II. Phœniceæ.** Folia pinnatisecta, segmentis acuminatis vernatione induplicatis. Spadices interfoliacei; spatha solitaria. Flores dioici. Ovarii carpella 3, distincta, unum tantum maturans, stigmatibus terminali. Semen ventre profunde sulcatum, umbilicatum, embryone dorsali.—*Gerontogææ.*

**Tribus III. Coryphææ.** Folia vernatione flabellatim plicata, orbicularia semi-orbicularia v. cuneata, fissa, segmentis induplicatis. Spadices interfoliacei; spathæ numerosæ. Flores sæpius hermaphroditi. Ovarium integrum v. 3-lobum, 3-loculare, ovulis erectis. Fructus carpella 1-3, distincta, pericarpio non squamoso. Semina hilo punctiformi, raphe ventrali.—*Gerontogææ et Neogææ.*

**Tribus IV. Lepidocaryæ.** Folia pinnatisecta v. flabellatim plicata, segmentis vernatione reduplicatis. Spadices terminales v. axillares; spathæ numerosæ. Flores polygamo-monoici. Ovarium integrum, perfecte v. imperfecte 3-loculare. Fructus pericarpium squamis nitidis deorsum imbricatis loricatum. Semina umbilicata, raphe dorsali, embryone ventrali.

Subtribus 1. Calamæ. *Folia pinnatisecta. Ovarium imperfecte 3-loculare.—Gerontogææ.*

Subtribus 2. Raphiæ. *Folia pinnatisecta. Ovarium perfecte 3-loculare.—Neogææ et Africanæ.*

Subtribus 3. Mauritiæ. *Folia flabelliformia.—Neogææ.*

**Tribus V. Borasseæ.** Folia orbicularia, fissa, segmentis flabellatim plicatis vernatione induplicatis. Spadices interfoliacei; spathæ numerosæ, vaginantes. Flores dioici. Ovarium integrum, 3-loculare, ovulis ascendentibus. Fructus varius. Semina hilo diffuso.—*Gerontogææ.*

**Tribus VI. Coccoïnæ.** Folia pinnatisecta, segmentis vernatione reduplicatis. Spadices interfoliacei. Spathæ 2 v. plures. Flores sæpissime in eodem spadice monoici, inferiores 3-ni intermedio ♀. Ovarium 1-7-loculare. Fructus 1-7-locularis, stigmatibus terminalibus, endocarpio lignoso 3-7-poroso. Semen endocarpio adhærens, hilo diffuso, embryo poro opposito.—*Neogæ.*

Subtribus 1. Bactridæ. *Palmæ aculeatæ.* Fructus 1-spermus, endocarpio medio v. supra medium 3-poroso.—*Gerontogæ.*

Subtribus 2. Elæidæ. *Palmæ inermes.* Stamina monadelpha. Fructus 1-3-spermus, endocarpio supra medium 3-poroso.—*Neogæ et Africanæ.*

Subtribus 3. Eucoccoïnæ. *Palmæ inermes.* Stamina libera. Fructus 1-∞-spermus, endocarpio supra basin 3-poroso.—*Neogæ.*

#### CONSPECTUS GENERUM.

**Tribus I. Arecæ.** Folia pinnatisecta, segmentis discretis v. in laminam apice 2-fidam plus minusve confluentibus, marginibus basi recurvis, vernatione reduplicatis. Spadices inter- v. infra-foliacei, simplices v. ramosi. Spathæ 2 v. plures. Flores monoici v. dioici, nunquam hermaphroditi, inferiores in spadice v. ramis spadicis sæpissime 3-ni intermedio ♀. Fl. ♂: petala semper valvata. Fl. ♀: petala sæpius imbricata, v. e basi convolutivo-imbricata, apicibus breviter v. longe valvatis v. conniventibus. Carpella 3, sæpissime in ovarium 1-3-loculare symmetricum rarius 3-lobum confluentia, carpella rarissime fere libera; stigmata 3, parva, rarius majuscula; ovulum parietale, plus minusve pendulum, rarius basilare et erectum. Fructus 1-3-spermus, stigmatibus terminalibus excentricis lateralibus v. basilaribus. Semina libera v. secus raphem v. tota endocarpio adhærentia, hilo punctiformi orbiculari v. lineari, raphe ventrali.

Excepta: Petala per totam longitudinem valvata in flore ♀ *Oreodoxæ*, in speciebus nonnullis *Chamædoreæ*, in *Gaussia*, *Hyophorbe*, et in subtribu *Caryotidearum*.

Subtribus 1. Euarecæ. Flores in eodem spadice infra-foliaceo monoici, sæpissime 3-ni intermedio ♀. Fl. ♂ asymmetrici, sepalis sæpius parvis v. minutis, rarius latis et imbricatis. Fl. ♀, petala basi v. tota convolutivo-imbricata, apicibus rotundatis v. acutatis et conniventi-valvatis. Ovarium integrum, stigmatibus terminalibus sessilibus minutis. Fructus symmetricus, stigmatibus terminalibus. *Palmæ inermes.* Foliorum vagina elongata, cylindracea. Spathæ 2, rarius 3.

\* Ovulum basilare, erectum.

1. *ARECA*. Fl. ♂ minuti, in ramis spadicis numerosi, solitarii v. 2-ni. Stamina 3 v. 6. Fl. ♀ multo majores, basin versus ramorum solitarii. Albumen ruminatum.—*Asia trop., Nov. Guinea, Austral. trop.*

2. *MISCHOPHLEUS*. Flores inferiores in ramis spadicis 3-ni, intermedio ♀ masculis minore, spiraliter dispositi. Stamina 9. Stigmata distincta. Albumen ruminatum.—*Archip. Malay.*

3. *PINANGA*. Flores 3-ni, intermedio ♀, di-hexastiche dispositi. Stamina numerosa. Stigmata confluentia. Albumen ruminatum.—*Asia trop.*

4. *KENTIA*. Flores 3-ni, intermedio ♀, tetrastiche dispositi. Stamina 6. Fl. ♀: Petala sepalis multo longiora apicibus valvatis. Albumen æquabile. Foliorum segmenta acuminata; spadices ramuli acute 4-goni.—*Nov. Guinea.*

\*\* Ovulum parietale, plus minusve pendulum.

† Flores in ramis spadicis tetrastiche dispositi.

5. *HYDRIASTELE*. Flores 3-ni, intermedio ♀. Stamina 6. Fl. ♀: Petala sepalis haud longiora, apicibus imbricatis. Albumen æquabile. Foliorum segmenta apice fissa.—*Nov. Guinea, Austral. trop.*

6. *ADELONENGA*. Fl. ♀: Sepala et petala conformia. Albumen ruminatum. Foliorum segmenta præmorsa.—*Nov. Guinea.*

7. *GRONOPHYLLUM*. Fl. ♀: Petala sepalis multo longiora, apicibus valvatis. Albumen ruminatum. Foliorum segmenta præmorsa.—*Nov. Guinea.*

8. *ENGELLA*. Fl. ♂: Sepala minuta; stamina 6, filamentis brevissimis. Fl. ♀: Petala sepalis duplo longiora, supra medium valvata. Albumen æquabile. Foliorum segmenta longe acuminata.—*Archip. Malay., Nov. Guinea.*

†† Flores in ramis spadicis spiraliter dispositi.

9. *KENTIOSIS*. Fl. ♂: Sepala triangulari-orbicularia, late imbricata. Stamina numerosa,

filamentis brevibus. Fl. ♀: Petala brevia, apicibus valvatis. Foliorum segmenta apice attenuata, obtusa v. dentata.—*Nov. Caledonia*.

10. *VERTICIA*. Fl. ♂: Sepala chartacea, basi connata. Fl. ♀ masculis multo majores; petala sepalis inclusa. Foliorum segmenta apice attenuata, oblique truncata.—*Ins. Pacific.*

11. *HEDYSCYPA*. Fl. ♂: Sepala anguste lanceolata. Stamina 9–12, filamentis elongatis. Fl. ♀: Petala sepalis conformia, apicibus valvatis. Foliorum segmenta acuminata.—*Ins. Lord Howe*.

12. *NENGA*. Fl. ♂: Sepala angusta, petala longe superantia. Stamina 6, antheris erectis. Fl. ♀: Sepala et petala consimilia, late imbricata. Foliorum segmenta apice attenuata, oblique 2–3-fida.—*Archip. Malay*.

13. *LOXOCOCCUS*. Fl. ♂: Sepala rotundata, imbricata. Stamina 9–12, filamentis elongatis. Fl. ♀: Petala apice valvata. Foliorum segmenta apice oblique præmorsa.—*Zeylania*.

14. *ACTINORHYZA*. Fl. ♂: Sepala late imbricata. Stamina 24–30, filamentis apice inflexis. Fl. ♀: masculis multo majores; petala sepalis paullo longiora, apicibus valvatis. Foliorum segmenta acuminata, oblique dentata.—*Archip. Malay*.

15. *ARCHONTOPHANTIX*. Fl. ♂: Sepala parva, carinata, imbricata. Stamina 9–24, filamentis apice inflexis. Fl. ♀: Sepala et petala consimilia. Foliorum segmenta attenuata, acuminata, v. apice 2-dentata.—*Australia*.

16. *RHOPALOSTYLIS*. Fl. ♂: Sepala subulato-lanceolata, haud imbricata. Stamina 6–12, filamentis apice inflexis. Fl. ♀: Petala brevia, apice valvata. Foliorum segmenta acuminata.—*Ins. Norfolk, Nov. Zeland.*

17. *DICTYOSPERMA*. Fl. ♂: Sepala parva, acuta. Stamina 6, filamentis apice inflexis. Fl. ♀: Petala sepalis paullo longiora. Foliorum segmenta acuminata.—*Ins. Mascarens.*

Subtribus 2. *Ptychospermeæ*. Flores in eodem spadice infrafoliaceo monoici, 3-ni intermedio ♀ v. superiores solitarii et 2-ni ♂, spiraliter dispositi. Fl. ♂ symmetrici; sepalis orbiculata, concava, sæpe basi gibba, late imbricata. Fl. ♀, petala tota convolutivo-imbricata, v. apicibus conniventibus valvatis. Ovarium 1- rarissime 2–3-loculare, ovulo parietali, stigmatibus terminalibus minutis. Fructus symmetricus, stigmatibus apicalibus. Palmæ inermes. Foliorum vagina sæpius elongata cylindracea. *Spathæ* 2–3.

Excepta: Fructus stigmata paullo excentrica in *Cyphophanice*.

(Vide quoque 30 *ENOCARPI* species, et 31 *JESSENIAM* in Subtribu 4.)

\* *Albumen ruminatum.*

18. *PTYCHOSPERMA*. Fl. ♂: Stamina 20–30, antheris versatilibus. Foliorum segmenta late præmorsa.—*Archip. Malay., Nov. Guinea, Australia*.

19. *RHOPALOKLASTE*. Fl. ♂: Stamina 6, antheris versatilibus. Foliorum segmenta acuminata.—*Archip. Malay*.

\*\* *Albumen æquabile.*

20. *CYTOSTACHYS*. Fl. ♂: Stamina 6–15, antheris versatilibus. Foliorum segmenta apice attenuata integra v. oblique 2-dentata.—*Archip. Malay*.

21. *DRYOPHLEUS*. Fl. ♂: Stamina numerosa, antheris versatilibus. Foliorum segmenta oblique præmorsa.—*Ins. Molucc. ad ins. Pacific.*

22. *CYPHOPHANTIX*. Fl. ♂: Stamina 6, antheris versatilibus. Pericarpium crassum, granulosum, intus fibrosum, semine tereti. Foliorum segmenta apice angustata.—*Nov. Caledonia*.

Subtribus 3. *Oncospermeæ*. Flores in eodem spadice infrafoliaceo monoici, spiraliter dispositi, inferiores v. omnes 3-ni, intermedio ♀. Fl. ♂ symmetrici v. asymmetrici, sepalis parvis v. latiusculis. Fl. ♀: Petala convolutivo-imbricata, apicibus conniventibus valvatis. Ovarium integrum, 1-loculare v. 3-loculare loculis 2 effatis, stigmatibus minutis. Fructus sæpiissime globosus, 1-spermus, stigmatibus excentricis lateralibus v. basilaribus. Palmæ inermes v. armatæ, foliorum vagina brevi v. elongata. *Spathæ* 2.

Excepta: Spadix florens *Jessenie* interfoliaceus. Petala fl. ♀ *Oreodoxæ* valvata, basi connata. Fructus *Jessenie* et specierum *Enocarpi* stigmatibus terminalibus.

\* Fl. ♂ symmetrici, sepalis latis late imbricatis. Fructus stigmata excentrica v. lateralia, v. in *Cyphophanice* subterminalia.

23. *PTYCHANDRA*. Stamina numerosa, 1-seriata. Pericarpium fibrosum. Semen globosum, albumine ruminato. Foliorum segmenta infra apicem attenuatum 1-dentata.—*Ins. Molucc.*

24. *CLINOSTIGMA*. Stamina 6 v. 12. Perianthium ♀ post anthesin auctum. Pericarpium grumosum et fibrosum. Semen globosum, rapheos ramis a hilo radiantibus, albumine æquabili. Palmæ robustæ, foliorum segmentis præmorsis.—*Australia, Ins. Pacific.*

25. *CYPHOKENTIA*. Stamina 6 v. 12. Perianthium ♀ post anthesin immutatum. Pericarpium grumosum, endocarpio crustaceo. Semen subglobosum v. oblongum, rapheos ramis a hilo ascendentibus, albumine æquabili. Palmæ robustæ. Foliorum segmenta apice attenuata.—*Nov. Caledonia.*

26. *CYTHOSPERMA*. Stamina 6. Perianthium post anthesin auctum. Pericarpium tenue, coriaceo-crustaceum. Semen angulatum v. tuberculatum, albumine æquabili. Foliorum segmenta apice præmorsa, fissa.—*Nov. Caledonia.*

27. *MICROKENTIA*. Stamina 6. Perianthium post anthesin immutatum. Pericarpium crustaceum. Semen globosum, albumine æquabili. Palmæ arundinaceæ, foliorum segmentis acuminatis.—*Nov. Caledonia.*

\*\* *Fl. ♂ sæpius asymmetrici, sepalis parvis v. angustis, haud v. leviter imbricatis. Fructus stigmata lateralibus v. basilaribus.*

† *Petala libera. Ovulum parietale.*

28. *ONCOSPERMA*. *Fl. ♂*: Sepala parva, acuta. Stamina 6–12, antheris erectis. Albumen ruminatum. Palmæ armatæ, foliorum segmentis acuminatis.—*Asia trop.*

29. *EUTERPE*. *Fl. ♂*: Sepala varia. Stamina 6, antheris versatilibus. Fructus globosus stigmatibus excentricis v. lateralibus. Palmæ inermes, foliorum segmentis acuminatis, vagina elongata cylindracea; spadix scopiformis v. paniculatum ramosus, rachi elongata ramis erecto-patentibus.—*Amer. trop.*

30. *CENOCARPUS*. *Fl. ♂*: Sepala parva, acuta, valvata. Stamina 6, antheris versatilibus. Fructus ovoideus stigmatibus apicalibus, v. globosus stigmatibus basilaribus. Palmæ inermes v. armatæ; foliorum vagina brevi inflata aperta, segmentis acuminatis; spadiceis hippuriformis rhachi brevi ramis elongatis pendulis simplicibus.—*Amer. trop.*

31. *JESSANIA*. *Fl. ♂*: Sepala minuta. Stamina 9–20, antheris versatilibus. Fructus ellipsoideus, stigmatibus terminalibus; albumen ruminatum. Foliorum vagina brevis, aperta, segmenta acuminata; spadix *Enocarpi, florens interfoliaceus*.—*Amer. trop.*

32. *ACANTHOPHœNIX*. *Fl. ♂*: Sepala parva, orbicularia. Stamina 6 v. plura, antheris versatilibus. Fructus minutus, stigmatibus lateralibus v. subbasilaribus; albumen ruminatum. Palmæ elatæ, spinosæ, foliorum segmentis acuminatis.—*Ins. Mascarens.*

†† *Fl. ♀, petala libera. Ovulum basilare, erectum.*

33. *HYOSPATHE*. *Fl. ♂*: Sepala parva, basi connata. Stamina 6. Ovarium 3-loculare. Fructus stigmatibus basilaribus; albumen æquabile. Palmæ inermes, arundinaceæ, foliorum segmentis obliquis longe acuminatis.—*Brasil. bor.*

34. *PRESTOEIA*. *Fl. ♂*: Calyx minutus, 3-lobus. Stamina 6, antheris magnis. Ovarium 1-loculare. Fructus stigmatibus infra-apicalibus; albumen ruminatum. Palma gracilis, foliorum vagina brevi, segmentis liberis et confluentibus acuminatis.—*Ind. Occ.*

††† *Fl. ♀: Petala basi connata, superne valvata.*

35. *OREODOXA*. *Fl. ♂*: Sepala minuta, scariosa; stamina 6–12. Ovarium 3-loculare. Fructus curvus, stigmatibus subbasilaribus. Palmæ inermes; foliorum segmentis apice attenuatis 2-fidis.—*Amer. trop.*

Subtribus 4. *Iriarteæ*. *Flores in eodem spadice (junior corniformi) infrafoliaceo monoici, omnes v. inferiores 3-æ intermediæ ♀, spiraliter dispositi. Fl. ♂ subsymmetrici; sepalis orbicularia, concava, late imbricata. Ovarium 3-loculare, stigmatibus minutis terminalibus; ovulum parietale. Fructus 1-spermus, globosus v. ovoideus, stigmatum situs varius. Palmæ inermes, foliorum segmentis cuneatis plicato-nervosis, nervis subtus prominentibus. Spathæ plures vaginantes.*—Genera omnia potius pro subgeneribus v. sectionibus *Iriartæ* habenda.

36. *IRIARTEA*. Stamina 9–15. Fructus stigmata terminalia v. subterminalia. Embryo dorsalis. Foliorum segmenta quaquaversa.—*Amer. trop.*

37. *SOCRATEA*. Stamina numerosa. Fructus stigmata subterminalia. Embryo subterminalis. Foliorum segmenta quaquaversa.—*Bras. bor.*

38. *DICTOCARYUM*. Stamina 6. Fructus stigmata basilaria. Embryo basilaris. Foliorum segmenta quaquaversa.—*Bras. bor., Nov. Grenada.*

39. *IRIARTELLA*. Stamina ad 15. Fructus stigmata basilaria. Embryo subterminalis. Foliorum segmenta bifaria.—*Brasil. bor.*

Subtribus 5. *Wetteniæ*. Flores dioici v. in diversis spadicebus infrafoliaceis monoici, spiraliter dispositi. Fl. ♂ asymmetrici. Fl. ♀: Petala imbricata v. valvata. Ovarium alte 3-lobum, 3-loculare; stylus inter lobos brevis v. elongatus, stigmatibus magnis elongatis. Fructus stigmata basilaria. *Palma inermes*, foliorum segmentis dimidiato-cuneatis v. lanceolatis, vagina brevi; spathe plures.

40. *CATOBLASTUS*. Fl. ♂: Sepala libera; stamina 9–15, antheris magnis. Fl. ♀: Petala libera, elongata, apicibus valvatis; stylus brevis. Fructus carpella ellipsoidea. *Palma inermis*, foliorum segmentis cuneatis.—*Bras. bor., Venezuela.*

41. *WETTENIA*. Fl. ♂: Sepala libera; petala elongata; stamina 12–16, antheris magnis. Fl. ♀: Petala libera, elongata; stylus filiformis. Fructus obpyramidatus.—*Palma inermis*, foliorum segmentis dimidiato-lanceolatis.—*Andes.*

Subtribus 6. *Linospadiceæ*. Flores in eodem spadice interfoliaceo simplicissimo (v. in *Gigliolia ramoso*) monoici, in alveolis v. urceolis spiraliter dispositis 3-ni intermedio ♀ v. superiores sparsi ♂. Fl. ♂ symmetrici; sepala rotundata, late imbricata. Fl. ♀: Petala imbricata; ovarium 1-loculare, stigmatibus minutis (in *Gigliolia crassiusculis*) terminalibus. Fructus symmetricus, 1-spermus, stigmatibus apicalibus. *Palma inermis*. Foliorum vagina brevis v. elongata, aperta. Spathe 1 v. 2.

42. *CALYPTROCALYX*. Fl. ♂: Stamina numerosa, antheris versatilibus dorsifixis. Fl. ♀: Staminodia 6–∞; ovulum parietale; albumen ruminatum. Foliorum segmenta acuminata.—*Amboyna, Austral. trop.*

43. *BACULARIA*. Fl. ♂: Stamina 6, 10, 12, antheris erectis basifixis, connectivo dilatato. Fl. ♀: Staminodia ∞; ovulum parietale; albumen æquabile. Foliorum segmenta præmorsa.—*Australia.*

44. *LINOSPADIX*. Fl. ♂: Stamina 6–9, antheris versatilibus dorsifixis. Fl. ♀: Staminodia 6–9; stigmata majuscula; ovulum parietale; albumen æquabile. Foliorum segmenta acuminata.—*Nov. Guinea.*

45. *HOWEA*. Fl. ♂: Stamina perplurima, antheris erectis basifixis. Fl. ♀: Staminodia 0; ovulum erectum; albumen æquabile. Foliorum segmenta acuminata.—*Ins. Lord Howe.*

#### *Genus anomalum.*

46. *GIGLIOLIA*. Flores in eodem spadice interfoliaceo gracili digitatim ramoso monoici, subdistiche dispositi, sparsi, inferiores rarius 3-ni intermedio ♀. Fl. ♂: Calyx tubulosus, 3-gonus. Fl. ♀ masculis multo majores. Ovarium 1-loculare, ovulo subbasilari, stigmatibus terminalibus crassis. Fructus elongatus, cylindraceo-ovoides. *Palma arundinaceæ*, spatha 1, longissima.—*Borneo.*

Subtribus 7. *Ceroxyleæ*. Flores dioici v. in diversis spadicebus interfoliaceis paniculatim ramosis monoici, breviter pedicellati, solitarii, bracteati, ebracteolati, perianthio coriaceo. Fl. ♂: subsymmetrici; calyx 3-dentatus. Fl. ♀: Petala subvalvata. Ovarium 3-loculare, integrum, stigmatibus parvis æqualibus. Fructus globosus, 1-spermus, stigmatibus basilaribus v. terminalibus. *Palma inermis*, foliorum segmentis acuminatis.

47. *CEROXYLON*. Stamina 9–15. Fructus stigmatibus basilaribus.—*Andes.*

48. *JUANIA*. Fructus stigmatibus terminalibus.—*Ins. Juan Fernandez.*

Subtribus 8. *Malortieæ*. Flores in eodem spadice interfoliaceo subdigitatim ramoso monoici, 3-ni intermedio ♀, spiraliter dispositi. Fl. ♂ subsymmetrici; sepala rotundata, late imbricata. Fl. ♀: Petala imbricata; ovarium incomplete 3-loculare, stigmatibus minutis terminalibus; ovula 3, septis incompletis adnata. Fructus symmetricus, 1-spermus, stigmatibus terminalibus. *Palma nana* v. mediocres, inermes. Spathe 2. Foliorum vagina brevis.

49. *MALORTIA*. Stamina 6 v. 12. Foliorum segmenta confluentia.—*Amer. cent.*

50. *REINHARDTIA*. Stamina numerosa. Foliorum segmenta libera, acuminata.—*Mexico.*

Subtribus 9. *Iguanuræ*. Flores in eodem spadice interfoliaceo ramoso monoici, omnes v. inferiores 3-ni intermedio ♀, spiraliter dispositi. Fl. ♂: Sepala orbicularia v. reniformia, late imbricata.

Fl. ♀: *Petala imbricata*; *ovarium 1-3-loculare, stigmatibus minutis terminalibus, ovulis parietalibus v. basilaribus. Fructus parvus, 1-spermus, stigmatibus excentricis lateralibus v. basilaribus. Palmæ inermes v. armatæ.—Spathæ 2.*

\* *Stigmata in fructu excentrica v. lateralia.*

51. *HETEROSPATHA*. Stamina 6, antheris versatilibus. Ovarium 1-loculare. Albumen ruminatum. Palma inermis, foliorum segmentis acuminatis.—*Amboyna*.

52. *NEPHROSPERMA*. Stamina numerosa, antheris brevibus apici filamentum crassi adnatis. Ovarium 1-loculare. Albumen ruminatum. Palma armata, foliorum segmentis acuminatis.—*Ins. Seychelles*.

\*\* *Stigmata in fructu basilaria v. subbasilaria.*

53. *IGUANURA*. Stamina 6-9, antheris versatilibus. Ovarium 1-3-loculare. Albumen varium. Palmæ inermes, foliorum segmentis premorsis.—*Archip. Malay*.

54. *STEVENSONIA*. Stamina 15-20, antheris lineari-oblongis versatilibus. Ovarium 1-loculare. Fructus ovoides, endocarpio laevi. Albumen ruminatum. Palma armata, foliorum segmentis in laminam bifidam confluentibus.—*Ins. Seychelles*.

55. *VERSCHAFFELTIA*. Stamina 6, filamentis brevibus, antheris didymis. Ovarium 1-loculare. Fructus globosus, endocarpio intus sulcato. Albumen ruminatum. Palma armata, foliorum segmentis in laminam 2-fidam confluentibus.—*Ins. Seychelles*.

56. *DYPSIS*. Stamina 6, antheris didymis. Ovarium 3-loculare. Albumen ruminatum. Palmæ nanæ, inermes, foliorum segmentis acuminatis apice fissis.—*Madagascar*.

57. *PELOGA*. Stamina 6, antheris didymis. Foliorum segmenta pseudo-verticillata, lanceolata, caudato-attenuata, basi nodoso-incrassata.—*Madagascar*.

58. *SOMMIERA*. Stamina 6, antheris versatilibus. Fructus crasse corticatus, tessellatum verrucosus; albumen æquabile. Palmæ humiles, inermes, foliorum segmentis in laminam 2-fidam confluentibus.—*Nov. Guinea*.

Subtribus 10. *Chamedoreæ. Flores dioici, v. in diversis spadicebus inter- v. infra-foliaceis, rarius in eodem spadice monoici (nunquam 3-ni) ebracteati et ebracteolati, varie dispositi. Fl. ♂: Calyx minutus; stamina 3 v. 6. Fl. ♀: Petala imbricata v. valvata; ovarium 3-loculare, stigmatibus minutis terminalibus. Fructus varius, stigmatibus basilaribus. Palmæ inermes. Spathæ numerosæ, vaginantes.*

\* *Flores dioici v. in diversis spadicebus monoici, spiraliter dispositi.*

59. *CHAMÉDORÆA*. Spadices infra- v. inter-foliacei. Fl. ♂: Stamina 6. Fl. ♀: Petala valvata v. leviter imbricata. Fructus carpella 1 v. 2-3, libera, globosa; albumen æquabile.—*Mont. Amer. trop.*

\*\* *Flores in eodem spadice monoici, in acervulos elongatos dispositi.*

60. *SYNECHANTHUS*. Spadix interfoliaceus. Fl. ♂: Stamina 3 v. 6. Fl. ♀: Petala convolutivo-imbricata. Fructus ellipsoideus, 1-spermus; albumen æquabile. Palmæ inermes, spadice ramis gracillimis, foliorum segmentis acuminatis.—*Amer. cent.*

61. *GAUSSIA*. Spadix interfoliaceus. Fl. ♀: Petala valvata. Fructus carpella 1-3, parva; albumen æquabile. Palmæ inermes, foliorum segmentis acuminatis.—*Cuba*.

62. *HYOPHORÆA*. Spadix infrafoliaceus. Fl. ♂: Stamina 6. Fl. ♀: Petala valvata. Albumen æquabile. Palmæ robustæ, inermes, foliorum segmentis acuminatis.—*Ins. Mascarens.*

\*\*\* *Flores in eodem spadice monoici, sparsi, solitarii v. 2-ni.*

63. *ROSCHERIA*. Spadix interfoliaceus. Fl. ♂: Stamina 6. Fl. ♀: Petala imbricata. Albumen ruminatum. Palma spinosa, foliorum segmentis apice 2-fidis.—*Ins. Seychelles*.

Subtribus 11. *Geonomæ. Flores dioici v. in diversis spadicebus monoici, sæpius in cavis spiraliter dispositis solitarii, v. 3-ni intermedio ♀, perianthio glumaceo. Fl. ♂ asymmetrici, a dorso compressi; petala basi in stipitem connata. Fl. ♀: Petala imbricata; ovarium 3-loculare, stylo terminali laterali basilaribus v. 0, stigmatibus minutis. Fructus parvus, 1-spermus, styli cicatrice v. stigmatibus basilaribus. Palmæ inermes. Spathæ 1 v. 2, rarius plures.*

\* *Ovarii basis disco inclusa. Filamenta in columnam cupulæve connata.*

64. *GEONOMA*. Stamina 6, antherarum loculis discretis elongatis pendulis. Discus liber. Stylus lateralis v. subbasilaris. Fructus globosus. Palmæ sæpius arundinaceæ.—*Amer. trop.*

65. *ASTEROGYNE*. Stamina 6, antherarum loculis discretis pendulis. Discus tubo corollæ adnatus et cum eo circumscissus. Stylus terminalis. Fructus ellipsoideus. Palmæ arundinaceæ. —*Amer. cent.*

66. *CALYPTROGYNE*. Stamina 6, antheris sagittatis. Palmæ arundinaceæ. Foliorum segmenta longissime acuminata. —*Amer. trop.*

67. *WELFIA*. Stamina ad 20, antheris elongato-subulatis. Foliorum segmenta acuminata. —*Amer. cent.*

\*\* *Discus 0. Filamenta libera.*

68. *PODOCOCCUS*. Flores cavis non immersi. Fructus stipitatus, elongatus, supra stipitem deflexus. Palma acaulis, foliorum segmentis rhombo-lanceolatis dentatis. —*Afr. trop. occid.*

69. *BENTINCKIA*. Fructus globosus. Palma arundinacea, foliorum segmentis acuminatis apice fissis. —*Travancor.*

Subtribus 12. *Caryotides*. Flores in eodem v. diversis spadiciis interfoliaceis v. terminalibus monoici, solitarii v. 3-ni intermedio superiore ♀. Fl. ♀: Petala per totam longitudinem valvata. Ovarium 3-loculare, stigmatibus terminalibus v. excentricis. Fructus varius. Palma inermes, foliorum segmentis abrupte v. oblique præmorsis. Spathæ paucæ v. numerosæ.

Vide etiam 35 *ORBODOXA*, 59 *CHAMÆDORRA*, 61 *GAUSSIA*, et 62 *HYOPHORBE*.

\* *Spathæ numerosæ. Fl. ♂ symmetrici. Stigmata in fructu terminalia.*

70. *WALLICHIA*. Fl. ♂: Calyx tubulosus, truncatus; stamina 6. Albumen æquabile. Palmæ sæpius humiles, foliis simpliciter pinnatisectis. —*Ind. Or.*

71. *DIDYMOSPERMA*. Fl. ♂: Calyx cupularis, 3-lobus; stamina ∞. Albumen æquabile. Palmæ humiles, foliis simpliciter pinnatisectis. —*Asia trop.*

72. *ARENGA*. Fl. ♂: Sepala 3; stamina ∞; albumen æquabile. Palmæ monocarpiceæ, foliis simpliciter pinnatisectis, segmentis linearibus basi auriculatis. —*Asia et Austral. trop.*

73. *CARYOTA*. Fl. ♂: Sepala 3; stamina ∞. Albumen ruminatum. Palmæ elatæ, foliis 2-pinnatisectis. —*Asia et Austral. trop.*

\*\* *Spathæ 2. Fl. ♂ asymmetrici. Stigmata in fructu basilaria.*

74. *ORANIA*. Spadix ramosus. Flores 3-ni intermedio ♀. Stamina 6, antheris extrorsum dehiscentibus. Palmæ elatæ, foliis simpliciter pinnatisectis, segmentis linearibus apice oblique lobatis. —*Archip. Malay. Nov. Guinea.*

75. *SCLEROSPERMA*. Spadix simplex, fusiformis. Flores densissime congesti, superiores ♂, inferiores 3-ni intermedio ♀. Stamina numerosa. Palma acaulis, foliis simpliciter pinnatisectis, segmentis late præmorsis. —*Afr. trop. occid.*

*Areceæ dubiæ affinitatis.*

76. *MANICARIA*. Flores in eodem spadice interfoliaceo simpliciter ramoso monoici, in cavis spiraliter dispositis sessiles, solitarii, superiores ♂ conferti, inferiores majores ♀ sparsi. Fl. ♂: Sepala ovato-rotundata; stamina 24–30. Fl. ♀: Petala superne forte valvata. Fructus 1–3-spermus, stigmatibus minutis terminalibus, crasse corticatus, tessellatim verrucosus. Albumen æquabile, cavum. Palma robusta, inermis, foliorum segmentis omnibus in laminam prælongam 2-Adam confluentibus, v. inferioribus discretis. Spathæ 2. —*Amer. trop.*

77. *LEOPOLDINIA*. Flores minuti, in iisdem v. diversis spadiciis interfoliaceis monoici v. dioici, sparsi. Fl. ♂ symmetrici; stamina 6, antheris latis. Fl. ♀: Ovarium turbinatum, 3-loculare, stigmatibus minutis excentricis. Fructus subglobosus, basi gibbus, paulo compressus, 1-spermus, stigmatibus basilaribus, pericarpio carnoso, endocarpio fibroso, fibris crassis lignescens. Albumen æquabile. Palmæ inermes, foliorum segmentis acuminatis. Spathæ 2, caducæ. —*Bras. bor.*

78. *NIPA*. Fl. ♂ in ramulis lateralibus amentiformibus spadiciis congesti, perianthio glumaceo. Fl. ♀ in apice spadiciis capitati, perianthio obscuro; carpella 1-locularia, apice rima stigmatosa exarata. Syncarpium globosum. Palma prostrata, foliorum segmentis acuminatis. *Littora Asia et Austral. trop.*

79. *PHYTELPHAS*. Fl. dioici, in spadices amentiformes densissime congesti, perianthio obsoleto. Fl. ♀ capitati; sepala 3; petala 5–10, prælonga; ovarium 4–9-loculare, stigmatibus totidem filiformibus. Syncarpium globosum. Palmæ inermes, prostratæ v. suberectæ, foliorum segmentis acuminatis. —*Peruv., Nov. Grenada.*

**Tribus II. Phœniceæ.** Folia pinnatisecta, segmentis discretis v. fasciculatis acutis v. acuminatis vernatione induplicatis. Spadices interfoliacei, fastigiatim ramosi. Spatha 1, coriacea, completa, compressa. Flores dioici. Stamina 6, rarissime plura. Ovarii carpella 3, distincta; stigmata sessilia; ovula erecta. Fructus carpellum 1, stigmate terminali. Semen teretiusculum, ventre profunde sulcato, hilo punctiformi; albumen æquabile; embryo subbasilaris v. dorsalis.

80. PHŒNIX. Genus unicum.—*Asia et Africa trop. et subtrop.*

**Tribus III. Coryphææ.** Folia orbicularia semi-orbicularia v. basi cuneata, flabellatim plicata, ambitu fissa, segmentis vernatione induplicatis. Spadices interfoliacei; spathæ numerosæ, tubulosæ, apice v. latere oblique fissæ. Flores hermaphroditi v. polygami, rarius dioici. Ovarii carpella 3, distincta v. leviter connata, rarius in ovarium integrum 3-loculare confluentia; styli breves v. elongati, distincti v. connati; ovula basilaria v. subbasilaria, erecta. Fructus carpella 1-3, distincta, globosa v. ovoidæa, stylo stigmatibusve terminalibus v. basilaribus. Seminis raphe ventralis.

\* *Stylus v. stigma in fructu basilaris.*

† *Petala v. corollæ segmenta leviter imbricata.*

81. CORYPHA. Flores ♀. Ovarium 3-lobum, stylo brevi. Albumen æquabile; embryo terminalis. *Palmæ monocarpiceæ.—Asia trop.*

82. SABAL. Flores ♀. Ovarium 3-lobum, stylo valido elongato. Albumen æquabile, basi profunde exsculptum; embryo dorsalis. Spadicis rhachis vaginata.—*Amer. trop. et subtrop.*

83. WASHINGTONIA. Flores ♀. Ovarium 3-lobum, stylo elongato filiformi. Albumen æquabile; embryo subbasilaris. Spadicis rhachis vaginata.—*Arizona.*

†† *Petala v. corollæ segmenta valvata.*

84. NANNORHOPS. Flores polygamo-monoici. Ovarium 3-loculare, stylo brevi subulato. Albumen æquabile, ventre profunde exsculptum; embryo dorsalis. Spadicis rhachis vaginata.—*Afghanistan, Persia australis.*

85. ?TREYSMANNIA. Flores ♀. Ovarii carpella 3, distincta, stylis in unum brevem connatis. Fructus pericarpium tessellato-muricatum. Albumen ruminatum; embryo basilaris. Folii lamina elongata; spadicis rhachis nuda.—*Sumatra.*

\*\* *Stylus v. stigma in fructu terminalis.*

† *Petala v. corollæ segmenta imbricata.*

86. CHAMÆROPS. Flores polygamo-dioici. Ovarii carpella libera, stigmatibus sessilibus distinctis. Albumen ruminatum; embryo dorsalis. Spadicis rami primarii basi bracteati.—*Reg. Mediterr.*

87. RHAPIDOPHYLLUM. Flores polygamo-dioici. Ovarii carpella libera, stigmatibus sessilibus distinctis. Albumen æquabile; embryo dorsalis. Spadicis rami paucibracteati.—*Carolina ad Floridam.*

88. ACANTHORHIZA. Flores ♀. Filamenta libera. Ovarii carpella distincta, stylis elongatis distinctis. Spadicis rami basi spathaceo-bracteati.—*Amer. centr.*

89. TRITHRINAX. Flores ♀. Filamenta in tubum connata. Ovarii carpella distincta, stylis elongatis distinctis. Spadicis rami vaginati.—*Brasil., Chili.*

†† *Petala v. corollæ segmenta lobis valvata.*

90. BRAHEA. Flores ♀. Ovarii carpella leviter cohærentia, stylo unico brevi 3-gono. Albumen æquabile, ventre profunde intrusum; embryo dorsalis. Spadicis rami evaginati.—*Texas, Mexico.*

91. SHERENZEA. Flores ♀. Ovarii carpella basi libera, stylo unico gracili elongato. Albumen æquabile; embryo subbasilaris. Spadicis rhachis vaginata.—*Texas, Carolina, Florida.*

92. COLPOTHRINAX. Flores ♀. Ovarii carpella distincta, stylis erectis subcohærentibus. Albumen æquabile; embryo dorsalis. Spadicis rhachis nuda.—*Cuba.*

93. ERYTHREA. Flores ♀. Ovarii carpella leviter cohærentia, stylo unico brevi 3-sulcato. Albumen æquabile, ventre profunde intrusum; embryo subbasilaris. Spadicis rhachis vaginata.—*California.*

94. COPEERNICIA. Flores ♀. Ovarii carpella 3, basi distincta, stylo unico brevi 3-sulcato. Albumen ruminatum, ventre convexum. Spadicis rhachis vaginata.—*Amer. trop.*

95. *PRITCHARDIA*. Flores ♀. Ovarium 3-gonum v. 3-lobum, in stylum validum attenuatum. Corollæ *tubus persistens segmentis deciduis*. Albumen æquabile; embryo subbasilaris. Spadicis rhachis vaginata.—*Ins. Pacific.*

96. *LIGUALA*. Flores ♀. Ovarii carpella 3-gona, leviter cohærentia, stylo unico filiformi. Albumen æquabile, ventre profunde exsculptum; embryo dorsalis. Spadicis rhachis vaginata.—*Asia trop., Austral. trop.*

97. *LIVISTONA*. Flores ♀. Ovarii carpella globosa, distincta v. leviter cohærentia, stylis brevibus distinctis v. cohærentibus. Albumen æquabile, ventre late exsculptum; embryo dorsalis. Spadicis rami nudi v. inferiores bracteati.—*Asia trop., Australia trop.*

98. *TRACHYCARPUS*. Flores polygamo-monoici. Ovarii carpella distincta, stigmatibus distinctis sessilibus. Albumen æquabile, ventre sulcatum; embryo dorsalis. Spadicis rhachis vaginata.—*Himalaya, China, Japan.*

99. *RHAPIS*. Flores dioici. *Corolla 3-dentata. Antheræ extrorsum dehiscentes.* Ovarii carpella distincta *gynophoro insidentia*, stylis brevibus distinctis. Albumen æquabile, ventre profunde exsculptum. Spadicis rhachis vaginata.—*China, Japan.*

††† *Perianthium minutum, 6-fidum v. obsoletum.*

100. *THRINAX*. Filamenta subulata, antheris introrsum dehiscentibus. Ovarium 1-loculare, stigmate infundibulari. Albumen sinuato-sulcatum, subruminatum; embryo apicalis. Spadicis rhachis vaginata.—*Florida, Ind. Occ.*

101. *HEMITHRINAX*. Antheræ sessiles, extrorsum dehiscentes, connectivo crasso. Ovarium 1-3-loculare, stigmate infundibulari; embryo apicalis. Spadicis rhachis nuda.—*Cuba.*

**Tribus IV. *Lepidocaryeæ*.** Folia pinnatisecta v. flabelliformia, segmentis discretis marginibus recurvis, vernatione reduplicatis, nervulis transversis distinctis. Spadices terminales v. axillares; spathæ numerosæ, distichæ, incompletæ, vaginæformes, rarius paucæ v. solitariae. Flores hermaphroditi monoici v. dioici. Ovarium complete v. incomplete 3-loculare, stigmatibus terminalibus; orula erecta, basilaria, anatropa. Fructus squamis deflexis rigidis nitidis tessellatim loricatus, symmetricus, stigmatibus terminalibus. Semina libera, umbilicata, raphe dorsali.—Palmæ sæpissime armatæ, non raro ope rhacheos foliorum productæ aculeatæ scandentes.

Subtribus 1. *Calamææ*. Folia *æqualiter pinnatisecta*. Ovarium imperfecte 3-loculare.

\* *Palmæ polycarpicæ, spadicibus axillaribus.*

102. *CALAMUS*. Caudex elongatus, sæpissime scandens. Foliorum segmenta acuminata, nervis parallelis. Spathæ numerosæ, persistentes. Flores distichi v. subdistichi.—*Asia, Africa, Australia.*

103. *ZALACCA*. Acaulis. Foliorum segmenta acuminata, nervis parallelis. Spathæ numerosæ, persistentes. Flores in ramulos amentiformes congesti.—*Ind. or., Archip. Malay.*

104. *KORTHALSIA*. Caudex elongatus, scandens. Foliorum segmenta trapeziformia, nervis flabellatis. Spathæ numerosæ, persistentes. Flores in ramulos amentiformes congesti.—*Archip. Malay., Nov. Guinea.*

105. *CERATOLOBUS*. Caudex elongatus, scandens. Foliorum segmenta rhombea, nervis flabellatis. Spatha 1, decidua.—*Archip. Malay.*

106. *PIGAFETTA*. Caudex erectus, robustus. Foliorum segmenta acuminata, nervis parallelis. Spadicis ramuli amentiformes, lanati.—*Archip. Malay., Nov. Guinea.*

\*\* *Palmæ monocarpicæ, spadicibus axillaribus.*

107. *PLECTOCOMIA*. Caudex elongatus, scandens. Foliorum segmenta lanceolata, nervis parallelis. Spadicis rami spathellis distichis flores obtegentibus imbricatis instructi; spathæ numerosæ, persistentes.—*As. trop., Archip. Malay.*

\*\*\* *Palmæ monocarpicæ, spadicibus terminalibus. Foliorum rhachis non producta.*

108. *EUGEISSONIA*. Caudices brevissimi, cæspitosi. Spadices longe pedunculati, contracti. Fl. ♂: Petala elongata. Stamina ad 12.—*Archip. Malay.*

109. *METROXYLON*. Caudices robusti. Spadicis rami patentes, recurvi. Fl. ♂: Petala oblonga. Stamina 6. Albumen ruminatum.—*Archip. Malay., Nov. Guinea, Ins. Fij.*

Subtribus 2. *Raphiæ*. *Folia pinnatisecta*. *Ovarium perfecte 3-loculare*.

\* *Palmæ monocarpicæ*, *caudice robusto erecto*, *foliorum rhachi non producta*. *Spadix terminalis*.

110. *RAPHIA*. Spadicis gigantei ramuli pectinatim ramulosi, quasi articulati.—*Afric. et Amer. trop.*

\*\* *Palmæ polycarpicæ*, *caudicibus elongatis scandentibus*, *foliorum rhachi producta*. *Spadix axillaris*.

111. *ONCOCALAMUS*. Spadix spathis vaginatus. Flores glomerati, bracteati et bracteolati.—*Afric. trop.*

112. *EREMOSPATHA*. Spadix nudus. Flores ♂, gemini, minutissime bracteati, ebracteolati.—*Afric. trop.*

\*\*\* *Palmæ monocarpicæ*, *caudicibus elongatis scandentibus*. *Spadices terminales*.

113. *ANCISTROPHYLLUM*. Spadix spathis vaginatus. Flores ♂, distichi, bracteati et bracteolati.—*Afric. trop.*

Subtribus 3. *Mauritiæ*. *Folia flabelliformia*. *Ovarium perfecte 3-loculare*. *Palmæ erectæ*, *polycarpicæ*.

114. *MAURITIA*. Spadicis ramuli floriferi amentiformes, cylindracei, floribus densissime spiraliter confertis. Semen esulentum.—*Amer. trop.*

115. *LEPIDOCARYUM*. Spadicis ramuli floriferi breves, compressi, floribus secundis v. bifariis. Stigmata linearia. Semen sulco excavatum.—*Bras. bor.*

**Tribus V. Borassæ.** *Folia flabelliformia*. Spadices interfoliacei; spathæ numerosæ, vaginiformes. Flores dioici; ♂ ramulis amentiformibus cylindraceis solitariis v. umbellatis spadice terminantibus dense congesti, in foveis inter bracteas dense imbricatas immersi, perianthio glumaceo; ♀ spadice crasso inserti, magni, bracteis imbricatis immersi, perianthio crasso coriaceo. Ovarium 3-loculare, stigmatibus terminalibus. Fructus symmetricus v. asymmetricus, 1 3-pyrenus, stigmatibus terminalibus. Semina non umbilicata, endocarpio arcte adhaerentia, hilo diffuso. Palmæ robustæ, inermes.

116. *BORASSUS*. Fl. ♂ in alveolis spadicis numerosi; stamina 6.—*Afr. trop.*, *India culta*.

117. *LODOICEA*. Fl. ♂ in alveolis spadicis numerosi; stamina numerosa.—*Ins. Seychelles*.

118. *LATANIA*. Fl. ♂ in alveolis spadicis solitarii; stamina numerosa.—*Ins. Mascarens.*

119. *HYPHÆNE*. Fl. ♂ in alveolis spadicis solitarii; stamina 6.—*Afr. trop.*, *Madagascar*.

**Tribus VI. Coccinæ.** *Folia pinnatisecta*, segmentis discretis v. confluentibus vernatione reduplicatis. Spadices interfoliacei; spathæ 2. Flores saepius in eodem spadice monoici, bracteati et bracteolati. Ovarium obovoideum, 3- rarissime pluri-loculare, stigmatibus terminalibus. Fructus symmetricus, 1- rarius pluri-locularis et -spermus, pericarpio fibroso, stigmatibus terminalibus, endocarpio osseo v. crustaceo, fossis 3 (rarissime 2 v. 4-7) quarum 3 loculis abortientibus respondent, tertia fertilis. Semen ope rapheos ramorum endocarpio plus minus arcte adhærens, hilo diffuso; albumen æquabile, oleosum. Embryo poro endocarpii oppositus.

Subtribus 1. *Bactrideæ*. *Palmæ aculeatæ*. *Fructus 1-spermus*, *endocarpio medio v. supra medium 3-poroso*.—Omnes *Americanæ*.

\* *Corolla fl.* ♀ *alte gamopetala*.

120. *BACTRIS*. Fl. ♂ femineis minores, spadice non immersi. Endocarpium osseum. Caudex erectus, foliis terminalibus segmentis acuminatis.

121. *DESMONCUS*. Fl. ♂ femineis majores, spadice non immersi. Endocarpium tenue. Caudex elongatus, scandens, foliis subremotis rhachi in funem producta, segmentis acuminatis.

122. *ASTROCARYUM*. Fl. ♂ femineis minores, alveolis spadicis immersi. Endocarpium osseum. Caudex erectus, foliis terminalibus, segmentis præmorsis.

\*\* *Petala fl.* ♀ *basi tantum connata*.

123. *ACROCOMIA*. Fl. ♂ alveolis spadicis immersi, antheris magnis exsertis. Fl. ♀: Petala convolutivo-imbricata. Foliorum segmenta acuminata.

124. *MARTINEZIA*. Fl. ♂ spadice non immersi, antheris inclusis. Fl. ♀: Petala valvata. Foliorum segmenta cuneata, præmorsa.

Subtribus 2. Elæidæ. *Palme inermes*. Fl. ♂ *spadice immersi, stamina monadelpha v. libera*. Fl. ♀ *polyptali*. Fructus 1-3-spermus, endocarpio supra medium 3-poroso. Foliorum segmenta attenuato-acuminata.

125. ELÆIS. Fl. ♂ in alveolis spadice immersi. Foliorum segmenta acuminata.—*Afr. et Amer. trop.*

Subtribus 3. Eucocoinæ. *Palme inermes*. Fructus 1-∞-spermus, endocarpio osseo et, Jubbæa excepta, basin versus 3-6-poroso. Foliorum segmenta acuminata v. apice attenuata.—Omnes, *Coco nucifera* excepta, Americanæ.

\* *Spadix simplex*.

126. DIPLOTHEMIUM. Stamina 6-∞.

\*\* *Spadix simpliciter ramosus*.

127. COCOS. Fl. ♂: Petala lanceolata. Stamina 6, inclusu. Fructus 1-spermus.

128. MAXIMILIANA. Fl. ♂: Petala minuta, staminibus 6 exsertis multo minora. Fructus 1-spermus.

129. SCHZELERA. Fl. ♂: Petala elongato-clavata v. cylindracea; stamina 6, petalis breviora. Fructus 1-3-spermus.

130. ATTALIA. Fl. ♂: Petala lanceolata; stamina 10-24, inclusa, antherarum loculis connatis. Fructus 2-6-spermus.

131. JUBBÆA. Fl. ♂: Petala lanceolata; stamina numerosa, inclusa, antherarum localis connatis. Fructus 1-spermus, endocarpio medio v. paullo infra medium 3-poroso.

132. ORBIGNYA. Fl. ♂: Petala ovata, integra v. dentata; stamina 12-24, inclusa, antherarum localis discretis tortis. Fructus 2-6-spermus.

#### GENERA DUBIA AUT IMPERFECTE COGNITA.

ACCELOREHAPHE, H. Wendl. in Bot. Zeit. 1879, 148, nomen tantum (e tribu *Coryphearum*).

BISMARCKIA, Hildebr. et H. Wendl. in Bot. Zeit. 1881, 93 (e tribu *Borassearum*). Fructus obovoideus, 1-locularis cum loculis 2 rudimentariis, stigmatibus basilaribus, pericarpio crasso subspongioso fragiliter extus lævi sicco rugoso, endocarpio soluto intus fasciis 3-6 verticalibus ramosis anastomosantibus costato. Semen ovoideum, profunde rugosum, albumine corneo ruminato, sulco hippocrepiformi ventre exsculpto; embryo apicalis.—*Madagascaria occidentalis*.

CHRYSLIDOCARPUS, H. Wendl. in Bot. Zeit. 1878, 118 (e tribu *Arecearum*). Fructus e carpello unico, ellipsoideo-turbinatus, resupinatus, stigmatibus subbasilaribus, epicarpio tenuissimo secedente, mesocarpio fibroso fibris applanatis. Semen oblongo-conicum, basi acutata, rapheos ramis ascendentibus dorso leviter anastomosantibus, albumine æquabili; embryo infra medium albuminis.—*Palma inermis, stolonifera, caudicibus fasciculatis mediocribus annulatis. Folia pinna-tisecta, segmentis ad 100 longe acuminatis apice 2-fidis, nervis lateralibus a costa remotis (Hyophorbe indica et H. lutescens, Hort.)—Madagascaria.*

DIODOSPERMA, H. Wendl. in Bot. Zeit. 1878, 118 (e tribu *Coryphearum*).—Semen subglobosum, aciculatum, rapheos ramis arcuato-divergentibus, albumine æquabili processu fusco crassissimo conoideo supra hilum progrediente et per totum albumen excavatum penetrante; embryo dorsalis, infra medium seminis.—*Brasilia australis*.

MEDEMA, P. G. v. Würtemb. in litt. ad. H. Wendl. in Bot. Zeit. 1881, 93 (e tribu *Borassearum*). Fructus ellipsoideus, a perianthio secedens, 1-spermus, ima basi areolis 2 parvulis lævibus interdum confluentibus notatus, stigmatum cicatrice areolis opposito, pericarpio crasso suberoso pallido nitido sicco ruguloso, endocarpio lævi albo. Semen oblongum, basi lata lateri endocarpii adherente, testa crassa extus molliter coriacea albida intus brunnea, albumine corneo centro cavo leviter ruminato; embryo basilaris.—'Caudex simplex. Folia flabelliformia, filis paucis inter lacinias, petiolo inermi, ligula 0. Amenta ♂ gracilia, squamis totis testaceo-tomentoso-hirtulis. Carpella matura 1-3.'—Mart. Hyphæna Argun, Mart. Hist. Nat. Palm. iii. 227.—Species 2, *Nubica* et *Ahyssinica*.

MICRONOMA, H. Wendl. in litt. (e subtribu *Geomomearum*). Fructus e carpello unico, drupaceus, turbinato-globosus, leviter compressus, lævis, haud apiculatus, fere resupinatus, stigmate basilaris, mesocarpio tenuissime grumaceo, endocarpio vitreo-crustaceo. Semen oblique turbinato-globosum, leviter compressum, raphe circulari leviter immersa latiuscula utrinque in dorso de vertice usque ad basin ramosa, ramis patentissimis irregulariter duplicato-dichotomis, albumine æquabili; embryo basilaris juxta hilum.—*Peruvia orientalis*.

**PHOLIDOCARPUS**, *Blume in Schultes Syst.* vii. 1308 (e tribu *Coryphearum*). Fructus globosus v. ovoideus, mucronatus, 3-4-spermus, pericarpio tessellato intus fibroso-ligneo. Semen subglobosum, latere endocarpium insertum, hilo ovali, albumine duro ruminato; embryo basilaris. Caudex elatus, obscure annulatus. Folia *Borassi*, segmentis 4-5-partitis, petiolo aculeato.—Species 2, Archipelagi Malayani incolæ.—*Mart. Hist. Nat. Palm.* iii. 222. *Miq. Fl. Ind. Bat.* iii. 47. *Suppl.* 591, et in *Palm. Archip. Ind.* 10 (ubi fructus 1-spermus dicitur). *Beccari, Males.* i. 79.—*Rumph. Herb. Amboin.* i. 56, t. 12. In exemplare a. cl. Beccari misso, nervatio foliorum potius *Coryphearum* quam *Borassarum*.

**POROTHRIX**, *H. Wendl. ex Griseb. Cat. Pl. Cub.* 221 (*Thrinax Pumilio*, Lodd.); genus est non descriptum, cujus fructus solum in herbariis exstat, albumine centro perforato margine haud ruminato.

**RAVENIA**, *Bouché in Monatschr. Verein. Beford. Gartenb.* 1878, 197, 323, cum ic. xylog. 324; *Lemaire, Ill. Hortie.* xxvii. 164, cum ic., est palma inermis non descripta, statu juvenili tantum nota, montium insulæ Comoro incola, suadente H. Wendlandio in litt. *Hyophorbi* proxima.

**ROEBELIA**, *Engel in Linnæa*, xxxiii. 680, t. 3, f. 5, palma Andium Colombiæ incola, inflorescentia et fructu ignotis, delenda est.

#### TRIBUS I. ARECÆ.

1. **Areca**, *Linn. Gen. n.* 1225.—Flores in eodem spadice infrafoliaceo paniculatim v. simpliciter ramoso monoici, obsolete bracteati, ♂ in ramulis numerosi, solitarii v. 2-ni, distichi v. secundi, ♀ basin versus ramorum solitarii. Fl. ♂ minuti, compressi v. triquetri-compressi. Sepala parva, subtriangularia, libera v. connata, haud imbricata. Petala sepalis multo majora, oblique lanceolata, acuta v. acuminata, valvata. Stamina 3 v. 6, filamentis brevibus v. obsoletis; antheræ sagittatæ, basifixæ, erectæ. Ovarii rudimenta minuta. Fl. ♀ masculis multo majores, perianthio post anthesin aucto. Sepala orbicularia, concava, late imbricata. Petala paullo longiora, orbicularia, convolutivo-imbricata, apicibus acutatis valvatis. Staminoa minuta v. obsoleta. Ovarium ovoideum, 1-loculare; stigmata 3, sessilia, subulata, erecta v. recurva; ovulum basilare, erectum. Fructus ovoideus v. oblongus; stigmate terminali, pericarpio crasse carnosus et fibroso, endocarpio tenui testæ adherente. Semen ovoideum v. subhemisphaericum, basi truncatum, erectum, teres, hilo basilari, rapheos ramis ascendentibus a basi ramosis reticulatis, albumine ruminato; embryo basilaris.—Palmæ inermes, humiles v. elatæ, caudicibus solitariis v. cæspitosis annulatis. Folia terminalia, æqualiter pinnatisecta, segmentis lanceolatis acuminatis plicatis marginibus basi recurvis, superioribus confluentibus bifidis v. truncatis et multifidis, rhachi trigona dorso convexa facie superne acuta, inferne petioloque concavis, vagina elongata. Spadix latus v. contractus, ramis patentibus fructiferis pendulis; spathæ 3 v. plures, caducæ, inferiore completa, superioribus sæpe bractei-formibus. Flores sæpe albi. Fructus mediocris v. majusculus, sanguineus v. croceus.

Species enumeratæ ad 24, Asiæ tropicæ, Archipelagi Malayani, Australiæ tropicæ et Novæ Guineæ incolæ. *Mart. Hist. Nat. Palm.* 169, 311 (excl. sp.), t. 102, 149. *Kunth, Enum. Pl.* iii. 183, 637 (excl. sp.). *Gertn. Fruct. i.* t. 7, f. 2. *Blume, Rumph.* ii. 64, t. 99, 100, f. 1, 101, 102 A, B, C, 108; iii. t. 160, 163 D. *Griff. Palm. Brit. Ind.* 146, t. 230 (*Areca* sect. *Pinanga*). *Miq. Fl. Ind. Bat.* iii. 8 (*Areca* sect. 1); *Palm. Archip. Ind.* 22. *Scheff. in Natuurk. Tijdschr. Ned. Ind.* xxxii. 149 (excl. sect. *Spiranthe*); et in *Ann. Jard. Bot. Buitenz.* i. 112, 132, 144, t. 1 ad 8. *H. Wendl. et Drude in Linnæa*, xxxix. 175, t. 1, f. 1. *Drude in Bot. Zeit.* 1877, t. 6, f. 16, 17. *Beccari, Malesia*, i. 17 (excl. subgen. 3), 97. *Roxb. Cor. Pl.* t. 75. *Bot. Mog.* t. 6025. *Benth. et Trim. Med. Plant.* t. 276.

Genus in sectiones 2 dividitur:—

1. **Ewareca**, *Scheff. in Ann. Jard. Bot. Buitenz.* 114. Spadix duplicato-ramosus, axis primarius non incrassatus. Stamina 3 v. 6. Fl. ♀ distantes in ramorum basi secundi. *Areca* sect. *Eoetheanthæ*, *Scheff. in Natuurk. Tijdschr. Ned. Ind.* xxxii. 156.

2. **Balanocarpus**, *H. Wendl. & Drude in Linnæa*, xxxix. 176 (subgen.). Spadix simpliciter ramosus, axis primarius incrassatus. Stamina 6. Fl. ♀ in axi ipso approximati. *Areca* sect. *Axonianthe*, *Scheff. in Natuurk. Tijdschr. Ned. Ind.* xxxii. 156.

2. **Mischophloeus**, *Scheff. in Ann. Jard. Bot. Buitenz.* i. 115, 134, 152, t. 11, 12.—Flores in eodem spadice infrafoliaceo ramosissimo monoici, inferiores in ramis 3-ni inter-

medio ♀ spiraliter dispositi, superiores 2-ni ♂ subdistichi; bracteæ et bracteolæ obsoletæ. Fl. ♂ asymmetrici, compressi. Sepala in cupulam subtrigonam 3-dentatam basi elongatam connata, haud imbricata. Petala oblique ovato- v. lineari-oblonga, valvata. Stamina 9, filamentis brevibus basi connatis; antheræ lineares, basi sagittata affixæ, erectæ. Ovarii rudimentum minutum. Fl. ♀ masculis multo minores, ovoidei, perianthio post anthesin aucto. Sepala orbicularia, late imbricata. Petala paullo longiora, orbicularia, convolutivo-imbricata, apicibus acutatis valvatis. Staminodia 9, minuta. Ovarium ovoideum, 1-loculare; stigmata 3, sessilia, brevia, recurva; ovulum basilare, erectum. Fructus ovoideus, stigmatibus terminalibus, pericarpio carnosus et fibroso, endocarpio tenui. Semen globoso-ovoideum, basi truncatum, hilo basilari, rapheos ramis dorsalibus ascendentibus a basi subsimplicibus reticulatis, albumine ruminato; embryo basilaris.—Palma inermis, caudice elato annulato basi radicibus epigæis suffulto. Folia terminalia, inæqualiter pinnatisecta, segmentis lanceolatis duplicato-dentatis plurinerviis, marginibus basi recurvis, inferioribus 1-nerviis acuminatis. Spadices duplicato-ramosi, ramis patentibus, pedunculo brevi; spatha 1 completa, decidua. Flores parvi.

Species 1, Ternatensis. *Beccari, Malesia*, i. 22 (*Areca*).

3. *Pinanga*, *Blume, Rumph.* ii. 76, t. 87, 108 A, 109 ad 116.—Flores in eodem spadice infrafoliaceo simplici v. simpliciter ramoso monoici, di-hexastiche dispositi, 3-ni intermedio ♀, obsoletæ bracteati et bracteolati. Fl. ♂ asymmetrici, compressi v. triquetri-compressi. Sepala 3, libera v. connata, acuta, carinata, haud imbricata. Petala 3, oblique lanceolata v. ovata, acuminata, valvata. Stamina 6-∞, filamentis brevibus basi connatis; antheræ lineares, basi sagittata affixæ, erectæ. Ovarii rudimenta 0. Fl. ♀ masculis minores, late ovoidei v. globosi, perianthio post anthesin aucto. Sepala orbicularia, late imbricata. Petala orbicularia, convolutivo-imbricata, apicibus acutatis valvatis. Staminodia 6 v. 0. Ovarium ovoideum v. subturbinatum, 1-loculare; stigmata 3, brevia, crassa, confluentia; ovulum basilare, erectum. Fructus ovoideus v. ellipsoideus, stigmatibus terminalibus, pericarpio crassiusculo fibroso, endocarpio tenui interdum testæ adhærente. Semen ovoideum v. ellipsoideum, erectum, hilo basilari, rapheos ramis ascendentibus a basi subsimplicibus dein anastomosantibus, albumine ruminato; embryo basilaris.—Palmæ inermes, caudicibus solitariis v. fastigiatis v. soboliferis humilibus v. medioeribus annulatis. Folia terminalia, inæqualiter fissa v. pinnatisecta v. simplicia apice bifida, segmentis plicatis plurinerviis, inferioribus acuminatis, superioribus confluentibus, marginibus non incrassatis basi recurvis, rhachi superne acuta, inferne petioloque antice convexis, vagina elongata. Spadix sæpe parvus, interdum simplicissimus, pedunculo brevi, ramis fastigiatis v. flabellatim dispositis; spatha 1 completa, tumida v. complicato-compressa et bialata; bracteæ foveas marginantes, bracteolæ inconspicuæ. Flores inter minores. Fructus plerumque croceus v. sanguineus.

Species enumeratæ ad 25, Indiæ transgangeticæ et Archipelagi Malayani incolæ, una Deccanensis. *Mart. Hist. Nat. Palm.* iii. 183 (*Seaforthia* sp. 3 ad 10) et 313 (*Seaforthia* sect. *Orthostichanthæ*) t. 158, f. 2, 3. *Kunth, Enum. Pl.* iii. 640 (excl. sp.). *Griffith, Palm. Brit. Ind.* 146, t. 230 C, 231, 232 A, B, C, 235 (*Areca* sect. *Anaclasmus*); *Notul.* iii. 164;  *Ic. Pl. Asiat.* t. 248 (*Areca*). *Miq. Fl. Ind. Bat.* iii. 20 (*Ptychospermatis* species 1, 3, 5 ad 20). *Scheff. in Naturk. Tijdsch. Ned. Ind.* xxxii. 171; in *Ann. Jard. Bot. Buitenz.* i. 115, 133, 148, t. 13, 14, 15, 16, f. 1, 17 ad 21. *Kurz, For. Fl.* ii. 538; et in *Journ. As. Soc. Beng.* xliii. pars 2, 200 (*Areca* sp. 5 ad 7), t. 12. *H. Wendl. et Drude in Linnaea*, xxxix. 176. *Drude in Bot. Zeit.* 1877, t. 5, f. 12, 13.

4. *Xentia*, *Blume, Rumph.* ii. 94, t. 106, 160.—Flores in ramulis 4-gonis ejusdem spadicis infrafoliacei fastigiatim ramosi monoici, in areolis decussatim oppositis 3-ni intermedio ♀; bracteæ bracteolæque obsoletæ. Fl. ♂ asymmetrici, compressi. Sepala parva, acuta, haud imbricata, basi connata. Petala multo majora, oblique ovato-oblonga v. lanceolata, acuminata, valvata. Stamina 6, filamentis brevibus subulatis basi connatis; antheræ lineares, erectæ, basifixæ. Ovarii rudimentum parvum. Fl. ♀ pyramidato-

trigoni, masculis multo minores. Sepala orbiculata, late imbricata. Petala multo longiora, ovato-lanceolata, acuminata, basi convolutivo-imbricata, apicibus elongatis valvatis. Staminodia obscura. Ovarium ovoideum, 1-loculare; stigmata 3, minuta, erecta, 3-gona; ovulum basilare, erectum. Fructus ellipsoideus, stigmatibus terminalibus, pericarpio fibroso, endocarpio tenui chartaceo. Semen erectum, ellipsoideum, hilo basilari, rapheos ramis paucis subsimplicibus ascendentibus arcuatis laxè reticulatis, albumine æquabili; embryo basilaris.—Palmæ inermes, caudice elato annulato. Folia terminalia, æqualiter pinnatisecta, segmentis suboppositis lineari-lanceolatis acuminatis v. 2-dentatis basi callosa insertis, marginibus basi recurvis, costa prominula subtus paleis persistentibus aucta, nervis extimis marginalibus, rhachi facie acuta, petiolo dorso convexo facie concavo, vagina cylindracea. Spadices patentes, pedunculo brevi compresso, ramis basi spathellis elongatis anguste lanceolatis auctis, ramulis elongatis pendulis gracilibus; spathæ 3, inferiore incompleta; bracteæ 3-floræ, brevissimæ, semilunares, spadici adnatæ; bracteolæ ad basin floris ♀. Flores albi. Fructus minutus.

Species 3, Novæ Guinæe et insularum Moluccarum incolæ. *Mart. Hist. Nat. Palm.* iii. 312 (*Kentia* sp. 1). *Kunth, Enum. Pl.* iii. 639. *H. Wendl. et Drude in Linnæa*, xxxix. 179, 190. *Scheff. in Ann. Jard. Bot. Buitenz.* i. 126. *Beccari, Malesia*, i. 40, 98, t. 2, f. 23 ad 32. Ovulum a Blumeo basilare descriptum et depictum ut in speciebus a nobis scrutatis, sed genus ab auctoribus omnibus cæteris inter ea ovulo parietali locatum est. *K. exorhiza*, *H. Wendl. in Seem. Fl. Vit.* 269, t. 78, ovulo parietali, vix hujus generis. *K. acuminata*, *Wendl. et Drude l. c.* t. 2, f. 4, imperfecte nota est.

5. *Hydriastele*, *H. Wendl. et Drude in Linnæa*, xxxix. 180, 190, 208.—Flores in eodem spadice infrafoliaceo simpliciter ramoso monoici, in areolis decussatim oppositis dispositi, 3-ni intermedio ♀; bracteæ et bracteolæ obsoletæ. Fl. ♂ asymmetrici, compressi. Sepala minuta, acuta, haud imbricata. Petala ovato-lanceolata, acuminata, valvata. Stamina 6, filamentis brevibus subulatis; antheræ lineares, erectæ, basifixæ. Fl. ♀ masculis multo minores, subglobosi, perianthio post anthesin aucto. Sepala reniformia, imbricata. Petala paullo longiora, orbicularia, convolutivo-imbricata. Staminodia obsoleta. Ovarium globosum v. ovoideum, 1-loculare; stigmata 3, minuta, sessilia, patula, depressa; ovulum supra medium loculi insertum, pendulum. Fructus parvus, ellipsoideus, lævis v. costatus, stigmatibus terminalibus, pericarpio fibroso, fibris interdum in fasciculos longitudinales dispositis costas efficientibus, endocarpio tenuiter crustaceo. Semen ellipsoideum, erectum, liberum, hilo laterali, raphe tenui ramis paucis a chalaza apicali descendentibus remote reticulatis, albumine æquabili; embryo basilaris.—Palma inermis, caudice elato annulato. Folia terminalia, pinnatisecta, segmentis alternis linearibus præmorsis apice fissis, costa inferne paleis caducis conspersa, marginibus tenuibus, rhachi lateraliter compressa dorso convexa, petiolo facie concavo, vagina breviuscula. Spadices breviter lateque pedunculati, a basi ramosi, ramis elongatis pendulis gracilibus obtuse quadratis; spathæ 2 completæ, compressæ, deciduæ, inferiore ancipiti; bracteæ et bracteolæ in cupulam obscuram connatæ. Flores parvi, ♀ minuti.

Species 1, Australiæ tropicæ incola. *Benth. Fl. Austral.* vii. 138 (*Kentia Wendlandiana*).

6. *Adelonenga*, *Beccari, Malesia*, i. 26, t. 2, f. 10–17 (*Nengæ subgen.*).—Flores in eodem spadice infrafoliaceo simpliciter ramoso monoici, in areolis decussatim oppositis 3-ni, intermedio ♀, obsolete bracteati et bracteolati. Fl. ♂ asymmetrici, trigono-compressi. Sepala brevissima, triangulari-ovata, acuminata. Petala lanceolata, apice attenuata, valvata. Stamina 6, filamentis brevissimis triangularibus; antheræ lineari-lanceolatæ, apiculatæ, basifixæ, erectæ. Ovarii rudimentum inconspicuum. Fl. ♀ globosi, masculis minores, perianthio post anthesin immutato v. paullo aucto. Sepala et petala consimilia, rotundata, convolutivo-imbricata. Staminodia 3, minuta. Ovarium globoso-turbinatum, 1-loculare; stigma 3-lobum; ovulum parietale. Fructus sphaericus v. breviter ellipsoideus, apiculatus, stigmate terminali, pericarpio carnosulo intus fibroso, endocarpio crustaceo. Semen globoso-ovoidum, liberum, hilo elongato laterali, rapheos ramis axè

reticulatis semen circumambientibus, albumine ruminato; embryo basilaris.—Palmæ graciles, inermes; caudice humili annulato. Folia terminalia, æqualiter pinnatisecta, segmentis subregularibus v. interruptis lineari-lanceolatis, v. cuneatis truncatis apice laceris v. dentatis 1-∞-nerviis, marginibus basi recurvis, rhachi subtrigona v. dorso convexa et facie canaliculata petioloque obtuse 3-gono glabris v. furfuraceis, vagina valde elongata longe fissa. Spadix primum erectus, fructifer erecto-patens, ramis filiformibus flexuosis; spathæ 2 completæ, elongatæ, complanatæ; bracteæ et bracteolæ in annulum brevissimum connatæ. Flores inter minores. Fructus parvus.

Species 2, Novæ Guinææ incolæ.

7. **Gronophyllum**, Scheff. in *Ann. Jard. Bot. Buitenz.* i. 135, 153.—Flores in eodem spadice infrafoliaceo fastigiatis ramoso monoici, in areolis decussatis oppositis 3-ni intermedio ♀, v. ♂ solitarii et 2-ni, obsolete bracteati et bracteolati. Fl. ♂ asymmetrici, trigono-compressi. Sepala parva, acuta, haud imbricata. Petala ovato-lanceolata, acuminata, valvata. Stamina 6, filamentis brevibus rectis; antheræ lineares, basifixæ, erectæ. Ovarii rudimentum minutum, 3-lobum. Fl. ♀ masculis minores, perianthio post anthesin aucto. Sepala orbiculata, late imbricata. Petala longiora, basi dilatata, late imbricata, apicibus incrassatis triangularibus valvatis. Staminodia parva v. 0. Ovarium oblongum, umbonatum, 1-loculare; stigmata 3, crassa, deltoidea, erecta; ovulum parietale. Fructus parvus, pisiformis v. oblongo-ellipsoideus, stigmatibus terminalibus, pericarpio fibroso intus lævi. Semen pericarpio adhærens, globosum v. oblongum, hilo elongato laterali, rapheos ramis descendentibus laxè reticulatis, albumine ruminato; embryo basilaris.—Palmæ inermes, caudice gracili annulato. Folia terminalia, æqualiter pinnatisecta, segmentis cuneatis 1-3-nerviis truncatis apice crosis v. laceris multinerviis, summis confluentibus, marginibus basi recurvis, nervis extimis marginalibus, rhachi 3-gona dorso inferne convexa petioloque teretiusculo v. inferne canaliculato furfuraceis, vagina valde elongata longe fissa. Spadix breviter pedunculatus, ramis gracilibus pendulis; spathæ completæ 3, elongatæ, complanatæ, caducæ; bracteæ et bracteolæ in annulum brevissimum connatæ. Flores inter minores. Fructus parvus.

Species 4, Novæ Guinææ et insularum Celebes incolæ. *Beccari, Malesia*, i. 28, 98, t. 2, f. 1-22 (*Nenga* subgen. *Gronophyllum*).

8. **Wongella**, *Beccari, Malesia*, i. 32, t. 1.—Flores in eodem spadice infrafoliaceo simplici monoici, in areolis decussatis oppositis 3-ni intermedio ♀, bracteati et 2-bracteolati. Fl. ♂ asymmetrici. Sepala minuta, ovata, acuta, haud imbricata. Petala oblique ovato-lanceolata, acuminata, valvata. Stamina 6, filamentis rectis subulatis; antheræ lineares, basifixæ, erectæ. Ovarii rudimenta minuta. Fl. ♀ elongato-pyramidati, masculis minores, perianthio post anthesin paullo aucto. Sepala orbiculata, late imbricata. Petala longiora, basi concava late imbricata, supra medium ovato-lanceolata acuta valvata. Staminodia 3 v. 0. Ovarium globoso-ovoideum, basi abrupte contractum, 1-loculare; stigmata 3, brevia, confluentia, recurva; ovulum elongatum, parietale, pendulum. Fructus elongatus, rectus v. lente curvus, stigmatibus terminalibus, pericarpio parce fibroso, endocarpio tenuissimo. Semen elongato-conicum, erectum, endocarpio arcte adnatum, raphe inconspicua ramis gracilibus longitudinalibus subliberis, albumine æquabili; embryo basilaris.—Palmæ humiles, inermes, caudicibus arundinaceis annulatis. Folia terminalia, æqualiter pinnatisecta v. flabelliformia et furcata, segmentis superioribus truncatis multinerviis erosis v. fissis, inferioribus lineari-lanceolatis longe acuminatis, marginibus basi recurvis, rhachi et petiolo trigonis et cum vagina valde elongata longe fissa furfuraceo-scaberulis. Spadix gracilis, pendulus, subflexuosus; spathæ 2 completæ, elongatæ, membranaceæ, complanatæ, deciduæ; bracteæ et bracteolæ equaniformes. Flores fructusque parvi.

Species 2 v. 3, Archipelagi Malayani et Novæ Guinææ incolæ. *Griff. Palm. Brit. Ind.* 156, t. 232, f. 2 (*Areca paradoxa*). Habitus et stigmata *Pinangæ*, sed ovulum certe infra apicem loculi pendulum.

9. *Xentlopsis*, Brongn. in *Comptes Rend. Acad. Sc. Par.* lxxvii. 398.—Flores in eodem spadice infrafoliaceo fastigiatim ramoso monoici, spiraliter dispositi, inferiores 3-ni intermedio ♀, superiores solitarii v. 2-ni ♂, brevissime bracteati et bracteolati. Fl. ♂ asymmetrlici, late trigono-compressi. Sepala late triangulari-rotundata, acuta, concava, imbricata. Petala lata, oblique ovata, obtusa, coriacea, valvata. Stamina numerosa, fasciculata, filamentis brevibus subulatis basi connatis; antheræ lineari-elongatæ, basi sagittatæ, dorsifixæ, erectæ, ovarii rudimentum 0. Fl. ♀ masculis minores, pyramidato-globosi, perianthio crasse coriaceo, post anthesin valde aucto. Sepala orbicularia, subacuta, valde concava, late imbricata. Petala paullo longiora, basibus latissimis concavis convolutivo-imbricatis, apicibus abrupte angustatis acutis valvatis. Staminodia 0. Ovarium globoso-ovoideum, basi valde contractum, 1-loculare; stigma crassum, conoideum, apice 3-lobum, lobis trigonis erectis; ovulum parietale. Fructus ellipsoideus v. ovoideus, rostratus v. vertice rotundato, stigmatē terminali, pericarpio crasso fibroso, endocarpio crustaceo intus lævi. Semen globosum v. ellipsoideum, erectum, liberum, hilo elongato verticem seminis attingente, rapheos ramis reticulatis semen totum involventibus, albumine duro æquabili; embryo basilaris.—Palmæ inermes, caudice elato robusto annulato. Folia terminalia, æqualiter pinnatisecta, segmentis lineari-ensiformibus apice attenuatis obtusis v. dentatis valde coriaceis, costa valida, nervis prominulis, marginibus angulato-incrassatis basi recurvis, costa robusta obtuse 3-gona v. quadrata faciebus planis, petiolo et vagina non visis. Spadices magni, crassi, ramis elongatis robustis; spathæ non descriptæ; bracteæ et bracteolæ in cupulam brevem areolam marginantes connatæ. Flores inter majores. Fructus mediocris v. magnus.

Species 3 examinavimus Novo-Caledonicas, a Museo Parisiensi receptas:—1. *K. oliveiformis*, Brongn., rhachi folii quadrata, fructu parvo umbonato (nullo modo rostrato), seminis hilo angusto, rapheosque ramis transverse reticulatis; fl. ♂ non visi. 2. *K. macrocarpa*, Brongn., rhachi folii 3-gona, fructu globoso-ellipsoideo granulato, semine globoso, hilo lato, rapheos ramis verticalibus impressis irregulariter ramosis. 3. Species diversa? sub nomine *K. macrocarpæ*, fructu magno utrinque rostrato granulato, hilo et raphe ut in No. 1. *K. divaricata*, Brongn., generice differt fl. ♂ symmetrico et aliter.

10. *Veitchia*, H. Wendl. in *Seem. Fl. Vit.* 271, t. 81.—Flores in eodem spadice infrafoliaceo duplicato-ramosissimo monoici, inferiores 3-ni intermedio ♀, superiores solitarii v. 2-ni superpositi ♂; bracteæ bracteolæque obsolete. Fl. ♂ parvi, subsymmetrlici. Sepala chartacea, ovato-rotundata, concava, basi connata, marginibus superne paullo imbricatis, nervosa. Petala paullo longiora, late elliptica, ima basi connata, coriacea, valvata. Stamina 6, basi perianthii inserta, filamentis brevissimis; antheræ lineari-oblongæ, basifixæ, erectæ. Ovarii rudimentum crassum, columnare, truncatum. Fl. ♀ masculis multo majores, subrotundati, a dorso compressi, perianthio valde aucto. Sepala crasse coriacea, oblique rotundata, valde concava, late imbricata. Petala consimilia sed multo minora, convolutivo-imbricata. Staminodia 0. Ovarium late ovoideum v. subglobosum, basi valde contractum et cylindraceum, 1-loculare, in stigma conoideum tridentatum contractum dentibus trigonis erectis; ovulum parietale. Fructus magnus, ellipsoideus v. fusiformi-ovoideus et subrostratus v. subglobosus, stigmatē terminali umbonatus, pericarpio lævi crasso fibroso, endocarpio tenui intus polito. Semen ovoideum, apice rotundatum v. conoideum, erectum, liberum, hilo ad verticem extenso lato, testa brunnea, rapheos ramis descenditibus prominulis laxè reticulatis, albumine denso æquabili; embryo basilaris.—Palmæ inermes, caudice elato annulato. Folia terminalia, æqualiter pinnatisecta, pinnis linearibus v. acuminatis oblique truncatis, marginibus incrassatis, costa valida. Spadix breviter crasseque pedunculatus, ramis elongatis fastigiatis basi crassis; spathæ 3? deciduæ. Florum glomeruli basin versus ramorum sparsi, superiores conferti. Fructus ad 2-pollicaris.

Species a Wendlandio indicatæ 4, Ins. Fiji et Novarum Hebridarum incolæ. Flores examinavimus *V. Storckii*, et fructus *V. Joannis*. Genus imperfecte notum.

11. *Hedyoscepe*, *H. Wendl. et Drude in Linnæa*, xxxix. 178, 189, 203, t. 1, f. 4.—Flores in eodem spadice infrafoliaceo simpliciter fastigiatim ramoso monoici, spiraliter dispositi, 3-ni intermedio ♀, obscure bracteati. Fl. ♂ asymmetrici. Sepala anguste lanceolata, basi connata, haud imbricata. Petala lanceolata, striata, valvata. Stamina 9–12, filamentis lineari-subulatis; antheræ lineari-oblongæ, dorsifixæ, versatiles. Ovarii rudimentum conicum. Fl. ♀ masculis minores?, perianthio post anthesin aucto. Sepala cordato-deltoidæa, imbricata. Petala conformia, breviora, ciliata, convolutivo-imbricata apicibus valvatis. Staminodia 0. Ovarium globoso-pyramidatum, 1-loculare; stigmata sessilia; ovulum parietale. Fructus ovoideus, stigmatibus terminalibus, pericarpio crasso intus fibroso. Semen ovoideum, obtusum, hilo lato elongato exsculpto per totam longitudinem endocarpio adnatum, testa cano-fusca, rapheos ramis creberrimis primum horizontalibus dein descendentibus reticulatis, albumine æquabili; embryo basilaris.—Palma elata, inermis, caudice robusto. Folia terminalia, densa, æqualiter pinnatisecta, segmentis numerosis lineari-lanceolatis acuminatis, nervis inferioribus a margine subremotis basi recurvis, rhachi arcuata decurva. Spadix breviter pedunculatus, ramis crassis flexuosis, areolis laxis; spathæ . . . Flores mediocres. Fructus magnus.

Specie 1, insulæ Lord Howe incolæ. *Benth. Fl. Austral.* vii. 138 (*Kentia Canterburyana*).

12. *Wenga*, *H. Wendl. et Drude in Linnæa*, xxxix. 182.—Flores in eodem spadice infrafoliaceo fasciculatim ramoso monoici, spiraliter dispositi, 3-ni intermedio ♀, minute bracteati et bracteolati. Fl. ♂ asymmetrici, 3-gono-compressi. Sepala inæqualia, anguste subulato-lanceolata, petala longe superantia, haud imbricata. Petala oblique oblonga, longe acuminata, valvata. Stamina 6, inæqualia, filamentis subulatis; antheræ lineari-oblongæ, basifixæ, erectæ. Ovarii rudimentum minutum. Fl. ♀ globosi, masculis minores, perianthio post anthesin fere immutato. Sepala orbiculata, late imbricata. Petala consimilia, inclusa. Staminodia obsoleta. Ovarium trapezoideo-ovoideum, basi contractum, 1-loculare; stigmatibus crasso conico 3-fido, lobis trigonis erectis; ovulum parietale. Fructus ellipsoideus, lævis, stigmatibus terminalibus, pericarpio tenui fibroso intus lævi. Semen liberum, cylindraceo-ellipsoideum, hilo laterali elongato, rapheos ramis numerosis impressis reticulatis, albumine ruminato; embryo basilaris.—Palma elegans, inermis, caudice gracili elato annulato. Folia terminalia, æqualiter pinnatisecta, segmentis linearibus acuminatis v. oblique 2–3-fidis, marginibus basi reduplicatis, nervis primariis subtus sparse paleaceis, rhachi 3-gona, petiolo brevi, vagina cylindræa ore valde obliquo. Spadix breviter pedunculatus, ramis gracilibus pendulis; spathæ 2, inferiore completa lanceolata complicata 2-cristata, superiore incompleta persistente v. 0; bractææ 3-floræ, bracteolæque squamiformes. Flores albidii. Fructus parvus, rubro-croceus.

Species 1, Malayana. *Scheffer in Ann. Jard. Bot. Buitenz.* i. 120, 134, 153, t. 9, 10. *Mart. Hist. Nat. Palm.* iii. 311, t. 153, f. 1–3 (*Areca pumila*). *Blume, Rumph.* ii. 77, t. 107 (*Pinanga*).

13. *Loxococcus*, *H. Wendl. et Drude in Linnæa*, xxxix. 185.—Flores in eodem spadice infrafoliaceo subsimpliciter ramoso monoici, spiraliter dispositi, 3-ni intermedio ♀, v. superiores solitarii et 2-ni ♂, minute bracteati et bracteolati. Fl. ♂ asymmetrici. Sepala 3, rotundata, subacuta, imbricata. Petala 3, multo majora, oblique ovata, valvata. Stamina 9–12, filamentis elongatis basi connatis; antheræ lineari-oblongæ, obtusæ, basi breviter biloba affixæ. Ovarii rudimentum parvum, 3-cuspidatum. Fl. ♀ masculis minores, subglobosi, perianthio post anthesin aucto. Sepala rotundata, late imbricata. Petala ovata, basi concava, imbricata, superne triangularia valvata. Staminodia obsoleta. Ovarium late ovoideum, 1-loculare; stigmata 3, minuta, sessilia, erecta; ovulum parietale, pendulum. Fructus oblique globosus, in rostrum rectum v. obliquum abrupte attenuatus, stigmatibus terminalibus, pericarpio coriaceo tenuiter fibroso intus lævi. Semen liberum, subglobosum, apice rotundatum v. acutum, basi intrusum, rugulosum, hilo elongato laterali, rapheos ramis inconspicuis, albumine profunde et creberrime

ruminato; embryo fere basilaris.—Palma haud elata, inermis, caudice annulato. Folia terminalia, æqualiter pinnatisecta, glaberrima, segmentis elongatis coriaceis apicibus oblique truncatis, marginibus incrassatis basi recurvis, costa valida, nervis tenuibus, rhachi dorso convexa facie sulcata, petiolo mediocri, vagina breviuscula. Spadix breviter crasseque pedunculatus, sanguineus, ramis patentibus crassis divaricatis, basi bractea squamiformi auctis; spathæ 2, elongatæ; bracteæ et bracteolæ parvulæ, squamiformes. Flores mediocres. Fructus diametro nucis avellanæ, lævis, atro-violaceus.

Species 1, Zeylanica. *Bot. Mag. t. 6358.*

14. *Actinorhytis*, *H. Wendl. et Drude in Linnaea*, xxxix. 184.—Flores in eodem spadice infrafoliaceo duplicato-ramoso monoici dispositi, inferiores 3-ni intermedio ♀, v. superiores ♂ solitarii et 2-ni, bracteati et 2-bracteolati. Fl. ♂ minuti, asymmetrici. Sepala orbicularia, compresso-carinata, concava, late imbricata. Petala 3, ovata, crasse coriacea, subæqualia, valvata. Stamina 24–30, in basi lata perianthii multiseriatim fasciculata, filamentis gracilibus apice inflexis; antheræ lineares, dorsifixæ, versatiles. Ovarii rudimentum parvum, subulatum, v. 0. Fl. ♀ masculis multo majores, ovoidei, perianthio post anthesin valde aucto. Sepala 3, reniformi-rotundata, late imbricata. Petala paullo longiora, basi orbicularia late imbricata, apice triangularia coriacea valvata. Staminodia 3 v. 0. Ovarium late ovoideum, 1-loculare; stigmata 3, parva, subulata, recurva; ovulum parietale, pendulum. Fructus magnus, ellipsoideus v. ovoideus, stigmatibus terminalibus, pericarpio crasso fibroso, endocarpio crustaceo. Semen magnum, globoso-ellipsoideum, endocarpio arcte adhærens, hilo lato verticem seminis attingente, rapheos ramis creberrime reticulatis, albumine profunde radiatim ruminato; embryo elongatus, basilaris.—Palma inermis, elata, caudice robusto annulato. Folia terminalia, æqualiter pinnatisecta, segmentis lineari-lanceolatis acutis, apicibus oblique dentatis, marginibus incrassatis basi recurvis, costa valida subtus paleis sparsis persistentibus aucta, rhachi valida petioloque plano-convexo furfuraceis. Spadix breviter pedunculatus, ramis pendulis flexuosis; spathæ 2, completæ, complanatæ, caducæ, inferiore elongata 2-cristata. Flores mediocres. Fructus magnus.

Species 1, Archipelagi Malayani incolæ. *Mart. Hist. Nat. Palm.* iii. 313 (*Seaforthia Calapparia*). *Scheff. in Ann. Jard. Bot. Buitenz.* 122, 136, 156, t. 22, 23. *Blume, Rumph.* ii. 68, in *Adnot. t. 100, f. 2 (Areca)*. *Griff. Palm. Brit. Ind.* 150, t. 230 B (*Areca cocoides*).

15. *Archontophoenix*, *Wendl. et Drude in Linnaea*, xxxix. 182, 190, 211, t. 3, f. 6.—Flores in eodem spadice infrafoliaceo triplicato ramoso monoici, spiraliter dispositi, 3-ni intermedio ♀, v. ♂ solitarii et 2-ni, bracteati et obscure bracteolati. Fl. ♂ asymmetrici, trigono-compressi. Sepala 3, parva, triangulari-rotundata, carinata, imbricata. Petala 3, oblique ovato-oblonga, subacuta, valvata. Stamina 9–24, filamentis gracilibus ina basi connatis, apicibus inflexis; antheræ lineares, basi 2-fidæ, dorsifixæ, versatiles. Ovarii rudimentum styloforme. Fl. ♀ masculis minores, subglobosi, perianthio post anthesin aucto. Sepala 3, orbicularia, convolutivo-imbricata. Petala consimilia sed minora. Staminodia 6, subulata, v. 0. Ovarium trigono-ovoideum, 1-loculare; stigmata 3, minuta, recurva; ovulum parietale. Fructus parvus, globoso-ellipsoideus, stigmatibus subterminalibus umbonatus, pericarpio fibroso, fibris in vittas latas anastomosantes contextis, endocarpio tenuissimo. Semen erectum, endocarpio arcte adhærens, læve, hilo laterali elongato, rapheos ramis laxè reticulatis, albumine profunde ruminato; embryo basilaris.—Palma inermis, elatæ, caudice solitario robusto annulato. Folia terminalia, æqualiter pinnatisecta, segmentis lineari-lanceolatis acuminatis v. apice 2-dentatis, marginibus basi recurvis, subtus sparse paleaceis, costa prominula, nervis tenuibus, rhachi dorso convexa facie alte carinata petioloque superne canaliculato tomentellis, vagina elongata cylindracea alte fissa. Spadices breviter pedunculati, ramis ramulisque flexuosis gracilibus pendulis glabris; spathæ 2 completæ, elongatæ, complanatæ, caducæ; bractea semilunaris, spadici adnata, bracteolæ persistentes. Flores majusculi. Fructus mediocri.

Species 2, Australiæ orientalis incolæ. *Mart. Hist. Nat. Palm.* ii. 181, t. 105, 106, 109 (*Seaforthia*)

Muell. *Fragm. Phyt. Austral.* v. 47, t. 43, 44 (*Ptychosperma*). Benth. *Fl. Austral.* vii. 141 (*Ptychosperma*, sp. n. 2, 3). Bot. Mag. t. 4961 (*Seaforthia*, excl. figs. 9, 10, 11, a *Martio iteratis, quæ ad Ptychosperma elegans pertinent*).

16. *Rhopalostylis*, H. Wendl. et Drude in *Linnaea*, xxxix. 180, t. 1, f. 2.—Flores in eodem spadice infrafoliaceo v. fastigiatim ramoso monoici, spiraliter dispositi, 3-ni intermedio ♀, v. superiores solitarii et 2-ni ♂, bracteati et bracteolati. Fl. ♂ asymmetrici, 3-gono-compressi. Sepala subulato-lanceolata, haud imbricata. Petala oblique ovata, acuminata, valvata. Stamina 6, filamentis subulato-filiformibus apice inflexis; antheræ lineares, dorsifixæ, versatiles. Ovarii rudimentum columnare. Fl. ♀ masculis minores, trigono-globosi, perianthio post anthesin aucto. Sepala rotundata, concava, late imbricata. Petala minora, vix exserta, basi cochleata late imbricata in apices triangulares valvatos repente angustata. Staminodia 0. Ovarium ovoideum, 1-loculare; stigma sessile, conoideum, 3-fidum, segmentis 3-gonis erectis; ovulum parietale. Fructus ellipsoideus, lævis, stigmate terminali umbonatus, pericarpio crassiusculo fibroso intus lævi. Semen ellipsoideum v. ovoideo-oblongum, erectum, liberum, hilo lato a basi ad verticem producto, rapheos ramis laxis v. creberrimis tenuissimis descendentibus reticulatis, albumine æquali; embryo basilaris.—Palmæ inermes, caudice mediocri annulato. Folia terminalia, æqualiter pinnatisecta, segmentis æquidistantibus numerosis anguste ensiformibus acuminatis, marginibus basi recurvis non incrassatis, costa valida, nervis utrinque 1-3, rhachi facie concava furfuracea, petiolo brevissimo, vagina elongata. Spadices breves, patentes, brevissime crasseque pedunculati, ramis subflabellatis crassiusculis densifloris; spathe 2 completæ, oblongæ, complanatæ, inferiore 2-alata; bracteæ fossæ floriferæ adnatæ apicibus subulatis; bracteolæ squamiformes. Flores mediocres. Fructus parvus v. majusculus.

Species 2, Novæ Zelandiæ et insulæ Norfolkiciæ incolæ. Mart. *Hist. Nat. Palm.* iii. 172, t. 151, 152 (*Areca*), et 312 (*Kentia sapida*). Hook. f. *Fl. Nov. Zel.* i. t. 59, 60 (*Areca*). Drude in *Bot. Zeit.* 1877, 637, t. 6, f. 18-21. Bot. Mag. t. 5139, 5735 (*Areca*).

17. *Dictyosperma*, H. Wendl. et Drude in *Linnaea*, xxxix. 181.—Flores in eodem spadice infrafoliaceo simpliciter ramoso monoici, spiraliter dispositi, 3-ni intermedio ♀ v. inferiores ♀ solitarii intermediis 3-nis, supremis solitariis v. 2-nis ♂, bracteati et bracteolati. Fl. ♂ asymmetrici, obtuse 3-goni. Sepala parva, ovata, acuta, distincta. Petala oblique ovata, obtusa, valvata. Stamina 6, filamentis breviusculis apice inflexis; antheræ lineares, dorsifixæ, versatiles. Ovarii rudimentum elongatum, a basi conica sensim attenuatum, trifidum. Fl. ♀ masculis multo minores, subglobosi, perianthio post anthesin valde aucto. Sepala late orbicularia, imbricata. Petala paullo longiora, carnosula, orbicularia, imbricata apicibus leviter imbricatis. Staminodia 6, dentiformia. Ovarium ovoideum, 1-loculare, basi contractum; stigma latum, 3-gonum; ovulum parietale. Fructus olivæformis v. subglobosus, stigmate terminali, pericarpio fibroso, endocarpio tenuissimo. Semen subglobosum v. elongato-ovoidum, hilo laterali verticem attingente, rapheos ramis oblique descendentibus laxè reticulatis, albumine leviter ruminato; embryo subbasilaris.—Palmæ inermes, graciles, caudice annulato. Folia æqualiter pinnatisecta, segmentis lineari-lanceolatis acuminatis v. 2-fidis, summis confluentibus, marginibus incrassatis basi recurvis, costa valida nervisque subtus paleis persistentibus sparsis nudisve, rhachi petioloque gracili furfuraceis trigonis facie canaliculatis, vagina elongata, integra. Spadix in pedunculo brevi glabro v. tomentoso, ramis erectis v. patulis flexuosis, inferioribus basi membranaceo-bracteatis; spathe 2, completæ, a dorso compressæ, caducæ, inferiore bicristata, areolis floriferis depressis magnis; bracteæ bracteolæque squamiformes. Flores ♀ majusculi, albi v. flavescentes. Fructus furfuraceus, parvus.

Species 2 v. 3, insularum Mascarensium incolæ. Balf. f. in Baker, *Fl. Maurit.* 383. Mart. *Hist. Nat. Palm.* iii. 175, t. 154, 155, f. 2, 3 (*Areca*). Scheff. in *Natuurk. Tijd. Ned. Ind.* xxxii. 183 (*Ptychosperma album*), et in *Ann. Jard. Bot. Buitenz.* i. 122. *D. album*, var. *aureum*, ex exemplaribus a Horneo (Hort. Bot. Maurit. Præfect.) missis certe a *D. albo* specifice differt.

18. **Ptychosperma**, Labill. in *Mém. Instit. Par.* 1808, ix. 253. (Seaforthia, R. Br. *Prod.* 267.)—Flores in eodem spadice infrafoliaceo paniculatum ramoso monoici, spiraliter dispositi, 3-ni intermedio ♀, v. superiores solitarii et 2-ni ♂, bracteati et bracteolati. Fl. ♂ symmetrici, ovoidei v. oblongi. Sepala orbicularia, dorso carinata, gibba v. rotundata, late imbricata. Petala ovata v. oblonga, acuta, valvata. Stamina 20–30, fasciculata, filamentis brevibus v. elongatis apicibus rectis; antheræ oblongæ v. lineares, dorso v. basin versus affixæ, versatiles. Ovarii rudimentum gracile, styliforme. Fl. ♀ masculis sæpe minores, subglobosi, perianthio post anthesin aucto. Sepala reniformia v. orbicularia, late imbricata. Petala paullo longiora, orbicularia, convolutivo-imbricata, apicibus acutatis valvatis v. subvalvatis. Staminodia 3 v. plura, minuta. Ovarium oblongum v. ovoideum; stigmata 3, brevia, sessilia; ovulum parietale, pendulum. Fructus ovoideus v. ellipsoideus, interdum rostratus, teres v. sulcatus, 1-locularis, stigmatibus terminalibus, pericarpio sæpius crasso fibroso, endocarpio tenui v. crustaceo lævi. Semen erectum, ovoideum v. oblongum, teres v. profunde 5-sulcatum, hilo a basi ad verticem extenso, rapheos ramis oblique descendentibus laxè reticulatis, albumine plus minusve ruminato; embryo basilaris.—Palmæ inerme, caudice sæpius elato annulato. Folia terminalia, æqualiter pinnatisecta, segmentis linearibus v. a basi apices versus dilatatis præmorsis membranaceis plurinerviis, marginibus incrassatis basi recurvis, terminalibus confluentibus, rhachi trigona tenui, vagina elongata. Spadix patentim ramosus, ramis sæpius gracilibus; spathæ 2 completæ, caducæ; bracteæ et bracteolæ squamiformes. Flores parvuli v. inter minores, glomerulis sæpius sparsis. Fructus majusculus v. parvus.

Species enumeratæ ad 12, Archipelagi Malayani, Novæ Guineæ, Australiæ tropicæ et insularum Pacificarum incolæ. *Mart. Hist. Nat. Palm.* iii. 182, t. 128, 129 (*Seaforthia*). *Benth. Fl. Austral.* vii. 141 (*Ptychosperma*, sp. n. 4). *Seem. Fl. Vit.* 272, t. 82. *Scheff. in Ann. Jard. Bot. Buitenz.* i. 120, 135, 154. *Beccari, Malesia*, i. 47, 99 (excl. sp.). *H. Wendl. in Bot. Zeit.* 1858, 345 (*Seaforthia*). *H. Wendl. et Drude in Linnaea*, xxxix. 183, 215. *H. tenella*, H. Wendl. in *Bot. Zeit.* 1859, 63, est *Pinnangæ* species.

19. **Rhopaloblaste**, Scheff. in *Ann. Jard. Bot. Buitenz.* i. 137, 156, t. 26, 27, f. 1.—Flores in eodem spadice infrafoliaceo paniculatum ramoso monoici, spiraliter dispositi, 3-ni intermedio ♀ v. apices versus ramorum solitarii et 2-ni ♂, minute bracteati et bracteolati. Fl. ♂ symmetrici, globosi v. ovoidei. Sepala orbicularia, concava, late imbricata. Petala ovata v. elliptica, obtusa, valvata. Stamina 6, rarissime 9, filamentis elongatis apice inflexis; antheræ oblongæ, dorsifixæ, versatiles. Ovarii rudimentum columnare v. clavatum, truncatum. Fl. ♀ masculis majores, subglobosi, petalis post anthesin auctis. Sepala orbicularia v. reniformia, concava, late imbricata. Petala paullo longiora, orbicularia, convolutivo-imbricata, apicibus acutis valvatis. Staminodia in cupulam minutam 6-dentatam connata. Ovarium ovoideum, basi abrupte contractum, 1- rarissime 2-loculare; stigmata 3, sessilia, subulata, recurva; ovulum parietale, pendulum. Fructus parvulus, ovoideus, subacutus, stigmatibus terminalibus, pericarpio crassiusculo fibroso intus tenuiter crustaceo lævi. Semen ellipsoideum, liberum, erectum, hilo exsculpto a basi verticem attingente, rapheos ramis obscuris descendentibus laxè reticulatis, albumine parce radiatum ruminato; embryo basilaris.—Palmæ inerme, caudice gracili v. robusto annulato. Folia terminalia, æqualiter pinnatisecta, segmentis alternis anguste lineari-lanceolatis acuminatis 3–5-nerviis, costa tenui subtus sparse paleacea marginibus non incrassatis basi planis v. recurvis. Spadix breviter pedunculatus, laxè ramosus, ramis patulis elongatis gracilibus; spathæ complete 2, caducæ, inferiore breviorè 2-carinata; bracteæ et bracteolæ squamuliformes. Flores et fructus inter minores.

Species 3 nobis notæ, Archipelagi Malayani incolæ. In *R. hexandra*, Scheff. l. c., species typica, caudex robustus, folia magna, pinnis crasse coriaceis, rhachi crassa facie plana dorso convexa lateribus profunde exsculptis; spadices crasse pedunculati ramis robustis; spathæ magnæ coriaceæ inferiore densè velutino-tomentosa; flores majusculi, fructusque fere pollicaris interdum 2-spermus.

Huic indole florum et fructus valde affine est *Ptychosperma singaporense*, Beccari, Males. i. 53, caudice gracili, foliis parvis elegantissimis, pinnis membranaceis, rhachi petioloque gracillimis furfuraceis, spadiceis ramis gracilibus, floribus fructuque parvis. Planta philippinensis (Cuming, No. 1476), foliis *R. singaporensis*, sed glabris, differt spadice paniculatim ramoso, ramis gracillimis. Fructus ignotus est. *Ptychosperma Drudei*, Wendl., fructum 2-spermum *Rhopaloblastis hexandra* exhibet, cum fibris pericarpium in fasciculos longitudinales complanatos dispositis ut in *Hydriastele Wendlandiana*. *P. micranthum*, Beccari, Malesia, i. 52, species est *Rhopaloblastis staminibus* 9.

20. **Cyrtostachys**, Blume, *Rumph.* ii. 101, t. 120.—Flores in eodem spadice infrafoliaceo duplicato-ramoso monoici, in foveis spiraliter dispositis 3-ni intermedio ♀, bracteati et bracteolati. Fl. ♂ symmetrici. Sepala rotundata, late imbricata. Petala valvata. Stamina 6 v. 12–15, exserta, filamentis basi connatis fere triadelphis, apicibus inflexis; antheræ versatiles. Ovarii rudimenta 3, subulata. Fl. ♀ ovoidei, perianthio post anthesin modice aucto. Sepala orbicularia, concava, late imbricata. Petala duplo longiora, suborbicularia, convolutivo-imbricata, apicibus acutatis valvatis. Staminodia in cupulam membranaceam dentatam connata. Ovarium columnare, 1-loculare; stigmata crasse subulata, recurva; ovulum parietale, pendulum. Fructus parvus, elongato-ovoideus, stigmatibus terminalibus, pericarpio tenuiter fibroso intus lævi. Semen ellipsoideum v. subglobosum, læve, liberum, erectum, hilo basilari, raphe obsoleta ramis descendentibus laxè reticulatis, albumine æquabili; embryo basilaris.—Palmæ gregariæ, inermes, petiolis læte rubris, caudice elato gracili annulato. Folia terminalia, æqualiter pinnatisecta, segmentis linearibus rigidis apice attenuatis oblique bidentatis, marginibus incrassatis basi plicata recurvis, costa sparse paleacea, nervis utrinque binis, rhachi inferne subtetragona, superne triquetra, petiolo dorso convexo facie concavo, vagina elongata. Spadix breviter pedunculatus, rhachi compressa, ramis subalternis basi squama auctis, ramulis pendulis; spathe 2 completæ v. 3, complanatæ, ensiformes, caducæ; bractee spadici coadunatæ, bracteolæ squamiformes. Flores et fructus parvi.

Species 2, Archipelagi Malayani incolæ; altera C. Renda, *Blume l.c.*, *Mart. Hist. Nat. Palm.* iii. 316 (*Bentinckia Renda*). *Kunth, Enum. Pl.* iii. 641 (*Bentinckia*). *Scheff. in Ann. Jard. Bot. Buitenz.* 138, 159. *Miq. Fl. Ind. Bat. Suppl.* 589. (*Areca? erythropoda*); altera, *B. ceramica*, Wendl., nobis ignota est. Flores masculi a nobis non visi; stamina ex Wendlandio 6, ex Scheffero 12 ad 15.

21. **Drymophloeus**, Zippel in *Flora*, 1829 i. 185.—Flores in eodem spadice infrafoliaceo paniculatim ramoso monoici, spiraliter dispositi, 3-ni intermedio ♀, v. superne 2-ni et solitarii ♂, bracteati et bracteolati. Fl. ♂ symmetrici, ovoidei v. oblongi. Sepala orbicularia, basi rotundata v. gibba, late imbricata. Petala oblonga v. elliptica, coriacea, acuta v. obtusa. Stamina numerosa, filamentis filiformibus apice rectis; antheræ oblongæ v. lineares, dorso v. infra dorsum affixæ, versatiles. Ovarii rudimentum gracile, styliforme. Flores ♀ masculis majores, subglobosi, perianthio (sed precipue petalis) post anthesin aucto. Sepala reniformia, latissime imbricata. Petala paullo longiora, orbicularia, convolutivo-imbricata, apicibus acutatis valvatis v. subvalvatis. Staminodia minuta. Ovarium oblongum v. ovoideum, basi abrupte contractum, 1-loculare; stigmata sessilia, recurva; ovulum parietale, pendulum. Fructus ovoideus, stigmatibus terminalibus, lævis v. longitudinaliter sulcatus, pericarpio crassiusculo fibroso, endocarpio tenui v. crustaceo intus lævi. Semen ovoideum v. oblongum, teres v. 3–5-sulcatum, hilo a basi ad verticem producto, rapheos ramis paucis obscuris parce reticulatis, albumine æquabili; embryo basilaris.—Palmæ inermes, caudice gracili v. mediocri annulato. Folia terminalia, æqualiter pinnatisecta, segmentis cuneato-oblongis v. linearibus, late rarius anguste oblique præmorsis submembranaceis 3–∞-nerviis, marginibus basi recurvis, rhachi sæpe furfuracea 3-gona, vagina elongata. Spadix varius, pedunculo brevi, ramis sæpissime gracilibus; spathe 2 v. plures, inferiore bicristata; bractee et bracteolæ squamiformes. Flores inter minores, glomerulis sæpius sparsis. Fructus parvus v. majusculus.

Species ad 12, Novæ Guineæ, Australiæ tropicæ et insularum Moluccarum et Pacificarum incolæ. *Mart. Hist. Nat. Palm.* iii. 186, 314 (*Seaforthia*, sect. *Drymophloeus*). *Blume, Rumph.* ii. 117, t. 83,

84, 119, iii. t. 156 (*Ptychosperma*). *Miq. Palm. Archip. Ind. Obs.* 24. *Griff. Palm. Brit. Ind.* t. 142 A, B (*Ptychosperma*, ic. *Blumei iterata*). *Scheff. in Ann. Jard. Bot. Buitenz.* i. 52, 138, 157. *H. Wendl. et Drude in Linnaea*, xxxix. 183. *Beccari, Malesia* i. 41, 98. Genus verisimiliter melius cum *Ptychospermate* unitum, a Beccario in sectiones 2 divisum.

1. *Actinophlæus*. Semen profunde 5-sulcatum. Folia interrupte pinnatisecta, segmentis elongatis.

2. *Eudrymophlæus*. Semen teres. Folia pinnatisecta, segmentis latis v. abbreviatis.

*Ptychosperma Normanbyanum*, F. Muell., est verisimiliter *Drymophlæi* species. In *D. bifido*, Beccari, spatha superior persistens apparet et irregulariter rupta. *Kentiopsis divaricata*, Brongn., ad *Drymophlæum* potius quam *Kentiopsidi* spectat; differt foliorum segmentis crasse coriaceis, apice attenuatis.

22. **Cyphophoenix**, *H. Wendl. in litt. (nomen)*.—Flores in eodem spadice robusto infrafoliaceo paniculatim ramoso monoici, spiraliter dispositi, 3-ni intermedio ♀, bracteati et bracteolati. Fl. ♂ symmetrici, oblongo-cylindracei. Sepala crasse coriacea, orbicularia, concava, late imbricata. Petala longiora, elliptica, subacuta, coriacea, valvata. Stamina 6, filamentis filiformi-subulatis apicibus inflexis; antheræ lineari-oblongæ, dorsifixæ, versatiles. Ovarii rudimentum ovoideum v. styloforme. Fl. ♀ masculis minores, subglobosi, perianthio post anthesin aucto. Sepala orbicularia, crasse coriacea, latissime imbricata. Petala vix v. paullo longiora, orbicularia, late convolutivo-imbricata, apicibus breviter acutatis valvatis. Staminodia 3, linearia, membranacea. Ovarium anguste oblongum, 1-loculare, in stigma crassum conoideum 3-fidum lobis trigonis desinens; ovulum parietale, pendulum. Fructus elongato-ovoideus v. ellipsoideus, lente curvus, stigmate subterminali, pericarpio crasso granulato intus fibroso, endocarpio crustaceo. Semen ellipsoideum, læve, erectum, liberum, hilo minuto basilari, raphe et chalaza obscuris, ramis distinctis gracillimis patentibus dein descendentibus reticulatis, albumine æquabili; embryo basilaris.—Palmæ inermes, caudice robusto? annulato. Folia terminalia, pinnatisecta, segmentis coriaceis elongato-ensiformibus, apice angustatis, marginibus incrassatis basi plicatis recurvis, costa nervisque validis subtus sparse paleaceis, rhachi robusta latiuscula dorso leviter convexa, facie superne acuta. Spadices glabri, ramis robustis elongatis; spathæ . . .; bracteæ breves, bracteolæ squamiformes. Flores inter minores. Fructus brunneus, mediocris.

Species 2, Novæ Caledoniæ incolæ, altera *Kentia elegans*, Brongn. in *Comptes Rend. Acad. Sc. Par.* lxxvii. 399. (*Herb. Balansa*, 3122) fructu fere recto; altera, *K. fulcita*, Brongn. l.c. (gen. novum *CAMPECARPUS*, *Wendl. in litt.*), spadice valde robusto fructuque lageniforme lente curvo.

Genus a *Cyphospermate* differt fructu recto stigmatibus terminalibus, pericarpio crasso, et seminibus.

23. **Ptychandra**, *Scheff. in Ann. Jard. Bot. Buitenz.* i. 140, 160, t. 28, 29, f. 1.—Flores in eodem spadice infrafoliaceo paniculatim ramoso monoici, spiraliter dispositi, inferiores 3-ni intermedio ♀, superiores solitarii v. 2-ni ♂; bracteæ bracteoleque inconspicuæ. Fl. ♂ symmetrici, subglobosi. Sepala parva, orbicularia, coriacea, imbricata. Petala multo latiora, late ovato-cordata, obtusa, valvata. Stamina ad 34, 1-seriata, exserta, filamentis filiformi-subulatis basi connatis apice inflexis; antheræ oblongæ, dorsifixæ, versatiles. Ovarii rudimentum parvum. Fl. ♀ masculis subæquantes, subgloboso-conoidei, perianthio post anthesin parum aucto. Sepala reniformi-rotundata, late imbricata. Petala paullo longiora, orbicularia, convolutivo-imbricata, apicibus acutatis valvatis. Staminodia numerosa, dentiformia. Ovarium ovoideum, 1-loculare; stigmata sessilia, trigona; ovulum parietale. Fructus fere globosus, stigmatibus infra-apicalibus, pericarpio fibroso, endocarpio duro. Semen globosum, rapheos semine triplo brevioris ramis a chalaza radiantibus creberrime reticulatis, albumine dense ruminato; embryo . . . —Palma inermis, caudice elato solitario. Folia terminalia, æqualiter pinnatisecta, subtus glauca, segmentis lanceolatis basi et apice angustatis infra apicem 1-dentatis 3-nerviis, marginibus basi recurvis, costa nervisque subtus paleaceis, rhachi dorso convexa facie plana, vagina elongata indumento cereo albo. Spadix breviter pedunculatus, pluries ramosus, basi rufo-tomentosus, ramis crassiusculis; spathæ 2 completæ, inferiore spadice

breviore 2-cristata lanceolata lignea, apice oblique fissa, superiore cylindracea utrinque acuminata. Flores majusculi. Fructus cerasiformis.

Species 1, insularum Moluccarum incolæ. Fructus tantum a nobis examinatus.

24. *Clinostigma*, H. Wendl. in *Bonplandia* 1862, 196; et in *Linnaea*, xxxix. 185.—Flores in eodem spadice infrafoliaceo paniculatim ramoso monoici, spiraliter dispositi, inferiores 3-ni intermedio ♀, v. superiores solitarii et 2-ni ♂; bracteæ bracteolæque obsoletæ. Fl. ♂ symmetrici. Sepala orbicularia, basi gibba v. saccata, late imbricata. Petala paullo longiora, ovata, obtusiuscula, valvata. Stamina 6 v. 12 filamentis filiformibus apice inflexis; antheræ oblongæ v. lineari-oblongæ, dorsifixæ, versatiles. Ovarii rudimentum crassum, columnare. Fl. ♀ masculis minores, subglobosi, perianthio post anthesin parum aucto. Sepala reniformia, late imbricata. Petala paullo longiora, orbicularia, convolutivo-imbricata, apicibus acutatis subvalvatis. Staminodia 3 v. 6, linearia. Ovarium subglobosum v. turbinatum, 1- rarius 2-3-loculare; stigmata parva, crassa, trigona; ovulum parietale. Fructus globosus v. subglobosus, rarius paullo elongatus, obliquus, stigmatibus excentricis lateralibus v. subbasilaribus, 1-locularis v. 2-3-locularis loculis 2 parvis vacuis, pericarpio crassiusculo grumoso et fibroso, endocarpio membranaceo v. crustaceo. Semen globosum, rarius oblongum et curvum infra situm stigmatium affixum, hilo orbiculari, rapheos ramis ab hilo radiantibus reticulatis, albumine æquabili; embryo hilo propinquus.—Palmæ inermes, caudice elato v. humili annulato v. annulis obscuris. Folia terminalia, æqualiter pinnatisecta, segmentis subfalcatolanceolatis basi lata insertis plicatis acuminatis (apice 2-fidis? v. oblique truncatis et dentatis?), marginibus interdum incrassatis basi vix recurvis, rachi furfuracea dorso convexa facie obtuse carinata. Spadix elongatus, ramis fructiferis elongatis crassis areolis distantibus; spathæ 2-3. Fructus parvus, maturus ruber.
